A COMPLETE MCQ COMPANION FOR ASPIRANTS

NARAYAN
CHANGDER

This E-book is dedicated to the loving memory of my mother:
my guiding light, my shining star,
forever

It is my deepest gratitude and warmest
affection that I dedicate this Ebook.

To my mother JOYTSNA CHANGDER
who could not see this Ebook.

who has been a constant source of Knowledge and in-
spiration. Mom, Covid did not take you, it took our
many dreams. wherever you are we will meet again.

Disclaimer

The aim of this publication is to supply information taken from sources believed to be valid, reliable and authentic. The author bear no responsibility for any damage arising from inadvertent omissions, negligence or inaccuracies (typographical or factual) that may have found their way into this PDF booklet.

Due care has been taken to ensure that the information provided in this book is correct. Author is not responsible for any errors, omissions or damage arising out of use of this information.

Important

If not satisfied with the answers, search the internet for correct answers. If you want to include new questions in this booklet, please contact author. You can contact him on Facebook <https://www.facebook.com/narayanchangder/>

IMPORTANT INFORMATION: PLEASE READ BEFORE CONTINUING:

1. EVERY MCQ IN THIS BOOK HAS A DETAILED EXPLANATION AVAILABLE ONLINE. VISIT [HTTPS://WWW.TOTALMCQ.COM](https://www.totalmcq.com) TO ACCESS STEP-BY-STEP EXPLANATIONS, ANSWER DISCUSSIONS, ADDITIONAL PRACTICE QUESTIONS, AND THE LATEST STUDY MATERIALS.

1. SUPPORT THE AUTHOR! YOUR GENEROUS DONATION HELPS TO CREATE MORE CONTENT.
2. SCAN TO DONATE IN SECONDS.
3. YOUR SUPPORT IS GREATLY APPRECIATED. SCAN THE QR CODE TO CONTRIBUTE VIA PAYTM.
4. THANK YOU FOR READING! SCAN TO SUPPORT MY WORK AND FUTURE PROJECTS.

BUYING THIS BOOK HELPS, BUT A SMALL DONATION HELPS ME REMAIN AN INDEPENDENT CREATOR. WHETHER BIG OR SMALL, YOUR CONTRIBUTION IS GREATLY APPRECIATED. THE MONEY RAISED WILL HELP US PRODUCE SIMILAR BOOKS. SCAN HERE TO DONATE VIA PAYTM (**PAY WHAT YOU WANT**).

BUYING THIS BOOK HELPS, BUT A SMALL DONATION HELPS ME REMAIN AN INDEPENDENT CREATOR. YOUR CONTRIBUTION—WHETHER BIG OR SMALL—HELPS US. SCAN THE QR CODE TO DONATE VIA PAYTM (**PAY WHAT YOU WANT**) AND SUPPORT OUR MISSION.

Preface

This book presents a comprehensive collection of over **1,20,000 multiple-choice questions (MCQs)** covering the complete syllabus of **UGC NET Paper 1**. The questions have been carefully organized chapter-wise and topic-wise to facilitate systematic learning, regular practice, and effective revision.

Prepared in accordance with the latest syllabus, this question bank is intended to help learners strengthen their conceptual understanding, improve speed and accuracy, identify areas requiring further study, and build confidence through continuous practice.

This book is particularly useful for:

1. UGC NET and Junior Research Fellowship (JRF) aspirants.
2. State Eligibility Test (SET/SLET) candidates.
3. Assistant Professor recruitment examinations.
4. Ph.D. entrance examinations.
5. University students and research scholars.
6. Teachers and educators seeking practice material.
7. Candidates preparing for other competitive examinations covering teaching aptitude, research aptitude, reasoning, communication, information and communication technology, and higher education.

The primary objective of this book is to provide an extensive repository of practice questions that supports self-learning, systematic revision, and exam-oriented preparation. Whether used for daily practice, mock tests, or last-minute revision, this question bank serves as a valuable companion throughout the preparation journey.

Every effort has been made to ensure the accuracy, relevance, and quality of the contents. Suggestions and constructive feedback from readers are always welcome and will help improve future editions.

Preface	v
1 Unit-II: Research Aptitude	1
1.1 Introduction to Research	1
1.1.1 Research Aptitude	1
1.1.2 Meaning of Research	24
1.1.3 Nature of Research	36
1.1.4 Characteristics of Research	41
1.1.5 Objectives of Research	58
1.1.6 Research Objectives	65
1.1.7 Importance of Research	77
1.1.8 Scope of Research	82
1.2 Research Philosophies and Types	88
1.2.1 Positivism in Research	88
1.2.2 Postpositivistic Approach to Research	102
1.2.3 Types of Research	109
1.2.4 Research Methods Overview	152
1.2.5 Quantitative Research	266
1.2.6 Qualitative Research	349
1.2.7 Mixed Methods Research	495
1.2.8 Experimental Research	515
1.2.9 Descriptive Research	627
1.2.10 Historical Research	647
1.2.11 Comparative Research	663
1.2.12 Survey Research	668
1.2.13 Case Study Research	697
1.3 Research Process	722
1.3.1 Research Process	722
1.3.2 Steps of Research	799
1.3.3 Identification of Research Problem	802
1.3.4 Formulation of Research Problem	828
1.3.5 Research Questions	844

1.3.6	Research Hypothesis	865
1.3.7	Variables in Research	912
1.3.8	Research Design	1031
1.3.9	Pilot Study	1088
1.4	Data Collection and Sampling	1091
1.4.1	Data Collection	1091
1.4.2	Primary Data	1169
1.4.3	Secondary Data	1211
1.4.4	Sampling	1252
1.4.5	Probability Sampling	1338
1.4.6	Non-Probability Sampling	1370
1.4.7	Observation Method	1394
1.4.8	Interview Method	1435
1.4.9	Questionnaire	1477
1.4.10	Schedule Method	1500
1.5	Data Analysis and Interpretation	1500
1.5.1	Data Analysis	1500
1.5.2	Descriptive Statistics	1603
1.5.3	Inferential Statistics	1649
1.5.4	Data Interpretation	1678
1.5.5	Drawing Conclusions	1706
1.6	Research Report Writing	1723
1.6.1	Research Paper Components	1723
1.6.2	Abstract Writing	1765
1.6.3	Research Article Writing	1777
1.6.4	Research Report Writing	1782
1.6.5	Thesis Writing	1822
1.7	Research Ethics and ICT	1841
1.7.1	Research Ethics	1841
1.7.2	Publication Ethics	1948
1.7.3	Plagiarism	1951
1.7.4	Citation and Referencing	1973
1.7.5	Styles of Referencing	2047
1.7.6	Reference Management Software	2064
1.7.7	Application of ICT in Research	2066
1.7.8	Research Databases	2089
1.7.9	Digital Libraries	2100
1.7.10	Intellectual Property Rights and Patents	2101

1. Unit-II: Research Aptitude

1.1 Introduction to Research

1.1.1 Research Aptitude

1. When creating items which need to be compared to external criterion measurements, the ___ can then be determined by correlating scores on it with the external criterion.
(A) Validity
(B) Reliability
(C) Content validity
(D) Test-retest reliability
(E) Standardisation
2. Why is it crucial to choose reliable and credible sources during background research?
(A) To impress your readers with diverse sources.
(B) To ensure your information is trustworthy and written by experts.
(C) To save time and avoid reading multiple sources.
(D) None of the above
3. The claim: video games are helpful. An example of a counterargument would be:
(A) Video games improve coordination
(B) Video games might also help improve visual skills
(C) Video games can be used to simulate trainings for soldiers
(D) Violent video games increase your heart rate in a negative way
4. This refers to the ability of the research instrument to produce consistent results.
(A) Validity
(B) Reliability
(C) Usability
(D) Clarity
5. Through research and data, scientists have found that Earth's temperature has been
(A) Increasing
(B) Decreasing
6. Facts and research that support your argument
(A) Evidence
(B) Commentary
(C) Counterclaim
(D) Discredit
7. Quality of a good researcher who is unique and original in his research to arrive at productive results
(A) Efficient
(B) Scientific

- (C) Creative
(D) Research-oriented
8. It is at this point that the researcher described who will benefit and what benefits can be derived from the findings of the study. The writer, under this section, tries to sell its importance to the panel or to the funding agency.
(A) Scope and Limitation
(B) Significance of the Study
(C) Introduction
(D) Framework
9. A marine biologist studying seabird populations notices that the number of hatchlings declines after an oil tanker spill occurs off the coast where one of the birds' major nesting sites is located. Which of the following is the probable human impact on the birds' nesting site?
(A) Increased food availability for hatchlings.
(B) Improved nesting conditions due to less human activity.
(C) Higher survival rates of adult seabirds.
(D) Oil contamination of the nesting site.
10. Her study on the misinformation effect shows that eyewitness testimonies can be wrong
(A) Mary Calkins
(B) Mary Ainsworth
(C) Margaret Washburn
(D) Elizabeth Loftus
11. Systematic investigation used to test hypothesis and find support for theories
(A) Psychology
(B) The scientific method
(C) Theory
(D) Hypothesis
(E) Research
12. An argument made to address opposing viewpoints is called the:
(A) Claim
(B) Counter argument
- (C) Author's purpose
(D) Discriminations
13. What distinguishes a source's quality of information from its quantity?
(A) The physical size of the source
(B) The language the source is written in
(C) The depth and usefulness of the information
(D) The age of the source
14. A good piece of research is the outcome of
(A) Collective effort
(B) A touch of genius
(C) A reputed research institute
(D) A penetrating and analytical mind
15. Jerry had a natural ____ for solving complex mathematical problems, excelling where others struggled.
(A) Conviction
(B) Aptitude
(C) Indolence
(D) Chastise
16. Which question would help you assess the reliability of a source?
(A) Is the author an expert in the subject area?
(B) Is the source entertaining to read?
(C) Does the source have colorful illustrations?
(D) Is the source easy to access?
17. To search or investigate; the collecting of information about a particular subject.
(A) Reading
(B) Google
(C) Research
(D) Informational text
18. Choose the word that means: having preference for one thing over another in a way that's unfair (choosing one thing unfairly because I like it better)

- (A) Bias
 - (B) Satire
 - (C) Credible
 - (D) None of above
19. Which aspect is the researcher considering when they evaluate when was the data collected?
- (A) Purpose
 - (B) Currency
 - (C) Credibility
 - (D) Methodology
20. What aspect of research does the author emphasize in their lesson plans?
- (A) Random topics
 - (B) Outdated methods
 - (C) Evidence-based practices
 - (D) Personal opinions
21. Bias
- (A) A tendency to favor one side over another, which can affect the objectivity of information.
 - (B) A neutral stance that presents all sides equally.
 - (C) A method of gathering data without any influence.
 - (D) A statistical error that occurs in data analysis.
22. Creates knowledge that could result in the establishment of industries, new commercial items, and technology that could significantly affect the economy.
- (A) University instruction
 - (B) University research
 - (C) University extension
 - (D) University production
23. A person who employs the scientific method to uncover new knowledge is known as a
- (A) Menace
 - (B) Scuba diver
 - (C) Scientist
 - (D) Botanist
24. How do you find a topic to be of high significance?
- (A) When it has political insights
 - (B) When it has social standards
 - (C) When it provides practical implications
 - (D) When it is Contemporary
25. Evidence is only useful to a argument when it's:
- (A) Measured in numbers
 - (B) In a pretty, pretty graph
 - (C) Collected by someone who is professional
 - (D) It is relevant (has something to do with) the claim.
26. What is the purpose of using students as research participants?
- (A) To mandate protections for research participants
 - (B) To benefit future students and learn from the experience
 - (C) To coerce participants into giving consent
 - (D) To falsify data
27. What is the scientific investigation of phenomena which includes the collection, presentation, analysis, and interpretation facts that line an individual's speculation with reality?
- (A) Research
 - (B) Qualitative
 - (C) Quantitative
 - (D) Scientific method
28. Why is the origin of a source critical in assessing its reliability?
- (A) It provides a basis for legal analysis
 - (B) It helps understand the perspective and potential bias
 - (C) It influences the color of the source material
 - (D) It determines the physical condition of the source

29. Generalization in research means:
- (A) Applying results to a larger population
 - (B) Restricting conclusions
 - (C) Using random results
 - (D) None
30. How can identifying research phenomena benefit teachers and educators?
- (A) By making the classroom competitive
 - (B) By reducing student engagement
 - (C) By providing guidance on effective instructional strategies
 - (D) By limiting conceptual understanding
31. The phrase “This research study provides findings to support ____” is reflective of what principle?
- (A) Proof
 - (B) Evidence
 - (C) Replication
 - (D) None of above
32. A collection of information used to support an author’s idea.
- (A) Statistics
 - (B) Fact
 - (C) Counterclaim
 - (D) Evidence
33. Capacity for learning; natural ability
- (A) Aptitude
 - (B) Askew
 - (C) Artisan
 - (D) Badger
34. What are the specific pieces of information that support a claim called?
- (A) Evidence
 - (B) Reason
 - (C) Argument
 - (D) Counterclaim
35. If research suggested that a pregnant mother’s use of an artificial sweetener caused harm to the fetus, the artificial sweetener would be considered a(n):
- (A) FAS
 - (B) Form of DNA
 - (C) Depressant
 - (D) Teratogen
36. An American psychologist who supported the experimentation on animals in order to help humans.
- (A) Robert Rosenthal
 - (B) Stanley Schachter
 - (C) Neal Miller
 - (D) None of above
37. Information that supports your reasons with facts and research
- (A) Evidence
 - (B) Story
 - (C) Advertisement
 - (D) Rumor
38. A procedure by which one attempts to find systematically, and with the support of demonstrable fact, the answer to a question or the resolution of a problem
- (A) RESEARCH
 - (B) INQUIRY
 - (C) THESIS
 - (D) PROBLEM
39. What is the primary focus of accuracy in research?
- (A) Gathering opinions
 - (B) Getting the facts right
 - (C) Minimizing costs
 - (D) Increasing speed
40. The idea that one shouldn’t judge another culture based on one’s own cultural standards
- (A) Cultural relativism
 - (B) Moral relativism
 - (C) Comparative perspective
 - (D) Ethnocentrism

41. A set of systematically interrelated concepts, propositions and definitions is called
(A) Theory
(B) Hypothesis
(C) Case
(D) Framework
42. Which pillar focuses on systematic explanations of the underlying phenomenon or behavior?
(A) Authority
(B) Evidence
(C) Faith
(D) Theories
43. Which of the following is a sign of good research skills?
(A) Using only one source for information
(B) Evaluating the credibility of sources
(C) Copying text directly from sources
(D) Ignoring recent publications
44. A subject or field of knowledge or learning
(A) Major
(B) Degree
(C) Discipline
(D) Diploma
45. Accuracy is essential in marketing research because:
(A) It ensures reliable data for decision-making.
(B) It saves time and resources.
(C) It helps in understanding customer needs.
(D) It improves brand image.
46. Findings extend knowledge from previous studies and raise implications for theoretical issues
(A) Research Significance
(B) Plagiarism
(C) Qualitative Data
(D) Research Background
47. When critiquing evidence, what should be determined using a scale?
(A) Popularity of the topic
(B) Number of references cited
(C) Level and quality of the evidence
(D) Length of the manuscript
48. If you were researching healthy foods, your social studies teacher would be a credible source.
(A) True
(B) False
49. Ivan Pavlov's original research interest involved
(A) How the brain works
(B) Memory
(C) Digestion
(D) How children learn
50. Which person has the best qualifications to write a credible article about the history of food production in the United States?
(A) A former worker in the meat-packing industry who is angry about being fired
(B) A professor of history who has published books about the food production industry
(C) A television reporter who visited the fast food museum in Chicago, Illinois
(D) A Senator whose proposed law would overhaul the food production industry
51. Research can be conducted by a person who:
(A) Has studied research methodology
(B) Holds a postgraduate degree
(C) Possesses thinking and reasoning ability
(D) Is a hard worker
52. Ms. Turner is thinking about changing her instructional approach to a more mastery-learning orientation. She is interested in knowing more about this topic as well as its effectiveness when working with elementary school students. On which source should she rely for such information?
(A) Tradition

- (B) Research
(C) Personal experience
(D) Intuition
53. The novice researchers generally commit the following errors,
(A) Refers broad area of study.
(B) Narrowing a topic to such an extent that it becomes insignificant for research purposes.
(C) Employing unscientific terms of argumentative and biased nature.
(D) All of the above.
54. M1 college/university is defined as:
(A) A college/university with a high level of research activity
(B) A college/university with a focus on liberal arts
(C) A community college
(D) A technical institute
55. One example of biomass is
(A) Electricity
(B) Water
(C) Plants
(D) Biomass
56. What is one key benefit of sharing research experiences?
(A) It allows others to learn from findings.
(B) It increases the length of studies.
(C) It prevents others from researching.
(D) It reduces the need for citations.
57. Which of the following is a valid statement?
(A) Switch on the fan
(B) $X + 2 = 7$
(C) Are you ready?
(D) 5 is an odd number
58. What term best describes a person who systematically investigates phenomena for the purpose of increasing knowledge and understanding?
(A) A religious figure
(B) A service provider
(C) A settler
(D) A researcher
59. Find word to the definition. Studies to find more information about something (n)
(A) Research
(B) Journey
(C) Injection
(D) Secret
(E) University
60. What is the the process of gathering and analyzing information to discover facts, test theories, or solve problems?
(A) Database
(B) Research
(C) Source
(D) Findings
61. Where is India's permanent research station Dakshin Gangotri located?
(A) Australia
(B) Russia
(C) Antarctica
(D) Greenland
62. CRAAP:What is relevance?
(A) A source that answers my research question
(B) A source that is relevant to teens
(C) A source that the teacher gave me
(D) A source near the top of Google results
63. What type of research studies physical, cognitive and social change throughout the life span?
(A) Psychometrics
(B) Developmental Psychology
(C) Human Factors Psychology
(D) Social Psychology

64. Which fossil fuel is formed only from dead plants in swamps?
(A) Rubber
(B) Petroleum
(C) Coal
(D) Natural Gas
65. Learners who acquire knowledge on their own and develop the ability for enquiry and critical evaluation are considered ____
(A) Dependent
(B) Introverted
(C) Cooperative
(D) Independent
66. Shows that something is TRUE. Proof
(A) Plagiarize
(B) Evidence
(C) Argument
(D) None of the above
67. A claim with supporting evidence is a(n) ____
(A) Opinion
(B) Argument
68. A nurse who reads research articles and incorporates research findings into nursing practice would demonstrate which of the following research roles?
(A) Consumer
(B) Primary investigator
(C) Collaborator
(D) Producer
69. Thinking about our own culture, our group behavior as the standard against all the other groups. One's own cultural experience unintentionally makes us to feel that our culture is distinctive.
(A) Cultural Lag
(B) Xenocentrism
(C) Ethnocentrism
(D) Racism
70. What should students practice to improve their writing for professionalism?
(A) Using complex terminology
(B) Making messages lengthy
(C) Increasing redundancy
(D) Conveying ideas clearly and succinctly
71. A source is ____
(A) Where information comes from
(B) The beginning
(C) Where you plug things in
(D) The Force, young Jedi
72. The meaning is given by a thesaurus or dictionary which is generally understood by people.
(A) Conceptual Framework
(B) Theoretical Framework
(C) Conceptual Definition of terms
(D) Operational Definition of terms
73. Providing evidence-based nursing practice most directly depends on which activity?
(A) Generating and applying robust research
(B) Replacing all clinical documentation
(C) Increasing brand loyalty campaigns
(D) Eliminating patient preferences entirely
74. Which word is a synonym for INDEPENDENTLY in this sentence? This is the gap between what they can achieve only with support-teachers, textbooks, worked examples, parents and so on-and what they can achieve INDEPENDENTLY.
(A) Unearthed
(B) Astronomer
(C) Autonomously
(D) Dig
75. What term describes whether or not a research study achieved what the researcher intended?
(A) Reliability
(B) Validity
(C) Compulsivity
(D) Altruism

76. Evidence is ____
- (A) To summarize something
 - (B) To state a fact as one's belief
 - (C) To show proof for a statement
 - (D) The group of people an author is writing to
77. What is the danger of following intuition in research and real life?
- (A) Intuition always leads to accurate results in research.
 - (B) The danger of following intuition in research and real life is that it can result in biased judgments and poor decision-making.
 - (C) Intuition is a reliable method for gathering data.
 - (D) Following intuition guarantees success in decision-making.
78. Facts and examples that support the reasons
- (A) Research
 - (B) Rebuttal
 - (C) Evidence
 - (D) Claims
79. What is the importance of evaluating the quality of research literature?
- (A) To ensure the reliability and validity of the findings
 - (B) To identify potential biases or limitations
 - (C) To assess the relevance and significance of the research
 - (D) All of the above
80. How can engaging with the research community benefit a researcher?
- (A) It helps in narrowing the research focus
 - (B) It provides access to more literature
 - (C) It ensures ethical considerations are met
 - (D) It reveals research gaps and opportunities
81. Which of the following fields heavily relies on authoritative sources?
- (A) Fiction writing
 - (B) Opinion blogging
 - (C) Scientific research
 - (D) Creative arts
82. Discuss the role of reasoning in assessing the validity of claims.
- (A) Reasoning is essential for evaluating the validity of claims as it enables individuals to critically analyze evidence, evaluate arguments, and draw logical conclusions.
 - (B) Reasoning has no impact on assessing the validity of claims
 - (C) Assessing claims does not require critical thinking
 - (D) Drawing illogical conclusions is beneficial for evaluating claims
83. It means the process of arriving at dependable solutions to problems through planned and systematic collection analysis and interpretation of data.
- (A) Research
 - (B) Theoretical conclusion
 - (C) Syllogisms
 - (D) None of above
84. In academic writing, this is usually a main idea, often called a "claim" or "thesis statement," backed up with evidence that supports the idea.
- (A) CONCEPT
 - (B) QUESTION
 - (C) RESEARCH
 - (D) ARGUMENT
85. This infers that something is true of the whole from the fact that is true of some part of the whole.
- (A) Equivocation
 - (B) Composition
 - (C) Division
 - (D) Appeal to pity
86. How is the effectiveness of completed research evaluated:
- (A) Scientific significance, economic result and social effect;

- (B) Scientific significance, economic result and economic effect;
(C) Theoretical significance, economic result and biological effect;
(D) Scientific significance, practical result and biological effect;
(E) Scientific significance, environmental efficiency, chemical result;
87. When reviewing the literature, what should a researcher focus on to demonstrate the importance of their research?
(A) The number of studies conducted on the topic.
(B) The age of the studies.
(C) The methodological flaws in previous studies.
(D) The agreement among previous studies.
88. Many studies have affirmed the positive effects of government, financial institutions, and training institutions in setting up businesses.
(A) External factors
(B) Environmental support
(C) Environmental influence
(D) None of above
89. In evaluating an online article about Albert Einstein's work, what is the MOST important factor?
(A) The number of sources cited
(B) The domain of the website
(C) The qualifications of the author
(D) The publication date of the article
90. Careful and organized study or gathering information about a specific topic.
(A) Research
(B) Counterargument
(C) Statistic
(D) None of the above
91. Will your research prove any scientific concept upon completion?
(A) Yes, I'm proving all the science
(B) No, I can't actually prove anything
(C) All the above
(D) None of the above
92. This reflects the knowledge and training acquired by the researcher.
(A) Academic community
(B) Qualifications
(C) Motivation
(D) Costing
93. Jana recently moved to the U.S. from Thailand. Her teacher inaccurately diagnoses her with a developmental delay because she is shy and reluctant to engage in classroom activities. The teacher lacks
(A) Common core standards
(B) Cultural understanding
(C) Developmental screening
(D) Empathetic perspective
94. A misunderstanding due to ambiguous vocabulary and faulty translation best exemplifies which barrier?
(A) Technological barrier from software and connectivity
(B) Semantic barrier involving language and meaning issues
(C) Organizational barrier due to hierarchy protocols
(D) Cultural barrier in norms and values differences
95. "In preparing for this speech, I researched extensively on the topic and interviewed community experts." This is an example of ____
(A) An attention getting device
(B) A credibility statement
(C) A source citation
(D) A cue to the conclusion
96. Which form of energy is not derived from solar energy?
(A) Gasoline
(B) Biofuels
(C) Nuclear energy
(D) Wind

97. Which statement is an opinion according to the research vocabulary?
- (A) A claim that can be checked with reliable evidence and stays the same for everyone
 - (B) A statement that is not verifiable and can't be proven true; does change from person to person
 - (C) A statistic reported by a government agency after a census
 - (D) A quote copied exactly from a diary written during an event
98. Which of the following should not be a criterion for a good research project?
- (A) Demonstrates the abilities of the researcher
 - (B) Is dependent on the completion of other projects
 - (C) Demonstrates the integration of different fields of knowledge
 - (D) Develops the skills of the researcher
99. Why is background research important before conducting an experiment?
- (A) To prove your hypothesis is correct
 - (B) To gather existing knowledge and avoid repeating past mistakes
 - (C) To make the experiment more complicated
 - (D) To speed up the scientific process
100. Using technical terms or jargon causes:
- (A) Semantic barrier
 - (B) Physical barrier
 - (C) Psychological barrier
 - (D) Cultural barrier
101. Which of the following is an essential skill for conducting a research project in English?
- (A) Mathematical calculation
 - (B) Critical analysis
 - (C) Laboratory experimentation
 - (D) Artistic drawing
102. Careful study and investigation for the purpose of discovering and explaining new knowledge
- (A) Plagiarism
 - (B) Research
 - (C) Topic sentence
 - (D) Paraphrase
103. Humans change the environment around them to meet their needs
- (A) Climate
 - (B) Technological innovation
 - (C) Physical geography
 - (D) Human modification
104. How can logical reasoning help to counter opposing arguments in writing?
- (A) By using emotional appeals instead of logical reasoning
 - (B) By ignoring the opposing argument and presenting your own argument forcefully
 - (C) By agreeing with the opposing argument and changing your own argument
 - (D) By identifying flaws in the opposing argument, presenting evidence to support your own argument, and anticipating counterarguments and addressing them preemptively.
105. To what area of interest the following research title can be fallen? "Perceptions of Students Towards the Use of Social Media"
- (A) Agriculture
 - (B) Arts
 - (C) Business
 - (D) Communication
106. Research and theory are necessary complements to one another because
- (A) The inductive research model starts with theory
 - (B) Research findings are integrated into a system of description, prediction, or explanation
 - (C) The deductive research model ends with theory development
 - (D) Theory is necessary to validate research

- 107.** What is an explanation that organizes observations?
- (A) Theory
 - (B) Hypothesis
 - (C) Operational Definition
 - (D) Scientific Method
- 108.** A set of systematically interrelated concepts, definitions and propositions that are advanced to explain and predict phenomena is called
- (A) Model
 - (B) Theory
 - (C) Design
 - (D) Framework
- 109.** Which of the following best describes a career progression from higher technical to professional occupations?
- (A) A progression from supervisory roles to conducting independent research
 - (B) A shift from routine technical tasks to entry-level skilled work
 - (C) A lateral move within the same technical role
 - (D) A progression from unskilled labor to skilled labor
- 110.** Why is it important to use current literature in a review?
- (A) Older studies are always irrelevant
 - (B) To ensure the research reflects the latest findings and trends
 - (C) Because current studies are easier to understand
 - (D) To fill pages in the literature review
- 111.** A function of an engineer where the engineer is engaged in the process of learning about nature and codifying this knowledge into usable theories.
- (A) Research
 - (B) Design and Development
 - (C) Testing
 - (D) Manufacturing
- 112.** Words, phrases, or other information that backs up and supports a claim
- (A) Evidence
 - (B) Cite
 - (C) Informative essay
 - (D) Analyze
- 113.** What is a systematic inquiry that involves process and steps?
- (A) Data Collection
 - (B) Data Mining
 - (C) Research
 - (D) Reading of Literature
- 114.** Which one is an important skill involved in literature review that to evaluate the literature, determine the relationship between the sources and ascertain what has been done already and what still needs to be done.
- (A) Research
 - (B) Critical Appraisal
 - (C) Writing
 - (D) Data Mining
- 115.** The potential one has for learning a skill is called:
- (A) Interest
 - (B) Skill
 - (C) Ability
 - (D) Aptitude
- 116.** Taken from published articles, books, journals, magazines, novels, poetry, and many others which have bearing to the present study.
- (A) Related legal bases
 - (B) Related literature
 - (C) Related studies
 - (D) Literature review
- 117.** All professors have to ____ as part of their jobs.
- (A) Do a good job
 - (B) Do research
 - (C) Make a suggestion
 - (D) Make a decision

118. Not influenced by personal feelings, thoughts, interpretations or prejudice; based on facts
- (A) Bias
 - (B) Objectivity
 - (C) Chronology
 - (D) Opinion
119. Which statement best defines a fact?
- (A) A statement that reflects someone's personal feelings and can change from person to person
 - (B) A statement that is verifiable and can be proven true; does not change from person to person
 - (C) A guess that might be correct if more people agree with it
 - (D) A prediction about the future that cannot be checked
120. The branch of philosophy that deals with how knowledge of phenomena is acquired is?
- (A) Positivism
 - (B) Interpretativism
 - (C) Ontology
 - (D) Epistemology
121. Which term is used when we attempt to explain pattern?
- (A) Law
 - (B) Hypothesis
 - (C) Theory
 - (D) Conclusion
122. What is the main purpose of academic writing in research?
- (A) Using complex vocabulary
 - (B) Communicating ideas clearly and objectively
 - (C) Impressing readers
 - (D) Showing emotions
 - (E) Writing creatively
123. A common test in research demands much priority on
- (A) Reliability
 - (B) Useability
 - (C) Objectivity
 - (D) All of the above
124. The systematic investigation of facts
- (A) Research
 - (B) National EMS education standards
 - (C) Continuous quality improvement
 - (D) Medical oversight
125. What is the significance of evidence in supporting an argument?
- (A) It provides entertainment
 - (B) It strengthens the argument by providing proof
 - (C) It makes the text longer
 - (D) It distracts the reader
126. Why is it important to use multiple pieces of evidence to support your arguments?
- (A) To strengthen and validate arguments, and counter biases or limitations in individual pieces of evidence.
 - (B) To confuse the audience and make the argument seem more complex.
 - (C) To save time and effort by not having to find additional evidence.
 - (D) To make the argument more subjective and opinion-based.
127. Pick the reason that best explains the evidence: Claim: Dogs make good pets. Evidence: When people pet dogs, their brains release a chemical called oxytocin.
- (A) Oxytocin is also increased when people spend time with friends, meditate, or listen to music.
 - (B) Oxytocin reduces anxiety, so having dogs as pets makes people less stressed.
 - (C) Dogs are great with small children.
 - (D) My dog is kind of annoying, but I still love him.

128. Discuss the importance of evidence in supporting an argument.
- (A) Evidence is irrelevant in supporting an argument
 - (B) Using evidence makes the argument less convincing
 - (C) It is better to rely on personal opinions rather than evidence
 - (D) Evidence provides credibility and validity to the claims being made.
129. Meeting our current needs without compromising the ability of future generations to meet their own needs is called:
- (A) Climatic
 - (B) Weather
 - (C) Systemic
 - (D) Sustainability
130. Which word is a synonym for EMPIRICAL in this sentence? Despite all this, there is limited EMPIRICAL evidence to suggest that streaming results in better outcomes for students.
- (A) Ball bearing
 - (B) Crescent
 - (C) Religious
 - (D) Based on observation
131. A person who is highly knowledgeable or skilled in a particular domain, such as physics, anesthesiology, or teaching is best describes as a(n):
- (A) Professional.
 - (B) Expert.
 - (C) Scholar.
 - (D) Technician.
132. It refers to a system of acquiring knowledge based on the scientific method, as well as the organized body of knowledge gained through such research
- (A) Science
 - (B) Society
 - (C) Technology
 - (D) STS
133. Match the words that have similar meaning: to substitute
- (A) To influence
 - (B) To investigate
 - (C) To replace
 - (D) To affect
134. Which of the following is the best synonym for validity?
- (A) Consistency
 - (B) Feasibility
 - (C) Truthfulness
 - (D) Economy
135. The activity of getting information about a subject
- (A) Research
 - (B) Secondary Source
 - (C) Periodical
 - (D) Central Idea
136. Which of the following best describes 'evidence' in an argumentative context?
- (A) A statement that explains the reasoning
 - (B) A fact or example that supports a claim
 - (C) A counterargument to the main point
 - (D) A summary of the argument
137. Which problem of education does this refer to? "The Philippines has lagged behind its ASEAN neighbors in producing researchers, innovators, and solutions providers needed to effectively function in a knowledge economy"
- (A) Mismanaged Budget
 - (B) Selective Admission Policy
 - (C) Transparency
 - (D) Lack of Innovation
138. What is the term used for knowledge obtained from reading, investigation, study, or research?
- (A) Communication
 - (B) Information
 - (C) Technology
 - (D) Data

139. What is the term for a systematic investigation that aims to establish facts and reach new conclusions?
- (A) Observation
 - (B) Research
 - (C) Investigation
 - (D) Scientific Inquiry
140. What is the role of scientific research in addressing environmental racism?
- (A) It is irrelevant
 - (B) It provides evidence to support policy changes
 - (C) It only benefits academic institutions
 - (D) It hinders progress
141. It refers to an organized method of finding novel or relatively new ideas from the existing body of knowledge with the help of useful tools for the purpose of improving the quality of life.
- (A) Theory
 - (B) Research
 - (C) Methods
 - (D) All of the above
142. Statement that can be verified or proven with evidence
- (A) Credibility
 - (B) Contemporary
 - (C) Opinion
 - (D) Fact
143. What is the term for an individual's underlying potential for acquiring skills?
- (A) Intelligence
 - (B) Aptitude
 - (C) Interest
 - (D) Personality
144. Brittanie's coworker asks her a question about a software program. Brittanie isn't familiar with the program, so she can't answer the question. Brittanie has a
- (A) Prejudice.
 - (B) Knowledge gap.
 - (C) Viability problem.
 - (D) Bias.
145. This is defined as the use of the best clinical evidence in making patient care decisions, and such evidence typically comes from research conducted by nurses and other health care professionals.
- (A) Nursing Practice
 - (B) Nursing Research
 - (C) Nursing Science
 - (D) Evidenced-Based Practice
146. It is a scientific, experimental, or inductive manner of thinking.
- (A) Research
 - (B) Inference
 - (C) Ponder
 - (D) Probe
147. If you work at a golf course, which of the following is a project you could take on?
- (A) Research the best turf grass varieties for your area
 - (B) Design a new video game
 - (C) Write a novel
 - (D) Bake pastries for a bakery
148. Race is based on ___ characteristics, while Ethnicity is based on ___ characteristics
- (A) Cultural, physical
 - (B) Physical, cultural
 - (C) Achieved, ascribed
 - (D) Citizenship, cultural
149. Evidence is information used to support an argument, such as facts.
- (A) True
 - (B) False
150. ___ is looking for new information and learning cool things by asking questions and exploring.
- (A) Research

- (B) Sleeping
 - (C) Drawing
 - (D) Cooking
151. Salman is a ___ at the univeristy working on improving G5 communication devices.
- (A) Researcher
 - (B) Homepage
 - (C) Shepherd
 - (D) Drug
152. In project management, “R & D” stands for:
- (A) Retail Distribution
 - (B) Research and Development
 - (C) Repair and Develop
 - (D) Reduce and Deduce
153. What is already known about the topic?
- (A) The information that has been previously established about the topic.
 - (B) The future predictions about the topic.
 - (C) The opinions of experts about the topic.
 - (D) The unknown aspects of the topic.
154. Which is not an effect on the environment from using chemical in farming?
- (A) Chemical run offs in water ways for domestic use.
 - (B) Chemical run offs can cause problem to aquatic life
 - (C) Growth of plants and animals
 - (D) Air pollution that leads to acid rain
155. A teacher encounters various problems during his professional experiences. He should
- (A) Resign from his post in such situations.
 - (B) Do research on that problem and find a solution.
 - (C) Avoid the problematic situations.
 - (D) Take the help of the head of the institution.
156. Why do we need evidence?
- (A) To make the paragraphs longer.
 - (B) To practice sentence structure.
 - (C) To make a claim.
 - (D) To support, prove, and explain our claim.
157. Search for knowledge.
- (A) Research
 - (B) Research design
 - (C) Sample design
 - (D) Research report.
158. The researcher must explain in what ways and to whom the expected outcome of the study will be significant or beneficial.
- (A) Background of the Study
 - (B) Significance of the Study
 - (C) Scope and Delimitation
 - (D) Introduction
159. Factual information that supports reasoning
- (A) Opinion
 - (B) Idea
 - (C) Evidence
 - (D) None of the above
160. Why is working with literature important in research?
- (A) To identify gaps in existing knowledge
 - (B) To collect data
 - (C) To analyse results
 - (D) To write the conclusion
161. Why would researching the average earnings by major and by career be useful to you as you choose an institute for higher education?
- (A) You can anticipate the return on investment based on how much you could earn.
 - (B) You can calculate the return on investment based on the types of classes that they offer.
 - (C) You can hypothesize the return on investment based on the net cost.
 - (D) You can determine the return on investment based on the sticker price.

162. Name the fallacy committed in the following argument and explain why it is a fallacy. Either we ban all cars, or pollution will never decrease.
- (A) Appeal to Authority
 - (B) Ad Hominem
 - (C) Straw Man
 - (D) False Dichotomy
163. The researcher should be fully equipped with research skills when conducting the study.
- (A) Competence
 - (B) Confidentiality
 - (C) Legality
 - (D) Openness
164. The degree to which an instrument measures what it is intended to measure.
- (A) Validity
 - (B) Reliability
 - (C) Accuracy
 - (D) Consistency
165. What does the word relevant mean when you are evaluating a source?
- (A) Not a trustworthy source for research
 - (B) Something that is true and valid
 - (C) Up-to-date and accurate
 - (D) Related to the topic that is being researched.
166. A nurse who reads research articles and incorporates research findings into nursing practice would demonstrate which of the following research roles?
- (A) Consumer
 - (B) Primary investigator
 - (C) Collaborator
 - (D) Producer
167. A tweet written by a ten-year-old yesterday about a new miracle medicine may not be reliable because of its ____
- (A) Currency-the information is out of date
 - (B) Relevance-the article is irrelevant to the election
 - (C) Authority-the creator doesn't know enough about the topic
 - (D) Purpose-the goal of the article is not to inform
168. What does it mean to synthesize literature in a literature review?
- (A) Ignoring all sources and writing based on personal opinion
 - (B) Summarizing the main points of a single source
 - (C) Copying and pasting entire paragraphs from different sources
 - (D) Analyzing and integrating information from different sources to create a cohesive overview of the topic.
169. What weakens an argument?
- (A) Being based only on personal opinion
 - (B) Not backed by evidence or fact
 - (C) Does not address a counterargument
 - (D) All of these
170. In research, assumptions are:
- (A) Unnecessary details that are ignored
 - (B) Beliefs considered true without evidence within the study
 - (C) The main variables in the study
 - (D) Data that support the hypothesis
171. Discovering that he had an ____ for finance, he got a job as a commercial-credit analyst.
- (A) Victory
 - (B) Standing ovation
 - (C) Virtuoso
 - (D) Aptitude
172. Why does research need to be modified according to the text?
- (A) Because new information is discovered or existing information becomes outdated.
 - (B) Because marketing strategies need to be updated regularly.
 - (C) Because entertainment content needs to be refreshed.
 - (D) Because personal opinions change over time.

173. One of the knowledge roles of the Engineering Management discipline that involves generating knowledge that can benefit various domains.
- (A) Research
 - (B) Education
 - (C) Training
 - (D) Technical Assistance
 - (E) None of the choices given
174. It can be defined as the lessons that are taught informally, and usually unintentionally, in a school system.
- (A) Written Curriculum
 - (B) Societal curriculum
 - (C) Hidden Curriculum
 - (D) None of above
175. What should you focus on when reviewing related literature?
- (A) Identifying sources that only support your position
 - (B) Finding sources that support and refute your position
 - (C) Choosing a topic that is popular
 - (D) Selecting a topic based on personal interest
176. It is a careful and detailed study into a specific problem, concern, or issue using the scientific method. It uses an organized and systematic procedure by presenting related facts and data.
- (A) Research Instrument
 - (B) Methodology
 - (C) Research
 - (D) Abstract
177. A seemingly unimportant event is suggested to lead to a more significant event, which leads to an even more significant event, and so on —
- (A) Strawman
 - (B) Slippery slope
 - (C) False dilemma
 - (D) Red herring
178. It plays a pivotal role in the educational setting for several seasons. Serving as the cornerstone for progress and improvement?
- (A) Research
 - (B) Education
 - (C) Physics
 - (D) None of above
179. If a business determines that what it will learn from a research project will be worth the expense, then the research is?
- (A) Reliable
 - (B) Objective
 - (C) Valid
 - (D) Cost Effective
180. The relation of something to the matter at hand
- (A) Compelling
 - (B) Investigation
 - (C) Relevance
 - (D) Unbiased
181. A student shows that trained dental interns demonstrate better waste segregation practices. What is the most evidence based explanation of this finding?
- (A) Training increases the fear of punishment
 - (B) Training improves knowledge, attitude and compliance
 - (C) Training increases workload
 - (D) None of above
182. — is a set of logically interrelated statements in the form of empirical assertions about properties of infinite class of events or things
- (A) Abstract
 - (B) Theory
 - (C) Conclusion
 - (D) None of these

183. When a writer takes a position on an argument, he/she states a ____
- (A) Narrative
 - (B) Rebuttal
 - (C) Claim
 - (D) Counterclaim
184. In the event that resources are limited, researchers must be able to find ways to make use of the given resources and locally available materials to compensate for the things needed without compromising of the research output.
- (A) Inventive
 - (B) Efficient
 - (C) Practical
 - (D) Active
185. Contribution to basic knowledge, improving research techniques, improving welfare
- (A) Potential benefits
 - (B) Potential costs
186. These are entrusted with generating new knowledge, sharing it with pupils, and describing how they acquired it in a methodical way.
- (A) Faculty members
 - (B) Researchers
 - (C) Criminologist
 - (D) Professional
187. Imagine you are at a university. Which job role would involve conducting research and publishing scholarly articles?
- (A) Being a teacher or instructor
 - (B) Working as a librarian or archivist
 - (C) Being a principal or administrator
 - (D) Working as a professor or researcher
188. Theoretical meaning of concept, dictionary
- (A) Dictative
 - (B) Operational
 - (C) Wikipedia
 - (D) Conceptual
189. When evaluating the sources for your research, which factor is most important to consider?
- (A) The color of the source's cover page
 - (B) The number of pages in the source
 - (C) The publication date and its relevance to the topic
 - (D) The source's price
190. The ability to quickly solve puzzles is usually a good ____ test for mathematical ability.
- (A) Garage
 - (B) Homage
 - (C) Aptitude
 - (D) Attitude
191. An attitude of having doubt, keeps scientists from accepting faulty ideas and may lead to new understandings
- (A) Data
 - (B) Skepticism
 - (C) Pseudoscience
 - (D) Subjective reasoning
192. Instructions: Choose the most appropriate option. Each question carries equal marks. A learner has negative beliefs about vaccination. The primary gap is in:
- (A) Knowledge
 - (B) Skill
 - (C) Attitude
 - (D) Environment
193. Bose's research helped lay foundation for discovery of?
- (A) Bose-Einstein Condensate
 - (B) Higgs boson
 - (C) Radioactivity
 - (D) Superconductivity
194. Who is someone who searches for information on a particular subject?
- (A) Researcher
 - (B) Teacher
 - (C) Student
 - (D) Historian

- 195.** Doctor Sharma wrote a letter to his Engineer friend. His friend is unable to get the meaning of some words which is written in medical terminology. Name the type of communication barrier.
- (A) Personal Barrier
 - (B) Semantic barrier
 - (C) Psychological Barrier
 - (D) None of the above
- 196.** It helps to promote the science of behavior.
- (A) Research
 - (B) Theoretical conclusion
 - (C) Syllogisms
 - (D) None of above
- 197.** In social research, a researcher must be able to think skeptical. The point is ____
- (A) Researchers must always analyze every problem encountered
 - (B) A researcher must always question evidence or facts that can support a statement (not easily believe)
 - (C) Research was carried out based on the principle of gaining knowledge
 - (D) Researchers work based on observations
 - (E) Researchers can start research from beginning to end
- 198.** Choose the option that best explains the reasoning behind the evidence: Claim: Regular exercise improves mental health. Evidence: Exercise releases endorphins.
- (A) Endorphins are chemicals that cause pain and discomfort.
 - (B) Endorphins are released during exercise, which can improve mood and reduce stress.
 - (C) Exercise is a physical activity that requires energy.
 - (D) Mental health is not affected by physical activity.
- 199.** Reasons that make sense and are logical
- (A) Faulty reasoning
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Sound reasoning
- 200.** Teacher Juana furthers her studies and research so she can improve her teaching. What characteristic of a 21st-century teacher does she possess?
- (A) Social
 - (B) Flipped
 - (C) Actively engaged
 - (D) Lifelong learner
- 201.** What is the significance of learning scientific research methods in CTE programs?
- (A) To ignore research in scientific fields
 - (B) To develop critical thinking and analytical skills
 - (C) To focus only on memorization
 - (D) To avoid conducting any research
- 202.** Which type of reasoning is used when you solve a mystery by choosing the most likely explanation for the clues?
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) None of above
- 203.** What is the primary factor in choosing relevant literature?
- (A) The publication date
 - (B) The length of the document
 - (C) The document's relevance to the research topic
 - (D) The document's popularity
- 204.** The differences in learning and graduation rates among schools.
- (A) SPENDING PER PUPIL
 - (B) SCHOOL FUNDING GAP
 - (C) ACHIEVEMENT GAP
 - (D) EXPULSION
- 205.** A statement that attempts to explain why things are the way they are and happen the way they do is a
- (A) Theory
 - (B) Hypothesis

206. It is an objective and systematic search for relevant information on a particular subject or topic
- (A) Quantitative
 - (B) Qualitative
 - (C) Research
 - (D) Quasi-Experimental
207. It is a systematic, abstract explanation of some aspect of reality.
- (A) Theory
 - (B) Jargon
 - (C) Paradigm
 - (D) Perspective
208. If a research involves careful judgement, it is —
- (A) Empirical
 - (B) Analytical
 - (C) Critical
 - (D) Logical
209. Teacher Rose wants to ensure her assessments are measuring what she intends to measure. Which principle of assessment is she prioritizing?
- (A) Reliability
 - (B) Clarity
 - (C) Validity
 - (D) Practicality
210. Farmers can best reduce negative effects on the water quality of nearby streams and lakes by planting crops that
- (A) Produce less oxygen
 - (B) Produce less carbon dioxide
 - (C) Need less fertilizer
 - (D) Need less solar energy
211. Which of the following shows the process of creating something new:
- (A) Business model
 - (B) Modeling
 - (C) Creative flexibility
 - (D) Innovation
212. Ms. De Guzman created an Action Based Research to know the knowledge of her students on financial literacy. From the results, she created a workbook to enhance the student's knowledge. What role of teacher Ms. De Guzman has shown?
- (A) Councilor of learner
 - (B) Agent of Social Science
 - (C) Researcher
 - (D) Life Long Partner
213. Quality of a good researcher who is systematic, methodical, logical, and precise on his decision and interpret research results
- (A) Creative
 - (B) Efficient
 - (C) Research-oriented
 - (D) Scientific
214. Rachel Carson got — banned.
- (A) Mercury
 - (B) Methylmercury
 - (C) DDT
 - (D) Phosphates
215. A professional who conducts experiments and studies natural phenomena to advance scientific knowledge is known as a —
- (A) Artist
 - (B) Engineer
 - (C) Scientist
 - (D) Musician
216. Proponent of the "triple model"-
- (A) Piaget
 - (B) Montessori
 - (C) Bloom
 - (D) Sternberg
217. It is the process of finding answers to questions.
- (A) Credibility
 - (B) Inquiry
 - (C) Knowledge Production
 - (D) Research

- 218.** The important pre-requisites of a researcher in sciences, social sciences and humanities are[2005-DECEMBER]
(A) Laboratory skills, records, supervisor, topic
(B) Supervisor, topic, critical analysis, patience
(C) Archives, supervisor, topic, flexibility in thinking
(D) Topic, supervisor, good temperament, pre-conceived notions
- 219.** Words and phrases might be a reason for misinterpretation
(A) True
(B) False
- 220.** A communication barrier that comes from anything that is related to the meaning of words
(A) Physical noise
(B) Cultural noise
(C) Physiological noise
(D) Semantic noise
- 221.** Write T if the statement is true, and F if it is false. Novelty refers to how new or original a research topic is.
(A) True
(B) False
- 222.** Indians made advancements in which of the following areas?
(A) Fashion
(B) Cooking
(C) Mathematics
(D) Astrology
- 223.** ____ is a systematic investigation to search for new facts in any branch of knowledge.
(A) Research design
(B) Sampling
(C) Research
(D) Survey
- 224.** Which type of barrier is caused by differences in language or jargon?
(A) Psychological barriers
(B) Physical barriers
(C) Semantic barriers
(D) Cultural barriers
- 225.** What does the word 'support' mean in an academic context?
(A) In an academic context, 'support' means to physically hold up books and materials for students.
(B) In an academic context, 'support' means to provide evidence, reasoning, or examples to back up a claim or argument.
(C) In an academic context, 'support' means to oppose or disagree with a particular idea or argument.
(D) In an academic context, 'support' means to take a break or rest from studying.
- 226.** It is defined as a careful consideration of study regarding a particular concern or problem using Scientific Method
(A) Essay
(B) Inquiry
(C) Narrative report
(D) Research
- 227.** What is the plural form of 'datum'?
(A) Data
(B) Datas
(C) Datums
(D) Datum
- 228.** Evaluate the reasoning in the statement: "My neighbor is a bad driver, so all people from his country must be bad drivers."
(A) Illogical conclusion
(B) Overgeneralization
(C) Personal bias
(D) Logical conclusion
- 229.** A set of data presented as the grounds for substantiating a claim.
(A) Major claim:

- (B) Evidence:
(C) Complex argument:
(D) Inductive argument:
230. Which of the following is NOT a guideline for selecting literature to review?
(A) The material should be unrelated to the research topic.
(B) The material should be recent when possible.
(C) The material should come from varied sources.
(D) The material should be credible.
231. In research, it is important to identify the sources that are most ___ to your topic.
(A) Relevant
(B) Keywords
(C) On topic
(D) Similar
232. During a field trip to a polluted river, Carson, Ella, and Levance observed a large number of dead fish. What is the main cause of this environmental issue?
(A) Water pollution
(B) Air pollution
(C) Soil pollution
(D) Noise pollution
233. "Not bad meaning bad but bad meaning good!" This statement may lead to confusion given that to one person, "bad" normally means unpleasant or evil while to another it means stupid or dope. What kind of noise might occur?
(A) Physical Noise
(B) Psychological Noise
(C) Emotional Noise
(D) Semantic Noise
234. Which disposition is "being orderly in your inquiry" an example of?
(A) Inquisitiveness
(B) Being systematic in thinking
(C) Truth-seeking
(D) Self-confidence
235. True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. Relevant literature is directly connected to the variables or concepts of the study.
(A) True
(B) False
236. When the research is theory generation, what approach is used?
(A) Inductive
(B) Deductive
(C) Experimental
(D) Survey
237. The ___ of qualitative research contend that knowledge is socially constructed and relativistic.
(A) Ontology
(B) Epistemology
(C) View of Thought & Behavior
(D) Research Focus
238. What are Research Skills primarily focused on?
(A) Providing personal opinions on a topic.
(B) The ability to memorize facts and figures.
(C) Finding answers to questions or solutions to problems, gathering information, and interpreting details to support a solution.
(D) Creating aesthetically pleasing research presentations.
239. The subject of research is called ____
(A) A topic
(B) An assignment
(C) The predicate
(D) None of the above
240. In research, we support a claim with reason, then we support that reason with evidence.
(A) False
(B) True

- 241.** What is a systematized body of ideas used for the explanation of phenomenon?
(A) Hypothesis.
(B) Assumption.
(C) Theory.
(D) Construct.
- 242.** Which of the following is not objective of action research?
(A) Improve education practice
(B) Respond to the call of 21st century learners
(C) Improve teacher own craft
(D) Satisfy curiosity
- 243.** A scientist shows interest and pays particular attention to objects or events. He / She asks questions and seeks answers.
(A) Curiosity.
(B) Creativity.
(C) Objectivity.
(D) Honesty.
- 244.** For a teacher in higher educational institution, which of the following is the best option to do in leisure time?
(A) Taking rest in teacher's room
(B) Reading magazines in library
(C) Talking to administrative staff
(D) Doing research
- 245.** This word can be use as a verb or noun ____
(A) Research
(B) Research-based
(C) Researcher
(D) None of the above
- 246.** Which are the elements that are used to evaluate the quality of applied research?
(A) Identifying, planning, observing, applying, analyzing, and making conclusions and recommendations
(B) Validity, reliability, effectiveness, efficiency, feasibility, relevance, and sufficiency.
(C) Time, money, restraints, interviewers, and other resources
(D) None of above
- 247.** A method of acquiring knowledge based on the scientific method of inquiry to enrich the system of objective knowledge in the field of natural and social sciences
(A) Discipline
(B) Research
(C) Theory
(D) Methodology
- 248.** Jason works in quality assurance. His work is vital in the development of pharmaceutical products to:
(A) Ensure effectiveness and safety.
(B) Increase development time.
(C) Increase production costs.
(D) Support continued production.
- 249.** A logical set of general propositions used as principles of explanation of the obvious relationship of certain observed phenomena?
(A) Proposition
(B) Theory
(C) Hypothesis
(D) Variable
- 250.** A patient who is unfamiliar with medical terminology was unable to understand what the doctor was saying. What kind of barrier is this?
(A) Psychological barrier
(B) Socio-psychological barrier
(C) Semantic barrier
(D) Language barrier
- 251.** Select the word that matches this definition: information that is true or real.
(A) References
(B) Outline
(C) Quote
(D) Facts

252. By — we mean without bias.
- (A) Credibility
 - (B) Honesty
 - (C) Objectivity
 - (D) Subjectivity
253. How can the objectivity of the research be enhanced? [2009-JUNE]
- (A) Through its impartiality
 - (B) Through its reliability
 - (C) Through its validity
 - (D) All of these
254. The use of reasons and evidence to support a claim is called-
- (A) Claim
 - (B) Reason
 - (C) Argument
 - (D) Evidence
 - (E) Defense
255. It's encompasses written, numerical and digital literacy as they pertain to understanding science, it's methodology, observation and theories.
- (A) Economic literacy
 - (B) Media literacy
 - (C) Information literacy
 - (D) Scientific literacy
256. Internal motivation for research usually comes from:
- (A) Institutional pressure
 - (B) Curiosity and desire to learn
 - (C) External rewards
 - (D) Peer competition

1.1.2 Meaning of Research

1. The wrong statement related with research in
 - (A) The research has been carried out for invention.
 - (B) The research has been carried out for name and fame.
 - (C) The research has been carried out for ornamental degrees.
 - (D) All the above items are incorrect in relation to research.
2. What does "do research" mean in an academic context?
 - (A) To attend tutorials regularly
 - (B) To conduct a detailed investigation into a specific subject area
 - (C) To apply for undergraduate credits
 - (D) None of above
3. The term which refer the scientific and systematic search for pertinent information on a specific topic is called
 - (A) Resolution
 - (B) Research
 - (C) Theory
 - (D) Data
4. It is an organized search for knowledge
 - (A) Hypothesis
 - (B) Systematic
 - (C) Research
 - (D) Data
5. Hey there! Let's have some fun learning! What is another name for research?
 - (A) Objective Enquiry
 - (B) Timeline
 - (C) Approach
 - (D) Verifying the Frequency
6. Which of the following best describes the comprehensive definition of research?
 - (A) A systematic process of gathering, analyzing, and interpreting data to solve a problem or expand knowledge.
 - (B) A creative work undertaken to increase the stock of knowledge without any systematic basis.
 - (C) A process of gathering information solely for marketing purposes.
 - (D) A method of collecting data without any rigorous control or purpose.

7. It refers to the continuous and repetitious pursuit of knowledge to arrive at the truth.
(A) Research
(B) Inquiry
(C) Investigation
(D) None of above
8. Which statement of research is this, "Research is a structured inquiry that utilizes acceptable scientific methodologies to solve problems and creates new knowledge that is generally acceptable"
(A) Bulmer
(B) Kerlinger
(C) Burns
(D) Grinnel
9. Object of research is to "extend human knowledge of the physical, biological, or social world beyond what is already known"
(A) False
(B) True
10. ___ is the careful study of a topic to find and learn facts.
(A) Essential
(B) Specialist
(C) Motivated
(D) Research
11. What does research in its broadest sense aim to achieve?
(A) The collection of data in a rigorously controlled situation for prediction or explanation.

(B) The creation of new entertainment content for the public.
(C) The development of marketing strategies for businesses.
(D) The preservation of outdated knowledge for future reference.
12. A careful study to find and learn facts
(A) Professional
(B) Research
(C) Serious
(D) Specialist
13. Research is born out of
(A) Human curiosity.
(B) Natural incidents.
(C) Human requirements.
(D) None of these.
14. Research is something that people undertake to find out things in a systematic way, thereby increase their knowledge
(A) True
(B) False
15. What does it mean if research is "biased"?
(A) It is based on fair and objective data
(B) It is influenced by personal opinions or preferences
(C) It uses only graphs
(D) It is always correct
16. Who is the author that defined research as a systematic controlled, empirical, and critical investigation of hypothetical propositions about the presumed relations among natural phenomenon?
(A) Good
(B) Kerlinger
(C) Martinez
(D) Parel
(E) Not Given
17. It is a purposive, systematic, and scientific process of gathering, analyzing, classifying, organizing, presenting and interpreting data for the solution of a problem, for prediction, for discovery of a truth, or for the expansion or verification of existing knowledge, all for the preservation and improvement of the quality of human life.
(A) RESEARCH
(B) CRIMINOLOGICALRESEARCH
(C) PURE/BASICRESEARCH
(D) APPLIED RESEARCH

18. Systematic search for answers to questions is called
(A) Nursing Research
(B) Research
(C) Clinical Research
(D) All the above
19. "Searching for knowledge" is known as
(A) Inquiry
(B) Investigation
(C) Research
(D) Investigate
20. It derives from the French recherche, from rechercher, to search closely where "chercher" means "to search"; its literal meaning is 'to investigate thoroughly'.
(A) INQUIRY
(B) THESIS
(C) PROBLEM
(D) RESEARCH
21. What is the primary definition of research according to the provided text?
(A) A casual collection of facts.
(B) A systematic process of collecting, analyzing, and interpreting information to answer questions or solve problems.
(C) The act of generating new knowledge without a structured approach.
(D) An unsystematic review of existing literature.
(E) A subjective process based on personal opinions.
22. Who defined educational research as an activity directed towards the development of an organized body of scientific knowledge about the events with which educators are concerned?
(A) Scates (1941)
(B) Borg and Gall (1979)
(C) Travers (1969)
(D) None of above
23. Which of the following is NOT true about research?
(A) Research should make people's lives easier.
(B) Research is important in determining the community's needs.
(C) Research can study any problem.
(D) Research enables us to know widespread data and information about a topic/idea.
24. Research is [2010-JUNE]
(A) Searching again and again
(B) Finding solution to any problem
(C) Working in a scientific way to search for truth of any problem
(D) None of the above
25. Who is the author that defined research as a careful, critical, disciplinary inquiry varying in techniques and methods according to the nature and condition?
(A) Aquino
(B) Estolas, et al.
(C) Good
(D) Kerlinger
(E) Not Given
26. Who among the following gave the below statement "research is an honest effort carried out through insight"
(A) Cook.
(B) Crick.
(C) Watson.
(D) None of the above.
27. A systematic investigation of a subject to find facts is called
(A) Research
(B) Works Cited Page
(C) Citation
(D) In-Text Citation
28. What is a systematic investigation for information?
(A) Curiosity

- (B) Inquiry
 - (C) Questions
 - (D) Research
29. Research is a “Scientific undertaking” opined by
- (A) Young
 - (B) Kerlinger
 - (C) Kothari
 - (D) Emory
30. What does the term ‘research’ mean?
- (A) Random guessing and speculation
 - (B) Copying information from others
 - (C) Ignoring evidence and making assumptions
 - (D) Systematic investigation and study of materials and sources to establish facts and reach new conclusions.
31. What is inquiry?
- (A) Entertaining
 - (B) Researching
 - (C) Arguing
 - (D) Writing
32. The word research was derived from the French word “recherche” meaning the ____
- (A) Act of investigate
 - (B) Act of inquire
 - (C) Act of searching
 - (D) Act of explore
33. What should be done for constructing and standardizing a psychological test?
- (A) Should not be considered a research because it is a small-scale activity.
 - (B) Should not be considered a research because it does not test any hypothesis.
 - (C) Should be considered a valuable piece of research because a lot of labor and energy have gone into it.
 - (D) Should be considered a research of value because the test so developed can be used later by others.
34. An organized and systematic way of finding answers to questions.
- (A) Key Informants.
 - (B) Qualitative.
 - (C) Quantitative.
 - (D) Research.
35. A creative and systematic work undertaken to increase the stock of knowledge. It involves the collection, organization, and analysis of information to increase understanding of a topic or issue.
- (A) Brainstorming
 - (B) Panel Discussion
 - (C) Research
 - (D) Interview
36. Which term refers to a systematic process of investigating a topic to discover new information?
- (A) Research Problem
 - (B) Research
 - (C) Hypothesis
 - (D) Methodology
37. It is the systematic studies of natural and social phenomena.
- (A) Research
 - (B) Experimentation
 - (C) Demonstration
 - (D) None of the above
38. Grinnel (1993) stated that The word of research is composed of two syllables-
- (A) R and S
 - (B) Res and arch
 - (C) “Re” and “search
 - (D) All of the above
39. What is educational research?
- (A) An activity which is directed towards the development of science of behavior in educational conditions.
 - (B) Type of procedure employed in answering questions about education.

- (C) Contributing towards finding solutions of educational problem.
(D) All of the above.
40. What term refers to a systematic investigation designed to extend knowledge of what is already known of the physical, biological, or social world?
(A) Inquiry
(B) Ethics
(C) Research
(D) Theory
41. The Word Research is derived from ____ word 'recherche'
(A) Latin
(B) French
(C) German
(D) English
42. What is research?
(A) A type of celebration.
(B) A process of collecting and analyzing information to increase understanding of a topic.
(C) A form of exercise.
(D) A way to cook food.
43. It is a systematic and a scientific process of inquiry or investigation.
(A) Science
(B) Mathematics
(C) Arts
(D) Research
44. In a literature class, Jackson, Avery, and Daniel are discussing a novel they just read. They are trying to identify the central message or idea about life that the author is trying to convey. What is this called?
(A) Relevant
(B) Extraneous
(C) Purpose
(D) Theme
45. What is "research" according to the IB? Check all that apply.
(A) A type of service at the MYP level.
(B) Forming your own conclusions about data.
(C) Collecting data, compiling lists, or conducting surveys.
(D) Reporting data collected from Wikipedia.
(E) Collecting data from a verified source.
46. Inquiry and research are both seeking answers to the given problem
(A) True
(B) False
47. Research is derived from the old French word
(A) Sercher
(B) Cercher
(C) Cerchier
(D) Serchier
48. ____ is commonly known as search for knowledge.
(A) Search.
(B) Research.
(C) Google.
(D) Wisdom.
49. It is a systematic investigation or scientific inquiry that aims to find solutions to problems.
(A) Review of Related Literature
(B) Research
(C) Abstract
(D) Background/Introduction
50. Any systematically organized body of verified knowledge about a certain class of facts and events is known as
(A) Hypothesis.
(B) Science.
(C) Experiment.
(D) Fact.

51. The art of generating concept and understanding in a new and creative way.
(A) Research
(B) Inquiry
(C) Probing
(D) Investigation
52. The words examination, exploration, investigation, probation and study have the nearest meaning with ____
(A) Data
(B) Validation
(C) Research
(D) Distribution
53. Research is an investigation following ordered steps leading to discovery of new information or concepts.
(A) True
(B) False
54. The systematic investigation that aims to establish facts and reach new conclusions.
(A) Observation
(B) Research
(C) Investigation
(D) Scientific Investigation
55. The word 'Anusandhan' implies ____
(A) Goal Orientation
(B) Following an aim
(C) Attaining an aim
(D) Praying to achieve an aim
56. True or false: Research is the process of locating information to answer a question or solve a problem.
(A) True
(B) False
57. It is an art of scientific investigation.
(A) Terms
(B) Research paper
(C) Research
(D) Hypothesis
58. Research was derived from the French word ____ which means "search or seek."
(A) CIRCLE
(B) CERCIE
(C) CERCHIER
(D) CIRCHE
59. What is the systematic investigation in research primarily used for?
(A) To establish facts on an existing problem.
(B) To create new entertainment content.
(C) To develop marketing campaigns.
(D) To gather information for personal use.
60. Which author defined research as a systematic search for pertinent information on a specific topic or problem?
(A) Estolas, et al.
(B) Good
(C) Kerlinger
(D) Aquino
61. Science is a ____ way of acquiring knowledge about a particular field of study.
(A) Systematic
(B) Innovative
(C) Experimentation
(D) Limited
62. Research is otherwise called as ____
(A) Objective Enquiry
(B) Timeline
(C) Approach
(D) Verifying the Frequency
63. What does it mean to do research?
(A) To write the end or last part of something
(B) To do a careful study to find and learn facts
(C) To write the beginning of a story or paper
(D) To repeat the exact words that someone said or wrote

64. Research is a process of executing various mental acts for discovering and examining facts and information to prove all accuracy or truthfulness of your claims or conclusions.
(A) True
(B) False
65. Research is the process of collecting information or data from varied sources.
(A) True
(B) False
66. It expounds the meaning of the word which would include the explanation of its etymology, examples, and even samples cases, if applicable.
(A) Conceptual Definition
(B) Operational Definition
(C) Expanded Definition
(D) General Definition
67. Process that uses observations and investigation to gain knowledge about events in nature is called ____
(A) Science
(B) Predicting
(C) Inferring
(D) None of above
68. The research is always [2008-DECEMBER]
(A) Verifying the old knowledge
(B) Exploring new knowledge
(C) Filling the gap between knowledge
(D) All of these
69. Research is ____
(A) An observation to an object which is based on questions
(B) An organized and systematic way of finding answers to questions
(C) An implementation of a strategy to see whether it works
(D) A comparison between two events to see the differences between them
70. ____ is considered as careful investigation or inquiry to find out new facts in any branch of knowledge.
(A) Search.
(B) Research.
(C) Google.
(D) Wisdom.
71. Which of the following sentences uses the word 'research' correctly?
(A) I need to research for my upcoming vacation.
(B) The research was a delicious meal.
(C) She researches her hair every morning.
(D) He research the book yesterday.
72. A systematic investigation which involves collecting, analyzing, and interpreting information in a sequential manner in order to increase our understanding of the phenomenon of interest is also known as
(A) Statistics
(B) Analysis
(C) Research
(D) Methodology
73. What is the origin of the word "research"?
(A) It comes from the Latin word "investigare," meaning to investigate.
(B) It comes from the French word "rechercher," meaning to search.
(C) It comes from the Greek word "episteme," meaning knowledge.
(D) It comes from the German word "forschen," meaning to explore.
74. Research is any organized inquiry carried out to provide information for solving problems.
(A) True
(B) False
75. The investigation into and study of materials and sources in order to establish facts and reach new conclusions. (a)
(A) Credible
(B) Research

- (C) Synthesize
(D) Cite
76. Educational research has to do with
(A) Proving that educators are scholars
(B) Solving general social problems
(C) Scientific investigating and solving of educational problems
(D) Solving educational problems
77. The main goal of educational research is to advance our understanding of pedagogy and the educational system as a whole
(A) True
(B) False
78. The word research literally means:
(A) To search once
(B) To search again
(C) To conclude facts
(D) To summarize knowledge
79. What is research all about?
(A) It is for conducting new resources to be implemented in a working environment.
(B) It is used for all kinds of case studies.
(C) It eliminates solutions to present problems.
(D) It answers a specific question and defends the answer using critical reasoning.
80. What is the systematic investigation conducted to establish facts?
(A) Experiment
(B) Research
(C) Survey
(D) Analysis
81. It is a structured inquiry that utilizes acceptable scientific methodology to solve problems and creates new knowledge that is generally acceptable.
(A) Research
(B) Methodology
(C) Scientific Inquiry
(D) Generalization
82. Which of the following is NOT considered research according to Schmitz?
(A) A systematic process of collecting and analyzing data.
(B) A compilation and digestion of all available data.
(C) A thought process that clarifies ideas.
(D) A collection of footnotes and bibliographical materials.
83. The process of systematically investigating and studying materials and sources to establish facts and draw new conclusions is known as ____
(A) Hypothesis
(B) Plagiarism
(C) Research
(D) Citation
84. Which of the following is a systematic investigation aimed at discovering and interpreting facts?
(A) Survey
(B) Observation
(C) Research
(D) Experiment
85. The process of finding information or materials on a specific topic is called
(A) Blogging
(B) Bookmarking
(C) Citing
(D) Researching
86. The definition of research is:
(A) A systematic investigation to establish facts or principles
(B) A random collection of data
(C) An unplanned exploration
(D) A casual observation
87. Research involves making ____ investigation.
(A) Careful
(B) Validated
(C) Issue
(D) Known

88. Choose the correct synonyms or paraphrases of: trends
(A) Famous people
(B) Number
(C) Double
(D) Patterns
89. Research studies what happens in any field of knowledge.
(A) True
(B) False
(C) Biography
(D) Narrative Report.
90. Research is process in which in-depth study of the problem is carried out.
(A) TRUE
(B) FALSE
91. "Research is an organized and systematic enquiry" Defined by
(A) Marshall
(B) . Young
(C) Emory
(D) Kerlinger
92. Research means mere transformation of facts from one location to another.
(A) True
(B) False
93. According to Cohen et al., what defines research?
(A) A complex, challenging and thoughtful activity
(B) A straightforward answer-finding task
(C) A mechanistic exercise
(D) An isolated, simple process
94. Who said "Educational Research is that activity which is directed toward development of science of behavior in educational situation?"
(A) Whites.
(B) Travers.
(C) Best.
(D) Monroe.
95. What do you think a research is?
(A) Copying information from the internet
(B) Studying information from sources to find fact
(C) Asking people what they think about something
(D) Finding information to help answer the research question
96. Research is related with ____
(A) Discovery of New Idea
(B) Solution of a problem
(C) Investigation of a Problem
(D) All of the above
97. Research can be defined as
(A) A careful or diligent work to reach a new understanding
(B) Non-fiction text
(C) Give credit to someone else's words
(D) Your personal experience
98. If a study is perceived as 'objective', what does this mean?
(A) It may yield a range of different responses
(B) Free from bias, uninfluenced by personal expectations, emotions or personal opinions
(C) Multiple researchers will find different results
(D) None of above
99. Keywords to define research in simple way could be ____
(A) Problems
(B) Methods/Procedures
(C) Solutions/Truth
(D) Statistics
(E) Presentation
100. Research involves solving a/an ____
(A) Careful
(B) Validated
(C) Issue
(D) Known

- 101.** Reference: Abdelgafur, et al. (2020). Purposive Communication Learning Guide. Marawi City, Philippines: Mindanao State University. 1. What do you call the systematic study or investigation of something for the purpose of answering questions posed by [the one who conducts the study] (Creswell, 2007, cited in Abdelgafur, et al., 2020)?
- (A) Interview
 - (B) Analysis
 - (C) Research
 - (D) Experiment
- 102.** Research is best defined as:
- (A) Guessing results
 - (B) Systematic investigation
 - (C) Informal observation
 - (D) Random thinking
- 103.** What do you call the systematic study or investigation of something for the purpose of answering questions posed by [the one who conducts the study] (Creswell, 2007, cited in Abdelgafur, et al., 2020)?
- (A) Interview
 - (B) Analysis
 - (C) Research
 - (D) Experiment
- 104.** Pick an alternative for research
- (A) Suggested
 - (B) Created
 - (C) Investigated
 - (D) Executed
- 105.** Research is a systematic inquiry geared towards providing information to solve problems.
- (A) True
 - (B) False
- 106.** According to Mason & Bramble (1989), research is concerned with finding ____ It is a systematic and organized search for knowledge or answers to questions.
- (A) Answers
 - (B) Problems
 - (C) Opinions
 - (D) Stories
- 107.** What is the best definition of research as taught in Basic Research Skills?
- (A) Gathering data from books
 - (B) Repeating previous experiments
 - (C) Adding something new to existing knowledge
 - (D) Memorizing facts
- 108.** What is the subject of research?
- (A) Specific aspects of the object
 - (B) Researcher personality
 - (C) Teaching method
 - (D) Theory list
 - (E) Results
- 109.** Aling Rosa wants to know the reason behind the decrease of her sales for the day
- (A) Inquiry
 - (B) Research
 - (C) Quantitative
 - (D) Qualitative
- 110.** A scientific and systematic search for knowledge and information on specific topic is called as ____
- (A) Science
 - (B) Education
 - (C) Research
 - (D) None of the above
- 111.** ____ is the knowledge obtained by observing natural events and conditions in order to discover facts and formulate laws.
- (A) Science
 - (B) Chemistry
 - (C) Biology
 - (D) Learning

- 112.** Meaning of research
- (A) Research is a casual conversation about ideas.
 - (B) Research is a random collection of opinions.
 - (C) Research is a method of storytelling without evidence.
 - (D) Research is a systematic investigation to establish facts or principles.
- 113.** A scholarly report of an investigation, the product of which contributes to general knowledge, has practical value, contributes to an area of specialization.
- (A) Research
 - (B) Research proposal
 - (C) Experiment
 - (D) Investigation
- 114.** It means "Search for Knowledge"
- (A) Research
 - (B) Quali-Quant
 - (C) Quasi
 - (D) Experimental
- 115.** Which of the following statements regarding the meaning of research are correct
- (A) It leads to enhancement of knowledge
 - (B) Research refers to a series of systematic activity or activities undertaken to find out the solution of a problem
 - (C) It is a systematic, logical and an unbiased process wherein verification of hypothesis data analysis, interpretation and formation of principles can be done
 - (D) All of the above
- 116.** Which statement of research is this, "scientific research is a systematic, controlled empirical and critical investigation of propositions about the presumed relationships about various phenomena"
- (A) Bulmer.
 - (B) Kerlinger.
 - (C) Burns.
 - (D) Grinnel.
- 117.** ____ is a movement from the known to the unknown
- (A) Research
 - (B) Hypothesis
- 118.** Investigation into materials and sources to establish facts and conclusions
- (A) Bias
 - (B) Relevant
 - (C) Infographic
 - (D) Research
- 119.** To 'investigate' something means to:
- (A) Examine it thoroughly
 - (B) Ignore it
 - (C) Destroy it
 - (D) Forget about it
- 120.** The aim of research is the search for knowledge.
- (A) True
 - (B) False
- 121.** Research is a process of
- (A) Systematic inquiry of information
 - (B) Only revising existing information
 - (C) Only Reporting of information
 - (D) None of the above
- 122.** Research means
- (A) Searching again and again.
 - (B) Finding solution to any problem.
 - (C) Scientific approach to new truth.
 - (D) Conducting experiment.
- 123.** Which word is a synonym for EMPHASIZE in this sentence? In the 1930s, Vygotsky EMPHASIZED the importance of targeting a student's specific 'zone of proximal development' (ZPD).
- (A) Ball bearing
 - (B) Massive
 - (C) Highlight
 - (D) Serve the function of

- 124.** What research is?
(A) A lab experiment.
(B) A procedure.
(C) A systematic Enquiry.
(D) A report.
- 125.** To find information to learn about a topic by searching for it
(A) Evaluate
(B) Credible
(C) Research
(D) Paraphrase
- 126.** Complete the sentence with the most accurate option: Research is ___ from the ___ and makes it possible to overcome ___ about the processes and ___ that surround our lives.
(A) Developed; scientific method; common knowledge; phenomena
(B) Designed; experimental method; opinions; facts
(C) Conducted; statistical method; beliefs; events
(D) Implemented; technical method; anecdotes; situations
- 127.** In all cases, the product of scientific research is
(A) Information.
(B) Material wealth.
(C) Cultural and artistic values.
(D) Spiritual values.
- 128.** ___ is a way of learning about the natural world and the knowledge gained through that process.
(A) Data
(B) Controlled experiment
(C) Science
(D) Variable
- 129.** The research is all about
(A) Exploring new knowledge
(B) Finding solution for problem
(C) All of above
(D) None of above
- 130.** True or False-“Meaning” can vary according to context
(A) True
(B) False
- 131.** It is a careful, diligent and exhaustive investigation of a specific matter, having as its aim the advancement of mankind’s knowledge
(A) RESEARCH
(B) INQUIRY
(C) THESIS
(D) PROBLEM
- 132.** Research
(A) A subject for composition or essay
(B) Act of using or closely imitating thoughts of another
(C) To make a brief statement
(D) Inquiry or investigation into a subject
- 133.** THE OBJECT OF AN INVESTIGATION IS
(A) EXTEND KNOWLEDGE BEYOND WHAT IS ALREDY KNOW.
(B) MEMORIZE EVERYTHING ABOUT A TOPIC.
(C) GIVE A PERSONAL PERSPECTIVE ON THE TOPIC.
(D) None of the above.
- 134.** What is the definition of research?
(A) A creative way of solving puzzles.
(B) A systematic way of finding answers to questions.
(C) A quick method for gathering opinions.
(D) An informal process of discovery.
- 135.** Which of the following is the essence of research?
(A) Misunderstanding society and social processes
(B) Giving misinformation to people
(C) Destroying theories
(D) Enhancing knowledge

136. Choose the definition of: research
- (A) Careful study that is done to find and report new knowledge about something
 - (B) Reasonable to trust or believe
 - (C) A list of the books, websites, magazines, articles, etc., that are mentioned in a text
 - (D) To say (something that someone else has said or written) using different words
137. Research's elements as Prolonged, purposeful and intensive search Constitute a method of discovery Comprises defining, redefining problem Formulating hypothesis Connecting, organizing and evaluating data Proposed in the definition of
- (A) Rusk.
 - (B) Clifford Woody.
 - (C) PM. Cook.
 - (D) Munroe.
138. What does it mean to "suit research findings into previous research"?
- (A) To connect and integrate findings with the existing body of knowledge
 - (B) To ignore contradictory findings
 - (C) To manipulate data to fit existing theories
 - (D) To replicate previous studies exactly

1.1.3 Nature of Research

1. An essential Criterion of Scientific study is
 - (A) Belief
 - (B) Value
 - (C) Objectivity
 - (D) Subjectivity
2. Research is based on invalid procedures and principles.
 - (A) TRUE
 - (B) FALSE
3. What kind of ideas can't be empirically researched?
 - (A) Effectiveness of different methods of instruction.
 - (B) Description of educational practices.
 - (C) Issues of values and morality such as the correctness of having prayer in schools.
 - (D) Factors helpful in predicting future drug use.
4. OCCUPATION OF HOUSEHOLD HEAD
 - (A) NATURE: QUALITATIVE
 - (B) NATURE: QUANTITATIVE
 - (C) SOURCE: PRIMARY
 - (D) SOURCE: SECONDARY
5. Whether our behavior is biologically determined or is determined by the environment in which we live is part of the
 - (A) Biopsychosocial approach
 - (B) Nature versus nurture debate
 - (C) Evolutionary conundrum
 - (D) Cognitive approach
6. In every field research promotes systematic and gradual advancement of knowledge but still discoveries are rare:
 - (A) Not able to think beyond a point.
 - (B) It requires a continuous critical investigation.
 - (C) Experimental work needed for discovery is not easily forthcoming.
 - (D) Most people lack depth of knowledge for it.
7. Not based on, or affiliated with, any religion.
 - (A) Abstract thinking
 - (B) Concrete thinking
 - (C) Paraprofessional
 - (D) Nonsectarian
8. What does "empirical" mean?
 - (A) Based on, concerned with, or verifiable by observation or experience rather than theory or pure logic

- (B) Related to the empire or an emperor
 - (C) Based on emotions or feelings
 - (D) Related to the empirical formula in chemistry
9. True or False. Using the scientific method can prove something
- (A) True
 - (B) False
10. Which of the following is a limitation of scientific research, even though science uses standardized methods and aims for objectivity?
- (A) Objectivity
 - (B) Probability
 - (C) Subjectivity
 - (D) Standardization
11. The scientific method refers to a set of systematic techniques used to acquire, modify, and integrate knowledge concerning —
- (A) Observable and measurable phenomena.
 - (B) Populations, but not samples.
 - (C) Statistics, but not parameters.
 - (D) Any phenomena.
12. Scientific knowledge is —
- (A) Intuitive
 - (B) Empirical
 - (C) Permanent
 - (D) Subjective
13. The main difference between research and non-research is
- (A) The type of skills we use to discover something.
 - (B) The utilization of acceptable scientific methodology to solve problems to create new knowledge.
 - (C) The quantitative and qualitative methods that are to be used.
 - (D) All the above.
14. According to the text, which field is likely more quantitative in its exploration of pedagogical issues?
- (A) English
 - (B) Sociology
 - (C) Engineering
 - (D) Psychology
15. It is a systematic process that is used to solve problems and find solutions.
- (A) Philosophy
 - (B) APA
 - (C) Research
 - (D) None of above
16. Which of the following could be the differences of the words research and inquiry?
- (A) Uses methods
 - (B) Scientific procedure
 - (C) Discovering truths
 - (D) Formulates questions
17. What distinguishes problem solving from research?
- (A) Research aims for generalization
 - (B) Research is less rigorous
 - (C) Problem solving contributes to theory
 - (D) Problem solving is broader
18. Research does not always have to be original, meaning it can be a replication or repetition in a different context. Do you agree with this statement?
- (A) Don't agree
 - (B) Agree
19. Can research that has already been carried out be carried out again by another researcher?
- (A) Can't
 - (B) Can
20. What does researching education involve?
- (A) Simple social settings
 - (B) Complex social settings with multiple stakeholders
 - (C) Individual learning
 - (D) Single stakeholder involvement

21. Which of the following is NOT a characteristic of conclusive research?
- (A) Well-defined research objectives
 - (B) Flexible research design
 - (C) Large representative samples
 - (D) Detailed data analysis
22. In a quest to discover new species, Dia embarked on a journey into the uncharted rainforest. She knew that ____ is a movement from the known to the unknown.
- (A) Research
 - (B) Hypothesis
23. Research utilizes proven logical process in gathering the data.
- (A) YES
 - (B) NO
24. Old disciplines must evolve to embrace new research and developments in the educational field.
- (A) T
 - (B) F
25. According to Genato et al. (1993), research is a process of obtaining knowledge through techniques where truth, accuracy, validity, reliability, and other criteria can be ____
- (A) Ascertained
 - (B) Ignored
 - (C) Fabricated
 - (D) Overlooked
 - (E) Assumed
26. Media research is about
- (A) The analysis of financial media trends
 - (B) The study of media production techniques
 - (C) The evaluation of media advertising strategies
 - (D) The systematic study of media content, audience behavior, and its societal impact.
27. Which field of study focuses on expanding knowledge and understanding without immediate concern for practical applications?
- (A) Applied science
 - (B) Botany
 - (C) Basic science
 - (D) Biochemistry
28. Research focus on questions they regard as important for understanding the nature of human communication
- (A) True
 - (B) False
29. According to interpretivists, why is it challenging to be completely unbiased in sociology?
- (A) Sociology is about numbers and statistics.
 - (B) Sociology is about people, making complete objectivity difficult.
 - (C) Sociology is a natural science.
 - (D) Sociology does not involve any human interaction.
30. A literature review is based on the assumption that
- (A) Copy from the work of others.
 - (B) Knowledge accumulates and learns from the work of others.
 - (C) Knowledge disaccumulates.
 - (D) None of the above option.
31. The “soft sciences” usually involve the study of human behavior: psychology, economics, and sociology.
- (A) True
 - (B) False
32. If an area has high sustainability, it most likely has ____
- (A) Only one kind of producer
 - (B) A large amount of natural disasters
 - (C) A declining insect population
 - (D) A wide variety of organisms

33. Empirical research is based on:
- (A) Intuition
 - (B) Observation and experimentation
 - (C) Assumptions only
 - (D) Literature alone
34. It aims to develop new knowledge and apply scientific and engineering principles to connect the knowledge in one field to that in others.
- (A) Research
 - (B) Methodology
 - (C) Scientific Inquiry
 - (D) Generalization
35. In which of the following respects is a theory 'not' different from a belief?
- (A) Verifiability.
 - (B) Demonstrability.
 - (C) Acceptability.
 - (D) Antecedent consequent relationships.
36. The "nature" argument suggests that people socialize and behave in certain ways because of
- (A) The way they are born
 - (B) The way they are raised
 - (C) The alignment of the stars
 - (D) The cultural expectations of the society
37. We should look for articles that are written objectively in our research. If something is objective, it focuses on ____ instead of opinions or feelings.
- (A) Beliefs
 - (B) Facts
 - (C) Biases
 - (D) Citations
38. This question is about originality. When can a research result be defined original?
- (A) The process through which the research lead to the result is novel.
 - (B) The research result was not known before.
 - (C) The research result was very hard to achieve.
 - (D) The research result was unexpected.
 - (E) The research result can lead to a useful product.
39. Objective, subjective, quantitative, qualitative etc.
- (A) Data gathering method employed
 - (B) Place where it is conducted
 - (C) Nature of data collected
 - (D) None of above
40. Strategically analyze why societies and cultures might differ in their use of communication codes.
- (A) Because they have different degrees of individualism and cultural norms
 - (B) Because all societies use the same codes
 - (C) Because communication codes are universal
 - (D) Because language is not influenced by culture
41. Educational research is unique because
- (A) It focus on futures.
 - (B) It is social.
 - (C) Its value laden.
 - (D) All of the above.
42. Research is a journey from ____
- (A) Data to Information
 - (B) Known to Unknown
 - (C) Unknown to Known
 - (D) Information to Data
43. Multiple Choice: Read each question carefully and choose the BEST answer. Which statement is INCORRECT about the nature of research?
- (A) It follows a systematic process
 - (B) It is based on observable evidence
 - (C) It manipulates opinions without validation
 - (D) It aims to answer specific questions

44. Technological, biological, social experiments are united by:
(A) The nature of the studied objects and phenomena;
(B) The structure of the studied objects and phenomena;
(C) Organization of the experiment;
(D) Research objectives of the experiment;
(E) Method of forming experimental conditions;
45. Research reports are based only on personal opinions.
(A) TRUE
(B) FALSE
(C) All the above
(D) None of the above
46. Interpretive philosophy is all of the following EXCEPT
(A) Experiment
(B) Counting numbers
(C) Concern with meaning
(D) Creating a social world through language
47. Research is always absolutely conclusive, due to perfect information or uncontested interpretations.
(A) True
(B) False
48. Business research primarily aims at:
(A) Guesswork
(B) Systematic inquiry
(C) Random assumptions
(D) Personal opinions
49. According to Rolfe (2002), what is the nature of understanding that arises from a phenomenological study, as discussed by Aarav and Ella in their research project?
(A) It is the only possible understanding
(B) It is one possible understanding among potential others
(C) It is universally accepted
(D) It is scientifically proven
50. What is scientific knowledge based on?
(A) Evidence and research
(B) Opinion
(C) Belief
(D) Guess
(E) Tradition
51. Theory focuses on language use and educational achievement.
(A) Howard Becker
(B) Bernstein
(C) Bourdieu
(D) None of above
52. Looking in company files for information is considered formal research.
(A) True
(B) False
53. An assumption is a premise that is ____ stated.
(A) Directly
(B) Implicitly
(C) Completely
(D) None of above
54. Objective research is based on:
(A) Personal experiences
(B) Replicable observations
(C) Unreal assumptions
(D) Qualitative analysis
55. Research should not be considered as academic activity only
(A) TRUE
(B) FALSE
56. Until very recently, approximately 130 years ago, psychology was considered to be a branch of ____
(A) Biology
(B) Philosophy
(C) Religion
(D) None of above

57. A set of beliefs that may make use of science, but the conclusions and predictions are not based on observation or scientific evidence
(A) Subjective reasoning
(B) Objective reasoning
(C) Empirical evidence
(D) Pseudoscience
58. In every field research pursuits promote systematic and gradual advancement of knowledge but discoveries are rare because
(A) Research is a continuous critical investigation
(B) Most people lack depth of knowledge needed for it
(C) It is not common to be able to think beyond a grooved channel
(D) Sustained experimental work needed for discoveries is not easily forthcoming
59. What relationship is NOT Part-Whole?
(A) Carrot/Garden
(B) Key/Piano
(C) Writer/Computer
(D) Flower/Patch
60. Research is a/an ____ method.
(A) Artistic
(B) Scientific
61. Since tracking data on intelligence testing, there has been a strong upward/positive trend in intelligence scores. This has been named the
(A) Hawthorne Effect
(B) Flynn Effect
62. Research inculcates scientific and inductive thinking and it
(A) Enhances the behavior of social beings.
(B) Promotes the development of logical habits of thinking.
(C) Establishes the facts and reasons for the relations.
(D) Brings out the latest changes.
63. Research is a ____ process
(A) Linear
(B) Spiral
(C) Hexagonal
(D) Triangle
64. Scientific knowledge is (a).
(A) Intuitive
(B) Empirical
(C) Permanent
(D) Subjective
65. Research involves refined distinctions, interpretations, and some generalizations. It is a systematic technique of employing specialized tools, instruments and procedures in order to obtain an adequate solution of ____
(A) A puzzle
(B) A problem
(C) A situation
(D) A decision
66. In higher education, research and education are two activities that:
(A) Can go only in sequential order.
(B) Can go together.
(C) Cannot go together.
(D) Can go together but at the expense of each other.
67. According to nature, fossil fuels are those created underground for thousands of years. One of the following elements is NOT a fossil fuel:
(A) Coal
(B) Phosphorus
(C) Natural gas
(D) Oil

1.1.4 Characteristics of Research

1. Which among the following is not a characteristics of research?
(A) It is based on observable evidence
(B) It involves precise observation.
(C) It is based on presumptive evidence.
(D) It is directed towards the solution of a problem
2. This characteristic of research refers to being tested for accuracy and is based on real life experiences —
(A) Validity
(B) Empirical
(C) Reliability
(D) Accuracy
3. A characteristic of research which refers to the researcher's own investigation and shows originality
(A) Original Work
(B) Empirical
(C) Systematic
(D) Analytic
4. What is characteristic of your claim or argument or reason?
(A) It is easy to read.
(B) It is supported by other researchers.
(C) It is convenient.
(D) It is freely expressed. TagsChapter 5
5. Which of the following characteristics describe the ability to reuse the research process conducted?
(A) Methodical
(B) Replicability
(C) Analytical
(D) Cyclical
6. Characteristic of research that is possible to do easily or conveniently.
(A) Systematic
(B) Objective
(C) Feasible
(D) Empirical
(E) Clear
7. What characteristic of research is described here? It follows valid, definite principles, frameworks and procedures.
(A) Logical
(B) Cyclical
(C) Analytical
(D) Replicable
8. When you are writing a research paper, you should be aware that all of the following are characteristics of a good research EXCEPT?
(A) The topic should be relevant
(B) The topic should be obsolete
(C) The topic educates the readers
(D) The topic is the researcher's interest
9. Characteristics of critical thinkers are; EXCEPT:
(A) Making personal attack
(B) Reject standardized formats for problem solving
(C) Capable of making balanced judgement
(D) Have an interest in a wide range of fields
10. Characteristic of research refers to the degree to which research method produces stable and consistent results.
(A) Validity
(B) Reliability
(C) Rigorous
(D) Credibility
(E) Empirical
11. What does it mean when research is described as systematic?
(A) It is based on personal opinions
(B) It is based on random methods
(C) There are specific steps to follow
(D) It is kept secret and confidential
12. Each word of a research should be
(A) Full of wisdom.
(B) Justifiable.
(C) Enjoyable.
(D) Entertaining.

13. Which of the following characteristics of research describes that the results of research should be clearly and explicitly stated?
- (A) Valid and Verifiable
 - (B) Controlled
 - (C) Clear
 - (D) Rigorous
14. Criteria of Good Research-Good research is characterized by:
- (A) Logical reasoning
 - (B) Systematic and controlled approach
 - (C) Empirical evidence
 - (D) All of the above
15. In regions with established research practices, which characteristic is most typical of decision-making?
- (A) Preference for impulsive choices
 - (B) Reliance on informal anecdotes
 - (C) Avoidance of written documentation
 - (D) Formal use of validated insights
16. A common test in research demands much priority on [2010-JUNE]
- (A) Reliability
 - (B) Useability
 - (C) Objectivity
 - (D) All of the above
17. Criteria of Good Research-Which of the following is NOT a characteristic of good research?
- (A) Based on random guesses
 - (B) Objective and unbiased
 - (C) Reliable and valid
 - (D) Uses appropriate methodology
18. Research is conducted using methods and techniques that are appropriate to the research problems or objectives.
- (A) Replicable
 - (B) Critical
 - (C) Analytical
 - (D) Methodical
19. Which characteristic of research refers to the ability to be carried out within practical constraints?
- (A) Empirical
 - (B) Feasible
 - (C) Systematic
 - (D) Theoretical
20. QUALITIES OF A GOOD RESEARCH are
- (A) Systematic
 - (B) Logical
 - (C) Empirical
 - (D) All of the above
21. Research is said to be critical if it exhibits cautious judgement.
- (A) TRUE
 - (B) FALSE
22. A characteristic of research which describes "dealing with facts, not with mere opinions or assumptions."
- (A) Objectiveness
 - (B) Systematic
 - (C) Timeliness
 - (D) Relevance
23. Which of the following is NOT a characteristic of a related literature material
- (A) Materials to be reviewed may include any topic
 - (B) Materials must be objective and unbiased
 - (C) Materials must be as recent as possible
 - (D) Materials must be based on facts or data
24. Characteristic of research refers to how accurately a method measures what it is intended to measure.
- (A) Validity
 - (B) Reliability
 - (C) Rigorous
 - (D) Credibility
 - (E) Empirical

25. Characteristic of research which states that research is conducted in an orderly manner without bias.
- (A) Methodical
 - (B) Time-bound
 - (C) Analytical
 - (D) Logical
26. The use of new technology is considered in doing a research nowadays. Which research characteristics is being shown?
- (A) Accuracy
 - (B) Clarity
 - (C) Objectiveness
 - (D) Timeliness
27. What makes the research title 'The Effects of Arts-Integrated Instruction on Arithmetic Skills of Students for S.Y. 2018-2019' erroneous?
- (A) It specifies a school year, making the title too narrow and time-bound.
 - (B) It does not mention the subject of the research.
 - (C) It is too broad and lacks focus.
 - (D) It uses technical jargon that is hard to understand.
28. Cross-sectional studies are sometimes more useful than longitudinal studies because they
- (A) Are more risky
 - (B) Have more variables
 - (C) Cost more money
 - (D) Take less time
29. Research is ___ because it is free of bias or prejudice.
- (A) Critical
 - (B) Objective
 - (C) Cyclical
 - (D) Logical
30. Which of the following is not a quality of good research?
- (A) Valid
 - (B) Reliable
 - (C) Accurate
 - (D) Bias
31. For items 3-6, identify the characteristics of research in the statements in each item. Choose your answer in the box provided (a. accuracy; b. objectiveness; c. timeliness; d. relevance). It must work on a topic that is fresh, new and interesting to the present society.
- (A) Accuracy
 - (B) Objectiveness
 - (C) Timeliness
 - (D) Relevance
32. Which characteristic of research involves dealing with facts rather than opinions or assumptions?
- (A) Systematic
 - (B) Timeliness
 - (C) Objectivity
 - (D) Relevance
33. What characteristic of research is shown in the statement below? "Research is based on direct experience by the researcher."
- (A) Analytical
 - (B) Controlled
 - (C) Empirical
 - (D) Systematic
34. "If you do not make decisions and draw conclusions based on actual evidence, then your results or conclusions can be flawed because you may have ignored important evidence," would be a statement supporting why it is important that scientific reasoning be ___
- (A) Objective
 - (B) Subjective
 - (C) Inductive
 - (D) Deductive
35. Ethnography method is ___
- (A) Simple
 - (B) Detailed

- (C) Intensive
(D) Systematic
36. An important characteristic of a research title is that it should be:
(A) Lengthy and detailed
(B) Brief, specific, and descriptive of the study
(C) Written in the form of a question
(D) Vague to encourage curiosity
37. What is a characteristic of scientific research?
(A) It relies on ad-hoc procedures
(B) It is specific to a particular context
(C) It is replicable
(D) It provides truthful information
Explanation:
38. Aanya, a budding researcher, believes that critical observation, careful planning, constructive attitude and condensed generalization should always be a part of research
(A) True
(B) False
39. A characteristics of research which states that research “uses simple, direct, concise and correct language.”
(A) Relevance
(B) Replicable
(C) Clarity
(D) Analytical
40. What is the characteristic of research where research is conducted in an unbiased systematic procedure?
(A) Empirical
(B) Logical
(C) Methodical
(D) Replicability
(E) Not Given
41. Research exhibits careful and precise judgment.
(A) Empirical
- (B) Logical
(C) Critical
(D) Cyclical
42. Scientific research must be conducted in simple and economic manner. This characteristic is ____
(A) Parsimony
(B) Objectivity
(C) Generalisability
(D) Replicability
43. When the researcher expresses his discoveries by using simple, direct, concise and correct language, what characteristic of research subscribe to?
(A) Clarity
(B) Relevance
(C) Systematic
(D) Timeliness
44. A characteristic of research which follows orderly and sequential method
(A) Logical
(B) Empirical
(C) Systematic
(D) Analytic
45. What does objectivity in research aim to minimize?
(A) Personal bias
(B) Data collection
(C) Error-free results
(D) Precise measurements
46. Choose true or false We relate the facts in our research in an objective way.
(A) True
(B) False
(C) All the above
(D) None of the above
47. A researcher is not allowed to mix the facts in the field with his personal opinion. The statement is an explanation of the attitude and way of thinking ____
(A) Factual

- (B) Skeptical
(C) Analytical
(D) Critical
(E) Objective
48. When a researcher has objectivity they..
(A) Stand to profit from the outcome of the research
(B) Have no personal stake in the results of the research
(C) Have a personal connection to the research
(D) Believe the research reinforces their own values
49. Characteristic of research that exhibits careful and exact judgment wherein higher level of significance must be established
(A) Analytical
(B) Logical
(C) Empirical
(D) Critical
50. Quantitative research is expressed in numerical form which makes it easy to understand and deduce a conclusion. Which characteristics of quantitative research is being described by the statement?
(A) Reusable Outcome
(B) Numerical Outcome
(C) Closed-ended Question
(D) Highly Reliable Outcome
51. Which of the following are the characteristics of research in education?
(A) Sound philosophical basis
(B) Based on insight and imagination
(C) An interdisciplinary approach
(D) All of the above
52. Which is NOT a characteristic in selecting a research topic?
(A) It should be ambiguous.
(B) It must be original.
(C) It should be significant to the field of study or discipline.
(D) It should be simple for beginners.
53. Which of the following characteristics of research describes that research results should be unbiased?
(A) Subjective
(B) Objective
(C) Rigorous
(D) Verifiable
54. What characteristic of research states that research results must be applicable and acceptable worldwide.
(A) Replicability
(B) Generalizability
(C) Rigor
(D) Objectivity
55. Characteristic of research which involved establishing that the results of the research are believable.
(A) Validity
(B) Reliability
(C) Rigorous
(D) Credibility
(E) Empirical
56. Which characteristic of research emphasizes valid procedures and principles to draw conclusions?
(A) Empirical
(B) Logical
(C) Ethical
(D) Comparative
57. Characteristics of research that should always be based on direct experience and observation and should provide an evidences.
(A) Systematic
(B) Empirical
(C) Clean and clear
(D) None of above

58. Research topic should be something new or different from what has already been written about. Research topic should be significant to the field of study or discipline.
- (A) Statement is correct while statement be is incorrect.
 - (B) Statement and B are incorrect. Statement A is incorrect while statement be is correct.
 - (C) Both statements are correct.
 - (D) Both statements are incorrect.
59. Research is ___ if it exhibits careful and precise judgment.
- (A) Empirical
 - (B) Replicability
 - (C) Critical
 - (D) Methodical
60. Which is NOT a characteristic of good research?
- (A) Objectivity
 - (B) Bias
 - (C) Reliability
 - (D) Validity
61. For items 3-6, identify the characteristics of research in the statements in each item. Choose your answer in the box provided (a. accuracy; b. objectiveness; c. timeliness; d. relevance). It must deal with facts, not with mere opinions arising from assumption.
- (A) Accuracy
 - (B) Objectiveness
 - (C) Timeliness
 - (D) Relevance
62. Which of the following characteristics of research describes that the results of research are correct and approved and clarified by others, too?
- (A) Valid and verifiable
 - (B) Constant
 - (C) Systematic
 - (D) Controlled
63. The following are characteristics of action research that every teacher may consider, except: —
- (A) Not concerned with building theories or generalization
 - (B) A theoretical focus
64. Research applies analytic procedures in gathering and analyzing data.
- (A) Replicable
 - (B) Critical
 - (C) Analytical
 - (D) Methodical
65. What is one of the characteristics of research mentioned in the notes?
- (A) It is linear
 - (B) It is cyclic and collaborative
 - (C) It always uses quantitative methods
 - (D) It only uses secondary data
66. What is a key feature of scientific research?
- (A) It relies on anecdotal evidence
 - (B) It is based on replicable data
 - (C) It avoids testing hypotheses
 - (D) It promotes popular beliefs
67. Which of the following is not a characteristic of conceptual research?
- (A) It is often based on existing literature
 - (B) It involves the development of new concepts
 - (C) It relies on empirical observation
 - (D) It is often exploratory in nature
68. What is a common characteristic of an effective research title?
- (A) Lengthy and detailed
 - (B) Vague and general
 - (C) Clear and specific
 - (D) Humorous and catchy
69. According to Nunan, which of the following is NOT a major characteristic in the definition of action research?

- (A) It is carried out by practitioners (eg: classroom teacher).
(B) It is aimed at changing things.
(C) It is carried out by using of oral interviews.
(D) It is collaborative.
70. A research should be empirical. Which situation best exemplifies being empirical?
(A) Anna who follows a step by step procedure when doing a study.
(B) Pamela who critically observes what is happening in her surroundings so as to arrive at a researchable topic
(C) Pamela who knows the variable of the study
(D) None of above
71. The information is said to be valued if it aids the user in making or improving decisions.
(A) Value
(B) Timeliness
(C) Authorship
(D) Reliability
72. One of the following is not a quality of researcher: [2005-DECEMBER]
(A) Unison with that of which he is in search

(B) He must be of alert mind
(C) Keenness in enquiry
(D) His assertion to outstrip the evidence
73. Characteristic of research refers to conducting research by abiding to best practices in method selection (from appropriate fields) and high-quality research design and reporting of results to the academic community.
(A) Validity
(B) Reliability
(C) Rigorous
(D) Credibility
(E) Empirical
74. What is the characteristic of research where research can be repeated to enable the researcher to arrive at valid and conclusive results?
(A) Empirical
(B) Logical
(C) Methodical
(D) Replicability
(E) Not Given
75. Which of these is NOT a feature of good business research?
(A) Systematic
(B) Logical
(C) Subjective
(D) Replicable
76. Why is it important for marketing research to be objective?
(A) So that researchers can guide consumers' responses
(B) So that researchers can express their own opinions
(C) So that the data gathered are not influenced by researchers' opinions
(D) So that the data gathered can be analyzed using statistical software
77. Which of the characteristic of effective research wherein research design and procedures are repeated to enable the researcher to arrive at valid and conclusive results?
(A) Falsifiability
(B) Precision
(C) Parsimony
(D) Replicability
78. A research should be
(A) Objective.
(B) Valid.
(C) Reliable.
(D) All the above.
79. A researcher follows procedures identified to the scientific method in finding out the answers, what characteristic does he/she possesses?

- (A) Effective
 - (B) Logical
 - (C) Curious
 - (D) Practical
80. Which of the following characteristics of research describes that research should be based on life experiences and observations?
- (A) Empirical
 - (B) Valid
 - (C) Rigorous
 - (D) Critical
81. Research is said to be verifiable as other researchers can check on the correctness of the results by replicating the study based on methods and procedures employed by the researcher.
- (A) Comprehensive.
 - (B) Critical.
 - (C) Valid.
 - (D) Verifiable.
82. What is the characteristic of research where research is based on direct experience or observation by the researcher?
- (A) Analytical
 - (B) Critical
 - (C) Cyclical
 - (D) Empirical
83. All of these are characteristics of scientific methods of research except, it is;
- (A) Rationalism.
 - (B) Unethical.
 - (C) Cumulative.
 - (D) Deterministic.
84. The psychologist uses the paper scientific methodology and maintains
- (A) Accuracy
 - (B) Objectivity
 - (C) Both a and b
 - (D) None of these
85. Which of the following describes 'reliability' in research?
- (A) The measure's accuracy
 - (B) The measure's consistency over time
 - (C) The relevance of the measure to the research question
 - (D) The measure's complexity
86. Characteristics of research that should always follow a step by step procedure
- (A) Systematic
 - (B) Specific
 - (C) Clean and clear
 - (D) None of above
87. Which of the following is NOT a key characteristic of empirical science?
- (A) Objectivity
 - (B) Measurement
 - (C) Replicability
 - (D) Subjectivity
88. Requires effort to get at the researcher's own investigation and produce the data needed to complete the study.
- (A) Logical
 - (B) Empirical
 - (C) Systematic
 - (D) Original work
89. What is the first characteristics of education research?
- (A) It aims to address a particular issue
 - (B) Educational research is accurate and objective
 - (C) Educational research relies on empirical evidence
 - (D) None of above
90. Research must give correct data. What characteristic of research is being described?
- (A) Accuracy
 - (B) Clarity
 - (C) Objectiveness
 - (D) Timeliness

91. Mira is conducting a study on community behavior and wants to ensure her research is robust. What is a specific characteristic of empirical social research compared to common research that she should focus on?
- (A) Need to apply certain techniques or tools
 - (B) Apply critical thinking
 - (C) Evident based
 - (D) All the above
92. Which of the following is NOT the characteristic of a research?[2004-DECEMBER]
- (A) Research is systematic
 - (B) Research is not a process
 - (C) Research is problem oriented
 - (D) Research is not passive
93. It is a characteristic of researcher that is not swayed to what is expected, but rather to what is true, regardless of the results of their investigations, good researchers report accurately their findings in their reports.
- (A) Honest
 - (B) Inventive
 - (C) Logical
 - (D) Effective
94. The Characteristic of research that should means follow a step by step procedure is called:
- (A) Systematic
 - (B) Specific
 - (C) Clean and clear
 - (D) Empirical
95. A researcher must have important reason in doing the research. What is this characteristic?
- (A) Testability
 - (B) Purposiveness
 - (C) Replicability
 - (D) Objectivity
96. Which of the following is NOT a characteristic of research as described in the passage?
- (A) Systematic
 - (B) Organized
 - (C) Subjective
 - (D) Exhaustive
97. Which of the following is a characteristic of a good researcher?
- (A) Intellectual dishonesty
 - (B) Lack of critical thinking
 - (C) Procrastination
 - (D) Intellectual curiosity
98. What is not correct?
- (A) A belief becomes a scientific truth when it is established experimentally.
 - (B) It is arrived at logically.
 - (C) It is accepted by many people.
 - (D) It can be replicated.
99. The essential qualities of a researcher are
- (A) Spirit of free Inquiry
 - (B) Reliance on observation and evidence
 - (C) Systematization or theorizing of knowledge
 - (D) All the above
100. What does it mean for research to be verifiable? Fill in the blank: Verifiable research is said to be verifiable as other researchers can check on the correctness of the results by ____ the study, based on methods and procedures employed by the researcher.
- (A) Replicating
 - (B) Publishing
 - (C) Summarizing
 - (D) Reviewing
101. Research follows orderly and sequential procedures, based on valid procedures and principles.
- (A) Controlled
 - (B) Analytical
 - (C) Systematic
 - (D) Objective

- 102.** A researcher writes his data interpretation in an organized and orderly manner. What research characteristic did he adhere to?
- (A) Clarity
 - (B) Relevance
 - (C) Systematic
 - (D) Timelines
- 103.** Which characteristic of a good research question asks if the questions provide an additional contribution to address the given research problem?
- (A) Feasible
 - (B) Clear
 - (C) Significant
 - (D) Ethical
- 104.** The scientific method is Objective meaning —
- (A) The scientific method is made available for evaluation by others, especially other scientists. Replication should be able to be accomplished.
 - (B) Observations are structured so that the researchers biases and beliefs do not influence the outcome of the story
 - (C) Answers are obtained by making (systematic or structured) observations
 - (D) None of above
- 105.** Action research is related to bring out change. True or False?
- (A) True
 - (B) False Edit
- 106.** Which characteristic of good research 'Relies on real-world data for validity'?
- (A) Logical Reasoning
 - (B) Systematic Approach
 - (C) Empirical Evidence
 - (D) Ethical Conduct
- 107.** Objectivity in research means avoiding biases, assumptions, and opinions.
- (A) True
 - (B) False
- 108.** Which of the following options refers to the characteristics of scientific research which manager has started the research with a definite aim or purpose?
- (A) Purposiveness
 - (B) Rigor
 - (C) Replicability
 - (D) None of above
- 109.** A characteristic of research that employs strict and correct predetermined procedure and gathering empirical data, the latter must be analyzed to elicit the desired meaning from the obtained information.
- (A) Analytical
 - (B) Cyclical
 - (C) Logical
 - (D) Realistic
- 110.** The polluted facts can give birth to
- (A) Errorless research.
 - (B) Human sorrows.
 - (C) A good research.
 - (D) Polluted research.
- 111.** Critical observation, careful planning, constructive attitude and condensed generalization should always be a part of research
- (A) True
 - (B) False
- 112.** All of the following are driven terms used to characterized a research, EXCEPT?
- (A) Methodical
 - (B) Theoretical
 - (C) Replicable
 - (D) Logical
- 113.** Research should maintain objectivity. What does objectivity means?
- (A) Being impartial and independent from different factors.
 - (B) Establishing validity among the data collected.
 - (C) Showing prejudice to the subject matter.
 - (D) Having partiality to the decisions being undertaken on the process.

- 114.** Choose the term to match this definition: relating to formal study or research
(A) Credible
(B) Paraphrase
(C) Scholarly
(D) Thesis
- 115.** The essential qualities of a researcher are [2011-JUNE]
(A) Spirit of free enquiry
(B) Reliance on observation and evidence
(C) Systematization or theorizing of knowledge
(D) All the above
- 116.** Rahul believes that research is simply about moving facts from one place to another without any analysis or interpretation.
(A) True
(B) False
- 117.** The Characteristics of research that it should be based on proven scientific methods is called:
(A) Systematic
(B) Specific
(C) Clean and clear
(D) Empirical Solution
- 118.** Which of the following characteristics of research describes that the variables in research are kept constant?
(A) Controlled
(B) Systematic
(C) Rigorous
(D) Planned
- 119.** Which of the following refers to the absence of subjective judgments?
(A) Objectivity
(B) Analysis
(C) Validity
(D) Reliability
- 120.** Objectivity in research implies:
(A) Correct judgment of truth.
(B) Methodological sophistication.
(C) Research-researcher agreement.
(D) Finding consistency with reality.
- 121.** What is specific characteristics of empirical social research compared to common research?
(A) Need to apply certain techniques or tools
(B) Apply critical thinking
(C) Evident based
(D) All the above
- 122.** Good theories have which of the following characteristics?
(A) Logic, consistency, explanatory power, falsifiability, and parsimony
(B) Simplicity, measurability, inductiveness, and falsifiability
(C) Deducibility, broad focus, and measurability
(D) Deducibility and inductiveness
- 123.** Using systematic method and procedures
(A) Analytical
(B) Cyclical
(C) Methodical
(D) Logical
- 124.** Which is NOT the characteristic of Ethnographic Research?
(A) The research takes a relative long time
(B) Carried out in the context in which the subjects normally live and work
(C) Questions or hypothesis emerge before the course of investigation
(D) The researcher does not try to control or handle the phenomenon
- 125.** Good research uses facts and data that are obtained through a thorough investigation. This means that research is ____
(A) Analytical
(B) Empirical
(C) Systematic
(D) Cyclical

126. Marketing Research is everything except ____
(A) Systematic
(B) Politically biased
(C) Objective
(D) Useful for the purpose of improving decision-making
127. Most research papers share all of the following characteristics EXCEPT which one?
(A) They have considerable length.
(B) They use sources.
(C) They are complex.
(D) They are worth 150 pts.
128. Which characteristic of research means that it is not based on guesswork and requires empirical data to be gathered before making conclusions?
(A) Objective
(B) Subjective
(C) Speculative
(D) Intuitive
129. A good research is always ____
(A) Comprehensive
(B) Selective
(C) Systematic
(D) Time-bounded
130. What is an objective and verifiable observation, established using evidence collected through empirical research called?
(A) Fact
(B) Hypothesis
(C) Generalize
(D) None of above
131. Which of the following characteristics describe a research that is based on personal and direct experiences of the proponents?
(A) Empirical
(B) Methodical
(C) Analytical
(D) Cyclical
132. It is not based on guess work
(A) Objective
(B) Numerical Data
(C) Replication
(D) Large Sample Sizes
133. Scientific research must deal with facts rather than interpretations of facts. This characteristic is ____
(A) Testability
(B) Replicability
(C) Generalisability
(D) Objectivity
134. This characteristic of research refers to taking control of some factors while others are tested for a possible effect ____
(A) Systematic
(B) Empirical
(C) Controlled
(D) Credibility
135. What is fair, neutral reporting called?
(A) Objective
(B) Biased
(C) Ethical
(D) Privileged
136. Research is based on observations and experimentation of theories. It takes into account the direct experiences that fuse the researcher's speculation with the reality.
(A) Employs hypothesis
(B) Objective
(C) Controlled
(D) Empirical
137. Characteristic of research which states that the choice of variable, research design statement of the problem, instruments, and participants must be explained thoroughly in the research paper.
(A) Systematic
(B) Feasible
(C) Clear
(D) Empirical

138. — is a quality of Good Researcher
- (A) Scientific temper
 - (B) Age
 - (C) Money
 - (D) Time
139. The research process have certain characteristics. One of the statements below are not part of these characteristics.
- (A) Controlled and systematic
 - (B) Quantitative and Qualitative
 - (C) Critical and Empirical
 - (D) Rigorous and Valid
140. Which of the following characteristics of research utilizes proven analytical procedures in gathering data?
- (A) Analytical
 - (B) Controlled
 - (C) Empirical
 - (D) Systematic
141. The main characteristic of scientific research is:[2007-DECEMBER]
- (A) Empirical
 - (B) Theoretical
 - (C) Experimental
 - (D) All of the above
142. Why is research systematic?
- (A) It follows your subjective opinion about things.
 - (B) It gives you accurate answers to scientific problems.
 - (C) It is logical.
 - (D) It follows a specific system.
143. The “Verifiable” characteristic of scientific research deals with:
- (A) A:The results’ replication
 - (B) B:None of the given options
 - (C) C:The results’ application
 - (D) D:The results’ interpretation?
144. A characteristics of research which posits that research must have “no error in interpretation since data are analyzed critically.”
- (A) Relevance
 - (B) Replicable
 - (C) Clarity
 - (D) Analytical
145. One of the following is not a quality of researcher:
- (A) Keeness in enquiry
 - (B) He must be of alert mind
 - (C) His assertion to outstrip the evidence
 - (D) Unison with that of which he is in search
146. Which of the following is a characteristic of a good research topic?
- (A) The topic is obsolete
 - (B) The topic is unessential
 - (C) The topic is overused
 - (D) The topic is of current importance
147. What is required for themes explored in psychology?
- (A) They need to be entertaining
 - (B) They need to be measurable, scientific, and credible
 - (C) They need to be simple and easy to understand
 - (D) They need to be financially profitable
148. Conducted without bias using systematic method and procedures
- (A) Replicability
 - (B) Methodical
 - (C) Empirical
 - (D) Logical
149. Which of the following characteristics of research describes that research is extremely thorough and careful?
- (A) Valid
 - (B) Verifiable
 - (C) Rigorous
 - (D) Systematic

150. If a research aims to solve a problem in which solution leads to another problem, it is —
(A) Analytical
(B) Critical
(C) Methodical
(D) Cyclical
151. Which of the following BEST describes that research must be rigorous?
(A) The researcher must spend so much effort, energy, time and money to his research study.
(B) The researcher must ensure that all stringent measures, procedures and steps are readily focused.
(C) The researcher must be able to generate a lot of reactions from all his readers and experts.
(D) The researcher must abide by the conditions set by the participants of the study for him.
152. The scientific method must satisfy which of the following four characteristics?
(A) Exploratory, inferential, descriptive, and testable
(B) Replicable, deductive, falsifiable, and precise
(C) Theoretical, inductive, deductive, and valid
(D) Replicable, precise, falsifiable, and parsimonious
153. A characteristics of research which posits that research “can be repeated for verification/confirmation.”
(A) Relevance
(B) Replicable
(C) Clarity
(D) Analytical
154. What is a characteristic of a good research?
(A) Belief
(B) Responsibility
(C) Curiosity
(D) Controlled
155. When action research is designed to lead to an intervention for the identified problem, which characteristic does it possess?
(A) Empirical
(B) Diagnostic
156. Which option is biotic?
(A) Plants
(B) Air
(C) Water
(D) Energy
157. Characteristic of research which is based on observed and measured phenomena and derives knowledge from actual experience rather than from theory or belief.
(A) Validity
(B) Reliability
(C) Rigorous
(D) Credibility
(E) Empirical
158. A characteristics of research which depicts research as “working on topic that is fresh, new & interesting to the present society.”
(A) Objectiveness
(B) Systematic
(C) Timeliness
(D) Relevance
159. A characteristic of research that says researchers should make sure that there are credible data that supports claims or variables in the research study.
(A) Feasible
(B) Empirical
(C) Objective
(D) Systematic
160. Which of the following lists three characteristics of research?
(A) Systematic, objective, and logical
(B) Random, subjective, and illogical
(C) Unplanned, biased, and emotional
(D) Disorganized, opinion-based, and inconsistent

- 161.** A characteristics of research which states that research topics must “help improve community or solve societal problems.”
- (A) Objectiveness
 - (B) Systematic
 - (C) Timeliness
 - (D) Relevance
- 162.** Scientific data collection specifically focuses on being
- (A) Objective
 - (B) Subjective
 - (C) Qualitative
 - (D) None of the above
- 163.** If a researcher is serious about understanding a phenomenon, he needs to examine and analyze all aspects or angles before making a generalization or conclusion.
- (A) Comprehensive.
 - (B) Critical.
 - (C) Valid.
 - (D) Verifiable.
- 164.** How could we describe marketing research that is not influenced by bias, prejudice, or outside opinion?
- (A) Reliable
 - (B) Objective
 - (C) Valid
 - (D) Cost Effective
- 165.** What is a characteristic of project research regarding its timeframe?
- (A) It is a long-term, indefinite process.
 - (B) It is not bound by any timeframe.
 - (C) It is conducted over several years.
 - (D) It is time-bound, conducted within a semester/project timeframe.
 - (E) It is completed in a single day.
- 166.** Which of the characteristics of scientific research that refers to the scope of applicability of the research findings in one organizational setting to other settings?
- (A) Generalizability
 - (B) Objectivity
 - (C) Parsimony
 - (D) None of above
- 167.** One of the characteristics of mathematics where it is the process of extracting the underlying essence of a mathematical concept by taking away any dependence on real-world objects
- (A) Logical Sequence
 - (B) Classification
 - (C) Abstractness
 - (D) Structure
- 168.** Research is conducted in a organized manner with bias.
- (A) YES
 - (B) NO
- 169.** This characteristic refers to the extent to which a research findings can be applied to larger population —
- (A) Empirical
 - (B) Credibility
 - (C) Reliability
 - (D) Generalization
- 170.** A Qualitative Research is a research that deals more on factual data. What characteristics of a qualitative research refers to examining the data by internal traits of the subject individual like emotional, mental and spiritual characteristics.
- (A) Diversified Data in Real-life Situation
 - (B) Abounds with Words and Visuals
 - (C) Contextualization
 - (D) Internal Analysis
- 171.** Which of the following is a characteristic of logical research?
- (A) It relies on direct experience without scientific theory.
 - (B) It uses valid procedures to draw valid conclusions.

- (C) It avoids duplication and focuses on novelty.
- (D) It emphasizes sponsorship and administrative cooperation.
- 172.** A characteristic of research which describes “following an orderly and sequential procedure to make discoveries.”
- (A) Objectiveness
- (B) Systematic
- (C) Timeliness
- (D) Relevance
- 173.** One quality of good information is
- (A) Accuracy
- (B) Ambiguity
- (C) Redundancy
- (D) Versatility
- 174.** Which of the following characteristics of research describes that research follows a certain logical sequence?
- (A) Controlled
- (B) Systematic
- (C) Logical
- (D) Scientific
- 175.** Research is not based on observation by the researcher.
- (A) TRUE
- (B) FALSE
- 176.** The scientific method is NOT ____
- (A) Empirical
- (B) Public
- (C) Objective
- (D) Subjective
- 177.** A characteristic of research which uses facts and data obtained through investigation
- (A) Logical
- (B) Cyclical
- (C) Honest
- (D) Empirical
- 178.** Major characteristics of research that follows orderly and sequential procedures.
- (A) EMPIRICAL
- (B) SYSTEMATIC
- (C) OBJECTIVE
- (D) ANALYTICAL
- 179.** Which of the following is not a basic characteristic of scientific research?
- (A) It is public
- (B) It is empirical
- (C) It is conducted in a lab
- (D) It is objective
- 180.** Which of the following is NOT a characteristic of a scientific question?
- (A) It must be testable
- (B) It relies on faith
- (C) It is based on evidence and logic
- (D) It does not rely on opinion
- 181.** Three of the following four attributes characterise research. Identify the one which is not an attribute of research
- (A) Research is purposive
- (B) Findings of research can be generalised for all contexts
- (C) Research is logical and objective
- (D) Research is based on accurate data
- 182.** What is the characteristic of research where research exhibits careful and precise judgement?
- (A) Analytical
- (B) Critical
- (C) Cyclical
- (D) Empirical
- 183.** A study where research findings can be applied to the whole population under study is known as:
- (A) Generalisable
- (B) Valid
- (C) Representative
- (D) Reliable

1.1.5 Objectives of Research

1. Sociological research helps us understand societies patterns.
(A) True
(B) False
2. Researchers need to ensure that the research carried out benefits the management and from an academic perspective. referring to?
(A) Relevant
(B) Can be executed
(C) Attract
(D) Discussion with experts
3. What is the primary purpose of conducting scientific research?
(A) To prove a hypothesis
(B) To explore new phenomena
(C) To generate data for analysis
(D) To develop new technologies
4. Which objective aims to find a new research project?
(A) A case study
(B) Exploratory research
(C) Conclusive research
(D) Historical research
5. What is the main purpose of conducting foundational research?
(A) To be prepared for future events in education
(B) To learn about the human being behavior
(C) To advance and expand human knowledge
(D) None of above
6. One of the goals of the research is to produce results-based practice.
(A) True
(B) False
7. The following are goals of research, except?
(A) Improvement of the quality of life
(B) Prevention of the expansion of new knowledge
(C) Discovery of new facts about new phenomena
(D) Improvement of existing ways to develop new products
8. According to the passage, why is it important to select a significant topic for research?
(A) It should be easy to complete
(B) It must be able to answer or solve problems in the community
(C) It should be popular
(D) It should be recommended by a teacher
9. What is the purpose of research?
(A) To create fictional stories
(B) To entertain people
(C) To discover new information or reach a new understanding
(D) To confuse readers
10. What is the main focus of research?
(A) To entertain
(B) To discover new information
(C) To create myths
(D) To write stories
11. Which of the following best represents the general goal of science and political science?
(A) To discover and describe regularities and to develop theories that explain these regularities
(B) To make discoveries that improve human existence
(C) To invent things
(D) To explain why things happen
12. Which is the main objective of research? [2013-DECEMBER]
(A) To review the literature

- (B) To summarize what is already known
 - (C) To get an academic degree
 - (D) To discover new facts or to make fresh interpretation of known facts
13. What is the primary aim of educational research?
- (A) To create new teaching approaches
 - (B) To develop student motivation
 - (C) To expand the existing body of knowledge
 - (D) To improve classroom management
14. The purpose of research is to ____
- (A) Give examples of different topics
 - (B) Persuade the reader
 - (C) Explain different ideas
 - (D) Gain information with the intention of teaching others about a specific topic
15. Below is the objectives of doing research. Which one is not TRUE
- (A) To determine pattern
 - (B) To test frequencies
 - (C) To test hypothesis
 - (D) To seek for the truth
16. Which of the following is NOT a purpose of research?
- (A) To discover new information
 - (B) To reach a new understanding
 - (C) To create fictional stories
 - (D) To study a topic in detail
17. The purpose for research consists of ____
- (A) Deciding on audience, structuring report
 - (B) > identifying and selecting individuals to study
 - (C) Identifying the major intent or objective for a study
 - (D) > drawing conclusions about the data
18. This kind of educational research is carried out the gather data to make long-term decisions that can be informed by societies or institutions to improve the governance of education, what kind of reasons of conducting educational research it is?
- (A) To shape policy
 - (B) To improve the quality
 - (C) To explore issues
 - (D) To maintain the knowledge
19. What is the most important factor when considering if a topic should be researched?
- (A) If the topic is interesting to others
 - (B) If the topic adds to the research knowledge in the literature
 - (C) If the topic is researchable
 - (D) If the topic is easy to research
20. A researcher studying a social issue to bring change in society is motivated by:
- (A) Professional advancement
 - (B) Social responsibility
 - (C) Personal gain
 - (D) Academic requirement
21. Introduction to Research: Objectives & Significance-The main objective of research is to:
- (A) Generate new knowledge
 - (B) Support personal opinions
 - (C) Avoid data collection
 - (D) None of these
22. Which among the following is not a product of research?
- (A) Medical breakthroughs
 - (B) Advances in technology
 - (C) Inflation rate
 - (D) Solving problems in education
23. What is the shared goal of all types of research?
- (A) The money
 - (B) Make new laws
 - (C) Create new trends
 - (D) The creation of new knowledge Edit

24. The potential benefit of a study to society is known as:
- (A) Ethical Soundness
 - (B) Usefulness/Social Relevance
 - (C) Novelty
 - (D) Feasibility
25. One common justification for conducting educational research is to attempt to do something better than what is already being done, what kind of reasons of conducting educational research it is?
- (A) To shape policy
 - (B) To improve the quality
 - (C) To explore issues
 - (D) To encourage
26. The research aims to advance the personal and professional qualifications of a practitioner.
- (A) True
 - (B) False
27. What is the primary objective of education research that studies a phenomenon about which little is known?
- (A) To describe
 - (B) To predict
 - (C) To integrate
 - (D) To understand
28. Which of the following statements motivates a teacher to do action research?
- (A) Any problem that occurs will soon pass.
 - (B) For every teaching-learning problem, there is always a solution.
 - (C) Leave the problematic situation for other teachers to solve.
 - (D) There are more important classroom routines than finding solutions.
29. Another general goal of research is to find solutions to which target?
- (A) Personal career development goals
 - (B) Historical controversies in art
 - (C) Clearly defined problems in practice
 - (D) Routine scheduling of staff shifts
30. What is the primary objective of research?
- (A) To prove a hypothesis
 - (B) To gather information and knowledge
 - (C) To persuade others of a particular viewpoint
 - (D) To entertain the audience
31. Aims of research
- (A) Answer questions
 - (B) Solve problems
 - (C) A & b
 - (D) Non of them
32. What is the purpose of the study on quality standards for the treatment of waste electrical and electronic equipment (WEEE)?
- (A) To prevent the creation of WEEE as a priority
 - (B) To reduce the administrative burden of EEE registers
 - (C) To establish quality standards for the treatment of WEEE
 - (D) To improve the environmental performance of everyone involved in the life cycle of EEE
33. What should a researcher ensure about the relevance of their study?
- (A) It should be interesting to the researcher
 - (B) It should add to existing knowledge and be useful
 - (C) It should be based on personal experiences
 - (D) It should be easy to conduct
34. Fundamental research reflects the ability to:
- (A) Synthesize new ideals
 - (B) Expound new principles
 - (C) Evaluate the existing material concerning research
 - (D) Study the existing literature regarding various topics

35. Purpose of conducting research
- (A) To confirm existing beliefs without questioning them.
 - (B) To gather data that can be used to support a hypothesis.
 - (C) To explore new ideas without any specific goal.
 - (D) To entertain the audience with interesting facts.
36. Which of the following is not a goal of conceptual research?
- (A) To develop new concepts
 - (B) To test hypotheses
 - (C) To measure variables
 - (D) To explore relationships between concepts
37. Aarav is conducting a study on the effects of social media on mental health. He wants to gather insights and data to better understand the topic. What is the purpose of his research?
- (A) To increase understanding
 - (B) To ensure ethical behaviour
 - (C) To make use of questionnaires
 - (D) To formulate a research proposal
38. Which is a general goal of research across disciplines?
- (A) Replace all clinical judgment decisions
 - (B) Develop explanations articulated in theories
 - (C) Increase reimbursement from insurers
 - (D) Reduce time spent on documentation
39. Below are the objectives of doing research. Which one is not TRUE
- (A) To determine pattern
 - (B) To test frequencies
 - (C) To test hypothesis
 - (D) To seek for the truth
40. Good research focuses on which of the following?
- (A) Social welfare
 - (B) Subjective analysis of a situation.
 - (C) Formulating generalizations, theories, principles and innovations.
 - (D) All of the above.
41. Ongoing research contributes to nursing primarily by:
- (A) Eliminating professional organizations entirely
 - (B) Reducing the need for ethical guidelines
 - (C) Generating evidence to improve patient care
 - (D) Maintaining static clinical routines
42. What would be a logical justification (good reason) to continue the research of bioplastics?
- (A) They are biodegradable which means they will cause less pollution.
 - (B) They are easier to produce than plastic.
 - (C) They cost less than plastic.
 - (D) They are recycled less easily than plastic.
43. Underlying causes; theories to explain, meaning of phenomenon
- (A) Identification
 - (B) Description
 - (C) Exploration
 - (D) Prediction and control
 - (E) Explanation
44. The primary purpose of nursing research is to:
- (A) Generate income for hospitals
 - (B) Improve patient care
 - (C) Replace nursing theories
 - (D) Publish in journals
45. What aim of research that verifies or proves the veracity of existing theories or knowledge?
- (A) Verification of Existing Knowledge
 - (B) Acquisition of New Knowledge
 - (C) Application of New Knowledge
 - (D) Advancement of the Researcher's Expertise

46. Which is NOT a primary objective of educational research?
(A) Action
(B) Prediction
(C) Description
(D) Exploration
47. Which of the following is not a goal of research?
(A) Describe behavior
(B) Explain its causes
(C) To monitor groups of people
(D) To control certain behaviors
(E) Predict the circumstances under which certain behaviors may occur again
48. It is not one of the main purposes of research?
(A) To inform action
(B) To describe
(C) To explore
(D) To avoid
49. A student intends to stay current in her research area. Which literature review objective aligns with this aim?
(A) Keep abreast of recent developments
(B) Ensure hypothesis is always correct
(C) Replace experimentation with reading
(D) Limit scope to a single historic source
50. According to the lecture, what does project research bridge?
(A) Theory and data collection
(B) Qualitative and quantitative methods
(C) Theory and practice
(D) Problems and solutions
(E) Budgets and timelines
51. Research primarily aims to:
(A) Prove assumptions
(B) Discover new facts or verify old ones
(C) Support opinions
(D) Avoid experimentation
52. Objective of DigiBayanihan that ____ Filipinos by teaching them the skills they need to use digital technology to improve their lives.
(A) Accelerate
(B) Empower
(C) Enable
(D) Activate
53. Which of the following is a reason to conduct research?
(A) To create a new theory
(B) To test a theoretical concept
(C) To develop a hypothesis
(D) To state an aim
54. A company wants to know why sales of a certain product are not growing. Its purpose in conducting marketing research is to
(A) Monitor.
(B) Test hypotheses.
(C) Explain.
(D) Predict.
55. The objectives of the ____ are to search an answer for the difficulty which is facing by a firm or a society.
(A) Fundamental Research
(B) Quantitative Research
(C) Qualitative Research
(D) Applied research
56. Teacher researchers study practical issues that will have immediate benefits for teachers, schools and school districts.
(A) TRUE
(B) FALSE
57. Higher institutions have functions that must develop according to the curricular educational level. One of them are:
(A) Investigation and technology
(B) Teaching and science
(C) Investigation and social projection
(D) Teaching and cultural knowledge

58. The following are objectives of action research except ____
- (A) Improve education practice
 - (B) Improve teachers own craft
 - (C) Respond to the call of 21st Century Learners
 - (D) Satisfy curiosity
59. The main purpose of research is to:
- (A) Prove personal opinions
 - (B) Discover new facts
 - (C) Support political agendas
 - (D) Promote bias
60. Which of the following is a purpose of research according to Robson (2002)?
- (A) To create confusion
 - (B) To explore or understand a phenomenon
 - (C) To entertain the audience
 - (D) To validate personal beliefs
61. What is an acceptable reason to conduct research?
- (A) To address a knowledge gap.
 - (B) To duplicate previous work.
 - (C) To make assumptions valid.
 - (D) To prove personal beliefs.
62. What is the primary goal of scientific research?
- (A) To prove personal beliefs
 - (B) To understand the natural world
 - (C) To make moral judgments
 - (D) To rely on faith and opinion
63. It describes how the problem will be solved and specifically pinpoints who will benefit from such findings or results.
- (A) Introduction
 - (B) Background of the Study
 - (C) Scope and Limitation
 - (D) Significance of the Study
64. Aim to gain understanding; to find the truth
- (A) Ultimate goals
 - (B) External evidence
 - (C) Reliance on human cooperation
 - (D) Ethical constraints
65. According to Robson (2002), what are the main reasons for conducting research?
- (A) To describe, explore, and measure phenomena.
 - (B) To predict, classify, and organize data.
 - (C) To invent new applications and expand knowledge.
 - (D) To preserve human life and serve society.
66. When you are making a research, you need to ____
- (A) Describe and control the observed phenomenon
 - (B) Predict and control the observed phenomenon
 - (C) Describe, explain, predict and control the observed phenomenon
 - (D) Copy and paste from google
67. What is the primary aim of research in HCI?
- (A) To contribute to general knowledge
 - (B) To solve specific problems
 - (C) To develop software faster
 - (D) To entertain users
68. Which is the main objective of research?
- (A) To review the literature
 - (B) To get an academic degree
 - (C) To summarize what is already known
 - (D) To discover new facts or to make fresh interpretation of known facts
69. Which of the following best describes the main purpose of research?
- (A) To decorate a room
 - (B) To create confusion
 - (C) To entertain people
 - (D) To discover new knowledge or solve problems

70. What is the main aim of interdisciplinary research?
- (A) To over simplify the problem of research
 - (B) To bring out the holistic approach to research
 - (C) To create a new trend in research methodology
 - (D) To reduce the emphasis on a single subject in the research domain
71. What is the primary value of significance in research?
- (A) To generate financial benefits
 - (B) To improve current practices and promote theory development
 - (C) To increase the researcher's reputation
 - (D) To create new technologies.
72. Researching the average earnings by major and by career can help you determine the — of an institute of higher education.
- (A) Sticker price
 - (B) Net cost
 - (C) Return on investment
 - (D) Available scholarships
73. Which of the following is not considered as one of the objectives of research?
- (A) Providing facts that will help us to analyze the problem
 - (B) Finding better solutions to the challenges
 - (C) Validate existing knowledge
 - (D) It allows us to prove lies and oppose truths.
74. The primary aim of research is to:
- (A) Collect data
 - (B) Discover new facts or verify existing ones
 - (C) Write papers
 - (D) Increase complexity
75. The justification for the investigation answers the question:
- (A) What is the research problem?
 - (B) Why are you researching that particular topic?
 - (C) What knowledge do you want to achieve with research?
 - (D) No choice is correct
76. Research is conducted to
- (A) Generate new knowledge
 - (B) Obtain research degree
 - (C) Reinterpret existing knowledge
 - (D) All of the above
77. A research is effective if:
- (A) It is associated with a decision.
 - (B) It has no effect on the decisions.
 - (C) The company has already made a decision.
 - (D) The research cost is higher than the benefit.
78. Research in education generally carried out for
- (A) Individual's personal prestige.
 - (B) Individual's professional growth.
 - (C) Enhancing the body of knowledge related to education.
 - (D) Individual's opportunities for getting job.
79. A company wants to know how its target market will react to expected changes in the economy. Its purpose in conducting marketing research is to
- (A) Monitor.
 - (B) Test hypotheses.
 - (C) Explain.
 - (D) Predict.
80. General aim of research is —
- (A) Must contribute to the national goals for the development of quality of human life
 - (B) Must develop skills of the researcher and have return (e.g monetary, prestige) after research report
 - (C) Results must provide reliable results and implementable
 - (D) None of above

81. Which is the primary purpose of educational research?
- (A) Expand the existing body of knowledge
 - (B) Seek answers to questions bothering on classroom management
 - (C) Help in the formulation of theories
 - (D) Maintain the knowledge
82. The theoretical aims of research is
- (A) Qualitative.
 - (B) Explanatory.
 - (C) Inferential.
 - (D) Quantitative.
83. Research is now an integral part of the K to 12 curriculum. What is the least significant aspect of incorporating research-based pedagogy?
- (A) It updates trends and information.
 - (B) It leads to discoveries within various fields of knowledge.
 - (C) It serves to meet the requirements of the course curriculum.
 - (D) It enhances the teacher's understanding of the subject matter.
84. What is the primary purpose of research?
- (A) To collect data
 - (B) To establish facts and reach new conclusions
 - (C) To present findings
 - (D) To analyse data
85. What is NOT a purpose of research?
- (A) Knowledge production.
 - (B) Finding answers.
 - (C) Creating problems.
 - (D) Human Convenience.
86. What is the object of scientific research?
- (A) The phenomenon or process being studied
 - (B) The research method
 - (C) The hypothesis
 - (D) The conclusion
 - (E) The references
87. What is the role of scientific research in promoting sustainable development?
- (A) To develop technologies that exploit natural resources
 - (B) To provide data for informed decision-making
 - (C) To focus solely on economic benefits
 - (D) To disregard social impacts
88. What aim of research that allows researchers not just to verify theories or discover new ideas and technologies, but also gain relevant experiences that enhance and deepen their knowledge and skills in the area of their investigations.
- (A) Verification of Existing Knowledge
 - (B) Acquisition of Knowledge
 - (C) Application of Knowledge
 - (D) Advancement of Researcher's Expertise
89. What is the main purpose of research in a business context?
- (A) To create new products
 - (B) To increase sales
 - (C) To entertain employees
 - (D) To solve specific problems

1.1.6 Research Objectives

1. Objectives in problem formulation means
 - (A) Questions to be answered
 - (B) Methods
 - (C) Techniques
 - (D) Methodology
2. Research aims and objectives serve the same purpose in a research project.
 - (A) True
 - (B) False
3. Statement that tells you the purpose of the in-

- vestigation but does not predict an outcome.
- (A) Aim
 - (B) Hypothesis
 - (C) Directional Hypothesis
 - (D) Non-directional Hypothesis
 - (E) Null Hypothesis
4. You may use the following phrases to restate the objectives EXCEPT
- (A) As mentioned earlier in the introduction, the purpose of this study was to investigate/find out/determine/evaluate..
 - (B) To reiterate, this study set to investigate/find out/ determine/ evaluate
 - (C) In general, it seems ____
 - (D) None of above
5. It is important to have a clear aim in research because (a)
- (A) It provides entertainment
 - (B) It ensures the study is systematic
 - (C) It increases the length of the stud
 - (D) It complicates the research process
6. What is the main role of the objectives or research questions section?
- (A) List investigators and affiliations
 - (B) State clear, measurable goals linked to methods
 - (C) Estimate costs and sources of funding
 - (D) Provide a narrative literature review
7. What must be clearly formulated at the beginning of research?
- (A) Purpose and objectives
 - (B) Conclusions
 - (C) References
 - (D) Results
 - (E) Tables
8. It is usually written in statement that establishes the intent of the entire study
- (A) Statement of the problem
 - (B) Purpose of the study
 - (C) Research Questions
 - (D) Title
9. List the objectives of the study as described in the worksheet.
- (A) The objectives of the study as described in the worksheet are to identify key research goals.
 - (B) The objectives of the study as described in the worksheet are to summarize the entire textbook.
 - (C) The objectives of the study as described in the worksheet are to list unrelated facts.
 - (D) The objectives of the study as described in the worksheet are to provide a bibliography only.
10. How can we enhance the research objective?
- (A) By making it more valid
 - (B) By making it more reliable
 - (C) By making it more impartial
 - (D) All of the above
11. How to judge the depth of any research?
- (A) By research title
 - (B) By research duration
 - (C) By research objectives
 - (D) By total expenditure on research
12. Both general/specific and long term/short term objectives
- (A) Objectives of the Study
 - (B) Significance of the Study
 - (C) Scope and Delimitation
 - (D) Definition of Terms
13. In the significance of the study, what is the expected output?
- (A) A general idea of the research subject
 - (B) A specific, measurable, attainable, realistic, and time-bound output from the research
 - (C) A theoretical conclusion without data
 - (D) A literature review on the subject matter

14. Transformative, ascertaining, controlling, searching, solving, etc.-this is a classification according to:
- (A) The objectives of the study of the experiment;
 - (B) Organization of the experiment;
 - (C) The structure of the studied objects;
 - (D) The type of models studied in the experiment;
 - (E) The method of forming the experimental conditions;
15. Which one of these will always appear in a research proposal?
- (A) Research objective
 - (B) Creative objective
 - (C) Academic objective
 - (D) Personal objective
16. "Make a general list of the research objectives" is an statement that fits better with:
- (A) Determine Methods and Sources
 - (B) Identify Research Objectives
 - (C) Gather the Data
 - (D) None of above
17. What are the three components of the research objective?
- (A) Research question, development of hypothesis, research boundaries
 - (B) Decision alternatives, timing, results
 - (C) Research purpose, framing research questions, market analysis
 - (D) Specification of research purpose, alternatives, research boundaries
18. What part of a research paper clearly outlines what the researcher intends to achieve?
- (A) Research Objectives
 - (B) Statement of the Problem
 - (C) Research Design
 - (D) Scope and Limitation
19. Research objective defines what you want to achieve in your study while research questions refers to what you want to be answered in doing your study. The statement is
- (A) True
 - (B) False
 - (C) Incorrect
 - (D) Ambiguous
20. The general aims and objectives (purpose) of the research.
- (A) When
 - (B) Who
 - (C) What
 - (D) Why
21. The statement 'To identify the relationship between the time the patient spends on the operating table and the development of pressure ulcers' is best described as a research:
- (A) Objective
 - (B) Aim
 - (C) Question
 - (D) Hypothesis
22. Research objectives should always include action verbs to specify the intended outcomes.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
23. The objective of "to determine the association between prevalence of wound and health care practice" is identified as ____
- (A) General objective
 - (B) Specific objective
 - (C) Research question
 - (D) Research hypothesis
24. Summary of all goals. Establish general directions of inquiry & capture substance of study.
- (A) Problem Statement
 - (B) Statement of Purpose
 - (C) Research Questions
 - (D) Hypothesis

25. It explains the reason behind the study, its main and specific goals and aims.
(A) Background of the Problem
(B) Statement of the Problem
(C) Research Objectives
(D) Research Hypothesis
26. A clear, easy-to-understand questionnaire is needed to collect data that reflect:
(A) The study's expected results
(B) The study's budget
(C) The study's objectives
(D) The study's staffing
(E) The study's design type
27. What is the significance of the study in a research project?
(A) Includes reasons why the study adds to the research or literature in the field or area; who benefits
(B) Indicates boundaries, exceptions, reservations, and qualifications in the study
(C) Entices the reader and stimulates interest
(D) Indicate what the research will do
28. The depth of any research can be judged by:
(A) Title of the research
(B) Duration of the research
(C) Objectives of the research
(D) Total expenditure on the research
29. Explain the importance of identifying the reason for the research in the marketing research process.
(A) It helps in defining the research objectives clearly.
(B) It ensures the research is conducted within budget.
(C) It guarantees the success of the marketing campaign.
(D) It eliminates the need for data analysis.
30. The rationale of your study is:
(A) The underlying reason or justification for conducting the research
(B) The list of references used in the study
(C) The expected results of the study
(D) The methodology used in the study
31. In using a descriptive or explanatory framework, specific purposes of nursing research include the following except
(A) Identification and exploration
(B) Prediction and control
(C) Quantitative and qualitative
(D) Description and explanation
32. The main purpose of the study described in the worksheet is:
(A) To investigate a specific scientific question
(B) To summarize previous research
(C) To provide entertainment
(D) To advertise a product
33. In research, the aim is
(A) A testable statement
(B) A general statement explaining the purpose of the study
(C) A clear precise testable statement
(D) None of above
34. Which one is the research objective?
(A) What are the factors that affect the perceived waiting experience of airline passengers?
(B) To what extent do these factors affect the perception of waiting times?
(C) To analyze the affective consequences of waiting
(D) How does affect mediate the relationship between waiting and service evaluations?
35. Why is it important to clearly define the problem in market research?
(A) It reduces the need for data collection.
(B) It provides clarity on the research objectives.
(C) It ensures that the research is inexpensive.
(D) It eliminates the need for secondary data.

36. An explanatory research objective aims to:
- (A) Describe an event
 - (B) Compare two datasets
 - (C) Identify cause-and-effect relationships
 - (D) Collect numerical data
37. A statement of the intent or the objective of a study is referred to as the "research ____"
- (A) Purpose
 - (B) Question
 - (C) Problem
 - (D) Hypothesis
38. What is the significance of the "rationale" in a research proposal?
- (A) It provides the researcher's personal motivation
 - (B) It explains the importance of the study and its contribution to the field
 - (C) It reviews the existing literature
 - (D) It outlines the steps for data analysis
39. In evaluating the significance of the research problem, an important social consideration is
- (A) The genuine interest of the researcher in the problem.
 - (B) Practical value of the findings to educationists, parents and social workers, etc.
 - (C) Necessary skills, abilities and background of knowledge of the researcher.
 - (D) Possibility of obtaining reliable and valid data by the researchers.
40. According to their characteristics, research objectives allow:
- (A) Defining the stages of the research project
 - (B) Discarding the theoretical framework
 - (C) Avoiding ethical approval
 - (D) Replacing research questions
41. Which objective means research into something after it has happened?
- (A) Historical research
 - (B) A case study
 - (C) Ex post facto research
 - (D) Exploratory research
42. In which of the following objectives achievement, the related literature is not useful?
- (A) In formulating the problem.
 - (B) In exploration of the inferences.
 - (C) In selection of the tool.
 - (D) In defining the problem.
43. Before gathering data, the first thing you should do is
- (A) Determine research methods
 - (B) Identify research objectives
 - (C) Find research sources
 - (D) Identify your target market
44. Which of the following is untrue about the objectives of research?
- (A) To extend knowledge
 - (B) To make generalisation
 - (C) To create problems
 - (D) To verify hypotheses
45. Which of the following characteristics should your research aim have?
- (A) It should follow as a logical consequence of the problem statement
 - (B) It should be singular
 - (C) The conclusions in your last chapter must respond to this aim
 - (D) The research aim should have all the characteristics listed here
46. What is a key strategy for avoiding a lack of focus and direction in a capstone project?
- (A) Ambiguous objectives
 - (B) Generalized literature review
 - (C) Clear and specific research objectives
 - (D) Rapid project execution
47. Evaluation model that focused on a process for determining the extent to which program objectives can be achieved.
- (A) Goal-Free Model

- (B) Responsive Model
(C) Effectiveness Model
(D) Objectives-Centered Model
48. What is the main object of research in adult foreign language education?
(A) Adult learners and their learning processes
(B) Textbooks only
(C) Grammar exercises
(D) Vocabulary lists
(E) Eye movement patterns
49. Which objective is advice, guidance, or even an obligation regarding how something should be done
(A) Descriptive research
(B) Exploratory research
(C) Conclusive research
(D) Prescriptive research
50. Research objectives are the goal intended for the research to take place, they must be implicit at the beginning of the research and related to the problem.
(A) Formulating objectives and hypothesis
(B) Collecting the data
(C) Writing a report
(D) None of above
51. What is the first task in the market research process?
(A) Conclusion
(B) Present data in charts
(C) Survey target market
(D) Aim of the research
52. What is the main role of a research purpose statement?
(A) To summarize results from previous studies
(B) To describe what the study aims to accomplish
(C) To identify flaws in existing literature
(D) To predict the relationship between variables
(E) To select a theoretical framework
53. Which one of the following decisions should be made before designing the research plan?
(A) Drafting research objectives
(B) Sampling plans
54. Describe what your research is trying to achieve and explain why you are pursuing it
(A) OBJECTIVES
(B) STATEMENT AND SIGNIFICANCE OF THE PROBLEM
(C) SCOPE AND DELIMITATIONS
(D) BENEFIT AND BENEFICIARIES
55. What is the purpose of formulating one or more AIM or hypothesis in psychological research?
(A) To state the goals or specify a certain outcome
(B) To analyze the data collected
(C) To conduct statistical tests
(D) To publish the research findings
56. Determine purpose, hypotheses and research questions:
(A) Is the purpose statement clear, and does it indicate the variables, their relationship, and the people and site to be studied?
(B) Is the unit of analysis appropriate to address the research problem?
(C) Is the study written using an impersonal point of view?
(D) Does the author mention the steps taken to obtain access to people and sites?
57. Why is it important to consider the "significance" of a research problem?
(A) To ensure the research is interesting only to the researcher.
(B) To assess the potential contribution of the research to knowledge and practice.
(C) To guarantee the research will be published in a top-tier journal.

- (D) To make the research process more complex.
58. Which of the following BEST explains the role of objectives in the conduct of the study?
- (A) It serves as the baseline in making the Review of Related Literature of the study.
 - (B) It is a major structure in framing the methodology of the study.
 - (C) It is the basis in formulating a good, concise and accurate abstract of the study.
 - (D) It serves as a guide to answer the problem.
59. The statement of purpose in research is
- (A) Identify the intent
 - (B) To analyse data
 - (C) Get results
 - (D) Overview results
60. What is the primary purpose of defining research objectives?
- (A) To gather data
 - (B) To outline what the research aims to achieve
 - (C) To develop hypotheses
 - (D) To create a timeline
61. When choosing a research project, which factor is critical in defining the research purpose?
- (A) Clarifying concepts and objectives
 - (B) Collecting large datasets
 - (C) Minimizing time constraints
 - (D) Following traditional methods
62. What is the purpose of a formal inquiry?
- (A) To gather information to answer an academic question
 - (B) To satisfy personal curiosity
 - (C) To create strong emotions
 - (D) To trace back sources
63. Which is the least appropriate form of research objective?
- (A) To explore the relationship between income and education level
 - (B) To determine the causal effect of class attendance on grades
 - (C) To assess the popularity of entertainment shows among youth
 - (D) To vaguely look at media influence
64. A formal statement of what a marketing research study will achieve:
- (A) Decision problem
 - (B) Research objective
 - (C) Target market
 - (D) Research problem
65. Planning of objectives, goals and purposes set at the beginning of the lesson depict which type of stage of curriculum designing:
- (A) Intended
 - (B) Achieved
 - (C) Implemented
 - (D) Transaction
66. The statement "This study explores the experience of caregiving by adult daughters of parents with Alzheimer disease" is an example of which of the following?
- (A) Question
 - (B) Objective
 - (C) Simple hypothesis
 - (D) Complex hypothesis
67. In general, there are 3 research objectives, one of which is to obtain new knowledge or discovery?
- (A) Verification
 - (B) Analytical
 - (C) Development
 - (D) Exploratory
 - (E) Skeptical
68. How do research questions or objectives guide the direction of a study?
- (A) Research questions or objectives guide the direction of a study by defining its focus and scope.

- (B) They outline the methodology to be used in the study.
- (C) They determine the funding sources for the research.
- (D) They provide a list of references for the study.
69. Ms. Lee is researching an article about renewable energy sources in Alaska. Which of the following would Ms. Lee NOT research for her article?
- (A) Where it is very windy
- (B) Where forests are located
- (C) Where to find natural gas
- (D) Where there is the most sunshine
70. What is the objective of forwarding practical recommendations?
- (A) To let stakeholders know that the intended result is doable in the near future
- (B) To persuade stakeholders that accepting the study's proposed output could be beneficial to them
71. A research purpose in a study is a description of its
- (A) Goal
- (B) Question
- (C) Hypothesis
- (D) Area of concern
72. The statement of purpose in a research study should:
- (A) Identify the design of the study
- (B) Identify the intent or objective of the study
- (C) Specify the type of people to be used in the study
- (D) Describe the study
73. Research objectives are:
- (A) Specific goals the researcher aims to achieve
- (B) Review of literature
- (C) Final results
- (D) Statistical conclusions
74. Which of these is NOT an example of a research purpose?
- (A) To investigate effects
- (B) To randomly collect data
- (C) To clarify concepts
- (D) To critique practice
75. Which of the following is not a research objective?
- (A) Exploratory research
- (B) Descriptive research
- (C) Expressive research
- (D) Casual research
76. According to their characteristics, research objectives guide:
- (A) The remaining phases of the research project
- (B) Only the literature review chapter
- (C) Only the sampling procedure
- (D) Only the dissemination plan
77. What is the primary aim of the research described in the document?
- (A) To identify the sources of workplace stress for new RCrim working in LEOs.
- (B) To develop a taxonomy for classifying living organisms.
- (C) To validate quantitative data using qualitative methods.
- (D) To analyze the effectiveness of workplace programs.
78. Research objectives provide:
- (A) A blueprint for research activities
- (B) A guarantee of profits
- (C) Final marketing decisions
- (D) None of these
79. This chapter explains why the researchers wanted to do his research topic.
- (A) Chapter 1
- (B) Chapter 3
- (C) Chapter 2
- (D) Chapter 4

80. Which motive aligns with initiating research within a general area of interest?
- (A) Desire to validate funding cycles
 - (B) Preference for familiar datasets
 - (C) Quest for intellectual understanding
 - (D) Obligation to publish quarterly
81. Which objective best supports testing the assumption that Indian journals are most frequently referred by researchers?
- (A) Study distributions of citations among sources
 - (B) Evaluate most cited journals and rank them
 - (C) Analyse authorship patterns and author rankings
 - (D) Identify trends in institutional collections
82. Dia is conducting a research project to understand the behavior of a new social media platform. Below are the objectives of her research. Which one is not TRUE?
- (A) To determine pattern
 - (B) To test frequencies
 - (C) To test hypothesis
 - (D) To seek for the truth
83. Research objectives should be:
- (A) Vague and general
 - (B) Specific and measurable
 - (C) Long and descriptive
 - (D) Only qualitative
84. Which type of statement can help you define the focus of your report and keep you on target?
- (A) Scope
 - (B) Proposal
 - (C) Purpose
 - (D) Methods
85. Examples of research objectives for causal research design EXCEPT:
- (A) To assess the impacts of foreign direct investment on the levels of economic growth in Taiwan.
 - (B) To analyse the effects of re-branding initiatives on the levels of customer loyalty.
 - (C) To investigate the work ethic values of employees working in branch A are different from those in branch B.
 - (D) None of above
86. A good research purpose statement will include:
- (A) The tools used to measure the variables
 - (B) How many people were in the study
 - (C) Principal variables under study
 - (D) Where the researchers work
87. What does a research aim represent?
- (A) A specific task to achieve
 - (B) The broad goal of the research
 - (C) The variables being studied
 - (D) The methodology used
88. Which of the following purposes of nursing research, implies relationship between socio demographic profile and risk of depression among students?
- (A) Describe
 - (B) Explore
 - (C) Predict and control
 - (D) Explain
89. Which of the following is a simple statement of researchers' intention and a crucial element of a research study?
- (A) Research Hypothesis
 - (B) Research Objective
 - (C) Research Problem
 - (D) None of above
90. It is the part of the research project where the goals will be explained.
- (A) Justification
 - (B) Conclusion
 - (C) Theoretical framework
 - (D) Objectives

91. A description of the management problem, defining the information to be obtained in terms of research questions to be answered.
- (A) Executive summary
 - (B) Research purpose and objective
 - (C) Research Methodology
 - (D) Statistical Treatment of Data
92. What is the purpose of an aim in research?
- (A) To provide a specific, testable prediction
 - (B) To outline the purpose of the research
 - (C) To ensure the study is systematic
 - (D) To develop research methods
93. Cyber bullying at work is a growing threat to employee job satisfaction. Researchers want to find out why people do this and how they feel about it. The primary purpose of the study is:
- (A) Description
 - (B) Prediction
 - (C) Exploration
 - (D) Explanation
94. In writing the research topic there are objectives that serve as guide for the researcher. What is the acronym of that objectives?
- (A) HOMES
 - (B) IRSME
 - (C) SMART
 - (D) SIGBLA
95. What are mentioned as specific goals that the study attempts to accomplish usually as statements of intent?
- (A) Research objectives
 - (B) Research aim
 - (C) Research survey
 - (D) Research designs
96. Find the correct definition of the purpose of research:
- (A) The major intent or objective of the study used to address the problem.
 - (B) A general educational issue, concern, or controversy addressed in research that narrows the topic
 - (C) The broad subject matter addressed by the study
 - (D) Planning a study, investigators should anticipate the time required for data collection and data analysis
97. To Set your Research Objective, the following are required?
- (A) Identify the Context of your Research and (ii) Clarify Research Question
 - (B) Predict Possible Outcomes
 - (C) Both (A) and (B)
 - (D) None of the above
98. Which question most directly clarifies the study's purpose?
- (A) What is the study about and why it is undertaken
 - (B) How many pages the final report will include
 - (C) Which font will be used for headings
 - (D) What refreshments will be served at meetings
99. "to ask people why they support not support the organisation". This is a ____ objective.
- (A) Definite
 - (B) Clear
 - (C) Weak
 - (D) Strong
100. The depth of any research can be judged by:[2006-JUNE]
- (A) Title of the research.
 - (B) Objectives of the research.
 - (C) Total expenditure on the research.
 - (D) Duration of the research.
101. Objectives of the study are essential for
- (A) Stating Hypothesis
 - (B) Preparing tools
 - (C) Selecting sample
 - (D) All of the above

- 102.** When American Airlines asked "1) What types of first-class passengers would respond most to ultra high-speed Wi-Fi service and 2) How many are likely to use it at different price levels?", it was ____
- (A) Setting specific research objectives
 - (B) Conducting exploratory research
 - (C) Outlining decisions
 - (D) Defining the problem
 - (E) Designing a research plan
- 103.** The specific, measurable goals a research project aims to accomplish are known as its:
- (A) Hypotheses
 - (B) Research objectives
 - (C) Research questions
 - (D) Problem statements
- 104.** The research objectives should be written and explained in what form?
- (A) According to the wishes and style of each researcher
 - (B) Long, philosophical, and general
 - (C) Mysterious and invites the reader's curiosity
 - (D) Short, clear, definite, operational and specific
- 105.** The statement "This study aims to explore the perceived effects of Pandemic on the psychological being of people" is an example of which of the following?
- (A) Purpose
 - (B) Question
 - (C) Simple hypothesis
 - (D) Complex hypothesis
- 106.** A well-formulated research objective should be all of the following except:
- (A) Specific
 - (B) Measurable
 - (C) Ambiguous
 - (D) Realistic
- 107.** After initial exploration, the team wants to determine if a price increase caused the drop in sales. Which research objective type aligns best with this goal?
- (A) Exploratory-collecting info to define the problem
 - (B) Descriptive-focus on characteristics of target market
 - (C) Causal-determine cause/effect of issue
 - (D) Promotional-improve advertising reach
- 108.** What is one of the objectives of a research proposal?
- (A) To state the conclusions of the study
 - (B) To prepare the reader for changes in the study
 - (C) To contain an overview of the study
 - (D) To include revisions
- 109.** The success or failure of research should always be judged against its
- (A) Aims
 - (B) Reliability
 - (C) Validity
 - (D) Processes
- 110.** It refers to the specific accomplishments the researcher hopes to achieve by conducting the study.
- (A) Statement of Purpose
 - (B) Statement of Problem
 - (C) Aim
 - (D) Paradigm
- 111.** Research objectives help in:
- (A) Defining the scope of study
 - (B) Reducing the need for sampling
 - (C) Avoiding the need for data collection
 - (D) Eliminating bias completely
- 112.** When defining research objectives, it is necessary to ensure that the objectives are achievable
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above

- 113.** Research objectives falls into a number of categories that include
- (A) Planning to get answers for what, why & where type of questions.
 - (B) Considering the logic behind the methods we use in the context of the research.
 - (C) Formulative, concept, and planning for research methods.
 - (D) Exploratory, descriptive, diagnostic and experimentation research.
- 114.** A good research objective should be:
- (A) Broad and vague
 - (B) Measurable and specific
 - (C) Difficult to understand
 - (D) Based on guesses
- 115.** The first step of a scientific enquiry is the
- (A) Hypothesis
 - (B) Aim
 - (C) Variables
 - (D) Method
- 116.** Managers and researchers have formalized their decisions into a statement of what the marketing research study will achieve, known as a
- (A) Relevant variable.
 - (B) Decision problem.
 - (C) Research objective.
 - (D) Research problem.
- 117.** The goals to be achieved by conducting research
- (A) Research gaps
 - (B) Research problem
 - (C) Content Validity
 - (D) Research Objectives
- 118.** Provides an overview of the business and research objectives.
- (A) Introduction
 - (B) Mission and Vision
- 119.** Why is it important to establish research objectives before starting a research project?
- (A) To ensure the study has enough statistical power to detect meaningful effects
 - (B) To obtain informed consent from participants
 - (C) To analyze data collected over time to identify patterns, trends, or seasonality
 - (D) To provide a clear direction and focus for the research
- 120.** Tell me your concept of Condition when you write a Learning Objective:
- (A) Describes what learners must be able to do to demonstrate that they have achieved the objective.
 - (B) Who is expected to complete the performance
 - (C) Condition statements describe any conditions that apply to the performance
 - (D) None of above
- 121.** The process of the questionnaire begins with:
- (A) Problem
 - (B) Hypothesis
 - (C) Objectives
 - (D) Strategies
- 122.** In a research project, Mira is tasked with defining the purpose of her study. She knows that a clear statement of her intention is essential for guiding her research. Which of the following best describes this crucial element of her research study?
- (A) Research Hypothesis
 - (B) Research Objective
 - (C) Research Problem
 - (D) None of above
- 123.** What do you consider as the main aim of interdisciplinary research?
- (A) To over simplify the problem of research
 - (B) To bring out holistic approach to research
 - (C) To create a new trend in research methodology
 - (D) To reduce the emphasis of single subject in research domain

1.1.7 Importance of Research

1. In the criteria of Relevant to the Academe, this means that your study
 - (A) Is something you are interested to begin with
 - (B) Is within the bounds of your time, budget and locale
 - (C) Can contribute and add new information for peers scholar and future researcher
 - (D) Must be beneficial to other and can help improve quality of human life
2. Which importance of research best describes the sentence, "The results of research studies are used as a springboard for conducting more studies, planning new projects, or creating new products"?
 - (A) Research gathers relevant information and produces novel knowledge
 - (B) Research improves the quality of life
 - (C) Research promotes understanding of history
 - (D) Research contributes to one's personal and professional development
3. Research provides solutions to problems we encounter. Since problems are endless, research is a continuing process.
 - (A) True
 - (B) False
4. Why is it important to clearly state the benefits of a study?
 - (A) To show its relevance and potential contributions
 - (B) To make the study appear longer
 - (C) To confuse the reader
 - (D) To meet word count
5. Which of the following best describes the importance of research in academic writing?
 - (A) It supports arguments and enhances credibility.
 - (B) It is optional and not always necessary.
 - (C) It distracts from the main topic.
 - (D) It is only relevant for scientific papers.
6. The purpose of research is not to inform action.
 - (A) TRUE
 - (B) FALSE
7. It state what is the relevance of your study to your intended audience and what are the specific benefits they can get from the findings of your research
 - (A) Objectives of the Study
 - (B) Literature review
 - (C) Brief background
 - (D) Significance of the Study
8. How does research help in everyday decision-making?
 - (A) It allows instant conclusions without proof.
 - (B) It ensures that all opinions are correct.
 - (C) It provides reliable and factual information.
 - (D) It removes the need for critical thinking.
9. Which of the following is a key aspect of the importance of a research report in decision-making processes?
 - (A) It provides a formatted and structured document.
 - (B) It contributes to decision-making processes by providing evidence-based information.
 - (C) It includes an abstract and introduction.
 - (D) It details the methodology used in the study.
10. One important goal in conducting research is to
 - (A) Advance the personal and professional qualification of practitioner
 - (B) Produce evidence based practice
 - (C) Focus direction of the research
 - (D) Describe characteristics of a population

11. Importance of media research
- (A) It helps in creating more advertisements.
 - (B) It provides insights into audience preferences and behaviors.
 - (C) It focuses solely on the financial aspects of media.
 - (D) It is only relevant for media production companies.
12. What is considered an essential tool of journalism along with curiosity, skepticism, and collaboration?
- (A) Research
 - (B) Writing
 - (C) Editing
 - (D) Interviewing
13. The purpose of Social Science Research is
- (A) Academic and Non academic
 - (B) Cultivation
 - (C) Academic
 - (D) None of above
14. Which of the following options are the main tasks of research in modern society?
- (A) To discover new things
 - (B) To keep pace with the advancement in knowledge
 - (C) To systematically examine and critically analyse the investigations/sources with objectivity
 - (D) All of the above
15. The following statements are the importance of research EXCEPT ____
- (A) Research can lead to expansion of knowledge and new discoveries.
 - (B) It helps us find ways to allocate scarce resources accordingly.
 - (C) It may not help in studying the effects of observed phenomena.
 - (D) It develops critical thinking and analysis.
16. The wider cause for conducting research is to improve
- (A) Personnel
 - (B) Organisation
 - (C) Management
 - (D) Society
17. Why is dissemination of research findings important?
- (A) Scientists earn more
 - (B) Public awareness grows
 - (C) Schools get richer
 - (D) Laws become stricter
18. Why is it important to establish the significance of your study?
- (A) To make the study more complex.
 - (B) To explain who benefits from the research and its importance to the field.
 - (C) To confuse the reader.
 - (D) To justify the researcher's personal interest in the topic.
19. In the criteria of Significant to the Community, this means that your study
- (A) Is something you are interested to begin with
 - (B) Is within the bounds of your time, budget and locale
 - (C) Can contribute and add new information for peers scholar and future researcher
 - (D) Must be beneficial to other and can help improve quality of human life
20. What is the significance of the study on game-based learning?
- (A) It shows teachers how to discourage participation in their classrooms.
 - (B) It demonstrates the ineffectiveness of on-line game-based learning.
 - (C) It provides another way to encourage participation in classrooms.
 - (D) It confirms that traditional teaching methods are superior.

21. Which importance of research is described in the statement below? Research creates change as a result of intense study on exiting knowledge and policy.”
- (A) To make changes
 - (B) To know the truth
 - (C) For a safer life
 - (D) Gain essential information
22. In what way does research contribute to the advancement of knowledge in society?
- (A) By providing entertainment value for the general public
 - (B) By reinforcing commonly accepted beliefs without challenging them
 - (C) By offering innovative solutions to problems and expanding understanding in various fields
 - (D) By ensuring that all research results are immediately accepted as truth
23. Which importance of research is described in the statement below? “Results of research helped us to mark out the thin line between truth and lie.”
- (A) To make changes
 - (B) For a safer life
 - (C) To know the truth
 - (D) Gain essential information
24. Choose the most appropriate word to fill in the blank: “The scientist’s ____ research contributed significantly to the understanding of climate change.”
- (A) Superficial
 - (B) cursory
 - (C) Groundbreaking
 - (D) Negligible
25. Which of the following states the importance of research?
- (A) To hinder exchange of ideas and information.
 - (B) To discriminate your subject using research.
 - (C) To disapprove and discontinue learning process.
 - (D) To dive deep in the subject or topic that you are interested.
26. Why is research important in social sciences?
- (A) To bring out solutions to business problems.
 - (B) To find out solutions for the problems of the Government.
 - (C) To come out with solutions to social problems.
 - (D) To find out solutions for the problems of the individuals.
27. The significance or importance of the research study, which is typically economic, intellectual, or problem-oriented, is explained by the author in this chapter.
- (A) Conceptual framework
 - (B) Theoretical framework
 - (C) Introduction
 - (D) Significance of the study
28. The significance of the study should clearly explain how the research benefits society, science, or education.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
29. True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. Research contributes to knowledge development by building on and validating previous studies.
- (A) True
 - (B) False
30. Which importance of research is best described by the sentence “Research is done by examining past societies, problems, and human behaviors and comparing them to current ones”?
- (A) Research gathers relevant information and produces novel knowledge

- (B) Research improves the quality of life
(C) Research promotes understanding of history
(D) Research contributes to one's personal and professional development
31. Why is it important to use multiple sources in research?
(A) To make it longer
(B) To impress the boss
(C) To increase accuracy and reliability of findings
(D) To confuse competitors
32. The importance of research in the profession of nursing is mainly to
(A) Establish a solid base of evidence for nursing practice.
(B) Find new drugs
(C) Remember nursing history
(D) Compete with other professions
33. What is one of the key benefits of engaging in research for engineering students?
(A) Procrastination reduction
(B) Improved social skills
(C) Enhanced problem-solving abilities
(D) Decreased workload
34. What enhances the value of a research?
(A) Choosing a topic that is significant
(B) Choosing a topic that is already discussed
(C) Choosing a topic that has high impact
(D) Choosing a topic with strategic process
35. Which of the following describes the content with who are to be benefitted and how they are going to be benefitted?
(A) Objectives of the study
(B) Problem statement
(C) Significance of the study
(D) Scope and limitation
36. It is a written statement that explains why your research was needed
(A) Statement of the Problem
(B) Background of the Study
(C) Significance of the Study
(D) Scope and Delimitation of the Study
37. Write T if the statement is true, and F if it is false. The significance of the study explains the potential benefits of research.
(A) True
(B) False
38. This is the importance of the proposed study in the individuals and society.
(A) Statement of the problem
(B) Significance of the study
(C) Scope and delimitation
(D) Background of the study
39. What is not the reason underlying the importance of research in education?
(A) It is a tool for verifying, testing and validating knowledge.
(B) It is a potent means of creating new knowledge.
(C) It has moved to the centre of the behavioral sciences.
(D) It provides answers to many problems faced by educators.
40. What is the importance of evaluating the success of a research collaboration?
(A) To identify areas for improvement and enhance future collaborations
(B) To assess the impact and outcomes of the research project
(C) To demonstrate the value and benefits of collaboration
(D) All of the above
41. Describes what contribution your study will make to the broad literature or set of broad educational problems upon completion.
(A) Definition of terms
(B) Significance of the study

- (C) Objectives of the study
(D) Scope and limitation of the study
42. Which of the following is the importance of educational research?
(A) To understand action and reaction
(B) For development
(C) Problem-solving
(D) All of the above
43. One of the importance of Statistics in Research is it enables us to make predictions.
(A) TRUE
(B) FALSE
(C) All the above
(D) None of the above
44. Introduction to Research: Objectives & Significance-Research is significant because it:
(A) Helps in decision-making and policy formulation
(B) Is done only for academic purposes
(C) Avoids use of scientific methods
(D) Has no real-world impact
45. Research undertakings are basically geared toward improving the ____
(A) Program
(B) History
(C) Quality of life
(D) Quality of self
46. It should be ____ to the field of study or discipline
(A) Accurate
(B) Specific
(C) Significant
(D) SMART
47. The benefit or importance of the research to society.
(A) Significance
(B) Limitation
(C) Procedure
(D) Hypothesis
48. Why is it important to know how research is done?
(A) To evaluate research results confidently
(B) To develop disciplined thinking
(C) To make rational decisions
(D) All of the above
49. Why do you need to conduct research report on relevant social issues?
(A) It gives you ideas of how to deal with problems and issues you may face in the future.
(B) It shows the answers to all your queries by giving you correct information and results.
(C) It highlights some important details that will help you overcome problems in your life.
(D) It provides possible solutions to the problems in the society through a thorough study.
50. "Every teacher, should be an action researcher". This statement is ____
(A) Applicable only for teachers in big schools.
(B) Not doable and very idealistic.
(C) The call for teachers in the current times.
(D) Appropriate for honor graduates.
51. What is the principal goal of research as stated in the notes?
(A) To create new applications for technology.
(B) To preserve and improve the quality of human life.
(C) To expand knowledge for academic purposes only.
(D) To gather information for marketing strategies.
52. The proposition about research that you do not agree is
(A) Research contributes to social progress of the society.
(B) Research improves the quality of teaching.
(C) Research is only a personnel achievement.

- (D) Research leads to finding solution to too many problems.
53. Stresses the importance of the study by emphasizing the specific sectors of society that would benefit from the present study
- (A) Scope and Delimitation
 - (B) Significance of the Study
 - (C) Literature Review
 - (D) Introduction
54. A response to which of these questions is closest to motivation for research?
- (A) Why should people care?.
 - (B) Why not?.
 - (C) Why do I care?.
 - (D) So when?.
55. Raised awareness of the plight of endangered species such as chimpanzees
- (A) John Muir
 - (B) Jane Goodall
- (C) Voting
- (D) EIS
56. The primary purpose of the significance of the study is to:
- (A) Describe how the study will benefit others and contribute to existing knowledge
 - (B) Justify the methodology used
 - (C) Present the findings in a summarized form
 - (D) Show previous research on the topic
57. Why is research important for advancing knowledge?
- (A) It provides definitive answers to all questions.
 - (B) It facilitates the exploration of uncharted territories and generates new insights.
 - (C) It replaces the need for traditional education
 - (D) It ensures that no mistakes are made in knowledge acquisition.

1.1.8 Scope of Research

1. What the project will and will not include is called the ____
- (A) Plan.
 - (B) Scope.
 - (C) Risk.
 - (D) Quality.
2. In a project meeting, Advait discusses the extent of the area or subject matter that their research on renewable energy will cover, emphasizing its relevance to current environmental issues.
- (A) Limitation
 - (B) Scope
 - (C) Methodology
 - (D) Literature
3. This describes the coverage and boundaries of the study.
- (A) Background of the study
 - (B) Research Questions
 - (C) Scope and Delimitation of the study
 - (D) None of above
4. This refers to the coverage of the study expressed thru the following phrases: This study consists of ____ / This study includes only the ____
- (A) Voice
 - (B) Scope
 - (C) Style
 - (D) Diction
5. This section explains the nature, coverage, and time frame of the study.
- (A) Review of Related Literature
 - (B) Review of Related Studies
 - (C) Scope and Limitation
 - (D) Theoretical Framework
6. The scope of business research includes:
- (A) Decision-making

- (B) Policy formulation
 - (C) Forecasting trends
 - (D) All of the above
7. Nursing research encompasses which scope of inquiry?
- (A) Historical biographies of physicians
 - (B) Only laboratory bench experiments
 - (C) Care improvement in clinical settings
 - (D) Administrative budgeting processes
8. This tells the specific boundaries of the study by describing the place or venue of the study, the population, subjects/respondents, time frame, the variables and their indicators.
- (A) Scope and Limitation
 - (B) Significance of the Study
 - (C) Introduction
 - (D) Framework
9. Have technological developments had the greatest impact on what we know, how we know, or how we store knowledge?
- (A) Scope
 - (B) Perspectives
 - (C) Methods and Tools
 - (D) Ethics
10. Identifies the topic that a researcher intends to cover
- (A) Research questions.
 - (B) Title.
 - (C) Delimitation.
 - (D) Scope.
11. “ Identifies parameters that restrict the scope of the research findings.
- (A) Definition of terms
 - (B) Background of the Study
 - (C) Scope and Delimitation
 - (D) Statement of the Problem
12. Which part of the research paper determines the coverage of the study and all the things that will not be covered in order to be specific?
- (A) Assumption of the Study
 - (B) Scope and Delimitation
 - (C) Significance of the Study
 - (D) Background of the Study
13. The scope of research problem defines:
- (A) The statistical tools used
 - (B) The boundaries or limits of the study
 - (C) The hypothesis
 - (D) The sampling size
14. Describes the coverage of the study in terms of concept, population and timeline.
- (A) Title
 - (B) Scope
 - (C) Hypothesis
 - (D) Delimitation
15. The extent of the area or subject matter that something deals with or to which it is relevant.
- (A) Limitation
 - (B) Scope
 - (C) Methodology
 - (D) Literature
16. It identifies the boundaries of the study in terms of subjects, objectives, facilities, area, time frame, and the issues to which the research is focused.
- (A) Delimitation
 - (B) Inquiry
 - (C) Statement of the problem
 - (D) Scope
17. Remember those — are not good or bad. They are simply a detailed description of the scope of interest for your study as it relates to the research design.
- (A) Limitations
 - (B) Delimitations
 - (C) Scopes
 - (D) Assumptions

18. A study focusing on Filipino millennials who use Instagram for online shopping from 2020 to 2024 is defining its:
- (A) Research Problem
 - (B) Research Gap
 - (C) Scope
 - (D) Limitation
19. When a researcher is able to apply research findings to larger population, it is called as ____
- (A) Logical
 - (B) Objective
 - (C) Empirical
 - (D) Generalisation
20. Scientists sometimes replicate a study using different participants in order to
- (A) Test whether or not there was volunteer bias
 - (B) Study changes over time
 - (C) Make sure the findings are true for different groups of people
 - (D) Prove a positive correlation between two factors
21. What is the scope of research?
- (A) The breadth and depth of the research topic
 - (B) The sample size of the research study
 - (C) The time frame of the research project
 - (D) The accuracy of the research findings
22. What should the scope and delimitation of a study include?
- (A) Only the specific time frame of the study.
 - (B) The topics covered, as well as the limitations, such as sample size and methods.
 - (C) The opinions of participants only.
 - (D) The research objectives only.
23. True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. The scope of the study defines the coverage and boundaries of the research.
- (A) True
 - (B) False
24. This part answers the who, what, when, why and how of the present study, the coverage and limitations.
- (A) Scope and Delimitation
 - (B) Hypothesis
 - (C) Significance of the Study
 - (D) Statement of the Problem
25. Generalize: apply the findings of a study more ____, ex. other settings and populations
- (A) Widely
 - (B) Narrowly
 - (C) Locally
 - (D) Specifically
26. If an action researcher team is considering study issues occurring in a large-scale environment-such as a lower-income school district-which scope of action research is the most appropriate for the investigation?
- (A) Collaborative
 - (B) Individual
 - (C) Systemwide
 - (D) None of above
27. This indicates the general boundaries of the study.
- (A) Coverage
 - (B) Scope
 - (C) Limitation
 - (D) None of the above
28. Write T if the statement is true, and F if it is false. A scope refers to the boundaries and limitations of the study.
- (A) True
 - (B) False
29. The purpose of delimitations in a research study is to:
- (A) State the assumptions made in the study
 - (B) Identify the limitations that could affect the study

- (C) Define the boundaries and scope of the study
(D) Explain why the study is important
30. Part of research that includes the coverage of the study, the subjects, the research instrument, and the duration of the study.
(A) Significance of the study
(B) Scope and limitations of the study
(C) Review of related literature
(D) None of above
31. The sections where you define the broader parameters and boundaries of your research
(A) Objectives
(B) Statement and Significance of the Problem
(C) Scope and Delimitations
(D) Benefit and Beneficiaries
32. It means range of view, outlook, field or opportunity of activity, operation and application of education
(A) Scope of Education
(B) Foundation of Education
(C) Both A and B
(D) None of the choice s
33. Why is defining the scope of research important?
(A) To avoid making conclusions
(B) To clarify study boundaries
(C) To include unrelated topics
(D) To increase word count
34. An important section of a research paper, this includes the coverage of the study, the subjects, the research instruments, the research issues and concerns, the duration of the study and the constraints that have direct bearing on the results of the study.
(A) Significance of the study
(B) Objectives of the study
(C) Scope and limitations of the study
(D) Definition of terms
35. This part of research provides the boundaries or limitation of the research study.
(A) Benefits and beneficiaries
(B) Scope and delimitation
(C) Justification
(D) None of above
36. Where in the world do we see soil pollution?
(A) Canada, China, Australia
(B) Everywhere
(C) Africa, Australia, South Africa, Europe
(D) US, Europe and Australia
37. This part of the introduction delineates the total bounds and range of the whole research work in relation to the chosen topic.
(A) The research gap
(B) The significance of the study
(C) The scope and limitations
(D) None of the above
38. What part of the introduction sets the boundaries and parameters of the study?
(A) Parametric Limits
(B) Study Area Coverage
(C) Scope and Delimitation
(D) Limitation of the study
39. Which of the following best defines the scope of a study?
(A) The duration of the study
(B) The extent or area covered by the study
(C) The method used in data collection
(D) The ethical considerations
40. What defines the scope of a literature review in a research project?
(A) Conducting experimental trials
(B) Establishing key theoretical and conceptual insights
(C) Gathering personal opinions
(D) Summarizing past research briefly

41. If a company uses only Instagram and TikTok for its marketing research, this limits:
- (A) Generalizability to all social platforms
 - (B) Internal consistency
 - (C) Ethical transparency
 - (D) Data coding
42. The scope of Educational research is very vast. The problems included are
- (A) Educational.
 - (B) Sociological.
 - (C) Philosophical.
 - (D) All the above.
43. Scope and Delimitation presents the following data except ____?
- (A) Gender of the respondents
 - (B) Grade Level of the students
 - (C) Locale of the Research
 - (D) Research Problem
44. What is the significance of the scope and limitations section in Chapter 1?
- (A) To present the research findings and conclusions
 - (B) To describe the research methodology and analysis techniques
 - (C) To provide a theoretical framework for the research
 - (D) To outline the boundaries and constraints of the research study
45. It is part of the research study that states what is included and not in the research study.
- (A) Statement of the Problem
 - (B) Significance of the Study
 - (C) Background of the Study
 - (D) Scope and Delimitation
46. Which query is fundamental when specifying the scope of a study?
- (A) Who will fund the publication fees
 - (B) Which software will be used for citation
 - (C) Where will the study be conducted geographically
 - (D) Whether participants prefer online surveys
47. Multiple Choice: Read each question carefully and choose the BEST answer. A study involves selected private senior high schools in one city. Which title best reflects the scope?
- (A) Study Habits of Students
 - (B) Study Habits in Senior High Schools
 - (C) Study Habits in Selected Private Senior High Schools in Cebu City
 - (D) Study Habits of All Filipino Students
48. Details what your study will explore, such as the target population, extent, or study duration
- (A) Objectives
 - (B) Statement and Significance of the Problem
 - (C) Scope and Delimitations
 - (D) Benefit and Beneficiaries
49. When a study includes only Instagram users aged 18-24, what part of the research paper defines this boundary?
- (A) Limitation
 - (B) Background
 - (C) Scope
 - (D) Research Gap
50. What is the purpose of the scope of a research study?
- (A) To specify the timeline of the study
 - (B) To describe the background of the study
 - (C) To describe the coverage of the study
 - (D) To define who will benefit from the study
51. The scope of the study refers to:
- (A) The boundaries or coverage of the research
 - (B) The research title
 - (C) The references used
 - (D) The findings

52. On this part of the research it shows the boundaries of the study like geographic location, population, time, and variables to be discussed. Which of the following is an example of time in the study?
- (A) 6:00 am
 - (B) Academic year 2020-2021
 - (C) Beyond Sunday
 - (D) Between 2:00 to 3:00 o'clock of the day
53. These are the characteristics that limit the scope and describe the boundaries of the study, such as the sample size, geographical location, or setting in which the study takes place.
- (A) Limitations
 - (B) Delimitations
 - (C) Scope
 - (D) Assumptions
54. Issues affecting a large environment-such as an educational college of a major university-are best handled by which scope of action research?
- (A) Systemwide.
 - (B) Individual.
 - (C) Collaborative.
 - (D) None of the above.
55. It explains the extent to which the research will be explored.
- (A) Significance of the Study
 - (B) Scope and Delimitations
 - (C) Statement of the Problem
 - (D) Research Question
56. Describe the coverage of the study. It specifies what is covered in terms of concept, number of subjects or the population included in the study, as well as the timeline when the study is conducted
- (A) Introduction
 - (B) Background of the Study
 - (C) Scope and Limitation
 - (D) Significance of the Study
57. This refers to the boundaries of the research study, based on the researcher's decision of what to include and what to exclude
- (A) Delimitation
 - (B) Scope
 - (C) Limitation
 - (D) Range
58. This part of the research paper presents the boundaries of the study.
- (A) Abstract
 - (B) Table of Content
 - (C) Significance of the Study
 - (D) Scope and Limitations
59. Why is it important to limit recommendations to the study's scope?
- (A) To make recommendations appear universal
 - (B) To ensure they are realistic and achievable
 - (C) To enhance the study's originality
 - (D) To increase publication chances
60. What is the scope of research methodology?
- (A) Specific.
 - (B) Very wide.
 - (C) Narrow.
 - (D) Very limited.
61. Details how in-depth your study is to explore the research question and the parameters in which it will operate concerning relation to the population and the timeframe
- (A) Delimitation
 - (B) Limitation
 - (C) Scope
 - (D) Research question

1.2 Research Philosophies and Types

1.2.1 Positivism in Research

1. Who would most likely agree with the statement, "Psychology should investigate only behaviors that can be observed"?
 - (A) Wilhelm Wundt
 - (B) Sigmund Freud
 - (C) John Watson
 - (D) William James
2. Positivist researchers assume that
 - (A) The social world is predictable
 - (B) There is some level of uniformity in the social world
 - (C) Individuals have their own unique stories to tell
 - (D) Some universal statements can be said about the general population
3. Positivism: scientific method
 - (A) Quantitative
 - (B) Qualitative
4. Epistemological approaches aim to understand:
 - (A) What is understood
 - (B) Replicable observations
 - (C) Subjective interpretation
 - (D) Deductive reasoning
5. According to positivism, which of the following is the primary goal of research?
 - (A) To uncover the meaning behind social phenomena
 - (B) To understand the subjective experiences of individuals
 - (C) To establish causal relationships between variables
 - (D) To describe the cultural practices of a group
6. Positivism emphasizes the importance of which of the following in research?
 - (A) Emotions
 - (B) Values
 - (C) Objectivity
 - (D) Subjectivity
7. What is the positivist view of the relationship between theory and research?
 - (A) Theory should be developed from empirical research
 - (B) Research should be based on pre-existing theories
 - (C) Theories and research are separate and unrelated
 - (D) Theory is irrelevant to the research process
8. A discipline's perspective embraces, and in turn reflects, its defining elements, which include the assumptions it makes about the natural and human world.
 - (A) True
 - (B) False
9. Positivism emphasizes the importance of:
 - (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) None of the above
10. Which of the following best describes the positivist approach to research?
 - (A) It emphasizes the use of qualitative data and subjective experiences
 - (B) It seeks to understand the meaning behind human behavior
 - (C) It focuses on empirical observation and quantifiable data
 - (D) It encourages the involvement of participants in the research process
11. What is a positivist?
 - (A) Researchers who focus on hard facts and numbers.

- (B) Researchers who focus on understanding people's experiences.
(C) A scientist who studies human cultures and societies.
(D) Trustworthy and accurate information.
12. Herbert Spencer ____
(A) Believe that the education of children needed to be developmentally appropriate, it needs to build on prior knowledge.
(B) Advocate for experiential learning, using hands-on projects that allow students to learn by actively engaging in activities that put their knowledge to use.
(C) Support operant and classical conditioning
(D) Invented the term "survival of the fittest," and was an advocate for competition.
13. Philosophy in research informs us about how to use abstract ideas and beliefs into research worthy forms
(A) True
(B) False
14. What is the positivist view of the role of the researcher in the research process?
(A) The researcher should be an active participant in the research
(B) The researcher should be a neutral observer
(C) The researcher should be a passive observer
(D) The researcher's role is irrelevant to the research process
15. Positivist research assumes that reality is:
(A) Socially constructed
(B) Subjective
(C) Objective
(D) None of the above
16. Evidence that is rooted in objective reality and gathered through the senses rather than through personal belief
(A) Empirical evidence
(B) Assumption of determinism
17. An approach to the study of human behavior that seeks causal relationships among factors with the goal of trying to predict outcomes.
(A) Positivism
(B) Rapport
(C) Matching
(D) Treatment
18. What is the focus of positivism in research?
(A) Objectivity and deductive logic
(B) Subjectivity and inductive logic
(C) Power and inequality
(D) None of above
19. It is true about a positivist scientific method, EXCEPT
(A) Quantitative researchers gather empirical evidence
(B) Quantitative research focus on understanding the human experience as it is lived
(C) Quantitative researchers are independent of those being studied
(D) Quantitative studies data are gathered systematically, using formal instruments to collect needed information
20. What does an empiricist believe?
(A) All the knowledge that we have of life after death can be used in research.
(B) Knowledge in the form of 'facts' should be gained through sensory experience.
(C) Research conducted within the British Empire was biased and unreliable.
(D) Research should not always necessarily rely on the scientific methods.
21. This philosophy influenced the adoption of evidenced-based strategies.
(A) Positivism
(B) Humanism
(C) Perennialism
(D) Behaviorism

22. Positivism is most closely associated with which discipline?
(A) Sociology
(B) Philosophy
(C) Anthropology
(D) Political science
23. An empiricist view of development would be
(A) Psychometric
(B) Behavioristic
(C) Against the use of formal statistical testing
(D) Both options two and three
24. The author of "The Grammar of Science" is
(A) Ostle
(B) Richard
(C) Karl Pearson
(D) Kerlinger
25. What is a paradigm in research?
(A) A method for qualitative
(B) A way of making statistical models
(C) A tool used for experiments
(D) A set of beliefs or principles in research
26. According to positivism, which of the following is the most reliable source of knowledge?
(A) Intuition
(B) Personal experience
(C) Empirical observation
(D) Religious faith
27. In a scientific research
(A) There are assumptions which can easily verified experimentally.
(B) There are no assumptions at all.
(C) There are assumptions but experiments cannot verify them.
(D) Experiments can only refute assumptions.
28. Positivistic research approach was advocated by
(A) Stanley & Compbell.
(B) Babbit.
(C) Auguste Comte.
(D) Francis Bacon.
29. A proposition is true if it
(A) Is believed
(B) Corresponds to reality
(C) Is accepted
(D) Is reflective
30. The ___ of quantitative research assumes that truth is based in objectivity.
(A) Ontology
(B) Epistemology
31. "A set of shared understandings and assumptions about reality and the world" is a definition for which of the following.
(A) A concept
(B) A conceptual framework
(C) A practice discipline
(D) A paradigm
32. Which of the following is NOT a typical step in the positivist research design process?
(A) Formulating a hypothesis
(B) Literature review
(C) Developing personal interpretations
(D) Collecting data
33. Which research philosophy tests the theory or hypothesis using data?
(A) Positivist
(B) Interpretivist
34. Using postulate theorems and definitions to draw conclusions.
(A) Deductive
(B) Inductive
35. Most closely allied with the positivist tradition
(A) Quantitative research
(B) Qualitative research

36. Involves using orderly procedures to gather primarily quantitative information
(A) Positivism: scientific method
(B) Assumption of determinism
(C) Empirical evidence
(D) None of above
37. Describes a relationship in nature that is supported by many experiments.
(A) Theory
(B) Scientific law
38. What does “falsifiable” mean in scientific research?
(A) It means the research is false or incorrect
(B) It means the research can be proven false
(C) It means the research is not believable
(D) It means the research is not valid
39. Decide whether the statement is true or false: Positivism supports scientific study of society.
(A) True
(B) False
40. Which of the following is not a type of research question that can be addressed using positivism?
(A) How do people experience a particular phenomenon?
(B) What is the relationship between two variables?
(C) What are the causes of a particular behavior?
(D) What is the prevalence of a particular condition?
41. Generally a scientist’s observations related to Experiment and testing are based on-
(A) Self-experiences
(B) Self-imagination
(C) Scientific principles
(D) House hold rules
42. What is the positivist view of the relationship between science and society?
(A) Science is separate from society
(B) Science should be used to benefit society
(C) Society should be used to benefit science
(D) Science is irrelevant to society
43. Decide whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of quantitative research. objective, material, structural, agreed-upon
(A) Ontology
(B) Epistemology
(C) View of thought and behavior
(D) Research focus
44. Which philosophical paradigm underpins quantitative research?
(A) Interpretivism.
(B) Positivism.
(C) Constructivism.
(D) Postmodernism.
(E) Phenomenology.
45. An assumption of the natural sciences is that knowledge is based on experience.
(A) True
(B) False
46. Positivist research tends to involve qualitative data
(A) False
(B) True
47. Which of the following is not a method used in positivist research?
(A) Experimentation
(B) Observation
(C) Surveys
(D) Participant observation
48. Emile Durkheim engaged in qualitative research
(A) True
(B) False

49. Auguste Comte: The doctrine that recognizes only natural phenomena or facts that are objectively observable.
- (A) Positivism
 - (B) Materialism
 - (C) Mentalism
 - (D) None of above
50. The first direction in sociology was:
- (A) Materialism
 - (B) Positivism
 - (C) Idealism
 - (D) Subjectivism;
 - (E) Marxism
51. When the industrial age introduced empirical research, what became valuable as basis for objective truth?
- (A) Observable and measurable evidence
 - (B) Customs and traditions
 - (C) Church doctrine and morals
 - (D) Authoritative rules and norms
52. The scientific methods is based on the positivist paradigm. Which among the following types of research is based on the positivist tradition?
- (A) Quantitative research
 - (B) Phenomenology
 - (C) Ethnography
 - (D) Qualitative research
53. Which of the following is not a strength of positivist research?
- (A) Positivist research is rigorous and systematic
 - (B) Positivist research is objective and unbiased
 - (C) Positivist research can generate generalizable findings
 - (D) Positivist research is particularly well-suited to studying complex social phenomena
54. Define the research paradigm of positivism.
- (A) A school of thought which advocates that reality is objective and measurable.
 - (B) A school of thought which believes that reality is subjective and that there is no universal truth.
 - (C) A school of thought which takes a practical approach to research advocating the use of mixed methods.
 - (D) Beliefs about the nature of being and the characteristics of reality.
55. Theories A and B provide explanations for variance in student's academic performance. Both theories explain performance well; however, Theory A is more concise and succinct. Which approach for evaluation quality is applied to determine that Theory A is preferred for explaining the phenomenon?
- (A) The rule of parsimony
 - (B) The criterion of falsifiability
 - (C) The theoretical explanations
 - (D) The principle of evidence
56. What is the primary aim of research in empiricism?
- (A) To derive knowledge from divine revelation
 - (B) To formulate laws based on observations of patterns or recurring relationships
 - (C) To question everything and rely on reason alone
 - (D) To explore multiple realities through subjective experiences
57. Circle the best answer. Positivism supports:
- (A) Interpretation only
 - (B) Scientific methods
 - (C) Subjectivity
 - (D) Ideology
58. Positivist refers to that which can be scientifically verified
- (A) True
 - (B) False
59. During a class discussion, Rohan asked, 'What philosophical approach informed the theoretical location of the research?'

- (A) Empiricism
 - (B) Rationalism
 - (C) Interpretive phenomenology
 - (D) Positivism
60. Circle the best answer. Durkheim introduced the concept of:
- (A) Class struggle
 - (B) Rationalization
 - (C) Social facts
 - (D) Hegemony
61. What is able to be disproven by experimental results?
- (A) Falsifiable
 - (B) Empirical
 - (C) Inductive reasoning
 - (D) None of above
62. Who prefers structured interviews?
- (A) Marxists
 - (B) Functionalists
 - (C) Interpretivists
 - (D) Positivists
63. Positivism emphasizes the use of which type of data?
- (A) Qualitative
 - (B) Quantitative
 - (C) Both qualitative and quantitative
 - (D) Neither qualitative nor quantitative
64. Which perspective believed psychology should only study observable and objectively described acts?
- (A) Humanistic
 - (B) Behaviorism
 - (C) Functionalism
 - (D) Structuralism
65. Which of the following is not a basic assumption of science?
- (A) Science cannot provide answers to all questions.
 - (B) It is possible to distinguish between more and less plausible claims.
 - (C) Researchers should follow certain agreed upon norms and practices.
 - (D) Science is best at solving value conflicts, such as whether abortion is immoral.
66. Understanding philosophical foundations is crucial for grasping the evolution of psychological theories and methodologies.
- (A) True
 - (B) False
67. Which of the following is a key principle of positivism?
- (A) Knowledge is based on intuition
 - (B) Knowledge is based on religious faith
 - (C) Knowledge is based on empirical observation
 - (D) Knowledge is based on personal experience
68. The Empirical Method/Empiricism is ____
- (A) Information accepted to be true just because it has always been believed or because of superstitions
 - (B) Info is accepted through a "gut feeling" or a hunch
 - (C) Information accepted because an expert says so
 - (D) Information from a philosophical approach to gain knowledge through reason or logical thinking without requiring evidence
 - (E) Information acquired through our senses
69. What is the main argument of positivists regarding bias in research?
- (A) Researchers should embrace their biases.
 - (B) Researchers should be neutral and objective.
 - (C) Researchers should focus on their personal values.
 - (D) Researchers should avoid any form of data analysis.

70. In the process of developing an approach, research should be based on objective evidence and supported by theory. A theory serves as a foundation on which the researcher can organize and interpret the findings
- (A) True
 - (B) False
71. Which historiographical approach emphasized the analysis of objective facts?
- (A) Marxist
 - (B) Modernism
 - (C) Materialism
 - (D) Positivism
72. What philosophy is followed by quantitative research?
- (A) Empiricism and idealism
 - (B) Realism and positivism
 - (C) Positivism and pragmatism
 - (D) Empiricism and positivism
73. Which school of thought emphasizes that psychology should be an objective science and that study behavior without references to mental processes thus focusing on observable items.
- (A) Behaviorism
 - (B) Structuralism
 - (C) Psychoanalytic
 - (D) Humanism
74. The criteria of positivistic philosophy:
- (A) Intensive
 - (B) The oldest
 - (C) Qualitative
 - (D) Emulate natural science research
75. Objective reasoning is:
- (A) Studying an object to draw a conclusion
 - (B) Using evidence to draw a conclusion
 - (C) Using attitudes of a scientist to draw a conclusion
 - (D) Using personal feelings to draw a conclusion
76. An alternative approach to research which believes that there is an objective truth out in the world.
- (A) Pragmatism
 - (B) Positivism
 - (C) Critical Realism
 - (D) None of above
77. Which of these research paradigms closely adhere to natural science's assumptions about researching?
- (A) Interpretivist/qualitative research
 - (B) Critical theory research
 - (C) Positivist research
 - (D) Action research
78. According to positivism, which of the following is the ultimate goal of scientific research?
- (A) To discover universal truths
 - (B) To promote individual expression
 - (C) To explore subjective experiences
 - (D) To critique power structures
79. Positivist research denies knowledge unless:
- (A) It is based on personal experiences
 - (B) It is observed in a replicable way
 - (C) It is entirely theoretical
 - (D) It involves qualitative methods
80. Which of the following is not a principle of positivist research?
- (A) Predictability
 - (B) Generalizability
 - (C) Causality
 - (D) Indeterminacy
81. Which of the following is a widely accepted belief or concept?
- (A) Epistemology
 - (B) Paradigm
 - (C) Positivism
 - (D) Qualitative

82. Science will try to discover facts and relationships and then tries to create theories that makes sense of these facts and relationships.
(A) True
(B) False
83. Which of the following is not a criticism of positivism that led to the development of post-positivism?
(A) Positivism is reductionist
(B) Positivism ignores the influence of culture and context on human behavior
(C) Positivism is too focused on subjective experiences and emotions
(D) Positivism assumes that there is a single reality
84. The approach to science that involves starting with a theory and propositions and then collecting data to test those propositions is:
(A) Reduction
(B) Induction
(C) Production
(D) Deduction
85. Theories are defined as
(A) Testable propositions
(B) Statistical indexes
(C) Factors that may change in response to manipulation
(D) Principles that help to organize observation and predict behaviors and events
86. Which model of psychology holds the view that psychology should only study observable behaviour that can be objectively measured?
(A) Humanism
(B) Behaviourism
(C) Depth psychology
(D) Cognitive Psychology
87. Which of the following is not a key proponent of positivism?
(A) Auguste Comte
(B) Emile Durkheim
(C) Max Weber
(D) Herbert Spencer
88. Positivism is most closely associated with which of the following historical periods?
(A) The Enlightenment
(B) The Romantic era
(C) The Industrial Revolution
(D) The Renaissance
89. Scientists ____ test scientific theories.
(A) Constantly
(B) Rarely
(C) Never
(D) None of above
90. What are 'positivists'?
(A) Researchers who focus on hard facts and numbers.
(B) Researchers who focus on understanding people's experiences.
(C) A scientist who studies human cultures and societies.
(D) Trustworthy and accurate information.
91. From the 1920s into the 1960s, American psychologists emphasized the study of
(A) Genetic influences.
(B) Self-esteem.
(C) Conscious thoughts and feelings.
(D) Observable behavior.
92. Which stance emphasizes sensory experiences and observation in gaining knowledge?
(A) Rationalism
(B) Idealism
(C) Constructivism
(D) Empiricism
93. Falsifiable
(A) The ability to be proven true.
(B) The capacity for some proposition, statement, theory or hypothesis to be proven wrong.
(C) The quality of being universally accepted without evidence.
(D) The tendency to be subjective and open to interpretation.

94. An important epistemological assumption of quantitative research is?
(A) Scientific Realism
(B) Relativity
95. Positivism assumes that knowledge is:
(A) Inherently subjective
(B) Inherently objective
(C) Inherently unknowable
(D) None of the above
96. Which research paradigm emphasizes the search for an objective and singular truth? Interpretivism
(A) Critical Theory
(B) Constructivism
(C) Feminist Research
(D) Positivism
97. The more traditional scientific approach is
(A) Methodological pluralism
(B) Interpretivism
(C) Triangulation
(D) Positivism
98. The Method of Science is ____
(A) Information believed from that "gut feeling" or hunch you get.
(B) Believing something is true just because an expert says so.
(C) Philosophical approach to gain knowledge through reason or logical thinking without gaining evidence
(D) A combination of rationalism and empiricism; uses rationalization for predictions and empirical observations for evidence against predictions.
99. Which method is a positivistic researcher least likely to use?
(A) Longitudinal Surveys
(B) Ethnography
(C) Experiments
(D) Interview
100. Which of the following research questions would be most suitable for a positivist approach?
(A) How do individuals experience anxiety?
(B) What are the meanings that individuals attach to their experiences of illness?
(C) What is the impact of social media on political participation?
(D) How do individuals perceive their experiences of discrimination?
101. Which sociological perspective argues that there is a measurable, objective social reality?
(A) Functionalism
(B) Marxism
(C) Positivism
(D) Interpretivism
102. In research, ontology deals with
(A) Nature of Reality
(B) Causes of reality
(C) Outcome of reality
(D) Reason of reality
103. Which of the following research methods is most commonly used in the positivist approach?
(A) Case study
(B) Grounded theory
(C) Survey
(D) Ethnography
104. Positivist research is best suited for studying which of the following?
(A) Human experience
(B) Unobservable phenomena
(C) Natural environments
(D) Social structures and systems
105. Using definitions, theorems, and postulates to make a conclusion
(A) Inductive
(B) Deductive

- 106.** In a positivist research study, which of the following is the most important factor in ensuring the validity of the findings?
- (A) The researcher's personal beliefs and opinions
 - (B) The use of standardized methods and measures
 - (C) The ability to generalize findings to a larger population
 - (D) The ability to explore subjective experiences and perspectives
- 107.** Deductive reasoning proceeds from:
- (A) One particular conclusion to another particular conclusion.
 - (B) One general conclusion to another general conclusion.
 - (C) General to particular.
 - (D) Particular to general.
- 108.** Which of the following is not a major theorist associated with positivism?
- (A) Auguste Comte
 - (B) Max Weber
 - (C) Emile Durkheim
 - (D) Herbert Spencer
- 109.** Positivist research seeks to identify and measure which of the following?
- (A) Objective reality
 - (B) Subjective experiences
 - (C) Emotions
 - (D) Opinions
- 110.** Which of the following is not a characteristic of a positivist worldview?
- (A) Emphasis on individual experience
 - (B) Belief in objective reality
 - (C) Confidence in the ability to measure phenomena
 - (D) Reliance on scientific methods
- 111.** In any discipline, theories and observations (related experiment results):
- (A) Should compensate each other.
 - (B) More often than not should contradict each other.
 - (C) Should complement each other.
 - (D) Need not have anything to do with each other.
- 112.** Positivism emphasizes the use of which research method?
- (A) Case study
 - (B) Ethnography
 - (C) Survey
 - (D) Grounded theory
- 113.** What does "evidence-based" mean in academic research?
- (A) Based on personal beliefs
 - (B) Supported by data and research
 - (C) Related to anecdotal experiences
 - (D) Derived from traditional practices
- 114.** Teacher Suzanne believes that "truth exist in objective order and independent of the knower". She is considered
- (A) Idealist
 - (B) Realist
 - (C) Pragmatist
 - (D) Essentialist
- 115.** In order for an experiment to be considered falsifiable, ____
- (A) It must fail to confirm the original hypothesis
 - (B) It should be capable of being disproved
 - (C) It must be replicable by another researcher
 - (D) It should make predictions about future events
- 116.** What is an example of a phenomenon that is not testable by science?
- (A) Earthquakes
 - (B) Supernatural phenomena
 - (C) Greenhouse gas effects
 - (D) Tornadoes

117. Why is a researcher's epistemological position important in the context of research?
- (A) It determines the reliability of hypotheses.
 - (B) It influences how knowledge is acquired and interpreted.
 - (C) It ensures the use of deductive reasoning.
 - (D) It validates the role of authority in research.
118. Quantitative research is allied with the constructivist tradition
- (A) True
 - (B) False
119. He was often considered the founder of Sociology. He established the Positivist approach to the study of Sociology
- (A) Karl Marx
 - (B) Auguste Comte
 - (C) Emile Durkheim
 - (D) Talcott Parsons
120. Which of the following is not a characteristic of positivist research questions?
- (A) They are focused on observable phenomena
 - (B) They are testable
 - (C) They are open-ended
 - (D) They are based on empirical observation
121. Which of the following is not a type of hypothesis commonly used in positivist research?
- (A) Null hypothesis
 - (B) Alternative hypothesis
 - (C) Subjective hypothesis
 - (D) Directional hypothesis
122. In this type of research, reality is explained by general laws that point to certain conclusions;
- (A) Quasi experimental research
 - (B) Inductive research
 - (C) Deductive research
 - (D) Hypothetical research
123. Which of the following is a key concept of positivism?
- (A) Holism
 - (B) Individualism
 - (C) Determinism
 - (D) Subjectivity
124. Deductive reasoning is:
- (A) Based on observations
 - (B) Based on known/established facts/evidence
125. ____ describes an approach to the study of society that specifically utilizes scientific evidence such as experiments, statistics, and qualitative results to reveal a truth about the way society functions.
- (A) Interpretivism
 - (B) Positivism
 - (C) Marxism
 - (D) Symbolic-interactionism
126. Decide whether each of the following apply to the epistemology, or the theory of knowledge, of quantitative research. Search for existing truths
- (A) Applies
 - (B) Does not apply
127. Seeks to find the truth through logic
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) None of above
128. While studying a phenomenon, we are deceived by our senses, is an assumption of
- (A) Realism
 - (B) Critical realism
 - (C) Positivism
 - (D) Pragmatism
 - (E) Interpretivism

129. What reasoning makes proofs based on facts and evidence?
(A) Deductive
(B) Inductive
130. Which major research approach is based on the assumption that objective truths exist in the world and can be discovered?
(A) Quantitative
(B) Qualitative
(C) Mixed methods
(D) Action
131. In a positivist research study, which of the following is the most important consideration?
(A) The researcher's personal biases and opinions
(B) The experiences and perspectives of the participants
(C) The use of standardized methods and measures
(D) The ability to generalize findings to a larger population
132. John B. Watson is most likely to say:
(A) "A person needs unconditional love and acceptance in order to reach her true potential."
(B) "A person's behavior reflects unconscious conflicts and emotions that result from early childhood experiences."
(C) "Emotional responses reflect biological processes such as hormones and brain chemistry."
(D) "Science must be rooted in observation of behavior, rather than introspective processes."
133. Which scientific approach is most common in the hard sciences?
(A) Positivism
(B) Constructivism
(C) Interpretive Research
(D) Applied Research
134. In planning a study, researchers need to consider their worldviews or philosophical beliefs about the world leading to qualitative, quantitative and mixed methods approach also known as
(A) Paradigm
(B) Concept
(C) Framework
(D) Abstract
135. Which of the following is a key feature of positivist research?
(A) Use of qualitative data
(B) Focus on subjective experiences
(C) Emphasis on generalizability
(D) Use of interpretive methods
136. Postulates the idea of "progress" as the definition of historical becoming:
(A) French School of the Annales
(B) Historicism
(C) Positivism
(D) Materialism
137. Knowledge is a result of empirical study which goes through the process of observation and experiment
(A) KNOWLEDGE AS BELIEF
(B) KNOWLEDGE AS AUTHORITY
(C) A PRIORI KNOWLEDGE
(D) EMPIRICAL KNOWLEDGE
138. Psychologists believed that there are specifiable causes for the way people behave and that these causes can be discovered through research. This is an example of ____
(A) Scientific Mentality
(B) Crab Mentality
(C) Etiological Mentality
(D) Formative Mentality
139. What is positivist sociology?
(A) Understanding human behaviour through the eyes of those being studied.

- (B) Less concerned with meaning and more concerned with measuring behaviour and analysing numbers.
(C) Concerned with the ethics of a method
(D) None of above
- 140.** Which of the following is not a characteristic of positivist data analysis?
(A) It is subjective and interpretive
(B) It relies on statistical techniques
(C) It is quantitative in nature
(D) It emphasizes objectivity
- 141.** Which paradigm is commonly associated with quantitative research?
(A) Constructivist
(B) Interpretivist
(C) Positivist
(D) Pragmatist
- 142.** The RESEARCH PARADIGM is a type of conceptual framework.
(A) True
(B) False
- 143.** According to positivism, which of the following is the most important factor in conducting research?
(A) The researcher's personal experiences
(B) The researcher's intuition
(C) The researcher's ability to quantify data
(D) The researcher's ability to interpret data
- 144.** A paradigm is a model for how you think about things.
(A) True
(B) False
- 145.** Uses testable ideas
(A) Science
(B) Pseudoscience
- 146.** How does 'research integrity' relate to methodology?
(A) Through funding and resources
(B) By aligning with research objectives
(C) Via the philosophical underpinnings of the study
(D) Through the selection of research instruments
- 147.** A scientific theory ____ (tick one)
(A) Must always be described as a set of mathematical formulae.
(B) Is valid until further findings disprove it.
(C) Is valid if a majority vote of researchers approves it.
(D) Is guaranteed to be unfalsifiable when it is published.
(E) Must be stated as an absolute truth. It is guaranteed that it will never be falsified by further experiments.
- 148.** Which approach is associated with the rise of positivism?
(A) Mixed methods research
(B) Transformative research
(C) Quantitative research
(D) Qualitative research
- 149.** Positivism emerged as a response to which philosophical movement?
(A) Idealism
(B) Empiricism
(C) Existentialism
(D) Pragmatism
- 150.** Which of the following is not a type of positivist research design?
(A) Experimental design
(B) Survey design
(C) Case study design
(D) Correlational design
- 151.** Reality exists; it should be studied and known
(A) Positivism
(B) Constructivist

152. Research in education is a way of establishing knowledge through
- (A) Empiricism
 - (B) Ethical reasoning
 - (C) Intuition
 - (D) Logic
153. Which of the following is a strength of positivism?
- (A) It allows for a deep understanding of subjective experiences
 - (B) It provides a framework for collecting and analyzing quantitative data
 - (C) It emphasizes the importance of values and emotions in research
 - (D) It is not influenced by the researcher's biases and assumptions
154. What is a fundamental question for an ontological stance in research?
- (A) What is the best research method?
 - (B) How do we measure happiness?
 - (C) What is the nature of reality?
 - (D) What is the meaning of life?
155. Which one of the following approaches tries to analyze human behavior in terms of stimulus-response units acquired through the process of learning, mainly through instrumental conditioning?
- (A) Cognitive Approach.
 - (B) Dynamic and Psychoanalytic Approach.
 - (C) Stimulus-Response-Behaviouristic Approach.
 - (D) Existential Approach.
156. A basic difference between positivism and its critics pertains to:
- (A) The importance of valid information
 - (B) The role of religion
 - (C) The nature of reality
 - (D) The importance of value
157. Refers to the belief that phenomena are not haphazard but rather have antecedent causes
- (A) Assumption of determinism
 - (B) Empirical evidence
158. "The historian must just accumulate data to create historical laws" is a principle of:
- (A) Historicism
 - (B) French School of the Annales
 - (C) Positivism
 - (D) Hist. Materialism
159. Which of the following is a limitation of using a positivist approach to research?
- (A) It is difficult to quantify social phenomena
 - (B) It does not allow for the exploration of individual experiences and perspectives
 - (C) It relies too heavily on personal bias and interpretation
 - (D) It is not conducive to studying large-scale societal trends and patterns
160. Positivist research is typically associated with which of the following research designs?
- (A) Case study
 - (B) Grounded theory
 - (C) Experimental design
 - (D) Ethnography
161. Which of the following attitudes is considered a scientific attitude?
- (A) Skepticism
 - (B) Hindsight Bias
 - (C) Overconfidence
 - (D) Perceiving order in random events
162. Positivism is based on the assumption that:
- (A) Reality is subjective
 - (B) Knowledge is only gained through intuition
 - (C) The world is objective and can be studied scientifically
 - (D) The world is made up of spiritual forces
163. Which of the following BEST describes the use of objective procedures in sociological research?

- (A) Intensive review
 - (B) Phenomenology
 - (C) Scientific method
 - (D) Ethnomethodology
- 164.** Which of the following is a key assumption of positivism?
- (A) Reality is subjective and cannot be measured objectively
 - (B) Scientific knowledge is based on intuition and personal experience
 - (C) All phenomena can be measured and explained using scientific methods
 - (D) Research should focus on the experiences of individuals rather than objective data
- 165.** Application of the positivist paradigm involves viewing reality as being driven by natural causes
- (A) True
 - (B) False
- 166.** Which approach restricts psychology to observable behavior, dismissing internal mental states as irrelevant?
- (A) Behaviorism
 - (B) Cognitivism
 - (C) Humanism
 - (D) Psychoanalysis
- 167.** A systematic approach to researching questions and problems through objective and accurate observation, collection and analysis of data, direct experimentation, and replication (repeating) of these procedures.
- (A) Interpretivist method
 - (B) Positivist method
 - (C) Scientific method
 - (D) Representative method
- 168.** Which of the following refers to research supported by measurable evidence?
- (A) Opinion
 - (B) Empiricism
 - (C) Speculation
 - (D) Rationalism
- 169.** Sir Francis Galton set out to show
- (A) That some humans possessed characteristics that made them more fit than other humans.
 - (B) That humans did not differ significantly from each other.
 - (C) That life evolved on this planet partially because of individual differences among individual forms of life within a species or type of animal.
 - (D) That the concept of survival of the fittest was essentially incorrect.
- 170.** Which of the following is not a characteristic of positivist research?
- (A) It is objective
 - (B) It is value-free
 - (C) It is subjective
 - (D) It is quantitative
- 171.** Decide whether the statement is true or false: Qualitative research is often anti-positivist.
- (A) True
 - (B) False
- 172.** We can only make a scientific study of events that are observable.
- (A) TRUE
 - (B) FALSE
 - (C) NOT SURE
 - (D) None of above

1.2.2 Postpositivistic Approach to Research

- 1.** Post-positivist research is typically characterized by which of the following types of data collection?
- (A) Surveys
 - (B) Experiments
 - (C) Interviews
 - (D) Observations

2. Post-positivistic research acknowledges that:
 - (A) The researcher's own experiences and biases can influence the research process
 - (B) It is not possible to establish objective facts about the world
 - (C) The social world operates according to natural laws that can be objectively observed
 - (D) All knowledge is relative and contextual
3. Who is known for the concept of 'paradigm shifts' in research?
 - (A) Karl Popper
 - (B) Thomas Kuhn
 - (C) Albert Einstein
 - (D) Isaac Newton
4. Which of the following is a key criticism of positivism that post-positivists address?
 - (A) Positivism is too subjective
 - (B) Positivism ignores the influence of culture and context
 - (C) Positivism is too focused on qualitative methods
 - (D) Positivism is not practical for real-world applications
5. Post-positivism acknowledges that scientific inquiry is always:
 - (A) Objective
 - (B) Subjective
 - (C) Both objective and subjective
 - (D) Neither objective nor subjective
6. Post-positivist researchers aim to produce:
 - (A) Objective, absolute truth
 - (B) Probable, contingent knowledge
 - (C) Intuitive, subjective insights
 - (D) Ethical, moral guidelines
7. Criticism of positivism is the focus of ____
 - (A) Symbolic interaction theory
 - (B) Conflict theory
 - (C) Critical theory
 - (D) Functional theory
8. Which of the following is not a key principle of post-positivist research?
 - (A) Reflexivity
 - (B) Skepticism
 - (C) Objectivity
 - (D) Empiricism
9. If a person has a cerebrovascular accident, there must be a reason as to the cause of the disease. Which of the following worldviews is directed in understanding the cause of a phenomenon?
 - (A) Constructivist paradigm
 - (B) Postpositivist paradigm
 - (C) Pragmatic paradigm
 - (D) Transformative paradigm
10. An alternative approach to research which criticizes the positivist belief that there is an objective truth.
 - (A) Positivism
 - (B) Constructionism
 - (C) Critical realism
 - (D) None of above
11. The post-positivist approach is most closely associated with which of the following theoretical perspectives?
 - (A) Structural functionalism
 - (B) Symbolic interactionism
 - (C) Critical theory
 - (D) Postmodernism
12. What is falsifiability?
 - (A) Falsifiability is the concept of proving a hypothesis without experimentation.
 - (B) Falsifiability is the process of making a theory more believable.
 - (C) Falsifiability is the ability to prove a hypothesis true through empirical evidence.
 - (D) The assertion that for any hypothesis to have credence, it must be inherently disprovable before it can become accepted as a scientific hypothesis or theory

13. The first proponent of empirical interpretivism was Max Weber.
- (A) True
 - (B) False
14. What is the key difference between positivism and post-positivism?
- (A) Post-positivism emphasizes the importance of subjective experiences
 - (B) Post-positivism rejects the idea of objective truth
 - (C) Post-positivism allows for multiple perspectives and interpretations of reality
 - (D) All of the above
15. What is the main criticism of the positivist approach to research that led to the development of the post-positivist approach?
- (A) It is too subjective
 - (B) It is too focused on the natural sciences
 - (C) It is too focused on quantitative methods
 - (D) It is too reductionist
16. Which of the following is not a key principle of post-positivism?
- (A) Objectivity
 - (B) Empiricism
 - (C) Realism
 - (D) Interpretivism
17. Post-positivist research recognizes that research is influenced by which of the following factors?
- (A) Researcher bias
 - (B) Power relationships
 - (C) Cultural context
 - (D) All of the above
18. Which of the following is not a key proponent of the post-positivist approach?
- (A) Thomas Kuhn
 - (B) Paul Feyerabend
 - (C) Richard Rorty
 - (D) John Dewey
19. Post-positivist researchers believe that scientific knowledge is:
- (A) Objective and absolute
 - (B) Subjective and relative
 - (C) Objective but not absolute
 - (D) Subjective but not relative
20. Post-positivist researchers believe that:
- (A) All knowledge is subjective and cannot be objectively verified
 - (B) Scientific knowledge is universal and can be objectively verified
 - (C) Knowledge is always socially constructed and cannot be objective
 - (D) Scientific knowledge is contextual and subject to revision based on new evidence
21. ____ is a view that is based on emotive, anecdotal, and/or personal experience. It is the opposite of "objectivity", which purports to be bias-or-judgement-free and data-driven. First person narratives, ethnography, and a great deal of historical writings are generally this.
- (A) Objective
 - (B) Triangulated
 - (C) Hypothetical
 - (D) Subjective
22. The interpretivist approach views reality as something objective
- (A) True
 - (B) False
23. Which of the following is a limitation of the post-positivist approach?
- (A) It is too focused on subjective experiences and emotions
 - (B) It can be difficult to establish causality
 - (C) It ignores the importance of culture and context
 - (D) It is not adaptable to a variety of research questions
24. Which philosophical background is most closely related to case study research?
- (A) Constructivist

- (B) Post-positivist
(C) Feminist
(D) None. The philosophical versatility allows the researcher to decide the methodological orientation.
25. In the post-positivistic approach to research, knowledge is considered to be:
(A) Completely objective and certain
(B) Subjective and interpretative
(C) Provisional and revisable based on evidence
(D) Independent of human perception and values
26. What differentiates 'method' from 'methodology'?
(A) Techniques for data collection
(B) Philosophical underpinnings of a study
(C) Data analysis procedures
(D) Publication strategies
27. What is the definition of the transformative worldview?
(A) The traditional form of research
(B) The integration of qualitative and quantitative data
(C) Seeks to understand the consequences of actions
(D) Arose from individuals who felt that the postpositivist assumptions imposed structural laws and theories that did not fit marginalized individuals
28. Post-positivism acknowledges that:
(A) There is a single, objective reality that can be observed and measured
(B) Subjective experiences cannot be studied empirically
(C) Research should not be influenced by the researcher's values and beliefs
(D) All research is inherently biased and subjective
29. Post-positivists acknowledge that scientific knowledge is always:
(A) Certain and objective
(B) Uncertain and subjective
(C) Certain but subjective
(D) Uncertain but objective
30. Name the following paradigm: Emphasizes people's subjective experiences which are grounded in social-historical contexts (Hesse-Biber & Leavy, 2011)
(A) Critical
(B) Constructivist
(C) Transformative
(D) Pragmatic
31. Theories can have many characteristics. Which characteristic is NOT likely to be one of them?
(A) Localized
(B) Provisional
(C) Indisputable
(D) None of above
32. Sciences demarcated from other disciplines in its empirical
(A) Provability.
(B) Refutability.
(C) Demonstration.
(D) All of the above.
33. Which of the following is not a characteristic of post-positivism?
(A) Views facts as theory-laden
(B) Considers multiple perspectives
(C) Believes in absolute truth
(D) Acknowledges that knowledge is provisional
34. The post-positivist approach to research recognizes the role of which of the following in shaping research findings?
(A) Culture and context
(B) Personal experience
(C) Intuition
(D) Religious faith

35. Which research philosophy is not usually associated with qualitative research?
- (A) Constructivist
 - (B) Postpositivist
 - (C) Pragmatic
 - (D) Transformative
36. What are the philosophical roots of qualitative research?
- (A) Positivism
 - (B) Frequency and magnitude
 - (C) Constructivism and interpretivism
 - (D) Structured and predetermined
37. New values and principles are established through
- (A) Human motivation.
 - (B) Philosophical research.
 - (C) Natural research.
 - (D) Social research.
38. Post-positivist research seeks to eliminate which of the following sources of bias in research?
- (A) Observer bias
 - (B) Participant bias
 - (C) Confirmation bias
 - (D) Sampling bias
39. Post-Positivism research shifted from 'reality' to 'critical reality'
- (A) True
 - (B) False
40. According to modern forms of positivism, what replaces universal laws in understanding relationships between concepts?
- (A) Absolute truths.
 - (B) Probabilities.
 - (C) Theoretical principles.
 - (D) Societal norms.
41. Which of these can change when new evidence is presented?
- (A) Theory
 - (B) Law
42. Post-positivism is a philosophical stance that emphasizes:
- (A) Objectivity and empiricism
 - (B) Subjectivity and intuition
 - (C) Critical reflexivity and skepticism
 - (D) Faith and belief
43. Post-positivism is a reaction to which previous approach to research?
- (A) Realism
 - (B) Constructivism
 - (C) Positivism
 - (D) Pragmatism
44. Which of the following is a goal of post-positivist research?
- (A) To establish causal relationships
 - (B) To develop theories
 - (C) To understand subjective experiences
 - (D) To make predictions
45. Post-positivism differs from positivism in that it:
- (A) Emphasizes subjective experiences
 - (B) Acknowledges the role of values in research
 - (C) Does not rely on empirical observation
 - (D) Does not seek to establish causal relationships
46. One cannot prove whether a theory or hypothesis is true. One can only prove that it is false, a process called ____ It is a tool that distinguishes scientific social psychology from folk social psychology, which does not use that process.
- (A) Positivism
 - (B) Objectivism
 - (C) Interpretivism
 - (D) Falsification
47. Which worldview is used in quantitative research?
- (A) Pragmatism
 - (B) Postpositivism
 - (C) Constructivism
 - (D) Empiricism

48. Which worldview is applied for real-world practice-oriented research?
- (A) Postpositivism
 - (B) Deconstructionism
 - (C) Pragmatism
 - (D) Constructivism
49. Post-positivists believe that:
- (A) Reality is objective and can be observed directly
 - (B) Reality is subjective and cannot be observed directly
 - (C) Reality is both objective and subjective
 - (D) Reality does not exist independently of our observations
50. What is the purpose of inquiry related to existing theory in research?
- (A) To avoid modifying the theory.
 - (B) To advance its development or refute aspects of its cognition.
 - (C) To focus solely on social trends.
 - (D) To eliminate the need for publications and newsletters.
51. The view that a hypothesis is never proved; but merely sustained or rejected only tentatively, is
- (A) A misconception.
 - (B) A correct and valid statement.
 - (C) A wrong assumption about hypothesis.
 - (D) A fact not accepted by all.
52. Post-positivist research is often associated with which of the following theoretical perspectives?
- (A) Feminism
 - (B) Marxism
 - (C) Postmodernism
 - (D) All of the above
53. Post-positivism suggests that scientific theories are:
- (A) Objective and final
 - (B) Objective but provisional
 - (C) Subjective and final
 - (D) Subjective and provisional
54. Post-positivism recognizes the limitations of which of the following in research?
- (A) Objectivity
 - (B) Subjectivity
 - (C) Empiricism
 - (D) Quantification
55. As you conduct your research, try to focus on one perspective in order to reinforce your assumptions.
- (A) True
 - (B) False
56. Post-positivism can be seen as a response to which of the following philosophical perspectives?
- (A) Positivism
 - (B) Interpretivism
 - (C) Realism
 - (D) All of the above
57. Theories are falsifiable: true or false
- (A) True
 - (B) False
58. Social science assumptions differ from those of the natural sciences because of key differences between the phenomena each studies.
- (A) True
 - (B) False
59. Post-positivism challenges the traditional positivist assumption that:
- (A) Reality can be objectively observed and measured
 - (B) All knowledge is relative and contextual
 - (C) The social world operates according to natural laws
 - (D) Knowledge is produced through the subjective experiences of individuals

60. Post-positivist researchers typically collect which types of data?
- (A) Quantitative and qualitative
 - (B) Quantitative only
 - (C) Qualitative only
 - (D) None of the above
61. Post-positivism acknowledges the influence of which factor on research?
- (A) Culture
 - (B) Context
 - (C) Power
 - (D) All of the above
62. In actuality, most disciplines are characterized by several competing perspectives, and there may be highly contested beliefs and values within a discipline or subdiscipline.
- (A) True
 - (B) False
63. What can lead to a paradigm shift?
- (A) A decrease in research funding
 - (B) New data and research
 - (C) A change in political power
 - (D) Technological malfunctions
64. What does post-positivism acknowledge about knowledge and reality?
- (A) All observations are theory-free
 - (B) Knowledge is provisional and subject to change
 - (C) Knowledge is absolute and unchanging
 - (D) Reality is singular and universally true
65. According to post-positivism, what is the role of the researcher in the research process?
- (A) To be objective and detached from the research process
 - (B) To actively engage with participants and the research context
 - (C) To limit their involvement in the research process as much as possible
 - (D) To rely solely on quantitative data analysis techniques
66. The philosophy that seeks to change society rather than just teach about it
- (A) Existentialism
 - (B) Progressivism
 - (C) Essentialism
 - (D) Social Reconstructionism
67. Post-positivism recognizes that all knowledge is:
- (A) Objective and unbiased
 - (B) Subjective and influenced by personal values
 - (C) Based on intuition and faith
 - (D) Unattainable
68. We create our own knowledge of the world based on individual experiences.
- (A) Constructivism
 - (B) Behaviorism
 - (C) Cognitivism
 - (D) Socialism
69. Which of the following is not a limitation of post-positivist research?
- (A) It is difficult to generalize findings to larger populations
 - (B) It does not allow for the exploration of subjective experiences
 - (C) It is not adaptable to a variety of research questions
 - (D) It can be reductionist in its approach
70. Post-positivism recognizes that:
- (A) All research is inherently objective and unbiased
 - (B) The researcher's values and beliefs can influence the research process
 - (C) There is a single, objective reality that can be observed and measured
 - (D) Qualitative data collection methods are not useful for research
71. Post-positivist research often uses which of the following data collection methods?
- (A) Focus groups

- (B) Interviews
 - (C) Document analysis
 - (D) All of the above
72. Which of the following paradigms or world-views is implied in the “Effects of Pandemic in the Health Seeking Behavior of People and Delivery of Health Services in 6 Municipalities of Marinduque”?
- (A) Pragmatic paradigm
 - (B) Constructivist paradigm
 - (C) Postpositivist’s paradigm
 - (D) Transformative paradigm

1.2.3 Types of Research

1. A type of research in which the same people are studied over a long period of time
 - (A) Laboratory observation
 - (B) Longitudinal method
 - (C) Positive correlation
 - (D) Single-blind study
2. Which type of research analyzes the effect of a factor or variable which cannot be manipulated, such as the study of the incidence of lung cancer among smokers?
 - (A) Ex-post Facto or Causal-Comparative Research
 - (B) Experimental Research
 - (C) Descriptive Research
 - (D) Correlational Research
3. Conceptual research is most useful for:
 - (A) Testing causal relationships
 - (B) Identifying gaps in existing knowledge
 - (C) Collecting data
 - (D) None of the above
4. This research focuses on a group of people sharing common characteristics.
 - (A) Longitudinal
 - (B) Experimental
 - (C) Cohort
 - (D) Descriptive
5. Research related to abstract ideas or concepts is
 - (A) Empirical research
 - (B) Conceptual Research
 - (C) Quantitative research
 - (D) Qualitative research
6. The studies with an objective to get introduced with a process for achieving new insights into it are known as
 - (A) Hypothesis testing research
 - (B) Exploratory research
 - (C) Cruptive research
 - (D) Diagnostic research
7. A nurse researcher wants immediate practice change. Which research type is most appropriate?
 - (A) Basic research
 - (B) Applied research
 - (C) Ethnographic research
 - (D) Meta-theoretical research
8. Classification based on Geography is known as which type of classification?
 - (A) Quantitative
 - (B) Qualitative
 - (C) Geographical
 - (D) Chronological
9. Julio is a researcher and has been assigned to collect statistical data on the Zika virus. What level of research is he working on if his findings will be used to develop a vaccine or new treatment?
 - (A) Basic
 - (B) Applied
10. The purpose of exploratory research is to obtain conclusive evidence in order to make strategic marketing decisions.
 - (A) True
 - (B) False

11. Exploratory research is most appropriate when:
- (A) Variables are known and measurable
 - (B) Little is known about the problem
 - (C) Testing specific hypotheses
 - (D) Predicting outcomes
12. Prof. Mendoza wants to build a theory in culture and language. She is doing a/an:
- (A) Basic research
 - (B) Experimental research
 - (C) Descriptive research
 - (D) Strategic research
13. A company wants to understand the relationship between social media engagement and product sales. Which type of research question does this represent?
- (A) Descriptive
 - (B) Correlational
 - (C) Exploratory
 - (D) Causal
14. Action Research usually takes place in single setting because ____
- (A) It is difficult to get permission from different settings.
 - (B) It is designed to answer issues to improve practice in a particular setting.
 - (C) Researchers do not have the skills to conduct research.
 - (D) Data collection methods are only for single settings.
15. Action Research is conclusive and focuses on right or wrong.
- (A) True
 - (B) False
16. Attitude research is also known as
- (A) Product research
 - (B) Opinion-based research
 - (C) Market research
 - (D) Customer research
17. What type of research utilizes knowledge in decision making, product development and solving problems?
- (A) Qualitative Research
 - (B) Non-Research based
 - (C) Action Research
 - (D) Basic Research
18. It's main purpose is to advance knowledge without the need to provide an immediate practical application of the results.
- (A) Basic Research
 - (B) Applied Research
 - (C) Research and Development
 - (D) Investigatory Project
19. What are the three types of investigations?
- (A) Procedure, Experiment, Results
 - (B) Descriptive, Comparative, Experimental
 - (C) Hypothesis, Variables, Experiment
 - (D) Research, Constants, Control
20. Ann conducts an in-depth study to better understand the normal grieving process
- (A) Action research
 - (B) Applied research
 - (C) Basic research
 - (D) Evaluation research
21. The type of research generally used by philosophers or thinkers to develop new concepts or reinterpret the existing ones:
- (A) Empirical Research
 - (B) Analytical Research
 - (C) Conceptual Research
 - (D) Applied Research
22. What is Fundamental Research?
- (A) Practical experiments to find solutions to real-world problems.
 - (B) Experimental or theoretical works to obtain new knowledge on observable phenomena without considering practical applications.

- (C) Research aimed at commercial product development.
(D) Research focused on finding solutions to specific educational problems.
23. Which of the following research types focuses on addressing an immediate problematic situation?
(A) Applied Research
(B) Action Research
(C) Experimental Research
(D) Fundamental Research
24. It provides the teacher or administrator in the field with objective systematic techniques of problem solving that are far superior to an appeal to authority on personal experience.
(A) Action research
(B) Educational research and development
(C) Evaluation research
(D) Statistical research
25. What does applied research do?
(A) Whatever it wants to do!
(B) Directed towards a specific objective in order to create vaccines, therapy, and treatments
(C) Gather general information and knowledge to use as a foundation.
(D) None of above
26. Generalization can be made appropriately from-
(A) Fundamental Researches.
(B) Action Researches.
(C) In both of the above.
(D) More intensively in Fundamental Research in comparison than the action researches.
27. Research that seeks to examine the findings of a study by using the same design but a different sample is which of the following?
(A) An exploratory study
(B) A replication study
(C) An empirical study
(D) Hypothesis testing
28. On the spot research aimed at the solution of an immediate problem is called
(A) Fundamental research.
(B) Survey research.
(C) Action research.
(D) Pure research.
29. ____ research deals with practical problems
(A) Basic
(B) Exploratory
(C) Applied
(D) Causal
30. A group of participants is observed over an extended period of time.
(A) Testing Method
(B) Case-Study Method
(C) Longitudinal Method
(D) Cross-Sectional Method
31. Research into products which have obvious commercial or practical use is called:
(A) Market research
(B) Pure research
(C) Applied research
(D) Process research
32. Cattle egrets forage (feed) in fields among cattle. The egret gets easy access to flying insects stirred up by the cattle, and the cattle don't care if they are there or not.
(A) Mutualism
(B) Commensalism
(C) Competition
(D) Parasitism
33. In case of ____ research, no commercial angle is involved.
(A) Social science
(B) Pure
(C) Applied
(D) Empirical

34. This type of research contributes to the development of knowledge or theory.
- (A) Basic Research
 - (B) Applied Research
 - (C) Action Research
 - (D) None of above
35. — is based on the assumption that the researcher has an accurate understanding of the problem at hand.
- (A) Exploratory research
 - (B) Conclusive research
 - (C) Subjective research
 - (D) Observational research
 - (E) Directed research
36. Research about consumer behavior and the external environment represents:
- (A) Internal research
 - (B) External research
 - (C) Organizational research
 - (D) None of these
37. Action Research is conducted by:
- (A) Scientists
 - (B) Teachers/Practitioners
 - (C) Educational Psychologists
 - (D) Policy Makers
38. The study in which the investigators attempt to trace an effect is known as [2007-JUNE]
- (A) Survey Research
 - (B) 'Ex-post Facto' Research
 - (C) Historical Research
 - (D) Summative Research
39. Action research is purely a learner-centered pursuit.
- (A) TRUE
 - (B) FALSE
40. Mr. Christian has designed a camera with buttons that are easy to reach and see. Mr. Christian is most likely —
- (A) Engaged in physical research.
 - (B) Engaged in laboratory research.
 - (C) Engaged in social research.
 - (D) Engaged in applied research.
41. The document outlines three types of marketing research. Which type is focused on establishing cause-and-effect relationships?
- (A) Exploratory research
 - (B) Descriptive research
 - (C) Causal research
 - (D) Quantitative research
42. Which type of research often relies on large, representative samples?
- (A) Qualitative research.
 - (B) Quantitative research.
 - (C) Ethnographic studies.
 - (D) Case study.
 - (E) Narrative research.
43. What are the types of Educational Research Problems?
- (A) Theoretical.
 - (B) Applied.
 - (C) Historical.
 - (D) All of the above.
44. What research is done on a continuous basis or at regular intervals to monitor changes over time?
- (A) Market Research
 - (B) Marketing Research
 - (C) Programmatic research
 - (D) Ad hoc research
45. Pure science that aims to increase knowledge
- (A) Case study
 - (B) Scientific method
 - (C) Basic research
 - (D) Psychiatry
46. Assess changes over an extended period of time by looking at the same groups of subjects for months or even years.
- (A) LONGITUDINAL RESEARCH

- (B) CROSS-SECTIONAL RESEARCH
 - (C) CROSS-SEQUENTIAL RESEARCH
 - (D) NONE
47. What type of action research is characterized by the engagement of many stakeholders in all aspects of the project?
- (A) Action science
 - (B) Individual action research
 - (C) Participatory action research (PAR)
 - (D) Orientational action research
48. A researcher working on discovering how to improve elementary school students' test scores would be most likely characterized as conducting ____
- (A) Basic research
 - (B) Applied research
 - (C) Observational research
 - (D) Experimental research
49. Which of the following would occur in a longitudinal study:
- (A) Measures are taken from different participants over an extended period of time
 - (B) Participation is expected to last for a minimum of 24 hours
 - (C) Measures are taken from same participants on different occasions usually over extended period of time
 - (D) Measures are taken from participants in at least 6 different countries
50. Research can be classified as:
- (A) Basic, Applied and Action Research
 - (B) Quantitative and Qualitative Research
 - (C) Both (1) and (2)
 - (D) Fluke
51. Research that focuses on issues of media effectiveness, media selection, frequency, and ratings. This type of research may measure advertising effectiveness, brand recall, brand image, etc
- (A) Attitude research
 - (B) Media research
 - (C) Product research
 - (D) Customer research
52. The purpose of ex post facto research is ____
- (A) To study the relationship of characteristics and the reason behind instability
 - (B) To attach accurate or exact meanings to objects or subjects
 - (C) To ensure the use of reliable measurement instruments or statistical methods
 - (D) To obtain an objective understanding of people, things, places, and events
53. Which type of research is most focused on practical outcomes?
- (A) Pure
 - (B) Theoretical
 - (C) Applied
 - (D) Descriptive
54. In a ____ study, subjects are grouped by age.
- (A) Coalesced
 - (B) Longitudinal
 - (C) Gravitational
 - (D) Cross-sectional
55. Fundamental research aims at
- (A) Action research
 - (B) Survey
 - (C) Pure research
 - (D) Pilot survey
56. Which design incorporates researcher and participants collaborating to solve a social issue?
- (A) Grounded theory
 - (B) Ethnography
 - (C) Action research
 - (D) Phenomenology
57. Analytical research is the type of research that
- (A) Is made for performing the basic or pure research; it's a theoretical research.
 - (B) Is intended for finding some solution to the problem considered.

- (C) Includes fact-finding enquires and surveys.
(D) Uses available information as the base to make the further critical evaluation.
58. What kinds of questions applied researchers are not interested to solve?
(A) Yes / No Questions about the research, nature, and people
(B) Big unanswered questions about the universe or society
(C) Information questions about the research that is being investigated
(D) None of above
59. Which type of research aims to solve specific problems within a program, organization, or community?
(A) Action
(B) Applied
(C) Basic
(D) Evaluation
60. Scientific study that aims to solve practical problems.
(A) Basic research
(B) Applied research
(C) Practical research
(D) Utilitarian research
61. A scientist who learns about ancient people by studying the things they left behind
(A) Dentist
(B) Archaeologist
(C) Paleontologist
(D) Historian
62. A focus group was held by a research firm to determine how consumers felt about the advertisement message. What type of research is this?
(A) Product and Media
(B) Media and Attitude
(C) Attitude and Sales
(D) Product and Sales
63. Research that aims at finding solutions to immediate problems is:
(A) Fundamental research
(B) Applied research
(C) Conceptual research
(D) Theoretical research
64. The researcher was given a study but is NOT yet familiar with the discipline that she/he is in. What level of investigation is the researcher in?
(A) Exploratory
(B) Descriptive
(C) Experimental
(D) None of the choice s
65. Which of the following types of research attempts to clarify why and how there is a relationship between two aspects of a situation or phenomenon?
(A) Exploratory Research
(B) Action Research
(C) Descriptive Research
(D) Diagnostic Research
66. Which of the following is an example of basic research?
(A) A teacher wants to improve student engagement.
(B) Basic research studies how memory works.
(C) A school board uses quantitative surveys to assess student performance.
(D) None of above
67. Treat or cure a specific disease.
(A) Applied Research.
(B) Basic Research.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
68. The application of the scientific method to the study of educational problems is called ____
(A) Inductive reasoning
(B) Deductive reasoning
(C) Grounded theory
(D) Educational research

69. Dr. Winkle conducts basic research on the systematic changes in intelligence associated with aging. It is most likely that Dr. Winkle is a(n) ____ psychologist.
(A) Biological
(B) Social
(C) Developmental
(D) Industrial-organizational
70. Name the preliminary research
(A) Basic research
(B) Descriptive research
(C) Applied research
(D) Exploratory research
71. Which type of research is involved in finding a cure for Covid-19?
(A) Basic
(B) Applied
(C) Problem solving
(D) Problem oriented
72. A type of scientific investigation that seeks to gain knowledge for the sake of knowledge itself.
(A) Pure research
(B) Applied research
73. A psychologist who studies how work productivity might be increased by changing office layout is engaged in ____ research
(A) Applied
(B) Basic
(C) Clinical
(D) Developmental
74. In contrast to ____ research, the findings of ____ research can be treated as conclusive and used to recommend a final course of action.
(A) Quantitative; qualitative
(B) Observational; qualitative
(C) Qualitative; quantitative
(D) Descriptive; observational
(E) Partial; total
75. Applied research is aimed at answering real-world, practical problems.
(A) True
(B) False
76. This research involves the process of collecting and analyzing information in order to develop and enhance theory.
(A) Evaluation research
(B) Action research
(C) Applied research
(D) Basic research
77. Fundamental Research is otherwise called
(A) Action Research
(B) Analytical Research
(C) Qualitative Research
(D) Pure Research
78. Exploratory research
(A) According to the method of obtaining information
(B) According to the type of information
(C) According to the nature of the information
(D) According to the purpose of the information
79. Which of the issues listed below would be addressed using problem-solving research?
(A) The need to understand the market potential
(B) The need to understand current cultural trends
(C) The need to understand changes in consumer behavior
(D) The need to determine where to locate retail outlets
80. Select one characteristic of Practical Action Research.
(A) To contextualize and annotate data.
(B) To analyze the previous information or events minutely and testing their validity.
(C) To practice causal inferences.
(D) To implement changes based on the findings.

81. In this type of research, the investigator tries to probe the significance of relationship between two or more factors or characteristics?
(A) Correlational
(B) Experimental
(C) Ex-post facto
(D) Survey
82. What type of research aims to find application for theories or create products employing an existing idea?
(A) Basic
(B) Applied
(C) Logical
(D) Analytical
83. Which type of research involves carrying out research and surveys outside the firm?
(A) Desk Research
(B) Sampling
(C) Field Research
(D) None of above
84. ____ is used when one is seeking insights into the general nature of a problem, the possible decision alternatives, and relevant variables that need to be considered.
(A) EXPLORATORY RESEARCH
(B) DESCRIPTIVE RESEARCH
(C) CAUSAL RESEARCH
(D) None of above
85. Action research has all the following purposes except
(A) Supporting the professional development of education professionals.
(B) Building theory and generalizable knowledge.
(C) Building a collegial networking system among educators.
(D) Helping practitioners identify problems and seek solutions systematically.
86. Product research consists on evaluating product design, package design, product usage, and consumer acceptance of new and existing products.
(A) True
(B) False
87. Field Research is also known as ____
(A) Primary Research
(B) Secondary Research
(C) Third Research
(D) Fourth Research
88. Determining the relationship between two or more variables occurs in ____
(A) Survey research
(B) Action research
(C) Correlational research
(D) Naturalistic observation
89. Conceptual research typically involves which of the following methods?
(A) Surveys
(B) Experiments
(C) Case studies
(D) None of the above
90. A researcher works on ways to improve crop production.
(A) Pure research
(B) Applied research
91. To get an insight into the research topic is known as ____
(A) Descriptive research
(B) Exploratory research
(C) Diagnostic research
(D) Experimental research.
92. Basic Research
(A) Determines how bacteria reproduce
(B) Improves crop production
93. Dr. Anders wants to investigate how people of different ages communicate via the Internet, so she does an experiment with three groups

- of three different ages: 18-21, 47-50, and 75-78. Concurrently comparing how people of different ages behave is an example of which of the following kinds of research?
- (A) Case study
 - (B) Longitudinal
 - (C) Cross-sectional
 - (D) Factor analysis
 - (E) Qualitative research
94. Data gathered on the same sample of participants over a long period of time is called
- (A) A Case study
 - (B) An Observation study
 - (C) A Longitudinal study
 - (D) An Experiment
95. The per capita income of India from 1950 to 1990 is four times. This study is
- (A) Factorial.
 - (B) Longitudinal.
 - (C) Horizontal.
 - (D) Social.
96. Discovering ways to use scientific findings to accomplish practical goals.
- (A) Applied science
 - (B) Basic science
 - (C) Pure science
 - (D) Philosophy
 - (E) History
97. Action Research is a ____ enquiry.
- (A) Self rewarding
 - (B) Self reflecting
 - (C) Self rationalising
 - (D) Self reviewing
98. Data are collected a single point in time in a study called:
- (A) Cross sectional study
 - (B) Prospective
 - (C) Longitudinal
 - (D) None of above
99. There are two types of research, they are quantitative and qualitative ones.
- (A) True
 - (B) False
100. Preliminary Data Collection may be considered as part of
- (A) Descriptive research.
 - (B) Explanatory research.
 - (C) Exploratory research.
 - (D) All of the given options.
101. Confirmatory research is:
- (A) Conducted without any prior theory
 - (B) Used to test hypotheses derived from theory
 - (C) A form of qualitative research only
 - (D) Not used in scientific studies
102. It is used for the preliminary investigation of a subject that is not yet well understood or sufficiently researched
- (A) Applied research
 - (B) Exploratory research
 - (C) Independent research
 - (D) Dependent research
103. In summary, the major characteristic of correlational research is seeking out ____ among variables.
- (A) Differences
 - (B) Characteristics
 - (C) Validity
 - (D) Associations
104. Which type of research is concerned with a specific problem and ends once it is solved?
- (A) Mixed-methods
 - (B) Problem solving
 - (C) Research
 - (D) Longitudinal

- 105.** A ____ study is a research design that involves repeated observations of the same variables over short or long periods of time. It is often a type of observational study, although it can also be structured as ____ randomized experiment.
- (A) Attrition rate
 - (B) Cross-sectional
 - (C) Longitudinal
 - (D) Control group
 - (E) Treatment group
- 106.** Who is credited with coining the term 'action research' to describe work that did not separate the investigation from the action needed to solve the problem?
- (A) Shon
 - (B) Bloom
 - (C) Lewin
 - (D) Duddley
- 107.** You're a psychology researcher exploring how memory works in the brain, not necessarily to fix a specific problem but to learn more about how we remember things. What kind of research are you doing?
- (A) Basic research
 - (B) Applied research
 - (C) Clinical research
 - (D) Experimental research
- 108.** Why do businesses use exploratory research?
- (A) To predict future outcomes
 - (B) To define the reason for the research
 - (C) To try out different approaches to see what the results would be
 - (D) To obtain specific data related to the business's situation
- 109.** Conceptual research is also known as:
- (A) Theoretical research
 - (B) Empirical research
 - (C) Applied research
 - (D) Experiential research
- 110.** Are program evaluations qualitative or quantitative research?
- (A) Quantitative
 - (B) Qualitative
 - (C) Either
 - (D) None of above
- 111.** Which type of researcher studies human cultures and may travel to various countries to observe and document different ways of life?
- (A) Political Scientist
 - (B) Geographer
 - (C) Anthropologist
 - (D) Sociologist
- 112.** The purpose of the applied research is carried out
- (A) Make respondents aware of the phenomenon that occurs
 - (B) Adding existing knowledge to general knowledge
 - (C) Find a solution to a problem
 - (D) Give a clear picture of the problem being studied
- 113.** Longitudinal research is often used to:
- (A) Test existing theories or concepts
 - (B) Develop new theories or concepts
 - (C) Describe phenomena accurately
 - (D) Study changes in individuals or groups over time
- 114.** Research that seeks to develop or test theories is known as:
- (A) Applied research
 - (B) Fundamental (basic) research
 - (C) Action research
 - (D) Descriptive research
- 115.** Which type of research does not manipulate variables but identifies relationships among them?
- (A) Experimental Research
 - (B) Non-experimental Research
 - (C) Historical Research
 - (D) Grounded Theory

- 116.** Allows researchers to see how people change and develop in their thinking or behavior over time.
- (A) Strength of Correlations
 - (B) Strength of Case Study
 - (C) Strength of Longitudinal Study
 - (D) None of above
- 117.** Types of research
- (A) Quantitative and Qualitative
 - (B) Red and Blue
 - (C) Hot and Cold
 - (D) Fast and Slow
- 118.** Causal-comparative research looks at the possible causal relationships among variables that can be manipulated by the researcher.
- (A) True
 - (B) False
- 119.** Applied research is best described as research that
- (A) Directly influences or improves clinical practice
 - (B) Avoids patient-oriented outcomes
 - (C) Is rarely useful in practice settings
 - (D) Focuses solely on theory generation
- 120.** The fourth year psychology students are currently conducting a research that aims to find out the relationship between the two variables. What type of research they have to engage with?
- (A) Experimental Research
 - (B) Correlational Research
 - (C) Naturalistic Observation
 - (D) Case Studies
- 121.** Action research allows localized problem diagnosis and enables teachers to address concerns that are closest to them.
- (A) TRUE
 - (B) FALSE
- 122.** A company would like to study the impact of advertising expenditure on sales and sales revenue. This is an example of ____ research.
- (A) Prescriptive
 - (B) Causal
 - (C) Secondary
 - (D) Exploratory
 - (E) Qualitative
- 123.** Jean Piaget gave a theory of cognitive development of humans on the basis of his
- (A) Action research
 - (B) Applied research
 - (C) Evaluation Research
 - (D) Fundamental research
- 124.** The purpose of which studies is to apply the results of fundamental sciences to the solution of cognitive and socio-practical problems:
- (A) Applied
 - (B) Environmental
 - (C) Production
 - (D) Economic
 - (E) Social
- 125.** Attitude Research or Opinion Research is designed to obtain information on how people feel about products, services, companies or ideas.
- (A) True
 - (B) False
- 126.** Causal-comparative research is also known as ex post facto research because
- (A) Variables are studied in retrospect.
 - (B) Conclusions drawn on the basis of studies are assumed to be factual.
 - (C) Two or more groups are compared on at least one variable.
 - (D) Results demonstrate cause-and-effect relationships.
- 127.** Applied research aims at finding a solution
- (A) Aims at finding a solution for an immediate problem facing a society or an industrial/business organization,

- (B) Includes surveys and fact-finding enquiries
(C) Based on the measurement of quantity or amount.
(D) Use facts or information already available, and analyze these to make a critical evaluation of the material.
- 128.** In this type of research, the investigator delves on analyzing the possible effect of a factor which cannot be manipulated and controlled.
(A) Experimental research.
(B) Causal-Comparative Research.
(C) Historical Research.
(D) Ethnographic Research.
- 129.** An Action Research is carried out by an outsider or someone not involved in a local situation.
(A) True
(B) False
- 130.** Research concerned with the derivation of generalizations of broad applicability and only secondarily with any practical value is called
(A) Practical research.
(B) Action research.
(C) Applied research.
(D) Fundamental research.
- 131.** Action Research in Education Field refers to ____?
(A) Survey Research
(B) Classroom Research
(C) Interview Research
(D) Basic Research
- 132.** If a researcher was studying the use of various instructional approaches to the “multiple intelligences” of a class of students, he is likely to be conducting which type of research?
(A) Basic
(B) Applied
(C) Evaluation
(D) Action
- 133.** Action Research could be individual, collaborative, school-wide or district-wide.
(A) True
(B) False
- 134.** Finds solutions to problems
(A) Basic research
(B) Applied research
- 135.** Action research means [2010-JUNE]
(A) A longitudinal research
(B) An applied research
(C) A research initiated to solve an immediate problem
(D) A research with socioeconomic objective
- 136.** The Principles of fundamental research are used in [2013-DECEMBER]
(A) Action research
(B) Applied research
(C) Philosophical research
(D) Historical research
- 137.** Action research gives teachers the opportunity to design and implement research interventions for the purpose of improving teaching and learning.
(A) TRUE
(B) FALSE
- 138.** What is the purpose of pure/basic research?
(A) To solve practical problems
(B) To develop or refine theory models
(C) To monitor the effects of remedial action
(D) To test the usefulness of research in solving problems
- 139.** A type of non-experimental research method, that measures two variables.
(A) Quasi-experimental
(B) Descriptive
(C) Correlational
(D) Experimental

- 140.** Which of the following is the type of non experimental research in which the primary independent variable of interest is categorical?
- (A) Experimental research.
 - (B) Qualitative research.
 - (C) Mixed research.
 - (D) Causal-comparative research.
- 141.** Annie wants to find out about the lived experiences of OFWs. What type of research should she do?
- (A) Ethnography
 - (B) Grounded theory
 - (C) Narrative research
 - (D) Phenomenology
- 142.** Which of the following is a form of research typically conducted by teachers, counselors, and other professionals to answer questions they have and to specifically help them solve local problems?
- (A) Action research
 - (B) Basic research
 - (C) Predictive research
 - (D) Orientational research
- 143.** Research conducted to find solution for an immediate problem is ____
- (A) Fundamental Research
 - (B) Analytical Research
 - (C) Action Research
 - (D) Descriptive Research
- 144.** What is the example given for Applied Research in the 'Research Methodology Hierarchy'?
- (A) Interviewing students about online learning experiences.
 - (B) Surveying student screen time quantitatively.
 - (C) Developing stress reduction techniques for students.
 - (D) Studying fundamental brain memory processes.
- 145.** Improve agricultural crop production.
- (A) Applied Research.
 - (B) Basic Research.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 146.** In a university research lab, a group of scientists is working on a project to understand the fundamental principles of quantum mechanics. Their goal is to expand current knowledge in the field, rather than focusing on immediate practical applications. This type of research is known as ____
- (A) Practical and descriptive
 - (B) Client-driven
 - (C) Expands current knowledge
 - (D) Advancement of technology
- 147.** Aside from generating knowledge, ____ research seeks to use findings to address a particular problem.
- (A) Applicant
 - (B) Applied
 - (C) Applied
 - (D) Pure
- 148.** Exploratory research is conducted:
- (A) To gain insights into a problem
 - (B) To prove hypothesis
 - (C) For prediction
 - (D) None
- 149.** Fundamental research is the type of research that-
- (A) Is made for performing the basic or pure research; it's a theoretical research
 - (B) Is intended for finding some solution to the problem considered
 - (C) Includes fact-finding inquiries and surveys
 - (D) Uses available information as the bases to make the further critical evaluation
- 150.** Fundamental research reflects the ability to:
- (A) Expound new principles

- (B) Synthesize new ideals
 - (C) Evaluate the existing material concerning research
 - (D) Study the existing literature regarding various topics
- 151.** What is the main purpose of applied research?
- (A) To develop or refine theory models
 - (B) To solve practical problems
 - (C) To study social phenomenon
 - (D) To monitor the effects of remedial action
- 152.** Which research refers to scientific study and research that seeks to solve practical problem
- (A) Basic research
 - (B) Applied Research
 - (C) Exploratory Research
 - (D) None of above
- 153.** It is a type of research according to purpose that is concerned with knowledge/truth that can be applied to practical setting.
- (A) PURE/BASIC RESEARCH
 - (B) DESCRIPTIVE RESEARCH
 - (C) APPLIED RESEARCH
 - (D) EXPERIMENTAL RESEARCH
- 154.** Exploratory research is undertaken when little or nothing is known about a problem. Feasibility studies and pilot studies fall under this type of research.
- (A) True
 - (B) False
- 155.** Longitudinal Approach is related with
- (A) Long term researches.
 - (B) Transverse researches.
 - (C) Horizontal researches.
 - (D) All of the above.
- 156.** A type of scientific investigation that is undertaken to solve a specific problem.
- (A) Pure research
 - (B) Applied research
- 157.** Action research is usually carried out by:
- (A) Policymakers
 - (B) Teachers or practitioners to solve immediate problems
 - (C) Professional researchers only
 - (D) None of the above
- 158.** The relationship between the length of hours spent on social media and the level of digital literacy of students is an example of:
- (A) A correlational research question
 - (B) A causal research question
 - (C) An experimental research question
 - (D) A descriptive research question
- 159.** Which of the following is a form of research typically conducted by teachers, counselors, and other professionals to answer questions they have and to specifically help them solve local problems?
- (A) Predictive research.
 - (B) Orientational research.
 - (C) Basic research.
 - (D) Action research.
- 160.** Which type of research would allow you to determine whether students' grades accurately predict later income?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Experimentation
 - (D) Correlation
- 161.** Research that examines the relationships between variables
- (A) Correlational Research.
 - (B) Qualitative Data.
 - (C) Plagiarism.
 - (D) Pre-Test.
- 162.** What does basic research do?
- (A) Gather general information and knowledge to use as a foundation.
 - (B) Is directed towards a specific subject such as creating therapies, treatments, and vaccines.

- (C) Used to study the sky and planets
(D) None of above
- 163.** Research that tries to verify a theory or learn more about a certain concept is the essence of:
(A) Performance-monitoring research.
(B) Pure research.
(C) Applied research.
(D) Forecasting research.
- 164.** Which research type aims to solve immediate classroom issues?
(A) Quantitative research
(B) Historical research
(C) Theoretical research
(D) Experimental research
(E) Action research
- 165.** A study comparing student sleep hours and GPA is likely:
(A) Descriptive
(B) Exploratory
(C) Correlational
(D) Experimental
- 166.** Action research is a 'study of a social situation carried out by those involved in that situation in order to improve both their practice and the quality of their understanding', captures the essence of the philosophy underlying the action research approach (Winter and Munn-Giddings, 2001).
(A) True
(B) False
- 167.** Applied research (e.g., action research) seeks to answer questions in what type of setting?
(A) Real-world
(B) Fake-world
- 168.** Action research can be described as a cycle.
(A) True
(B) False
- 169.** Which type of research approach resides in the middle of the continuum?
(A) Qualitative
(B) Quantitative
(C) Mixed methods
(D) None of the above
- 170.** Longitudinal research is complicated by high rates of (a).
(A) Deception
(B) Observation
(C) Attrition
(D) GeneralizationTags2.B
- 171.** In an applied research one solves certain problems employing well known and accepted theories and principles.
(A) Qualitative Research
(B) Quantitative Research
(C) Basic Research
(D) Applied Research
- 172.** A research study aiming to determine relationships between variables is classified as:
(A) Experimental
(B) Descriptive
(C) Correlational
(D) Phenomenological
- 173.** Which of the following is a key characteristic of action research in teaching?
(A) It is conducted by external researchers
(B) It involves teachers in the research process to solve real-world classroom problems
(C) It is not intended to influence teaching methods
(D) It is done in large research labs, not classrooms
- 174.** When the researcher has to use the facts or information already available and make a critical evaluation of the material:
(A) Analytical Research
(B) Applied Research
(C) Qualitative Research
(D) Quantity Research

175. Research may differ along a series of dimensions. Which of the following may be applied to this statement?
- (A) The type of data collected.
 - (B) The data-collection technique.
 - (C) The level of manipulation used to elicit data collection.
 - (D) All of the given options.
176. Which of the following is not a potential benefit of conceptual research?
- (A) It can lead to the development of new theories or concepts
 - (B) It can provide insights into complex phenomena
 - (C) It can establish cause-and-effect relationships
 - (D) It can inform practical applications in the field
177. Research is designed to solve practical problems of the modern
- (A) Basic
 - (B) Applied
 - (C) Qualitative
 - (D) Quantitative
178. Scientific study that aims to solve practical problems, not just collect data
- (A) Basic research
 - (B) Applied research
 - (C) Psychometrics
 - (D) Hypnosis
179. The main purpose of basic research is to
- (A) Make respondents aware of the phenomenon that occurs
 - (B) Find solutions to the problems faced by the organization
 - (C) Provide a clear description of the problem under study
 - (D) Find the truth about a problem
180. Exploratory Research probes into the cause of an effect by exposing one or more experimental groups to one or more treatments or conditions.
- (A) TRUE
 - (B) FALSE
181. Which type of research is often used to test hypotheses and generalize about a population based on a sample?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Both
 - (D) Neither
182. Research can be classified from three perspectives
- (A) Philosophies, validity and unbiased.
 - (B) Controlled, systematic and empirical.
 - (C) Rigorous, valid and critical.
 - (D) Application, objectives and inquiry mode used.
183. Action research is participative and collaborative; it is undertaken by individuals with a common purpose.
- (A) True
 - (B) False
184. This type of research involves comparison and is done without focusing on their relationship rather it focuses on the causes of phenomena.
- (A) Survey Research
 - (B) Historical Research
 - (C) Causal-Comparative
 - (D) Phenomenology
185. A researcher explores the phenomenon of how nurses make decisions about when to discuss end-of-life issues with clients. From this research, a model is developed to explain the decision-making process. Which type of research does this represent?
- (A) Grounded Theory
 - (B) Phenomenological Research
 - (C) Ethnography
 - (D) Narrative
 - (E) Case Study Research

186. A type of research done by the government officials which focus on the question 'How can problem 'X' be solved or prevented? '
- (A) Policy-oriented Research
 - (B) Longitudinal Research
 - (C) Exploratory Research
 - (D) Explanatory Research
187. — refers to when the solution to a problem does not bear on any practical situation in the world, but only improves the understanding of a community of researchers
- (A) Applied research
 - (B) Consequence
 - (C) Pure research
 - (D) Research problem
188. In — studies, psychologists study the same group of participants at regular intervals over a period of years.
- (A) Biased
 - (B) Survey
 - (C) Hypothetical
 - (D) Longitudinal
189. Basic research is known as
- (A) Fundamental
 - (B) Descriptive
 - (C) Analytical
 - (D) None of the above
190. Applied research uses the scientific method to answer questions —
- (A) About how to purchase apps
 - (B) About theoretical issues for fundamental processes and underlying mechanisms related to the behaviors and events being studied
 - (C) Concerning practical problems with potential practical solutions within an organization or institution
 - (D) That are directly related to the predictions made by theories
191. When the researcher uses the information already available and analyzes these to make a critical evaluation that is called
- (A) Empirical research.
 - (B) Descriptive research.
 - (C) Conceptual research.
 - (D) Analytical research.
192. What type of research aims to contribute to the existing body of knowledge?
- (A) Basic
 - (B) Applied
 - (C) Logical
 - (D) Analytical
193. Basic research in psychology is used for the purpose of gaining scientific knowledge.
- (A) True
 - (B) False
194. Which type of research deals with developing new theories?
- (A) Applied research
 - (B) Descriptive research
 - (C) Fundamental research
 - (D) Empirical research
195. It is defined as a careful, systematic study of knowledge in the field of criminology or criminal justice, undertaken to discover or establish facts of the crimes or causations of crime.
- (A) CRIMINALITY RESEARCH
 - (B) CRIMINOLOGICAL RESEARCH
 - (C) QUALITATIVE RESEARCH
 - (D) QUANTITATIVE RESEARCH
196. Can be used to uncover the variables at work in a given situation
- (A) Exploratory Research
 - (B) Descriptive Research
 - (C) Casual Research
 - (D) None of above
197. Which of the following involves the study of a certain problem and from that experience, decisions, actions and conclusions are drawn. Findings are limited to settings actually studied.

- (A) Pure research.
(B) Applied research.
(C) Action research.
(D) None of the above.
198. Qualitative, quantitative and mixed are according to ____
(A) The method of obtaining information
(B) The type of information
(C) The nature to the information
(D) None of above
199. An investigator conducted a study to examine the effect on attitude towards dowry system. The nature of this study was
(A) Phenomenological study
(B) Experimental study
(C) Causal comparative study
(D) Co relational study
200. There are two distinct types of developmental studies. In a cross-sectional study, clients are assessed at one point in time. In a longitudinal study, however
(A) The researcher has an accomplice pose as a client and act in a certain manner
(B) The same people are studied over a period of time
201. If the findings of a research have practical implications for improving educational patterns, it is called
(A) Experimental research.
(B) Descriptive research.
(C) Applied research.
(D) Pure research.
202. Conceptual research is often used to:
(A) Refute existing theories or concepts
(B) Develop new theories or concepts
(C) Describe phenomena accurately
(D) Test hypotheses
203. Basic reaserch also referred to as ____ research.
(A) Model
(B) Mixed
(C) Pure
(D) Simple
204. Which type of research is focused on predicting outcomes?
(A) Causal research
(B) Descriptive research
(C) Exploratory research
(D) Qualitative research
205. Which of these types of research/data shows consumers' attitudes and beliefs about a product, service, etc.?
(A) Quantitative
(B) Qualitative
206. Which type of research is more likely to have a final report with a lot of writing and quotes?
(A) Qualitative research
(B) Quantitative research
(C) Experimental research
(D) Observational research
207. Which type of research involves human subjects and is conducted after other forms research have already taken place?
(A) Basic research
(B) Clinical research
208. Action research is unique in that it assumes that research should ____ (purposely evolve, always follow tradition) as reality and education contexts change, thereby ____ (advocating, discouraging) new, different, and more effective practices guided by "theory that works" as determined by locally driven research studies. Answer the first blank only
(A) Purposely evolve
(B) Always follow tradition
209. Action-research can be understood as ____
(A) A longitudinal research
(B) An applied research

- (C) A kind of research being carried out to solve a specific problem
(D) All of the above
- 210.** If a psychologist is tackling real-world issues, like improving classroom management or developing new therapies, which type of research are they using to find practical solutions?
(A) Basic research
(B) Empirical research
(C) Applied research
(D) Theoretical research
- 211.** To infer the causes of a phenomenon which has already occurred
(A) Ex Post Facto
(B) Quasi-Experimental
(C) Experimental
(D) Descriptive
- 212.** An investigation on basic principles and reasons for occurrence of a particular event or process or phenomenon
(A) Basic Research
(B) Applied Research
(C) Quantitative Research
(D) Qualitative Research
- 213.** All of the following are types of QUANTITATIVE studies, EXCEPT:
(A) Experimental
(B) Quasi-experimental
(C) Phenomenological
(D) Correlational
- 214.** ___ is a systematic attempt to gain a better understanding of the educational process, with a view to improve its efficiency.
(A) Research
(B) Educational research
(C) Both of the above
(D) None of the above
- 215.** Which of these is something that correlational research CANNOT do?
(A) Show central tendencies
(B) Show causation
(C) Use surveys
(D) Show relationships between variables
- 216.** What type of research studies relationships without establishing cause and effect?
(A) Experimental
(B) Correlational
(C) Descriptive
(D) Historical
- 217.** Longitudinal research is for a long period of time
(A) True
(B) False
- 218.** If the timescale may drop out, affecting the validity of the data.
(A) Weakness of Correlations
(B) Weakness of Case Study
(C) Weakness of Longitudinal Study
(D) None of above
- 219.** Studies that aim to solve practical problems
(A) Clinical psychology
(B) Case study
(C) Descriptive statistics
(D) Applied research
- 220.** Pharmaceuticals and biotechnological are involved in applied research and are having ___ departments.
(A) L&D
(B) R&D
(C) K&D
(D) D&R
- 221.** What type of research is encouraged under SDG 3?
(A) Agricultural research
(B) Medical research
(C) Environmental research
(D) Technological research

- 222.** Which type of research is most appropriate for testing hypotheses statistically?
- (A) Qualitative research.
 - (B) Quantitative research.
 - (C) Case study.
 - (D) Narrative inquiry.
 - (E) Ethnography.
- 223.** This is a type of research aims of finding solutions to pressing problems that society, organizations and the like are facing by employing well-known theories and principles
- (A) Basic research
 - (B) Investigative Research
 - (C) Exploratory Research
 - (D) Applied Research
- 224.** The type of research focused on finding a solution to an immediate practical problem is termed as
- (A) Basic research
 - (B) Applied research
 - (C) Explanatory research
 - (D) Descriptive research
- 225.** Correlational or Associational Research
- (A) Based on the one undertaking the research
 - (B) Based on final use or application of the research results
 - (C) Based on the mode of inquiry used
 - (D) Based on the methodology or research design used
- 226.** What is the relationship between basic and applied research?
- (A) Basic and applied research are equal in form but different in their nature
 - (B) Basic and applied research are complementary
 - (C) Basic and applied research are almost the same depending on the type of investigation
 - (D) None of above
- 227.** Type of research that shows connectedness and relationships between two factors, or variables.
- (A) Pure Research.
 - (B) Applied research.
 - (C) Correlational research.
 - (D) Descriptive research.
- 228.** Research undertaken for knowledge sake is
- (A) Pure Research
 - (B) Action Research
 - (C) Pilot study
 - (D) Survey
- 229.** This type of research determines if two variables are related or not.
- (A) Experimental Research
 - (B) Field Experiment
 - (C) Quasi Experiment
 - (D) Correlational Research
- 230.** The research that helps in developing theories by discovering broad generalization and principle is
- (A) Fundamental research.
 - (B) Historical research.
 - (C) Descriptive research.
 - (D) Experimental research.
- 231.** Pure science that aims to increase the scientific knowledge base, collecting research and data
- (A) Basic research
 - (B) Applied research,
 - (C) Psychology
 - (D) Psychometrics
- 232.** There are two broad approaches to research, qualitative research and quantitative research.
- (A) True
 - (B) False
- 233.** This is used for the preliminary investigation of a subject that is not yet well understood or sufficiently researched.

- (A) Exploratory research
 - (B) Applied research
 - (C) Explanatory research
 - (D) Correlational research
- 234.** A researcher analyzes the composition of Neptune's atmosphere.
- (A) Pure research
 - (B) Applied research
- 235.** A study conducted in order to compare collected data with variables of the same interest
- (A) Longitudinal
 - (B) Survey
 - (C) Correlational
 - (D) Cross-sectional
- 236.** Which research needs larger scale of sampling size?
- (A) Qualitative research
 - (B) Quantitative research
- 237.** Otherwise known as pure research
- (A) Field research
 - (B) Basic Research
 - (C) Developmental research
 - (D) Applied research
- 238.** Which of the following is an example of applied research?
- (A) Reading books for entertainment.
 - (B) Studying the effects of a new medicine.
 - (C) Watching documentaries for fun.
 - (D) Writing a fictional novel for leisure.
- 239.** Which study involves a repeated collection of data from the same sample over an extended period of time.
- (A) Cross-sectional study
 - (B) Longitudinal study
 - (C) Qualitative data
 - (D) Quantitative data
- 240.** In a recent study, Asher is investigating the relationship between social media usage and mental health among teenagers. He aims to clarify why and how these two aspects are related. Which of the following types of research is Asher conducting?
- (A) Exploratory Research
 - (B) Action Research
 - (C) Descriptive Research
 - (D) Diagnostic Research
- 241.** An experimental psychologist employed at a university is more likely to engage in
- (A) Basic research
 - (B) Applied research
- 242.** Which of the following research questions is causal in nature?
- (A) What factors influence smartphone brand preference?
 - (B) How does pricing affect online purchase intent?
 - (C) What are the characteristics of brand-loyal consumers?
 - (D) How do customers describe good service?
- 243.** Which type of research focuses on developing theories to understand the phenomenon being studied and contribute to knowledge?
- (A) Action
 - (B) Applied
 - (C) Basic
 - (D) Evaluation
- 244.** In the research one applies theories or principles to solve certain problems (by employing well known and accepted theories and principles).
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Basic Research
 - (D) Applied Research
- 245.** Exploratory research is typically used to:
- (A) Test hypotheses

- (B) Confirm existing theories
 - (C) Develop new theories or concepts
 - (D) All of the above
- 246.** Andy is collecting data by sending a survey to his classmates about their opinion on new school policies. What type of research is this?
- (A) Product
 - (B) Sales
 - (C) Attitude
 - (D) Media
- 247.** Research method in which data are collected about a group of participants over a number of years.
- (A) Longitudinal study
 - (B) Cross-sectional study
 - (C) Case study
 - (D) Survey
 - (E) Experiment
- 248.** What type of research studies pure science that aims to increase the scientific knowledge base?
- (A) Psychometrics
 - (B) Developmental Psychology
 - (C) Basic Researchers
 - (D) Applied Research
- 249.** Objective knowledge, in any field of study, is developed through:
- (A) Experience
 - (B) Past practices and training
 - (C) A review of the relevant literature
 - (D) Basic and applied research
- 250.** Which of the following is NOT a type of research?
- (A) Experimental research
 - (B) Qualitative research
 - (C) Descriptive research
 - (D) Subjective research
- 251.** The research that aims at immediate application is:
- (A) Action Research
 - (B) Empirical Research
 - (C) Conceptual Research
 - (D) Fundamental Research
- 252.** Which type of research is most suitable when very little is known about the problem and the goal is to generate ideas?
- (A) Exploratory
 - (B) Descriptive
 - (C) Causal
 - (D) Comparative
- 253.** Exploratory research is primarily concerned with:
- (A) Explaining what is happening in a particular situation
 - (B) Describing a phenomenon accurately
 - (C) Studying changes over time
 - (D) Developing new theories or concepts
- 254.** Studies conducted by philosophers and thinkers are ____
- (A) Pure Research
 - (B) Experimental Research
 - (C) Empirical Research
 - (D) Conceptual Research
- 255.** Basic research is about ____
- (A) Advancement of technology
 - (B) Expansion of current knowledge
 - (C) Being client-driven
 - (D) Practical and descriptive
- 256.** Is conducted for a problem that was not well researched before, demands priorities, generates operational definitions and provides a better-researched model.
- (A) Exploratory Research
 - (B) Descriptive Research
 - (C) Correlational Research
 - (D) Explanatory Research
 - (E) Predictive Research

257. What research is conducted on a 'one-off' basis, to provide a snapshot at a particular point in time?
- (A) Ad hoc research
 - (B) Programmatic Research
 - (C) Market Research
 - (D) Marketing Research
258. Applied research is an inquiry to test or evaluate a theory or knowledge arrived at, in the solution of a problem or for useful ends.
- (A) True
 - (B) False
259. Exploratory research is the problem finding phase or usually done at the initial stages of the issue.
- (A) True
 - (B) False
260. Applied research is theory oriented while basic research is practical oriented.
- (A) True
 - (B) False
261. Types of scientific research for special purpose:
- (A) Fundamental, applied, development
 - (B) Objective, subjective, complex
 - (C) Experimental design, complex, search
 - (D) None of above
262. Applied research aims at:
- (A) Formulating a theory
 - (B) Finding a solution to a problem
 - (C) Reporting what has happened or what is happening
 - (D) None of above
263. A focus of critical action research includes —
- (A) Reducing discrimination and encouragement of inequality of income
 - (B) Reduction of inequality of income
 - (C) Support of inequality of wealth
 - (D) None of above
264. What is the MOST likely reason to use exploratory research?
- (A) When only qualitative data is available
 - (B) When little research exists on the topic under study
 - (C) When access to the target population is limited
 - (D) None of above
265. A clinical psychologist studying the effects of a specific therapy on bipolar disorder is using
- (A) Basic research.
 - (B) Applied research.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
266. Which of the following is the definition of applied research?
- (A) Solve a problem
 - (B) Understand a problem
 - (C) Observe participants in their natural environment
 - (D) Research past studies and find the links between them
267. Causal-comparative research and experimental research are similar in that —
- (A) Neither demonstrate causation.
 - (B) Both involve group comparisons.
 - (C) Both demonstrate causation.
 - (D) Both study relationships between two or more variables in one group.
268. Conceptual research is based on:
- (A) Empirical observation
 - (B) Logical reasoning
 - (C) Intuition
 - (D) None of the above
269. Independent variables are not manipulated in the
- (A) Ex-post facto research.
 - (B) Normative research.
 - (C) Both A and B.
 - (D) None of the above.

270. Conceptual research is:
- (A) Research that is focused on testing hypotheses
 - (B) Research that is focused on developing new concepts or theories
 - (C) Research that is focused on studying specific individuals or groups
 - (D) Research that is focused on analyzing existing data
271. Research to increase fundamental knowledge is
- (A) Applied
 - (B) Basic
 - (C) Clinical
 - (D) Medical
272. What distinguishes correlational from descriptive research?
- (A) Use of control groups
 - (B) Measurement of relationships
 - (C) Random assignment
 - (D) Manipulation of variables
273. Feasibility research is a type of applied research.
- (A) True
 - (B) False
274. Research or pursuit of knowledge for its own sake.
- (A) Basic science
 - (B) Applied science
 - (C) Technology
 - (D) Engineering
 - (E) Medicine
275. Apple does research to determine the best packaging for protecting the new iPhone. What type of research is this?
- (A) Product
 - (B) Attitude
 - (C) Sales
 - (D) Media
276. Longitudinal research can be used to study which of the following?
- (A) Human development
 - (B) Social change
 - (C) Health outcomes
 - (D) All of the above
277. Which of the following types of research explore an area where little researchers have researched in?
- (A) Descriptive
 - (B) Exploratory
 - (C) Explanatory
 - (D) Correlational
278. Building up of theory is the aim of:
- (A) Action research.
 - (B) Applied research.
 - (C) Historical research.
 - (D) Fundamental research.
279. The exploration of new phenomena in this way may help the researcher's need for better understanding, may test the feasibility of a more extensive study, or determine the best methods to be used in a subsequent study.
- (A) Exploratory Research
 - (B) Explanatory Research
 - (C) Descriptive Research
 - (D) Action Research
280. Investigations in which samples from a general population are studied over time with respect to some phenomenon is termed as
- (A) Trend studies
 - (B) Action research
 - (C) Outcome research
 - (D) Meta-analysis
281. In ___ a researcher has to avail data which already exists and has to make an accurate evaluation
- (A) Applied Research
 - (B) Fundamental Research
 - (C) Analytical research,
 - (D) Quantitative Research

- 282.** What type of research explores how people and machines interact and how machines and physical environments can be made safe and easy to use?
- (A) Industrial-Organizational Psychology
 - (B) Developmental Psychology
 - (C) Human Factors Psychology
 - (D) Applied Research
- 283.** Which of the following is not a type of research based on methodology?
- (A) Quantitative
 - (B) Qualitative
 - (C) Applied
 - (D) Mixed
- 284.** On the basis of process research is classified as:
- (A) Conceptual and Empirical
 - (B) Quantitative and Qualitative
 - (C) Basic and Applied
 - (D) Inductive and Deductive
- 285.** It seeks to solve everyday problems immediately and improve the action. Its objective is to help make decisions for the implementation of programs, processes, and reforms:
- (A) Actio research design
 - (B) Grounded designs
 - (C) Correlational designs
 - (D) Exploratory design
- 286.** What type of research aims to solve practical real world problems?
- (A) Psychometrics
 - (B) Developmental Psychology
 - (C) Basic Researchers
 - (D) Applied Research
- 287.** Considered as an action research which is directed towards practical application of the scientific knowledge.
- (A) Basic Research
 - (B) Applied Research
 - (C) Practical Research
 - (D) Critical Research
- 288.** True or False: The result of basic research is theoretical knowledge.
- (A) True
 - (B) False
- 289.** Which type of sciences focus on people or collections of people, such as groups, firms, societies, economies, and their individual or collective behaviors?
- (A) Applied
 - (B) Basic
 - (C) Natural
 - (D) Social
- 290.** Research which aims at theory building is called:
- (A) Applied research
 - (B) Experimental research
 - (C) Theoretical research
 - (D) Descriptive research
- 291.** Research that centers on the relationship between the changes in our thinking over the life span and changes in moral reasoning is most likely associated with
- (A) Clinical psychologist
 - (B) Personality psychologist
 - (C) Psychiatrist
 - (D) Developmental psychologist
- 292.** The goal of the action research cycle is ____ improvement.
- (A) Continuous
 - (B) Sporadic
- 293.** It is a type of research that investigates the basic reasons and principles behind the occurrence of a particular phenomenon or event
- (A) Basic Research
 - (B) Investigative Research
 - (C) Exploratory Research
 - (D) Applied Research

- 294.** Which of the following research questions is an example of correlational research?
- (A) Is there a difference in the height of Mung Bean in setup A from setup B after various treatments?
 - (B) What are the various learning modalities offered in Gusa Elementary School for SY 2020-2021?
 - (C) Is the pre-online tutorial effective in preparing preschool for distance learning?
 - (D) What is the relationship between time spent on texting and spelling ability?
- 295.** When the objective of a research is to produce a guidance, or even an obligation regarding how something should be done. this is:
- (A) Conclusive research
 - (B) Prescriptive research
 - (C) Descriptive research
 - (D) Historical analysis
- 296.** Which research approach focuses on solving practical problems?
- (A) Action Research
 - (B) Basic Research
 - (C) Experimental Research
 - (D) Grounded Theory
- 297.** What type of research that is done chiefly to make a contribution to existing knowledge?
- (A) Applied Research
 - (B) Basic Research
- 298.** Generally the formulation and progress of new knowledge have been carried out through
- (A) Fundamental researches.
 - (B) Experimental researches.
 - (C) Historical researches.
 - (D) None of the above.
- 299.** Qualitative and Quantitative researches can be classified on the basis of
- (A) Process of research
 - (B) Source of Information
 - (C) Types of information
 - (D) Analysis of data
- 300.** In this type of research, knowledge is generated from an observation to achieve a generalisation.
- (A) Quasi experimental research
 - (B) Inductive research
 - (C) Deductive research
 - (D) Hypothetical research
- 301.** A group of students that developed an Arduino-based Automated Greenhouse made a research of which type?
- (A) Pure
 - (B) Applied
 - (C) Evaluation
 - (D) Action
- 302.** Is of great use when a researcher has only a vague idea of the problem.
- (A) Exploratory research design
 - (B) Conclusive research design
 - (C) Diagnostic research design
 - (D) Descriptive research design.
- 303.** Action research means
- (A) A longitudinal research
 - (B) An applied research
 - (C) A research initiated to solve an immediate problem
 - (D) A research with socioeconomic objective
- 304.** The type of study that focuses on developing or improving research strategies is called:
- (A) Methodological study
 - (B) Clinical trial
 - (C) Mixed methods
 - (D) None of above
- 305.** Which of the following is a primary objective of conceptual research?
- (A) To provide an accurate description of a phenomenon
 - (B) To test the accuracy of existing theories
 - (C) To develop new theories or concepts
 - (D) To establish cause-and-effect relationships

- 306.** What is the main purpose of theoretical research?
- (A) To study social phenomenon
 - (B) To solve practical problems
 - (C) To develop or refine theory models
 - (D) To monitor the effects of remedial action
- 307.** A student-researcher examines if the frequent use of social media has something to do with poor communication skills.
- (A) Historical Research
 - (B) Ethnographic Research
 - (C) Correlational Research
 - (D) None of above
- 308.** Research studies can be divided into either ___ studies or ___ studies.
- (A) Longitudinal, cross-sectional
 - (B) Independent, dependent
 - (C) Qualitative, quantitative
 - (D) Random, stratified
- 309.** A company manager is facing declining sales, but he does not know why. Which type of research design would you recommend to address this problem?
- (A) Exploratory research
 - (B) Descriptive research
 - (C) Causal research
 - (D) Secondary research
- 310.** Below is an example of what type of research. The Relationship Between Physical Activity Levels and Physical Self-Worth Among Grade 8 Physical Education Students
- (A) Correlational
 - (B) Descriptive
 - (C) Experimental
 - (D) Causal-Comparative
- 311.** Researchers follow the same group of individuals over a period of time. This could be from several months to many years.
- (A) Correlations
 - (B) Case Study
 - (C) Longitudinal Study
 - (D) None of above
- 312.** Which of the following research is used to check solutions for real-life problems on the basis of already existing theories?
- (A) Applied research
 - (B) Action research
 - (C) Ex-post facto research
 - (D) Historical research
- 313.** Applied research in nursing is BEST characterized by which goal?
- (A) Developing abstract theoretical frameworks
 - (B) Discovering meanings from participant narratives
 - (C) Exploring perception-based realities of clinicians
 - (D) Transforming practice through targeted interventions
- 314.** A research which uses scientific methods in improving existing device, system, and/or practices.
- (A) Laboratory research
 - (B) Applied research
 - (C) Library research
 - (D) Developmental research
- 315.** What do we call research intended to increase the scientific knowledge base?
- (A) Applied research
 - (B) Mental research
 - (C) Basic research
 - (D) Behavioral research
- 316.** How is Quasi-Experimental Research different from Experimental Research?
- (A) The researcher does not randomly select groups to observe
 - (B) The researcher conducts surveys instead of an experiment
 - (C) The researcher can only have two variables
 - (D) The researcher does the experiment on-line instead of in-person

317. The primary aim of ____ is to understand social life & thereby to gain a greater measure of control over social behavior.
(A) Educational research
(B) Social research
(C) Managerial research
(D) None of these.
318. Which research method is cost-effective and can provide historical perspective?
(A) Correlational (cross-sectional) research
(B) Longitudinal research
(C) Experimental research
(D) Archival research
319. What are the two types of research?
(A) Qualitative and quantitative
(B) Primary and secondary
(C) Proposal and ethics
(D) Structured and unstructured
(E) Open and closed questions
320. Types of Research-Exploratory research is mainly conducted to:
(A) Test a hypothesis
(B) Explore new ideas and insights
(C) Confirm established theories
(D) None of the above
321. A research used to investigate a problem which is not clearly defined.
(A) Exploratory Research
(B) Descriptive Research
(C) Correlational Research
(D) Explanatory Research
(E) Predictive Research
322. A research study shows that customers who follow a brand on Instagram are more likely to make purchases. What type of relationship is being explored?
(A) Causal
(B) Correlational
(C) Descriptive
(D) Comparative
323. What type of theory focuses on more specific phenomena of interest?
(A) Grand theory
(B) Middle-range theory
(C) Shared theory
(D) Grounded theory
324. Applied research is a type of research based on
(A) Application
(B) Objective
(C) Types of information sought
(D) Application and objective
325. T/F: The result of basic research is theoretical knowledge.
(A) True
(B) False
326. What type of research involves studies in which the same group of individuals is surveyed or measured repeatedly over an extended period of time?
(A) Longitudinal research
(B) Cross-sectional research
(C) Experimental research
(D) Case study research
327. Is conducted with the purpose of gaining a better insight into a problem.
(A) Conclusive research design
(B) Descriptive research design
(C) Diagnostic research design
(D) Exploratory research design.
328. What is effectiveness and why is it important?
(A) Effectiveness-the extent to which the study has met its stated goals-is especially important in applied research
(B) Effectiveness-the time in which the study has met its stated goals-is especially important in applied research
(C) Effectiveness-the way in which the study has met its stated goals-is especially important in basic research
(D) None of above

- 329.** A community project aims to understand the experiences of local farmers over time. Which systematic method would be most appropriate?
- (A) Quantitative Survey
 - (B) Case Study
 - (C) Longitudinal Research
 - (D) Statistical Analysis
- 330.** Research conducted to address questions about a specific real-life problem is the essence of:
- (A) Basic research.
 - (B) Pure research.
 - (C) Applied research.
 - (D) Intuitive research.
- 331.** What type of research that is done with the intention of applying the results of the findings to solve specific problems currently being experienced in an organization?
- (A) Applied Research
 - (B) Basic Research
- 332.** Which of the following is a characteristic of applied research?
- (A) Seeks to expand general knowledge
 - (B) Is purely theoretical
 - (C) Aims to solve practical problems
 - (D) Does not involve data
- 333.** What type of research does Newton's law of universal gravitation belong to?
- (A) Basic research.
 - (B) Applied research.
 - (C) Development research.
 - (D) Forecast research.
- 334.** Which of the following is NOT a reason why exploratory research is conducted?
- (A) Screening alternatives
 - (B) Discovering new ideas
 - (C) Prospecting for clients
 - (D) Diagnosing a situation
- 335.** It is used to understand the traits or behaviour of a subject under observation after repeatedly testing the subject over a period of time. name it
- (A) Applied research
 - (B) Survey method
 - (C) Longitudinal study
 - (D) None of these
- 336.** Study in which people of different ages are compared to one another at a single point in time is what definition word?
- (A) Longitudinal
 - (B) Cross-sectional
 - (C) Correlate
 - (D) Correlational
- 337.** Which of the following research leads to development of new theories or concepts?
- (A) Applied research
 - (B) Fundamental research
 - (C) Action research
 - (D) Experimental research
- 338.** Which of the following is the definition of basic research?
- (A) Solve a problem
 - (B) Research past studies and find the links between them
 - (C) Understand a problem
 - (D) Observe participants in their natural environment
- 339.** An extensive, long term study is called a ____ study.
- (A) Simple
 - (B) Longitudinal
 - (C) Qualitative
 - (D) Quantitative
- 340.** Conclusive research is typically more formal and structured than exploratory research.
- (A) True
 - (B) False

341. Einstein's study that led to the theory of relativity is an example of what kind of research
- (A) Pure
 - (B) Applied
 - (C) Evaluation
 - (D) Action
342. A type of research method that investigates the strength of relationships between co-variables.
- (A) Correlational study
 - (B) Field method
 - (C) Case study
 - (D) Quasi-experiment
343. Akira Takano, a marketing manager, will test the hypothesis that sales of a particular product will increase exponentially if there is a \$5 decrease in the selling price of that product. Akira is involved in research ____
- (A) Exploration
 - (B) Causal
 - (C) Descriptive
 - (D) Ethnographic
344. The main goal of ____ research is to expand man's knowledge
- (A) Pure/fundamental
 - (B) Applied
345. Prof. Cruz is doing an evaluation research on political participation of the youth. The result of the research will be used to formulate certain policies on political participation. This research is an example of:
- (A) Applied research
 - (B) Basic research
 - (C) Descriptive research
 - (D) Strategic research
346. Conceptual research is primarily concerned with:
- (A) Explaining what is happening in a particular situation
 - (B) Describing a phenomenon accurately
 - (C) Developing new theories or concepts
 - (D) Testing existing theories or concepts
347. Done when a researcher does not know anything about the situation subject at hand. No previous study has ever been done and knowledge is minimal in a certain field of study.
- (A) Discovery research.
 - (B) Descriptive research.
 - (C) Purposive research.
 - (D) Exploratory research.
348. Research directed toward a specific objective is
- (A) Clinical
 - (B) Basic
 - (C) Medical
 - (D) Applied
349. The primary purpose of ____ is to provide insight into unexplored areas.
- (A) Descriptive research design
 - (B) Diagnostic research design
 - (C) Exploratory research design
 - (D) Experimental research design.
350. A scientist wants to determine whether people who live in places with high levels of air pollution have more colds than people who live in places with little air pollution. What type of research study is described?
- (A) Experimental Research Study
 - (B) Observational Research Study
 - (C) All the above
 - (D) None of the above
351. Involves using tools and information to investigate facts
- (A) Informal research
 - (B) Formal research
352. The purpose of Basic research is to test or apply an existing principle or theory with specific purpose of improving human condition.
- (A) TRUE
 - (B) FALSE
 - (C) I DON'T KNOW
 - (D) None of above

- 353.** Which statement best defines basic research in scientific inquiry?
(A) Expands fundamental knowledge without immediate applications
(B) Solves specific practical problems in real contexts
(C) Tests hypotheses by manipulating variables
(D) Observes natural behaviors without intervention
- 354.** Improve the energy efficiency in homes, offices or modes of transportation.
(A) Applied Research.
(B) Basic Research.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 355.** On the basis of contributions made, all the researches can be classified as
(A) Fundamental-Applied-Action Research.
(B) Experimental-Historical-Philosophical.
(C) Longitudinal and Cross-sectional.
(D) None of the above.
- 356.** Hypotheses formulation is a stage in all the following studies except:
(A) Basic research
(B) Applied research
(C) Exploratory research
(D) Descriptive research
- 357.** The research stream of immediate application is
(A) Empirical research.
(B) Conceptual research.
(C) Fundamental research.
(D) Action research.
- 358.** ____ can be defined as a research method that is used to determine the cause and effect relationship between two variables.
(A) Basic Research
(B) Causal Research
(C) Cross Sectional Research
(D) Longitudinal Research
- 359.** A team of educational researchers plan to conduct a local study in the community in order to resolve a critical problem at hand. What variety of research does this represent?
(A) Basic.
(B) Predictive.
(C) Experimental.
(D) Action.
- 360.** A longitudinal study is one in which
(A) Different age groups are tested at the same time.
(B) Different characteristics of a specific individual are assessed by a single test.
(C) The same group of people are tested and retested over a period of years.
(D) Different characteristics of a specific individual are assessed by multiple tests.
- 361.** Cross-sectional studies collect data at a single point in time and do not provide insights into changes over time
(A) TRUE
(B) FALSE
- 362.** The Principles of fundamental research are used in
(A) Historical research.
(B) Action research.
(C) Applied research.
(D) Philosophical research.
- 363.** The Purpose of Applied Research are to create new knowledge, theories and principles.
(A) TRUE
(B) FALSE
(C) I DON'T KNOW
(D) None of above
- 364.** It is theoretical in nature and is conducted to advance marketing knowledge in general or to verify a proposed marketing theory or concept.
(A) Applied Marketing Research
(B) Basic Marketing Research

365. Basic research in nursing is primarily designed to do what?
- (A) Implement evidence-based protocols
 - (B) Evaluate patient satisfaction scores
 - (C) Directly improve clinical practice
 - (D) Generate and refine theory
366. What type of research is a form of investigation designed for teachers who attempt to solve problems and improve professional practices in their own classrooms?
- (A) Applied Research
 - (B) Pure Research
 - (C) Policy Research
 - (D) Case Study
367. If a researcher conducts a research on finding out which administrative style contributes more to institutional effectiveness? This will be an example of
- (A) Basic Research
 - (B) Action Research
 - (C) Applied Research
 - (D) None of the above
368. In what type of study would a researcher study a group of people for many years?
- (A) Longitudinal
 - (B) Case
 - (C) Correlational
 - (D) Naturalistic
369. Exploratory research addresses one of the following types of question
- (A) Why.
 - (B) How.
 - (C) What.
 - (D) All the above.
370. A ____, or also called ____, is conducted simply to generate knowledge.
- (A) Basic, applied research
 - (B) Applied research, pure research
 - (C) Applied research, basic
 - (D) Basic, pure research
371. Which type of research is primarily concerned with understanding the fundamental nature of phenomena and is often conducted in a controlled environment?
- (A) Action Research
 - (B) Basic or Fundamental Research
 - (C) Applied Research
 - (D) Quantitative Research
372. Why is usually required a diverse team composition in terms of skills and knowledge to conduct applied research?
- (A) Because applied research problems and questions are not usually clear and must be answered
 - (B) Because applied research problems and questions tend to be ambiguous and require special attention
 - (C) Because applied research problems and questions tend to be multi-dimensional, requiring a different set of skills and strengths
 - (D) None of above
373. Which type of research is used to test or confirm theories and assumptions?
- (A) Qualitative research
 - (B) Quantitative research
374. Conclusive research is typically:
- (A) More flexible and open-ended than exploratory research
 - (B) More structured and formal than exploratory research
 - (C) Quantitative
 - (D) Both B and C
375. Motivation Research is a type of ____ research
- (A) Quantitative
 - (B) Qualitative
 - (C) Pure
 - (D) Applied
376. 'Longitudinal Studies' are a type of
- (A) Historical studies.
 - (B) Developmental studies.
 - (C) Philosophical studies.
 - (D) Survey studies.

377. What is the PRIMARY purpose of nomothetic research?
- (A) To understand what is true for everyone
 - (B) To use complete descriptions of research concepts
 - (C) To focus on a deep understanding of a group
 - (D) None of above
378. The feature of collecting knowledge for the sake of knowledge is best suited to
- (A) Fundamental Research
 - (B) Quantitative Research
 - (C) Qualitative Research
 - (D) Conceptual Research
379. Which of these is an example of basic research in science?
- (A) Research that seeks to understand what processes generate metallic ore deposits
 - (B) Research that seeks to understand where to find a metallic ore deposit
380. Action Research is related to bring out change.
- (A) True
 - (B) False
381. What is a research type that attempts to extract a general abstract theory of a process, or interaction grounded in views of research participants?
- (A) Content analysis
 - (B) Case study
 - (C) Ground theory
 - (D) Phenomenological
382. The development of a solid foundation of reliable knowledge typically is built from which type of research?
- (A) Action research.
 - (B) Basic research.
 - (C) Orientational research.
 - (D) Evaluation research.
383. Researchers were interested in how reasoning ability may change across life span. Researchers tested 5,000 individuals at 7-year intervals beginning in 1956. This research technique is called a(n)
- (A) Case study
 - (B) Longitudinal study
 - (C) Experiment
 - (D) Naturalistic observation
384. Which type of research is best for studying changes over time?
- (A) Cross-sectional
 - (B) Descriptive
 - (C) Correlational
 - (D) Longitudinal
385. Which type of research is directed towards specific objectives and is conducted using animals and other non-animal models such as computers and tissue cultures?
- (A) Basic research
 - (B) Applied research
386. It is frequently called basic or pure research, which seeks to extend the boundaries of knowledge in a given area with no necessary immediate application to existing problems.
- (A) Applied research
 - (B) Fundamental research
 - (C) Futuristic research
 - (D) Descriptive research
 - (E) Explanatory research
387. Dr. Frye conducts research investigations on memory, with the intent of contributing to what is known about human memory processes. Dr. Frye conducts:
- (A) Professional service.
 - (B) Applied research.
 - (C) Basic research.
 - (D) Psychiatry.
388. A systematic work, drawing on existing knowledge gained from research and/work or

- practical experience that is directed to producing new materials, products or devices, to installing new processes, systems and services and to improving substantially those already produced or installed.
- (A) Applied research
(B) Developmental research
(C) Basic research
(D) Historical research
- 389.** If a researcher wants to be able to predict if two variables are related to each other they would use
- (A) Experimental research
(B) Correlational research
(C) Case study
(D) Illusory research
- 390.** Research can be classified as: [2006-DECEMBER]
- (A) Basic, Applied and Action Research
(B) Quantitative and Qualitative Research
(C) Philosophical, Historical, Survey and Experimental Research
(D) All the above
- 391.** Increases the knowledge base
- (A) Basic research
(B) Applied research
- 392.** Action research is a type of ____
- (A) Survey research
(B) Applied research
(C) Quantity research
(D) Population research
- 393.** What is interdisciplinary research?
- (A) Combining several sciences
(B) Single-subject study
(C) Opinion-based research
(D) Memorization
(E) Translation
- 394.** Conceptual research is important for:
- (A) Developing new theories
(B) Testing existing theories
(C) Collecting data
(D) None of the above
- 395.** How does Basic research expand knowledge?
- (A) By letting scientists and professionals practice the theories of science
(B) By answering fundamental questions pertaining to the nature of the universe, society, organisms, etc
(C) By guiding learners to new horizons of nature
(D) None of above
- 396.** Systematic planning, data collection, analysis and reporting of all findings relevant to a particular marketing situation facing a company is the definition of?
- (A) Business Research
(B) Marketing Research
(C) Sales Research
(D) Company Research
- 397.** What is the purpose of designing and conducting applied research?
- (A) To know about a specific field to later inform general clients
(B) To ask for more information about a specific situation to alert clients
(C) To answer practical questions to address real-world problems and the needs of a particular client.
(D) None of above
- 398.** Stephen M. Corey is associated with
- (A) Applied research.
(B) Action research.
(C) Pure research.
(D) Scientific research.
- 399.** What is research done in action research?
- (A) By students

- (B) By scientists
 - (C) By school staff
 - (D) All
- 400.** Which research has open-ended survey?
- (A) Qualitative research
 - (B) Quantitative research
- 401.** Action research can be used as an evaluative tool.
- (A) TRUE
 - (B) FALSE
- 402.** The information required is vaguely defined
- (A) Secondary data
 - (B) Exploratory
 - (C) Conclusive
 - (D) Longitudinal
- 403.** Theoretical research is based on:
- (A) Personal experiences
 - (B) Replicable observations
 - (C) Explaining facts
 - (D) Inductive reasoning
- 404.** Fundamental research is also called basic, or pure research.
- (A) True
 - (B) False
- 405.** What is the scientific study that aims to solve practical problems?
- (A) Human Factors Psychology
 - (B) Applied research
 - (C) Developmental Psychology
 - (D) Testing Effect
- 406.** Action research is practical, reflective, and recursive.
- (A) TRUE
 - (B) FALSE
- 407.** Which research purpose focuses on solving specific, practical problems?
- (A) Exploratory
 - (B) Descriptive
 - (C) Explanatory
 - (D) Applied
 - (E) Fundamental
- 408.** — is research conducted to gain ideas and insight into the problem confronting the management or the researcher
- (A) Exploratory research
 - (B) Conclusive research
 - (C) Descriptive research
 - (D) Causal research
- 409.** Which of the following is not considered as a definition of correlational design?
- (A) Comparing results
 - (B) Explores the relationship between two or more variables
 - (C) Composed of predictor and criterion variables
 - (D) Variables consist of X and Y
- 410.** When we find something very unique and we want to understand it more, what type of research should we conduct?
- (A) Qualitative
 - (B) Quantitative
- 411.** Longitudinal research is particularly well-suited for studying:
- (A) The effectiveness of specific interventions
 - (B) The development of specific populations over time
 - (C) The impact of extraneous variables on a specific outcome
 - (D) The prevalence of a specific outcome in a particular population
- 412.** Problems occurring in a narrowly defined environment—such as a single eighth-grade classroom—are best handled under which scope of action research?
- (A) Individual action research
 - (B) Collaborative action research
 - (C) Systemwide action research
 - (D) None of above

- 413.** Action Research usually conducted in a single school because
- (A) It is difficult to secure permission to study students in multiple schools.
 - (B) Teacher does not have the necessary skills to conduct research across multiple settings.
 - (C) It is designed to answer question about improving practices in a particular setting
 - (D) None of above
- 414.** Action research is most appropriate when teachers
- (A) Control possible rival hypothesis for extraneous variables
 - (B) Learn how things were done in the past and apply them to current or future events
 - (C) Learn the participant's views rather than imposing their own view of the situation
 - (D) Try to correct something that is not working
- 415.** What form of research would be used to gather data to estimate future sales?
- (A) Marketing Research
 - (B) Exploratory Research
 - (C) Observation Research
 - (D) Predictive Research
- 416.** Applied research is primarily designed to do what?
- (A) Solve specific problems using scientific methods
 - (B) Examine associations without inferring causation
 - (C) Advance theory without practical targets
 - (D) Describe phenomena without influencing them
- 417.** The statement which is not example of fundamental research
- (A) Research concerning some natural phenomenon
 - (B) Research relating to pure mathematics
 - (C) Research studies, concerning human behavior
 - (D) Research at a certain concrete social or business problem
- 418.** Action Research is not a common approach used in classroom research because it includes the teacher as researcher
- (A) True
 - (B) False
- 419.** This type of research design aims to determine possible underlying connections/relationships between distinct variables
- (A) True Experimental
 - (B) Quasi-Experimental
 - (C) Correlational
 - (D) Cross-sectional
- 420.** — refers to when the solution to a research problem has practical consequences.
- (A) Applied research
 - (B) Pure research
 - (C) Academic research problem
 - (D) None of above
- 421.** Research conducted to solve a particular problem is known as —
- (A) Pure research
 - (B) Basic research
 - (C) Applied research
 - (D) None of the above
- 422.** It tries to find the relationship between the cause and the effect
- (A) EXPLORATORY RESEARCH
 - (B) DESCRIPTIVE RESEARCH
 - (C) CAUSAL RESEARCH
 - (D) None of above
- 423.** This type of research involves seeking new applications of scientific knowledge in solving a problem, making a decision, developing or evaluating a program or product.
- (A) Pure research.
 - (B) Applied research.
 - (C) Action research.
 - (D) None of the above.

424. It is a research which is conducted without any specific outcome in mind other than the advancement of knowledge
- (A) Pure research
 - (B) Strategic research
 - (C) Independent research
 - (D) Dependent research
425. Which is not present in an action research?
- (A) Context
 - (B) Intervention
 - (C) Output
 - (D) Methodology
426. Facts or information's are analyzed and critical evaluation is made in
- (A) Pure Research
 - (B) Action Research
 - (C) Analytical research
 - (D) Qualitative Research
427. Which type of research clarifies why and how a relationship exists, such as why job stress leads to burnout or why low morale results in lower productivity?
- (A) Descriptive research
 - (B) Explanatory research
 - (C) Exploratory research
 - (D) Applied research
428. Research that seeks new applications of scientific knowledge to solve a problem
- (A) Applied Research
 - (B) Basic research
 - (C) Developmental Research
 - (D) None of above
429. Exploratory research often relies on ___ research such as review of the literature and/or ___ approaches to data gathering.
- (A) Primary, quantitative
 - (B) Secondary, quantitative
 - (C) Primary, qualitative
 - (D) Secondary, qualitative
430. Mr Hamzah has collected a number of stories from his mother, who was an elementary school teacher for 30 years. By documenting some of these stories he has recorded experiences that were unique, interesting, and meaningful. Which type of research describes Mr Hamzah's work?
- (A) Causal comparative
 - (B) Descriptive
 - (C) Narrative
 - (D) Ethnographic
431. A psychologists who conducts research solely intended to build psychology's knowledge base in engaged in
- (A) Basic research
 - (B) Applied research
 - (C) Clinical research
 - (D) Industrial research
432. Which type of research provides building blocks for all the others
- (A) Clinical
 - (B) Applied
 - (C) Basic
 - (D) Medical
433. The goal of conducting an Action Research is to test a theory and to produce or add knowledge for a more generalizable population.
- (A) True
 - (B) False
434. Research aimed at finding ways to use the laws of nature to create new and improve existing means and methods of human activity are called:
- (A) Applied
 - (B) Fundamental
 - (C) Developments
 - (D) Scientific research
 - (E) Experimental design
435. Action research is ordinarily concerned with problems
- (A) Of general nature.

- (B) Constituting universal truths.
(C) Are of immediate concern and call for immediate solutions.
(D) Have long-range implications.
- 436.** Fundamental research is also known as:
(A) Applied research
(B) Pure research
(C) Case research
(D) Diagnostic research
- 437.** What type of research tests “what if” theories?
(A) Exploratory Research
(B) Observation Research
(C) Causal Research
(D) Predictive Research
- 438.** This is based on the study of little-studied phenomena, it relies less on theory and more on the collection of data to identify patterns that explain these phenomena.
(A) Exploratory research
(B) Applied research
(C) Explanatory research
(D) Correlational research
- 439.** The research that aims at immediate application is [2012-JUNE]
(A) Action Research
(B) Empirical Research
(C) Conceptual Research
(D) Fundamental Research
- 440.** Types of Research-Research aimed at solving an immediate problem is called:
(A) Fundamental research
(B) Applied research
(C) Conceptual research
(D) Exploratory research
- 441.** A study seeks to determine if there's a relationship between sleep and productivity. What kind of research is this?
(A) Descriptive
(B) Experimental
(C) Correlational
(D) Historical
- 442.** The main goal of pure research is to:
(A) Improve productivity
(B) Develop commercial products
(C) Increase theoretical knowledge
(D) Apply findings to immediate problems
- 443.** Longitudinal Studies involve studying a group of people over a period of time.
(A) False
(B) True
- 444.** This research is also called quasi-experimental research.
(A) Casual-comparative
(B) Survey research
(C) Correlational research
(D) None of above
- 445.** It serves to establish a frame of reference and a hypothesis from which an in-depth study can be developed that will enable conclusive results to be generated.
(A) Exploratory research
(B) Applied research
(C) Explanatory research
(D) Correlational research
- 446.** There are 4 types of Action Research, according to E. Ferrance (2000). Choose the correct answer.
(A) Individual, collaborative, school-wide and district-wide
(B) Individual, communicative, school-wide and district-wide
(C) Individual, collaborative, school-wide and country-wide
(D) Individual, collaborative, region-wide and district-wide
(E) Individual, group, team, school-wide

447. How is exploratory research different from descriptive research?
- (A) It involves measurement using precision instruments
 - (B) It is based on the use of non-numeric data
 - (C) It is used to study physical phenomenon
 - (D) It is primarily used to generate insights and ideas
448. In which of the following situations should exploratory research be used?
- (A) When experimentation is needed
 - (B) To define terms
 - (C) In situations in which all of the concepts are clearly defined and measured
 - (D) To determine how variable x causes variable y
449. What is the research that aims to solve practical problems?
- (A) Applied research
 - (B) Clinical Psychologists
 - (C) Basic research
 - (D) Counseling Psychologist
450. Which of the following types of research design should be used when management realizes a problem exists but does not yet understand why?
- (A) Conclusive research
 - (B) Exploratory research
 - (C) Descriptive research
 - (D) Causal research
 - (E) Expeditionary research
451. Research aimed at building psychology's knowledge base is
- (A) Basic Science
 - (B) Applied Science
 - (C) Academic Science
 - (D) Clinical Science
452. Action researchers try out new strategies and practices in their places of work, and this produces ____ knowledge.
- (A) Local
 - (B) National
453. Pure research deals with concepts, principles, or abstract things
- (A) TRUE
 - (B) FALSE
 - (C) I DON'T KNOW
 - (D) None of above
454. Which type of research pursues potential solutions to human and societal problems?
- (A) Action
 - (B) Applied
 - (C) Basic
 - (D) Evaluation
455. Type of research which draws on theory to generate practical scientific knowledge.
- (A) Applied research
 - (B) Strategic research
 - (C) Independent research
 - (D) Dependent research
456. Both basic and applied research employ the scientific method to answer the research question at hand.
- (A) True
 - (B) False
457. It is a type of research according to purpose that is primarily concerned with making empirical observations that can be used to accumulate information or to formulate or refine a theory
- (A) PURE/BASIC RESEARCH
 - (B) APPLIED RESEARCH
 - (C) DESCRIPTIVE RESEARCH
 - (D) EXPERIMENTAL RESEARCH
458. What is the main advantage of using a longitudinal study in psychological research?
- (A) It is less expensive than other methods
 - (B) It allows for the study of changes over time
 - (C) It requires fewer participants
 - (D) It provides immediate results

- 459.** A PhD scholar conducted a study with a view to address the language problems of tribal children at elementary level. This study can be categorized as
- (A) Action Research
 - (B) Applied Research
 - (C) Basic Research
 - (D) None of the above
- 460.** A hospital invites participants with high blood pressure to take part in the study of a new medication. What kind of research is this?
- (A) Behavioral
 - (B) Basic
 - (C) Applied
 - (D) Clinical
- 461.** Action research is a strategy teachers can use to investigate a problem or area of interest specific to their professional context.
- (A) True
 - (B) False
- 462.** Allow researchers to determine if there is a relationship between two variables, without the manipulation of variables. They seek to examine how variables are related without researcher interference. (Research Methods and Statistics Part I)
- (A) Methodology
 - (B) Correlational Studies
 - (C) Longitudinal Design
 - (D) Representative Sample
- 463.** What kind of environment is usually related to applied research?
- (A) The natural environment where the problem is unfolding.
 - (B) The virtual environment where the research can be analyzed
 - (C) The artificial environment where the problem is not developing and the results can be calculated
 - (D) None of above
- 464.** Unlike a formal research, the goal of action research is ____
- (A) To solve problems of local concern
 - (B) To develop and test theories and to produce knowledge generalized to wide population
- 465.** Which of the following is NOT a broad type or tradition in psychology research topics?
- (A) Cognitive: memory, attention
 - (B) Clinical: disorders, therapy
 - (C) Mechanical engineering
 - (D) Neuro/physio
 - (E) Social(-ish)
- 466.** Basic research is ____
- (A) Practical and descriptive
 - (B) Client-driven
 - (C) Expands current knowledge
 - (D) Advancement of technology
- 467.** Identify the term: These studies identify and measure the relationship among variables. For example, a study can tell you that the best readers read more than the poorest readers, but it does not tell you the cause of a relationship.
- (A) Correlational research studies
 - (B) Experimental research studies
 - (C) Case study research
 - (D) Longitudinal research studies
- 468.** This type of research aims to provide a possible intervention to minimize a problem within current practice.
- (A) Pure
 - (B) Applied
 - (C) Evaluation
 - (D) Action
- 469.** What's is the definition of longitudinal studies?
- (A) Studies same group over long period
 - (B) People of different age compared to another group
 - (C) Two variables change together
 - (D) Group of people being studied

470. Which type of research is done for the purpose of formulating a theory, principle, or law, with no intended application of results?
- (A) Applied research
 - (B) Pure/theoretical research
 - (C) Descriptive research
 - (D) Exploratory research
471. The branch of psychology that only deals with behavior that can be observed and measured.
- (A) Cognitive
 - (B) Biological
 - (C) Behavioral
 - (D) Humanistic
472. The Aim of Action research is ____
- (A) To survey the problem
 - (B) To learn about the problem
 - (C) To fix the problem in the field
 - (D) To ignore the problem
473. Which of the following is NOT one of the three research approaches discussed in the text?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed methods
 - (D) Action research
474. What is NOT the feature that Burns was shown in action research?
- (A) Evaluative
 - (B) Reflective
 - (C) Participatory
 - (D) Big-scale
475. The study over a long period of time using the same group of people is called what?
- (A) Longitudinal study
 - (B) Case study
 - (C) Survey
 - (D) Cross sectional study
476. Assume that you are requested to make research regarding how to improve the policy of an organization. This research is:
- (A) Action research
 - (B) Applied research
 - (C) Basic research
 - (D) Historical analysis
477. Longitudinal research
- (A) Compares people of different ages.
 - (B) Studies the same people at different times in their lives.
 - (C) Usually involves a larger sample than does cross-sectional research.
 - (D) Usually involves a smaller sample than does cross-sectional research.
478. Classification of research by purpose
- (A) Pure Research
 - (B) Applied Research
 - (C) Action Research
 - (D) All of the above
479. Similar to qualitative research, researchers utilizing an action research approach typically focus on ____
- (A) Local problems.
 - (B) National problems.
 - (C) Global problems.
 - (D) None of the above.
480. Ethnography-
- (A) Addressing research questions through in-depth analysis of a single (small group of people) instance(s) or individuals
 - (B) Inductively generating a theory explaining a process
 - (C) Describing lives/ stories to add to understanding
 - (D) Describing cultural characteristics of a group of people
481. Select a type of action research we reviewed.
- (A) Dynamic
 - (B) Participatory
 - (C) Spiral
 - (D) Simple

482. Theoretical or pure research that generates tests is
(A) Research.
(B) Clinical research.
(C) Basic research.
(D) Theory.
483. Level of Academic Achievement of Senior High Schools in Different Learning Modalities Quantitative Research Design: ____
(A) Comparative or Causal-Comparative
(B) Descriptive Survey
(C) Experimental
(D) Correlational
484. Researching a cohort of people over a period of time rather than a snapshot of a particular moment in time
(A) Ethnography
(B) Longitudinal Study
(C) Case study
(D) Experiment
485. Tell whether the statement is true or false The choice of a research approach depends on the nature of the research that one wants to do.
(A) True
(B) False
486. What type of research would be used to explain relationships between variables?
(A) Exploratory
(B) Descriptive
(C) Explanatory
(D) Applied
(E) Fundamental
487. Which of the following provides a greater understanding of a concept or crystallizes a business problem, rather than providing quantification or precise measurement?
(A) Causal research
(B) Exploratory research
(C) Descriptive research
(D) Conclusive research
488. Which type of research deals with the investigation of how nature functions?
(A) Applied
(B) Actuarial
(C) Hypothetical
(D) Basic
489. The research stream of immediate application is [2014-JUNE]
(A) Conceptual research
(B) Action research
(C) Fundamental research
(D) Empirical research
490. In ____ studies, the psychologist studies the same group of people at regular intervals over a period of years to determine whether their behavior and/or feelings have changed.
(A) Qualitative
(B) Cross-sectional
(C) Quantitative
(D) Longitudinal
491. This type of research searches for new knowledge includes establishing fundamental theories or relationships among facts.
(A) Pure research.
(B) Applied research.
(C) Action research.
(D) None of the above.
492. Which of the following type of research is according to time element?
(A) Historical, descriptive, and experimental
(B) Quantitative research and non-quantitative research
(C) Evaluation and developmental research
(D) Basic or pure research and applied research
493. Which of these is an example of applied research in science?
(A) Research that seeks to understand what processes generate metallic ore deposits
(B) Research that seeks to understand where to find a metallic ore deposit.

- 494.** A group of individuals who share a common characteristic and are studied together.
(A) Longitudinal study
(B) Cross-sectional study
(C) Cohort
(D) Culture
- 495.** The aim of exploratory research is to examine a problem or situation in order to provide knowledge and understanding of it and extend the object of study
(A) Secondary
(B) Exploratory
(C) Descriptive
(D) Longitudinal
- 496.** Both Action Research and Formal Research (Quantitative and Qualitative) are systematic.
(A) True
(B) False
- 497.** This type of research attempts to discover or establish the existence of a relationship/interdependence between two or more aspects of a situation.
(A) Correlational Research
(B) Descriptive Research
(C) Experimental Research
(D) Quasi-Experimental Research
- 498.** Extends the base of knowledge in a discipline
(A) Basic research
(B) Applied research
- 499.** What do you consider as the main aim of interdisciplinary research?[2006-JUNE]
(A) To bring out holistic approach to research.
(B) To reduce the emphasis of single subject in research domain.
(C) To over simplify the problem of research.
(D) To create a new trend in research methodology.
- 500.** The application of the scientific method to the study of business problems is called
(A) Grounded theory.
(B) Business research.
(C) Deductive reasoning.
(D) Inductive reasoning.
- 501.** A group of teachers at an elementary school plans to study the effects of team teaching science to their second-grade students. What type of research will they be engaged in?
(A) Action
(B) Basic
(C) Evaluation
(D) Orientational
- 502.** Based on the final use or application of the research results, research can either be pure/theoretical or applied/practical.
(A) True
(B) False
- 503.** This research focuses on problems or topics with little or no research done about them, and gathers information that will guide future studies.
(A) Exploratory
(B) Descriptive
(C) Cross-sectional
(D) Experimental
- 504.** A type of research design that is appropriate to use when the researcher is interested in finding out whether something will work or in solving a problem in a local setting.
(A) Policy research
(B) Action research
(C) Exploratory research
(D) Descriptive research
- 505.** Research that is conducted for its own sake, that is, without seeking a solution
(A) Detailed research
(B) Basic research
(C) Psychology
(D) Behavior

506. Following a group of kindergarteners every other year until they graduate and evaluating their performance is an example of ____
- (A) Longitudinal research
 - (B) Descriptive research
 - (C) Cross-sectional research
 - (D) Archival research
507. Which type of research seeks to solve practical problems in society?
- (A) Basic research
 - (B) Applied research
 - (C) Pure research
 - (D) Historical research
508. Action research is described as a horizontal progress / movement.
- (A) True
 - (B) False
509. The ____ is concerned with ideas and theories.
- (A) Empirical Research
 - (B) Analytical Research
 - (C) DESCRIPTIVE RESEARCH
 - (D) Conceptual research
510. Research undertaken to help solve specific marketing problems is called ____
- (A) Problem-solving research
 - (B) Problem-manipulation research
 - (C) Problem-identification research
 - (D) Problem-correction research
 - (E) Problem exception
511. Which type of research focuses on causal relationships but with lack of control of some elements of the study.
- (A) Correlational
 - (B) Descriptive
 - (C) Experimental
 - (D) Quasi-experimental

1.2.4 Research Methods Overview

1. It is not important to decide what methodology you have to use for your research report.
 - (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
2. Which reasoning method starts with specific observations?
 - (A) Deductive reasoning
 - (B) Logical reasoning
 - (C) Inductive reasoning
 - (D) Experimental reasoning
3. What is a research project? Fill in the blank: A research project is a type of research undertaken by an individual or group of individuals as part of their professional work or assignment. For example, a market researcher surveying the preference of housewives for a particular brand of soap is doing a ____
 - (A) Research project
 - (B) Sales pitch
 - (C) Advertisement
 - (D) Product launch
4. Which of the following print materials refers to a scholarly published periodical containing articles written by researchers, professors, and other experts?
 - (A) Books
 - (B) Journals
 - (C) Magazines
 - (D) Newspapers
5. What are the three routes in research?
 - (A) Quantitative, qualitative, and mixed
 - (B) Numerical, narrative, and integrated
 - (C) Probabilistic, interpretive, and comparative
 - (D) Objective, subjective, and comprehensive

6. Research method is an organized and systematic procedures to gain knowledge about a particular topic.
(A) True
(B) False
7. Requires a representative sample in order to generalise to the target population
(A) Nomothetic approach
(B) Ideographic approach
8. Why might a student choose to work for a company that installs plastic drainage tile to farm fields?
(A) To research water savings accomplished by new irrigation technologies
(B) To study animal genetics
(C) To analyze crop yields
(D) To design farm machinery
9. Dr. Goodman is studying how memory changes as people get older. She is most likely a(n) — psychologist.
(A) Social
(B) Cognitive
(C) Developmental
(D) Experimental
(E) Industrial-organizational
10. Research methodology refers to the specific approach the researcher takes to conduct a research project
(A) TRUE
(B) FALSE
11. Which approach involves collaborative and participatory methods to address organizational challenges?
(A) Action research
(B) Holistic approach
(C) Quantitative analysis
(D) Cultural relativism
12. A sample surveyed at one point in time:
(A) Panel study
(B) Census
(C) Cohort study
(D) Trend study
(E) Cross-sectional survey
13. Why is a theory with strong explanatory power and predictive value highly valued in empirical research?
(A) Because complexity makes it harder to challenge
(B) Because it helps clarify observations and predict future outcomes
(C) Because usefulness is more important than being theoretically correct
(D) Because ambiguity allows for different viewpoints
14. In scientific research, what is the primary role of the researchers?
(A) To provide guidance
(B) To conduct experiments and analyze data
(C) To write the research title
(D) To publish the findings
15. An exploratory investigation will be required according to the nature of the problem, the degree of importance to the organisation and the degree of experience of the researchers
(A) True
(B) False
16. Which of the following might be considered a type of periodical that a researcher might consider in a literature search?
(A) Novels
(B) Peer-reviewed scholarly journal
(C) Facebook page
(D) My personal blog
17. If someone says, "The room is cold," this is an example of:
(A) Qualitative data
(B) Quantitative data
(C) Scientific data
(D) Inconclusive data

18. A piece of information (quote, fact, or example) that comes from a source and proves your idea is true
(A) Evidence
(B) Source
(C) Evaluate
(D) Credible
19. Which is an open question?
(A) Do you smoke? (Y/N)
(B) Why do you smoke?
(C) Smoking is bad for you, strongly agree 5 4 3 2 1 strongly disagree
(D) How many cigarettes do you smoke a day? Edit
20. A social work researcher creates a hypothesis using systems theory then designs an experiment to test it. Which approach is the researcher using?
(A) Inductive
(B) Deductive
(C) Mixed methods
(D) None of above
21. If a researcher repeats a study with different participants to see if the findings hold true, they are engaging in:
(A) Peer review
(B) Meta-analysis
(C) Replication
(D) Random sampling
22. Replication is an important method in psychological science primarily because it:
(A) Increases our confidence in scientific findings
(B) Guarantees external validity by including every demographic group in one study
(C) Establishes causality without using random assignment or control conditions
(D) Maximizes effect sizes by pooling multiple studies into a single analysis
23. If a researcher gives people an intelligence test twice to see if they get the same score each time, the researcher is checking the ____ of the test.
(A) Test-Retest Reliability
(B) Split-Half Reliability
(C) Predictive Validity
(D) Content Validity
24. A researcher notes that a group of clients who are not receiving counseling but are observed in a research study, are improving. Her hypothesis is that the attention she has given them
(A) The Hawthorne effect
(B) The Halo effect
25. What is the term for subjects of psychological research?
(A) Participants
(B) Observers
(C) Analysts
(D) Respondents
26. When a participant's behaviour changes because of their desire to be viewed positively by other people.
(A) Social desirability effect
(B) Sampling bias
(C) Participant variability
(D) Participant expectancy effect
27. If the research can be repeated for verification of the generated information, such research is considered ____
(A) Critical
(B) Objective
(C) Replicable
(D) Logical
28. After observing that swans in the park are white, I conclude that all swans must be white.
(A) Deductive
(B) Inductive
(C) Abductive
(D) None of above

29. What factor influencing validity is demonstrated when an ESL student needs an alternative assessment method to allow them to demonstrate their understanding?
- (A) Nature of group
 - (B) Factors of pupil response
 - (C) Factors in test administration
 - (D) Factors of scoring
30. Directions: Read each statement carefully. In the answer sheet blacken the letter with the BEST answer. The process of giving and receiving information between a human source and a human receiver using words, symbols or actions is called ____
- (A) Process
 - (B) Transmission
 - (C) Communication
 - (D) Telecommunication
31. What type of reasoning is used when you conclude that all swans are white after seeing only white swans?
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Abductive Reasoning
 - (D) Analogical Reasoning
32. All the residents of Barangay BIS are exempted from taxes. The parents of Melanie reside in Barangay BIS. Therefore, Melanie's parents are exempted from taxes.
- (A) Inductive
 - (B) Deductive
33. What is information that can be used to prove a statement or support a conclusion called?
- (A) Evidence
 - (B) Hypothesis
 - (C) Theory
 - (D) Opinion
34. A ____ is used to show how others might view a topic differently than you. To overcome this, you should follow it up with a strong, fact-based rebuttal.
- (A) Claim
 - (B) Counterargument
 - (C) Appeal
 - (D) Hypothesis
35. Michael is a psychologist who wants to understand why certain mental disorders seem to run in families. He decides to conduct family studies to investigate this phenomenon. What do family studies primarily help professionals like Michael examine?
- (A) Impact of reflexes on learning outcomes
 - (B) Differences in autonomic nervous system arousal
 - (C) Effects of neurotransmitters on motor control
 - (D) Relationships between genetics and mental disorders
36. It is a process where we observe specific phenomena and on this basis arrive at general conclusions.
- (A) Deductive reasoning
 - (B) Inductive Reasoning
 - (C) Hypotheses
 - (D) None of above
37. What type of relationship is 'Fire causes Smoke'?
- (A) Cause/Effect
 - (B) Correlation
 - (C) Coincidence
 - (D) Consequence
38. It was a series of notable social psychology experiments conducted by Yale University psychologist Stanley ____ in the 1960s. It measured the willingness of study participants to obey an authority figure who instructed them to perform acts that conflicted with their personal conscience.
- (A) Parsons
 - (B) Meade
 - (C) Hawthorne
 - (D) Milgram

39. An organism that is sensitive to environmental conditions and is one of the first to respond to changes.
- (A) Water quality
 - (B) Bioindicator
 - (C) Nitrate
 - (D) Point source pollution
40. A phenomenon that occurs when a researcher's expectations or preferences about the outcome of a study influence the results.
- (A) Placebo
 - (B) Case study
 - (C) Experimenter bias
 - (D) None of above
41. What is evidence used for in the context of supporting a claim?
- (A) To provide a counterargument
 - (B) To back up a reason
 - (C) To summarize the claim
 - (D) To introduce a new claim
42. Which criterion defines uniform testing procedures and meaningful scores by comparison with the performance of a pretested group?
- (A) Standardization
 - (B) Validity
 - (C) Reliability
 - (D) None of above
43. Not being harmful to the environment or depleting natural resources.
- (A) Extinction
 - (B) Biosphere
 - (C) Sustainable
 - (D) Global warming
44. In correlational studies, finding of a relationship among variables provides information about the causal relationship between those variables
- (A) True
 - (B) False
45. A business wants to understand why customers prefer one brand over another. Which research method should they use?
- (A) Attitude Research
 - (B) Geographic Research
 - (C) Behavioral Research
 - (D) Product Research
46. Which option below is NOT a goal of Psychological Research?
- (A) Description
 - (B) Explanation
 - (C) Prediction
 - (D) Deception
47. Which of the following types of error does NOT contribute to reliability issues in Classical Test Theory? (Schmidt, Le, & Ilies (2003))
- (A) Random response error
 - (B) Transient error
 - (C) Criterion-related error
 - (D) Specific factor error
48. In physical and natural sciences, the — method is used to verify the available knowledge.
- (A) Physical
 - (B) Ethical
 - (C) Hypothetical
 - (D) Empirical
49. The plant is short.
- (A) Qualitative data
 - (B) Quantitative data
50. In rare situations where Uncle Light became suspicious of exceptionally high score of a particular student, he could retest him with the same questions, but almost the same score could be reproduced, with just a little error of margin. This is typically —
- (A) Criterion-referenced
 - (B) Test Reliability
 - (C) Test Validity
 - (D) Norm-referenced

51. Which reasoning method typically starts with a hypothesis or theory?
- (A) Inductive reasoning
 - (B) Empirical reasoning
 - (C) Abstract reasoning
 - (D) Deductive reasoning
52. Reliability refers to the ____ of measurement.
- (A) Consistency
 - (B) Accuracy
 - (C) Precision
 - (D) Validity
53. When scholars say they are "engaging with" previous research, what do they mean?
- (A) Disagreeing with prior research
 - (B) Ignoring the work of other scholars
 - (C) Building on and interacting with existing research
 - (D) Only including research from the last year
54. Which teaching method promotes learning by solving real-world problems?
- (A) Task-Based Learning
 - (B) Project-Based Learning
 - (C) Problem-Based Learning
 - (D) Dogme ELT
55. Cross-sectional studies of intelligence are potentially misleading because
- (A) They are typically based on a very small and unrepresentative sample of people.
 - (B) Retesting the same people over a period of years allows test performance to be influenced by practice
 - (C) They compare people who are not only different in age, but of different eras, educational levels, and affluence.
 - (D) Of all of these reasons
56. All previously observed polar bears have weighed less than 1,500 pounds. Therefore, all polar bears probably weigh less than 1,500 pounds.
- (A) Deductive
 - (B) Inductive
57. In Ex Post Facto research design, the researcher has control over the variables in the research study.
- (A) True
 - (B) False
58. The aim of the methodology section in the market research is to provide an overview of ____
- (A) The framework or the procedures of using the research tools to reach the results for the research problem
 - (B) How the sampling is conducted and picked from the population
 - (C) How the results are analysed, and recommendations are given
 - (D) How literature is summarized and presented
59. Standardized instruments guide data collection, thus, ensuring the accuracy, reliability and validity of data.
- (A) OBJECTIVE
 - (B) CLEARLY DEFINED RESEARCH QUESTIONS
 - (C) STRUCTURED RESEARCH INSTRUMENTS
 - (D) NUMERICAL DATA
60. What type of research instrument is specifically designed to measure personality traits?
- (A) Likert scale
 - (B) Questionnaire
 - (C) Personality inventory
 - (D) Interview
61. Which of the following statements regarding the scientific methods is true?
- (A) A hypothesis must be agreed upon by more than one scientist
 - (B) A theory is a hypothesis that has withstood many scientific tests
 - (C) A theory is proven to be true, and therefore may not be discarded

- (D) A hypothesis cannot predict the outcome of scientific experiments
- (C) Graphical Method
(D) Simplex Method
62. What criteria can be used to evaluate the credibility of a website for research?
(A) Website's color scheme
(B) Number of ads on the website
(C) Author's credentials, publication date, citations and references, domain expertise, bias or impartiality, website's reputation
(D) Number of social media followers
63. The Internet is a powerful mechanism for conducting research. However it does have its drawbacks. Which of the following signify these drawbacks?
(A) The possible inclusion of individuals not being targeted, that could skew the results
(B) Lack of information about the population responding to the questionnaire.
(C) Eye contact and body language, (two useful research indicators) are excluded from the analysis
(D) All of the above
64. What is the main purpose of the scientific method?
(A) To prove other scientists conclusions incorrect
(B) To understand every idea
(C) To teach students about scientific laws
(D) To determine answers for scientific questions
65. A word used as a reference point for finding other words or information
(A) Keyword
(B) Hyperlink
(C) URL
(D) None of above
66. An analytical method of problem-solving and decision making that is useful in the management of organization.
(A) Operation Research
(B) Linear Programming
67. How can deductive reasoning be applied in a scientific experiment?
(A) By observing patterns and forming a general theory
(B) By using a general theory to make specific predictions that can be tested
(C) By collecting data without any preconceived notions
(D) By generating new hypotheses based on experimental results
68. An argument that uses ___ reasoning begins not with a generalization but with several pieces of specific evidence. The speaker then draws a conclusion from this evidence.
(A) Inductive
(B) Deductive
69. The biggest strength of action research is the production of ___ (lifelong, reluctant) learners who initially create ___ (local, general) knowledge that can be ___ (shared with, ignored by) the world at large. Answer the first blank only
(A) Lifelong
(B) Reluctant
70. To Research the problem also depends on time, resources, and your research skills. What kind of other resources do you know except main ones?
(A) Posters and flyers
(B) Create a budget and obtain advice from other, experienced researchers about whether the anticipated expenses are realistic.
(C) Mailing labels, postage, statistical programs, or audiovisual equipment
(D) Mailing messages
71. To make a guess based on a small amount of information is to ___
(A) Survey
(B) Generalize
(C) Question
(D) None are correct

72. Scientific approach expresses and records your findings qualitatively.
- (A) True
 - (B) False
 - (C) Biography
 - (D) Narrative Report.
73. Rainbow trout are found in mountain streams and are sensitive to changes in their habitat. Which would be the best description for the use rainbow trout in water quality testing?
- (A) Biological indicator
 - (B) Invasive species
 - (C) Nitrates
 - (D) None of above
74. In ecological studies, what word refers to all surrounding conditions that affect living organisms?
- (A) Generations
 - (B) Connections
 - (C) Environment
 - (D) None of above
75. Action research originated in the United States around the 1940s due to the studies of:
- (A) Fromm
 - (B) Bruner
 - (C) Lewin
 - (D) Rapaport
76. Which method did Francis Bacon advocate for acquiring knowledge?
- (A) Deductive reasoning
 - (B) Authority-based reasoning
 - (C) Inductive reasoning
 - (D) Scientific experimentation
77. To repeat a research study usually with different participants and in different situations, to confirm the results of the original study
- (A) Informed consent
 - (B) Ethics
 - (C) Replicated
 - (D) Positive correlation
78. What is the PRIMARY purpose of deductive research?
- (A) To create a new theory without looking at data
 - (B) To gather data, look for patterns, and develop a theory
 - (C) To create a hypothesis from theory and analyzes data to test it
 - (D) None of above
79. The chapter that details the way in which the research was conducted is the-
- (A) Introduction
 - (B) Literature Review
 - (C) Research Methodology
 - (D) Data Analysis
 - (E) Conclusion and Recommendations
80. This type of reasoning starts with smaller facts or examples that lead to larger, general conclusions. The bigger, general conclusion may or may not be true.
- (A) Abductive
 - (B) Deductive
 - (C) Inductive
 - (D) None of above
81. You're conducting a psychology study by observing behaviors and testing theories in a controlled environment. What type of evidence are you gathering?
- (A) Anecdotal evidence
 - (B) Empirical evidence
 - (C) Theoretical evidence
 - (D) Hypothetical evidence
82. Nine years old children are taller than 7 years old ones. It is an example of
- (A) Experimental studies.
 - (B) Case studies.
 - (C) Cross-sectional studies.
 - (D) Vertical studies.
83. Concepts are ____ of Research
- (A) Guide

- (B) Tools
(C) Methods
(D) Variables
84. What is the term for the consistency or stability of a measurement instrument in communication research?
(A) Reliability
(B) Validity
(C) Correlation
(D) Bias
85. This part of a research report describes the instrument used to arrive at a result.
(A) Methods
(B) Review of Literature
(C) Results
(D) Discussion
86. ____ is a commitment to finding and using the best theory and data available at the time to make a decision.
(A) Rational decision making
(B) Classical decision making
(C) Rational management
(D) Evidence-based management
87. Starts with the particular and moves to the general; conclusions are drawn from those particular observations
(A) Deductive reasoning
(B) Inductive reasoning
88. The purpose of the methodology is to:
(A) Validate hypotheses
(B) Guide the replication of the research process
(C) Highlight statistical errors
(D) Summarize the entire research report
89. Jasmine, roses, gardenias & lavender smell nice. Therefore, all flower smell nice. This is..
(A) Inductive reasoning
(B) Deductive reasoning
(C) Abductive reasoning
(D) Statistical reasoning
90. Select inductive reasoning, deductive reasoning, or neither. You watch an ant taste a liquid and die. Several more ants sample the liquid and they die. You conclude the liquid is an ant poison.
(A) Deductive reasoning
(B) Inductive reasoning
(C) Neither
(D) None of above
91. An inductive process of researching involves
(A) Asking broad research questions
(B) Identifying sets of variable
(C) Making predictions
(D) Employing structured data collection methods
92. Presenting the research methodology involves describing the research design, participants, instruments, data collection procedures, and analysis methods.
(A) True
(B) False
93. In an experiment on treatments for depression, a researcher uses a sample consisting of depressed subjects who are NOT typical of the general population of depressed subjects. Although the treatment works on the sample subjects, it is unlikely to work on depressed people in general. Which type of validity does this study lack?
(A) Analogue validity
(B) External validity
(C) Internal validity
(D) Construct validity
94. Set of related hypotheses supported by evidence is ____
(A) Theory
(B) Law
(C) Technology
(D) Life science

95. In schools, action research refers to a wide variety of evaluative, investigative, and analytical research methods designed to diagnose problems or weaknesses-whether organizational, academic, or instructional-and help educators develop practical solutions to address them quickly and efficiently.
- (A) True
(B) False
96. In what way can a scenario be used as evidence to support an argument?
- (A) By providing a specific example or instance that illustrates the point being made.
(B) By making unsupported claims without any evidence
(C) By using emotional language instead of logic
(D) By providing a completely unrelated example
97. Which statement below cannot be applied to desk research?
- (A) It uses existing data and information for market research purposes.
(B) Data is often provided by specialist market research firms.
(C) It includes the use of survey and interview findings conducted by the firm.
(D) It includes industry surveys that have been carried out.
98. What is a model in scientific research?
- (A) A model is a detailed description of an experiment's procedure.
(B) A model is a hypothesis that has been proven true.
(C) A model is a summary of the results of an experiment.
(D) A model is a representation of an object or system that is used to explain and predict phenomena.
99. What is this an example of? I see a bunch of crumbs on the floor, see a hole in my wall, and hear scratching in my walls and conclude that I have a rodent problem.
- (A) Induction
(B) Deduction
100. Which of the following is an example of an authoritative source?
- (A) A social media influencer's post
(B) A government report
(C) An anonymous comment on a blog
(D) A Wikipedia entry with no citations
101. The extent to which two researchers agree in their scoring of a questionnaire or test.
- (A) Reliability
(B) Inter-rater Reliability
(C) Inter-observer Reliability
(D) Test-retest Reliability
(E) Replicability
102. Group comparison designs are always superior to single-case designs.
- (A) True.
(B) False.
(C) Doubtful.
(D) None of the above.
103. Which method cannot be used in conjunction with the survey method?
- (A) The experimental method
(B) The causal-comparative method
(C) The correlational method
(D) All can be used
104. The role of theory in educational research is primarily to
- (A) Develop precise descriptions of educational phenomena
(B) Evaluate the effectiveness of specific instructional interventions
(C) Explain phenomena in terms of constructs and principles
(D) Provide a language that facilitates collaboration between researchers and educators.

- 105.** What is the role of evidence in inductive reasoning?
- (A) Evidence is not important in inductive reasoning
 - (B) Evidence is used to make specific conclusions
 - (C) Evidence is used to make general conclusions
 - (D) Evidence is used to prove the conclusion is wrong
- 106.** Which method characterizes deductive reasoning in clinical decision-making?
- (A) Start with general ideas, consider specific actions
 - (B) Begin with specific cases, infer general principles
 - (C) Collect data without forming any conclusions
 - (D) Rely on intuition without structured analysis
- 107.** Which principle of assessment and evaluation measures what it intends to measure?
- (A) Readability
 - (B) Administrability
 - (C) Validity
 - (D) Reliability
- 108.** Empirical research in psychology is based on?
- (A) Personal opinions
 - (B) Careful observation and data collection
 - (C) Historical assumptions
 - (D) Traditional beliefs
- 109.** This method of research can only be measured between the values of -1 and 1.
- (A) Correlational
 - (B) Experiments
 - (C) Case Study
 - (D) Survey
 - (E) Observational
- 110.** Professor Ton That Tung's conclusion: 'The cause of acute pancreatitis in Indochina is due to the worm' is the result of research at what level?
- (A) Discovery level.
 - (B) Description level.
 - (C) Explanation level.
 - (D) Cognitive level.
- 111.** Every cat that you've observed purrs. Therefore, all cats must purr.
- (A) Inductive
 - (B) Deductive
- 112.** A claim or thesis that conveys a perspective developed through a line of reasoning and supported by evidence
- (A) Claim
 - (B) Bias
 - (C) Argument
 - (D) Assumption
- 113.** Which of the following is a common method for ensuring the reliability of research findings?
- (A) Relying on anecdotal evidence
 - (B) Using multiple data collection methods
 - (C) Ignoring previous research
 - (D) Conducting a single study
- 114.** Does the scientific method provide a plan for conducting research?
- (A) No, it is just a collection of random experiments
 - (B) Yes, but it does not emphasize a systematic approach
 - (C) No, it only provides guidelines for writing research papers
 - (D) Yes, it provides a general plan for conducting research in a systematic way
- 115.** What is replication?
- (A) Cloning the scientist who first did an experiment
 - (B) Doing an experiment for the first time

- (C) Doing an experiment again and getting different results
- (D) Doing an experiment again and getting the same results
- 116.** How can the criteria for evaluating research problems be applied to different research methodologies (e.g., quantitative, qualitative, mixed methods)?
- (A) The criteria are only relevant for quantitative research.
- (B) The criteria should be adapted and prioritized based on the specific research approach and context.
- (C) All research methodologies should apply the criteria in the exact same way.
- (D) The criteria are irrelevant to qualitative research.
- 117.** Action research involves a spiral of self reflective cycles (Kemmis and McTaggart, 2000).
- (A) True
- (B) False
- 118.** Similar to other research methods, action research has some limitations, including weaker research designs and ____
- (A) Integrating theory and practice
- (B) Improving practice at the local level
- (C) Utilizing less rigorous measurement criteria
- (D) None of above
- 119.** Research involves ____ instruments.
- (A) Careful
- (B) Validated
- (C) Issue
- (D) Known
- 120.** Validity means measuring what you intend to measure! Ex: Counting the voter turnout to measure political participation
- (A) True
- (B) False
- 121.** Qualitative research designs can also be called as:
- (A) Strategies of Inquiry
- (B) Collection of Data
- (C) Significance of Study
- (D) Research Timeline
- 122.** At the end of this module, you should be able to present written ____ methodology.
- (A) Research
- (B) Cooking
- (C) Sports
- (D) Music
- 123.** Corroboration is
- (A) The act of comparing pieces of evidence to see where they agree and disagree.
- (B) A primary source
- (C) When two parties disagree
- (D) Like building a strong tower
- 124.** You should use multiple sources during your research to ensure you know all the important facts.
- (A) True
- (B) False
- 125.** How do scientists confirm the findings of a study?
- (A) By replicating the study
- (B) By changing the hypothesis of the original study
- (C) By formulating new research questions
- (D) All of the above
- 126.** Reasoning which forms a generalization based on a set of specific observations is:
- (A) Thinking
- (B) Arguments
- (C) Deduction
- (D) Induction
- 127.** How can you determine if a claim is valid or not?
- (A) Trust your gut feeling

- (B) Evaluate the evidence, analyze the facts, consider counterarguments, and assess the credibility of the source.
- (C) Flip a coin
- (D) Ask a friend
- 128.** The extent to which we can say with confidence that the observations made for a sample would apply to other groups.
- (A) Evaluation
- (B) Generalization
- (C) Quality Translation
- (D) Credibility
- 129.** While walking home on a dark night, Joanna saw a bright light in the sky and concluded that it must have been a spaceship from another planet. Which of these questions could Joanna answer using scientific methods of investigation?
- (A) Can aliens read our minds?
- (B) Does Joanna actually believe in aliens?
- (C) What is the aliens spacecraft made from?
- (D) What percent of people in the area saw a bright light that night?
- 130.** Impersonal, scientific or systematic
- (A) QUALITATIVE
- (B) QUANTITATIVE
- 131.** A research study refers to how well the results among the study participants represent true findings among similar individuals outside the study.
- (A) Clean dataset
- (B) Validity
- (C) Pilot Test
- (D) 5-points
- 132.** In which channel there is less possibility of any misunderstanding and can be used as reference in future.
- (A) Formal
- (B) Informal
- 133.** Ecological validity: the extent to which the findings of research in one situation would — to other situations. This is influenced by whether the situation (example a laboratory) represents the real world effectively and whether the task is relevant to real life.
- (A) Generalize
- (B) Specialize
- (C) Isolate
- (D) Narrow
- 134.** — is a research design that involves comparisons of behaviour observed in different situations, but where subjects are not randomly assigned to the different situations.
- (A) Correlational Design
- (B) Experimental Design
- (C) True Experiment
- (D) Quasi Experiment
- 135.** Either you use quantitative or qualitative research approaches, you need to make sure that the approach is matched with your research problem
- (A) True
- (B) False
- 136.** Which of the following is not a research approach?
- (A) Descriptive
- (B) Exploratory
- (C) Innovative
- (D) Explanatory
- 137.** In addition to recording research activities and observations, action research also provides educators an activity for detailing —
- (A) Personal doubts
- (B) Practitioner certainty
- (C) Professional growth
- (D) None of above
- 138.** Internal validity is to causality; generalizability as external validity is to
- (A) Control; random assignment
- (B) Generalizability; control

- (C) Causality; minimizing differences
(D) Representative sampling; control over extraneous variables
- 139.** When large groups of interconnected facts are considered together in a consistent manner, we get a
(A) Combined Result.
(B) Confirmed Fact.
(C) Scientific Theory.
(D) Critical Problem.
- 140.** What is a word that relates to ‘investigate’?
(A) Examine
(B) Ignore
(C) Conclude
(D) Analyze
- 141.** Which classification does a speech about “how the internet works” belong to?
(A) Object
(B) Process
(C) Event
(D) Concept
- 142.** What is a common challenge when reading the methods section?
(A) It is too short
(B) It lacks detail
(C) It uses technical language
(D) It is written in layman’s terms
- 143.** Broad location for research (ex. Entire community of institute)
(A) Setting
(B) Ethnography
(C) Relationship
(D) Site
- 144.** Ice cores can trap gases, like carbon dioxide. And increased concentration of carbon dioxide found in a layer of ice is one piece of evidence for ____
(A) Climate change
(B) Cell theory
- 145.** Which platform is commonly studied in social media research?
(A) PowerPoint
(B) Excel
(C) Zoom
(D) Twitter
- 146.** What is an example of a generalizable finding?
(A) Applying findings from a regional reading comprehension study to national literacy programs
(B) Using findings from a single classroom to apply to the same classroom
(C) Applying findings from a math study to a science study
(D) Using findings from a study to apply to a different age group
- 147.** The researcher’s interpretation of behavior may be biased by personal thoughts, feelings and opinions.
(A) Internal Validity
(B) Social Desirability Bias
(C) Subjectivity
(D) Demand Characteristics
(E) Low Controls
- 148.** In scientific research, the orderly and systematic way of proceeding to reach a given result or end is known as:
(A) Method
(B) Technique
(C) Instrument
(D) Theory
- 149.** When selecting evidence to support an argument you want what kind of evidence?
(A) Relevant & sound evidence
(B) Irrelevant & unsound evidence
- 150.** This study provided evidence that infants seek their parents for emotional support and care, not just for biological nourishment.
(A) Piaget (1932)
(B) Harlow (1953)

- (C) Bowlby (1969)
(D) Ainsworth (1970s)
- 151.** What is the difference between quasi-experimental and non-experimental:correlational research design?
(A) There is no intervention in quasi-experimental research design.
(B) There is no intervention in correlational research design.
(C) There is randomization in quasi-experimental research design.
(D) There is randomization in correlational research design.
- 152.** Which of the following is a critical skill for a physicist working with theoretical models?
(A) Physical fitness
(B) Mathematical modeling
(C) Gardening
(D) Singing
- 153.** ___ bias in testing refers to a situation where the scores on a test are significantly higher or lower between cultural groups and are better able to predict the future performance of one cultural group than the rest of the population.
(A) Social.
(B) Teaching.
(C) Cultural.
(D) Math.
- 154.** Interests multiple parties/stakeholders with an interest in research topic
(A) Participatory Action Research (PAR)
(B) Critical Action Research (CAR)
(C) Action Science (AS)
(D) Appreciative Inquiry (AI)
- 155.** Which techniques includes the procedures and techniques for making valid observations, interpreting, results, and generalizing those results?
(A) Scientific Inquiry
(B) Scientific Knowledge
(C) Scientific Method
(D) Scientific System
- 156.** Which of the following methods are NOT commonly used in U&A research?
(A) Surveys
(B) Interviews
(C) Observational Studies
(D) Guessing consumer preferences
- 157.** It is a reasoning where people make use of conclusions based on the previously known facts. In short, general to specific.
(A) Logic
(B) Inductive Reasoning
(C) Deductive Reasoning
(D) Inductive and Deductive Reasoning
- 158.** Of the types of validity for tests, what type constructs a test of a particular subject adequately based on objectives?
(A) Content validity
(B) Curricular validity
(C) Criterion validity
(D) Predictive validity
- 159.** What is the definition of a Methodology? Select all you think are correct.
(A) Provide (a book or article) with citations of sources of information.
(B) A framework of how you carried out your project and how you got your results
(C) A system of methods used in a particular area of study or activity.
(D) A list of the books referred to in a scholarly work, typically printed as an appendix.
Edit
- 160.** A form of the nonequivalent comparison-group design is recommended when ___
(A) It is not possible to control for a basic history effect.
(B) It is not possible to randomly assign participants to groups.
(C) It is not possible to identify two groups.
(D) All of the above.

- 161.** The inquiry approach does not view a given discipline more as an attitude than as a body of knowledge or as a method.
(A) TRUE
(B) FALSE
- 162.** Research method in which data are collected about a group of participants over a number of years to assess how certain characteristics change or remain the same during development
(A) Naturalistic Observation
(B) Case Study
(C) Longitudinal study
(D) Cross-sectional study
- 163.** O Labs is not used for:
(A) Experiment
(B) Simulations
(C) To watch experimental videos
(D) To upload experiment videos
- 164.** Reasoning based on patterns you observe is called ____
(A) Deductive Reasoning
(B) Inductive Reasoning
(C) Conjecture
(D) Counterexample
- 165.** Why might a researcher duplicate a previous work with a new subject population?
(A) To test the generalizability of previous research findings
(B) To plagiarize the original study
(C) To prove the original study was flawed
(D) To avoid conducting original research
- 166.** Research participants who were asked to monitor and report their own immediate sensory reactions to differently colored objects. This research used a technique known as
(A) Biological elements of the mind
(B) Introspection
(C) Latin elements of the mind
(D) Psychological elements of the mind
- 167.** What is a key limitation of correlation research?
(A) It may reflect relationships influenced by unmeasured factors
(B) It cannot estimate effect sizes
(C) It proves causal relationships directly
(D) It is unusable with negative correlations
- 168.** What is a potential alternative explanation in inductive reasoning?
(A) The premises are incorrect.
(B) The conclusion is absolute.
(C) The data supports multiple theories.
(D) The general principle is unproven.
- 169.** In inductive reasoning, the researcher:
(A) Starts from observations to build a theory
(B) Starts with a theory to test through observation
(C) Makes assumptions without evidence
(D) Uses only qualitative methods
- 170.** Disturbance affecting message clarity is termed
(A) Noise
(B) Channel
(C) Medium
(D) Feedback
- 171.** Inter-observer reliability: the ____ between two researchers watching the same event, i.e. whether they will produce the same records.
(A) Consistency
(B) Difference
(C) Variation
(D) Discussion
- 172.** How are correlational studies different from experiments?
(A) Causation can be inferred
(B) Causation cannot be inferred
(C) The variable is manipulated by the researcher
(D) They are part of qualitative research

173. The purpose of enhancing the credibility and reliability of research outcomes is to:
- (A) Increase the validity of the research findings.
 - (B) Make the research more complex.
 - (C) Reduce the time taken for research.
 - (D) Limit the scope of the research.
174. Reasoning that begins with individual pieces of evidence and leads to bigger general conclusions
- (A) Induction
 - (B) Deduction
175. A beverage company wants to understand why its new product isn't performing well in a specific region. They organize small discussion groups to explore consumer opinions. What type of marketing research are they conducting?
- (A) Exploratory Research
 - (B) Descriptive Research
 - (C) Causal Research
 - (D) Quantitative Research
176. Based on limited experience with daisies in my flower garden, I have concluded that these flowers require almost no care at all. This conclusion is an example of
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Practical reasoning
 - (D) Predictive reasoning
177. Mr. Rahman's choice of a specific research approach to his research problem should be guided by the extent to which the approach
- (A) Provides a reasonable answer to the research question.
 - (B) Describes the study.
 - (C) Indicates the limitations of the study.
 - (D) Provides a summary of the research.
178. Who developed Method of equal appearing intervals forming the basis of constructing attitude scales?
- (A) Likert.
 - (B) Thurstone and Chave.
 - (C) Bogardus.
 - (D) Guttman.
179. A study that seeks to replicate findings of previous research
- (A) Adds nothing of value to the research literature.
 - (B) Is a worthwhile contribution to the research literature.
 - (C) Should be conducted only by the researchers who reported the original findings.
 - (D) Is important for theory building but not for an applied discipline like education.
180. Step process of an experiment
- (A) Survey
 - (B) Cross study
 - (C) Experimental group
 - (D) Scientific method
181. Seeks to collect field texts that document the individual's story in his or her own words. It is the explanation of:
- (A) IDENTIFYING A RESEARCH PROBLEM
 - (B) FORMULATING RESEARCH QUESTIONS
 - (C) FINDING REVIEW THE LITERATURE
 - (D) DESIGNING RESEARCH METHOD
182. Which scientific method focuses on testing hypotheses developed from theories?
- (A) Inductive method
 - (B) Deductive method
 - (C) Hypothesis method
 - (D) Pattern method
183. When choosing the most appropriate investigation methodologies to use, researchers should consider I. the advantages and disadvantages of each methodology. (a) II. the specific subject matter or topic they are studying. (b) III. the nature of evidence required to answer the research question. (c)

- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 184.** A reliable resource for researching a historical topic will most likely be nonfiction
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 185.** What reasoning process involves starting with specific details to form a general principle?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Abductive Reasoning
 - (D) Logical Reasoning
- 186.** Step-by-step problem-solving formula
- (A) Heuristic
 - (B) Algorithm
 - (C) Trial & Error
 - (D) Decision Bias
- 187.** I have a bag of candy. The first two pieces I grab are Starburst. I assume all the candy are Starbursts. This is an example of what kind of reasoning?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Sound Reasoning
 - (D) Poor Reasoning
- 188.** State True or False:-There is only one method for finding Proportion.
- (A) True
 - (B) False
- 189.** When we write an argument, we have to include ____
- (A) Evidence
 - (B) Our name
 - (C) Writing
 - (D) A period
- 190.** What is a tendency to favor or lean toward a particular perspective called?
- (A) Bias
 - (B) Neutrality
 - (C) Objectivity
 - (D) Impartiality
- 191.** Which reasoning is demonstrated by using specific cases to establish a general rule?
- (A) Conceptual reasoning
 - (B) Deductive reasoning
 - (C) Inductive reasoning
 - (D) Logical reasoning
- 192.** The learners are normally required to do this type of test at the beginning of a course in a language school in order to identify their language level and find the best class for them.
- (A) An objective test
 - (B) A subjective test
 - (C) An achievement test
 - (D) A placement test
- 193.** Which type of validity was established if the components or factors of a test are hypothesized to have a negative correlation?
- (A) Construct validity
 - (B) Predictive validity
 - (C) Content validity
 - (D) Divergent validity
- 194.** It uses correlations to study relationships between dimensions or characteristics of individuals, groups, situations, or events.
- (A) Exploratory Research
 - (B) Longitudinal Research
 - (C) Explanatory Research (Causal Research)
 - (D) Qualitative Research
- 195.** The degree to which the findings of a study can be generalized to other people, settings, and situation
- (A) Construct validity
 - (B) External validity
 - (C) Internal validity
 - (D) None of above

- 196.** This refers to published literature introduced into the debate to provide support for an argument.
- (A) Contention
 - (B) Evidence
 - (C) Explore
 - (D) Cross-ex
- 197.** Field-work based research is classified as:
- (A) Historical
 - (B) Empirical
 - (C) Biographical
 - (D) Experimental
- 198.** It can provide fuller, deeper, more meaningful answers to a single research question.
- (A) Strength
 - (B) Limitation
- 199.** Your teacher has asked you to explain the difference between quantitative and qualitative observations. Which statement is correct?
- (A) Quantitative observations use numbers, qualitative uses the senses.
 - (B) Quantitative observations use the senses, qualitative uses numbers.
 - (C) Quantitative observations use measurement, qualitative uses numbers.
 - (D) Quantitative observations use colors, qualitative uses the senses.
- 200.** What is theoretical validity?
- (A) The accuracy of the portrayal of the perspectives and meanings of the participants
 - (B) The factual accuracy of an account as reported by the researcher
 - (C) The generalizability of the results to other cases and contexts
 - (D) The degree to which the researchers' explanations fit the data
- 201.** Researchers use psychological constructs to describe things that cannot be seen, touched, or measured directly.
- (A) True
 - (B) False
- 202.** What is the definition of replicability in research?
- (A) The ability of research to be kept confidential
 - (B) The ability of research to be published in multiple journals
 - (C) The ability of research to be repeated and, thus, later verified by other researchers
 - (D) The ability of research to be conducted without observations
- 203.** Methodology:
- (A) This is the doctrine of the methods of cognition and transformation of reality;
 - (B) This is the identification and resolution of paradoxes;
 - (C) It is a system of generalized knowledge, explanations of certain aspects of reality;
 - (D) It is a denial of what appears to be absolutely correct;
 - (E) Involves the development of a scientific hypothesis based on the study of the physical, chemical, etc. essence of the phenomenon under study;
- 204.** Which type of map is NOT thematic?
- (A) Cartogram
 - (B) Dot density map
 - (C) Choropleth map
 - (D) Topographic map
- 205.** The technique adopted to find out the level of acceptability of an individual by members of a group is
- (A) Personality testing
 - (B) Projective techniques
 - (C) Psychometry
 - (D) Sociometry
- 206.** The extent to which the results of research or testing can be generalized beyond the sample that generated them. (Unit 1 Vocabulary)
- (A) Internal Validity
 - (B) Negative Correlation
 - (C) Positive Correlation
 - (D) External Validity

207. The ____ argument begins with a generalization, then cites a specific case related to that generalization from which follows a conclusion.
- (A) Inductive
 - (B) Deductive
 - (B) Investigating and searching for optional solutions for a current defined problem
 - (C) Investigating the new problematic customer trends
 - (D) Investigating the new problematic market trends
208. Research question is a must in a literature review called
- (A) Traditional
 - (B) Optional
 - (C) Systematic
 - (D) Structural
209. Research methods are broadly classified as:
- (A) Expository
 - (B) Qualitative and quantitative.
 - (C) Information text
 - (D) None of above
210. You want to compare the health of students who walk to school to the health of students who ride the bus
- (A) Survey
 - (B) Observational study
 - (C) Experiment
 - (D) Simulation
211. Gathering information and learning everything you can about the topic.
- (A) Research
 - (B) Hypothesis
 - (C) Conclusion
 - (D) Analysis
212. What approaches can we use in research?
- (A) Educational, scientific
 - (B) Quantitative, qualitative
 - (C) Basic, secondary
 - (D) Theoretical, practical
213. "Problem-Solving" research is concerned with ____
- (A) Investigating and searching for what may be the problem facing or will face the brand
214. The best method to study growth and development of the child is:
- (A) Psychoanalytic Method
 - (B) Comparative Method
 - (C) Developmental Method
 - (D) Statistical Method
215. Which early school of thought promoted by James and influenced by Darwin explored how mental and behavioral processes function, adapt, survive and flourish?
- (A) Structuralism
 - (B) Functionalism
 - (C) Behaviorism
 - (D) Evolution
216. Today, Sam notices that the city alarm sounds at 9:00 P.M. The next day of the same time, she notices that the city alarm sound again. She remembers that the city alarm did sound at the same time the other day. She then concludes that the city alarm sounds every 9:00 P.M.
- (A) Inductive
 - (B) Deductive
217. In the Chapter 2 Review of Related Literature, which word means similar to the study or topic?
- (A) Review
 - (B) Related
 - (C) Literature
 - (D) Research
218. When taking notes for research articles, you should (check multiple):
- (A) Note why the article is important to your research.
 - (B) Summarize the main idea.

- (C) Take quotes directly from the article.
(D) All of the above.
- 219.** What two elements of action research should be present in the title?
(A) Context and rationale
(B) Objective and output
(C) Intervention and objective
(D) Context and intervention
- 220.** Which research would be ideal for the following question? How does someone's age affect what they consider right and wrong?
(A) Cross-sectional
(B) Survey
(C) Longitudinal
(D) Correlation
- 221.** How does research phenomena contribute to the development of scientific theories?
(A) By discouraging scientific exploration
(B) By limiting the scope of scientific inquiry
(C) By providing evidence and observations for scientific inquiry
(D) By avoiding the use of data and evidence
- 222.** Which of the following is a potential disadvantage of exploratory research?
(A) It can lead to oversimplification of complex phenomena
(B) It can provide definitive conclusions about a phenomenon
(C) It can be completed quickly and inexpensively
(D) It can be used to confirm existing theories
- 223.** The two main styles of research are
(A) Data collection and data coding
(B) Surveys and questionnaires
(C) Sampling and recording
(D) Qualitative and quantitative
- 224.** What requirement of a good Data Question is this question missing? "Are girls more successful than boys?"
(A) It cannot be answered with data
(B) It is not fruitful
(C) It is not specific
(D) It is not ethical
- 225.** Which practice best bridges global standards with local cultural nuance in research programs?
(A) Centralize all analysis in head office
(B) Standardize questions without translation
(C) Train local moderators and calibrate instruments
(D) Replace qualitative with only tracking
- 226.** Which of the following is NOT a strength of the scientific method?
(A) We study the weaknesses of our studies
(B) Less vulnerable to errors of any given mistake
(C) It is based on authority
(D) Allows for public verification through peer review
- 227.** Which type of logic is taking specific observations and using them to make generalised theories?
(A) Inductive
(B) Deductive
(C) Abductive
(D) None of above
- 228.** Evidence that an author provides to support an argument must be related to the claims. If the evidence is related to claims we say it is ____
(A) Sound
(B) Sufficient
(C) Position
(D) Relevant
- 229.** Which figure is known for developing the Turing Machine?
(A) Tim Berners-Lee

- (B) Ada Lovelace
 - (C) Alan Turing
 - (D) John von Neumann
- 230.** The process of giving and receiving information between a human source and a human receiver using words, symbols or actions is called ____
- (A) Process
 - (B) Transmission
 - (C) Communication
 - (D) Telecommunication
- 231.** When conducting exploratory research, it is difficult to formulate hypothesis for testing based on existing knowledge.
- (A) True
 - (B) False
- 232.** Each time Monica kicks a ball up in the air, it returns to the ground. So, the next time Monica kicks a ball up in the air, it will return to the ground. Is this inductive or deductive reasoning?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
- 233.** The unintended meanings aroused by certain symbols inhibiting the accuracy of decoding.
- (A) External Noises
 - (B) Semantic noises
 - (C) Internal noises
 - (D) Empathetic listening
- 234.** The correct statement is
- (A) Approach, Method, Procedure and Techniques are hierarchy
 - (B) Approach, Method, Procedure and Techniques are not hierarchy
 - (C) Approach, Method, Procedure and Techniques have the same definition
 - (D) Approach, Method, Procedure and Techniques have no correlation
- 235.** Which section explains sampling methods, inclusion/exclusion criteria, materials, and procedures?
- (A) Time frame or schedule
 - (B) Study design and methodology
 - (C) Ethical considerations
 - (D) Rationale and background
- 236.** What are three different ways to test a hypothesis?
- (A) Observe, model, experiment
 - (B) Observe, look, see
 - (C) Experiment, investigate, control
 - (D) Model, simulate, graph
- 237.** It is conducted by researchers whose aim would be to find out the directions, associations and/or relationship between different variables or groups of respondents under study.
- (A) Survey
 - (B) Correlational
 - (C) Ex-Post Facto
 - (D) Normative
- 238.** If you wanted to compare personalities what might be the best research method to use?
- (A) Correlational
 - (B) Testing
 - (C) Case study
 - (D) Longitudinal
- 239.** A student wants to explore the impact of technology on careers in Arts, A/V Technology, and Communications. What is a strategic approach?
- (A) Research recent technological trends and their effects on job roles in the field
 - (B) Only ask friends who like art
 - (C) Ignore technology
 - (D) Guess based on old movies
- 240.** Identify whether the following are strengths or limitations of action research. "Lowers the scientific objectivity."
- (A) Limitation
 - (B) Strength

- 241.** A logical approach where you progress from general ideas to specific conclusions is ____
(A) Deductive reasoning
(B) Inductive Reasoning
- 242.** If a test measures what it is supposed to measure, that test has:
(A) Reliability.
(B) Validity.
(C) Objectivity.
(D) Consistency.
- 243.** Operational definition: the Clear description ____ of a variable such that it can be accurately manipulated, measured or quantified, and the study can be ____ This includes the description of the IV, DV or measured variables.
(A) Replicated
(B) Explained
(C) Analyzed
(D) Interpreted
- 244.** ____ refers to gathering primary data from a natural environment without doing a lab experiment or a survey.
(A) Experimental research
(B) Applied research
(C) Field research
(D) Observational research
- 245.** What is an academic research?
(A) A systematic data collection
(B) Factual based of data collection
(C) Manipulation of data to uncover truth
(D) Collaboration between researcher and participants
- 246.** Michael is conducting a research project for his class. He is trying to determine which of the following is NOT a part of the research methodology?
(A) Sampling
(B) Data collection
(C) Research design
(D) Literature review
- 247.** Methodology provides a description ____
(A) Of the exact method you will use to gather, organize, compile and analyze data.
(B) Of the exact introduction you will use to gather, organize, compile, and analyze.
(C) Of the exact literature you will use to gather, organize, compile, and analyze.
(D) Of the exact findings you will use to gather, organize, compile, and analyze data
- 248.** What do you call the degree of consistency and precision which produces a stable result of the conducted research?
(A) Consistency
(B) Reliability
(C) Scope
(D) Introduction
- 249.** It determines such factors as how he or she writes hypothesis and what level of evidence is necessary to make decision.
(A) Methodology
(B) Method
- 250.** Qualitative and Quantitative
(A) Based on the one undertaking the research
(B) Based on final use or application of the research results
(C) Based on the mode of inquiry used
(D) Based on the methodology or research design used
- 251.** Types of Quantitative Data and Measures a test that helps a person identify and measure human characteristics that help predict or explain behavior over and across situations. (Minnesota Multiphasic Personality Inventory)
(A) Personal assessment
(B) Affective scale
(C) Behavioral checklist
(D) Public document or school records

252. It is a reasoning which involves searching for patterns and making generalizations. In short, specific to general.
- (A) Logic
 - (B) Inductive Reasoning
 - (C) Deductive Reasoning
 - (D) Inductive and Deductive Reasoning
253. Combination of taxonomies and conceptual framework by providing a structure for a complete explanation of empirical phenomena; its scope is not limited to a particular aspect but of several concepts.
- (A) Theoretical system.
 - (B) Ad-hoc classificatory system.
 - (C) Conceptual framework.
 - (D) None of the above.
254. What do psychologists use to conduct experiments/research to avoid getting false conclusions and results?
- (A) Sample
 - (B) Case study
 - (C) Scientific method
 - (D) Correlation
255. Is an experiment a primary or secondary research method?
- (A) Both.
 - (B) Neither.
 - (C) Secondary.
 - (D) Primary. Edit
256. What is a disadvantage of field research compared to desk research?
- (A) It is quicker to carry out.
 - (B) It is less specific.
 - (C) It can be more expensive to carry out.
 - (D) It uses outdated information.
257. Rose conducted a study about the effect of organic and inorganic fertilizer in the growth of plants, what method should she used?
- (A) Survey
 - (B) Interview
 - (C) Multiple Method
 - (D) Scientific Method
258. Question that allows the source to talk
- (A) Q-and-A
 - (B) Open-ended question
 - (C) Quotation
 - (D) Read-back
259. Attempts to establish causation by quantifying relationships between variables
- (A) Descriptive research
 - (B) Analytical research
 - (C) Experimental research
 - (D) None of above
260. Whenever John eats peanuts, his throat swells. "John is allergic to peanuts".
- (A) Inductive
 - (B) Deductive
 - (C) All the above
 - (D) None of the above
261. Research method in which data are collected from groups of participants of different ages and compares so that conclusions can be drawn about differences due to age
- (A) Naturalistic Observation
 - (B) Case Study
 - (C) Longitudinal study
 - (D) Cross-sectional study
262. This section explains how the study was conducted. The full details of the materials and methods are described in this chapter, to permit repetition of the research work.
- (A) Methodology
 - (B) Review of Related Literature
 - (C) Theory
 - (D) Introduction
263. If an experiment can be easily replicated by another researcher and provide similar results, it is considered
- (A) Valid

- (B) Duplicable
(C) Falsifiable
(D) Reliable
- 264.** Which scientific method often focuses on generating new hypotheses and theories?
(A) Inductive method
(B) Deductive method
(C) Hypothesis method
(D) Pattern method
- 265.** What are three other methods of research according to Borg and Gall (1979).
(A) Educational research and development, evaluation research and historical research
(B) Educational research and development, evaluation research and action research
(C) Educational research and development, descriptive research and action research
(D) None of above
- 266.** What is interrater reliability?
(A) Interrater reliability is the measure of consistency between different tests or assessments.
(B) Interrater reliability refers to the accuracy of a single rater or judge when assessing multiple things.
(C) Interrater reliability is only applicable in qualitative research studies.
(D) Assesses the consistency of different raters' observations
- 267.** Descriptive, causal, and predictive are three forms of ____ research questions.
(A) Quantitative
(B) Action
(C) Phenomenological
(D) Qualitative
- 268.** Deductive or Inductive? Every time you study for a test, you get a good grade. You conclude that studying for a test will earn you a good grade.
(A) Inductive Reasoning
(B) Deductive Reasoning
(C) Not Enough Info
(D) None of above
- 269.** ____ is a process of reasoning which proceeds from specific or particular instances to the formulation of general or universal principles or statements.
(A) Deductive
(B) Reductive
(C) Inductive
(D) Inductive
- 270.** One of the aims of the scientific method in research is to: [2006-JUNE]
(A) Improve data interpretation
(B) Eliminate spurious relations
(C) Confirm triangulation
(D) Introduce new variables
- 271.** ____ is a research in which data is collected from a population at one point of time.
(A) Longitudinal
(B) Panel Study
(C) Cross Sectional
(D) Cohort Study
- 272.** The citation of multiple studies (Bybee, Thomas, Condliffe, etc.) serves to establish that the benefits of PBL are supported by "Empirical studies." The implication of using this term ("empirical") is that the claims about PBL are based on:
(A) Personal opinions or feelings.
(B) Philosophical debates and theoretical discussions.
(C) Observations, data collection, and evidence-based research.
(D) Unverifiable anecdotes from various teachers.
- 273.** Methods
(A) Are the techniques and procedures used to obtain and analyse data.
(B) Refers to the theory of how research should be undertaken.
(C) All the above
(D) None of the above

274. What does an informal inquiry aim to satisfy?
- (A) Personal curiosity
 - (B) Academic questions
 - (C) Unfair opinions
 - (D) Trustworthiness
275. The term regression was introduced by ____
- (A) R A Fischer
 - (B) Sir Francis Galton
 - (C) Karl Pearson
 - (D) None of these
276. A researcher who is method-bound is likely to ____
- (A) Be responsible for data analysis
 - (B) Utilize a probability sample
 - (C) Prefer one research approach over all others
 - (D) Mine a client's database
277. The ____ is only useful if the concepts, ideas, questions, etc. to be investigated are both testable and falsifiable.
- (A) Scientific Method.
 - (B) Independent Variable.
 - (C) Experimental Method.
 - (D) Dependent Variable.
278. Research conducted in order to identify or clarify a problem is called:
- (A) Exploratory Research
 - (B) Descriptive Research
 - (C) Causal Research
 - (D) Customer Research
279. A systematic study of facts according to a reliable and correct method of study is called a
- (A) Methodology.
 - (B) Social Technique.
 - (C) Biological Study.
 - (D) Scientific Study.
280. Which of the following DOES NOT closely relate to what action research is?
- (A) Used to address practical problems in the classroom
 - (B) Refers only to everyday life of the learners
 - (C) Allows teachers to study their own classroom
 - (D) Brings theories and practices together
281. The universe is really just like a complicated clock. But every clock has a maker. It follows therefore that the universe has to have a maker as well.
- (A) Enumerative All observed P are F Therefore: All P are F
 - (B) Argument by Analogy F is like P P has property A Therefore: F has property A
 - (C) Inference to the Best Explanation P The best explanation for P is A Therefore: A
 - (D) Hypothetical Syllogism If P, then Q If Q, then R Therefore: If P, then R
282. A researcher wants to determine if there is any relationship between car color and the tendency to run through stop signs at intersections. The best method to address this question is
- (A) Archival analysis
 - (B) Correlational
 - (C) Experimental
 - (D) Survey research
283. What does it mean for marketing research to be reliable?
- (A) It is conducted by the same researcher every time.
 - (B) It produces the same results when repeated by different researchers.
 - (C) It is conducted only once.
 - (D) It is always accurate.
284. Which research approaches are used in psychology?
- (A) Only fieldwork
 - (B) Surveys, experiments, observation, and statistical analysis

- (C) Only mathematical modeling
(D) Only interviews
- 285.** Avyaan is trying to understand the challenges faced by small businesses in his community. He wants to gather insights that provide a greater understanding of the issues rather than just quantifying them. Which of the following research methods should he use to crystallize the business problem?
(A) Causal research
(B) Exploratory research
(C) Descriptive research
(D) Conclusive research
- 286.** Which of the following is NOT a control procedure used in causal-comparative research?
(A) Matching
(B) Subgroups
(C) Chi square
(D) Analysis of covariance
- 287.** It is not a property of deductive reasoning.
(A) It uses available facts, information, or knowledge to deduce a valid conclusion
(B) It moves from generalized statement to a valid conclusion
(C) Conclusions are probabilistic.
(D) If premises are true, the conclusion must be true
- 288.** Observation or Inference? The caterpillar did not eat the moth because it is not a carnivore.
(A) Observation
(B) Inference
- 289.** Operations Research, is a very powerful tool for ____
(A) Research
(B) Database
(C) Operations
(D) Decision Making
- 290.** Suppose your friends went to the beach at noon on a warm day. They saw some black and white birds. As you are talking to you friend you think " They ate lunch and drank Coke.". Is this an observation or an inference?
(A) Observation
(B) Inference
- 291.** Inductive or Deductive Reasoning? You add up the angle measures inside 5 different triangles and see that they add up to 180 degrees. You conclude that the angles in triangles have a sum of 180 degrees.
(A) Inductive Reasoning
(B) Deductive Reasoning
(C) Not enough info
(D) None of above
- 292.** Which type of reasoning is used when suggesting a possible cause for an unexpected event?
(A) Inductive
(B) Deductive
(C) Abductive
(D) Analogical
- 293.** What research methods are used in scientific works:
(A) Theoretical and experimental
(B) Scientific and practical
(C) Theoretical and traditional
(D) Theoretical and scientific
(E) Experimental and applied
- 294.** A research based on direct experience or observation
(A) Empirical
(B) Analytical
(C) Critical
(D) Methodical
- 295.** A survey shows children who have encyclopedias in their homes earn better grades in school than children whose homes lack encyclopedias. The researcher concludes that having encyclopedias at home improves grades. This conclusion is erroneous primarily because the researcher has incorrectly
(A) Identified the independent variable

- (B) Identified the dependent variable
 - (C) Inferred correlation from causation
 - (D) Inferred causation from correlation
- 296.** Changes in solar radiation according to the Milankovitch cycles matches somewhat, but not exactly, with
- (A) Phases of the Moon
 - (B) The development of life on Earth
 - (C) Earth's changing temperature and Ice Ages
 - (D) The number of sunspots
- 297.** I posted a video on TikTok at 4:00 p.m. and it got 1,000 views. My friend posted at 4:00 p.m. and it got 1,000 views. Therefore, if I post my next video at 4:00 p.m. it will get 1,000 views.
- (A) INDUCTIVE
 - (B) DEDUCTIVE
 - (C) ABDUCTIVE
 - (D) None of above
- 298.** What does reliability mean with regards to research?
- (A) That we can trust the researcher to be ethical
 - (B) That research should be able to be repeated at a different time or in a different place and produce the same results
 - (C) That research has guaranteed results, no matter what the circumstance
 - (D) That research has been approved by the BSA
- 299.** In this kind of design, the researcher observes the phenomena as they occur naturally and no external variables are introduced.
- (A) EX-POST FACTO or CAUSAL-COMPARATIVE
 - (B) NON-EXPERIMENTAL DESIGN
 - (C) SURVEY
 - (D) CORRELATIONAL
- 300.** All the apples I have picked from this tree have been red. Therefore, the next apple I pick from this tree will probably be red.
- (A) INDUCTIVE
 - (B) DEDUCTIVE
 - (C) ABDUCTIVE
 - (D) None of above
- 301.** What must be ruled out to establish causality according to the notes?
- (A) Other potential reasons that the light turns on (no reasonable alternatives)
 - (B) The brightness of the light bulb
 - (C) The color of the light switch
 - (D) The time of day the light is turned on
- 302.** It is a set of systematic, empirical processes that apply to study a phenomenon:
- (A) Philosophy
 - (B) Research
 - (C) Anthropology
 - (D) None of above
- 303.** Which scientific method is being described below: a carefully worded statement of the exact procedures used in a research study (example-human intelligence may be defined as what an intelligence test measures)
- (A) Theory
 - (B) Case study
 - (C) Operational definition
 - (D) Replication
- 304.** When analyzing sources, what should you read first?
- (A) Source information
 - (B) Context information
 - (C) Content information
 - (D) Corroborate information
- 305.** In which type of reasoning are conclusions likely but not guaranteed to be true, based on observed patterns or experiences?
- (A) Hypothetical reasoning
 - (B) Deductive reasoning
 - (C) Analytical reasoning
 - (D) Inductive reasoning

- 306.** These are concerned with gaps in any of the steps in the data collection or data analysis.
- (A) Theoretical recommendations
 - (B) Methodological recommendations
 - (C) Practical recommendations
 - (D) None of above
- 307.** Approach which goes from bigger ideas as theories or concepts to smaller ideas.
- (A) Deductive
 - (B) Inductive
 - (C) Interrogative
 - (D) Declarative
- 308.** How research methods are classified?
- (A) Classified as Qualitative and Quantitative.
 - (B) They are classified in three steps
 - (C) Are classified by importance
 - (D) They are classified in alphabetical order
- 309.** Under which of the following research method is not applicable?
- (A) Business.
 - (B) Government offices.
 - (C) Health care.
 - (D) Imaginary worlds.
- 310.** Formal communication that needs documentation will be best in
- (A) Verbal form
 - (B) Physical form
 - (C) Change form
 - (D) Written form
- 311.** Consists of all individuals who can potentially participate in a study.(Research Methods and Statistics Part I)
- (A) Population
 - (B) Control Group
 - (C) Experimental Group
 - (D) Confidential Group
- 312.** The elaboration of scales is referred to procedures to treat specific objective, and sometimes abstract, concepts through qualitative measurements.
- (A) True
 - (B) False
- 313.** Empirical means:
- (A) Based on observation or experience
 - (B) Based on theory alone
 - (C) Based on imagination
 - (D) Based on tradition
- 314.** Use of broader principles of research underscored by philosophical rationales is termed as:
- (A) Research Methods
 - (B) Research Tools
 - (C) Research Techniques
 - (D) Research Methodology
- 315.** Which bibliometric law describes the inverse square pattern of scientific productivity among authors?
- (A) Price's Law
 - (B) Bradford's Law
 - (C) Lotka's Law
 - (D) Zipf's Law
- 316.** When do we look at both end of the confidence interval
- (A) Superiority trials
 - (B) Noninferiority trials
 - (C) Equivalence trials
 - (D) None of above
- 317.** What is the term for the systematic approach to gathering, analyzing, and interpreting information to answer questions or solve problems?
- (A) Research Methodology
 - (B) Data Analysis
 - (C) Research Design
 - (D) Literature Review

- 318.** Replication in research primarily enhances
- (A) Accuracy in measuring intended constructs
 - (B) Consistency and reliability of findings
 - (C) Precision of operational definitions
 - (D) Ethical protection of private information
- 319.** How could we describe marketing research that actually measures what it is intended to measure?
- (A) Reliable
 - (B) Objective
 - (C) Valid
 - (D) Cost Effective
- 320.** A longitudinal design differs from a cross sectional study in that the sample or samples are the same over the course of time
- (A) True
 - (B) False
- 321.** This is when the participant answers in a way that makes him/her look good to the researcher. This is done to avoid embarrassment or judgment
- (A) Social desirability effect
 - (B) Screw you effect
 - (C) Placebo effect
 - (D) Expectancy effect
- 322.** The research methodology Wilhelm Wundt used is called
- (A) Introspection.
 - (B) Structuralism.
 - (C) Naturalistic observation.
 - (D) Inferential.
 - (E) Scientific.
- 323.** Credible sources
- (A) A shortened version of the text
 - (B) Alter something that is already written in order to make corrections, improve or update
 - (C) Sources that are trustworthy and reliable
 - (D) Set of standards for writing and layout of documents
- 324.** What type of reasoning starts with a general statement and applies it to a specific case?
- (A) Abductive reasoning
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Analogical reasoning
- 325.** When a survey produces stable results over time, it can be considered
- (A) Valid
 - (B) Representative
 - (C) Reliable
 - (D) Statistically sound
- 326.** To find your concrete details in more than one source is known as ____
- (A) Relevant information
 - (B) Researching
 - (C) Cross referencing
 - (D) Necessary
- 327.** Which of the following is not true for exploratory research design
- (A) It explores something new
 - (B) It brings out a variable never found
 - (C) It is quantitative in nature
 - (D) None of above
- 328.** What form of research do businesses use when they can't clearly define their reasons for research?
- (A) Marketing Research
 - (B) Exploratory Research
 - (C) Observation Research
 - (D) Predictive Research
- 329.** ____ is a developmental design that treat age as a between-subjects variable, compare different age groups of participants where each participant contributes data for only one age group
- (A) Baseline design
 - (B) Longitudinal design
 - (C) Cross-sectional design
 - (D) Discrete trials design

330. Based on direct experience/ observation
- (A) Empirical
 - (B) Cyclical
 - (C) Logical
 - (D) Analytical
331. Based on personal feelings or personal values
- (A) Subjective reasoning
 - (B) Objective reasoning
 - (C) Data
 - (D) Empirical evidence
332. Reliability of an instrument refers to:
- (A) Consistency of results
 - (B) Accuracy of measurement
 - (C) Appearance of instrument
 - (D) Cost of instrument
333. Methodology includes tools, procedures, and sampling techniques.
- (A) TRUE
 - (B) FALSE
334. What is the main characteristic of action-oriented research?
- (A) It is primarily used to study social phenomenon
 - (B) It is self-evaluative
 - (C) It involves the use of numeric data
 - (D) It is based on scientific method of investigation
335. What does it mean for a study to be “replicable”?
- (A) It can be easily published
 - (B) It can be repeated with the same results
 - (C) It can be summarized quickly
 - (D) It can be funded repeatedly
336. Which of the following best describes what you should do when asked to formulate a brief methodology paragraph about your chosen SHS research topic?
- (A) Write a concise explanation of the research methods you will use for your chosen SHS topic.
 - (B) Summarize the results of your SHS research.
 - (C) List only the materials needed for your SHS research.
 - (D) Describe the background of your SHS research topic.
337. The first marker I pulled out the box is blue. The second one I pulled out is blue, too. So, all the markers in here are probably blue.
- (A) Deductive
 - (B) Inductive
 - (C) All the above
 - (D) None of the above
338. Making a statement about what will happen in the future
- (A) Prediction
 - (B) Analyze
 - (C) Classification
 - (D) Inference
339. Research is a way of establishing knowledge through
- (A) Empiricism
 - (B) Logic
 - (C) Intuition
 - (D) Ethical reasoning
340. ____ is a form of explanatory research in which the researcher develops a theoretical model and empirically tests the model to determine how well the model fits the data
- (A) Predictive research.
 - (B) Descriptive research.
 - (C) Causal modeling.
 - (D) Exploratory research.
341. Which research method is most effective for identifying a new product opportunity in an emerging market?
- (A) Experimental
 - (B) Exploratory

- (C) Correlational
(D) Descriptive
- 342.** Which of the following is not a projective technique?
(A) TAT
(B) Rorschach
(C) MMPI
(D) Word Association
- 343.** The objective of ____ is the development of hypotheses rather than their testing.
(A) Laboratory research
(B) Diagnostic research
(C) Exploratory research
(D) Empirical research
- 344.** Identifying relationship between two things is demonstrated by?
(A) Completion items.
(B) True / False items.
(C) Q items.
(D) Matching items.
- 345.** What are the two main questions to consider when evaluating the validity of a test?
(A) Does the test measure what we say it measures? Does the test contain a relevant and representative sample of what it is testing?
(B) Is the test easy to administer? Is the test easy to mark?
(C) Does the test take hours to do? Does the test take hours to mark?
(D) Is the test cheap to administer? Is the test cheap to mark?
- 346.** The psychologist ____ is referred to as the originator of action research.
(A) Kurt Lewin
(B) Lawrence Stenhouse
(C) Stephen Corey
(D) None of above
- 347.** The ____ method is an organized way to help scientists to answer a question
(A) Scientific method
(B) Harris method
(C) Biology method
(D) There is no method
- 348.** It is the process of gathering specific information usually through observation and measurement and then making a general conjecture.
(A) INDUCTIVE REASONING
(B) DEDUCTIVE REASONING
(C) All the above
(D) None of the above
- 349.** What does the scientific method in psychology involve?
(A) Systematic approach to research, including theory development, hypothesis formulation, testing, and revision
(B) Guesswork and intuition
(C) Only observation
(D) Only data analysis
- 350.** Reasoning achieved by using a premise that may be true
(A) Inductive reasoning
(B) Deductive reasoning
(C) Sound reasoning
(D) Faulty reasoning
- 351.** When a person's test performance can be compared with that of a representative and pretested sample of people, the test is said to be
(A) Reliable
(B) Standardized
(C) Valid
(D) Normally distributed
- 352.** Business disciplines uses strategies including quantitative, qualitative, descriptive, correlational, and experimental methods.
(A) True
(B) False

353. A method of finding out what works best in the classroom to improve student learning.
- (A) Construct validity
 - (B) Case Study
 - (C) Research Subject
 - (D) Classroom Action Research
354. A general approach to gathering information and answering questions so that errors and biases are minimized.
- (A) Scientific method
 - (B) Intuition
 - (C) Case study
 - (D) Introspection
 - (E) Common sense
355. How can you evaluate the credibility of a source for your literature review?
- (A) Consider the author's expertise, the publication's reputation, the presence of citations and references, and the objectivity and bias of the source.
 - (B) Check if the source has a lot of grammatical errors
 - (C) Consider the popularity of the author on social media
 - (D) Evaluate the font style and size used in the source
356. Which of the following is a characteristic of a weak scientific argument?
- (A) Based on empirical evidence
 - (B) Lacks supporting data
 - (C) Includes peer-reviewed sources
 - (D) Follows the scientific method
357. Which of the following is an example of modifying the geography to help farmers in a hilly region?
- (A) Desertification
 - (B) Desalination
 - (C) Terrace Farming
 - (D) Deforestation
358. Which type of evidence relies on direct observation and experimentation?
- (A) Empirical
 - (B) Feasible
 - (C) Non-empirical
 - (D) Objectivity
359. A researcher conducted a correlational research study on the relation of texting while driving and traffic accidents. The results showed that high amounts of texting were associated with high amounts of traffic accidents. This is an example of a ____
- (A) Negative correlation
 - (B) Positive correlation
360. This kind of research have conclusions that are expected to be part of the premise of the research problem and considered correct if the premise is valid and the inductive method is applied correctly.
- (A) Quasi experimental research
 - (B) Deductive research
 - (C) Inductive research
 - (D) Hypothetical research
361. The process of measuring the chance that an environmental hazard will cause harm is called
- (A) Toxicology
 - (B) Epidemiology
 - (C) A dose-response relationship
 - (D) Risk assessment
362. The researchers create a survey to measure customer satisfaction and compare it with another survey that measures customer anxiety. They want to know if the two surveys measure different things. What type of validity would they use?
- (A) Predictive Validity
 - (B) Content Validity
 - (C) Nomological Validity
 - (D) Discriminant Validity

- 363.** Which of the following best describes a scientific argument?
- (A) A personal opinion on a scientific topic
 - (B) A logical explanation supported by evidence
 - (C) A debate between two scientists
 - (D) A summary of scientific facts
- 364.** Which assumption characterizes action research?
- (A) Research should produce results that generalize to different contexts.
 - (B) Problems should be researched on a large scale.
 - (C) Hypothesis testing should be done via controlled experiments.
 - (D) Theory and research can be integrated with practice.
- 365.** Which of these lies second from the bottom of the hierarchy of evidence pyramid?
- (A) Opinion pieces
 - (B) Case report
 - (C) Cross-sectional studies
 - (D) None of above
- 366.** Carl and Jane are lab partners assigned to research who is friendlier, girls or boys. After conversing with their first ten participants, they find that their friendliness ratings often differ. With which of the following should they be most concerned?
- (A) Reliability
 - (B) Ethics
 - (C) Validity
 - (D) Confounding variables
- 367.** Every day, I leave for work in my car at eight o'clock. Every day, the drive to work takes 45 minutes I arrive to work on time. Therefore, if I leave for work at eight o'clock today, I will be on time.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
- 368.** Which form of reasoning is the process of drawing a specific conclusion from a set of premises?
- (A) Objective reasoning
 - (B) Positivist reasoning
 - (C) Inductive reasoning
 - (D) Deductive reasoning
- 369.** Different disciplines might approach the same phenomena using different conceptual frameworks.
- (A) True
 - (B) False
- 370.** What type of information is typically excluded from OSINT?
- (A) Publicly available social media posts
 - (B) Classified government documents
 - (C) News articles from reputable sources
 - (D) Academic research papers
- 371.** It discusses the approaches, tools, and techniques that researchers used to study a problem.
- (A) Literature review
 - (B) Respondents
 - (C) Methodology
 - (D) Bibliography
- 372.** What does "replication" in research signify?
- (A) Repeating studies to verify findings
 - (B) Using the same data in various ways
 - (C) Publishing the same study multiple times
 - (D) Conducting informal research
- 373.** A study that can be repeated by other scientists is considered what?
- (A) Empirical
 - (B) Logical
 - (C) Replicable
 - (D) Ethical
- 374.** What is the significance of feedback in action research for teachers?

- (A) To criticize teaching methods
 - (B) To gather information about the effectiveness of new strategies and improve the teaching process
 - (C) To avoid making changes to teaching methods
 - (D) To assess only students' academic performance
375. The last three times I ate at this restaurant, the service was excellent. Therefore, the service will be excellent next time.
- (A) Inductive
 - (B) Deductive
376. Which of the following is a potential limitation of a systematic review?
- (A) It provides a comprehensive and unbiased summary of the evidence
 - (B) It may be influenced by publication bias
 - (C) It is less rigorous than a narrative review
 - (D) It does not require a predefined research question
377. Quantitative methods can be repeated to verify findings in another setting, thus strengthen and reinforcing validity of findings eliminating the possibility of spurious conclusions.
- (A) REPLICATION
 - (B) FUTURE OUTCOMES
 - (C) LARGE SAMPLE SIZES.
 - (D) OBJECTIVE
378. What is important to consider when beginning a research project?
- (A) The cost of the project
 - (B) Which method will work best
 - (C) The duration of the project
 - (D) The number of people involved in the project
379. Which of the following statement refers to cross-sectional design?
- (A) A study of one particular section of society, e. g. the middle classes.
 - (B) One that is devised when the researcher is in a bad mood.
 - (C) The collection of data from more than one case at one moment in time.
 - (D) A comparison of two or more variables over a long period of time.
380. Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: Investigators find that positive-result case reports on a new therapy are widely cited, while negative or null reports remain unpublished.
- (A) Confounding
 - (B) Hawthorne Effect
 - (C) Selection Bias
 - (D) Publication Bias
 - (E) Measurement Bias
381. Any tool that you may use to collect or obtain data, measure data, and analyze data that is relevant of the subject of your research.
- (A) Research Instrument
 - (B) Data
 - (C) Questionnaire
 - (D) Result (Findings)
382. A marketing researcher is interested in studying the relationship between brand loyalty and customer satisfaction. Which type of research design would be most appropriate?
- (A) Cross-sectional research
 - (B) Longitudinal research
 - (C) Exploratory research
 - (D) Explanatory research
383. It investigates the extent to which variations in one factor correlate with variations in one or more other factors.
- (A) Descriptive method
 - (B) Historical method
 - (C) Correlational method
 - (D) Case and field method

- 384.** What is the main goal of the falsification principle in the scientific method?
- (A) Trying to disprove alternative theories
 - (B) Proving all theories to be true
 - (C) Ignoring evidence that contradicts a theory
 - (D) Accepting theories without question
- 385.** ____ is the set of basic cognitive techniques, procedures, tools with which scientific research is carried out, the acquired knowledge is systematized.
- (A) Methodology
 - (B) Data Interpretation and Analysis
 - (C) Research program
 - (D) The science
 - (E) Tools.
- 386.** What does it mean to “generalize” in scientific inquiry?
- (A) To make a statement that applies to a range of situations or phenomena based on observed patterns
 - (B) To focus on a specific case or example
 - (C) To collect data through experiments or observations
 - (D) To form a hypothesis or prediction
- 387.** Which reasoning uses proof, acceptable facts to draw specific case or situation?
- (A) Analogy
 - (B) Argument
 - (C) Deductive
 - (D) Inductive
- 388.** A student researching a new discovery about the activity of mitochondria could find the most current and reliable information in a-
- (A) Popular news magazine
 - (B) Cell biology textbook
 - (C) Scientific journal
 - (D) Newspaper
- 389.** Reliable sources are not
- (A) Peer reviewed
 - (B) Biased
 - (C) Interesting
 - (D) Researched
- 390.** Which type of reasoning is used when drawing conclusions from a set of premises that are assumed to be true?
- (A) Abductive reasoning
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Analogical reasoning
- 391.** What is the purpose of inclusion and exclusion criteria?
- (A) To filter relevant and credible studies
 - (B) To increase the number of irrelevant sources
 - (C) To avoid peer-reviewed journals
 - (D) To skip methodology
 - (E) To add random websites
- 392.** Which type of reasoning starts with generalized premises and ends with a specific conclusion.
- (A) Deductive
 - (B) Inductive
 - (C) Abductive
 - (D) Reasoning through analogy
- 393.** You kick your cat, and every time you do, it scratches you. You conclude that if you kick your cat you will get scratched.
- (A) Inductive
 - (B) Deductive
- 394.** Inductive reasoning applies observations to broad conclusions.
- (A) It begins with specific observations.
 - (B) It relies solely on mathematical proofs.
 - (C) It is based on deductive logic.
 - (D) It requires a hypothesis to be tested.
- 395.** True or False: A literature review is a survey of scholarly sources on a specific topic.
- (A) True
 - (B) False

396. Every time I have eaten peanuts, I have had an allergic reaction. Therefore, I infer that I am allergic to peanuts.
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
397. Circle the best answer. Durkheim's study of suicide demonstrated the importance of:
- (A) Psychology
 - (B) Religion
 - (C) Social forces
 - (D) Genetics
398. True or False: Inductive reasoning relies on probability rather than certainty.
- (A) False
 - (B) True
 - (C) Maybe
 - (D) Occasionally
399. What is the importance of writing about the literature reviewed?
- (A) To summarize and synthesize the findings
 - (B) To collect new data
 - (C) To formulate new hypotheses
 - (D) To write new conclusions
400. All numbers ending in 0 or 5 are divisible by 5. The number 35 ends with a 5, so it must be divisible by 5.
- (A) Inductive
 - (B) Deductive
401. What method of triangulation refers to using multiple perspectives or theories to interpret data.
- (A) Method triangulation
 - (B) Data triangulation
 - (C) Theory triangulation
 - (D) None of above
402. A key function of a study's methodology is to.
- (A) Determine the hypotheses that will be tested in the study
 - (B) Exercise control over contaminating factors in the study environment
 - (C) Identify grants and other funding sources for conducting the study
 - (D) Protect the rights of the study's participants
403. When evaluating a source, which of the following is NOT a factor to consider for reliability?
- (A) The author's credentials
 - (B) The publication date
 - (C) The number of images
 - (D) The presence of citations
404. Over \$19 billion is spent annually on pet grooming and related services, but more importantly, the pet care industry is growing by about 4% annually. This information is an example of:
- (A) Market Research
 - (B) Biological Research
 - (C) Industrial Management
 - (D) Time Management
405. What is a specific opinion or idea expressed to convey an argument
- (A) Evidence
 - (B) Argument
 - (C) Claim
 - (D) Inference
406. Which type of reasoning might be used in scientific method to formulate a general theory?
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Abstract reasoning
 - (D) Analytical reasoning
407. Longitudinal designs involve ____ participants as they age.
- (A) Following
 - (B) Testing
 - (C) Ignoring
 - (D) Replacing

- 408.** To estimate the population of a town in upcoming years, one of the town people collected populations from years past. The town wants to estimate the population in 5 years. Will the town use inductive or deductive reasoning to estimate?
- (A) Inductive
 - (B) Deductive
 - (C) Statement
 - (D) Argument
- 409.** Research method is generally divided into —
- (A) Qualitative, quantitative, and mixed method
 - (B) Survey, interview, and observation
 - (C) Population, sample and sampling method
 - (D) None of above
- 410.** The procedure is consistent/the same for every participant so the study can be replicated and tested for reliability.
- (A) Controls
 - (B) Participant Variables
 - (C) Situational Variables
 - (D) Standardized Procedures
 - (E) Uncontrolled Variables
- 411.** Which type of reasoning starts with specific observations and develops general theories?
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Analogical reasoning
 - (D) Heuristic reasoning
- 412.** This educational method, originating in Japan during the 1870s, predates Western action research by approximately 70 years.
- (A) Action Research
 - (B) Reflection
 - (C) Lesson Study
 - (D) Case Study
- 413.** A claim supported by reasons and evidence
- (A) Joke
 - (B) Conversation
- 414.** The strongest level of evidence is obtained from systematic reviews of randomized clinical trials (RCTs)
- (A) True
 - (B) False
- 415.** Below is a requirement for social research, namely?
- (A) Research is subjective
 - (B) Research on the will of others
 - (C) Research location is easy to reach
 - (D) Research must follow scientific procedures
 - (E) The study was conducted at any time
- 416.** When large, intact areas of habitat are broken up by roads, logging operations, farm fields, and urban development
- (A) Seed bank
 - (B) Egg pulling
 - (C) Habitat fragmentation
 - (D) Botanical garden
- 417.** Research done through observation or experiments.
- (A) Qualitative research
 - (B) Basic research
 - (C) Double-blind study
 - (D) Empirical research
- 418.** Which school of thought proposed that psychology should explain how people adapt or fail to adapt to the real world outside of the laboratory, thus becoming the first applied psychologists?
- (A) Functionalists
 - (B) Structuralists
 - (C) Behaviorists
 - (D) Psychoanalysts
- 419.** After the 1950s, nursing broadened in which key area of work?

- (A) Removal from health promotion efforts
(B) Conduct and publication of nursing research
(C) Exclusive focus on military nursing
(D) Restriction to physician-ordered tasks
- 420.** Research designed to assist the decision maker in determining, evaluating, and selecting the best course of action in a given situation is called ____
(A) Conclusive research
(B) Subjective research
(C) Exploratory research
(D) Observational research
(E) Supporting research
- 421.** Repeating a study in order to confirm the results of the original study is ____
(A) Control Group
(B) Placebo
(C) Naturalistic Observation
(D) Hindsight Bias
(E) Replication
- 422.** Inductive reasoning begins with a ____ or a set of observations such as an experiment, a statistic, or a personal experience.
(A) Claim
(B) Specific observation
(C) Conclusion
(D) Evidence
- 423.** Priya observed different types of animals in her backyard. She noticed that lizards visited her backyard every morning. From this specific observation, she made a generalization that all reptiles visit all backyards every morning. Which type of reasoning did she use?
(A) Logical Fallacies
(B) Deductive reasoning
(C) Abductive reasoning
(D) Inductive reasoning
- 424.** Who made the scientific method?
(A) George Washington
(B) Barrack Obama
(C) Francis Bacon
(D) Ben Franklin
- 425.** A test is valid when:
(A) Measures what it is supposed to measure
(B) Measures intelligence
(C) Gives similar scores every time it is used
(D) Measures achievement
- 426.** In the social sciences or humanities it is never necessary to describe both the research program and the stance you have adopted as a researcher.
(A) True
(B) False
- 427.** (Analysis) Observing 100 white swans to say "All swans are white" is:
(A) Deductive thinking
(B) Inductive thinking
(C) Formal Logic
(D) Valid argument
- 428.** Choosing literature for a research overview is?
(A) Synthesizing previous research results related to the research issue
(B) Identifying errors to recommend changes in research.
(C) Analyzing and evaluating research results of another issue
(D) Listing previous related research results
- 429.** How can bias affect the results of an experiment?
(A) Bias can distort the results of an experiment, leading to inaccurate conclusions.
(B) Bias has no effect on experimental results.
(C) Bias improves the accuracy of conclusions.
(D) Bias only affects qualitative data.

430. Each field has its own way of conducting research.
(A) True
(B) False
431. What type of research do sociologists use to answer questions?
(A) Empirical research
(B) Theoretical research
(C) Historical research
(D) Literary research
432. The ____ method of research involves observing a sample of individuals of different ages.
(A) Cross-sectional
(B) Longitudinal
(C) Latitudinal
(D) Case-study
433. What method involves understanding the world through systematic observation and testing of hypotheses?
(A) Culture
(B) Technology
(C) Philosophy
(D) Science
434. Which type of review compares how different theories address an issue?
(A) Methodological review.
(B) Integrated review.
(C) Theoretical review.
(D) Context review.
435. What must be followed to come to verifiable conclusions in scientific inquiry?
(A) Personal opinions
(B) Logical, repeatable steps of the scientific method
(C) Random guesses
(D) Historical data
436. Which “school” of psychology emphasized objectivity of research methods and measurement?
(A) The gestalt school
(B) Functionalism
(C) Structuralism
(D) Behaviorism
437. Which reasoning method is described as ‘top-down’?
(A) Experimental reasoning
(B) Observational reasoning
(C) Deductive reasoning
(D) Inductive reasoning
438. This kind of research is based on the collection of specific data to develop new theories.
(A) Quasi experimental research
(B) Inductive research
(C) Deductive research
(D) Hypothetical research
439. Who is credited with pioneering the use of inductive reasoning in the scientific method?
(A) Kepler
(B) Galen
(C) Bacon
(D) Aristotle
440. What is construct validity?
(A) The degree to which the operationalization that is used reflects the psychological construct of interest.
(B) The extent to which a test yields consistent results over time.
(C) The degree to which test scores predict future performance.
(D) The extent to which a test appears to measure what it claims to measure.
441. Research aims for finding “answers” to “questions” it implies
(A) A framework of philosophies.
(B) Using valid and reliable methods and techniques.
(C) An unbiased design.
(D) All the above.

442. What is the recommendation when studying human psychology regarding the paradigm used?
- (A) Use a paradigm that reflects the real world.
 - (B) Always use animal models only.
 - (C) Ignore real-world applicability.
 - (D) Focus only on laboratory settings.
443. Methods in research design in research refers to ____
- (A) The various tools used to collect data for an exact research
 - (B) The statistical analysis for the data collected
 - (C) The ways to document data from the library
 - (D) The ways sampling is done in research
444. Any treatment or condition is not involved in this type of research.
- (A) Experimental
 - (B) Non-experimental
 - (C) Qualitative
 - (D) Field research
445. The ____ refers to a process for conducting an objective inquiry through data collection/research and analysis.
- (A) Investigative
 - (B) Experimental
 - (C) Scientific method
 - (D) Empirical evidence
446. What is the term for the systematic approach involving techniques, procedures, and rules used to acquire reliable knowledge?
- (A) Law
 - (B) Theory
 - (C) Research method
 - (D) Paradigm
447. What are the materials in your scientific method?
- (A) Your favorite markers and lucky eraser
 - (B) Everything you will need to complete your experiment
 - (C) A hypothesis
 - (D) Step by step directions to complete an experiment
448. A research study that follows over time groups of individuals who are alike in many ways but differ by a certain characteristic (for example, female nurses who smoke and those who do not smoke) and compares them for a particular outcome
- (A) Prospective cohort
 - (B) Cross-sectional
449. Which design is least likely to establish causality?
- (A) Experimental
 - (B) Quasi-experimental
 - (C) Correlational
 - (D) Longitudinal
450. Which of the following research methods is being described? detects naturally occurring relationships, to assess how well one variable predicts another
- (A) Descriptive method
 - (B) Correlational method
 - (C) Experimental method
 - (D) None of above
451. When creating a literature review, which of the following is NOT necessary?
- (A) Defining key terms and concepts
 - (B) Reporting original findings
 - (C) Analyzing and critiquing sources
 - (D) Establishing a theoretical or conceptual framework
452. Of the following, the best description of the use of theories is to:
- (A) Rehearse and reflect.
 - (B) Describe and correlate.
 - (C) Explain and predict.
 - (D) Inquire and experiment.

453. The barriers to communication are misunderstandings, language/culture, and ____
- (A) Texting
 - (B) Active listening
 - (C) Poor listening skills
 - (D) Clear communication
454. The school librarian notices that many students are requesting books about different countries in Africa. The librarian concludes that one of the social studies classes must be studying about Africa.
- (A) Inductive
 - (B) Deductive
 - (C) All the above
 - (D) None of the above
455. Which type of reasoning is used to draw logical conclusions from a large number of observations?
- (A) Deductive reasoning
 - (B) Hypothetical reasoning
 - (C) Inductive reasoning
 - (D) Theoretical reasoning
456. If there was a boy who claimed he could see into the future, what kind of research method would you use to study him?
- (A) Case study
 - (B) Survey
 - (C) Naturalistic observation
 - (D) Operational study
457. Which aesthetic is least precise for quantitative comparison?
- (A) Position
 - (B) Length
 - (C) Area
 - (D) Color hue
458. Hunter notices that every day his math teacher wears what seems to be a different tie every day. He starts keeping track of what his teacher wears. After one semester, Hunter approaches his teacher and states, "I think you wear a different tie every day, do you have 180 different ties?" What reasoning is Hunter using?
- (A) Inductive
 - (B) Deductive
459. What is one advantage of field research in market research?
- (A) It is less expensive than desk research.
 - (B) The information gathered is new and more up-to-date.
 - (C) It takes less time to carry out than desk research.
 - (D) It uses existing information.
460. This is when the researcher has a prior belief and uses the research in an unintentional attempt to confirm that belief.
- (A) Confirmation bias
 - (B) Leading question bias
 - (C) Question order bias
 - (D) Biased reporting
461. What is key to generating the data that can lead to a paradigm shift?
- (A) Philosophical debates
 - (B) Scientific methods
 - (C) Economic analysis
 - (D) Artistic expression
462. What does 'generalisation' refer to in research?
- (A) The process of collecting data
 - (B) The presentation of results in a report
 - (C) The application of findings from a sample to a larger population
 - (D) The summarization of the research process
463. If an experiment measures what it is supposed to measure, it is considered ____
- (A) Reliable
 - (B) Duplicable
 - (C) Valid
 - (D) Falsifiable

- 464.** Research validity means:
- (A) Correct results
 - (B) Long report
 - (C) Easy language
 - (D) Old references
- 465.** A teacher chooses between Monopoly and a custom-designed math card game. Which option ensures instructional value?
- (A) Monopoly because it uses money
 - (B) Monopoly because it requires decisions
 - (C) Card game because it ends with a clear winner
 - (D) Card game because it follows mathematical rules
- 466.** If an action researcher wanted to compensate for the lack of random assignment in data collection, what kind of validity would they most likely employ?
- (A) Weakness minimization
 - (B) Generalizability of external validity
 - (C) Sociopolitical validity
 - (D) None of above
- 467.** Psychologists / Researchers must use the scientific method when they are conducting research.
- (A) True
 - (B) False
- 468.** Which method in the physical and natural sciences allows formulating laws that remain true irrespective of the time and space and can be tested and proved repeatedly?
- (A) Research Method
 - (B) Traditional Method
 - (C) Empirical Method
 - (D) Ancient Method
- 469.** Statistical enquiry means..
- (A) Search for knowledge with the help of statistical methods
 - (B) Collection of anything
 - (C) Search for knowledge
 - (D) It is science for knowledge
- 470.** A longitudinal study follows a group of participants:
- (A) Only at one specific point in time.
 - (B) Over a long period, studying them at intervals.
 - (C) Until they decide to withdraw.
 - (D) Only for qualitative data collection.
- 471.** Which of the following is a key problem with two-variable cases of nonexperimental research?
- (A) Unclear temporal order of the variables
 - (B) Lack of extraneous variables
 - (C) Too much manipulation of independent variables
 - (D) None of above
- 472.** The term research method refers to ____
- (A) How you conduct a study and collect data
 - (B) How you manipulate the IV in an experiment
 - (C) How you select your sample
 - (D) None of above
- 473.** Scientists are using ____ to study the possible causes and effects of Earth's increased temperature.
- (A) Simulations
 - (B) Emissions
 - (C) Fossil fuels
 - (D) Increasing
- 474.** The research method used if you watch TV for a week and count how many shows portray violence.
- (A) Interviews
 - (B) Content analysis
 - (C) Statistical analysis
 - (D) Case study
- 475.** Which type of reasoning involves making predictions based on patterns?
- (A) Inductive
 - (B) Deductive

476. 'Research methodology' refers to:
- (A) The sampling technique
 - (B) The tools that the researcher use
 - (C) The chain of association between the research question and the research design
 - (D) Qualitative methods
477. Is a type of non-experimental research method in which a researcher measures two variables, understands and assesses the statistical relationship between them with no influence from any extraneous variable.
- (A) Correlational Research
 - (B) Experimental Research
 - (C) Survey Research
 - (D) Quantitative Research
478. Every time I've watered my plants, they have grown taller. Therefore, if I continue to water my plants, they should keep growing taller.
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) All the above
 - (D) None of the above
479. What is the process or techniques used to conduct research and gather data called?
- (A) Conclusion
 - (B) Analysis
 - (C) Thesis
 - (D) Methodology
480. What is a key strength of longitudinal studies?
- (A) Quick data collection
 - (B) Low cost
 - (C) Tracking changes over time
 - (D) Random sampling
481. Which of the following is one major factor to consider in choosing a research methodology?
- (A) Objectives
 - (B) Participants
 - (C) Locale
 - (D) System
482. A research intends to explore the result of possible factors for the organization of effective mid-day meal interventions. Which research method will be most appropriate for this study?
- (A) Descriptive survey method
 - (B) Historical method
 - (C) Ex-post facto method
 - (D) Experimental method
483. Validity in research refers to (Price, L. R. (2017) Chapter 3)
- (A) The consistency of a measurement over time
 - (B) The ability of a study to be replicated with similar results
 - (C) The degree to which a measure produces the same results under the same conditions
 - (D) The extent to which a measurement accurately captures the construct it intends to measure and supports the inferences drawn from it
484. A line of thought that begins with a specific observation and draws a broad conclusion.
- (A) Hasty Generalization
 - (B) Inductive Reasoning
 - (C) Deductive Reasoning
 - (D) Slippery Slope
485. Pattern of thought that starts with an observation and ends with a theory:
- (A) Deductive
 - (B) Inductive
486. This is anything that gets in the way of communication.
- (A) Feedback
 - (B) Message
 - (C) Noise
 - (D) Sender

487. One purpose of organizing a literature review by methodology is to:
- (A) Criticize all methods used in previous studies
 - (B) Compare different approaches to studying a similar topic
 - (C) Group all studies by publication date
 - (D) Limit the scope of research findings
488. There are many organized and systematic ways of conducting empirical research. Which of the following IS NOT a strategy in empirical research?
- (A) Experimenting
 - (B) Eliciting behavior
 - (C) Logical reasoning
 - (D) Observing
489. Which scientific method is a bottom-up or generative approach to research?
- (A) Deductive method.
 - (B) Pattern method.
 - (C) Inductive method.
 - (D) Hypothesis method.
490. Using facts, definitions, accepted properties, and the laws of logic to form a logical true argument
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Logical Conclusions
 - (D) Conjecture
491. Nick and Riley are evaluating a source for a research project. Which of the following steps should they take to ensure the source is accurate?
- (A) Check the author's credentials and the publication date.
 - (B) See if the source has a lot of comments.
 - (C) Look at the number of images in the source.
 - (D) Check if the source is easy to read.
492. Instrument administered once. One version of the instrument. More than one individual observes behavior of the participants
- (A) Test-retest reliability
 - (B) Alternate forms reliability
 - (C) Alternate forms and test-retest reliability
 - (D) Interrater reliability
 - (E) Internal consistency reliability
493. Which characteristic is unique to action research questions when contrasted with quantitative and qualitative methods?
- (A) They are more concrete
 - (B) They are more generalized
 - (C) They are more fluid
 - (D) None of above
494. Which form of reasoning starts with a general statement and concludes with a specific instance?
- (A) Abductive reasoning
 - (B) Deductive reasoning
 - (C) Inductive reasoning
 - (D) None of the above
495. A systematic literature review is:
- (A) One which starts in your own library, then goes to on-line databases and, finally, to the internet
 - (B) A replicable, scientific and transparent process
 - (C) One which gives equal attention to the principal contributors to the area
 - (D) A responsible, professional process of time-management for research
496. Which of the following are the two methods in research?
- (A) Biological and Physical
 - (B) Mathematical and Scientific
 - (C) Qualitative and Quantitative
 - (D) Practical and Complicated

497. What is a "construct" in psychological research?
- (A) A physical object used in experiments
 - (B) An abstract concept used to explain behavior
 - (C) A type of survey method
 - (D) A statistical tool for data analysis
498. On the basis of which studies are the preliminary results of the study about the object, process, phenomenon analyzed?
- (A) Theoretical
 - (B) Practical
 - (C) Experimental
 - (D) Technological
 - (E) Economic
499. Practice 2: Research Methods and Design involves evaluating qualitative and quantitative research methods and study ____
- (A) Designs
 - (B) Outcomes
 - (C) Participants
 - (D) Locations
500. The results of the data are observable and measurable using structured instruments.
- (A) Objectivity
 - (B) Generalizability
 - (C) Controllability
 - (D) Replicability
501. Lucy wants to find out the number of frogs in a pond near her house. She catches 54 of them, puts a leg band on each frog, and put them back in the pond. The next week she catches 70 frogs. Of those 70 frogs 13 have a leg band. Based on this information, what is a reasonable estimate of the number of frogs in the pond?
- (A) 208
 - (B) 632
 - (C) 291
 - (D) 111
502. What is the term used for the type of generalizability where we assume that a situation in which many of the variables are the same is likely to result in the same findings as the original study?
- (A) Transferability
 - (B) Theoretical generalizability
 - (C) Population validity
 - (D) None of above
503. This is the participants' tendency to respond or behave in a way that they think will make them liked or accepted.
- (A) Social desirability bias
 - (B) Acquiescence bias
 - (C) Sensitivity bias
 - (D) Dominant respondent bias
504. Scientific Method was first outlined by ____ to provide logical, rational problem solving across many scientific field.
- (A) Charles Darwin
 - (B) Francis Bacon
 - (C) William James
 - (D) James Cattell
505. Which type of reasoning involves starting with specific observations and forming a general conclusion?
- (A) Deductive
 - (B) Inductive
 - (C) Abductive
 - (D) None of the above
506. Every flavor Snapple has made tastes good. The next flavor Snapple makes will taste good.
- (A) Inductive
 - (B) Deductive
507. A researcher wants to improve reliability. Which section should be carefully revised?
- (A) Introduction
 - (B) Methodology
 - (C) Results
 - (D) References

- 508.** Support that is provided for an argument
(A) Synthesis
(B) Inquiry
(C) Procedures
(D) Evidence
- 509.** How does action research align with the concept of lifelong learning for educators?
(A) By avoiding collaboration with peers
(B) By discouraging experimentation
(C) Through continuous reflection and adaptation
(D) By promoting a fixed mindset
- 510.** Research Philosophy involving researchers to interpreting elements of the study, thus — integrates human interest into a study. — Accordingly, this philosophy emphasizes qualitative analysis over quantitative analysis.
(A) Objectivism
(B) Positivism
(C) Interpretivism
(D) Determinism
- 511.** A conclusion drawn from too little evidence
(A) Over-generalization
(B) Hasty generalization
(C) Circular reasoning
(D) Attack the man
- 512.** How might a correlational study mislead conclusions about cause and effect?
(A) By using random sampling
(B) By implying causality from association
(C) By manipulating variables
(D) By using control groups
- 513.** What subject is included in the K-12 Basic Education Curriculum that develops critical thinking and problem solving skills through qualitative and quantitative research?
(A) Practical Research 1
(B) Practical Research 2
(C) Practical Research 3
(D) Inquiries, Investigations, and Immersion
- 514.** What reasoning makes predictions based on patterns and observations?
(A) Inductive
(B) Deductive
- 515.** The part of the action research spiral that differentiates this research methodology from other kinds of research is;
(A) The kinds of data that are collected.
(B) Looking at multiple sources of data.
(C) Taking action based on results.
(D) Thinking about or analyzing data in more than one way.
- 516.** Which of the following research methodologies is best suited for studying the levels of student performance based on teaching strategies?
(A) Quantitative Research
(B) Descriptive Research
(C) Qualitative Research
(D) Observational Research
- 517.** Method of research that looks at different age groups at the same time in order to understand changes that occur during a life span
(A) Case Study
(B) Cross-Sectional
(C) Replication
(D) Experimental group
- 518.** Correlational studies are used primarily to
(A) Examine relationships among variables.
(B) Examine if differences between groups exist.
(C) Determine causal relationships.
(D) Determine if experimental treatments work.
- 519.** Combining findings from various studies to identify patterns.
(A) Meta-analysis
(B) Case study
(C) Randomized control trial
(D) Longitudinal study

520. What method did Francis Bacon propose?
- (A) Intuitive reasoning
 - (B) Deductive reasoning
 - (C) Abductive reasoning
 - (D) Inductive reasoning
521. Which phase of clinical research is used to determine a drug's interaction with the human system, involves a small number of healthy volunteers, and usually takes around one year to finish?
- (A) Phase 1
 - (B) Phase 2
522. Tyler and Ayla, two young archaeologists, discovered a scale, weights, and marked rods in their backyard, which they believe are artifacts from the ancient city of Harappa. What does this suggest about the people of Harappa?
- (A) They had a uniform way to measure items
 - (B) They knew how to make tools
 - (C) They traded often
 - (D) They started a new kind of math
523. Which psychological research method is most appropriate for exploring the impact of cultural differences on purchasing behaviors of young adults?
- (A) Naturalistic observation
 - (B) Experiment
 - (C) Survey
 - (D) Case study
524. Of the types of validity for tests, what reflects the knowledge and skills in the program of studies?
- (A) Curricular validity
 - (B) Criterion validity
 - (C) Content validity
 - (D) Predictive validity
525. Determine whether the data is qualitative or quantitative: Hair colors of classmates.
- (A) Qualitative
 - (B) Quantitative
526. All of the following are methods of psychological research EXCEPT
- (A) Testing Method.
 - (B) Latitudinal Study.
 - (C) Case Study.
 - (D) Longitudinal Study.
527. Can the findings be used to generalize?
- (A) External validity
 - (B) Internal validity
 - (C) Theoretical validity
 - (D) Interpretive validity
 - (E) Descriptive validity
528. Which technique involves summarizing ideas briefly and should follow the themes and concepts with critical assessment of the material?
- (A) Annotated bibliography
 - (B) Literature
 - (C) Method
 - (D) Sampling
529. Which one of the following is not a characteristic of scientific method?
- (A) Deterministic
 - (B) Rationalism
 - (C) Empirical
 - (D) Abstraction
530. Which of the following statements uses deductive reasoning?
- (A) All mammals have lungs. A whale is a mammal. Therefore, a whale has lungs.
 - (B) The last five apples I ate were sour, so all apples must be sour.
 - (C) I saw it rain every day this week, so it will rain tomorrow.
 - (D) My friend likes pizza, so everyone must like pizza.
531. A way to fact check news by making sure you have three different points of information.
- (A) Responsiveness
 - (B) Authority check
 - (C) Back check
 - (D) Triangulation

532. Select the wrong method:
- (A) Survey
 - (B) Tarification
 - (C) Analysis of documents
 - (D) Observation
 - (E) Experiment
533. The problems social scientists study are usually concerned with the cause(s) of something or the effect(s) of something on other things.
- (A) True
 - (B) False
534. Carmen notices that every time she uses a certain bird food in her bird feeder, blue jays land on the feeder. She concludes that blue jays prefer this food more than other birds do. What type of reasoning is Carmen using?
- (A) Inductive reasoning
 - (B) Subjective reasoning
 - (C) Deductive reasoning
 - (D) Faulty reasoning
535. A chef tries cooking four different types of mushrooms and finds that they all taste great in pasta. He decides that mushrooms, in general, are perfect for pasta dishes. What type of reasoning is this?
- (A) Inductive
 - (B) Deductive
536. What type of reasoning is used when data predicts future outcomes?
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Rote reasoning
 - (D) Logical reasoning
537. The goal of a researcher is to test concepts and patterns known from theory using new empirical data. Which form of scientific inquiry is being used?
- (A) Deductive
 - (B) Inductive
 - (C) Methods
 - (D) Systematic
538. Which 'scientific method' follows these steps: 1) observation/data, 2) patterns, 3) theory?
- (A) Inductive
 - (B) Deductive
 - (C) Hypothesis testing
 - (D) Description
539. Even if the method you use is standard in the discipline, you should ____
- (A) Justify your methodological choice.
 - (B) Provide a detailed explanation of the method.
 - (C) Be hesitant regarding its use.
 - (D) Worry whether it is an appropriate method.
540. Read each statement and then determine which type of data it characterizes: qualitative, quantitative, or both. Can be used in an attempt to answer social science questions
- (A) Quantitative
 - (B) Both
 - (C) Qualitative
 - (D) None of above
541. What is Reliability?
- (A) The term reliability in psychological research refers to the consistency of a research study or measuring test.
 - (B) Reliability is the extent to which a concept, conclusion or measurement is well-founded and likely corresponds accurately to the real world.
 - (C) Reliability is the extent to which the scores from a measure represent the variable they are intended to.
 - (D) Not sure
542. Which part of an argument is responsible for providing evidence to support a claim?
- (A) Claim
 - (B) Evidence
 - (C) Counterclaim
 - (D) Conclusion

- 543.** This is a type of research design that assesses relationships between two or more variables.
(A) Correlational
(B) Descriptive Survey
(C) Experimental
(D) Comparative
- 544.** Which researcher/psychologist came up with this kind of graph that represents the relationship between forgetting and time?
(A) Loftus
(B) Ebbinghaus
(C) Binet
(D) Spearman
- 545.** Which of the following is the basis for inductive reasoning?
(A) Definitions and accepted properties
(B) Facts and rules
(C) Laws of logic
(D) Observed patterns
- 546.** What is the missing part of this qualitative research title: DEVELOPING SAFE SOCIAL SKILLS AMONG ABIS SHS STUDENTS IN THE NEW F2F
(A) Research goal or result
(B) Independent variable
(C) Dependent variable
(D) None
- 547.** The repetition of a prior research study in a different setting and time is called ____
(A) Redubplication
(B) Replication
(C) Double research
(D) Research duplication
- 548.** Refers to the extent to which the findings do not only represent the samples but also the population at large
(A) Generalizability
(B) Generalization
(C) Generalize
(D) General
- 549.** A correlational designs seek the relationship or degree of association between two or more variables or concepts.
(A) True
(B) False
- 550.** What is a potential source of income for universities through entrepreneurial models?
(A) Public funding
(B) Government subsidies
(C) Research commercialization
(D) Student tuition fees only
- 551.** Which of the following indicates that a research problem is solvable and researchable?
(A) The problem is highly complex and requires specialized expertise
(B) The problem can be addressed through existing research methods and techniques.
(C) The problem requires significant financial resources to investigate
(D) The problem is highly abstract and lacks clear definitions.
- 552.** The following are the characteristics of a good source of information EXCEPT:
(A) Sources from reputable academic institutions are useful.
(B) Sources published online are valid and always acceptable.
(C) Sources which have in-text and reference citations are always credible.
(D) Sources from any form of information.
- 553.** A research method comparing people of different ages at the same time.
(A) Longitudinal study
(B) Cross-sectional study
(C) Cohort
(D) Behavior genetics
- 554.** Logically reasoning from specific observations, examples and facts to arrive at a general conclusion or principle.
(A) Inductive reasoning
(B) Mad reasoning

- (C) Deductive reasoning
(D) None of above
555. Which of the following is the right order of deductive method?
(A) More specific-specific-general idea
(B) Specific-general idea-more specific
(C) General idea-more specific-specific
(D) General idea-specific-more specific
556. A number of popular celebrities, such as Morgan Freeman, have fallen victim to rumors of their death spread on the Internet. Whether the news is passed through electronic messages or face-to-face, insights gleaned from ____ could help to explain how this misinformation is passed through social circles.
(A) Class fractions
(B) Stratification
(C) Symbolic interaction
(D) Network analysis
557. What is something that psychology research relies on?
(A) Anecdotal evidence
(B) Inductive and deductive reasoning
(C) Astrology
(D) Guesswork
558. We try to measure in standardized units so that our measurements will be meaningful.
(A) TRUE
(B) FALSE
(C) NOT SURE
(D) None of above
559. What is the main purpose of scientific methodology?
(A) To define principles and methods of research
(B) To teach students
(C) To manage schools
(D) To translate texts
(E) To assess exams
560. Scientists use models to ____ future trends in population growth.
(A) Observe
(B) Gene
(C) Predict
(D) Researcher
561. Choose true or false. Inductive reasoning involves making a generalization from specific facts, and observations.
(A) True
(B) False
562. Decide whether the statement is true or false: Empirical research relies on evidence.
(A) True
(B) False
563. Which type of evidence relies on personal beliefs, opinions, or anecdotes rather than direct observation or experimentation?
(A) Empirical
(B) Feasible
(C) Non-empirical
(D) Objectivity
564. Mrs. Cho is careful to make sure that she fairly represents the whole year's work on the final exam for her American literature class. If Mrs. Cho achieves this goal, her test will have
(A) Test-retest reliability.
(B) Construct validity.
(C) Content validity.
(D) Split-half reliability.
565. When a researcher starts with the dependent variable and moves backwards, it is called ____
(A) Retrospective research.
(B) Descriptive research.
(C) Predictive research.
(D) Exploratory research.
566. Which of the following are an important reason to do repeated trials?
(A) Reliable

- (B) Accurate
 - (C) Valid results
 - (D) Reliable, accurate, and valid results
567. Scientific Inquiry and Research Methods are prevalent in all units of study in high school psychology.
- (A) True
 - (B) False
568. The types of literature that are actual researches published in different reputable journals.
- (A) CONCEPTUAL LITERATURE
 - (B) RESEARCH LITERATURE
 - (C) GRAY LITERATURE
 - (D) CRIMINAL LITERATURE
569. It refers to the research technique used to gather data.
- (A) Methodology
 - (B) Method
570. Which ideas predicted greater famines from overpopulation than occurred?
- (A) The Demographic Transition
 - (B) The Epidemiological Transition Model
 - (C) Malthusian theory
 - (D) Neo-Malthusian theory
 - (E) China's "One Child" policy
571. It is defined as the approaches researchers use or can use to collect and analyze data.
- (A) Research
 - (B) Research Instrument
 - (C) Research Methodology
 - (D) Relevant Literature
572. Which of the following examples applies to investigator triangulation?
- (A) Using sociological theory to explain human behavior
 - (B) Having six researchers recording data in the field
 - (C) Having multiple participants in the study
 - (D) Conducting ethnographic research in two different locations
573. What is the primary focus of research methodology?
- (A) Data analysis
 - (B) Knowledge creation
 - (C) Sampling methods
 - (D) Publication strategies
574. To allow study replication, the Methods should be written so that another researcher could:
- (A) Repeat the study using the same procedures
 - (B) Infer the hypotheses from scattered clues
 - (C) Guess the sample size from context alone
 - (D) Reverse-engineer results without data
575. Which is NOT part of the methodology?
- (A) Sampling
 - (B) Data Collection
 - (C) Hypothesis
 - (D) Research Design
576. It enables the continuous improvement of schools and institution by assessing their effectiveness, leading to informed policy decision and resource allocation?
- (A) Research design
 - (B) Educational research
 - (C) Quantitative research
 - (D) None of above
577. What is a resource you can use to identify a discipline's key concepts?
- (A) A podcast
 - (B) A blog
 - (C) An introductory textbook
 - (D) A course catalog

578. Which of the following is TRUE about features of quasi-experimental research design?
- (A) Manipulation. control group, randomization
 - (B) Manipulation, but no control group or randomization
 - (C) No manipulation of independent variable
 - (D) Use of correlational approach
579. Which type of reasoning involves making a generalization or prediction based on observations or examples?
- (A) Inductive
 - (B) Deductive tagsG.RL.1.2
580. Which of the following can be considered as a strong argument in an argumentative text?
- (A) "I believe this is true because it's obvious."
 - (B) "According to research, 75% of people agree with this point."
 - (C) "I don't like the other opinion, so I disagree."
 - (D) "Everyone knows that this is the best option."
581. — is concerned with selecting specific methods, tools and techniques for collecting, classifying, analysing and interpreting data.
- (A) Decision Making
 - (B) Sample Design
 - (C) Research Methodology
 - (D) Business Research
582. Your little brother has chocolate sauce on his face. You conclude he must have eaten chocolate sauce.
- (A) Inductive
 - (B) Deductive
 - (C) All the above
 - (D) None of the above
583. Marketers have developed a hypothesis, and they want to test it. Which of the following research designs is most appropriate in this situation:
- (A) Causal research
 - (B) Exploratory research
 - (C) Descriptive research
 - (D) Statistical research
584. Research that derives its data by means of direct observation or experiment, such research is used to answer a question or test a hypothesis
- (A) Theoretical
 - (B) Empirical
 - (C) All the above
 - (D) None of the above
585. True/False: A researcher has more control over observations in a lab setting.
- (A) True
 - (B) False
586. A research instrument refers to the tool or device used to collect data, such as surveys or interview guides.
- (A) True
 - (B) False
587. What is it called when the measured value fluctuates randomly with repeated measurements on the same individual?
- (A) Random error
 - (B) Bias
 - (C) Systematic error
 - (D) Calibration error
588. The scientific method is Empirical meaning —
- (A) The scientific method is made available for evaluation by others, especially other scientists. Replication should be able to be accomplished.
 - (B) Observations are structured so that the researchers biases and beliefs do not influence the outcome of the story
 - (C) Answers are obtained by making (systematic or structured) observations
 - (D) None of above

- 589.** Classroom Action Research is intended to ____ the quality of teaching and learning process
- (A) Use
 - (B) Make
 - (C) Get
 - (D) Improve
- 590.** The degree to which a test measures a concept, trait, or theoretical construct is known as:
- (A) Reliability
 - (B) Validity
 - (C) Standardization
 - (D) Split-half reliability
- 591.** It is recommended to look for nonfiction sources created by people and organizations that are expert in that field.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 592.** Jonas wants to understand the relationship between head size and intelligence. What type of study might he perform?
- (A) Correlational
 - (B) Meta-analysis
 - (C) Experimental
 - (D) Descriptive
- 593.** A chemistry experiment produces the same result 20 times. You conclude that it will always produce the same result.
- (A) Inductive
 - (B) Deductive
- 594.** Emphasizes the political possibilities and empowerment of those with little power in their communities and society
- (A) Participatory Action Research (PAR)
 - (B) Critical Action Research (CAR)
 - (C) Action Science (AS)
 - (D) Appreciative Inquiry (AI)
- 595.** Which of the following is NOT typically included in a critical literature review?
- (A) Summary of findings
 - (B) Analysis of methodologies
 - (C) Personal anecdotes
 - (D) Identification of research gaps
- 596.** Which type of reasoning is based on CAUSE AND EFFECT or CORRELATIONS?
- (A) Inductive
 - (B) Deductive
 - (C) Causal
 - (D) None of the above
- 597.** A visual, verbal, and/or mathematical explanation of data collected from many experiments.
- (A) Model
 - (B) Hypothesis
 - (C) Control
 - (D) Theory
- 598.** The Content Analysis is ____
- (A) An objective
 - (B) A research tool
 - (C) Optional
 - (D) Useless
- 599.** An Individual looks within, observer, analyses, and reports his own feelings is called as
- (A) Observation
 - (B) Correlation
 - (C) Introspection
 - (D) Differentiation
- 600.** The soundness of the methods that researchers use to estimate the degree of the association between independent and dependent variables involves ____ validity.
- (A) External
 - (B) Internal
 - (C) Construct
 - (D) Statistical conclusion

- 601.** Volunteer bias will usually have an effect on research results because
- (A) They do not have to sign a consent form
 - (B) They are willing to disclose information on that topic
 - (C) The research will most likely be unethical
 - (D) They will be given the placebo and believe that the treatment is working
- 602.** When action research intends to influence thinking skills, sense of efficacy, willingness to share and communicate attitudes towards process of change, which is being described?
- (A) Sense of collaboration
 - (B) Knowledge transformation
- 603.** The challenge that remained in integrating truly investigative work into the science curriculum in the 20th century was:
- (A) Finding ways to make investigative work a central part of the curriculum
 - (B) Lack of interest in science among students
 - (C) Insufficient funding for science programs
 - (D) Overemphasis on rote memorization
- 604.** Such a bias can occur if a participant gets influenced by the sponsor's reputation or mission statement.
- (A) Acquiescence bias
 - (B) Social acceptability bias
 - (C) Habituation bias
 - (D) Sponsor bias
- 605.** What provides support for an argument? Choose all that apply.
- (A) Reasons
 - (B) Evidence
 - (C) Background Information
 - (D) Common sense
- 606.** Subjective vs. objective: Which option correctly matches each term to its description?
- (A) Subjective = fact-based with little to no bias; Objective = opinion-based and may contain bias
 - (B) Subjective = opinion-based and may contain bias; Objective = fact-based with little to no bias
 - (C) Subjective = only numbers and data; Objective = only feelings and beliefs
 - (D) Subjective = unverifiable rumors; Objective = unverifiable rumors
- 607.** Is the set of beliefs, values, and attitudes that belong to a specific culture and are brought by each participant into the encounter.
- (A) Psychological Context
 - (B) Cultural Context
 - (C) Noise
 - (D) External Noise
- 608.** Choose the example of inductive reasoning: 'I have seen four students from this school, and they were all polite. Therefore, all students from this school are polite.'
- (A) Deductive
 - (B) Inductive
 - (C) Abductive
 - (D) Analogical
- 609.** Which of the following research methods is being used if the same subjects are tested at two, four, and six years of age?
- (A) Longitudinal
 - (B) Cross-sectional
 - (C) Correlational
 - (D) Projective
- 610.** The research questions in qualitative research designs are the same as those in quantitative research designs.
- (A) True
 - (B) False
- 611.** Debate about whether psychological characteristics are biologically innate or acquired through experience
- (A) Nature vs nurture debate

- (B) Mind-body problem
 - (C) Mind-body dualism
 - (D) Introspection
 - (E) Structuralism
- 612.** What is the purpose of attitude research?
- (A) To gather information on how people feel about things
 - (B) To analyze market data
 - (C) To evaluate product design
 - (D) To help the people in the office feel better about themselves
- 613.** Whole to part reasoning that determines the validity of a formal argument. The conclusion of this argument must be true if the premises are true.
- (A) Propaganda
 - (B) Logic
 - (C) Deductive reasoning
 - (D) Relevance
- 614.** Types of Quantitative Data and Measures-measures a person's ability to estimate how they will perform at some time in the future or in a different situation. (Stanford-Binet IQ Scale)
- (A) Norm-referenced test
 - (B) Criterion-referenced test
 - (C) Intelligence test
 - (D) Aptitude test
 - (E) Interest inventory
- 615.** In the past, students who studied for at least three hours a day tended to perform well on exams. Since I studied for four hours, I will likely do well on my test.
- (A) Deductive
 - (B) Inductive
 - (C) AbductiveTagsCCSS.RL.6.1CCSS.RL.9-10.1CCSS.RI.6.1CCSS.RL.11-12.1CCSS.RI.8.1
 - (D) None of above
- 616.** Research method in which data are collected from groups of participants of different ages and compared.
- (A) Cross-sectional study
 - (B) Longitudinal study
 - (C) Case study
 - (D) Experiment
 - (E) Naturalistic observation
- 617.** Which initiative helps advanced learners at MIT ADT?
- (A) Peer tutoring programs
 - (B) Research-based internships
 - (C) Remedial classes
 - (D) Counseling sessions
- 618.** Which type of question invites patients to tell you in their own words their opinions and ideas?
- (A) Directive questions
 - (B) Open-ended questions
 - (C) Closed-ended questions
 - (D) Leading questions
- 619.** A reliable source is
- (A) Biased
 - (B) Trusted
 - (C) Trying to sell you something
 - (D) Google
- 620.** A child examines ten tulips from a crop, all of them are red, and concludes that all tulips must be red.What type of reasoning was used?
- (A) Inductive
 - (B) Deductive
- 621.** Helping students draw tentative generalizations after having observed specific instances of a phenomenon
- (A) Rationalism
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Empiricism

- 622.** From general to specific we have:
(A) Technique, approach, method
(B) Method, technique, approach
(C) Approach, method, technique
(D) None of above
- 623.** In a ____ design, one group of people is followed and assessed at different times as the group ages.
(A) Longitudinal
(B) Cross-sectional
(C) Cross-sequential
(D) Cross-longitudinal
- 624.** Who is usually involved in inquiries to help solve specific problems when research is done outside universities or labs?
(A) Employees and consultants in all industries
(B) Volunteers for that specific research
(C) Well known scientists in the specific fields
(D) None of above
- 625.** What is the role of a search strategy in a systematic review?
(A) To identify all relevant studies on the research question
(B) To ensure the review is comprehensive and unbiased
(C) To minimize the risk of missing important studies
(D) All of the above
- 626.** Which of the following is not a type of reliability?
(A) Internal consistency.
(B) Split-half.
(C) Content.
(D) Test-retest.
- 627.** Opinions in literature reviews become valid when ____
(A) A famous author is saying it
(B) They are well written
(C) They prove my hypothesis
(D) They are based on empirical research
- 628.** Desi is a farmer who lives in a rural mountain town far from cities with no trees. One way he might adapt to this particular environment is by ____
(A) Moving to a big city when he graduates from college
(B) Terrace farming to grow crops in a mountain region
(C) Never learning to ski, ice skate or hike
(D) Making houses and furniture out of tree bark
- 629.** Based on evidence
(A) Subjective reasoning
(B) Objective reasoning
(C) Data
(D) Empirical evidence
- 630.** Research utilizes proven analytical procedures in gathering data, whether historical, descriptive, experimental, and case study.
(A) Empirical
(B) Logical
(C) Cyclical
(D) Analytical
- 631.** What should you do when you find a useful book or article during your research?
(A) Ignore it and continue searching
(B) Check the bibliography to find other relevant sources
(C) Write a summary of your personal thoughts about the source
(D) Delete it from your search results
- 632.** Valid sources report factual information that can be counted on to be true while Accurate sources present unbiased information that often includes a balanced discussion of controversial ideas.
(A) True
(B) False
(C) Maybe
(D) Not mentioned

- 633.** Which of the following is the best research method for developmental psychologists?
- (A) Case Study
 - (B) Experimental
 - (C) Longitudinal
 - (D) Cross Sectional
- 634.** What does the term "reliable" refer to in the context of measurements?
- (A) Consistency or repeatability of a measurement under the same conditions
 - (B) Accuracy of a single measurement
 - (C) The ability to measure different quantities
 - (D) The speed of taking measurements
- 635.** Founded psychometrics; developed the ideas of correlation, standard deviation, regression toward the mean
- (A) Anna Freud
 - (B) Francis Galton
 - (C) Jane Goodall
 - (D) Michael Gazzaniga
- 636.** What kind of question are you using when you ask someone "How long have you been in this field of work?"
- (A) Specific question
 - (B) Hypothetical open question
 - (C) Closed question
 - (D) Open ended questions
- 637.** Fido has a tail, Rex has a tail, and Snoopy has a tail. Therefore, all dogs have tails. What type of reasoning was used?
- (A) Inductive
 - (B) Deductive
- 638.** What refers to the appropriateness, meaningfulness, correctness, and usefulness of the inferences a researcher makes
- (A) Reliability
 - (B) Validity
 - (C) Exactness
 - (D) Completeness
- 639.** When similar results are obtained over time and across situations, this is a measure of:
- (A) Validity.
 - (B) Reliability.
 - (C) Predictive accuracy.
 - (D) Biasness.
- 640.** The advantage of this method of research is that it can help predict behavior by identifying relationships between variables.
- (A) Correlational
 - (B) Experiments
 - (C) Case Study
 - (D) Survey
 - (E) Observational
- 641.** What is a supposition or a system of ideas intended to explain something, especially one based on general principles independent of the thing to be explained?
- (A) Theory
 - (B) Idea
 - (C) Opinion
 - (D) Hypothesis Edit
- 642.** Which type of assertion relies on logical reasoning and deduction to support its claim?
- (A) Unsupported assertion
 - (B) Evidence-based assertion
 - (C) Logical assertion
 - (D) Speculative assertion
- 643.** Which research focus best fits the phrase product use and attitude?
- (A) How customers use and feel about offerings
 - (B) How suppliers quote logistics prices
 - (C) How regulators audit compliance tests
 - (D) How employees submit expense claims
- 644.** Repeating the essence of an earlier research study with different participants and in different circumstances is called...
- (A) The scientific method
 - (B) Operationalizing
 - (C) Replication
 - (D) Cloning Edit

- 645.** What is the recommended research method for beginning researchers?
(A) Experimental research
(B) Non-experimental study or survey research
(C) Comparative research
(D) Longitudinal study
- 646.** What is NOT the goal of scientific method of acquiring knowledge?
(A) Fact-finding.
(B) Control.
(C) Prediction.
(D) Explanation.
- 647.** The participant attempts to discern the experimenter's hypotheses, but only in order to destroy the credibility of the study.
(A) Social desirability effect
(B) Screw you effect
(C) Placebo effect
(D) Expectancy effect
- 648.** Which of the following is NOT a strategy for organizing the information in a literature review?
(A) Chronological order
(B) Alphabetical order
(C) By research methodology
(D) Random order
- 649.** Explains why researcher chose to use particular methods-has concepts and rationale behind adhering these concepts
(A) Methodology
(B) Research design
(C) Research
(D) Practical research
- 650.** This refers to whether or not the test measures what it claims to measure. Select one:
(A) Reliability.
(B) Validity.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 651.** Identify whether the following are strengths or limitations of action research. "Details local complexities."
(A) Limitation
(B) Strength
- 652.** This type of generalization can happen when the sample is representative of the target population.
(A) Case-to-case generalization
(B) Theoretical generalization
(C) Sample-to-population generalization
(D) None of above
- 653.** How can "movements that originate outside a profession" contribute to research?
(A) By hindering innovation and progress in research.
(B) By providing new perspectives and approaches to research problems.
(C) By limiting the scope of research to a single discipline.
(D) By discouraging interdisciplinary collaboration.
- 654.** How is the author integrating research into their teaching practice?
(A) By discouraging student questions
(B) By avoiding technology tools
(C) By incorporating evidence-based practices
(D) By ignoring research findings
- 655.** A way to reach a conclusion based on known facts
(A) Deductive reasoning
(B) Inductive reasoning
(C) Properties of congruence
(D) None of above
- 656.** What involves the collection, analysis and interpretation of data?
(A) Rationale
(B) Hypothesis
(C) Research Inquiry
(D) Research Methodology

657. What does the following definition refer to:
___ FROM THE SPECIFIC TO THE GENERAL
- (A) Scientific Method
 - (B) Deductive Method
 - (C) Inductive Method
 - (D) None of the Above
658. Which of the following issues is appropriate for collaborative action research by teachers in the school?
- (A) Poverty in the regional community
 - (B) Political dynasty during elections
 - (C) Increasing number of student absences
 - (D) Climate change affecting the world
659. Is this a reason or evidence: People should be vegan because the way that meat is processed for the masses is inhumane and cruel to animals.
- (A) Reason
 - (B) Evidence
 - (C) Claim
 - (D) None of above
660. Where did scientists at Colorado State University and the U.S. National Park Service analyze noise levels for a study?
- (A) In cities across the U.S.
 - (B) In rural areas across the U.S.
 - (C) In federal, state, and local parks
 - (D) In areas by the ocean
661. Researchers are using when they start with the data and create a theory to explain it; and they are using ___ when they start with a theory and collect data to support or refute that theory
- (A) Induction; deduction
 - (B) Deduction; induction
 - (C) Reduction; induction
 - (D) Induction; reduction
662. Which type of study observes variables without manipulating them?
- (A) Experimental
 - (B) Correlational
 - (C) Quasi-experimental
 - (D) Action research
663. A kind of reasoning based on repeated observations and is characterized by drawing a conclusion from observations of specific examples.
- (A) Inductive
 - (B) Deductive
 - (C) Logic
 - (D) Reasoning
664. Deductive approach is more beneficial than inductive approach.
- (A) True
 - (B) False
 - (C) It depends
 - (D) None of above
665. Which research intends to project the demands or needs of the students in the future in order to determine what resources are needed?
- (A) Trend Analysis
 - (B) Development Research
666. Earth rotates counterclockwise. Mars rotates counterclockwise. Mercury rotates counterclockwise. Maybe all planets in our solar systems rotate counterclockwise.
- (A) Inductive
 - (B) Deductive
 - (C) Abductive
 - (D) None of above
667. Which of the following would make a source UNreliable?
- (A) Having a recent date.
 - (B) No author's last name.
 - (C) Citing all sources.
 - (D) Including images with citations.
668. The method of constructing similar to the research object is?

- (A) Modeling method.
(B) Experiment method.
(C) Expert method.
(D) Observation method.
- 669.** The ___ is a criterion that refer to the consistency of the data stemming from the use of a particular research method.
(A) Reliability.
(B) Consistency.
(C) Validity.
(D) Feasibility.
- 670.** An explanation supported by many experiments; is still subject to new experimental data, can be modified, and is considered valid if it can be used to make predictions that are proven true.
(A) Theory
(B) Scientific law
- 671.** What does IAT stand for in psychology research?
(A) Implicit Association Test
(B) Immediate Action Task
(C) Internal Assessment Tool
(D) Integrated Analysis Technique
- 672.** In a repeated measures design, each participant performs in:
(A) Only one level of the independent variable
(B) All levels of the independent variable
(C) A matched pairs condition
(D) No conditions at all
- 673.** Internal validity is concerned with ___ whereas external validity is concerned with ___
(A) Generalizability, causality
(B) Causality, generalizability
(C) Consistency, causality
(D) Causality, consistency
- 674.** Does the following experiment use quantitative or qualitative data?"Justice asked all of the teachers what their favorite TV show is."
(A) Quantitative
(B) Qualitative
- 675.** Form of research designed to obtain information on how consumers feel about certain products, services, companies, or ideas. Customers are usually asked to rank "how satisfied" they are with a product.
(A) Attitude research
(B) Media research
(C) Product research
(D) Customer research
- 676.** What is the reduction in number of research participants as some drop out of the study over time called?
(A) Attrition
(B) Confirmation bias
(C) Debriefing
(D) None of above
- 677.** Rene grew bacteria from the mouth on special plates in the laboratory. She placed drops of different mouthwashes on bacteria on each plate. What step of the scientific method is this?
(A) Questions
(B) Hypothesis
(C) Experiment
(D) Conclusion
- 678.** T/F: Scientists use climate models to describe how different variables affect and predict Earth's future climate.
(A) TRUE
(B) FALSE
- 679.** Which of the following is NOT a way to research?
(A) Read a book
(B) Ask an expert
(C) Go to sleep
(D) Search online

- 680.** A way of gaining knowledge by means of direct and indirect observation or experience
(A) Empirical research
(B) Fundamental research
(C) Applied research
(D) Casual research
- 681.** A method for answering questions about the nature of reality that reduces the impact of human biases
(A) Psychology
(B) The scientific method
(C) Theory
(D) Hypothesis
(E) Research
- 682.** If I have a coin purse full of unknown coins and I pull out two copper pennies and I assume that all the rest of the coins in the purse are copper pennies I am using ____ reasoning.
(A) Abductive
(B) Inductive
(C) Analogical
(D) Deductive
- 683.** Analytical Research aims to explain existing state of affairs from available data
(A) True
(B) False
(C) All the above
(D) None of the above
- 684.** In research, it is important that others carry out a similar investigation and observe the same results as the original investigator. It should be deemed ____
(A) Valid
(B) Repeatable
(C) Reliable
(D) Population
- 685.** Correlational Studies:
(A) Show a relationship between variables
(B) Have an experimental group and a control group
(C) Are qualitative
(D) Show cause and effect between variables
- 686.** ____ reasoning uses observations to make generalizations.
(A) Logical
(B) Personal
(C) Inductive
(D) Deductive
- 687.** Which are the two basic approaches to research?
(A) Fundamental and historical approach.
(B) Conclusion and decision approach.
(C) Qualitative and quantitative approach.
(D) Problem and solution oriented approach.
- 688.** Who is MOST associated with the modern scientific method?
(A) John Locke
(B) Francis Bacon
(C) Plato
(D) Jean Piaget
- 689.** Which bias involves the researcher's expectations subtly influencing participants' behavior?
(A) Selection Bias
(B) Publication Bias
(C) Observer-Expectancy Effect
(D) Experimenter Bias
- 690.** A type of research design that is used to describe the relationship between and among variables that make up a study.
(A) Quasi-Experimental Research Design
(B) Descriptive Research Design
(C) Correlational Research Design
(D) Experimental Research Design
- 691.** How do you make sure that you are getting accurate information?
(A) Only choose .org and .gov websites
(B) Avoid all news websites, since they are sensational

- (C) Look at several sources on the same topic to make sure the information is the same
(D) None of above
- 692.** Pollution from runoff can be prevented by ___ farming techniques that don't use synthetic inorganic fertilizers and pesticides.
(A) Subsidies
(B) Organic
(C) Rivers
(D) Aquifer
- 693.** Which reasoning refers to the gathering of information through observation and measurement, formulating conjecture/s, then drawing generalization or conclusion based on the carefully gathered information?
(A) Argument
(B) Assumption
(C) Deductive
(D) Inductive
- 694.** Validity in research refers to:
(A) The accuracy and truthfulness of a measurement
(B) The consistency of a measurement
(C) The ability to generalize findings
(D) The ethical considerations in research
- 695.** Which of the following is not a good reason to include a methodology?
(A) It provides you with a plan to follow throughout your research.
(B) Keeps you accountable for your aims and objectives.
(C) Shows that you have correct spelling and grammar.
(D) Acts as an indicator of the quality of your study should anyone wish to replicate it. Edit
- 696.** Getting consistent results when the study is replicated
(A) Reliability
(B) Validity
- 697.** Action Research is about how we can improve things and enhance our practices.
(A) True
(B) False
- 698.** Review of research papers should be done in the light of
(A) Romantic context.
(B) Methodological facts.
(C) Cultural context.
(D) Psychological context.
- 699.** A researcher uses the scientific method to acquire knowledge through observation, evaluation, interpretation, and theoretical explanation. This researcher is engaged in ___
(A) Statistics
(B) Science
(C) Sampling
(D) Empiricism
- 700.** Which type of research inquiry focuses on understanding causal relationships?
(A) Exploratory
(B) Descriptive
(C) Explanatory
(D) Predictive
- 701.** Involves studying different age groups at the same time to see changes that occur over the lifespan.
(A) Cross-sectional method
(B) Longitudinal method
(C) Survey
(D) Naturalistic observation
- 702.** When is validity met?
(A) When the study actually does what it is was planned for research projects in general, and the data adequately and accurately represent future conditions
(B) When the study actually does what it says it is doing, and the data adequately and accurately represent actual conditions
(C) When the study actually does what it says in the theories of applied research, and the

- data adequately and accurately represent past conditions
(D) None of above
- 703.** The purpose of this type of scientific research is to identify the relationship between two or more variables.
(A) Exploratory Research
(B) Descriptive Research
(C) Explanatory Research
(D) Correlational Research
- 704.** A type of periodical usually sold by subscription and containing articles written for specialized or scholarly audiences.
(A) Magazine
(B) Encyclopedia
(C) Journal
(D) Textbook
- 705.** Alteration in performance due to being aware that one is participating in a study is known as ____
(A) Mortality.
(B) Reactivity.
(C) Temporal validity.
(D) Operationalism.
- 706.** How can a scientific argument be strengthened?
(A) By ignoring contradictory evidence
(B) By including more anecdotal evidence
(C) By incorporating peer-reviewed research
(D) By simplifying complex data
- 707.** Desk research is a type of research that can be carried out by which department?
(A) Human Resources
(B) Marketing
(C) Finance
(D) Production
- 708.** What is an unstructured/ambiguous questions, based on the assumption that shows an individuals natural spontaneous characteristics in their responses?
(A) Objective
(B) Projective
(C) Subjective
(D) Ipsative
(E) Normative
- 709.** Which of the following is true as one of the limitations of scientific method?
(A) It cannot provide explanation relating to ethical or philosophical issue
(B) It can provide explanation relating to ethical or philosophical issue
(C) It is free from measurement error
(D) It can provide rich information about a specific context of a phenomenon
- 710.** Research is based upon-
(A) Scientific method
(B) Scientists
(C) General principles
(D) Experiments
- 711.** A social scientist who characterizes his/her work as the study of the relationship between environmental events and the behavior they produce without regard for experience or consciousness is a
(A) Functionalist.
(B) Structuralist.
(C) Gestalt psychologist.
(D) Behaviorist.
- 712.** Your methodology explains how you will go about answering your research questions.
(A) True
(B) False
- 713.** Which method can be used to check reliability?
(A) Using different participants for the same study.
(B) Measuring the same participants at different times using the same test.
(C) Using different questions for each participant.
(D) Conducting the study in multiple locations.

714. What is a potential disadvantage of using internet research for market research?
- (A) It is always reliable.
 - (B) It is always unbiased.
 - (C) It can be difficult to verify the reliability of information.
 - (D) It is always expensive.
715. In the past, winter has always been cold in Loei. Therefore, winter will be cold again this year.
- (A) Deductive
 - (B) Inductive
716. In quasi-experimental research designs, causal interpretations can be made ____
- (A) Only when rival explanations have been shown to be plausible.
 - (B) Only when rival explanations have been shown to be implausible.
 - (C) Only when the participants have been randomly selected.
 - (D) Only when there is a single participant in the experiment.
717. The pursuit of knowledge through observation and experimentation.
- (A) Mechanism
 - (B) Determinism
 - (C) Reductionism
 - (D) Empiricism
718. What do you understand about "Exploratory Research"?
- (A) Describe a new area
 - (B) Be surprised about new inventions
 - (C) Be scared about new inventions
 - (D) New problem areas which haven't been discovered before
719. The benefit of a longitudinal study is
- (A) It allows for observations in the subjects daily routine without interfering.
 - (B) It allows a researcher to collect data on a target population over a longer period of time.
 - (C) It generates fast qualitative and quantitative data that can be sent easily to a large sample.
 - (D) It allows for a controlled environment for observations.
720. What best describes evidence in an argument?
- (A) Brief restatement of main points
 - (B) Speaker's credibility and authority
 - (C) Facts or information supporting truth
 - (D) Appeals to audience emotions
721. The research approach of Max Weber to understand how people create meanings in natural settings is identified as [2014-JUNE]
- (A) Positive paradigm
 - (B) Critical paradigm
 - (C) Natural paradigm
 - (D) Interpretative paradigm
722. Impact of the Implementation of COVID-19 Health Protocols in Supermarkets on Consumer Behaviors
- (A) Descriptive or Experimental (depending on the context, but typically Descriptive)
 - (B) Historical
 - (C) Meta-analytic
 - (D) Case Study
723. Which of the following is a technique for enhancing the face validity of a research instrument?
- (A) Statistical analysis
 - (B) Expert review
 - (C) Pilot testing
 - (D) Item analysis
724. Known on the basis of experience
- (A) Deductive reasoning
 - (B) Inductive reasoning
725. External validity provides strong evidence that the way IV and DV have been operationalized has bearing on what?
- (A) Real human behaviours

- (B) Statistical significance only
 - (C) Laboratory equipment accuracy
 - (D) Historical data trends
- 726.** Starts with generalizations and moves from the general to the particular
- (A) Deductive reasoning
 - (B) Inductive reasoning
- 727.** In ___ research, the objective is to gather preliminary information that will help define the problem and suggest hypotheses.
- (A) Exploratory
 - (B) Statistical
 - (C) Causal
 - (D) Analytic
- 728.** There is a news that we will be in a General Lockdown in Batangas because of the increasing number of covid cases. The news was probably true based on the recent interview with the Batangas Governor.
- (A) Arguments based on Math
 - (B) Categorical Syllogism
 - (C) Arguments from Authority
 - (D) Hypothetical Syllogism
- 729.** What is supporting evidence?
- (A) Anecdotes or personal experiences
 - (B) Irrelevant information
 - (C) Opinions or personal beliefs
 - (D) Information or data used to back up or prove a claim or argument.
- 730.** Which of the following orders present information in a successive way.
- (A) Research methods, research approach, research design
 - (B) Research design, research methods, research approach
 - (C) Research approach, research design, research methods
 - (D) Research design, research approach, research methods
- 731.** Identify the reasoning method: Observing that the sun rises every morning and concluding it will rise tomorrow.
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Abductive Reasoning
 - (D) Analogical Reasoning
- 732.** Which theme would be where humans used the resources on the land to survive?
- (A) Political Institutions
 - (B) Rise of Civilizations
 - (C) Beliefs
 - (D) Human Environment Interaction
- 733.** The steps commonly used by scientists in gathering information to test hypotheses and solve problems are called ____
- (A) Scientific inquiry
 - (B) Hypothesis
 - (C) Scientific method
 - (D) None of above
- 734.** Which of the following is a research method in which the research participant is asked to recall and describe a time when a behavior, action, or occurrence impacted (either positively or negatively) a specified outcome (for example, the accomplishment of a given task)?
- (A) Job/Task Analysis
 - (B) Critical Incident Technique
 - (C) Work Domain Analysis
 - (D) Staffing Model
- 735.** How could researching the effect of various planting times help improve fruit and vegetable yields?
- (A) By identifying optimal planting times for higher yields
 - (B) By planning plant-related activities for your class
 - (C) By starting your own forage-testing service
 - (D) By operating a hay-hauling service

736. "small groups of people (6-10), brought together in a discussion that is held and guided by a moderator through an unstructured and casual discussion, for the purpose of gaining relevant information about the market research problem" The statement above refers to —
- (A) Focus group
 - (B) Interview
 - (C) Observation
 - (D) Survey
737. Which design studies the relationship between variables without manipulating them?
- (A) Experimental
 - (B) Correlational
 - (C) Quasi-experimental
 - (D) Narrative
738. What does the term 'replication' refer to in research?
- (A) Reviewing literature
 - (B) Creating a new hypothesis
 - (C) Analyzing data from multiple sources
 - (D) Conducting a study in a different setting and time
739. Social Sciences use methods based on controlled laboratory practice, concrete experimentation, and experimental data.
- (A) True
 - (B) False
740. What is the key takeaway from the discussion on stating research problems?
- (A) Stating a research problem is an unnecessary step in the research process.
 - (B) The way a research problem is stated depends on the type of research being conducted (quantitative or qualitative).
 - (C) There is only one correct way to state a research problem.
 - (D) Research problems should always be stated in the form of a question.
741. A design measuring variables at one point in time is called:
- (A) Longitudinal
 - (B) Cross-sectional
 - (C) Experimental
 - (D) Case study
742. This research is done in stages in order to gather sufficient data.
- (A) Sequential
 - (B) Causal
 - (C) Cross-sectional
 - (D) Descriptive
743. The process of gathering data about people or companies and then analyzing it to better understand what that group of people needs.
- (A) Market Research
 - (B) Demographics
744. Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: A survey's response options differ slightly across study waves, leading to inconsistent interpretation of 'often' and 'sometimes'.
- (A) Measurement Bias
 - (B) Hawthorne Effect
 - (C) Confounding
 - (D) Selection Bias
 - (E) Attrition Bias
745. Scientist who conducted sociological research at industrial enterprises in the USA:
- (A) Parsons
 - (B) Mayo
 - (C) R, Merton
 - (D) Sorokin
 - (E) Park
746. Which research method measures variables like blood flow and neural activity?
- (A) Survey method
 - (B) Psychophysiological study
 - (C) Content analysis
 - (D) Field experiment

747. The primary objective of longitudinal research is to:
- (A) Establish cause-and-effect relationships
 - (B) Describe a phenomenon accurately
 - (C) Monitor changes over time
 - (D) Test the accuracy of existing theories
748. Of the types of validity for tests, what is focused on the extent to which a particular tests correlates with acceptable measure of performance?
- (A) Curricular validity
 - (B) Content validity
 - (C) Criterion validity
 - (D) Predictive validity
749. What part in the paradigm shows the ways on gathering data of the study be placed?
- (A) Input
 - (B) Process
 - (C) Output
 - (D) Feedback
750. Which of the following is correct regarding quasi-experimental design?
- (A) Random assignment
 - (B) Manipulation of the IV
 - (C) Some control of the IV
 - (D) Some control of confounds
751. The ___ that the scientists carried out about the climate showed fast global warming.
- (A) Game
 - (B) Study
 - (C) Story
 - (D) Math
752. What is the modern method of acquiring knowledge?
- (A) Authority.
 - (B) Scientific method.
 - (C) Expert opinion.
 - (D) Personal experience.
753. Determine if the given uses inductive or deductive reasoning. My Mathematics teacher is intelligent. The teacher in math of my brother is also intelligent. Mother's mathematics teacher way back high school is also intelligent. All the mathematics teachers are intelligent.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
754. What type of research is unstructured and informal?
- (A) Deductive
 - (B) Causal
 - (C) Exploratory
 - (D) Exploitive
755. Which reasoning approach involves forming a generalization based on specific instances?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Abductive Reasoning
 - (D) Causal Reasoning
756. How do scientists primarily study climate change in the polar regions?
- (A) By observing animal behavior
 - (B) Through ice core sampling
 - (C) By measuring tree rings
 - (D) By tracking ocean currents
757. It attempts to determine the extent of a relationship between two or more variables using statistical data.
- (A) Casual-comparative
 - (B) Survey research
 - (C) Correlational research
 - (D) None of above
758. Replicable approaches are associated with:
- (A) Subjective interpretation
 - (B) Automated instruments
 - (C) Qualitative methods
 - (D) Relativism

759. Explanations of why a claim is true, including how the evidence proves the claim
- (A) Sufficiency
 - (B) Relevance
 - (C) Point
 - (D) Reasoning
760. What does ecological validity assess?
- (A) The reliability of the data collected
 - (B) The generalizability of findings to real-world situations
 - (C) The strict control of variables
 - (D) The ethical considerations of the study
761. "Culturing of Mussel in Brackish Water of Dagupan City Using Staking Method and hanging Method" is a kind of:
- (A) Laboratory research
 - (B) Basic research
 - (C) Field research
 - (D) Library research
762. Making a conjecture based on observations and identifying patterns is called
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Valid Reasoning
 - (D) Invalid Reasoning
763. Objectivity: an ___ external viewpoint that is not affected by an individual's feelings, beliefs or experiences, so interpretations should be consistent between different researchers.
- (A) Unbiased
 - (B) Consistent
 - (C) Subjective
 - (D) Personal
764. In a ___ a group of participants are observed at intervals over a long period of time.
- (A) Testing method
 - (B) Longitudinal study
 - (C) Case study method
 - (D) None of above
765. Identify the type of reasoning used in the following argument: "The sun has risen in the east every day in recorded history. Therefore, the sun will rise in the east tomorrow."
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) Analogical reasoning
766. Earth, Mars, and Jupiter travel about the sun in elliptical orbits; therefore, all planets travel about the sun in elliptical orbits.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) All the above
 - (D) None of the above
767. The soundness of the evidence-whether findings are convincing, well-grounded, and support the desired inferences
- (A) Reliability
 - (B) Validity
768. Critique the following statement: "All students who get good grades are smart because my friend gets good grades and she is smart."
- (A) Illogical conclusion
 - (B) Overgeneralization
 - (C) Personal bias
 - (D) Logical conclusion
769. Any interference that affects message delivery: ___
- (A) Barriers
 - (B) Noise
 - (C) Feedback
 - (D) Channel
770. What type of research methodology is it?
- (A) Systematic review
 - (B) Qualitative methodology
 - (C) Quantitative methodology
 - (D) Mixed-method

771. If a Social Studies teacher believes that his/her lesson begins with the student's personal interpretation of his/her world based on experience, s/he is actually applying the principles of:
- (A) Cognitivism
 - (B) Constructivism
 - (C) Behaviorism
 - (D) Perennialism
772. Which one of the following is not a tool of the research:
- (A) Survey
 - (B) Questionnaire
 - (C) Interview
 - (D) Scientific method
773. All the methods used by a researcher during a research study are termed as
- (A) Research methods
 - (B) Research study
 - (C) Research design
 - (D) Research
774. Which type of validity refers to how well a test measures learning outcomes?
- (A) Content
 - (B) Predictive
 - (C) Concurrent
 - (D) Construct
775. A systematic process of collecting and analyzing data to increase the understanding of a topic
- (A) Inquiry
 - (B) Investigation
 - (C) Research
 - (D) Agenda
776. Which research intends identify variables and their relationships?
- (A) Experimental research
 - (B) Non-experimental research
777. System of gathering data so that bias and error in measurement are reduced.
- (A) Hypothesis
 - (B) Scientific method
 - (C) Representative sample
 - (D) Case study
778. This type of reasoning leads you to a generalization. Also known as "Conclusion only likely."
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Abductive Reasoning
 - (D) None of above
779. This type of longitudinal research studies the same individuals over an extended period of time
- (A) Trend study.
 - (B) Panel study.
 - (C) Both A and B.
 - (D) Neither A nor B.
780. A survey is not a method, but a — used within research.
- (A) Tool
 - (B) Experiment
 - (C) Observation
 - (D) Analysis
781. It is used to investigate a possible relationship between previous events and present conditions
- (A) Ex post Facto Design
 - (B) Expo Facto Design
 - (C) Ex post Factor Design
 - (D) Expest Facto Design
782. The "tool" function of theory is to
- (A) Summarize existing knowledge.
 - (B) Summarize existing hypotheses.
 - (C) Suggest new relationships and make new predictions.
 - (D) Suggest new theories.

783. Who is the father of action research?
(A) Michael Kors
(B) Kurt Lewin
(C) Onome Eluwa
(D) Kurt Carr
784. Which of the following is most likely a trustworthy source?
(A) A blog about life in medieval Japan
(B) A web site called "Medieval Japan fans"
(C) An academic journal article about medieval Japan
(D) A novel that takes a place in medieval Japan
785. To collect data on your topic, you need to select the appropriate ____
(A) Publisher
(B) Findings
(C) Results
(D) Research method
786. This is the most common type of research method and is responsible for establishing cause-and-effect relationships that allow generalisations to be extended to similar realities.
(A) Exploratory research
(B) Descriptive research
(C) Explanatory research
(D) Correlational Research
787. What does the term 'verifiability' refer to in research?
(A) The source should clearly state how the data was gathered
(B) The source can be vague about its methods
(C) The source should not be referenced
(D) The source can be biased
788. Who studies the effects of the environment on animal life?
(A) Producer
(B) Veterinarian
(C) Breeder
(D) Ecologist
789. Replication involves
(A) The selection of random samples
(B) Perceiving order in random events
(C) Repeating an earlier research study
(D) Rejecting ideas that cannot be scientifically tested
(E) Overestimating the extent to which others share our views
790. How can you support your arguments in a scientific report?
(A) By making emotional appeals
(B) By providing evidence from reliable sources, conducting experiments, and using logical reasoning.
(C) By using anecdotal evidence
(D) By relying on personal opinions
791. Scientifically
(A) Repeat, duplication, recurrence
(B) Methodically, systematically, logically,
(C) Death, disappearance #survival
(D) Tone, note
792. Which Science Investigatory Project criteria is used to evaluate the originality of the question and data analysis?
(A) Clarity
(B) Thoroughness
(C) Creativity ability
(D) Scientific thought
793. Unlike an experiment, the limitation of using a correlation is that it cannot establish ____
(A) That a relationship exists
(B) Causation
(C) The strength of the relationship between 2 variables
(D) The direction of the relationship between 2 variables

794. All chickens that we have seen have been brown; so, all chickens are brown.
(A) Deductive
(B) Inductive
795. The problem of ____ is that the future may not resemble the past.
(A) Deduction
(B) Induction
796. Which of the following types of reliability refers to the consistency of test scores over time?
(A) Inter-scorer reliability.
(B) Test-retest reliability.
(C) Equivalent forms reliability.
(D) Split-half reliability.
797. What are you required to discuss in relation to methodology?
(A) The results and conclusions of your research
(B) The approach and methods you used and why
(C) The ethical implications of your research
(D) The financial cost of your research
798. What is an important difference between Survey Research and Descriptive Research?
(A) Descriptive Research does not use surveys
(B) Descriptive Research may include other forms of collecting information than surveys and interviews
(C) Survey Research does not have full experimental control
(D) Survey Research examines the statistical relationship between two or more variables
799. Proof; may include facts, examples, data, research, and expert knowledge that supports the argument
(A) Metaphor
(B) Evidence
(C) Evaluate
(D) Witness
800. This concept implies that whatever we conclude on the basis of our findings is correct and can be verified by other researchers
(A) Controlled
(B) Empirical
(C) Reliable and valid
(D) Systematic
801. Argument = ____ + Reasons + Supporting Evidence
(A) Rebuttal
(B) Opinion
(C) Claim
(D) Fact
802. Which type of listeners like complex, detailed information with evidence and specifics?
(A) Time-oriented listeners
(B) Content-oriented listeners
(C) People-oriented listeners
(D) Action-oriented listeners
803. Research findings that are methodologically appropriate, rigorous, and clinically relevant for answering pressing questions
(A) Evidence-based practice
(B) Best evidence
804. Direct Experience or Observation by the researcher
(A) Logical
(B) Empirical
(C) Critical
(D) Replicability
805. ____ are at the pinnacle of many evidence hierarchies
(A) Case-Control study
(B) Systematic Review of Randomized Controlled Trials (RCTs)
(C) Randomized Controlled Trials (RCTs)
(D) In-Depth Qualitative Study

- 806.** A trend design is a type of longitudinal research design that:
- (A) Follows a single group of individuals over time
 - (B) Compares different groups of individuals at multiple time points
 - (C) Focuses on changes in a particular variable over time
 - (D) Uses a combination of cross-sectional and panel designs
- 807.** Ensuring both validity and reliability is crucial for the credibility of ____ research.
- (A) Psychological
 - (B) Historical
 - (C) Mathematical
 - (D) Fictional
- 808.** A company marketing team identifies a small group of consumers who fit the profile of the typical customer. The team observes, gathers survey information from, or hangs out with these typical customers, to gain insight into how the customers make product choices in order to design a future, more rigorous study. The data collection method used in this example is
- (A) Observational research.
 - (B) Focus group research.
 - (C) Case study research.
 - (D) Exploratory research.
- 809.** Bob says "Hello" to Marta as he walks past her. Marta smiles at Bob. Using the communication model, what is the feedback?
- (A) Bob
 - (B) "hello"
 - (C) Marta
 - (D) Marta's smile
- 810.** Joan is scratched by a cat while visiting her friend. Two days later she comes down with a fever. Joan concludes that the cat's scratch must be the cause of her illness.
- (A) Correlation vs. causation
 - (B) Appeal to False Authority
 - (C) Bandwagon appeal
 - (D) Faulty Analogy
- 811.** Endeavors to explain, predict, and/or control phenomena are the goal of
- (A) Scientific method
 - (B) Tradition
 - (C) Inductive logic
 - (D) Deductive logic
- 812.** Making a claim based on evidence that is just too small. Essentially, you can't make a claim and say that something is true if you have only an example or two as evidence.
- (A) Bandwagon
 - (B) Appeal to Authority
 - (C) Ad Hominem
 - (D) Hasty Generalization
- 813.** You should also explain why they could not be overcome with standard research ____ backed up by scientific evidence.
- (A) Question
 - (B) Aims
 - (C) Strategies
 - (D) Methods
- 814.** Basic types of question when not much is known about the situation at hand, or no information is available on how similar problems or research issues have been solved in the past is?
- (A) Descriptive
 - (B) Exploratory
 - (C) Causal
 - (D) None of above
- 815.** Gives us probable conclusions
- (A) Induction
 - (B) Deduction
- 816.** You are researching space exploration and you find a website that details all of the Apollo space missions. In evaluating the legitimacy of the site, you examine where links go from the site. Which types of links would most add to the site's credibility?

- (A) Links out to an astronaut's Instagram page
 - (B) Links out to the ice skater, Apollo Ono's, personal website
 - (C) Links out to the movie Apollo 13
 - (D) Links out to www.Nasa.gov
- 817.** Data are collected which show a relationship between two variables
- (A) Field experiment
 - (B) Quasi-experiment
 - (C) Correlational study
 - (D) Case study
- 818.** Reasons, evidence, and elaboration that strengthen a claim or make it convincing
- (A) Support
 - (B) Argument
 - (C) Claim
 - (D) Rebuttal
- 819.** Which research method is a bottom-up approach to research?
- (A) Deductive method
 - (B) Explanatory method
 - (C) Inductive method
 - (D) Exploratory method
- 820.** Exploratory design suits, when we deal with,
- (A) A novel phenomenon
 - (B) A well studied concept
 - (C) An established context
 - (D) Conclusive inquiry
- 821.** Which bias involves participants agreeing with statements regardless of their content?
- (A) Volunteer Bias
 - (B) Acquiescence Bias
 - (C) Recall Bias
 - (D) Publication Bias
- 822.** Which model of communication views communication as a one-way process, like sending a message through a pipeline?
- (A) Linear Model
 - (B) Interactive Model
 - (C) Transactional Model
 - (D) Osgood-Schramm Model
- 823.** What is the materials, data, or information used to support a study, including primary sources like original documents, interviews, or statistical data, and secondary sources like books, articles, or reviews that analyze primary sources; essentially, anything that provides information relevant to the research question.
- (A) Credible
 - (B) Information
 - (C) Resources
 - (D) Citation
- 824.** It is the process of reaching a general conclusion by examining specific examples.
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Inductive Reasoning
 - (D) Deduction Reasoning
- 825.** A ____ method is relatively insensitive to changes in experimental conditions.
- (A) Specific
 - (B) Sensitive
 - (C) Robust
 - (D) Rugged
- 826.** List the weaknesses of the Correlational Study method.
- (A) Cannot establish causation; Susceptible to third-variable problem; Directionality problem may exist.
 - (B) Allows for manipulation of variables; Guarantees causation; Eliminates all confounding variables.
 - (C) Ensures random assignment; Provides experimental control; Measures only dependent variables.
 - (D) Removes all bias; Uses only qualitative data; Always uses longitudinal design.

- 827.** The degree to which an assessment accurately assesses the concept and/or skill we are attempting to measure.
- (A) Reliability
 - (B) Validity
 - (C) Error margin
 - (D) None of above
- 828.** Type of observation done over a LONG amount of time looking at same subjects
- (A) Cross-sectional
 - (B) Naturalistic
 - (C) Longitudinal
 - (D) Laboratory
- 829.** A study examining how economic development influences democracy across 100 countries is an example of:
- (A) Large N-study
 - (B) Case study
 - (C) Survey Experiments
 - (D) Field Experiments
- 830.** The "Sociogram" technique is used to study —
- (A) Vocational Interest
 - (B) Human Relations
- 831.** Consistency of measures over time refers to:
- (A) Test-retest reliability
 - (B) Construct validity
 - (C) Content validity
 - (D) Internal validity
- 832.** Type of reasoning that uses generalizations to draw specific conclusions.
- (A) Inductive
 - (B) Deductive
- 833.** Every time I eat peanuts, my throat itches. Today, I ate peanuts, and my throat started itching. I must be allergic to peanuts.
- (A) Deductive
 - (B) Inductive
 - (C) Abductive
 - (D) None of above
- 834.** What distinguishes non-experimental research?
- (A) It uses random assignment
 - (B) It focuses on control groups
 - (C) It observes variables without manipulation
 - (D) It relies on clinical trials
- 835.** The semantic differential scale is primarily used in:
- (A) Measuring verbal aptitude
 - (B) Evaluating leadership preferences
 - (C) Visualizing spatial abilities
 - (D) Assessing bipolar adjectives in attitudes
- 836.** — is an investigative activity that a business choose to conduct, with the intention of making a discovery that can lead to either the development of new products or process, or the improvement of existing products or process.
- (A) Survey and Investigate
 - (B) Research and Development
 - (C) Research and Survey
 - (D) Survey and Development
- 837.** Which of the following is a research method?
- (A) Correlation
 - (B) Matched-pairs
 - (C) Randomization
 - (D) Brain Imaging
- 838.** How can this question best be answered to yield high-quality evidence?
- (A) Methodologic Issues
 - (B) Clinical Issues
 - (C) Ethical Issues
 - (D) Substantive Issues
- 839.** Different age groups are tested at the same time in a
- (A) Factor analysis.
 - (B) Longitudinal study.
 - (C) Standardized test.
 - (D) Cross-sectional study.

- 840.** The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
- (A) Justice
 - (B) Responsibility
 - (C) Competence
 - (D) Dignity
- 841.** I've seen many teenagers use their phones constantly. Therefore, most teenagers probably spend a lot of time on their phones.
- (A) Deductive
 - (B) Inductive
 - (C) Abductive
 - (D) None of above
- 842.** Action research refers to
- (A) A comparative study of cultural groups.
 - (B) A deep analysis of some real life entities in their natural context.
 - (C) A process of inquiring about problems and taking action to solve them. Edit
 - (D) None of above
- 843.** What is the process of using words, sounds, signs, or actions to exchange information or express thoughts?
- (A) Encoding
 - (B) Communication
 - (C) Transmission
 - (D) Feedback
- 844.** If I wanted to test you over everything we've learned so far, but I accidentally left all of the social psych stuff off the test, my test would lack:
- (A) Test-retest reliability
 - (B) Construct validity
 - (C) Content validity
 - (D) Split-half reliability
- 845.** Action researchers approach issues of validity and trustworthiness within the scope of —
- (A) Reflexivity
 - (B) Practicality
- 846.** The ants follow the same path from their colony to their food. They follow the same path from the food to the colony. Ants must be able to communicate. This is an example of —
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Faulty reasoning
 - (D) None of above
- 847.** Which of the following is a characteristic of field research?
- (A) It relies on existing data.
 - (B) It is always less costly.
 - (C) It provides new and specific information.
 - (D) It is faster than desk research.
- 848.** The approach that studies fertility, mortality and migration issues related to human activities is called
- (A) Psychological
 - (B) Demographic
 - (C) Cultural
 - (D) Collectivist
 - (E) Interactionist
- 849.** The baby is crying because she might be hungry.
- (A) Qualitative observation
 - (B) Inference
 - (C) Quantitative observation
 - (D) Fact
- 850.** Scientists study five newly discovered alien species and notice that all of them communicate using sound waves. They conclude that all alien species must use sound waves. What type of reasoning is this?
- (A) Inductive
 - (B) Deductive

851. Ensuring the experiment is measuring what it is supposed to
(A) Reliability
(B) Validity
(C) Must
(D) Should
(E) None of the above
852. Although the scientific method incorporates several other methods of inquiry, which of the following is least likely to be a part of the scientific method?
(A) Empiricism
(B) Rationalism
(C) Tenacity
(D) Authority
853. Tests the validity of assumptions (or theories/hypotheses) in hand
(A) Deductive research approach
(B) Inductive research approach
(C) Abductive research approach
(D) None of the above
854. In correlation design of Ex Post Facto Research, we study
(A) The variable which has been measured in advance and will be work as an causative factor for second variable.
(B) The second variable which is going to be measured and will work as a causative factor for antecedent variable.
(C) The third variable which cannot be measured but work as a causative factor for first and second variable.
(D) All the above three situations and occurrence of variables.
855. Association in causality means:
(A) When x happens, y occurs (y tends to happen)
(B) X and y never occur together
(C) X always causes y
(D) Y always causes x
856. You ___ always prove a conclusion by inductive reasoning.
(A) Can
(B) Cannot
857. Why is the scientific method important?
(A) It ensures experiments are structured and conclusions are based on evidence
(B) It allows scientists to guess results
(C) It eliminates the need for research
(D) It guarantees all hypotheses are correct
858. In the first month of school, Ian is late every Monday so he will be late next Monday too. What type of reasoning was used?
(A) Inductive
(B) Deductive
859. This involves the researcher starting with a theory and testing the theory using relevant methods.
(A) Coding
(B) Inductive Approach
(C) Deductive Approach
(D) None of above
860. You want to understand how a team adopted a new project management tool. What method fits best?
(A) Case study
(B) Observation
(C) Survey
(D) Interview
861. Which reasoning method starts with a general principle?
(A) Inductive reasoning
(B) Observational reasoning
(C) Deductive reasoning
(D) Experimental reasoning
862. The purpose of the research is to determine the interaction of the components of the variable being investigated.
(A) Directive
(B) Illuminative
(C) Predictive
(D) None of the choice s

- 863.** Whether a study can be repeated in exactly the same way again through standardized instructions and procedures.
- (A) Reliability
 - (B) Inter-rater Reliability
 - (C) Inter-observer Reliability
 - (D) Test-retest Reliability
 - (E) Replicability
- 864.** If a research utilizes proven analytical procedures in gathering the data, it is ____
- (A) Critical
 - (B) Logical
 - (C) Cyclical
 - (D) Analytical
- 865.** Reaching a conclusion by looking at several examples is called ____
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Examination
 - (D) None of above
- 866.** A research technique that compares individuals from different age groups at one time is known as
- (A) An experiment
 - (B) A longitudinal study
 - (C) A correlational study
 - (D) A cross-sectional study
- 867.** The first three candies that I ate out of the bag were chocolates. All of the candy in the bag is chocolate.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
- 868.** The first two kids I met at my new school were nice to me. The students at this school are really nice.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
- 869.** The reliability of research refers to:
- (A) Consistency of results when repeated
 - (B) Accuracy of instruments
 - (C) Appropriateness of sampling
 - (D) Use of modern tools
- 870.** The deductive method include the following, except?
- (A) More specific
 - (B) General idea
 - (C) Specific
 - (D) General conclusion
- 871.** Which of the following will decrease the likelihood of a drought
- (A) Devegetation
 - (B) Well draining substrate
 - (C) Urbanisation
 - (D) Increasing tree planting
- 872.** This type of reasoning makes broad generalizations from specific observations.
- (A) Inductive
 - (B) Deductive
 - (C) Fallacious
 - (D) Analogical
- 873.** How does external validity differ in quantitative and qualitative research?
- (A) Generalizability vs. applicability
 - (B) Statistical power vs. rich descriptions
 - (C) Objective reality vs. subjective reality
 - (D) Single truth vs. multiple truths
- 874.** Choose the alternative that is NOT an empirical method.
- (A) Historical-logical
 - (B) Observation
 - (C) Experiment
 - (D) Survey
- 875.** Prepares, maintains, and disseminates systematic reviews of the effects of health care interventions
- (A) Cochrane collaboration
 - (B) McMaster medical collaboration

- 876.** An efficiency expert is studying jobs carefully, making detailed assessments of how long it takes workers to perform tasks. In all likelihood, the expert is using the scientific management method of
- (A) Ergonomics.
 - (B) Time-and-motion studies.
 - (C) Scientist-practitioner model.
 - (D) Job specialization.
- 877.** Causal studies try to find out the relationship between a specific cause and a specific effect.
- (A) True
 - (B) False
- 878.** In correlational or associational research, the investigator tries to probe the significance of the relationship between two or more factors or characteristics. Fill in the blank: A researcher who undertakes a study to find out the significance of association between job performance and commitment is doing ____ research.
- (A) Correlational
 - (B) Experimental
 - (C) Descriptive
 - (D) Historical
- 879.** Correlational research aims to
- (A) Describe natural phenomena without influence
 - (B) Manipulate variables to measure outcomes
 - (C) Establish cause-and-effect relationships
 - (D) Examine associations without inferring causation
- 880.** What is meant by "Internal validity" in the context of research?
- (A) The extent to which the results can be applied to the general population
 - (B) The reliability of the measuring instrument
 - (C) Whether other factors during the data collection period impacted the results
 - (D) The ethical considerations of the research
- 881.** In what criterion in evaluating sources does this statement "Is the contact information, such as the publisher or e-mail address available?" belong?
- (A) Authority
 - (B) Relevance
 - (C) Currency
 - (D) Accuracy
- 882.** A research pattern or framework would be called
- (A) Ontology
 - (B) Paradigm
 - (C) Ethnography
 - (D) Epistemology
- 883.** ____ uses specific observations to make generalizations.
- (A) Deductive reasoning
 - (B) Inductive reasoning
- 884.** It is not possible to determine cause and effect, only that two variables are related.
- (A) Weakness of Correlations
 - (B) Weakness of Case Study
 - (C) Weakness of Longitudinal Study
 - (D) None of above
- 885.** Why is the scientific method used when conducting research?
- (A) It encouraged randomness when doing research
 - (B) It enhances social responsibility
 - (C) It lessens the need for professional competence
 - (D) It provides a systematic way to pursue knowledge
- 886.** " ____ is credited with coining the term 'action research' to describe work that did not separate the investigation from the action needed to solve the problem" (McFarland & Stansell, 1993)
- (A) Lewin
 - (B) Shon
 - (C) Bloom

- (D) Duddley
(E) Corey
- 887.** What is the process of conveying information between two or more people called?
(A) Encoding
(B) Communication
(C) Feedback
(D) Decoding
- 888.** Is this a quantitative or qualitative observation? Her skin feels smooth.
(A) Qualitative
(B) Quantitative
- 889.** Non-experimental research has..
(A) No manipulation of variables and no random assignment
(B) Manipulation of a variable and no random assignment
(C) Manipulation of a variable and random assignment.
(D) None of above
- 890.** Identify the inductive reasoning from the following options.
(A) The pencils are always gone by Core 2, and Ms. Mackey has been assigning written work. Core 1 must take all of the pencils.
(B) Astronauts go to space, and space has no gravity. So, astronauts must be able to live without gravity.
(C) Dave made a 0, so he needs to redo his assignment.
(D) The school offers lunch, and it offers breakfast. Students have two options for meals while at school.
- 891.** Intact, naturally formed groups are used in a quasi-experimental design.
(A) True
(B) False
- 892.** What is designed to obtain information on how people feel about certain products, ideas or companies?
(A) Product Research
(B) Media Research
(C) Market Research
(D) Attitude Research
- 893.** Types of Quantitative Data and Measure- provides information about an individual's interests and helps them make career choices (Strong Interest Inventory)
(A) Norm-referenced test
(B) Criterion-referenced test
(C) Intelligence test
(D) Aptitude test
(E) Interest inventory
- 894.** Can inductive reasoning lead to a guaranteed conclusion?
(A) Sometimes
(B) Depends on the situation
(C) No
(D) Yes
- 895.** Psychologists study human ___ by observing and measuring how people act.
(A) Behavior
(B) Natural
(C) Biology
(D) None of the above
- 896.** Involve the forms of data collection, analysis, and interpretation that researchers propose for their studies
(A) Research method
(B) Research design
(C) Research approach
(D) None of above
- 897.** The computerized models of real-world systems or imaginary future systems.
(A) Instructional
(B) Tutorial
(C) Simulation
(D) Drill and Practice

898. Preliminary data collection is a part of the ____ research.
- (A) Qualitative
 - (B) Exploratory
 - (C) Explanatory
 - (D) Correlational research
899. Psychological research relies on ____, which describes how to make and test observations about the world in order to draw conclusions while minimizing error or bias.
- (A) Intuition
 - (B) The scientific method
 - (C) Epistemology
 - (D) Clinical methodology
900. Video conferencing interviews
- (A) Are not used often.
 - (B) Are more expensive because of the equipment.
 - (C) Can be cost efficient for employers when interviewing out-of-town candidates.
 - (D) Are used in 90 percent of first interviews.
901. The flower is red.
- (A) Qualitative Data
 - (B) Quantitative Data
902. Avyaan conducted a study to determine the long-term effects of a new teaching method on student performance. The study in which the investigators attempt to find out after effect of intervention is known as:
- (A) Ex-post Facto Research
 - (B) Historical Research
 - (C) Survey Research
 - (D) None of above
903. You see a series of numbers, 1, 3, 5, 7, ____ You conclude the next number is a 9.
- (A) Deductive
 - (B) Inductive
904. Inductive research starts from:
- (A) Unreal assumptions
 - (B) Observations of the real world
 - (C) General premises
 - (D) Deductive reasoning
905. Observational research is ____ used with other research methods because of its limitations.
- (A) Never
 - (B) Sometimes
 - (C) Frequently
 - (D) Always
906. Combining findings from different studies to find patterns is called:
- (A) Literature Review
 - (B) Synthesis
 - (C) Data Analysis
 - (D) Hypothesis Testing
907. A major change in the way of thinking within a field that results in a new approach to the field
- (A) Psychology
 - (B) Behaviorism
 - (C) Cognitive revolution
 - (D) Paradigm shift
 - (E) Cognitive psychology
908. A research method that is used for the systematic analysis of media texts and communication. Strengths include the ability to use qualitative as well as quantitative data. Weaknesses include consumption of time as well as increased chance of error.
- (A) Case studies
 - (B) Cross-sectional survey
 - (C) Field experiments
 - (D) Content analysis
909. In which type of study are participants given a product to test in their own environment over a specified period?
- (A) Central location tests
 - (B) Home use tests
 - (C) Mystery shopping
 - (D) Exploratory tests

- 910.** Hawthorne Effect
- (A) When your impression of someone affects your thoughts, feelings and behavior towards that person.
 - (B) Preferential treatment towards one's in-group and against outsiders
 - (C) When someone is being watched they behave differently
 - (D) When you look for information to agree with your hypothesis
- 911.** What is a common method for ensuring reliability in research?
- (A) Using a small sample size
 - (B) Repeating the study under the same conditions
 - (C) Using subjective measures
 - (D) Ignoring outliers in data
- 912.** Solving and implementing solutions in empowering employees to review problems can, best classified as ____?
- (A) Action research
 - (B) Customer research
 - (C) Marketing research
 - (D) Human research
- 913.** Research uses ____ method to find facts or to provide solutions to specific problems.
- (A) Scientific
 - (B) Social
 - (C) Natural
 - (D) Subjective
- 914.** The perception of time as holistic, fluid and unstructured is associated with which culture?
- (A) Low-power distance
 - (B) High-context
 - (C) Monochronic
 - (D) Polychronic
- 915.** Which one of the following is not included in cross-sectional approach?
- (A) Survey method.
 - (B) Genetic method.
 - (C) Experimental method.
 - (D) Ex-post Facto method.
- 916.** Which of the four major research approaches seeks to solve specific problems and generate knowledge at the local level?
- (A) Action research
 - (B) Mixed methods research
 - (C) Qualitative research
 - (D) Quantitative research
- 917.** One of the Purposes of Research, which attempts to connect ideas to understand cause and effect.
- (A) EXPLANATORY RESEARCH
 - (B) EXPLORATORY RESEARCH
 - (C) DESCRIPTIVE RESEARCH
 - (D) HISTORICAL RESEARCH
- 918.** The method of drawing conclusions based on the observation of each and every instance of a population is called
- (A) Inductive Method.
 - (B) Deductive Method.
 - (C) Scientific Method.
 - (D) Dialectic Method.
- 919.** Which of the following is not a potential benefit of longitudinal research?
- (A) It can provide insights into complex phenomena over time
 - (B) It can establish cause-and-effect relationships
 - (C) It can inform practical applications in the field
 - (D) It can be conducted quickly and inexpensively
- 920.** Non experimental research methods consist of which of the following
- (A) Test causal relationship between variables
 - (B) Only describe characteristics of existing phenomenon

- (C) Can be descriptive, historical, or correlational
(D) Examine factors that are not related
- 921.** Put these notions (approach, method, technique) in the hierarchical order beginning with the major one:
(A) Method, approach, technique
(B) Method, technique, approach
(C) Technique, method, approach
(D) Approach, method, technique
- 922.** Field-work based research is classified as:[2008-JUNE]
(A) Empirical
(B) Historical
(C) Experimental
(D) Biographical
- 923.** It is a graphical representation that is useful for researchers to map out the processes of their research
(A) Graphs
(B) Charts
(C) Concept map
(D) Line Graph
- 924.** What is the purpose of evidence in research?
(A) Determine truths
(B) Support theories
(C) Prove practices
(D) Improve thinking
- 925.** Gives us logically necessary conclusions
(A) Induction
(B) Deduction
- 926.** In tool development, initial items often emerge from:
(A) Hypotheses tested
(B) Theoretical literature review
(C) Statistical software defaults
(D) Random ideas
- 927.** Key features of ____ include a reference list with summaries and annotations, which can be used to help highlight characteristics or critical analyses of the source.
(A) Annotated bibliography
(B) APA Literature Review
- 928.** You want to compare the job outlook for architects and civil engineers. What is the best way to conduct this research?
(A) Read job descriptions on entertainment blogs
(B) Use government labor statistics and professional organization resources
(C) Ask your neighbor
(D) Watch movies about construction
- 929.** A researcher administers the same intelligence test twice to the same group of participants two weeks apart to ensure consistency. The researcher is evaluating:
(A) Construct validity
(B) Predictive validity
(C) Test-retest reliability
(D) Standardization
- 930.** There are plenty of research methods, but deciding which one is the best for each case depends on the researcher's objectives and hypothesis planted in the previous step.
(A) Deciding the method of research
(B) Collecting the data
(C) Writing a report
(D) None of above
- 931.** The quality of an action research project is least dependent on its
(A) Use of well-designed methods of data collection and analysis.
(B) Promotion of collaboration between the researcher and his or her colleagues.
(C) Contribution to the knowledge base for education.
(D) Impact on the researcher's practice.

- 932.** Researcher bias is when ____
- (A) The researcher is very attentive to his research assistant
 - (B) The professor always chooses the same researcher to do the work
 - (C) The researcher is a white middle class male
 - (D) The researcher is not objective in their methodology
- 933.** Process scientists use to conduct research, which includes a continuing cycle of exploration, critical thinking, and systematic observation
- (A) Experiment
 - (B) Pseudoscience
 - (C) Scientific method
 - (D) None of above
- 934.** Which statement best defines scientific inquiry in health research?
- (A) Depends unstructured observations and intuition
 - (B) Applies anecdotes to predict future outcomes
 - (C) Relies expert opinion without collected data
 - (D) Uses observable, verifiable data to describe events
- 935.** Bias is defined as
- (A) A lack of reliability.
 - (B) A lack of validity.
 - (C) A poor interpretation of a student's score.
 - (D) The distortion of responses based on gender, ethnicity, race, or language.
- 936.** A counselor doing research decided to split a standardized test in half by using the even items as one test and the odd items as a second test and then correlating them. The counselor
- (A) Used an invalid procedure to test reliability
 - (B) Was testing reliability via the split-half correlation method
 - (C) Was testing reliability via the equivalent forms method
 - (D) Was testing reliability via the inter-rater method
- 937.** Which action research can have a potential impact on curriculum, instruction, assessment, and policy?
- (A) Collaborative action research
 - (B) District-wide action research
- 938.** Scientific method is committed to ____
- (A) Objectivity
 - (B) Ethics
 - (C) Proposition
 - (D) Neutrality
- 939.** To measure the students learning achievement, the teacher can assess the students using tests that are developed based on some principles. The degree to which the test actually measures what it is intended to measure belongs to the principals of ____
- (A) Washback
 - (B) Validity
 - (C) Authenticity
 - (D) Practicality
 - (E) Reliability
- 940.** A best source of evidence for nursing practice is:
- (A) Authorities (specialists)
 - (B) International rates of diseases
 - (C) The nurse's own clinical experience
 - (D) Disciplined Research
- 941.** Which of the following is an example of inductive reasoning?
- (A) All observed crows are black. Therefore, all crows are black.
 - (B) If it is a bird, it can fly. Penguins are birds. Therefore, penguins can fly.
 - (C) All mammals have lungs. Whales are mammals. Therefore, whales have lungs.
 - (D) If it is a car, it has wheels. This is a car. Therefore, it has wheels.

- 942.** What is the BEST reason for using animals in biomedical research?
- (A) There are no ethical objections to the use of animals in research.
 - (B) Animals do not have families who care about them.
 - (C) Animals provide the best surrogate for humans in the lab.
 - (D) Animals do not complain about their treatment.
- 943.** What kind of research is utilized to determine the relationship among variables?
- (A) Correlational Research
 - (B) Basic Research
 - (C) Experimental Research
 - (D) None of above
- 944.** Which of the following is not a method commonly used in exploratory research?
- (A) Surveys
 - (B) Interviews
 - (C) Experiments
 - (D) Focus groups
- 945.** What is one strength of action research?
- (A) It can be conducted by local practitioners.
 - (B) It provides a framework for participant observation.
 - (C) It eliminates the issues of research bias.
 - (D) It produces small-scale results.
- 946.** Sometimes known as associational research because it measures the extent or magnitude of association between two variables.
- (A) Descriptive design
 - (B) Experimental design
 - (C) Correlational research design
 - (D) None of above
- 947.** Focuses primarily on different disciplines.
- (A) Integration Approach
 - (B) Interdisciplinary Approach
 - (C) Multidisciplinary Approach
 - (D) Transdisciplinary Integration
- 948.** Source Accuracy evaluates a source to
- (A) Determine if the author is credible
 - (B) Determine if the source information is correct
 - (C) Determine if the source is right for your project
 - (D) Determine if the source is current
- 949.** Test based on answers that require students demonstrate a knowledge or skill exactly with no opportunity for judgment by the evaluator.
- (A) Open Ended Test
 - (B) Subjective Test
 - (C) Multiple Choice Test
 - (D) Objective Test
- 950.** A study finds that as the number of hours spent watching television increased, grades decreased. This is an example of:
- (A) A correlational study
 - (B) A survey
 - (C) A case study
 - (D) Experimentation
- 951.** Who relies on the natural enemies of pest?
- (A) Conventional Farmer
 - (B) Organic Farmer
- 952.** What is the opposite of inductive reasoning?
- (A) Abductive reasoning
 - (B) Conclusive reasoning
 - (C) Deductive reasoning
 - (D) Speculative reasoning
- 953.** Which method is most appropriate for assessing emerging market trends and regulatory impacts?
- (A) FIFO inventory rotation checks
 - (B) Timesheets and capacity planning
 - (C) A/B testing and coupon drops
 - (D) PEST analysis and expert interviews

- 954.** C. Identify the type of noise presented in each scenario. Jenna cannot focused on what she is reading because she feels frustrated on the Math grade that she received.
- (A) Physical Noise
 - (B) Psychological Noise
 - (C) Physiological Noise
 - (D) Semantic Noise
- 955.** What is the main focus of explanatory research?
- (A) To monitor the effects of remedial action
 - (B) To study social phenomenon
 - (C) To test the usefulness of research in solving problems
 - (D) To develop or refine theory models
- 956.** Causal research studies:
- (A) Who, what, when, where
 - (B) Cause-effect relationship
 - (C) Exploratory patterns
 - (D) Sample errors
- 957.** Point out how two or more people, places, or things are alike OR how they differ
- (A) Division & classification
 - (B) Cause & effect
 - (C) Compare & contrast
 - (D) Description
- 958.** Define the term: Reliability.
- (A) Reliability refers to the consistency or repeatability of a measurement or study.
 - (B) Reliability refers to the ability to measure intelligence.
 - (C) Reliability refers to the process of collecting data from a large sample.
 - (D) Reliability refers to the accuracy of a single observation.
- 959.** Why is methodology important?
- (A) IT SUMMARIZES THE STUDY
 - (B) IT EXPLAINS HOW THE RESEARCH CAN BE REPEATED
 - (C) IT GIVES OPINIONS
 - (D) IT LISTS RESULTS
- 960.** Name the term that we use to describe when each time a study is repeated, the results are consistent.
- (A) Validity
 - (B) Reliability
 - (C) Sample Edit
 - (D) None of above
- 961.** Information acquired by experience or experimentation is called as
- (A) Empirical
 - (B) Scientific
 - (C) Facts
 - (D) Scientific evidences
- 962.** In the “Methodology” chapter, you should discuss the range of research methods that could be used to test your hypotheses or answer your questions.
- (A) Yes
 - (B) No
- 963.** A researcher wants to learn more about schizophrenia. Schizophrenia is a somewhat rare disorder and it may be difficult to find a large sample size for an experiment. Which of the following is the MOST appropriate research method given this information?
- (A) Longitudinal study
 - (B) Case study
 - (C) Naturalistic observation
 - (D) Correlational study
- 964.** Cross-sectional and longitudinal designs can complement each other by:
- (A) Providing both a snapshot and tracking changes over time
 - (B) Focusing only on one age group
 - (C) Eliminating the need for data collection
 - (D) Ensuring results are always consistent

- 965.** Begins with a specific observation to form general or broad conclusions. You might take a small sample to make a generalization about the whole population.
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) Causal reasoning
- 966.** Which research compares groups on different variables to determine its effect on the dependent variables?
- (A) Correlational research
 - (B) Ex-post facto research
- 967.** Studies in which the sponsor is not disclosed to respondents.
- (A) Secret
 - (B) External
 - (C) Blind
 - (D) Ambiguous
- 968.** Experimental is to cause and effect as correlational is to
- (A) Blind study
 - (B) Double-blind study
 - (C) N = 1 design
 - (D) Degree of relationship
- 969.** What is a major limitation of nonexperimental research?
- (A) High cost
 - (B) Lack of control over variables
 - (C) Ethical concerns
 - (D) Time constraints
- 970.** Investigations into strength and direction of statistical association between 2 variables/ relationship between 2+ variables of interest/ can suggest a causal relationship exists but CANNOT establish credibility
- (A) Correlational studies
 - (B) Correlation coefficient (r)
- 971.** A community organization conducts regular interviews and observational studies over several months. This method is an example of which approach?
- (A) Longitudinal Study
 - (B) Cross-Sectional Survey
 - (C) Experimental Research
 - (D) Quantitative Analysis
- 972.** Sir Mike wants to know if the students' CBL program satisfaction level has a relationship with their attendance in the different school activities.
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
- 973.** Observational research method in which data is gathered for the same subjects repeatedly over a period of time. This research projects can extend over years or even decades.
- (A) Field Experiment
 - (B) Structured Interview
 - (C) Questionnaire
 - (D) Longitudinal Study
- 974.** Two research methods widely used by psychologists are
- (A) Precognition and experimentation
 - (B) Surveys and experiments
 - (C) Water-float tests and lie-detector tests
 - (D) Surveys and introspection
- 975.** Integrate evidence about a topic in a rigorous, systematic way
- (A) Preappraised evidence
 - (B) Systematic reviews
 - (C) Clinical practice guidelines and care bundles
 - (D) None of above
- 976.** How could we describe marketing research that produces essentially the same data every time it is conducted?

- (A) Reliable
 - (B) Objective
 - (C) Valid
 - (D) Cost Effective
- 977.** Discusses the research locale, design, population sampling or respondents of the study, research instrument, and the statistical treatment of the data.
- (A) Methodology
 - (B) Population Sampling or Respondents of the Study
 - (C) Research Instrument
 - (D) Statistical Treatment of Data
- 978.** Examines relationships among variables, can help make predictions, but cannot prove causation
- (A) Random assignment
 - (B) Correlational method
 - (C) Experimental method
 - (D) None of above
- 979.** ____ is the study of consumers based on social characteristics, such as personality, opinions, and lifestyle elements.
- (A) Psycho-graphics
 - (B) Geographics
 - (C) Demographics
 - (D) Brand loyalty
- 980.** Callie notices that every time she uses a certain bird food in her bird feeder, blue jays land on the feeder. She concludes that blue jays prefer this food more than other birds do. What type of reasoning is Callie using?
- (A) Inductive reasoning
 - (B) Subjective reasoning
 - (C) Deductive reasoning
 - (D) Faulty reasoning
- 981.** A series of steps followed by scientists to solve problems is known as ____
- (A) Scientific methods
 - (B) Life science
 - (C) Hypothesis
 - (D) Technology
- 982.** It is a kind of research where in it explores possible causal relationships among variables that cannot be manipulated by the researcher (group differences already exist)
- (A) Descriptive Research Design
 - (B) Ex-Post Facto
 - (C) Correlational Design
 - (D) Single-Subject Design
- 983.** Which feedback channel combines discussion with research facilitation?
- (A) Focus groups moderated in person or by phone
 - (B) Anonymous graffiti on city notice boards
 - (C) Internal memos between department managers
 - (D) Automated shipping notifications to customers
- 984.** It was hot this week, so it will be hot next week.
- (A) Quantitative
 - (B) Qualitative
 - (C) Inference
 - (D) Prediction
- 985.** Which type of reasoning gives you hypotheses?
- (A) Comparative
 - (B) Deductive
 - (C) Inductive
 - (D) Conditional
- 986.** When research is done to test hypotheses and theories about how and why phenomena operate as they do, then the primary purpose of such research is
- (A) Descriptive.
 - (B) Predictive.
 - (C) Explanatory.
 - (D) None of the above.

987. Every cat I've seen has a tail. Therefore, all cats must have tails.
(A) Inductive
(B) Deductive
988. What makes a measurement or tool "valid" according to the learning material?
(A) It is relevant or appropriate as a representation of the property being measured.
(B) It is always accurate.
(C) It is always reliable.
(D) It is always easy to use.
989. What is the best method of acquiring reliable knowledge on which to base a clinical practice
(A) Traditions and uthority
(B) Clinical experience and trial and error
(C) Assembled information
(D) Disciplined research
990. An investigator intends to establish the relationship between educational status of mothers and academic achievement of students for coastal areas. Which of the following methods will be helpful in terms of research design?
(A) Historical method
(B) Survey method
(C) Experimental method
(D) Ex-Post Facto method
991. Which is NOT a "good" way to research a future job or career?
(A) Networking
(B) Job shadowing
(C) Reading a novel or watching a TV show
(D) The internet
992. What factors can restrict the sociologist's choice of research method?
(A) Availability of funding
(B) Time constraints
(C) Ethical considerations
(D) All of the above
993. The systematic method to resolve a research problem through data gathering using various techniques.
(A) Population
(B) Methodology
(C) Sample
(D) Variable
994. Using specific observations (from the past) to make general conclusions (about the future)
(A) Validity
(B) Premise
(C) Deductive Reasoning
(D) Inductive Reasoning
995. A human who is observed, examined, and/or measured in a research study is called a
(A) Case
(B) Confederate
(C) Participant
(D) Subject
996. On which of the following could a scientific claim be based?
(A) A famous athlete's speech
(B) A religious text
(C) Superstitions and folklore
(D) Experiments and studies
997. What is "conceptual replication"?
(A) Repeating a study with different methods to test the same idea
(B) Copying the exact same study
(C) A type of fraud
(D) An unethical practice
998. Which reasoning method is often used in scientific research to form hypotheses and theories?
(A) Inductive
(B) Deductive
(C) Abductive
(D) None of the above

- 999.** Standardisation is useful when it comes to investigations being ____
(A) Reinterpreted
(B) Replicated
(C) Complicated
(D) Estimated Edit
- 1000.** Out of 5 schools days this week in Mr. McGill's class you took notes. You conclude that Mr. McGill loves making all of his students suffer. This is an example of ____
(A) Inductive Reasoning
(B) Deductive Reasoning
- 1001.** It has been defined as referring to the appropriateness, correctness, meaningfulness and usefulness of a specific conclusions that a teacher reaches regarding the teaching-learning situation.
(A) Reliability
(B) Validity
(C) Accurateness
(D) Assessment
- 1002.** Which of the following research methods are high in validity?
(A) Closed questioning
(B) Questionnaires
(C) Unstructured Interviews
(D) Participant Observation
- 1003.** What does a research study lack if two researchers use the same methods in a research study but cannot achieve the same results?
(A) Repetition
(B) Replicability
(C) Reliability
(D) Validity
- 1004.** Which of the following is not an example of an academic text?
(A) Conference Proceeding
(B) Scholarly Journal
(C) Daily Newspaper
(D) Theses
- 1005.** One of the major drawbacks to field studies is its ____ This can run into thousands of dollars, and is therefore not done lightly.
(A) Costs
(B) Accuracy
(C) Duration
(D) Simplicity
- 1006.** It is a function of research that provides a foundation for future studies, and seeks to find more information about a topic and a broader perspective or an additional knowledge to what is currently known.
(A) Exploration
(B) Description
(C) Explanation
(D) None of the above
- 1007.** Observing a relationship between two variables is NOT sufficient grounds for concluding that the relationship is a causal relationship.
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
- 1008.** Qualitative and Quantitative approaches are classifications of research designs.
(A) True
(B) False
- 1009.** Which of these is not a key characteristic of action research?
(A) A practical focus
(B) Action plan
(C) Collaboration
(D) Hoarding research
- 1010.** What are the two main categories of UX research methods?
(A) Primary and secondary research
(B) Qualitative and quantitative methods
(C) Direct and indirect research
(D) Formal and informal methods

- 1011.** A set of procedures, guidelines, assumptions, and attitudes required for the organized and systematic collection, interpretation, and verification of data and the discovery of reproducible evidence, enabling laws and principles to be stated or modified.(Unit 1 Vocabulary)
(A) Case Study
(B) Surveys
(C) Scientific Method
(D) Longitudinal Design
- 1012.** What type of reasoning draws a conclusion based on collective experiences?
(A) Inductive
(B) Analogy
(C) Arguments
(D) Deductive
- 1013.** His hair is red.
(A) Qualitative Data
(B) Quantitative Data
- 1014.** Determine the type of reasoning used:A child's teacher in pre-school was a female. In his grades 1 and 2, his teachers were both female. The child may say that ____
(A) Deductive
(B) Inductive
- 1015.** What is an example of a published literature review?
(A) A love letter
(B) A scholarly journal article on critical race theory in education
(C) A travel brochure
(D) A science fiction novel
- 1016.** The results of an action research has ____ significance.
(A) Theoretical
(B) Practical
- 1017.** Which of the following scenarios best exemplifies the use of inductive theory, where a researcher observes multiple specific cases and then formulates a general principle?
(A) Deduction
(B) Induction
(C) Reasoned Action
(D) Falsification
- 1018.** Since it rained every Christmas day for the past four years it will rain on Christmas day this year.What type of reasoning was used?
(A) Inductive
(B) Deductive
- 1019.** A purpose of interview that makes participants tell stories about their life.
(A) Narrative Interview
(B) Biographic Interview
(C) Episodic Interview
(D) In-depth Interview
- 1020.** Which of the following are types of nonexperimental designs?
(A) Experimental, Quasi-experimental, Longitudinal
(B) Descriptive, Correlational, Longitudinal
(C) Survey, Experimental, Cross-sectional
(D) Case study, Randomized, Longitudinal
- 1021.** The process of systematically examining or researching something or someone.
(A) Observation
(B) Simulation
(C) Investigation
(D) Accomplice
- 1022.** What does the Methods section contain?
(A) A summary of the entire study
(B) A detailed explanation of how data was collected and analyzed
(C) The interpretation of research findings
(D) Suggestions for future research
- 1023.** In the context of research instrument development, what does 'reliability' refer to?
(A) Consistency of measurement
(B) Validity of the instrument
(C) Accuracy of data collection
(D) Precision of sampling

- 1024.** Which of the following is a characteristic of a cohort longitudinal design?
- (A) Tracks groups of people defined by a shared event or experience.
 - (B) Uses different samples from the population at each time point.
 - (C) Measures IV and DV at two points in time to establish time order.
 - (D) Follows the same individuals with the same characteristics over time.
- 1025.** The local language is important in field-work because it:
- (A) Provides a formal tone in community interaction
 - (B) Preserves meaning and reflects the voice of participants
 - (C) Simplifies the steps of gathering information
 - (D) Reduces the reliance on outside translation services
- 1026.** Where the results of the study can be true for other real world settings, this is known as ____?
- (A) Reliability
 - (B) Inter-observer reliability
 - (C) Internal validity
 - (D) Ecological validity
- 1027.** Involved when a researcher conceptualizes his research activity, he uses existing theories and concepts in formulating theoretical framework for his research.
- (A) Inductive
 - (B) Deductive
 - (C) Dependent
 - (D) Independent
- 1028.** Which source is likely to be the most reliable?
- (A) An article from a peer-reviewed journal
 - (B) A blog post from an unknown author
 - (C) A celebrity's opinion on a topic
 - (D) A post with lots of likes
- 1029.** Finding the causes of behavior from a number of observations is called
- (A) Introspection.
 - (B) Observational technique.
 - (C) Inductive reasoning.
 - (D) Deductive reasoning.
- 1030.** This refers to a particular procedure or set of procedures applied in conducting a research or study.
- (A) Introduction
 - (B) Review of Related Literature
 - (C) Methodology
 - (D) Findings, Results and Recommendations
- 1031.** What term describes a procedure for statistically combining the results of multiple research studies and gives us the bottom-line results of these different studies?
- (A) Qualitative research
 - (B) Randomized controlled clinical trials
 - (C) Evidence-based practice
 - (D) Meta-analysis
 - (E) Cross-sectional studies
- 1032.** The use of natural predators to bring about a reduction in pest numbers.
- (A) Captive breeding programs
 - (B) 1080 baiting
 - (C) Biological control
 - (D) National parks
- 1033.** Different disciplines use different ____ to conduct, organize, and present research.
- (A) Methods
 - (B) Epistemologies
 - (C) Assumptions
 - (D) Phenomena
- 1034.** ____ is the extent to which an operational definition measures what it is intended to measure.
- (A) A variable
 - (B) Validity
 - (C) Hypothesis
 - (D) Reliability

- 1035.** In five math tests, Mr. Johnson scored higher when he studied. He believes studying improves his test scores.
(A) INDUCTIVE
(B) DEDUCTIVE
(C) ABDUCTIVE
(D) None of above
- 1036.** True or False. In a correlational study, researchers manipulate variables to observe effects.
(A) True
(B) False
- 1037.** Identify the following statement as qualitative or quantitative: Air is 21% Oxygen
(A) Qualitative
(B) Quantitative
- 1038.** Identify whether the following are strengths or limitations of action research. "Produces small-scale results."
(A) Limitation
(B) Strength
- 1039.** What is a potential drawback of longitudinal studies?
(A) Inability to track changes
(B) High dropout rates
(C) Lack of data
(D) No ethical concerns
- 1040.** What does "burden of proof" mean in scientific research?
(A) The requirement to publish findings
(B) The need to replicate studies
(C) The obligation to prove one's assertion
(D) The necessity to fund research
- 1041.** What is the main distinction between validity and reliability? (Price, L. R. (2017) Chapter 3)
(A) Reliability refers to consistency, while validity refers to accuracy
(B) Validity is a statistical concept while reliability is theoretical
(C) Reliability must be tested before validity can be considered
(D) They are identical measures
- 1042.** The way Jerry, a rehabilitation facility psychometrician, writes her psychological report exhibits the distinctive traits of her client's giving emphasis on each individual's unique personality. What approach does she use?
(A) Nomothetic approach
(B) Idiographic approach
(C) Both A and B
(D) None of the above
- 1043.** Cross sectional designs are ____ and fast, but lack insight into how age groups may differ beyond age.
(A) Cheap
(B) Expensive
(C) Complex
(D) Slow
- 1044.** What is a common challenge associated with longitudinal studies?
(A) High participant dropout rates over time
(B) Lack of detailed data collection
(C) Difficulty in obtaining initial funding
(D) Inability to measure changes over time
- 1045.** Which technique of research is applied in Educational Sociology?
(A) Laboratory Experiments.
(B) Historical Researches.
(C) Field Experiments.
(D) Field Studies.
- 1046.** Introduced mental testing in the United States.
(A) Antiquity to the Nineteenth Century
(B) 1822-1911: Francis Galton
(C) 1832-1920: Wilhelm Wundt
(D) 1860-1944: James McKeen Cattell
(E) Alfred Binet

- 1047.** A SWOT ____ gathers data about internal and external factors to help with strategic planning.
(A) Plan
(B) Analysis
(C) Routine
(D) Program
- 1048.** Which of the following should be avoided in item writing?
(A) Clear stems and options
(B) Items testing a single concept
(C) Negative wording such as “Which of the following is NOT ____” when unnecessary
(D) Balanced difficulty levels
- 1049.** Which of the following is acceptable to establish the fact?
(A) Reference in the ancient literature.
(B) Opinion of some specific people.
(C) Availability of observable evidence.
(D) All of the above.
- 1050.** A researcher studies a single session of counseling in which a counselor treats a client’s phobia using a paradoxical strategy. He then writes in his research report that paradox is the treatment of choice for phobics. This is an example of
(A) Deductive logic or reasoning
(B) Inductive logic or reasoning
- 1051.** It involves the application of the steps of scientific method to classroom problems.
(A) Action research
(B) Educational research and development
(C) Evaluation research
(D) Statistical research
- 1052.** This fallacy consists in drawing a general or universal conclusion from insufficient particular case.
(A) Argumentum ad Antiquum (Appeal to the Ages)
(B) Argumentum ad Verecundiam (Appeal to Inappropriate Authority)
(C) Argumentum ad Ignorantiam (Arguing from Ignorance)
(D) Hasty Generalization (Converse Accident)
- 1053.** Which is modern method of research?
(A) Scientific Method.
(B) Discussion.
(C) Authority.
(D) Case Study.
- 1054.** Which approach is more adaptable to changing data patterns and trends?
(A) Model-driven
(B) Data-driven
(C) Both are equally adaptable
(D) Neither is adaptable
- 1055.** The term “research methodology” refers to the theory of how research should be undertaken
(A) True
(B) False
- 1056.** Hey there! Can you help Advait figure out which of the following is not an outcome of a scientific research?
(A) Theory
(B) Practice
(C) Policy
(D) Literature Review
- 1057.** A nurse observes several patients improving after a new positioning technique and concludes it may benefit most post-op clients. Which reasoning type is used?
(A) Inductive reasoning from specific observations
(B) Abductive reasoning toward best explanations
(C) Deductive reasoning from general rules
(D) Analogical reasoning across unrelated fields

- 1058.** According to the British Standards Institution, bibliometrics primarily involves what?
- (A) Manual cataloging of archival documents
 - (B) Ethical frameworks for scientific communication
 - (C) Narrative reviews summarizing research fields
 - (D) Patterns of publication using mathematical methods
- 1059.** Which of the following similarity is found in Qualitative research and Survey research?
- (A) They are descriptive research methods.
 - (B) They are guided by predetermined variables to study.
 - (C) Examine topics primarily from the participants' perspectives.
 - (D) Have large sample sizes.
- 1060.** Research through experiment and observation is called
- (A) Clinical Research
 - (B) Experimental Research
 - (C) Laboratory Research
 - (D) Empirical Research
- 1061.** The test has uniformity of procedure in administration and scoring
- (A) Standardized
 - (B) Appropriateness of Difficulty Level
 - (C) Ease of Administration
 - (D) None of above
- 1062.** A methodology should include:
- (A) Findings and conclusions
 - (B) A description of how the study was conducted
 - (C) Suggestions for further research
 - (D) Limitations of the study
- 1063.** Professional development in science often includes training in which of the following areas?
- (A) Advanced scientific research methods.
 - (B) Basic arithmetic skills.
 - (C) Historical analysis techniques.
 - (D) Literary criticism.
- 1064.** Which of the following is not included in scientific research methods?
- (A) Method of recognizing scientific events.
 - (B) Methodology.
 - (C) Systematic method.
 - (D) Specific research method.
- 1065.** The table next to me at Panera has a bowl of soup on it, but no one is sitting there. Maybe they are in the restroom and will return soon.
- (A) Abductive
 - (B) Deductive
 - (C) Inductive
 - (D) None of above
- 1066.** Read each statement. Then choose whether the statement is an observation, inference, or prediction. I can jump high in tennis shoes because they have rubber on the bottom.
- (A) Observation
 - (B) Inference
 - (C) Prediction
 - (D) None of above
- 1067.** Any unplanned static or interruption during the communication process; can be semantic, internal or external
- (A) Noise
 - (B) Decoding
 - (C) Receiver
 - (D) Feedback
- 1068.** Whenever you forget to feed your goldfish it dies. You conclude that if you don't feed your fish it will die.
- (A) Deductive
 - (B) Inductive
- 1069.** Some quasi-experiment designs can also be known as correlational designs.
- (A) T
 - (B) F

- 1070.** The last six times we played our archrival in football, we won, so I know we are going to win on Saturday.
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Neither
 - (D) None of above
- 1071.** It deals with the description of the research subject, methods and tools of the study, and analysis that was used to summarize the result of the study
- (A) Methodology
 - (B) Background of the Study
 - (C) Statement of the Problem
 - (D) Abstract
- 1072.** Which reasoning method involves making predictions based on patterns observed in specific cases?
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Abductive Reasoning
 - (D) Critical Thinking
- 1073.** Begins with a specific observation or a set of observations such as an experiment, a statistic, or a personal experience. The arguer then draws a more broad, generalized conclusion (makes a claim) based on the observation(s). In the past, ducks have come to the pond. Therefore, ducks will come to the pond this summer.
- (A) Abductive Reasoning
 - (B) Inductive Reasoning
 - (C) Deductive Reasoning
 - (D) Author's Appeal
- 1074.** What is a keyword?
- (A) A single word or phrase on your topic
 - (B) A sentence about your topic
 - (C) A paragraph about your topic
 - (D) A question about your topic
- 1075.** ____ is the consistency of a measurement whereas ____ is the degree to which a test accurately measures what it purports to measure.
- (A) Validity; reliability
 - (B) Replication; interpretation
 - (C) Interpretation; replication
 - (D) Reliability; validity
- 1076.** Mrs. Gillihan asked each student in her class these four questions. Which of the following questions is statistical?
- (A) How many times do you exercise each week?
 - (B) How many laps around the school track is equivalent to a mile?
 - (C) How many cups are in a gallon?
 - (D) How many hershey chocolate bars come in a package for s'mores?
- 1077.** ____ is the process of generating broad conclusions based on specific patterns and observations.
- (A) Counterexample
 - (B) Inductive Reasoning
 - (C) Parallel Lines
 - (D) Conjecture
- 1078.** What is the most important reason for understanding research methods?
- (A) So you can be a psychologist when you grow up
 - (B) So you can have something interesting to say on blind dates
 - (C) So you can evaluate information and make informed decisions
 - (D) So you can get a good grade in this class
- 1079.** It tells how the research was conducted and how data was collected.
- (A) Methodology
 - (B) Title
 - (C) Discussion
 - (D) None of above

- 1080.** Educational research emphasizes
- (A) Collection of empirical data
 - (B) Control for personal biases in collecting, analyzing, and interpreting empirical data.
 - (C) Sample selection such that findings can be generalized to other individuals and situations
 - (D) All of these
- 1081.** How is research carried out using the scientific method?
- (A) In a disorganized and random manner
 - (B) In an organized and methodical manner
 - (C) In a hurried and careless way
 - (D) In a secretive and hidden manner
- 1082.** A valid research instrument ensures:
- (A) Consistent results across trials
 - (B) Measurement of what it intends to measure
 - (C) Simplicity in administration
 - (D) Free from all types of errors
- 1083.** Instruments used in action research are usually ____
- (A) Teacher-made/developed instruments
 - (B) Professionally developed instruments
- 1084.** Ananya is conducting a research project on the impact of social media on youth. She carefully selects her research methodology to ensure accurate results. Research methodology refers to the specific approach the researcher takes to conducting a research project.
- (A) TRUE
 - (B) FALSE
- 1085.** The following 6 questions refer to this information: Suppose a marine biologist observes the behaviour and activities of dolphins. She identifies different dolphins within the group and observes them every day for a month. She records detailed observations about their behaviours. Some of her observations are qualitative and some are quantitative. Is this research?
- (A) Yes
 - (B) No
- 1086.** In doing a research, which is needed to be more valid?
- (A) Hypothesis
 - (B) Factual evidences
- 1087.** Sir Francis Bacon of England devised a set of inductive methods for solving problems known as:
- (A) Scientific Aptitude
 - (B) Scientific Indoctrination
 - (C) Scientific Orientation
 - (D) Scientific Method
- 1088.** Which type of reasoning involves starting with specific observations and measures, moving to broader generalizations and theories?
- (A) Inductive
 - (B) Deductive
 - (C) Abductive
 - (D) None of the above
- 1089.** Research methods can be:
- (A) Strategies
 - (B) Processes
 - (C) Techniques
 - (D) All of the above
- 1090.** The type of reasoning where a person makes conclusions based on observations and patterns is called ____
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Conjecture
 - (D) Experiments
- 1091.** Interviewing veterans or collecting water samples from the pond in your park would be an example of which type of service-learning?
- (A) Direct
 - (B) Indirect
 - (C) Advocate
 - (D) Research

- 1092.** Which can effectively measure student's awareness of values?
- (A) Projective techniques
 - (B) Moral dilemma
 - (C) Likert scales
 - (D) Anecdotal record
- 1093.** In psychology an experiments Validity relates to
- (A) Values of researchers
 - (B) Real world comparisons
 - (C) How honest participants are
 - (D) The cost of running experiments
- 1094.** Team of researchers of different but complementary strengths work together to develop research questions and design and conduct. Example: different group of professors collaborating to improve instructional practices.
- (A) Individual action research
 - (B) Collaborative action research
 - (C) Systemwide action research
 - (D) None of above
- 1095.** In qualitative and quantitative research, both might use similar approaches in data collection such as observation.
- (A) True
 - (B) False
- 1096.** Leads to new knowledge as laws are derived from particulars
- (A) Deductive reasoning
 - (B) Inductive reasoning
- 1097.** Which of the following is true concerning causation?
- (A) Causation always exists if two variables are correlated
 - (B) Most events have a single cause
 - (C) Most events have multiple causes
 - (D) It is impossible to determine causation
- 1098.** Inductive or Deductive? A scientist dips a platinum wire into a solution containing salt, passes the wire over a flame, and observes that it produces an orange-yellow flame. She does this with many other solutions that contain salt, finding that they all produce an orange-yellow flame. She states "A solution that contains salt produces a orange-yellow flame in a flame test".
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
- 1099.** Which of the following is not one of the steps involved in a literature review?
- (A) Ignore secondary sources
 - (B) Define the research problem as precisely as possible
 - (C) Select and peruse one or two appropriate general reference works
 - (D) Obtain and read relevant primary sources
- 1100.** Practice 1: Concept Application involves applying psychological perspectives, theories, concepts, and ___ findings.
- (A) Research
 - (B) Historical
 - (C) Mathematical
 - (D) Fictional
 - (E) Personal
- 1101.** As workings of machines could be understood by reducing its basic components-physical universe can be understood by analyzing or reducing it to its simplest parts.
- (A) Mechanism
 - (B) Determinism
 - (C) Reductionism
 - (D) Empiricism
- 1102.** A business introduces a new product to mid-sized cities in the southeastern section of the country. The business monitors the product's sales to determine if it should introduce the product nationwide. What marketing research method is the business using?

- (A) Observation
 - (B) Test marketing
 - (C) Consumer panel
 - (D) Survey
- 1103.** If the inference made from the results of a study is correct, then the study has ____
- (A) Research validity
 - (B) Valid results
 - (C) Important results
 - (D) Research reliability
- 1104.** In assessing the degree to which the findings of a quantitative study are accurate and valid, which dimension would be especially important to critique?
- (A) Ethical
 - (B) Interpretive
 - (C) Substantive
 - (D) Methodologic
- 1105.** A reviewer of a research proposal on hyperactivity disorder has concerns over the concept of hyperactivity disorder described in the study. Her concern is over the ____ validity of hyperactivity disorder in the study.
- (A) Construct
 - (B) Internal
 - (C) Statistical conclusion
 - (D) None of above
- 1106.** What is the purpose of triangulation in communication research?
- (A) To validate research findings by using multiple methods or data sources
 - (B) To manipulate variables in an experiment
 - (C) To analyze survey responses
 - (D) To conduct a literature review
- 1107.** Data that deals with descriptions
- (A) Qualitative
 - (B) Quantitative
- 1108.** A set or system of methods or principles used in a discipline, as in the sciences:
- (A) Conclusion
 - (B) Discussion
 - (C) Research proposal
 - (D) Methodology
- 1109.** Which is one purpose of Participatory Action Research?
- (A) To improve practice in the short term as well as to inform larger issues.
 - (B) To establish an action plan.
 - (C) To provide holistic and systematic overview of the context.
 - (D) To empower individuals and groups to improve their lives.
- 1110.** In contrast to direct presentation of facts and concepts, this approach uses real and simulated problems to enhance students' critical thinking skills in order to solve them.
- (A) Inquiry Learning
 - (B) Cooperative Learning
 - (C) Problem-based Learning
 - (D) Project-based Learning
- 1111.** I ask 5 different boys their favorite color and they all say "blue" ____ I conclude that all boys like blue. This is:
- (A) Hypothetical thinking
 - (B) Deductive reasoning
 - (C) Inductive reasoning
 - (D) Adolescent egocentrism
- 1112.** You go fishing, and every time you fish in a certain hole you never catch anything. You conclude that there are no fish in that hole.
- (A) Deductive
 - (B) Inductive
- 1113.** When you do a checking of tools, what we call the process of validity used?
- (A) Criterion validity
 - (B) Face validity
 - (C) Content validity
 - (D) Construct validity

- 1114.** Consistent and predictable results are achieved more effectively and efficiently when activities are understood and managed as interrelated processes that function as a coherent system
- (A) Customer Focus
 - (B) Process Approach
 - (C) Improvement
 - (D) Evidence Based Decision Making
- 1115.** How do scientists know that their data is accurate?
- (A) Follow their procedure exactly and control all their variables
 - (B) Compare results with other scientists that tested the same thing and get similar results
 - (C) Repeat the experiment and get similar results
 - (D) All of the choices are correct.
- 1116.** Research methodology is a way to
- (A) Analyze the Data required for research.
 - (B) Solve the research problem systematically.
 - (C) Select the required sample size.
 - (D) Utilize the data to solve a problem.
- 1117.** The extent in which variables measure what they are supposed to measure is called ____
- (A) Construct validity
 - (B) External validity
 - (C) Internal validity
 - (D) None of above
- 1118.** In this study's purpose, what patterns are investigated to support economical library management?
- (A) Experimental crop rotation schedules
 - (B) Bibliographical patterns of cited documents
 - (C) Student attendance trends in reading rooms
 - (D) Software usage metrics for cataloging
- 1119.** Science seeks to acquire knowledge and understanding of reality through the formulation, testing, and evaluating of ____
- (A) Deductive reasoning
 - (B) Theories
 - (C) Technology
 - (D) Scientific method
- 1120.** Which of the following is NOT an analytic study design?
- (A) Randomize controlled trial
 - (B) Case series
 - (C) Ecologic
 - (D) Cohort
- 1121.** ____ refers to the extent to which the results of the study can be applied beyond the sample and the settings used in the study.
- (A) Generalizability
 - (B) Population
 - (C) Sample
 - (D) Credibility
- 1122.** These are the reactions, responses, or information provided by the receiver. It can be a verbal or non-verbal reaction or response.
- (A) Message
 - (B) Context
 - (C) Barrier
 - (D) Feedback
- 1123.** This type of reasoning begins with a general rule or fact and then creates specific conclusions based on the general fact. The specific ideas will be correct as long as the general idea is true.
- (A) Abductive
 - (B) Deductive
 - (C) Inductive
 - (D) None of above
- 1124.** The extent to which a study's findings can be meaningfully applied to the target population.
- (A) External Validity

- (B) Generalizability
(C) Ecological Validity
(D) Temporal Validity
- 1125.** A paradigm is:
(A) A research tool.
(B) A cluster of beliefs and dictates which for scientists in a particular discipline influence what should be studied, how research should be done, and how results should be interpreted.
(C) A set of students in a study group.
(D) A research strategy.
- 1126.** What type of reasoning is being used if someone argues from specific instances to a broader generalization?
(A) Abstract reasoning
(B) Inductive reasoning
(C) Conceptual reasoning
(D) Deductive reasoning
- 1127.** When seeing if a test is reliable, taking it more than once is termed:
(A) Alternate form
(B) Split Half
(C) Equivalent Form
(D) Test-Retest
- 1128.** A panel design is a type of longitudinal research design that:
(A) Follows a single group of individuals over time
(B) Compares different groups of individuals at multiple time points
(C) Focuses on changes in a particular variable over time
(D) Uses a combination of cross-sectional and trend designs
- 1129.** In a quantitative research method, which means data trustworthiness?
(A) Validity
(B) Reliability
(C) Triangulation
(D) Validity and Reliability
- 1130.** It refers to the repeat procedures and obtain the same results of the research.
(A) Duplication
(B) Replication
(C) Mutation
(D) Multiplication
- 1131.** What type of observation is color?
(A) QUANTITATIVE
(B) QUALITATIVE
- 1132.** An 'Operational Definition' in research methods and design refers to:
(A) A precise statement of how a variable is measured or manipulated in a study.
(B) A general theory about the topic being studied.
(C) A summary of previous research findings.
(D) A list of all possible variables in a study.
- 1133.** In which logical fallacy is a proposition supported by the premises, which is supported by the proposition, creating a circle in reasoning where no useful information is being shared? (For example, defining a term by using the term in the definition.)
(A) Circular reasoning
(B) Bandwagon
(C) Ad populum
(D) Appeal to authority
- 1134.** A researcher who investigates human behavior and culture by analyzing recovered artifacts is known as a(n) ____
(A) Scientist
(B) Paleontologist
(C) Archaeologist
(D) Botanist
- 1135.** The process of gathering evidence about the natural world and proposing explanations based on this evidence
(A) Hypothesis
(B) Independent variable
(C) Bias
(D) Scientific inquiry

- 1136.** What does methodology study in pedagogy?
(A) Principles, methods, and approaches of scientific research
(B) Only teaching techniques
(C) Classroom management
(D) Student behavior
(E) School administration
- 1137.** What term refers to the relationship between an event and a second event the second event is a consequence of the first?
(A) Association
(B) Causality
(C) Correlation
(D) Explanatory theory
- 1138.** What is the initial decision researchers need to make when planning empirical research?
(A) Choose the statistical analysis method
(B) Decide whether to use experimental or nonexperimental procedures
(C) Determine the sample size
(D) Select the data collection tools
- 1139.** The extent to which the results of a study can be generalized beyond the sample that was tested.
(A) Reliability
(B) Ecological validity
(C) External validity
(D) Internal validity
- 1140.** The methods and data section should outline:
(A) How the researcher answered his or her research question
(B) The researcher's theories and hypotheses
(C) The researcher's results
(D) The researcher's conclusions
- 1141.** The main purpose of exploratory research is to:
(A) Test a hypothesis.
(B) Quantify a specific phenomenon.
(C) Gain a deeper understanding of a problem or situation.
(D) Prove a cause-and-effect relationship.
- 1142.** Which of the following research methods is being described? collect data on 2 or more variables with no manipulation
(A) Descriptive method
(B) Correlational method
(C) Experimental method
(D) None of above
- 1143.** In which study sociometric methods cannot be used with advantage?
(A) Group structure.
(B) Social adjustments.
(C) Leadership.
(D) Personality.
- 1144.** What is wrong with test items that give clues to answers to questions?
(A) Ambiguity
(B) Poor construction
(C) Unclear directions
(D) Tests brevity
- 1145.** True or False? Scholarly resources are ALWAYS a good choice for your research
(A) True
(B) False
- 1146.** Which term describes the process of drawing a general conclusion from specific observations?
(A) Inductive reasoning
(B) Deductive reasoning
(C) Abductive reasoning
(D) Analogical reasoning
- 1147.** All of the following are informal research methods except ____
(A) Interviewing the target audience
(B) Conducting a scientific experiment
(C) Looking in company files
(D) Brainstorming for ideas

- 1148.** Research that is done to examine the findings of someone else using the "same variables but different people" is which of the following?
- (A) Empiricism.
 - (B) Replication.
 - (C) Hypothesis.
 - (D) Exploration.
- 1149.** Why is it beneficial to use multiple measurement techniques when measuring something?
- (A) To cross-validate with different methods and reduce bias
 - (B) To make the process slower
 - (C) To increase random errors
 - (D) To use more expensive equipment
- 1150.** In order to imbibe the quality of Prediction' in a research, it should be
- (A) Based on one's own self-preferences.
 - (B) Resultant of an astrologer.
 - (C) Completed on the basis of solid data.
 - (D) Carried out in order to satisfy the public opinion.
- 1151.** Research Process & Methodology- Research methodology refers to:
- (A) The techniques used to collect data
 - (B) The overall approach and logic behind research methods
 - (C) The tools used for analysis
 - (D) None of these
- 1152.** The 'Scientific Method' in the context of research methods and design is defined as:
- (A) A systematic process used to collect and analyze data to answer research questions.
 - (B) A random approach to gathering information for research.
 - (C) A method of expressing personal opinions in research.
 - (D) A way to summarize research findings without evidence.
- 1153.** A test should be administered on different occasions or contexts and marked by the same examiner at different times.
- (A) Validity
 - (B) Reliability
 - (C) Discrimination
 - (D) None of above
- 1154.** Which major research approach is committed to directly improving educational practices?
- (A) Mixed methods
 - (B) Action
 - (C) Qualitative
 - (D) Quantitative
- 1155.** What is the definition of 'Research Methodology'?
- (A) The overall strategy and techniques used to conduct research, including data collection and analysis methods.
 - (B) A summary of research findings presented in a report.
 - (C) A list of references used in a research paper.
 - (D) The process of publishing research in academic journals.
- 1156.** What kind of research method would you use to see if the robotics club was benefiting the students involved?
- (A) Case study
 - (B) Participant Observation
 - (C) Program Evaluation
 - (D) Demographic Information Edit
- 1157.** Which scientific method is being described below: an explanation using an integrated set of principles that organizes observations and predicts behaviors or events (explains behaviors)
- (A) Theory
 - (B) Case study
 - (C) Operational definition
 - (D) Replication

- 1158.** Inductive reasoning involves
- (A) Starting with a general principle and applying it to a specific case.
 - (B) Using a specific observation to make a general conclusion.
 - (C) Evaluating arguments based on logical consistency.
 - (D) Testing hypotheses through controlled experiments.
- 1159.** When is a literature review considered a poor literature review?
- (A) If it fails to incorporate your own inferential, analytical, and comparative-contrasting about the authors' ideas.
 - (B) If it fails to link or contrast a series of articles based on theory or theme.
 - (C) Both A and B
 - (D) A only
- 1160.** A researcher is concerned with measuring internal consistency reliability and has decided to use the Kuder-Richardson Formulas with a Likert Scale test. This is a problem because the:
- (A) Test does not measure internal consistency reliability
 - (B) Researcher needs a second test for comparison
 - (C) Test does not have dichotomous test items
 - (D) Researcher is concerned with content sampling error
- 1161.** What is a common mistake when conducting online research?
- (A) Using multiple sources to verify information.
 - (B) Relying solely on the first search result.
 - (C) Cross-referencing data from different websites.
 - (D) Taking notes while researching.
- 1162.** Which pair best matches scope area with a typical method?
- (A) Promotion effectiveness-controlled experiments
 - (B) Market size-employee exit interviews
 - (C) Product tests-quarterly tax filing reviews
 - (D) Brand impact-forklift maintenance logs
- 1163.** In which section do you present your research methods?
- (A) Methods or Methodology section
 - (B) Results section
 - (C) Introduction section
 - (D) Discussion section
- 1164.** Which theory operates on the "stimulus-response principle", which means all behaviors are caused by external stimuli?
- (A) Contextual theory
 - (B) Behaviorist theory
 - (C) Cognitive theory
 - (D) Constructivist theory
- 1165.** Which of the following are the fundamentals of research?
- (A) Planning, conducting and interpreting research
 - (B) Purpose, focus, sampling, types and sources of data
 - (C) Questionnaires, interviews, case studies, observations
 - (D) Respect, privacy, integrity, bias
- 1166.** If a research is conducted through systematic observation, measurement, and experiment, it is ____
- (A) Cyclical
 - (B) Logical
 - (C) Empirical
 - (D) Analytical
- 1167.** Dr. Xiao wants his personality test to predict future behaviors similarly for all test takers. What should Dr. Xiao examine?
- (A) Stereotype threat
 - (B) Stereotype lift
 - (C) Test bias
 - (D) Test fairness

- 1168.** A social worker reads a journal article that discusses a quantitative survey which focused on social work students' attitudes towards people with disabilities. Which kind of article is this?
- (A) Empirical
 - (B) Theoretical
 - (C) Practical
 - (D) None of above
- 1169.** Which of the following statements is not true in the context of participatory research?
- (A) It recognizes knowledge as power.
 - (B) It is a collective process of enquiry.
 - (C) Its sole purpose is production of knowledge.
 - (D) None of above
- 1170.** Which type of validity focuses on the social consequences and impacts of a test?
- (A) Construct validity
 - (B) Consequential validity
 - (C) Criterion validity
 - (D) Practical validity
- 1171.** Validity that reflect whether a scale performs as expected in relation to other variables selected as meaningful criteria
- (A) Content Validity.
 - (B) Convergent Validity.
 - (C) Criterion-related Validity.
 - (D) Construct validity.
- 1172.** It is the research design used to investigate relationships among variables in a population.
- (A) Quasi-Experimental
 - (B) Correlational
 - (C) Descriptive
 - (D) True Experimental
- 1173.** What are these examples of? Rule of thumb; educated guess; an intuitive judgement
- (A) Data Mining.
 - (B) Backtracking.
 - (C) Huristics.
 - (D) Performance Modelling.
- 1174.** What is a question that can be tested and can be disproved by experiment?
- (A) Scientific inquiry
 - (B) Experimental stuff
 - (C) Inference
 - (D) Pseudoscience
- 1175.** The ___ attempts to devise, test or improve new research methods in Planning
- (A) The descriptive study
 - (B) Methodological study
 - (C) The historical study
 - (D) The explanatory study
- 1176.** What are research methods primarily concerned with?
- (A) Collecting and analyzing data using tools and procedures
 - (B) Developing theories without evidence
 - (C) Focusing solely on qualitative data
 - (D) Ignoring the research design
- 1177.** What should you watch out for when using inductive reasoning?
- (A) That specific observations lead to larger conclusions
 - (B) That assumptions are true
 - (C) That generalizations are accurate
 - (D) That examples prove a rule
- 1178.** What aspect of research focuses on data collection and analysis techniques
- (A) Axiology
 - (B) Methodology
 - (C) Epistemology
 - (D) Ontology
- 1179.** Scientific ___ is a process that uses a set of skills to answer questions or test ideas about the natural world.
- (A) Process
 - (B) Inquiry
 - (C) Law
 - (D) Theory

- 1180.** — is a non-experimental research design technique that helps researchers establish a relationship between two closely connected variables.
- (A) Descriptive design,
 - (B) Experimental research design
 - (C) Correlational research design
 - (D) Diagnostic research design
 - (E) Explanatory research design
- 1181.** Method is dependent upon?
- (A) Available textbooks
 - (B) Teacher's expectation
 - (C) Classroom techniques
 - (D) Theoretical assumptions
- 1182.** Empirical research is empirical as generalizations drawn by a researcher are rooted upon hard evidence gathered from information collected from — experiences or observations.
- (A) Real-life
 - (B) Imaginary
 - (C) Fictional
 - (D) Hypothetical
- 1183.** A composite of separate research studies and type needed to address research objectives and execute an overall measurement strategy.
- (A) Service research program
 - (B) Marketing research program
 - (C) Service marketing program
 - (D) None of the above
- 1184.** Process for determining the nature and extent of the loss of a community resulting from a natural, accidental or human caused danger
- (A) Resilience
 - (B) Damage mapping
 - (C) Damage assessment
 - (D) Disaster response
- 1185.** What role does logic play in the formulation of scientific models?
- (A) Logic is used to create models that are purely speculative without evidence.
 - (B) Logic helps in structuring scientific models based on empirical data and theoretical frameworks.
 - (C) Logic is not necessary for the development of scientific models.
 - (D) Logic only serves to validate existing scientific models.
- 1186.** Reasoning achieved from statements to a certainty
- (A) Sound reasoning
 - (B) Deductive reasoning
 - (C) Inductive reasoning
 - (D) Faulty reasoning
- 1187.** How is the scientific research method understood in terms of information?
- (A) It is the way, path, and means of collecting and processing information.
 - (B) It is the way to prove points from existing information.
 - (C) It is an activity with a subject, using operations to explore the object.
 - (D) It is the path of scientific research.
- 1188.** A nurse starts with a theory about pressure injury prevention and determines exact turning schedules for a patient. This illustrates which approach?
- (A) Deductive approach moving from theory to action
 - (B) Inductive approach building theory from cases
 - (C) Abductive approach choosing likely hypothesis
 - (D) Intuitive approach relying on gut feeling
- 1189.** What does this mean by “inductive approach”?
- (A) An inductive approach to research is the one that people typically associate with scientific investigation
 - (B) An inductive approach to research begins by collecting data that is relevant to the topic of interest

1190. ____ can be a generative approach to the research process as it can elicit a meta-analysis that might otherwise be lost. The goal is to generate insight and reflection on the study topic and processes as well as to experience being interviewed, either using a protocol that resembles or is totally different from the ones used with your research participants.
- (A) Fieldwork Research Journal
 - (B) Researcher Interview
 - (C) Research Log
 - (D) Contact Summary Forms
1191. What method does psychology primarily use?
- (A) Storytelling
 - (B) Speculation
 - (C) The scientific method
 - (D) Artistic interpretation
1192. Which is NOT a source of reliable background information
- (A) A biased organization
 - (B) A government agency
 - (C) A magazine
 - (D) A museum
1193. Grade 12 students at Balatong Integrated School conducted an experiment on tomatoes by applying Ferrous Sulfate. After three weeks, they observed the number of tomatoes produced increased. They concluded that the used of Ferrous Sulfate as organic fertilizer can increase the production of tomatoes.
- (A) Inductive
 - (B) Deductive
1194. What type of reasoning is used when deriving a conclusion based on an established generalization?
- (A) Analytical reasoning
 - (B) Abstract reasoning
 - (C) Deductive reasoning
 - (D) Inductive reasoning
1195. What Quality Criteria is universal (applying to both Qual and Quan designs)?
- (A) Generalisability
 - (B) Transferability
 - (C) Reliability
 - (D) Confirmability
 - (E) Transparency
- Explanation:** Transparency How clear is the report on the research? Could another reader attempt to replicate your methods? Can the reader grasp how your data supports your findings?
1196. Repeating the essence of a study to see if the basic finding can be reproduced?
- (A) Replication
 - (B) Correlation
 - (C) Debriefing
 - (D) Validity
1197. What reasoning process involves drawing a general conclusion from a series of specific observations?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Abductive Reasoning
 - (D) Logical Reasoning
1198. What do you call the type of reasoning wherein a researcher makes generalizations based on observations and patterns?
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Hypothesizing
 - (D) Logical reasoning
1199. Traditionally authors have developed theory by
- (A) Reading
 - (B) Observations from previous literature + common sense + experience
 - (C) Experiments
 - (D) Survey

- 1200.** Which type of reasoning is used when you infer a general trend from specific data points?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Abductive Reasoning
 - (D) Causal Reasoning
- 1201.** Expert opinion survey is a technique used in
- (A) Exploratory research design
 - (B) Descriptive research design
 - (C) Pre-experimental designs
 - (D) Quasi-experimental designs
- 1202.** What is the hallmark of nonexperimental research studies?
- (A) High control of extraneous variables
 - (B) Full manipulation of the dependent variable
 - (C) No manipulation of an independent variable
 - (D) None of above
- 1203.** C. Identify the type of noise presented in each scenario. Jane is having difficulty in understanding "Florante at Laura" because the author used figurative language / conotative meaning.
- (A) Physical Noise
 - (B) Psychological Noise
 - (C) Physiological Noise
 - (D) Semantic Noise
- 1204.** What research method looks at people across stages of development in a short period of time?
- (A) Cohort sequential
 - (B) Cross sectional
 - (C) Case study
 - (D) Experiment
- 1205.** A clinician relies on a senior physician's advice without evidence appraisal. What type of knowledge is used?
- (A) Statistical knowledge based on meta-analysis
 - (B) Intuitive knowledge validated by biomarkers
 - (C) Empirical knowledge derived from controlled trials
 - (D) Authoritative knowledge guided by expert opinion
- 1206.** Sources in this category include professional, scholarly, and academic peer-reviewed journals or sites.
- (A) Top-tier sources
 - (B) Mid-tier sources
 - (C) Bottom-tier sources
 - (D) Peer-viewed sources
- 1207.** This piece of evidence is when a person speaks about a subject because he or she is knowledgeable.
- (A) Commonly Accepted Belief
 - (B) Anecdote
 - (C) Expert Opinion
 - (D) Fact
- 1208.** Name the command verb for the following: Look for similarities and differences between ____
- (A) Assess
 - (B) Evaluate
 - (C) Compare
 - (D) Create
- 1209.** On the theoretical foundations of the curriculum, why is organizing data prior to making general conclusions important to curriculum planning and designing?
- (A) This is the easy way to obtain results
 - (B) This is the scientific way to a valid curriculum
 - (C) This is the way of essentialist philosophy
 - (D) This is the way adopted by classical philosophers
- 1210.** The test-retest method is used to measure:
- (A) The validity of a test.
 - (B) The reliability of a test or task.
 - (C) The average score of participants.
 - (D) The variability of participant responses.

- 1211.** Formal research methods are generally required for what type(s) of business document(s)?
(A) Routine e-mail messages
(B) Routine memos
(C) Long reports and complex business problems
(D) All of these choices would require formal research.
- 1212.** Contributes to the emergence of new theories and generalizations.
(A) Deductive research approach
(B) Inductive research approach
(C) Abductive research approach
(D) None of the above
- 1213.** Which bias occurs when participants provide answers they think the researcher wants to hear?
(A) Selection Bias
(B) Demand Characteristics
(C) Extreme Response Bias
(D) Recall Bias
- 1214.** Which of the following can be studied using scientific methods?
(A) Unicorns
(B) Telepathy
(C) Apparitions
(D) Insects
- 1215.** The repetition of an original experiment or research study to verify or bolster confidence in its results
(A) Replication
(B) Coercion
(C) Theory
(D) Experimental Design
- 1216.** Study how quickly rats can go through a maze is an example of what?
(A) Cross-Sectional Method
(B) Naturalistic Observation
(C) Case Study
(D) Laboratory Observation
- 1217.** The reasoning that uses general principle to predict specific result is called
(A) Inductive
(B) Deductive
(C) Hypothetic-Deductive
(D) None of the above
- 1218.** All of the following are questions to ask when determining reliability of a source EXCEPT which one?
(A) Who wrote the source?
(B) What is the date of the source?
(C) What is the purpose of the source?
(D) How long is the source?
(E) Is the source biased?
- 1219.** The design and procedures of a study can be replicated or repeated to arrive at more conclusive results.
(A) Methodical
(B) Replicable
(C) Critical
(D) Analytical
- 1220.** What do scientists need in order to support a theory?
(A) Behavior
(B) Evidence
(C) Claim
(D) Opinion Edit
- 1221.** What is the process of reasoning that involves moving from specific observations to a general conclusion?
(A) Circular reasoning
(B) Abductive reasoning
(C) Deductive reasoning
(D) Inductive reasoning
- 1222.** A micro theory which relies on using qualitative methods to collect data.
(A) Interpretivism
(B) Realism
(C) Positivism
(D) None of above

- 1223.** A complex explanation based on findings from many studies.
(A) Theory
(B) Hypothesis
(C) Guess
(D) Opinion
(E) Anecdote
- 1224.** Scientific knowledge in nursing is obtained primarily through which process?
(A) The scientific method
(B) Peer hierarchy
(C) Patient anecdotes
(D) Generational customs
- 1225.** Which of the following issues should candidates consider when evaluating studies?
(A) Validity
(B) Reliability
(C) Generalisability
(D) All of the above
- 1226.** When a research method is repeatedly applied and consistently produces the same results in a study, it is said to be
(A) Valid
(B) Reliable
(C) Relevant
(D) Standardised
- 1227.** It evaluates the data on reliability in light of all the other attributes of the test
(A) Reliability
(B) Validity
(C) Efficiency
(D) Objectivity
- 1228.** What does empirical research focus on?
(A) Theoretical explanations
(B) Replicable observations of the real world
(C) Unreal assumptions
(D) Deductive reasoning
- 1229.** Why might field research be considered more beneficial for specific purposes?
(A) It uses general information.
(B) It gathers information for a specific purpose.
(C) It is cheaper than other methods.
(D) It is faster to conduct.
- 1230.** The Scientific Method is used in
(A) Scientific researches.
(B) Social science researches.
(C) Both of the above.
(D) None of the above.
- 1231.** Statistical enquiry means
(A) It is science for knowledge
(B) Search for knowledge
(C) Collection of anything
(D) Search for knowledge with the help of statistical methods.
- 1232.** Utilization and Commercialization of Milk fish Bones into Sausage” is an example of:
(A) Field research
(B) Laboratory research
(C) Library research
(D) Basic research
- 1233.** In the methodology section, a researcher describes:
(A) Only conclusions
(B) Methods and tools used for data collection and analysis
(C) Literature review
(D) Theoretical background
- 1234.** Studies of consumers based on social and psychological characteristics, such as attitudes, interests, and opinions.
(A) Market segmentation
(B) Demographics
(C) Psychographics
(D) Geographics

- 1235.** Which scientific method is a top-down or confirmatory approach?
- (A) Inductive method.
 - (B) Hypothesis method.
 - (C) Pattern method.
 - (D) Deductive method.
- 1236.** Collaboration between respondents and researcher in all steps of the study
- (A) Research
 - (B) Meta-analysis design
 - (C) Participant
 - (D) Participatory action research
- 1237.** A common mistake in the Methods section is to:
- (A) Describe instruments and materials
 - (B) Insert discussion or interpretation
 - (C) Report participant demographics
 - (D) Outline procedures clearly
- 1238.** Which of the following is not a limitation of conceptual research?
- (A) It is time-consuming
 - (B) It relies too heavily on existing literature
 - (C) It is not based on empirical observation
 - (D) It is difficult to validate findings
- 1239.** What is the missing part of this qualitative research title: ABIS SHS STUDENTS' LEVEL OF SATISFACTION TO THE NEW MODES OF LEARNING
- (A) Research goal or result
 - (B) Independent variable
 - (C) Dependent variable
 - (D) None
- 1240.** What does 'Generalized' mean in the context of research methods and design?
- (A) Being able to apply findings from a study to broader populations beyond the original sample.
 - (B) Collecting data from only one specific group without considering others.
 - (C) Focusing solely on qualitative data analysis.
 - (D) Ensuring that all participants receive the same treatment regardless of the study design.
- 1241.** A dental assistant notices a patient has never been on time for an appointment. She concludes that the patient will be late for her next appointment.
- (A) Abductive Reasoning
 - (B) Deductive Reasoning
 - (C) Inductive Reasoning
 - (D) None of above
- 1242.** Which of the following form of a scientific inquiry is known as the theory building research?
- (A) Deductive Research
 - (B) Inductive Research
 - (C) Hypothesis
 - (D) Systematic observation
- 1243.** Graphs, computer simulations, charts, scaled-up or down diagrams
- (A) Models
 - (B) Hypotheses
 - (C) Procedures
 - (D) Questions
- 1244.** What is the difference between a research tool and a research method?
- (A) A tool is used for data collection, a method is a plan for conducting research
 - (B) A tool is a hypothesis, a method is a conclusion
 - (C) A tool is a conclusion, a method is a hypothesis
 - (D) A tool is a plan, a method is a data collection instrument
- 1245.** This research design seeks to establish an association between variables.
- (A) Experimental
 - (B) Correlational
 - (C) Descriptive
 - (D) Causal

- 1246.** "Developmental studies where individuals are observed at different ages, or other types of changes that occur to individuals over a period of time" which of the following bias may occur?
- (A) History effect
 - (B) Testing effect
 - (C) Attrition/Mortality
 - (D) Maturation effect
- 1247.** ____ is the convergence of results in order to validate or support a study.
- (A) Narrative
 - (B) Idiographic Causation
 - (C) Triangulation
 - (D) None of above
- 1248.** Very often, social scientists begin constructing a theory by observing aspects of social life, seeking to discover patterns that may point to more or less universal principles
- (A) Theoretical system.
 - (B) Taxonomies.
 - (C) Inductive construction.
 - (D) None of the above.
- 1249.** If you notice that every time you water a plant, it grows, and you conclude that watering helps plants grow, which reasoning is this?
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) None of above
- 1250.** Which of the following best describes the main purpose of validity in measurement?
- (A) To ensure that the measurement tool accurately assesses the intended concept or construct.
 - (B) To guarantee that the measurement tool produces the same results every time.
 - (C) To make sure the measurement is close to the true value, regardless of what is being measured.
 - (D) To prioritize consistency over measuring the correct concept.
- 1251.** Which scientific method is being described below:doing the essence of a research study again, usually with different participants or situations, to see if the basic findings can be reproduced
- (A) Theory
 - (B) Case study
 - (C) Operational definition
 - (D) Replication
- 1252.** Observing participants over a long period of time is the ____ method.
- (A) Laboratory
 - (B) Longitudinal
 - (C) Naturalistic observation
 - (D) Cross-sectional
- 1253.** Which of the following would require a formal research method?
- (A) Routine e-mail messages
 - (B) Business letters
 - (C) Long reports and proposals
 - (D) Oral presentations
- 1254.** A gatekeeper is someone who might give you access to a difficult group to research.
- (A) True
 - (B) False
- 1255.** What is the purpose of reviewing "reviews of research"?
- (A) To avoid reading original research articles.
 - (B) To get a comprehensive overview of research on a specific topic.
 - (C) To rely solely on the opinions of the reviewers.
 - (D) To criticize and discredit existing research.
- 1256.** What is grounded in objective, tangible evidence that can be observed time and time again, regardless of who is observing?
- (A) Empirical
 - (B) Falsifiable
 - (C) Generalize
 - (D) None of above

- 1257.** Study design utilized when certain exposures cannot normally be measured individually but can be measured in a community or broader level such as air pollution
(A) Ecological study
(B) Case study
- 1258.** Which comes first, theory or research? a) b) c) d)
(A) Theory, because otherwise you are working in the dark
(B) Research, because that's the only way you can develop a theory
(C) It depends on your point of view
(D) The question is meaningless, because you can't have one without the other
- 1259.** A systematic approach used in scientific study; an organized process used by scientists to do research and to verify the work of others.
(A) Conclusion
(B) Qualitative data
(C) Scientific method
(D) Scientific law
- 1260.** Correlational research tries to identify relationship between two variables
(A) True
(B) False
- 1261.** Every time you do all your homework your grades improve. You conclude that doing homework improves your grades.
(A) Deductive
(B) Inductive
- 1262.** In the context of scientific research, what is a limitation of inductive reasoning?
(A) It cannot be used to generate new hypotheses
(B) It relies on the assumption that future observations will follow past patterns
(C) It is only applicable to mathematical proofs
(D) It requires a large amount of data to be valid
- 1263.** Which reasoning involves moving from a series of specific facts to a general conclusion?
(A) Deductive reasoning
(B) Inductive reasoning
(C) Conceptual reasoning
(D) Logical reasoning
- 1264.** Choose Valid or Invalid. All dogs have ears; golden retrievers are dogs, therefore they have ears.
(A) Valid
(B) Invalid
- 1265.** This refers to combining observations/interpretations of different researchers.
(A) Method triangulation
(B) Data triangulation
(C) Researcher triangulation
(D) Theory triangulation
- 1266.** What do correlational studies examine?
(A) Cause and effect
(B) Relationship between variables
(C) Genetic inheritance
(D) Memory development
- 1267.** In research ____, the goal is to gather initial information that will help define the problem and suggest hypotheses such as determining the effectiveness of brand advertising creativity for new products in the market.
(A) Exploration
(B) Causal
(C) Ethnographic
(D) Descriptive
- 1268.** To ensure content validity, researchers must:
(A) Confirm that the instrument covers all aspects of the construct
(B) Test the instrument multiple times
(C) Use a control group
(D) Include random sampling

- 1269.** Which reasoning method is more likely to be used when a scientist is exploring new phenomena without existing theories?
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Both inductive and deductive reasoning
 - (D) Neither inductive nor deductive reasoning
- 1270.** Analysis of how characteristics run in intact families
- (A) Family study
 - (B) Twin study
 - (C) Neuron
 - (D) Experimental group
- 1271.** What is a structured research method?
- (A) Uses unstructured tools
 - (B) Uses structured tools like surveys, tests, and experiments
 - (C) Does not use any tools
 - (D) Uses only interviews
- 1272.** Proxy data are ____
- (A) Current weather data and observations that give us DIRECT evidence of climate change
 - (B) Ice cores, pollen from sediment cores, and fossils that give INDIRECT evidence of climate change
- 1273.** A classification system generally used in social sciences that breaks something down into different types or levels is called a ____
- (A) Diagram
 - (B) Flow chart
 - (C) Hierarchical category system
 - (D) Category
- 1274.** The part of the action research that explains how the researcher will implement his/her research.
- (A) Methodology
 - (B) Design
 - (C) Variable
 - (D) Data Analysis Plan
- 1275.** Describe a scenario where deductive reasoning is preferred over inductive reasoning.
- (A) A legal argument where a lawyer deduces a citizen's rights based on established laws.
 - (B) A detective gathering clues to build a profile of a suspect.
 - (C) A teacher inferring a student's understanding from their test scores.
 - (D) A scientist forming a hypothesis based on experimental data.
- 1276.** "Every bear I've seen had black fur. Therefore, most bears probably have black fur."
- (A) This is an inductive reasoning.
 - (B) This is a deductive reasoning.
- 1277.** "Never to accept anything for true till all grounds of doubt are excluded" is one of the rules laid by Rene Descartes in his book ____ which is supposed to have a great impact on the scientific method of research
- (A) The Histories
 - (B) Discourse on the method
 - (C) Reason in history
 - (D) The capital
- 1278.** If a study is "reliable", this means that:
- (A) The methods are outlined in the methods discussion clearly enough for the research to be replicated.
 - (B) The measures devised for concepts are stable on different occasions.
 - (C) The findings can be generalized to other social phenomena.
 - (D) It was conducted by a reputable researcher who can be trusted.
- 1279.** What is used to illustrate how a given process will run?
- (A) Pie chart.
 - (B) Graph.
 - (C) Flow chart.
 - (D) Packet Tracer.

- 1280.** What is one of the main challenges of conducting longitudinal research in the teaching-learning context?
- (A) Difficulty in obtaining consent from participants
 - (B) Time commitment and participant attrition over extended periods
 - (C) Lack of funding for large sample sizes
 - (D) Absence of appropriate qualitative methods
- 1281.** It is defined as the systematic approach to the conduct of an operation or process. It includes steps of procedure, application of techniques, systems of reasoning or analysis, and the modes of inquiry employed by a discipline.
- (A) Literature Review
 - (B) Introduction
 - (C) Abstract
 - (D) Methodology
- 1282.** The most important addition to psychology which allowed it to be considered a science.
- (A) Religion
 - (B) Psychoanalysis
 - (C) Scientific Method
 - (D) Behaviorism
- 1283.** The extent to which a measure is related to an outcome
- (A) Research Gap
 - (B) Research Instruments
 - (C) Criterion Validity
 - (D) Research Analysis
- 1284.** If someone was using a survey to study citizen opinion about the legality of abortion across gender in Mexico, what is the unit of analysis?
- (A) The individual
 - (B) Gender
 - (C) Mexico
 - (D) Opinion about the legality of abortion
- 1285.** Which is NOT a credible source for RRL?
- (A) Peer-reviewed journals
 - (B) Government reports
 - (C) Personal social media posts
 - (D) Academic books
- 1286.** Which bias is related to inaccurate memory recall?
- (A) Volunteer Bias
 - (B) Attrition Bias
 - (C) Recall Bias
 - (D) Hawthorne Effect
- 1287.** It can be repeated to verify the correctness of the results in another setting
- (A) Large sample sizes
 - (B) Replication
 - (C) Future outcomes
 - (D) Objective
- 1288.** In an action research, research designs are described as:
- (A) Flexible and with-quick time frame
 - (B) With rigorous controls over longer periods
- 1289.** Repeated BP measurement over days is:
- (A) Cross-sectional
 - (B) Time-series

1.2.5 Quantitative Research

- 1.** What is the purpose of a survey questionnaire in quantitative research?
- (A) To measure the effectiveness of advertising campaigns
 - (B) To gather qualitative data and analyze patterns
 - (C) To gather numerical data and measure variables in a systematic way.
 - (D) To conduct interviews and gather personal stories

Explanation: A survey questionnaire in quantitative research is used to gather numerical data and measure variables in a systematic way.

2. Generalizable findings that can be applied to other populations
 - (A) Quantitative
 - (B) Qualitative
3. Quantitative research is particularly useful in decision-making because it:
 - (A) Relies on statistical evidence
 - (B) Avoids measurable data
4. Which of the following is a limitation of quantitative data?
 - (A) Provides in-depth insights
 - (B) Can be easily generalized
 - (C) May lack context
 - (D) Is highly subjective
5. There are two types of data. Which type of data involves numbers that are obtained by counting or measuring?
 - (A) Quantitative
 - (B) Qualitative
6. An example of a quantitative variable is the
 - (A) Month of birth.
 - (B) Highest educational degree earned.
 - (C) Time taken to complete a spatial reasoning task.
 - (D) Telephone area code.
7. True or False: Quantitative research is subjective and unstructured.
 - (A) True
 - (B) False
8. What is the best description of quantitative data?
 - (A) Non-numerical data in the form of opinions and feelings.
 - (B) Closed questions that are used in questionnaires.
 - (C) Types of primary data that use observations and interviews.
 - (D) Types of primary data that use numbers and statistics.
9. This research involves explaining phenomenon by collecting numerical data that are analyzed using mathematically based methods
 - (A) Pure research
 - (B) Quantitative research
 - (C) Applied research
 - (D) Qualitative research
10. Which of these types of research/data produces results in numbers, percents, etc.?
 - (A) Qualitative
 - (B) Quantitative
11. Quantitative research involves smaller sample sizes.
 - (A) False
 - (B) True
12. Which marketing research term is defined as: 'Research that collects and analyzes numerical data to identify patterns, averages, or statistical relationships.'
 - (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Exploratory Research
 - (D) Descriptive Research
13. TRUE or FALSE In Quantitative Research, to obtain more meaningful statistical result, the data must come from a large sample size.
 - (A) FALSE
 - (B) TRUE
 - (C) NEITHER
 - (D) None of above
14. Which of the following statements describes a quantitative observation?
 - (A) The liquid is blue
 - (B) The liquid has a pH of 7
 - (C) The liquid is viscous
 - (D) The liquid is transparent

15. Which approach is most appropriate for sensory evaluation that reports panel scores and variance?
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Mixed-Methods Research
 - (D) Interpretivist Inquiry
16. The Likert scale is primarily used for which type of data?
- (A) Qualitative descriptive
 - (B) Quantitative descriptive
 - (C) Qualitative experimental
 - (D) Quantitative experimental
17. What category would the following statement fall under? The plant has grown 4 cm since yesterday.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
18. What type of relationship can exist in correlational studies?
- (A) Neutral only
 - (B) Positive, negative, or zero
 - (C) Constant only
 - (D) Inverted only
19. There are 29 students in the classroom.
- (A) Quantitative observation
 - (B) Qualitative observation
 - (C) Inference
 - (D) Hypothesis
20. Numerical data from surveys, experiment, etc.
- (A) Quantitative Research
 - (B) Qualitative research
 - (C) Secondary research
 - (D) Primary research
21. Respondents' traits are translated numerically.
- (A) QUALITATIVE
 - (B) QUANTITATIVE
22. Data in large amounts expressed in numerical/statistical form to help identify trends and patterns.
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Representativeness
 - (D) Objectivity
23. Oscar ate 25 hamburgers!
- (A) Quantitative observation
 - (B) An observation
 - (C) Qualitative observation
 - (D) None of the answers
24. The number of desks in a classroom.
- (A) Qualitative data
 - (B) Quantitative data
25. Lbs of chocolate is
- (A) Quantitative data
 - (B) Qualitative data
26. A clothing brand conducts surveys to gather numerical data on customer satisfaction with their latest collection. What type of data collection is being used?
- (A) Quantitative Research
 - (B) Experimental Research
 - (C) Qualitative Research
 - (D) Secondary Data
27. A research method that uses numerical data and statistical analysis to measure and quantify information objectively is called ____
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Case Study
 - (D) Ethnography

28. What type of research is framed in terms of using closed-ended questions?
(A) Qualitative
(B) Quantitative
(C) Mixed methods
(D) None of the above
29. Students rate their enjoyment of research methods on a scale of 1-10.
(A) Qualitative data.
(B) Quantitative data.
30. The girl is 6 years old
(A) Quantitative data
(B) Qualitative data
31. Assessment of Customer Service Quality and Its Influence on Company
(A) Qualitative Research
(B) Quantitative Research
32. Random sampling as the most preferred
(A) QUALITATIVE
(B) QUANTITATIVE
33. This research focuses on measurement and testing using numerical data.
(A) Qualitative Research
(B) Quantitative Research
34. In quantitative research the sample should be unbiased and representative of the population.
(A) True
(B) False
35. The baby weighs 20 pounds.
(A) Qualitative
(B) Quantitative
36. This research is based on statistical and numerical data. Numerical data is generated by converting the data into statistics.
(A) Qualitative
(B) Quantitative
- (C) Descriptive
(D) Opinionated
37. Group studied is larger & randomly selected
(A) Quantitative
(B) Qualitative
38. Which research approach uses numbers
(A) Qualitative
(B) Quantitative
(C) Interpretive
(D) None of above
39. Experiments are generally
(A) Quantitative
(B) Qualitative
40. Qualitative or Quantitative? 75 days
(A) Qualitative
(B) Quantitative
41. The age of students in your class
(A) Qualitative
(B) Quantitative
42. Which of these data collection methods is not usually used in a quantitative research study?
(A) Survey
(B) Interview
(C) Case Study
(D) Questionnaire
43. A questionnaire with multiple-choice questions would likely yield which type of data?
(A) Qualitative data
(B) Quantitative data
(C) Observational data
(D) Descriptive data
44. This allows generalised conclusions to be projected over time.
(A) Qualitative research
(B) Quantitative research
(C) Exploratory research
(D) Non exploratory research

45. Which of the following quantitative evidence would best support the claim: "This study guide improves test scores by 20%"?
- (A) "Test scores increased by an average of 22% among students who used the guide."
 - (B) "Many students said they preferred using the guide to other methods."
 - (C) "In a survey, 90% of students said they found the guide helpful."
 - (D) "Students reported feeling more confident after using the study guide."
46. Is the following qualitative or quantitative? "There are seven petals on the flower."
- (A) Qualitative
 - (B) Quantitative
47. This research method is a measure of the extent to which two variables change together, and how well either variable influences the other
- (A) Correlational
 - (B) Experiments
 - (C) Case Study
 - (D) Survey
 - (E) Observational
48. Quantitative data are
- (A) Based on customer attitudes
 - (B) Not useful for most marketing purposes
 - (C) Non-statistical
 - (D) Factual
49. Quantitative data can be collected from observation, interview and transaction logs.
- (A) True
 - (B) False
50. A weakness of quantitative research is that related secondary data is sometimes not available or accessing available data is difficult/impossible
- (A) True
 - (B) False
51. Choose the wrong criteria for evaluating quantitative research:
- (A) References
 - (B) Research problem
 - (C) Access and permissions
 - (D) The literature review
52. Quantitative Research does not include ____
- (A) Experiments
 - (B) Standardized instruments
 - (C) Structured observations
 - (D) Isolated variables for control
 - (E) Field notes
53. Quantitative research has NOT paved the way to finding meaningful solutions to difficulties
- (A) TRUE
 - (B) FALSE
 - (C) PARTIALLY YES
 - (D) PARTIALLY NO
54. Quantitative content analysis is an approach that aims to:
- (A) Objectively and systematically measure the content of a text
 - (B) Reach an interpretive understanding of social action
 - (C) Engage in a critical dialogue about ethical issues in research
 - (D) Provide a feminist alternative to 'male-stream' quantitative methods
55. Quantitative or Qualitative? Number of eggs in a carton.
- (A) Quantitative
 - (B) Qualitative
56. Scales may limit how participants can respond, reducing validity.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data

57. A structured questionnaire is mostly used in:
(A) Qualitative research
(B) Quantitative research
(C) Action research
(D) Fundamental research
58. A quantitative research requires the reliable use of instrument and statistical methods which enables people to —
(A) Make hasty interpretations and conclusions.
(B) Study their surroundings as objective as they can.
(C) Conduct in depth and a more subjective type of study.
(D) Be empathetic towards the situation of the respondents.
59. The cat has a mass of 1kg.
(A) Inference
(B) Quantitative
(C) Qualitative
(D) None of above
60. Observations that include NUMBERS (quantity!)
(A) Quantitative
(B) Qualitative
(C) Opinions
(D) Inferences
61. A quantitative observation —
(A) Does NOT include numbers
(B) DOES include numbers
(C) Is an educated guess
(D) Is guessing about the future
62. I caught a fifteen foot shark.
(A) Qualitative data
(B) Quantitative data
63. The professor relied on measurable statistics for his research
(A) Data
(B) Population
(C) Quantitative
(D) Retrospective
64. The temperature of the room increased by 8 degrees Celsius.
(A) Qualitative
(B) Quantitative
65. You want to define optimum price that consumer will buy for a new laptop.
(A) Quantitative
(B) Qualitative
66. What type of data is often used for statistical analysis?
(A) Qualitative data
(B) Quantitative data
(C) Descriptive data
(D) Narrative data
67. A student records the mass of a rock as 250 grams. What type of data is this?
(A) Qualitative
(B) Quantitative
(C) Survey
(D) Inconclusive
68. An assumption of Quantitative Research is that human behavior is —
(A) Highly unpredictable but explainable.
(B) Highly predictable but non-explainable
(C) Highly predictable and explainable
(D) None of above
69. The number of points a football team scores
(A) Qual
(B) Quant
70. Identify if the data point listed below is an example of qualitative data or quantitative data: 17 marbles
(A) Qualitative data
(B) Quantitative data

71. What are two purposes of quantitative research? Choose 2 answers
- (A) To focus on solving specific problems
 - (B) To engage local practitioners in inquiry
 - (C) To employ experimental designs in a controlled setting
 - (D) To address the need for generalizable findings
72. The sidewalk is 100 meters long.
- (A) QUALITATIVE OBSERVATION
 - (B) QUANTITATIVE OBSERVATION
73. A strength of quantitative research is that the findings can be generalised if selection process is well-designed and sample is representative of study population
- (A) True
 - (B) False
74. Data analysis is deductive as it involves numerical analysis using statistical or other mathematical methods to test the hypothesis.
- (A) Qualitative
 - (B) Quantitative
75. Marketing research that answers questions that begin with “how many” or “how much”
- (A) Quantitative
 - (B) Qualitative
76. Data in numerical form would be known as
- (A) Quantitative
 - (B) Qualitative
 - (C) Descriptive
 - (D) Numerical
77. In a normal distribution of results of Quantitative analysis, 95% of the values are:
- (A) Within 2 standard deviations
 - (B) Within 3 standard deviations
 - (C) Within 5 standard deviations
 - (D) None of above
78. Which of the following is a key feature of quantitative research?
- (A) It uses numerical data to identify patterns
 - (B) It focuses on understanding subjective experiences
 - (C) It relies on open-ended questions
 - (D) It is always less reliable than qualitative research
79. Quantitative research can be used to identify why or how a certain phenomenon happened.
- (A) True
 - (B) False
80. Which of the following are advantages of quantitative research except?
- (A) Objectivity and accuracy
 - (B) Larger sample sizes
 - (C) Cost-effective
 - (D) Detailed outcomes
81. How does quantitative research primarily organize its research plan?
- (A) Emergent design
 - (B) Fixed design
 - (C) Flexible design
 - (D) Iterative design
82. What type of data is best for measuring how often an event occurs?
- (A) Categorical data
 - (B) Qualitative data
 - (C) Quantitative data
 - (D) Nominal data
83. If quantitative data interpretation could be summed up in one word (and it really can't) that word would be “numerical.”
- (A) True
 - (B) False
84. Quantitative research is a structured way of collecting and analyzing data obtained from different sources.
- (A) True
 - (B) False

85. These kind of observations are made using numbers by measuring with instruments such as rulers, scales and thermometers.
(A) Qualitative Observations
(B) Quantitative Observations
86. Identify whether the following are strengths or limitations of quantitative research. relatively quick data collection
(A) Strength
(B) Limitation
87. In a ____ the emphasis is on the need to explain, predict, or statistically describe some outcome or event. In this sense, describing the research problem involves highlighting what purpose a study will address.
(A) Qualitative Research Study
(B) Quantitative Research Study
88. Mention a characteristic of quantitative research
(A) Collecting data based on words from a small number of individuals so that the participants' views are obtained
(B) Writing the report using flexible, emerging structures and evaluative criteria, and including the researchers' subjective reflexivity and bias.
(C) Creating purpose statements, research questions, and hypotheses that are specific, narrow, measurable, and observable
(D) None of above
89. In order to focus in on a single or select few factors of a given situation, quantitative researchers use a ____ lens.
(A) Narrow-angle
(B) Wide-angle
90. What are the common methods used in quantitative research?
(A) Surveys, experiments, and statistical analysis
(B) Questionnaires, archival research, and correlation analysis
(C) Focus groups, content analysis, and field experiments
(D) Interviews, observations, and case studies
91. Which of the two is expressed in numbers?
(A) Qualitative
(B) Quantitative
92. Which research method utilizes the following measurement instruments: achievement tests, aptitude tests, affective tests, standardized tests, multiple choice, true-false, and matching?
(A) Quantitative
(B) Qualitative
(C) Action
(D) Mixed method
93. In quantitative research we need to ensure the quality of the test/instrument by conducting test of validity. The correct source of validity evidence is ____
(A) Evidence based on test history
(B) Evidence based on relations to questions
(C) Evidence based on internal structure
(D) Evidence based on the length of testing
(E) Evidence based on the research process
94. Which of the following research titles is an example of quantitative research?
(A) The Burial Practices of the Gaddangs
(B) The Relationship of Study Habits and Academic Performance
(C) Spiderman: The First Movie of the 21st Century
(D) The Struggles of Senior Citizens in LRT and MRT
95. Which of the following describes the "generalizability" of quantitative research?
(A) Ability to apply findings to larger populations
(B) Focusing on a single unique case
(C) Avoiding statistical analysis
(D) Observing without measuring

96. One of the weaknesses of quantitative research is:
- (A) Related secondary data is always available
 - (B) Accessing available data is easy/possible
 - (C) Easy to understand the context of a phenomenon.
 - (D) Data may not be robust enough to explain complex issues.
97. What percentage of our customers make purchases on-line?
- (A) Quantitative
 - (B) Qualitative
98. Identify whether the following are strengths or limitations of quantitative research. Data analysis relatively less time-consuming
- (A) Strength
 - (B) Weakness
99. You want to assess the impact of a new pricing strategy on customer satisfaction.
- (A) Quantitative
 - (B) Qualitative
100. It is 9cm long.
- (A) Qualitative
 - (B) Quantitative
101. Data is Quantitative and can be analyzed (e.g. mean, median, range) and displayed visually (e.g. using a bar chart).
- (A) Strength of Paper and Pencil Questionnaire
 - (B) Strength of Online Questionnaire
 - (C) Strength of Open Questions Questionnaire
 - (D) Strength of Closed Questions Questionnaire
102. Employs structured research instruments.
- (A) Qualitative
 - (B) Quantitative
103. Deductive Reasoning is applied in
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Action research
 - (D) Applied research
104. Is gathered in a structured and controlled manner and it should be possible to replicate using the same standardised procedure, instructions and questions.
- (A) Quantitative
 - (B) Qualitative
105. Counting how many people like today's assignment and deciding if I should use it again
- (A) Quantitative
 - (B) Qualitative
106. Which strength of quantitative research refers to its ability to establish a clear cause-and-effect relationship between variables?
- (A) Reliability
 - (B) Generalizability
 - (C) Replicability
 - (D) Causality
- Explanation:** Quantitative research has the strength of being able to conclusively establish cause-and-effect relationships between variables due to its controlled and systematic approach.
107. Easy and quick to analyse using descriptive statistics such as measure of central tendency (mode, median and mean) and dispersion range and standard deviation)
- (A) Quantitative
 - (B) Qualitative
108. The Coca Cola Company surveyed its customers to find out how often they are purchasing their product. This type of research is called:
- (A) Quantitative
 - (B) Qualitative

- 109.** Quantitative data collection include all BUT the following ____
(A) Correlations.
(B) Survey.
(C) Experiments.
(D) Content analysis.
- 110.** Highly-structured Research
(A) Qualitative Research
(B) Quantitative Research
- 111.** Calculating the average rating that reviewers gave Valorant across different sites
(A) Qualitative
(B) Quantitative
- 112.** This research makes you focus your mind on specific things by means of statistics.
(A) Qualitative
(B) Experimental
(C) Quasi-experimental
(D) Quantitative
- 113.** Observations that use numbers or measurements.
(A) Qualitative observations
(B) Quantitative observations
- 114.** What type of data is used to draw conclusions and make predictions?
(A) Qualitative data
(B) Descriptive data
(C) Quantitative data
(D) Nominal data
- 115.** The balloon increased in size from 15cm to 20cm around.
(A) Qualitative
(B) Quantitative
- 116.** Why is quantitative research considered scientifically objective and rational?
(A) Because it is based on mathematical principles
(B) Because it has more participants in sampling
(C) Because there is procedure to conduct research
(D) Because researcher choose sample randomly
- 117.** Quantitative research gathers data in a numerical form which can be measured in units of measurement.
(A) TRUE
(B) FALSE
- 118.** What kind of observation is being made in the following statement: The temperature of the room is decreasing by 4 degrees Celsius
(A) Qualitative
(B) Quantitative
- 119.** It assumes that a sample is a representative of the population.
(A) Quantitative Research
(B) Qualitative Research
- 120.** Determine if the following is an example of Quantitative or Qualitative Data:Collecting data around students' GPA.
(A) Quantitative
(B) Categorical
- 121.** Data are reported through measuring things.
(A) QUALITATIVE
(B) QUANTITATIVE
- 122.** This type of data coming from research answers questions such as "how many?" and "how much?".
(A) Research Data
(B) Quantitative Data
(C) Number Data
(D) Qualitative Data
- 123.** What kind of observation is being made in the following statement: The leaf is 5mm wide.

- (A) Qualitative
(B) Quantitative
- 124.** Which of the following are methods of quantitative research?
(A) Observation and interview
(B) Questionnaire and Field notes
(C) Group Discussion and Conduct of Polls
(D) Survey and Experiment
- 125.** T/F Quantitative researchers have less freedom to modify their procedures to accommodate the unique needs of participants.
(A) True
(B) False
- 126.** One leaf is 9 cm long.
(A) Qualitative data
(B) Quantitative data
- 127.** The line “Truth is out There” is true for
(A) Qualitative research
(B) Quantitative research
(C) All research design
(D) A personal way
- 128.** Quantitative data collection techniques include all BUT the following —
(A) Historical comparative research
(B) Survey
(C) Experiments
(D) Content analyses
- 129.** Aims to characterize trends and patterns.
(A) Qualitative
(B) Quantitative
- 130.** Measurement in quantitative research is dependent:
(A) Statistics
(B) Chemistry
(C) Physics
(D) Biology
- 131.** Which type of data often involves closed-ended questions?
(A) Qualitative
(B) Quantitative
(C) Descriptive
(D) Analytical
- 132.** What type of observation is the circumference of a tree?
(A) QUALITATIVE
(B) QUANTITATIVE
- 133.** In a school research study, what type of data would Charlotte, Arjun, and Isla collect if they were to gather information such as height, weight, age, and test scores of their classmates?
(A) Qualitative descriptions, narratives, observations
(B) Opinions, attitudes, beliefs, preferences
(C) Height, weight, age, test scores, numerical ratings
(D) Gender, ethnicity, nationality, occupation
- 134.** Quantitative research
(A) Is an open approach to social phenomena
(B) Employs predetermined instruments to measure and observe
(C) Reports data in narrative form
(D) Is only experimental in nature
- 135.** A company wants to determine what price consumers will pay for a new sandwich. At one store, the company charges \$3.59. At another comparable store, the company charges \$4.59. Sales are tracked at both locations for a one-month period. The data collected in this example is — data.
(A) Ethnographic
(B) Quantitative
(C) Qualitative
(D) Exploratory

136. Data gathering activities use deductive method
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
(C) BOTH
(D) None of above
137. Which of the following is NOT an acceptable quantitative research title?
(A) Analysis of STEM education and gender diversity in Batangas City
(B) A study on developing critical thinking techniques among senior high school students
(C) The responsibility of technology in worsening people's mental health
(D) Study on how urban engineers promote green technology
138. Quantitative research is a research methodology that cared for ____
(A) Measurability of data
(B) Description of data
(C) Quality of data
(D) Depth of data
139. The marble has a mass of 25 grams
(A) Quantitative data
(B) Qualitative data
140. Various fields of study make use of quantitative research because findings are explained using statistics or numerical models.
(A) TRUE
(B) FALSE
141. What is the difference between qualitative and quantitative?
(A) They both mean the same thing.
(B) Quantitative focuses on people's opinions
(C) Qualitative focuses on numbers and figures
(D) Quantitative focuses on numbers and figures
142. It is used to quantify the problem by way of generating numerical data that can be transformed into usable statistics.
(A) Quantitative Research
(B) Qualitative Research
(C) Data
(D) Sample
143. Which method best fits psychophysiological assessment in development?
(A) Observing behavior unobtrusively in parks
(B) Recording heart rate and hormone levels
(C) Using direct interviews to gather narratives
(D) Collecting long essays about identity
144. A tablet weighs 1.5 pounds.
(A) This is an example of Quantitative Data.
(B) This is an example of Qualitative Data.
145. Quantitative Research provide solutions to existing problem
(A) TRUE
(B) FALSE
(C) PARTIALLY TRUE
(D) PARTIALLY FALSE
146. Walt Disney World conducted research to determine what percent of visitors brought their grandchildren.
(A) Quantitative
(B) Qualitative
147. What words would be most appropriate to see if a student was describing the QUANTITATIVE properties of an organism?
(A) Grey skin
(B) Big ears
(C) 2 1/2 tons
(D) Mammal
148. True or False: Quantitative data is based on statistics and it is used to make predictions and test hypotheses.
(A) True
(B) False

149. A kind of Quantitative Research that also known as ex post facto (after the fact research); a research that already occurred in the past
(A) Cross-sectional
(B) Longitudinal
(C) Causal-Comparative Research
(D) Experimental Research
150. Which research method is more likely to use statistical analysis?
(A) Qualitative research
(B) Quantitative research
(C) Ethnographic research
(D) Case study research
151. What is the main characteristic of correlational research?
(A) It is also known as positivistic inquiry
(B) It is used to study physical phenomenon
(C) It involves measurement using precision instruments
(D) It involves the study of relationships between variables
152. This time, I have learned that when stating quantitative research questions ____
(A) They should be specific and measurable
(B) They should be vague and broad
(C) They should avoid using numbers
(D) They should be based on opinions
153. Concerned about numerical data.
(A) Quantitative Research
(B) Qualitative Research
154. Quantitative research problem deals more with
(A) Precision and general explanation of phenomena
(B) Description and explanation of situations
(C) Trends and patterns of the chosen group
(D) Precision and specificity of the problem
155. Focuses on testing theories and hypotheses- Requires many respondents Analyzed through math and statistical analysis All above refer to
(A) Qualitative Research
(B) Quantitative Research
156. Which type of data design requires a larger sample size for external validity?
(A) Qualitative
(B) Quantitative
(C) They require the same sample size.
(D) None of above
157. The quantitative research is best described by ____
(A) Research that attempts to generate new theory.
(B) The collection of non numerical data.
(C) Research that is exploratory.
(D) An attempt to confirm the researcher's hypotheses.
158. Which question below could be used in a quantitative market research survey
(A) How do you feel about maltesers?
(B) What does the logo mean to you?
(C) How many times a week do you buy groceries?
(D) What emotion does the brand evoke?
159. These include those results from counting/measuring and are presented by table, graphs, and figures
(A) Quantitative data
(B) Qualitative data
160. The dog weighs 54 kilograms (kg) is what kind of data
(A) Qualitative
(B) Quantitative
161. Which of the following statements shows research findings quantitatively?
(A) Many prefer to study with textbooks.
(B) Students find textbooks indispensable or necessary.

- (C) Perhaps, 30% consider textbook unnecessary in their studies.
(D) Out of 100 college students, 90 find textbooks beneficial to their studies.
- 162.** What is a type of educational research in which the researcher analyzes numbers using statistics?
(A) Action research
(B) Qualitative Research
(C) Quantitative Research
(D) Science Investigatory Project
(E) Not Given
- 163.** There are 15 boys and 17 girls.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
- 164.** Lisa boiled 5 cups of water in the pot. This is an example of a (n)
(A) Qualitative observation
(B) Quantitative observation
(C) Inference
(D) Conclusion
- 165.** Experiments, observations, and surveys are common data collection methods of this research.
(A) Qualitative Research
(B) Quantitative Research
- 166.** Decide whether each of the following apply to the epistemology, or the theory of knowledge, of quantitative research. Standards of knowledge varying with individuals or groups?
(A) Applies
(B) Does not apply
- 167.** A key advantage of quantitative research is that it:
(A) Can be generalized to a population
(B) Avoids using numbers
- 168.** An anemometer is an instrument that determines wind speed. The data collected from an anemometer would be considered ____
(A) Qualitative.
(B) Quantitative.
- 169.** What are observations that deal with numbers?
(A) Inferring
(B) Predicting
(C) Quantitative
(D) Qualitative
- 170.** This describes data reported as statistics, or numbers.
(A) Quantitative
(B) Qualitative
(C) Reliable
(D) Valid
- 171.** Revealed by automatic descriptions of circumstances or conditions.
(A) QUALITATIVE
(B) QUANTITATIVE
- 172.** A kind of Quantitative Research where information is collected from a sample in just single point in time
(A) Cross-sectional
(B) Longitudinal
(C) Causal-Comparative Research
(D) Experimental Research
- 173.** The advantage of quantitative research is high accuracy, scientific value, and having specific analytical methods.
(A) True
(B) False
- 174.** Quantitative or Qualitative Observation? There are 15 boys in this classroom.
(A) Quantitative
(B) Qualitative

175. What type of data will observation of traffic likely produce?
- (A) Qualitative.
 - (B) Quantitative.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
176. The leaf is 5 mm wide.
- (A) Qualitative
 - (B) Quantitative
177. What subject area is related with quantitative research?
- (A) Psychology
 - (B) English
 - (C) Mathematics
 - (D) Statistics
178. Which type of data can be measured with numbers and includes examples like height and weight?
- (A) Quantitative
 - (B) Qualitative
 - (C) Categorical
 - (D) Ordinal
179. Which type of data is always a numerical value?
- (A) Quantitative
 - (B) Qualitative
 - (C) Categorical
 - (D) All of the answers are correct
180. What type of data shows numerical information to analyze for market research purposes?
- (A) Qualitative Data
 - (B) Quantitative Data
 - (C) All the above
 - (D) None of the above
181. What does quantitative research focus on in social science?
- (A) Understanding how people make sense of their world
 - (B) Working with nonnumerical data such as texts and photographs
 - (C) Translating the social world into numbers for mathematical treatment
 - (D) Collecting field notes and interview transcripts
182. A ratio scale is an interval scale with a true zero point. Ratio measurements are possible using this scale. Addition, subtraction, multiplication, and division all can be utilized on a ratio scale. In terms of counseling research
- (A) The ratio scale is the most practical
 - (B) Most psychological attributes cannot be measured on a ratio scale
183. There are nine dolphins in this pod.
- (A) Qualitative
 - (B) Quantitative
184. Which type of data is typically used in quantitative research?
- (A) Images
 - (B) Words
 - (C) Numbers
 - (D) Themes
185. Complete the statement using the quantifier “all” or “some”, to make it a true statement ____ prime number is an odd number
- (A) All
 - (B) Some
186. He ran 50 miles.
- (A) Qualitative data
 - (B) Quantitative data
187. Identify whether the following are strengths or limitations of quantitative research. Categories and theories might not reflect local constituencies understandings
- (A) Strength
 - (B) Weakness
188. Which of the following tools is most commonly used in quantitative research?

- (A) Interview
 - (B) Focus group
 - (C) Questionnaire
 - (D) Observation notes
- 189.** The mass of the chocolate cake is 250 g.
- (A) Qualitative
 - (B) Quantitative
- 190.** Communicates findings via statistics and aggregated data
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) None of above
- 191.** Statistics in plural sense means
- (A) Statistical methods
 - (B) Descriptive statistics
 - (C) Quantitative data
 - (D) Qualitative data
- 192.** A systematic investigation of phenomena by gathering quantifiable data
- (A) Quantitative research
 - (B) Ethnography Research
 - (C) Research Background
 - (D) Qualitative Data
- 193.** What type of data collection is associated with quantitative research?
- (A) Answers to open-ended interview questions
 - (B) Analysis of field notes
 - (C) Questionnaire
 - (D) Goal is to identify themes/constructs
- 194.** She is 150 cm tall.
- (A) Qualitative
 - (B) Quantitative
- 195.** The role of self-efficacy, motivation and professional factors in the development of positive and negative stress in primary teachers
- and secondary school teachers of mathematics and English
- (A) Qualitative
 - (B) Quantitative
- 196.** Researcher uses tools, such as questionnaires or computer software, to collect numerical data.
- (A) Qualitative Research
 - (B) Quantitative Research
- 197.** Which question is an example of quantitative market research?
- (A) How many times did you purchase this product in the past six months?
 - (B) Why did you buy this product?
 - (C) How did you hear of our product?
 - (D) None of above
- 198.** Which statement best distinguishes quantitative from qualitative research in health sciences?
- (A) Quantitative uses numerical measures and statistical tests
 - (B) Qualitative prioritizes controlled trials and randomization
 - (C) Qualitative relies on standardized instruments and large samples
 - (D) Quantitative explores meanings through participant narratives
- 199.** Which research method emphasizes numerical data and statistical analysis?
- (A) Qualitative research.
 - (B) Quantitative research.
 - (C) Ethnographic research.
 - (D) Case study.
 - (E) Focus group.
- 200.** When you measure your height or your weight you are making a ____ observation.
- (A) Qualitative
 - (B) Quantitative
- 201.** There are fourteen penguins.
- (A) Qualitative observation
 - (B) Quantitative observation

202. The ball has a diameter of 3.0 centimeters.
(A) Quantitative observation
(B) Qualitative observation
(C) An observation
(D) None of the answers
203. Which use of quantitative research most directly supports making predictions from a sample to a broader market?
(A) Generalizable results across populations
(B) Attitude and behavior surveys only
(C) Policy evaluation within one firm
(D) Performance metrics for one team
204. The nature of this research is confirmatory.
(A) Qualitative Research
(B) Quantitative Research
205. A quantitative observation always includes a number and a unit.
(A) True
(B) False
206. Data that is based on statistical measurement (numerical)
(A) Qualitative
(B) Quantitative
207. Quantitative data includes:
(A) A written description
(B) A color
(C) A number
(D) A smell
208. "There are eleven sixth grade advisors". This is an example of a(n) —
(A) Prediction
(B) Inference
(C) Qualitative observation
(D) Quantitative observation
209. What type of data is typically represented using integers, decimals, or floating-point numbers?
(A) Ordinal data
(B) Categorical data
(C) Qualitative data
(D) Quantitative data
210. Quantitative research is more preferred over qualitative research because it is:
(A) More artistic and creative
(B) More scientific and objective
(C) Easier to write
(D) Based solely on interviews
211. You want to know how many users clicked a button last week. What kind of data is this?
(A) Qualitative
(B) Observational
(C) Subjective
(D) Quantitative
212. In a research project, Ishika decided to use a deductive approach to test her hypothesis about consumer behavior. She formulated a theory based on existing literature and then collected data to confirm her predictions. This method is known as —
(A) Quantitative research
(B) Qualitative research
(C) Mixed-method research
(D) None of above
213. Which research approach is most appropriate when manipulation would be unethical?
(A) Correlation studies using existing variables
(B) Qualitative field experiments with deception
(C) Single-case interventions with intensive treatment
(D) Randomized experimental trials with blinding
214. Water has a density of 1g/cm^3
(A) Quantitative data
(B) Qualitative data
215. Larger & randomly selected
(A) QUALITATIVE
(B) QUANTITATIVE

- 216.** In this research, you are tend to discover the idea of realness which is factual and not in accordance of emotional or feelings?
- (A) Quantitative
 - (B) Qualitative
 - (C) Direct
 - (D) Indirect
- 217.** Quantitative research is also called as?
- (A) Subjective
 - (B) Divergent
 - (C) Objective
 - (D) Convergent
- 218.** Numeric and measurable types of data such as height, age, scores, cost are called ____
- (A) Qualitative
 - (B) Quantitative
- 219.** The chimp identified 12 pictures correctly.
- (A) Qualitative data
 - (B) Quantitative data
- 220.** What is your height?
- (A) Quantitative data
 - (B) Qualitative data
- 221.** What does quantitative research primarily aim to do?
- (A) Integrate qualitative and quantitative data
 - (B) Test objective theories by examining relationships among variables
 - (C) Explore and understand the meaning of social or human problems
 - (D) Collect both types of data
- 222.** Which is TRUE about quantitative data?
- (A) It describes qualities or characteristics.
 - (B) It is used if you want to understand something (concepts, thoughts, experiences).
 - (C) It includes experiments, observations recorded as numbers, and surveys with closed-ended questions
 - (D) It is collected using questionnaires, interviews, or observation, and frequently appears in narrative form.
- 223.** Steven is keeping track of the number of apples he picks each day. One day, he notices that the number of apples he picked has changed compared to the previous day. Which term best describes this change in amount?
- (A) Qualitative change
 - (B) Quantitative change
 - (C) Significant change
 - (D) Metric change
- 224.** Jeremiah walked 50 meters in 32 seconds.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 225.** A score recorded for each participant, the time taken to complete a task.
- (A) Quantitative Data
 - (B) Qualitative Data
- 226.** Quantitative researchers most often follow which scientific method to test hypotheses?
- (A) Confirmatory
 - (B) Exploratory
 - (C) Investigative
 - (D) None of above
- 227.** Classify the observation as qualitative or quantitative: five minutes
- (A) Qualitative
 - (B) Quantitative
- 228.** With which one of the following techniques communality is associated?
- (A) Case studies
 - (B) SWOT analysis
 - (C) Factor analysis
 - (D) Univariate analysis

229. Which of the following is not a Quantitative Design?
- (A) Experimental
 - (B) Quasi-Experimental
 - (C) Case Study
 - (D) Non-Experimental
230. What is a key advantage of using quantitative data?
- (A) It provides in-depth insights into customer opinions.
 - (B) It is easy to measure and present in charts and graphs.
 - (C) It is difficult to analyze.
 - (D) It explains the reasons behind choices.
231. What type of Data are we collecting when asking: "How much does your backpack weigh?"
- (A) Categorical Data
 - (B) Quantitative Data
232. Aims to create general laws which can be universally applied to predict human behaviour
- (A) Nomothetic approach
 - (B) Ideographic approach
233. Quantitative research uses the scientific method to ____
- (A) Record observations as numeric data
 - (B) Make nonnumeric observations, from which conclusions are drawn without the use of statistical analysis
 - (C) Conduct studies that can be completed without the use of statistical analysis
 - (D) Make guesses about scientific phenomena
234. Quantitative researchers focusing on individual phenomena make a concerted effort to incorporate as much personal bias as possible.
- (A) True
 - (B) False
235. This type of data is limited to facts, statistics, figures, numerical information, percentages.
- (A) Quantitative
 - (B) Qualitative
236. The plant is 12 cm tall, has 24 blooms, and has dark green leaves.
- (A) Inference
 - (B) Qualitative observation
 - (C) Quantitative observation
 - (D) None of above
237. I use rulers, scales and calculators to make these observations.
- (A) Qualitative data
 - (B) Quantitative data
238. In quantitative research, larger samples:
- (A) Reduce accuracy
 - (B) Increase reliability
 - (C) Limit data analysis
 - (D) Increase sampling error
239. Market research that gathers statistical data is known as
- (A) Desk research
 - (B) Field research
 - (C) Quantitative research
 - (D) Qualitative research
240. Which of the following statements relates directly to quantitative data?
- (A) What motivates a customer to buy a product
 - (B) How a customer feels when they buy a product
 - (C) The number of customers that buy a product
 - (D) Why a customer chooses one branded product over another
241. An observation that is measurable and made with tools (such as a ruler or scale) is what type
- (A) Quantitative

- (B) Qualitative
(C) Koalatative
(D) None of above
- 242.** What are the five general classifications of Quantitative Research Designs?
(A) Descriptive, Correlational, Ex Post Facto, Quasi-Experimental, Experimental
(B) Qualitative, Quantitative, Mixed Methods, Case Study, Ethnography
(C) Survey, Interview, Observation, Case Study, Experimental
(D) Descriptive, Qualitative, Survey, Experimental, Correlational
- 243.** It emphasizes objective measurements and the statistical, mathematical, or numerical analysis of data collected through polls, questionnaires, and surveys, or by manipulating pre-existing statistical data using computational techniques.
(A) Quantitative Research
(B) Qualitative Research
(C) Practical Research
(D) None of above
- 244.** Qualitative or quantitative: the average time it takes for a student to take the ACT.
(A) Quantitative
(B) Qualitative
- 245.** The area of a square garden in square meters.
(A) Qualitative
(B) Quantitative
- 246.** The soda bottle contains 2 liters of Coke.
(A) Quantitative observation
(B) Qualitative observation
(C) Inference
(D) None of above
- 247.** Which is the most widely used branch of mathematics in quantitative research?
(A) Calculus
(B) Algebra
(C) Statistics
(D) Trigonometry
- 248.** Number of cans of vegetables at a food pantry
(A) Qualitative
(B) Quantitative
- 249.** What type of report pays attention to the numerical or statistical values in a bid to find answers to research questions?
(A) Technical Report
(B) Qualitative Research Report
(C) Quantitative Research Report
(D) Popular Research Report
- 250.** A survey that uses a scale from 1 to 5 to measure customer satisfaction is collecting what type of data?
(A) Qualitative data
(B) Observational data
(C) Quantitative data
(D) Secondary data
- 251.** The temperature of the room is decreasing by 4 degrees Celsius.
(A) Qualitative
(B) Quantitative
- 252.** What is the purpose of using a table to separate the population from the variable in a quantitative research problem?
(A) To make the research more complicated.
(B) To clearly identify and define the key components of the study.
(C) To avoid collecting data on the population.
(D) To confuse the reader with unnecessary information.
- 253.** Assessment Directions: Read each question and choose the letter that corresponds to your chosen answer. 1. Which best describes quantitative research? It is a/an ____

- (A) Study done inside the library using books and other reference materials
 - (B) Activity focused on finding the truth
 - (C) Systematic process obtaining numerical information
 - (D) Activity of producing a theory
- 254.** Qualitative or quantitative? By the end of the experiment, the liquid's density was 1.25 g/ml.
- (A) Qualitative
 - (B) Quantitative
- 255.** Numerals, Statistics
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 256.** Which of the two is inclined to confirming the hypothesis?
- (A) Qualitative
 - (B) Quantitative
- 257.** Quantitative variables are real-valued data and are divided into which two types?
- (A) Even and odd quantitative variables
 - (B) Nominal qualitative variables and ordinal variables
 - (C) Discrete quantitative variables and continuous quantitative variables
 - (D) Discrete quantitative variables with even and odd values
 - (E) Variables with only two values: yes and no
- 258.** A ruler is best for making ____ observations.
- (A) Qualitative
 - (B) Quantitative
- 259.** When it comes to purpose, which of the following focuses on theory testing, prediction, establishing facts and testing hypothesis?
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) None of above
- 260.** Which of the following studies is based on quantitative research?
- (A) A study examining the bereavement process in the spouses of the clients with terminal cancer
 - (B) A study examining client's feelings before, during and after a bone marrow aspiration
 - (C) A study exploring factors influencing weight control behavior
 - (D) A study measuring the effects of sleeping deprivation
- 261.** Quantitative research relies on post-positivism approach and aims at examining the hypothesis.
- (A) True
 - (B) False
- 262.** Which measurement is a continuous quantitative variable?
- (A) Product type such as dairy
 - (B) Number of bacteria colonies counted
 - (C) Pass or fail classification outcome
 - (D) Moisture content measured over time
- 263.** Percy wants to produce a quantitative research. What are the things should Percy consider?
- (A) Objective and random sampling
 - (B) Objective and multiple methods
 - (C) Random sampling and multiple methods
 - (D) Objective, multiple methods, mathematically based methods
- 264.** Discrete quantitative variables are characterized by which property?
- (A) Only two categories exist
 - (B) Categories have logical ranking
 - (C) Countable values without fractions
 - (D) Values take any value within a range
- 265.** What type of data focuses on the "how much" or "how many" aspect?
- (A) Quantitative data
 - (B) Qualitative data
 - (C) Data on Star Trek
 - (D) Meta Data

266. Choose the correct data type for: 'Measuring lengths of a football field.'
- (A) Quantitative
 - (B) Categorical
 - (C) Discrete
 - (D) Continuous
267. You see the following note written: "Weight: 112 kilograms" What kind of note was written?
- (A) Qualitative Observation
 - (B) Inference
 - (C) Quantitative Observation
 - (D) Hypothesis
268. Results of quantitative research
- (A) Means/Averages
 - (B) Quotes from interviews
 - (C) Photographs
 - (D) Transcripts from focus groups
269. Numeric data is ____
- (A) Something you see
 - (B) Something that is measurable
 - (C) Data that can be put into categories
 - (D) None of above
270. The people being studied in the quantitative study are called:
- (A) Informants
 - (B) Subject
 - (C) Reporter
 - (D) Interviewee
271. The plant has grown 2 inches since last week
- (A) Qualitative observation
 - (B) Quantitative observation
 - (C) Inference
 - (D) Opinion
272. This is defined as research that explains phenomena according to numerical data, which are analyzed by means of mathematically based methods
- (A) Qualitative Research
 - (B) Experimental Research
 - (C) Quantitative Research
 - (D) Mixed-method Approach Research
273. Mathematics based methods
- (A) QUALITATIVE
 - (B) QUANTITATIVE
274. In quantitative research, what is the term for the entire group of individuals under study?
- (A) Population
 - (B) Respondents
 - (C) Parameter
 - (D) Group
275. Which of the following is an example of a quantitative research question?
- (A) What are the experiences of first-time mothers?
 - (B) How do people feel about climate change?
 - (C) What is the average income of families in New York?
 - (D) Why do people prefer tea over coffee?
276. Focuses of prevalence, size, intensity, and measurable attributes of phenomena
- (A) Quantitative description
 - (B) Qualitative description
277. There are 25 Liters of water in the buckets.
- (A) Quantitative
 - (B) Qualitative
278. What is the main strength of Quantitative Research?
- (A) Contributes to a complex understanding about events or phenomenon.
 - (B) Approximates causal relationships through experimental research studies.
 - (C) Produces integrated knowledge that informs theory and practice.
 - (D) Describes the complexities of local situations.

279. According to LeBreton and Senter (2007), what has led to the increased popularity of interrater reliability (IRR) and interrater agreement (IRA) indices? (LeBreton & Senter (2007))
- (A) A decline in the use of traditional statistical methods.
 - (B) Simpler computational techniques for these indices.
 - (C) The increased role of multilevel modeling techniques in organizational research.
 - (D) A greater emphasis on quantitative research methods.
280. Quantitative research is 'Explaining phenomena by collecting numerical data that are analysed using mathematically based methods (in particular statistics). is is said by?
- (A) Aliaga and underson
 - (B) Aliaga and Gunderson
 - (C) Alaga and Gunderson
 - (D) Aliaga and Gundeson
281. How should the quantitative research question 'Is there a significant relationship in the number of households and COVID-19 confirmed cases in a Barangay?' be rated?
- (A) Feasible, Clear, Significant, and Ethical
 - (B) Unfeasible, Unclear, Insignificant, and Unethical
 - (C) Feasible, Unclear, Insignificant, and Ethical
 - (D) Unfeasible, Clear, Significant, and Unethical
282. How is data typically presented in quantitative research?
- (A) Textual descriptions
 - (B) Verbal narratives
 - (C) Graphs, charts, and tables
 - (D) Subjective opinions
- Explanation:** Numerical data in quantitative research is often presented visually using graphs, charts, and tables for better interpretation.
283. What data do quantitative methods use to primarily collect?
- (A) Descriptive
 - (B) Visual
 - (C) Numerical
 - (D) Narrative
284. Quantitative researchers believe that
- (A) Truth is subjective
 - (B) Knowledge is socially constructed
 - (C) Concrete knowledge can be observed with the five senses
 - (D) There are multiple ways to generate knowledge
285. Numerical Data
- (A) Measurement of quantities(Quantitative)
 - (B) Measurements of non-quantities. Can be sorted into categories(Qualitative)
286. Which of the following is typically part of quantitative research?
- (A) Interviews
 - (B) Statistical analysis
 - (C) Open-ended surveys
 - (D) Observations
287. Determine whether the data is qualitative or quantitative: Heights of infants in a maternity ward.
- (A) Qualitative
 - (B) Quantitative
288. If a research report has hypotheses, this is what type of research?
- (A) Quantitative
 - (B) Qualitative
289. Quantitative research is defined as ____
- (A) Collecting and analyzing non-numerical data (e.g., text, video, or audio) to understand concepts, opinions, or experiences. It can be used to gather in-depth insights into a problem or generate new ideas for research

- (B) Process of collecting and analyzing numerical data. It can be used to find patterns and averages, make predictions, test causal relationships, and generalize results to wider populations
290. O relationship between independent & dependent variables.
- (A) Qualitative
 - (B) Quantitative
 - (C) Ethnography
 - (D) Phenomenology
291. If you are measuring how fast a car is moving, what type of data are you collecting?
- (A) Qualitative
 - (B) Quantitative
 - (C) Descriptive
 - (D) Inconclusive
292. The first plant specimen had 3 more leaves than the second specimen.
- (A) Qualitative
 - (B) Quantitative
293. Quantitative research generally provides
- (A) Richer data
 - (B) Numerical data
 - (C) Difficult to interpret data
 - (D) Small amounts of data
294. Facts and figures from which conclusions can be drawn.
- (A) Qualitative data
 - (B) Market research
 - (C) Quantitative data
 - (D) Database
295. Decide whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of quantitative research. Narrow-angle lens, Testing specific hypotheses
- (A) Ontology
 - (B) Epistemology
 - (C) View of thought and behavior
 - (D) Research focus
296. Performance data, attitude data, observational data, and census data
- (A) Quantitative Methods
 - (B) Mixed Methods
 - (C) Qualitative Methods
 - (D) None of above
297. True or False. Choose TRUE if the following characteristics pertain to Quantitative Research and FALSE if not. Data is analyzed by identifying statistical relationships.
- (A) True
 - (B) False
298. Quantitative measurement of few characteristics which are explained in quantities is nothing but the
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Conceptual Research
 - (D) Empirical Research
299. A shop owner records information about his customers. The distance they traveled to get to the shop is ___ data
- (A) Categorical
 - (B) Quantitative
300. Quan/QUAN-
- (A) Qualitative research.
 - (B) Quantitative research.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
301. Number of one time arrivals per hour at a large airport.
- (A) Qualitative
 - (B) Quantitative.
302. Quantitative research seeks accurate measurement and analysis of target concepts. It is not based on mere intuition and guesses. Data

- are gathered before proposing a conclusion or solution to a problem.
- (A) OBJECTIVE
 - (B) CLEARLY DEFINED RESEARCH QUESTIONS
 - (C) STRUCTURED RESEARCH INSTRUMENTS
 - (D) NUMERICAL DATA
- 303.** TRUE or FALSE In Quantitative Research, Data gathering and analysis of results are done accurately, objectively, and are unaffected by the researcher's intuition and personal guesses.
- (A) TRUE
 - (B) FALSE
 - (C) NEITHER
 - (D) None of above
- 304.** Research that answers questions of "how many" and "how much" is known as?
- (A) Quantitative
 - (B) Qualitative
- 305.** Which of the following is an example of a quantitative research method?
- (A) Interviews
 - (B) Surveys
 - (C) Case studies
 - (D) Observations
- 306.** Quantitative research uses hypotheses development as a starting point to then collect data and analyse it, towards checking the extent of accuracy of these hypotheses.
- (A) True
 - (B) False
- 307.** Which type of data is best suited for identifying patterns and making statistical inferences?
- (A) External data
 - (B) Quantitative data
 - (C) Internal data
 - (D) Qualitative data
- 308.** The pendulum made 17 full swings in 30 seconds.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 309.** Quantitative data is
- (A) Descriptive
 - (B) Interpretation based
 - (C) Number based
 - (D) None of the above
- 310.** The bag of flaming hot Cheetos weighs 1 oz or 28.3 grams is what kind of data?
- (A) Qualitative
 - (B) Quantitative
- 311.** Counting and calculating the brine shrimp population is an example of ____ data.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 312.** The opinions are objective
- (A) QUALITATIVE RESEARCH
 - (B) QUANTITATIVE RESEARCH
 - (C) BOTH
 - (D) None of above
- 313.** What research design uses numbers in stating generalizations about a given problem or inquiry?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Experimental Research
 - (D) Descriptive Research
- 314.** Designed to describe the nature attitudes or behavior of customers empirically and to test hypotheses that a service markets wants to examine.
- (A) Quantitative research
 - (B) Qualitative research

- (C) Marketing research
(D) Service research
- 315.** Quantitative research is a means
(A) For exploring and understanding the meaning individuals or groups ascribe to a social or human problem.
(B) For testing objectives theories by examining the relationship among variables. These variables, in turn, can be measured, typically on instruments, so that numbered data can be analysed using statistical procedures.
(C) Is an approach to inquiry that combines or associate both qualitative and quantitative forms.
(D) None of above
- 316.** Quantitative data analysis involves the use of numerical data.
(A) True
(B) False
- 317.** How many customers enjoyed their shopping experience with us last year?
(A) Quantitative
(B) Qualitative
- 318.** Data expressing a certain quantity, amount or range.
(A) Qualitative Data
(B) Quantitative Data
- 319.** Which type of research helps understand the relationship between characteristics and instability?
(A) Biased research
(B) Quantitative research
(C) Subjective research
(D) Qualitative research
- 320.** What is the significance of sample size in quantitative research?
(A) To determine the appropriate research design
(B) To calculate the mean and standard deviation of a dataset
(C) To identify outliers in the data
(D) To ensure the study has enough statistical power to detect meaningful effects
- 321.** What is information represented with numbers and a unit of measurement?
(A) Qualitative data
(B) Quantitative data
- 322.** One of the benefits of doing research quantitatively is that it is faster and easier to gather data. Which of the following does NOT show that characteristic?
(A) Automated data collection
(B) Interviewing simultaneously across places
(C) Use of digital or mobile surveys
(D) Facilitating group discussions
- 323.** People inclined to do quantitative research wants to discover truth in ____
(A) Exact manner
(B) Careful way
(C) Indirect way
(D) Personal way
- 324.** Quantitative research is used to test hypotheses.
(A) TRUE
(B) FALSE
- 325.** In studying specific phenomena, quantitative researchers attempt to include as much personal bias as possible into the give situation.
(A) True
(B) False
- 326.** A satisfactory quantitative method should not possess one of the following qualities:
(A) Measurability.
(B) Appropriateness.
(C) Comparability.
(D) Flexibility.

327. According to the text, when should the search for related literature be completed in quantitative research?
- (A) Before the study commences
 - (B) After the study begins
 - (C) During the data analysis phase
 - (D) After the results are interpreted
328. It took 10 seconds for the salt to dissolve in the water.
- (A) Qualitative
 - (B) Quantitative
329. Which type of research relies on numbers?
- (A) Quantitative Research
 - (B) Case Study Research
 - (C) Qualitative Research
 - (D) Descriptive Research
 - (E) All options correct
330. My water bottle has 500 mL of water in it. This is an example of ____
- (A) Qualitative observation
 - (B) Inference
 - (C) Quantitative observation
 - (D) Thirst
331. Which is NOT a type of quantitative research?
- (A) Descriptive
 - (B) Correlational
 - (C) Narrative
 - (D) Experimental
332. Which of the following BEST defines quantitative research?
- (A) It is an exploration associated with libraries, books and journals
 - (B) It is an activity concerned with finding new truth in education
 - (C) It is a systematic process obtaining numerical information about the world
 - (D) It is an activity of producing or proving a theorem
333. "Quantitative Research Designs and Counselling Psychology: Historical Development, Current Application and Best Practices".
- (A) Agriculture
 - (B) Education
 - (C) Health and Medicine
 - (D) Psychology
334. Numbers and Statistics.
- (A) Qualitative
 - (B) Quantitative
335. What kinds of data is/are collected by quantitative researchers?
- (A) Age and test scores
 - (B) Memos and republic act
 - (C) Interview and anecdotal records
 - (D) Audio recordings and video tapes
336. Quantitative research should be in an environment where all variables are identified and can be controlled.
- (A) Objectivity
 - (B) Generalizability
 - (C) Controllability
 - (D) Replicability
337. Which word is an example of a verb to use in developing quantitative research questions?
- (A) Explore
 - (B) Affect
 - (C) Understand
 - (D) Discover
338. What characteristics of quantitative research deals with data in the form of numbers and statistics?
- (A) Replication
 - (B) Numerical data
 - (C) Large sample sizes
 - (D) Objective
339. The specific quantitative research design applied in a research study can be identified by:

- (A) Analyzing the research methods and objectives used in the study
 - (B) Reviewing only the literature section
 - (C) Focusing solely on the sample size
 - (D) Ignoring the data collection techniques
- 340.** Quantitative Data has to do with numbers or data that can be ____
- (A) Observed
 - (B) Tasted
 - (C) Felt by emotion
 - (D) Measured
- 341.** Objectivity is of the highest priority for quantitative researchers.
- (A) Myth
 - (B) Fact
- 342.** From the following list of terms which one is not related to quantitative research?
- (A) Variables
 - (B) Hypotheses
 - (C) Exploration
 - (D) None of above
- 343.** How can businesses use quantitative data to understand market trends?
- (A) By analyzing numerical data from surveys and questionnaires
 - (B) By collecting in-depth customer opinions
 - (C) By focusing only on internal data
 - (D) By avoiding data analysis
- 344.** Which research approach focuses on statistical analysis?
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed
 - (D) Experimental
- 345.** Objective information; specific and measurable
- (A) Questionnaire
 - (B) Quantitative data
 - (C) Primary data
 - (D) Qualitative data
- 346.** The average outside temperature is 92 degrees Fahrenheit.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 347.** Which of the following represents a quantitative research title?
- (A) Exploring the Experiences of Senior High School Students
 - (B) The Relationship Between Study Hours and GPA
 - (C) Teachers' Perception of Online Learning
 - (D) Narratives of First-Year College Students
- 348.** Numbers and statistics are more objective and less prone to research bias.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
- 349.** What is a quantitative variable that could have an infinite number of values?
- (A) Categorical variable
 - (B) Qualitative variable
 - (C) Discrete variable
 - (D) Continuous variable
- 350.** The researcher uses graphs and charts for data collection. Which type of research is created?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Both
 - (D) Neither
- 351.** Which type of research uses structured and numerical tools?
- (A) Quantitative research.
 - (B) Qualitative research.

- (C) Descriptive research only.
(D) Case study research.
(E) Action research.
- 352.** This research examines social phenomena through quantifiable evidence and often rely on statistical analysis of many cases to create valid and reliable general claims.
(A) Qualitative Research
(B) Quantitative Research
(C) Both
(D) None of these
- 353.** What is the primary goal of quantitative research in IT?
(A) To explore subjective experiences and meanings
(B) To understand social and cultural contexts
(C) To collect and analyze numerical data
(D) To investigate in-depth case studies
- 354.** Blinding is used in quantitative studies to reduce bias that results from awareness
(A) True
(B) False
- 355.** Describes human behavior and experience using numbers and statistical analysis. It is objective as it can be measured. Quantitative Data Qualitative Data
(A) Quantitative Data
(B) Qualitative Data
- 356.** In a study about customer satisfaction, researchers use a Likert scale in a survey to rate experiences with a product. What type of research method is applied?
(A) Qualitative Research
(B) Quantitative Research
(C) Observational Research
(D) Experimental Research
- 357.** In quantitative research, we convert the answers into numerical codes to be analysed.
(A) False
(B) True
- 358.** What type of data is typically represented in graphs and charts?
(A) Qualitative
(B) Quantitative
(C) Narrative
(D) Descriptive
- 359.** There were four dogs in the group.
(A) Qualitative
(B) Quantitative
- 360.** Which of the following is indicative of quantitative research ontology?
(A) Reality is flexible
(B) Reality is objective
(C) Reality is subjective
(D) None of above
- 361.** Applies the deductive method.
(A) Quantitative Research
(B) Qualitative Research
- 362.** In quantitative research, respondents are given very limited opportunity to elaborate their responses.
(A) TRUE
(B) FALSE
- 363.** Benjamin, William, and Abigail conducted a survey in their school. They collected data such as the number of books each student read in a month. Which type of data did they collect that can be measured in numbers and analyzed using statistical methods?
(A) Quantitative data
(B) Ordinal data
(C) Categorical data
(D) Qualitative data
- 364.** Deals with numbers-height, weight, time.
(A) Collectivist cultures
(B) Individualistic cultures
(C) Quantitative data
(D) Qualitative data

365. "How many hours do you spend on Instagram?" would obtain what type of data?
(A) Quantitative data
(B) Qualitative data
366. Which of the following is NOT a function of a literature review in quantitative research?
(A) Collecting primary data
(B) Identifying research questions
(C) Refining research concepts
(D) Learning valuable research techniques
367. Correlation studies must include
(A) Two or more levels of independent variable.
(B) Two or more variables and one group.
(C) Three or more variables and two groups.
(D) One independent variable and two dependent variables
368. A geologist found a rock sample which consisted of 25 grams of quartz in a mountain range.
(A) Qualitative
(B) Quantitative
369. A researcher records the height of plants in centimeters over a period of time. This type of data is:
(A) Qualitative
(B) Quantitative
(C) Descriptive
(D) Subjective
370. Which of the following is most aligned with a researcher using quantitative methods?
(A) Studying a large number of subjects as a detached, objective observer.
(B) Studying an interesting phenomenon in the context in which it naturally occurs.
(C) Communicating the results of the study in a loosely structured report that uses informal language.
(D) Using a research design that changes as narrative data is collected and analyzed.
371. Deductive approach is ____
(A) Quantitative research
(B) Qualitative research
(C) Mixed-method research
(D) None of above
372. My fingernail is 2cm long.
(A) Qualitative Data
(B) Quantitative Data
373. There was 20ml of liquid in the cup.
(A) Qualitative
(B) Quantitative
374. The table top is two feet in length.
(A) Quantitative observation
(B) Qualitative observation
(C) An observation
(D) None of the answers
375. TRUE or FALSE In Quantitative Research, The use of a statistical tools provides time-consuming data analysis.
(A) TRUE
(B) FALSE
(C) NEITHER
(D) None of above
376. There is approximately 120mL of water in the cylinder.
(A) Qualitative
(B) Quantitative
377. Researchers conducting a quantitative study prefer to examine the breadth and depth of a phenomenon from a subjective point of view.
(A) Fact
(B) Myth
378. What approach do quantitative researchers take?
(A) Top-down
(B) Bottom-up

379. Qualitative or quantitative? The mold covered fifty percent more of the bread's surface.
(A) Qualitative
(B) Quantitative
380. There are 3 narwhals.
(A) Quantitative Observation
(B) Qualitative Observation
381. Which of the following can be considered as a quantitative question?
(A) How can you describe your relationship with your superior / supervisor?
(B) Does your salary adequately meet your needs?
382. The chicken laid 15 eggs
(A) Quantitative data
(B) Qualitative data
383. Researcher tests hypothesis and theory with data
(A) Qualitative
(B) Quantitative
384. Result-oriented
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
385. Behavioral research focuses on:
(A) Theoretical explanations
(B) Empirical observations
(C) Non-tangible aspects
(D) Behaviors as the most tangible things to study
386. It does not always allow us to understand what a participant is thinking or feeling.
(A) Strength of Quantitative Data
(B) Strength of Qualitative Data
(C) Weakness of Quantitative Data
(D) Weakness of Qualitative Data
387. Which strategy is used by quantitative researchers to enhance rigor and reduce bias?
(A) Reliability
(B) Randomness
(C) The passive voice
(D) Reflexivity
388. This research tool includes surveys and pre-collected data.
(A) Qualitative research methods
(B) Quantitative research methods
389. Which of the following characteristics is most common in quantitative research?
(A) Data collection through open-ended interviews.
(B) Use of numerical data and statistics.
(C) In-depth analysis of individual cases.
(D) Exploration of subjective phenomena.
390. In which type of research would you most likely use statistical analysis to draw conclusions?
(A) Qualitative Research
(B) Quantitative Research
(C) Case Study Research
(D) Ethnographic Research
391. Which quantitative design focuses on describing what exists and its frequency?
(A) Descriptive design for existing phenomena
(B) Interpretive design for meaning-making
(C) Participatory design with co-developed plans
(D) Illuminative design for one aspect
392. Which research paradigm is most concerned about generalizing its findings?
(A) Quantitative research
(B) Qualitative research
(C) Mixed-methods research
(D) All of the above
393. If a study requires data in the form of numbers, the right research method is ____
(A) Verification

- (B) Development
 - (C) Descriptive
 - (D) Qualitative
 - (E) Quantitative
- 394.** Balances in the savings accounts at a bank
- (A) Qualitative
 - (B) Quantitative
- 395.** Useful lifetime (in hours) of 100-watt light bulbs.
- (A) Quantitative.
 - (B) Qualitative
- 396.** A company wants to measure customer satisfaction using numerical data that can be statistically analyzed. Which type of research is best?
- (A) Exploratory
 - (B) Quantitative
 - (C) Observational
 - (D) Qualitative
- 397.** What kind of questions should be asked in quantitative research questions to obtain measurable and observable data?
- (A) Unclear
 - (B) Indefinite
 - (C) Blurry
 - (D) Specific, narrow
- 398.** Data that is numerical
- (A) Qualitative
 - (B) Quantitative
- 399.** Deals with numbers or amounts when observing
- (A) Quantitative observation
 - (B) Qualitative observation
 - (C) Inferring observation
 - (D) Classifying observation
- 400.** Quantitative data research uses measurable data.
- (A) True
 - (B) False
- 401.** What is a characteristic of quantitative research?
- (A) Anecdotal notes based on observations
 - (B) Interviews and personal notes
 - (C) Strict controls and numerical data
 - (D) Examining trends and themes
- 402.** Match the statement below to the correct description: The volume of water was 32 mL.
- (A) Qualitative
 - (B) Quantitative
- 403.** Which of the below is NOT a method of quantitative research?
- (A) Structured interview
 - (B) Questionnaire
 - (C) Semi-structured interview
 - (D) Social survey
- 404.** Number of Harry Potter books you have read
- (A) Qualitative
 - (B) Quantitative
- 405.** Is defined as research involving the administration of a set of structured questions with predetermined response options to a large number of respondents.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed Methods
 - (D) None of above
- 406.** What is the significance of quantitative research in the field of study?
- (A) Quantitative research is not used in the field of study.
 - (B) Quantitative research only provides subjective data.
 - (C) Quantitative research is only used for qualitative analysis.
 - (D) Quantitative research provides objective and numerical data for statistical analysis.

407. Which type of research is expressed in numbers and graphs?
(A) Qualitative research
(B) Quantitative research
(B) Chemistry
(C) Education
(D) Physics
408. Which motto emphasizes ontology through quantity rather than divinity or power?
(A) I think, therefore I am
(B) All is about god
(C) All is numbers
(D) I came, I saw, I conquer
409. Quantitative observations use numbers.
(A) True
(B) False
410. TRUE or FALSE: Quantitative data describes the specific number or amount of something
(A) TRUE
(B) FALSE
411. Which observation is quantitative?
(A) It is 5 cm long
(B) It is smooth
(C) It looks red
(D) It is dry
412. Often starts with a theory or conceptual model and researchers make predictions about phenomena in the real world based upon the theory (deductive reasoning) and the predictions are tested
(A) Quantitative research
(B) Qualitative research
413. Which type of data is structured and based on numbers and scales?
(A) Qualitative data
(B) Quantitative data
(C) Both
(D) None
414. All of the following uses quantitative research except ____
(A) Biology
415. Keeping track of the time different students spend in the bathroom every day during B3
(A) Qualitative
(B) Quantitative
416. For her science project, a student collects data on deer spotted in a field each day. For the first five days of her study, she counted 23, 16, 18, 27, and 19 deer. What type of observation do these data represent?
(A) An inferred observation
(B) A quantitative observation
(C) A qualitative observation
(D) A classified observation
417. Which type of market research does surveys and questionnaires gather?
(A) Qualitative Research
(B) Quantitative Research
418. What kind of data involve numbers in the form of an amount or measurement?(ex 12 students working in the library)
(A) Qualitative data
(B) Quantitative data
419. There are 75 trees in the forest.
(A) Qualitative
(B) Quantitative
420. Which type of information is most likely to be collected by quantitative research methods?
(A) Attitudes and values
(B) Non-numerical data
(C) Descriptions and explanations
(D) Measurements and statistics
421. "There are 5 llamas." is an example of a(n)
(A) Qualitative Observation
(B) Quantitative Observation

422. Researcher is uninvolved observer, results are objective
(A) Qualitative Research
(B) Quantitative Research
423. Measuring the gas mileage used over the winter versus summer months would involve the collection of ____ data.
(A) Quantitative
(B) Qualitative
424. Mrs. Topham's cat weighs 8 kilograms. What type of observation is this?
(A) Quantitative
(B) Qualitative
425. Data classification which is based on variables such as production, cost, height and weight is considered as
(A) Qualitative classification
(B) Quantitative classification
(C) Open end classification
(D) Time series classification
426. How does quantitative research utilize numerical and quantifiable data?
(A) To create artistic visualizations
(B) To establish generalizability
(C) To predict outcomes
(D) To gather subjective opinions
Explanation: Quantitative research uses numerical and quantifiable data to make predictions and draw statistical inferences about outcomes.
427. Decide whether the statement is true or false: Quantitative research avoids statistics.
(A) True
(B) False
428. Numeric measurements are what kind of data?
(A) Quantitative data
(B) Qualitative data
429. What is the structure of a quantitative research report?
(A) Flexible structure
(B) No structure
(C) A structure determined by the participant
(D) Set structure
430. A good quantitative instrument must be:
(A) Wordy and subjective
(B) Open-ended
(C) Valid and reliable
(D) Long and detailed
431. The balloon increased in size from 5 inches to 8 inches around.
(A) Qualitative
(B) Quantitative
432. Quantitative data are data that use ____ with a unit of measurement.
(A) Numbers
(B) Colors
(C) Letters
(D) Shapes
433. Which of the following is QUANTITATIVE DATA about Miss. Bennett?
(A) Miss. Bennett is 25 years old.
(B) Miss. Bennett is 5'3".
(C) Miss. Bennett wears a size 9 shoe.
(D) All of these are examples of quantitative data.
434. A researcher looks for the relationship between students' standardized test scores and their household income in a particular city. Her data can be described as ____
(A) Quantitative
(B) Qualitative
(C) Experimental
(D) Observational
435. The temperature in degrees Celsius of a classroom.
(A) Qualitative data
(B) Quantitative data

436. What type of data involved numbers and figures?
(A) Quantitative
(B) Qualitative
437. Measurement is the assignment of ___ description of the learner's performance.
(A) Qualitative
(B) Qualified
(C) Quantitative
(D) Quadratic
438. Cathy is making a quantitative research and she is aware that among the following is the most widely used branch of mathematics in quantitative research?
(A) Algebra
(B) Calculus
(C) Statistics
(D) Trigonometry
439. There are 3 giraffes and 1 zebra. This is an example of a(n):
(A) Quantitative observation.
(B) Qualitative observation.
(C) Inference.
(D) None of above
440. If the results of the conducted research were analyzed statistically, the research is said to be ___ in nature.
(A) Quantitative
(B) Qualitative
441. Which of the following is considered a quantitative research?
(A) Focus group
(B) Observation
(C) Survey
(D) None of above
442. These are the designs of quantitative research method ___
(A) Survey, correlational, regression
(B) Narrative, survey, correlational
443. What kind of research is used to quantify attitudes, opinions, behavior other defined variables and to generalize results from a larger population?
(A) Research
(B) Qualitative Research
(C) Quantitative Research
(D) Scientific Scientific Method
444. The rock sample consisted of 25 grams of quartz.
(A) Qualitative
(B) Quantitative
445. Quantitative data can be
(A) Seen
(B) Measured
(C) Manipulated
(D) Heard
446. Concerned about findings that can be generalized.
(A) Quantitative Research
(B) Qualitative Research
447. A type of research that is an objective, systematic, empirical, investigation and uses statistic, to verify data relationship among variables, to come up with objective conclusion that can answer the problem of the research
(A) Inquiry
(B) Experimental
(C) Quantitative
(D) Qualitative
448. What is the role of statistical analysis in quantitative research?
(A) To explore subjective experiences, meanings, and social phenomena
(B) To test hypotheses, examine cause-effect relationships, and generalize findings
(C) To integrate both qualitative and quantitative approaches in a single study
(D) To analyze data collected over time to identify patterns, trends, or seasonality

449. Which item is an example of an instrument in quantitative research?
- (A) A validated blood pressure monitor
 - (B) An untested theoretical framework
 - (C) A predicted correlation coefficient
 - (D) A convenience sample roster
450. How many customers from Europe prefer to purchase online or in-store?
- (A) Quantitative
 - (B) Qualitative
451. In an experiment, a scientist records the temperature of a solution every minute. What type of data is being collected?
- (A) Qualitative
 - (B) Quantitative
 - (C) Descriptive
 - (D) Subjective
452. Which is an approach for testing objective or theories by examining the relationship among variables. These variables, in turn, can be measured, typically on instruments, so that numbered data can be analyzed using statistical procedures?
- (A) Qualitative
 - (B) Scientific
 - (C) Quantitative
 - (D) Mixed
453. TRUE or FALSE In Quantitative Research, Data is taken and analyzed objectively from a sample as a representative of the population, making it more credible and reliable for policymaking and decision making.
- (A) FLASE
 - (B) TRUE
 - (C) NEITHER
 - (D) None of above
454. During a field study, a biologist notes that a bird's song lasts for 15 seconds. What type of data is this?
- (A) Qualitative
 - (B) Quantitative
 - (C) Descriptive
 - (D) Comparative
455. There were 5 children on the playground.
- (A) Quantitative
 - (B) Qualitative
 - (C) Both
 - (D) Neither
456. Assessing the relationship between student teachers' computer attitudes and learning strategies in a developing country
- (A) Qualitative
 - (B) Quantitative
457. This research uses data taken from a large sample of the population that are usually randomly selected.
- (A) Qualitative Research
 - (B) Quantitative Research
458. Does the following experiment use quantitative or qualitative data?"Ms. Dillon recorded all the scores that her students received on their exit tickets throughout the year."
- (A) Quantitative
 - (B) Qualitative
459. Which is best to use for Quantitative data collection
- (A) Open questions
 - (B) Direct questions
 - (C) Simple questions
 - (D) Closed questions
460. The primary purpose of quantitative research in cultural heritage is to:
- (A) Gather personal views about cultural traditions
 - (B) Record oral accounts of local communities
 - (C) Create artistic displays of heritage resources
 - (D) Explain cultural patterns through numerical data

- 461.** Deductive approach resonates highly with —
(A) Quantitative research
(B) Qualitative research
(C) Mixed-method research
(D) None of the Above
- 462.** The importance of quantitative research lies greatly from —?
(A) Personal attachment
(B) Inaccurate meanings
(C) Production of accurate results
(D) Researcher's biases
- 463.** Which approach is more likely to use pre-specified research questions?
(A) Mixed methods research
(B) Quantitative research
(C) Qualitative Research
(D) Observational research
- 464.** Choose the correct data type for: 'A person's blood pressure when watching a horror movie.'
(A) Quantitative
(B) Categorical
(C) Discrete
(D) Continuous
- 465.** It is more scientific as statistical tests can be conducted.
(A) Strength of Quantitative Data
(B) Strength of Qualitative Data
(C) Weakness of Quantitative Data
(D) Weakness of Qualitative Data
- 466.** The flowers are 22.5 cm tall is what kind of data?
(A) Qualitative
(B) Quantitative
- 467.** Determine whether the data is qualitative or quantitative: Weight of dogs at an animal rescue facility.
(A) Qualitative
(B) Quantitative
- 468.** The first question that a researcher interested in the applicable for statistical techniques to his problem has to ask
(A) Whether the data could be quantified
(B) Whether analysis of data would be possible
(C) Whether worthwhile inferences could be drawn
(D) Whether appropriate statistical techniques are available
- 469.** Which of the following is NOT a benefit of correlational research?
(A) It can establish cause-and-effect relationships.
(B) It can identify high-risk groups.
(C) It can allow prediction of one variable on the basis of the other.
(D) It can help increase understanding of relationships between variables.
- 470.** Title communicates key variables and the population (PICO components)
(A) Qualitative studies
(B) Quantitative studies
- 471.** This research is used to establish generalizable facts.
(A) Qualitative Research
(B) Quantitative Research
- 472.** In which type of research is the researcher typically separate from the participants?
(A) Quantitative research
(B) Qualitative research
(C) Mixed-methods research
(D) Action research
- 473.** The main goal of Correlational Research is to:
(A) Establish cause and effect
(B) Measure variables as they occur and clarify relationships between variables
(C) Manipulate variables in a controlled environment
(D) Assign participants randomly to groups

474. Is analyzed through math and statistical analysis
(A) QUALITATIVE
(B) QUANTITATIVE
(B) Large sample
(C) Numerical figure
(D) Pie chart and bar graph
475. The length of a piece of string.
(A) Qualitative
(B) Quantitative
476. Prevalence of Workplace Violence Against Chinese Nurses and Its Association with Mental Health: A Cross-sectional Survey Question: This is a type of ____
(A) Qualitative Study
(B) Quantitative Study
477. The results of this type of study are more objective, and free from the personal bias of the researcher.
(A) Qualitative Design
(B) Quantitative Design
478. What words can be related with a quantitative type of research?
(A) Describe
(B) Answer
(C) Explain
(D) Confirm
479. Which step would not be undertaken in a nonexperimental quantitative study?
(A) Determining the number of subjects to recruit
(B) Undertaking a literature review
(C) Developing methods for safeguarding human subjects
(D) Developing an intervention protocol
480. Number of local calls made per month.
(A) Qualitative
(B) Quantitative
481. All of the following data refers to quantitative research EXCEPT?
(A) Broad questions
(B) All the above
482. "Quantitative research collects information that can easily?"
(A) Counted
(B) Tabulated
(C) Statistically analyzed
(D) All the above
483. Plans all research aspects before collecting data
(A) QUALITATIVE
(B) QUANTITATIVE
484. All of these are importance of Quantitative Research except:
(A) Making the research problem vague
(B) Objective and reliable data collection
(C) Helps in testing theories
(D) Establishes relationships between variables
485. A kind of Quantitative Research where information is collected from the same subjects over a period of time, sometimes lasting many years.
(A) Cross-sectional
(B) Longitudinal
(C) Causal-Comparative Research
(D) Experimental Research
486. This is an example of a quantitative data
(A) Cellphone is hot
(B) Cellphone is expensive
(C) Cellphone is broken
(D) Cellphone costs \$500
487. Match the following characteristics of reviewing research literature to the most appropriate research approaches
Identifies tools for data collection and necessary problem revisions.
(A) Quantitative

- (B) Qualitative
(C) Mixed
(D) Action
488. Classify the observation as qualitative or quantitative: 100% relative humidity
(A) Qualitative
(B) Quantitative
489. Which is not a criticism of quantitative research made by qualitative researchers?
(A) Treats people as objects
(B) Can't see the forest for the trees
(C) Is not creative
(D) Oversimplifies
490. The car traveled 70 miles
(A) Quantitative data
(B) Qualitative data
491. Common in experimental studies and surveys
(A) Quantitative
(B) Qualitative
492. Which characteristic ensures that data gathering and analysis in quantitative research are unbiased?
(A) Subjective interpretation
(B) Personal intuition
(C) Objective approach
(D) Emotional involvement
Explanation: Quantitative research aims to be objective, with data gathering and analysis being unbiased and unaffected by personal intuition.
493. To make sure that the results acquired will be valid, Quantitative Research requires a:
(A) Larger sample size
(B) Smaller sample size
494. Quantitative data describes the specific number or amount of something
(A) TRUE
(B) FALSE
495. What makes correlational research useful despite its limitations?
(A) It proves causation
(B) It identifies relationships
(C) It uses experimental methods
(D) It includes control groups
496. In this type of research, the researcher is separate from the process, questions may include "how many ____", the information is less open to interpretation.
(A) Qualitative
(B) Quantitative
(C) Stratified
(D) None of above
497. Which of the following best represents a quantitative observation?
(A) Number, amount, measurement
(B) Quality, characteristic, description
(C) Opinions and relative terms
(D) Subjective
498. Identify the following statement as qualitative or quantitative
The runner ran 5 kilometers
(A) Qualitative
(B) Quantitative
499. A observation requires tools like rulers, balances, graduated cylinders, or thermometers.
(A) Quantitative
(B) Qualitative
(C) Neither qualitative nor quantitative
(D) None of above
500. Observing and keep track of how much time it takes to make a cheeseburger from start to finish at Sonic.
(A) Quantitative
(B) Qualitative

- 501.** Define: Correlational Study
- (A) A correlational study is a research method used to determine the relationship between two variables without manipulating them.
 - (B) A correlational study is a method that involves manipulating one variable to observe its effect on another.
 - (C) A correlational study is a qualitative research method focused on detailed case studies.
 - (D) A correlational study is a statistical technique used only for predicting future trends.
- 502.** Qualitative or quantitative? The third solution started boiling three minutes faster.
- (A) Qualitative
 - (B) Quantitative
- 503.** The data is usually gathered using structured research instruments
- (A) Qualitative Research
 - (B) Quantitative Research
- 504.** The quantitative research problems requires 4 main problems except this:
- (A) Assess the impact of these variables on an outcome
 - (B) Test theories or broad explanations
 - (C) Obtain detailed information about a few people or research sites
 - (D) Measure variables
- 505.** Students measure the length of their shoes and record the data.
- (A) Change over time
 - (B) Numerical
 - (C) Categorical
 - (D) None of above
- 506.** The two types of quantitative research are survey research and experimental research.
- (A) True
 - (B) False
- 507.** Which of the following research purposed can be utilized in Quantitative study only?
- (A) Identification
 - (B) Description
 - (C) Explanation
 - (D) Prediction and Control
- 508.** Hypothesis Testing is done for which kind of research study
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) None of above
- 509.** Use statistical tools
- (A) QUALITATIVE RESEARCH
 - (B) QUANTITATIVE RESEARCH
 - (C) BOTH
 - (D) None of above
- 510.** The advantage of this method of research is that it can help to clarify relationships between variable that cannot be explained by other research methods, in other words- predictions.
- (A) Correlational
 - (B) Experiments
 - (C) Case Study
 - (D) Survey
 - (E) Observational
- 511.** Which method is most suitable for measuring the exact concentration of a solution?
- (A) Qualitative analysis
 - (B) Quantitative analysis
 - (C) Subjective analysis
 - (D) Descriptive analysis
- 512.** In quantitative research, the designs are mostly pre-established.
- (A) True
 - (B) False

- 513.** Why is it said that quantitative researchers use a “narrow-angle” lens in studies?
- (A) A small number of causal factors are focused on
 - (B) No specific factors are focused on
 - (C) Many factors are focused on
 - (D) None of above
- 514.** You want to measure the effectiveness of a new marketing campaign in increasing brand awareness.
- (A) Quantitative
 - (B) Qualitative
- 515.** Select the example(s) of quantitative?
- (A) Rank
 - (B) Last Name
 - (C) Gender
 - (D) General Weighted Average
- 516.** Which of the following tells the characteristic of quantitative research indicating that data are in the form of statistics?
- (A) Large sample size
 - (B) Numerical data
 - (C) Replication
 - (D) Objectivity
- 517.** Does correlational research provide information about which of the following?
- (A) The relationship between two or more things
 - (B) Historical trends
 - (C) Cause-and-effect relationships
 - (D) General human behaviours in the context in which they occur
- 518.** Correlations are
- (A) Quantitative
 - (B) Qualitative
- 519.** What is a drawback of quantitative data?
- (A) Smaller sample size
 - (B) Focused solely on numbers and facts
 - (C) Provides meaningful data
 - (D) Takes longer to conduct
- 520.** My dog, Mabel, weighs 35 pounds.
- (A) Inference
 - (B) Quantitative
 - (C) Qualitative
 - (D) None of above
- 521.** Quantitative Measures in research methods and design are:
- (A) Numerical data used to quantify variables
 - (B) Descriptions of participants’ experiences
 - (C) Interpretations of textual data
 - (D) Theoretical frameworks for analysis
- 522.** In quantitative research, which statement correctly describes basic research?
- (A) Generates theory and refines concepts
 - (B) Analyzes narratives and lived experiences
 - (C) Directly changes bedside clinical practice
 - (D) Relies on perceptions over measurable reality
- 523.** Which of the following is an example of a quantitative design?
- (A) Narrative research
 - (B) Ethnography
 - (C) Survey research
 - (D) Case study
- 524.** Identify whether the following are strengths or limitations of quantitative research. Testing hypothesis
- (A) Strength
 - (B) Weakness
- 525.** Design a quantitative analysis approach for investigating the relationship between student GPA and study hours using regression analysis.
- (A) Use T-tests to compare GPA between students
 - (B) Apply Pearson’s correlation and linear regression to assess the relationship

- (C) Perform ANOVA to analyze the differences in GPA
- (D) Conduct factor analysis to determine key variables
526. Quantitative data is a ____
- (A) Quantitative data is a type of data that can be quantified and is often represented in numerical form.
- (B) Qualitative data is a type of data that is descriptive and conceptual.
- (C) Quantitative data is always subjective and opinion-based.
- (D) Quantitative data cannot be measured or quantified.
527. Which of the following is “an approach for testing objective theories by examining the relationship among variables” (Creswell 2014)
- (A) Quantitative research
- (B) Survey
- (C) Qualitative research
- (D) None of above
528. Fidel gave a survey questionnaire where respondents would simply select reasons why they choose to enroll in Senior High School. What is the research type?
- (A) Quantitative
- (B) Descriptive
- (C) Qualitative
- (D) Experimental
529. The amount of goldfish in a bag
- (A) Qualitative
- (B) Quantitative
530. The plant is 6 inches tall.
- (A) Qualitative
- (B) Quantitative
531. What kind of observation is being made in the following statement: I caught a fifteen foot shark.
- (A) Qualitative data
- (B) Quantitative data
532. Which characteristic of a quantitative research is being used when the researcher repeat a study to verify findings enhancing its validity, free from false or immature conclusions.
- (A) Replication
- (B) Reliable Data
- (C) Visual representation
- (D) Objective
- Explanation:** Replication is a characteristic of quantitative research where a study is repeated to verify findings, ensuring validity and avoiding false or immature conclusions.
533. You want to measure the brand loyalty of your customers.
- (A) Quantitative
- (B) Qualitative
534. Is the following qualitative or quantitative?
”The earthworm is four inches long.”
- (A) Qualitative
- (B) Quantitative
535. A researcher counts the number of students wearing glasses in a class. This is an example of:
- (A) Qualitative data.
- (B) Quantitative data.
- (C) Inconclusive data.
- (D) Survey data.
536. Quantitative research is subjective given that it relies on human interpretation of observed reality.
- (A) True
- (B) False
537. Why is measurement in quantitative research important?
- (A) It provides a unique solution to all problems.
- (B) It is better than qualitative analysis.
- (C) It connects empirical observation with mathematical relationships.
- (D) It is easier to do than mere subjective observation.

- 538.** This is NOT a purpose of quantitative research.
- (A) To examine relationships among variables.
 - (B) To describe new situation, events or concepts
 - (C) To describe life experiences
 - (D) To generate numerical information through an objective process
- 539.** This type of marketing research answers questions that start with “how many” or “how much”; gathers information from large groups of people often using surveys or questionnaires
- (A) Exit polls
 - (B) Quantitative research
 - (C) Qualitative research
 - (D) Action research
- 540.** It is the investigation of relationship between variables.
- (A) Correlational research
 - (B) Descriptive research
 - (C) Evaluation research
 - (D) Casual comparative research
- 541.** What does “causality” mean in the context of quantitative research?
- (A) That one variable is expected to directly cause a change in another variable
 - (B) That all variables in the study are related to each other
 - (C) That the researcher’s biases have influenced the results
 - (D) That the study has successfully addressed all confounding variables
- 542.** Which of the following is a relationship-based quantitative research question?
- (A) What is the relationship between the number of hours studied and exam performance?
 - (B) Is there a difference in the effectiveness of two different types of cancer treatment?
 - (C) What are the factors that influence the likelihood of developing a chronic disease?
 - (D) How does the relationship between social media use and academic performance vary between different countries?
- 543.** Provide an example of Quantitative Research.
- (A) A survey collecting numerical data on consumer preferences
 - (B) An interview exploring personal experiences
 - (C) A case study analyzing a single event
 - (D) A focus group discussing opinions
- 544.** Why are large samples often used in quantitative studies?
- (A) Reduce need for standardized instruments
 - (B) Guarantee zero sampling bias in results
 - (C) Ensure deeper qualitative insights
 - (D) Increase statistical power and precision
- 545.** Choose the correct definition of each type of quantitative research.
- 4-Correlational research
 - (A) Investigates relationships between variables without the researcher controlling them.
 - (B) It is defined as a research method used for collecting data from a pre-defined group of respondents.
 - (C) It’s usually based on one or more theories.
 - (D) It’s used by researchers to conclude the cause-effect equation between two or more variables.
- 546.** Does the following experiment use quantitative or qualitative data?”Mr. Taddeo wanted to compare the weights (in grams) of different types of liquids.”
- (A) Quantitative
 - (B) Qualitative
- 547.** What type of research method uses numerical data and is typically presented using statistics, tables, and graphs?
- (A) Qualitative research methods

- (B) Quantitative research methods
 - (C) Mixed methods
 - (D) Pragmatic research methods
- 548.** The bug was 5 cm long.
- (A) Qualitative data
 - (B) Quantitative data
- 549.** Separate the Facts from Myths regarding the purpose and assumptions of quantitative research. Researchers conducting a quantitative study prefer to examine the breadth and depth of a phenomenon from a subjective point of view.
- (A) Fact
 - (B) Myth
- 550.** A weather report states that the temperature in a city is 82 degree Fahrenheit.
- (A) Qualitative
 - (B) Quantitative
- 551.** Quantitative researchers collect primarily quantitative data information in which form:
- (A) Alphabetical
 - (B) Coded
 - (C) Numerical
 - (D) Narrative
- 552.** The mass of the beaker was 122 grams.
- (A) Qualitative
 - (B) Quantitative
- 553.** Quantitative Observation: Often involves the standardization of the who is observed, what is observed, when the observations are to take place, where the observations are to be carried out, and how the observations are to be done.. Usually results in quantitative data. Sometimes uses observational sampling techniques (timeinterval sampling, event sampling)
- (A) True
 - (B) False
- 554.** Identify whether the following are strengths or limitations of quantitative research. Validating already constructed theories
- (A) Strength
 - (B) Weakness
- 555.** It uses numbers in stating generalization about a given problem or inquiry.
- (A) Basic Research
 - (B) Applied Research
 - (C) Qualitative Research
 - (D) Quantitative Research
- 556.** Quantitative research is used for
- (A) Collect people opinions
 - (B) Observe customer behavior
 - (C) Collect data can be transferred to numbers
 - (D) Non of mentioned
- 557.** Is the following practice more aligned with qualitative or quantitative research methods? Relies on large sample size to make more valid.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) None
- 558.** The following research question was addressed in what type of study? "What is the effect of a nursing smoking cessation intervention on the number of cigarettes that patients smoke?"
- (A) Qualitative
 - (B) Quantitative
- 559.** Which research focuses on analyzing the relationship between variables to draw accurate conclusions?
- (A) Descriptive research
 - (B) Quantitative research
 - (C) Qualitative research
 - (D) Experimental research

- 560.** The mass of the beakers is 500mg.
(A) Qualitative
(B) Quantitative
- 561.** Identify the data as Qualitative or Quantitative: age
(A) Qualitative
(B) Quantitative
- 562.** The cow weighs 1 ton
(A) Quantitative data
(B) Qualitative data
- 563.** What is correlational studies?
(A) Studying the same group of people over a long period of time
(B) Self reporting attitudes or behavior of a particular group of people
(C) Study in which people of different ages are compared to one another at single point of time
(D) Relationship between two variables (how they change together)
- 564.** It is concerned in discovering facts about a social phenomena and assumes a fixed and measurable reality
(A) Quantitative
(B) Qualitative
- 565.** Large numbers and statistics
(A) QUALITATIVE
(B) QUANTITATIVE
- 566.** Identify whether the following are strengths or limitations of quantitative research. Constructed theory validation
(A) Strength
(B) Weakness
- 567.** The beaker contains 250 mL of vinegar.
(A) Qualitative observation
(B) Quantitative observation
(C) Inference
(D) Prediction
- 568.** Purpose is to test hypotheses, look at cause & effect, & make predictions
(A) Quantitative
(B) Qualitative
- 569.** Data are collected through statistical analysis.
(A) QUALITATIVE
(B) QUANTITATIVE
- 570.** True or False Quantitative research is easier to prove scientifically than qualitative research. In qualitative research biases and prejudice are easy to occur.
(A) True
(B) False
- 571.** Select the quantitative data
(A) The liquid is orange
(B) The mass was 10 g
(C) The water evaporated
(D) The paper is blue
- 572.** What type of data is used to measure height or weight?
(A) Ordinal data
(B) Categorical data
(C) Ratio data
(D) Narrative data
- 573.** It is an inquiry that gathers numerical data that are analyzed using mathematically-based methods.
(A) Physical Science
(B) Governance
(C) Social Science
(D) Behavioral Science
(E) Quantitative Research
- 574.** Quantitative research gathers data that will generally be
(A) Numerical
(B) A participant's thoughts and opinions

575. Read this statement and determine if it contains qualitative or quantitative data: On average a colony of beavers consist of 6 individuals.
- (A) Qualitative Data
 - (B) Quantitative Data
576. Research data is numerical, non-descriptive, applies statistics or mathematics and uses numbers.
- (A) Applied Research
 - (B) Mixed Research
 - (C) Qualitative Research
 - (D) Quantitative Research
577. It is numerical, non-descriptive, applies statistics or mathematics and uses numbers.
- (A) Applied Research
 - (B) Mixed Research
 - (C) Qualitative Research
 - (D) Quantitative Research
578. Evaluates objectives and examines cause-effect relationship
- (A) QUALITATIVE
 - (B) QUANTITATIVE
579. A core characteristic of quantitative research is its emphasis on:
- (A) Unstructured, emergent data collection
 - (B) Statistical analysis of measured variables
 - (C) Narrative accounts of participant stories
 - (D) Flexible, evolving research questions
580. Which of the following represents quantitative data?
- (A) The dog is brown.
 - (B) The basketball team won 15 games.
 - (C) The food tastes spicy.
 - (D) The movie was entertaining.
581. In quantitative studies, researchers are primarily interested in the relationship between:
- (A) Independent variables and dependent variables
 - (B) Subject and Informants
 - (C) Population and Investigator
 - (D) Input and Output
582. Which type of research involves the use of numeric data?
- (A) Quantitative research
 - (B) Applied research
 - (C) Pure/basic research
 - (D) Action research
583. This research is based on numeric figures or numbers
- (A) Qualitative Research
 - (B) Quantitative Research
584. Which of the following is most important during the data analysis phase of quantitative research?
- (A) Looking for patterns in language
 - (B) Transcribing interviews
 - (C) Asking open-ended questions
 - (D) Using statistical tests to examine numerical data
585. To write a good quantitative research question and hypotheses it is important ____
- (A) Not to relate one or more independent variables to one or more dependent variables
 - (B) To focus on a single phenomenon or concept.
 - (C) Relate one or more independent variables to one or more dependent variables.
 - (D) No, this is not the answer
586. What is the type of research that measures variables numerically and analyzes statistical relationships?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed Methods
 - (D) Exploratory
 - (E) Descriptive

587. A study finds that 75% of participants prefer a new policy. What type of data does this percentage represent?
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Descriptive data
 - (D) Thematic data
588. The line waiting for Space Mountain was 57 people long.
- (A) Qualitative
 - (B) Quantitative
589. Which of the following attribute is related to quantitative research?
- (A) Covers multiple issues but assembles required information
 - (B) Explains, prevalence, incidence, extent, nature of issues, opinions and attitudes.
 - (C) Describes themes
 - (D) Explores experiences, meanings, perceptions and feelings.
590. How is the literature typically used in quantitative research?
- (A) Sparingly, to avoid biasing the researcher's perspective
 - (B) Deductively, to build a foundation for research questions or hypotheses
 - (C) Only in the discussion section to compare with the study's findings
 - (D) To generate new theories based on previous research
591. Nature of Data: Numerical
- (A) Quantitative
 - (B) Qualitative
592. When we want to find patterns or test a theory or relationship between two things, we do the ___ research.
- (A) Quantitative
 - (B) Qualitative
593. In quantitative designs, according to the strategy applied in the study, which types of research can be carried out?
- (A) Experimental and non-experimental
 - (B) Exploratory only
 - (C) Qualitative and quantitative
 - (D) Descriptive and correlational
594. The container could hold 50 milliliters of water
- (A) Quantitative data
 - (B) Qualitative data
595. Which strength of quantitative research allows researchers to confirm the accuracy of research findings by conducting the study again?
- (A) Generalizability
 - (B) Validity
 - (C) Reliability
 - (D) Replicability
- Explanation:** Replicability is a strength of quantitative research that allows researchers to repeat the study and confirm the accuracy of research findings.
596. What kind of observation is being made in the following statement: The speed of the car was 45 mph.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
597. What is a quantitative observation for this picture?
- (A) The radius of the ball is 5.5 inches.
 - (B) The basketball is orange.
 - (C) The ball makes a swoosh sound as it falls through the net.
 - (D) The surface of the basketball is bumpy.
598. Classify as either qualitative research or quantitative research. Constructing statistical models and figures to explain what is observed.

- (A) Qualitative research
 - (B) Quantitative research
- 599.** Quantitative research's ontology has many characteristics, including which concept?
- (A) Truth is objective
 - (B) Truth is subjective
 - (C) Truth is flexible
 - (D) None of above
- 600.** A company tests whether a new ad increases click-through rate. Which application of quantitative research is this?
- (A) Policy evaluation in government
 - (B) Trend analysis over decades
 - (C) Comparative studies without controls
 - (D) Hypothesis testing of an intervention
- 601.** Research "DATA" based on numbers and statistical analysis ____
- (A) Qualitative
 - (B) Quantitative
 - (C) Quorntative
 - (D) Potatotative
- 602.** If the observation has numbers and a label, then it is ____
- (A) Qualitative
 - (B) Quantitative
- 603.** Statistical analysis is essential in quantitative studies.
- (A) TRUE
 - (B) FALSE
- 604.** This observation is based on something that is MEASURED or COUNTED
- (A) Qualitative
 - (B) Quantitative
- 605.** In quantitative research, which practice most accurately characterizes the approach to design?
- (A) Researchers specify a formal plan before data collection
 - (B) Researchers avoid a structured plan to remain flexible
 - (C) Researchers combine qualitative viewpoints with numbers
 - (D) Researchers allow tactics to change as insights emerge Edit
- 606.** Instrument based questions
- (A) Quantitative Methods
 - (B) Mixed Methods
 - (C) Qualitative Methods
 - (D) None of above
- 607.** ____ research is concerned with data and addresses question such as "how many?", "how often", "who?", "when?" and "where?"
- (A) Quantitative
 - (B) Qualitative
 - (C) Primary
 - (D) Secondary
- 608.** Which component is more typical of quantitative methods than qualitative methods?
- (A) Use of apparatus and standardized procedures
 - (B) Emergent design shaped by participants' realities
 - (C) Thick description from data representation
 - (D) Participant co-development of research plan
- 609.** Identify whether the following are strengths or limitations of quantitative research. Generalized research findings
- (A) Strength
 - (B) Weakness
- 610.** In quantitative research, how does reviewing related literature help a researcher interpret their results?
- (A) It provides context and strengthens the researcher's arguments
 - (B) It provides a set of standardized interpretations.

- (C) It eliminates the need for statistical analysis.
- (D) It guarantees the validity of the findings.
- 611.** Quantitative methods can be ___ to verify findings in another settings, thus, reinforcing validity of findings.
- (A) Repeated
- (B) Enforced
- (C) Empowered
- (D) Reduced
- 612.** Quantitative analytic methods are usually based on a ___ sample and are statistically analyzed for hypothesis testing.
- (A) Larger (more representative)
- (B) Smaller (less representative)
- (C) Random (uncontrolled)
- (D) Biased (non-representative)
- 613.** It relies on surveys or attitude scales.
- (A) QUALITATIVE
- (B) QUANTITATIVE
- 614.** If we counted how many pencils each student in our class has, is that qualitative or quantitative data?
- (A) Quantitative
- (B) Qualitative
- (C) Historical
- (D) Secondary
- 615.** A scientist measures the the amount of time it takes for sound to travel to the ocean floor and records the time in a data table.
- (A) Qualitative observation
- (B) Quantitative observation
- (C) Inference
- (D) None of above
- 616.** All are findings of quantitative research EXCEPT ___
- (A) Grade 11 students perceived that studying Senior High School is more complicated.
- (B) 85% of the total population of Senior High perceived that studying STEM is difficult.
- (C) Out of 120 TVL students, 95 find good facilities will enhance their skills.
- (D) The mean average about perception on facilities is 3.50 which means evident.
- 617.** "There are 5 wolves in the pack this year." Is this a quantitative or qualitative observation?
- (A) Qualitative Observation
- (B) Quantitative Observation
- 618.** Which is TRUE when it comes to Quantitative research?
- (A) It requires few respondents
- (B) It requires many respondents
- (C) It is an open-ended questions
- (D) It focuses on exploring ideas and formulating a theory or hypothesis.
- 619.** What is the process of testing objective theories in quantitative research?
- (A) Gathering open-ended responses from participants
- (B) Examining the relationship among variables
- (C) Using a flexible structure for the study
- (D) All of the above
- 620.** Qualitative or quantitative: The distance between the high school and the football stadium.
- (A) Quantitative
- (B) Qualitative
- 621.** Height of your mom
- (A) Qualitative
- (B) Quantitative
- 622.** The type of research provides a collection of numerical data.
- (A) Qualitative
- (B) Quantitative
- (C) Stratified
- (D) None of above

- 623.** Research in which the data is numerical (based on numbers) is called what type of research?
- (A) Qualitative
 - (B) Quantitative
 - (C) All the above
 - (D) None of the above
- 624.** Objective in nature
- (A) Quantitative
 - (B) Qualitative
- 625.** The rabbit hopped 5 feet in the air
- (A) Quantitative data
 - (B) Qualitative data
- 626.** Decide whether each of the following apply to the epistemology, or the theory of knowledge, of quantitative research. Hypothesis justification based on experience or experiment
- (A) Applies
 - (B) Does not apply
- 627.** The number one word that reflects the true nature of quantitative research.
- (A) Statistical
 - (B) Objective
 - (C) Numerical
 - (D) Measurement
- 628.** The most basic distinction between types of data is that some data are quantitative whilst other data are qualitative. Quantitative data consists of:
- (A) Equations
 - (B) Open-ended responses
 - (C) Survey and questionnaire data
 - (D) Numbers
 - (E) Any data can be considered quantitative
- 629.** Determine the quantitative research design appropriate for the sample research title. Make sure to explain your choice in two to three sentences.
- (A) Which quantitative research design is most suitable for a given research title, and why?
 - (B) What is the main purpose of qualitative research design in a study?
 - (C) How do you select a sample size for qualitative research?
 - (D) What are the ethical considerations in conducting quantitative research?
- 630.** It is the method that is carried out to test a hypothesis looking through data collection and statistical analysis:
- (A) Qualitative method
 - (B) Quantitative method
 - (C) Mixed method
 - (D) None of above
- 631.** Carolyn is planning on releasing a new product in her candy business and makes a survey to collect data. She asks "how often do you eat chocolate bars?" What example of marketing research is this?
- (A) Media research
 - (B) Quantitative research
 - (C) Qualitative research
 - (D) Product placing
- 632.** A study uses the Correlates of War dataset to analyze 150 countries from 1950-2020, testing whether former colonies are more likely to engage in border disputes. The dependent variable is the number of militarized interstate disputes per decade.
- (A) Content Analysis
 - (B) Large-N studies
 - (C) Survey Experiments
 - (D) Comparative Case Studies
- 633.** You could start by collecting some quantitative data on your respondent's height, weight, blood pressure, and so on.
- (A) True
 - (B) False

634. Which type of quantitative research focuses on relationships between variables?
(A) Correlational
(B) Descriptive
(C) Experimental
(D) Quasi-experimental
635. What form of data are facts and figures that can be presented in the form of a chart or graph?
(A) Primary Data
(B) Quantitative Data
(C) Qualitative Data
(D) Secondary Data
636. ____ is a research strategy that focuses on quantifying the collection and analysis of data. It includes measurements and the statistical, mathematical, or numerical analysis of data.
(A) Experimental research
(B) Quantitative research
(C) Qualitative research
(D) No idea!
637. When a scientist measures the length of a snake, they are collecting:
(A) Qualitative data.
(B) Quantitative data.
(C) Descriptive data.
(D) Opinion-based data.
638. Numerical data is ____
(A) Quantitative
(B) Qualitative
639. The apple tree in my backyard has grown 4 cm since the last measurement taken yesterday.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
640. Quantitative analysis often involves the use of statistical modeling such as mean, median, and mode.
(A) True
(B) False
641. Quantitative data is counted or measured. Which of these is Quantitative?
(A) It is warm outside
(B) Winter is far away
(C) There are 24 students
(D) Biology is easy
642. TRUE or FALSE Personal bias can be avoided by keeping a distance from participating subjects and using accepted computational techniques is considered as a strength of quantitative research.
(A) TRUE
(B) FALSE
(C) NEITHER
(D) None of above
643. Which category of research focuses on turning data into numbers for analysis?
(A) Qualitative Research
(B) Quantitative Research
(C) Mixed Methods
(D) None of above
644. What is the main characteristic of quantitative data collection instruments?
(A) Meaningful
(B) Quantifiable
(C) Valid
(D) Objective
645. Match the statement below to the correct description: The boat sailed 472 meters.
(A) Qualitative data
(B) Quantitative data
646. Quantitative Data can be any data that you can count or measure.
(A) True
(B) False

647. Another word used to describe quantitative data is ____
(A) Categorical
(B) Numerical
648. Quantitative or Qualitative: My pencil is 5 inches long.
(A) Quantitative
(B) Qualitative
649. Which of the following does NOT apply to quantitative research?
(A) It utilizes diaries.
(B) It utilizes numerical data.
(C) It applies statistical analysis.
(D) It utilizes structured interviews.
650. A means for testing objective theories by examining the relationship among variables.
(A) Research
(B) Inquiry
(C) Qualitative
(D) Quantitative
651. Olivia is conducting a study on student performance and needs to collect numerical data to analyze the results. Which research design should she use?
(A) Qualitative
(B) Quantitative
(C) Mixed methods
(D) Descriptive
652. When based on random samples, quantitative research is very useful for making ____
(A) Statistical generalizations about populations
(B) Random generalizations about populations
(C) Speculative generalizations about populations
(D) None of above
653. Measuring the number of times a person breathes after exercise involves ____ data.
(A) Quantitative
(B) Qualitative
654. A researcher aims to determine the relationship between study habits and academic performance among SHS students. Which quantitative research design is most appropriate?
(A) Correlational research design
(B) Experimental research design
(C) Descriptive research design
(D) Quasi-experimental research design
655. Mainly expressed in numbers, graphs and tables
(A) QUALITATIVE
(B) QUANTITATIVE
656. Quantitative research deals with:
(A) Words
(B) Numbers
(C) Emotions
(D) Narratives
657. An empirical research used to generate measurable data by employing statistical and logical techniques
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
658. Do you always need variables in quantitative research?
(A) Yes
(B) No
(C) Sometimes
(D) None of above
659. What type of research involves numerical data and statistical analysis?
(A) Qualitative Research
(B) Quantitative Research
(C) Descriptive Research
(D) Exploratory Research
660. Quantitative research is typically conducted on ____ samples of people
(A) Large
(B) Small

661. Objective; least involvement by the researcher
(A) QUANTITATIVE
(B) QUALITATIVE
662. Qualitative or Quantitative: We bought 3.4 pounds of fruit.
(A) Qualitative Observation
(B) Quantitative Observation
663. Requires many respondents
(A) QUALITATIVE
(B) QUANTITATIVE
664. It is 60 degrees Fahrenheit.
(A) Qualitative data
(B) Quantitative data
665. If you are measuring length with a ruler, your data will be ____
(A) Qualitative
(B) Quantitative
(C) Inference
(D) Opinion
666. There were 25 girl scout cookies in the box
(A) Quantitative data
(B) Qualitative data
667. Qualitative or Quantitative: The green bar is 3.5 centimeters long.
(A) Qualitative Observation
(B) Quantitative Observation
668. Students record the number of hours they spend revising and the number of hours they spend on social network sites. What type of data is this?
(A) Qualitative data
(B) Quantitative data
(C) Observational data
(D) Experimental data
669. Why is replication important in quantitative research?
(A) It helps gather more data
(B) It verifies findings and enhances validity
(C) It replaces the need for statistical tools
(D) It reduces the need for large sample sizes
Explanation:Replication in quantitative research involves repeating the study to verify findings and enhance the validity of the results.
670. What does a single reality mean in quantitative research?
(A) Alternate realities occur but the one we know is the one we are living in
(B) Facts and feelings create different realities for each person
(C) The world is made up of facts that can be discovered thru research
(D) None of the above
671. How can quantitative research findings be applied in real-world scenarios?
(A) By using statistical analysis to draw conclusions and make informed decisions based on numerical data.
(B) By relying solely on qualitative data and disregarding quantitative findings.
(C) By conducting experiments and collecting qualitative data to support the quantitative findings.
(D) By using anecdotal evidence and personal experiences to validate the quantitative findings.
672. Composed of variables, measured with numbers and analyzed with statistical procedures
(A) Quantitative Research
(B) Qualitative Research
(C) Descriptive Research
(D) Experimental Research
673. Which type of research uses numbers and statistics to answer questions?
(A) Descriptive research
(B) Exploratory research
(C) Quantitative research
(D) Qualitative research

674. Quantitative research uses numerical data.
(A) True
(B) False
675. Embody a group of techniques used to conduct quantitative research where there is no manipulation done to any variable in the study.
(A) NONEXPERIMENTAL RESEARCH
(B) DESCRIPTIVE RESEARCH
(C) CORRELATIONAL RESEARCH
(D) CAUSAL-COMPARATIVE RESEARCH
676. Research establishes relationships and causations as data is presented through plots, graphs, tables, figures, and the like.
(A) Qualitative
(B) Quantitative
677. There are 20 students in our classroom.
(A) Quantitative
(B) Qualitative
678. Quantitative
(A) Data gathered from observations that is numerical, countable or measurable
(B) Data gathered from observations that is descriptive, describable, or non-numerical
(C) Data that is based on prior knowledge
(D) Data that is the result of an explanation
679. Which type of research involves systematic counting and measurement of content elements?
(A) Quantitative content analysis
(B) Qualitative content analysis
(C) Historical research
(D) Comparative research
680. Separate the Facts from Myths regarding the purpose and assumptions of quantitative research. Quantitative research often focuses on testing specific hypotheses.
(A) Fact
(B) Myth
681. Quantitative variables are separated into ____
(A) ____ ordinal and nominal.
(B) ____ discrete and continuous.
(C) ____ discrete and nominal.
(D) ____ ordinal and continuous.
682. Which of the following is NOT a typical component of a quantitative literature review?
(A) An introduction that provides an overview of the literature review organization
(B) A detailed description of the researcher's personal experiences with the topic
(C) A review of studies related to the independent variable(s)
(D) A section summarizing the literature on the dependent variable(s)
683. It is less prone to bias as the findings are expressed in terms of numbers.
(A) Quantitative Research
(B) Qualitative Research
684. What type of marketing research is this? *
Gathers information from large numbers of people. Relies heavily on surveys or questionnaires to obtain information.
(A) Quantitative Research
(B) Qualitative Research
685. The use of a quantitative research objective, collection of quantitative data, and the use of quantitative data analysis is known as
(A) Within-stage mixed model research.
(B) Mono-method research.
(C) Across-stage mixed model research.
(D) Mixed method research.
686. Closed questions: questionnaire, interview or test items that produce ____ data. They have only a few, stated alternative responses and no opportunity to expand on answers.
(A) Qualitative
(B) Descriptive
(C) Subjective
(D) Quantitative

687. The data shown in the data table is quantitative.
(A) True
(B) False
688. What is a key characteristic of quantitative data?
(A) It is based on thoughts, feelings, and opinions.
(B) It is subjective and open-ended.
(C) It is objective and represented numerically.
(D) It is gathered through informal interviews.
689. Can correlational studies test a causal relationship?
(A) Yes
(B) No
690. The speed of the car was 45 mph.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
691. You want to understand the impact of a new social media marketing campaign on website traffic.
(A) Quantitative
(B) Qualitative
692. Researchers choosing a quantitative research approach collect which type of data to test hypotheses?
(A) Drawings and journaling
(B) Anecdotal data
(C) Numerical data
(D) None of above
693. This time, I have learned that quantitative research design ____
(A) Focuses on numerical data and statistical analysis.
(B) Is based solely on personal opinions and feelings.
(C) Avoids using any form of measurement or data collection.
(D) Relies only on qualitative interviews and observations.
694. It reduces behavior to a single number, failing to find out why a participant has behaved a particular way.
(A) Strength of Quantitative Data
(B) Strength of Qualitative Data
(C) Weakness of Quantitative Data
(D) Weakness of Qualitative Data
695. ____ research is based on the measurement of quantity or amount. It is applicable to phenomena that can be expressed in terms of quantity
(A) Predictive research
(B) Analytical research
(C) Quantitative research
(D) Qualitative research
(E) Conceptual research
696. The extent to which study findings are valid for others not in the study
(A) Generalizability
(B) Transferability (qualitative research)
(C) Thick description
(D) None of above
697. Factual; not influenced by opinions
(A) Bias
(B) Subjective
(C) Summarize
(D) Objective
698. Which of the following studies most likely uses quantitative methods?
(A) Comparing test results across groups to understand the effects of a particular instructional approach.
(B) Understanding historical perspective for an educational topic.
(C) Understanding the shared beliefs and practices of teachers in a school.
(D) Developing a theory grounded in the beliefs of the group being studied.

699. Random selection and random assignment in a quantitative study are the same.
(A) True
(B) False
700. The worm grew by 2 centimetres.
(A) Qualitative
(B) Quantitative
701. Results in a Quantitative Study is mainly expressed in:
(A) Words
(B) Numbers
702. To measure trends and performance
(A) Quantitative Research
(B) Qualitative Research
703. Steve used a ruler to measure the length of a cube. He found the cube to be 3 cm. This is an example of an observation.
(A) Quantitative
(B) Qualitative
(C) Neither qualitative nor quantitative
(D) None of above
704. The temperature outside during a hurricane
(A) Qualitative
(B) Quantitative
705. To research participant rates of women in the Australian workforce, which is the best method?
(A) Interview
(B) Personal reflection
(C) Statistical Analysis
(D) Participant Observation
706. The temperature outside is 45 degrees.
(A) Qualitative
(B) Quantitative
707. Determine whether the data related to the topic below is qualitative or quantitative: Altitude of an airplane
(A) Qualitative
(B) Quantitative
708. Which of the following best defines quantitative data?
(A) Data that can be measured or counted
(B) Data that describes qualities or characteristics
(C) Data that is collected through surveys
(D) Data that is collected through experiments
709. "The potato weighs 174.95g." is an example of a(n)
(A) Quantitative Observation
(B) Qualitative Observation
710. Dolphins eat the equivalent of 4% of their body mass each day.
(A) Quantitative observation
(B) Qualitative observation
711. A student who has a strong background in statistics, and who doesn't want to work as closely with patients, would be an ideal candidate to become a ____
(A) Psychosocial
(B) Psych clinical
(C) Psychometric
(D) None of above
712. Why are reports on quantitative studies more difficult to comprehend than reports on qualitative studies?
(A) Qualitative reports are much shorter
(B) Qualitative reports do not use research jargon
(C) Qualitative research focuses on more concrete phenomena
(D) Quantitative reports typically present statistical information that may be intimidating
713. What type of data are measures of values or counts and are expressed as numbers?
(A) Quantitative
(B) Qualitative

- (C) Categorical
(D) Numeric
714. Quantitative researcher's preoccupation with generalization is an attempt to:
(A) Develop the law like findings of the natural sciences
(B) Boost their chances of publication
(C) Enhance the internal validity of the research
(D) Demonstrate the complex techniques of statistical analysis
715. The patient had a temperature 39 degrees Celsius.
(A) Qualitative data
(B) Quantitative data
716. Various fields of study like psychology, economics, and sociology can also make use of quantitative research.
(A) TRUE
(B) FALSE
717. Objectivity is critical
(A) Qualitative
(B) Quantitative
718. Research measured by numbers
(A) Quantitative Research
(B) Qualitative Research
(C) Descriptive Research
(D) Experimental Research
719. What must occur in Quantitative Research to strengthen external validity?
(A) Random Sampling
(B) Biased Sampling
(C) Internal Sampling
(D) None of above
720. Which of the following is an example of a quantitative observation about this photo?
(A) There are 16 people in the classroom
(B) The teacher is taller than the students
(C) The room number is 1B
(D) They are in art class
721. What research uses statistical data as the main source of knowledge?
(A) Pure Research.
(B) Case Study.
(C) Qualitative Research.
(D) Quantitative Research.
722. Takes a nomothetic approach
(A) Quantitative Research
(B) Qualitative Research
723. It puts emphasis on proof, rather than discovery
(A) Quantitative Research
(B) Qualitative Research
(C) Quasi-Experimental
(D) Quali-Quanti
724. When scientists collect data that is measurable with numbers, we call it ____
(A) Qualitative
(B) Quantitative
(C) Hypothetical
(D) Graphable
725. Which of the following is a pro of quantitative data?
(A) Easier to gather
(B) Slower to gather
(C) Difficult to analyze
(D) Harder to make decisions from
726. Which field uses quantitative research to analyze market trends?
(A) Art
(B) Business
(C) Literature
(D) History
727. To validate the already constructed theory
(A) Qualitative Research
(B) Quantitative Research

728. Ex-study to describe the intensity of the symptoms during a heart attack
(A) Quantitative
(B) Qualitative
729. In the methods section of a quantitative research paper, what should be described in detail?
(A) Personal experiences
(B) The researcher's opinions
(C) The data collection and analysis procedures
(D) Fictional data
730. Amount of time a personal computer is used per week.
(A) Qualitative
(B) Quantitative.
731. What type of data is numerical?
(A) Quantitative
(B) Qualitative
(C) Primary
(D) Secondary
732. What is a quantitative observation?
(A) A quantitative observation is a description using colors and shapes.
(B) A quantitative observation is a guess about a situation.
(C) A qualitative observation is based on feelings and opinions.
(D) A quantitative observation is a measurement expressed in numbers.
733. Which trait would be considered Quantitative?
(A) Coat Color
(B) Coat Texture
(C) White Face
(D) How many pounds of milk a dairy cow produces
734. What type of data is numerical and measurable?
(A) Qualitative
(B) Quantitative
(C) Primary
(D) Secondary
735. When data is arranged based on numerical characteristics, it is:
(A) Geographical classification
(B) Chronological classification
(C) Quantitative classification
(D) Qualitative classification
736. Meta-analysis is a technique that synthesizes a large amount of ____ research.
(A) Quantitative
(B) Qualitative
(C) Narrative
(D) Annotated
737. The tree is 6 meters tall
(A) Quantitative data
(B) Qualitative data
738. Which data type is most suitable for statistical analysis based on numerical values?
(A) Qualitative descriptive narratives
(B) Quantitative numeric measurements
(C) Ordinal ranked preferences
(D) Nominal category assignments
739. Which is NOT a characteristics of Quantitative Research?
(A) Costly
(B) Objective
(C) Replicated
(D) Numerical Data
740. The plant has grown 4cm everyday
(A) Qualitative
(B) Quantitative
(C) Both
(D) None of above

741. A quantitative research approach is most appropriate for which study.
- (A) A study measuring the effects of sleep deprivation on wound healing
 - (B) A study examining the bereavement process in spouses of clients with terminal cancer
 - (C) A study exploring factors influencing weight control behavior
 - (D) A study examining a client's feelings before and after a bone marrow aspiration
742. Sui had two sandwiches for lunch.
- (A) Quantitative observation
 - (B) Qualitative observation
 - (C) An observation
 - (D) None of the answers
743. Quantitative research is most likely to use which of the following methods?
- (A) Surveys with closed-ended questions
 - (B) Case studies
 - (C) Interviews
 - (D) Focus groups
744. Which characteristic of quantitative research allows it to be repeated by other researchers?
- (A) Reliability
 - (B) Flexibility
 - (C) Subjectivity
 - (D) Creativity
745. Determine whether the data is qualitative or quantitative: Wait times at the Department of Motor Vehicles
- (A) Qualitative
 - (B) Quantitative
746. Classify each research method as belonging to either the quantitative or qualitative research. Experimental
- (A) Qualitative
 - (B) Quantitative
747. Quantitative = data that can be expressed in ____ (quantified).
- (A) Numbers
 - (B) Colors
 - (C) Letters
 - (D) Shapes
748. Which of the following is an example of quantitative data?
- (A) "The students felt more confident after completing the test."
 - (B) "The average score on the test was 85%."
 - (C) "The teacher said the students showed improvement."
 - (D) "Many students said they liked the test format."
749. Numbers representing counts or measurements
- (A) Qualitative Data
 - (B) Quantitative Data
 - (C) A Statistic
 - (D) Population parameter
750. Which of the following is used only in correlation studies?
- (A) Double blind
 - (B) Placebo
 - (C) Random assignment
 - (D) Scatterplot
751. The investigator uses a structured or semi structured interview consisting of mostly closed-ended questions in
- (A) Qualitative survey interviews
 - (B) Quantitative survey interviews
752. What words would be most appropriate to see if a student was describing the QUANTITATIVE properties of a classmate?
- (A) He is nice
 - (B) He is tall
 - (C) He is 5 foot 11
 - (D) He is quiet

753. Quantitative research is a burden to the students as well as to the society.
(A) True
(B) False
754. This research study delves into a phenomenon through quantitative data collection and using mathematical, statistical and computer-aided tools to measure them.
(A) Qualitative research
(B) Quantitative research
(C) Experimental research
(D) Non experimental research
755. Granny needed 4 newtons of force to make it up the ramp.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
756. What is the best method for a geologist to find a scientific explanation for varying levels of damage in a city after an earthquake?
(A) Review local newspaper reports
(B) Conduct a survey of residents in each area
(C) Create a computer model that takes into account different variables
(D) Analyze the strength of previous earthquakes that have struck the same area
757. Mark the word that does not apply to Quantitative Research
(A) Instrument-based questions
(B) Inductive
(C) Inferential
(D) Manipulation
(E) Generalizations
758. The replication of a quantitative study is important for determining its generalizability.
(A) True
(B) False
759. It explains phenomena by collecting numerical data analyzed using appropriate statistical treatment.
(A) Quantitative Research
(B) Qualitative Research
(C) Practical Research
(D) None of above
760. Which type of data is this? Temperature of a cup of coffee
(A) Quantitative
(B) Categorical
761. Quantitative research is an:
(A) Existential, mechanical, and objective data expressed usually by words.
(B) Empirical, measurable and observable data expressed numerically
762. What is the overarching aim of a quantitative research study?
(A) To classify features
(B) To count features
(C) To explain what is observed
(D) To construct statistical models
763. Uses statistical data to explain a phenomenon
(A) QUANTITATIVE RESEARCH
(B) QUALITATIVE RESEARCH
764. Which of the following is not a quantitative research design?
(A) Descriptive research design
(B) Correlational research design
(C) Experimental research design
(D) Case Studies
765. The temperature outside today is 57 degrees is an example of what type of observation
(A) Qualitative
(B) Quantitative
766. In quantitative research, what is the primary role of a theory?

- (A) To provide a subjective interpretation of the phenomenon
(B) To generate hypotheses through inductive reasoning
(C) To offer a proposed explanation for the relationship between variables
(D) To guide the selection of qualitative research methods
- 767.** A principal emphasis of quantitative research problems is best expressed by ____
(A) The desire to explore an inner world
(B) The need to explain or predict
(C) The interest in understanding a particular group
(D) The interest in describing how individuals experience a phenomenon
- 768.** How is the Quantitative research method?
(A) Measurable numbers and variables
(B) Knowing what others think
(C) To play
(D) None of above
- 769.** All of the following questions would be found in a quantitative survey EXCEPT.
(A) Rating scale
(B) Likert scale
(C) Why or how questions
(D) Multiple choice questions
- 770.** Which research approach is more suitable whereby the researcher wants to survey / interview 1 000 respondents?
(A) Qualitative approach
(B) Quantitative approach
(C) Mixed Method
(D) None of above
- 771.** In quantitative research, what is the term for a measure that reflects the extent to which two variables change together?
(A) Correlation
(B) Causation
(C) Regression
(D) Standard deviation
- 772.** Price of cell phones at a store.
(A) Qualitative
(B) Quantitative
- 773.** Which of the following is an example of a quantitative observation?
(A) The sky is blue
(B) The liquid is hot
(C) The mass of the sample is 5 grams
(D) The flower smells sweet
- 774.** The tree is 30 feet tall.
(A) Qualitative
(B) Quantitative
- 775.** A useful way of presenting Quantitative data is in the form of
(A) Written account
(B) Statistics
(C) Essays
(D) Lab report
- 776.** A type of research that is numerical, non-descriptive, applies statistics, mathematics and uses numbers
(A) Mixed-Method.
(B) Qualitative Research.
(C) Quantitative Research.
(D) Descriptive Research.
- 777.** Statistical report with correlations, comparison of means, and statistical significance of findings
(A) Qualitative
(B) Quantitative
- 778.** You are testing the effect of fertilizer on plant vertical growth. What would be an appropriate quantitative measure of this effect?
(A) Description of plants after the fertilizer is added
(B) Count of the number of leaves on each plant
(C) Description of the color leaves
(D) The height of the plant in cm.

779. Quantitative research requires non-numerical data.
(A) True
(B) False
780. This type of quantitative research studies the relationship and extent of relationship between and among variables. The causal reason underlying them may not be investigated
(A) Evaluation
(B) Experimental
(C) Descriptive
(D) Correlational
781. Which of the following is true about literature reviews in quantitative studies?
(A) They are not required
(B) They focus on numerical data only
(C) They provide context and identify research gaps for statistical analyses
(D) They should avoid referencing prior research
782. An observation that deals with numbers or amounts.
(A) Observing
(B) Quantitative observation
(C) Scientific investigation
(D) None of above
783. Decide whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of quantitative research. Scientific realism, search for truth, justification by empirical confirmation of hypotheses, universal scientific standards
(A) Ontology
(B) Epistemology
(C) View of thought and behavior
(D) Research focus
784. The gummy worm increased by 2 inches.
(A) Qualitative
(B) Quantitative
785. "Effects of Playing Mobile Legends to Students' Academic Performance"
(A) QUALITATIVE
(B) QUANTITATIVE
786. This type of observation uses data and numbers. Examples include: measuring, counting, continuous collection of numerical data.
(A) Quantitative
(B) Qualitative
787. When data is classified on the basis of measurable characteristics
(A) Qualitative classification
(B) Quantitative classification
(C) Spatial classification
(D) Chronological classification
788. It represents research findings referring to the number or frequency of something in numerical forms (i.e., using percentages, fractions, numbers). What type of research is this?
(A) Quantitative
(B) Qualitative
(C) Both A and B
(D) Research
789. Which term, from the list below, would be the most suitable option for a study that aims to discover the relationship between teachers' qualifications and their level of productivity?
(A) Qualitative research design
(B) Quantitative research design
(C) In-depth interviews
(D) Phenomenological
790. Effects of a new teaching technology on student engagement in college classrooms
(A) Qualitative Research
(B) Quantitative Research
791. The building has twenty-five stories.
(A) QUALITATIVE OBSERVATION
(B) QUANTITATIVE OBSERVATION

792. The concepts are assigned numerical value.
(A) QUANTITATIVE RESEARCH
(B) QUALITATIVE RESEARCH
(C) PURE/BASIC RESEARCH
(D) APPLIED RESEARCH
793. There is 100.0 mL of the solution.
(A) Quantitative observation
(B) Qualitative observation
(C) An observation
(D) None of the answers
794. Quantitative data refers to information that is:
(A) Descriptive.
(B) Numerical.
(C) Opinion-based.
(D) In the form of words.
795. There are two approaches to research: Quantitative and Qualitative methods. The quantitative approach is ____
(A) A way of counting up stats and charts ____
(B) Emphasize objective measurements and the statistical, mathematical, or numerical analysis of data collected through polls, questionnaires, and surveys, or by manipulating pre-existing statistical data using computational techniques.
796. What do quantitative research methods do?
(A) Collects data through conversational methods
(B) Conduct interviews
(C) Do nothing
(D) Deal with numbers and measurable forms
797. Work in more controlled settings
(A) Qualitative
(B) Quantitative
798. Qualitative or quantitative? The slimes's diameter increased by 3 cm.
(A) Qualitative
(B) Quantitative
799. Quantitative research in food science typically employs which tools?
(A) Participant narratives and meanings
(B) Statistical analyses and measurements
(C) Open-ended focus group dialogues
(D) Thematic coding of interviews
800. Naira is conducting a study on the efficiency of a new public transportation system. The ____ objectives aim to optimize certain measures of performance of the system of study,
(A) Quantitative
(B) Qualitative
801. What category would the following statement fall under? The speed of the car was 45 mph.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
802. Numerical data are true for the ____ approach
(A) Naturalistic
(B) Scientific
(C) Triangulation/ Mixed Method
(D) None of above
803. What is a disadvantage of quantitative data?
(A) It is difficult to collect
(B) It can lack depth and context
(C) It is subjective and open to interpretation
(D) It is time-consuming to analyze
804. There are 10 puppies in the picture. This is an example of a(n):
(A) Quantitative observation.
(B) Qualitative observation.
(C) Inference.
(D) None of above

805. Numerical information describing how much, how little, how big, how tall, or how fast.
(A) Qualitative data
(B) Quantitative data
806. What type of observation is the temperature outside?
(A) QUALITATIVE
(B) QUANTITATIVE
807. Which of the following is the type of research method that requires the collection of numerical data and utilize the deductive approach of reasoning, which includes non-experimental and experimental designs?
(A) Qualitative Research Method
(B) Quantitative Research Method
(C) Statistic Research Method
(D) Narrative Research Method
808. Which research method only describes relationships between variables but cannot prove causation?
(A) Experiment
(B) Survey
(C) Correlation
(D) Case study
809. Is demographic information qualitative or quantitative research?
(A) Quantitative
(B) Qualitative
(C) Either
(D) None of above
810. Which of the following is NOT one of the strength of quantitative research?
(A) Real and unbiased
(B) Requires large number of respondents
(C) Analyzed in quick and easy way
(D) Replicable
811. Factors affecting primary school achievement in Botswana: a multilevel model for general student performance
(A) Qualitative
(B) Quantitative
812. What determines the choice of statistical test to be used in the analysis of the data of the quantitative research?
(A) The power of test.
(B) Kind of sampling used.
(C) Nature of population.
(D) All of these.
813. The population decreased by 15%.
(A) Qualitative
(B) Quantitative
814. Information collected using numbers
(A) Quantitative data
(B) Data
(C) Qualitative data
(D) Model
815. What would be a quantitative observation?
(A) There were 5 pumpkins.
(B) The pumpkins were orange.
(C) The pumpkins were shiny.
(D) The pumpkins smelled sweet.
816. Quantitative research can be classified into non-experimental and experimental. Which of the following does not fall under non-experimental research?
(A) Descriptive research
(B) Correlational research
(C) Causal-comparative research
(D) Laboratory experiments
817. The field of science makes use of quantitative research.
(A) TRUE
(B) FALSE
818. You want to know if people who have higher income are more likely to shop online. In this scenario, which type of quantitative research is the best to use?

- (A) Correlational
 - (B) Descriptive
 - (C) Experimental
 - (D) Quasi-experimental
- 819.** TRUE or FALSE In Quantitative Research, Data is non-numerical
- (A) TRUE
 - (B) FALSE
 - (C) NEITHER
 - (D) None of above
- 820.** What kind of research involves the systematic collection of numerical information and the analysis of that information using statistical procedure?
- (A) Quantitative research
 - (B) Exploratory research
 - (C) Qualitative research
 - (D) Evaluative research
- 821.** The plant has grown 4 cm since yesterday.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 822.** Measurable and observable data. NOT ideas, emotions, inner mental experiences
- (A) Structuralism
 - (B) Functionalism
 - (C) Behaviorism
 - (D) Gestalt
 - (E) Psychoanalytic
- 823.** "In the fall, 30% of leaves turn brown, 20% turn purple, and 50% of leaves turn red" is an example of a observation.
- (A) Quantitative
 - (B) Qualitative
 - (C) Neither quantitative nor qualitative
 - (D) None of above
- 824.** By using complex mathematical calculations and with the aid of computers, if-then scenarios may be formulated thus predicting future results. Quantitative research puts emphasis on proof, rather than discovery.
- (A) REPLICATION
 - (B) FUTURE OUTCOMES
 - (C) LARGE SAMPLE SIZES.
 - (D) OBJECTIVE
- 825.** Quantitative research is used to find out
- (A) How
 - (B) How many
 - (C) Why
 - (D) None of above
- 826.** Which statement best describes a weakness of quantitative data when analyzing research findings?
- (A) It is time-consuming due to large volumes
 - (B) It is easy to graph for clear conclusions
 - (C) It is detailed and explains underlying reasons
 - (D) It is not very detailed and lacks the 'why'
- 827.** Quantitative research questions typically come in three forms:causal, predictive, and —
- (A) Descriptive
 - (B) Objective
 - (C) Subjective
 - (D) None of above
- 828.** Deductive research relies more on:
- (A) Qualitative analysis
 - (B) Observational data
 - (C) Quantitative analysis
 - (D) Theoretical concepts
- 829.** Determine whether the data is qualitative or quantitative:Carrying capacities of flatbed trucks.
- (A) Qualitative
 - (B) Quantitative

- 830.** The cat weighs 5kg.
(A) Qualitative
(B) Quantitative
- 831.** Using a structured interview questionnaire is an information-collection technique of:
(A) Quantitative research
(B) Qualitative research
(C) Survey research
(D) Pilot study
(E) Cross-sectional description
- 832.** Research that answers questions of “how many” or “how much”
(A) Quantitative
(B) Qualitative
- 833.** Research questions in quantitative studies differ from qualitative studies in their focus on ____ being investigated.
(A) Variables.
(B) Phenomena.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 834.** An approach for generating knowledge based on determining how much of a given behavior, characteristic or phenomenon is present
(A) Qualitative
(B) Quantitative
(C) Mixed method
(D) None of above
- 835.** What are some common methods used to collect quantitative data?
(A) Ethnography, participant observation, field experiments
(B) Literature reviews, content analysis, archival research
(C) Interviews, case studies, focus groups
(D) Surveys, experiments, observations, and secondary data analysis.
- 836.** Numeral data
(A) Indicates a quantity and is used to perform calculations
(B) Is classified by the name of the category it belongs to.
- 837.** An example of a quantitative question would be ____
(A) Why do LHS students like pizza instead of hot dogs?
(B) How many cups of iced coffees do LHS students consume?
(C) What is a churro?
(D) Do Skittles give you cavities?
- 838.** Identify the quantitative variable in the following scenario: The position of a soccer player and the number of goals he scored during the season.
(A) The soccer player
(B) The season
(C) The position
(D) The number of goals scored
- 839.** Data that has to do with measurement, amount or numbers is
(A) Just data
(B) Qualitative data
(C) Quantitative data
(D) Hypothetical data
- 840.** Overly abstract theories are considered what in terms of quantitative research strengths and limitations?
(A) Strength
(B) Weakness
- 841.** Quantitative research requires much larger numbers of respondents than qualitative research.
(A) True
(B) False
- 842.** People being studied or cooperating in quantitative study
(A) Study (investigation)

- (B) Study subject or participant
(C) Informants
(D) Researchers or investigators
- 843.** A dropsonde is an instrument that is used to collect data about the atmosphere as it falls from an aircraft. Pressure, temperature, and wind speed would be examples of what kind of data?
(A) Qualitative.
(B) Quantitative.
- 844.** Time it Takes to Get to School
(A) Categorical
(B) Quantitative
- 845.** Identify quantitative data collection techniques
(A) Focus groups
(B) Questionnaires
(C) Observations
(D) Interviews
- 846.** Quantitative data
(A) Is data that can be described and shows the physical features of an object
(B) Is the data that can be shown numerically and measured out
(C) Is the data that is only associated with chemical changes
(D) None of above
- 847.** It is the process of collecting and analyzing numerical data.
(A) Case Study.
(B) Descriptive Research.
(C) Qualitative Research.
(D) Quantitative Research.
- 848.** Statistical interpretation
(A) Quantitative Methods
(B) Mixed Methods
(C) Qualitative Methods
(D) None of above
- 849.** Experimental group
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
(C) BOTH
(D) None of above
- 850.** Quantitative Research allows you to:
(A) Test hypothesis
(B) Formulate hypothesis
- 851.** There are 20 kids on the baseball team.
(A) Quantitative Observation
(B) Qualitative Observation
- 852.** The flower is 8 cm tall.
(A) Qualitative data
(B) Quantitative data
- 853.** What kind of data are always either measurable or countable?
(A) Qualitative Data
(B) Quantitative Data
(C) Correlational Data
(D) Causal Data
- 854.** If a researcher records the number of hours students study, what type of data is this?
(A) Qualitative data
(B) Categorical data
(C) Secondary data
(D) Quantitative data
- 855.** The veins in the leaf are 3mm wide.
(A) Qualitative
(B) Quantitative
- 856.** People can improve themselves through quantitative research.
(A) True
(B) False
- 857.** The reaction occurred at 2:51pm.
(A) Qualitative Data
(B) Quantitative Data

- 858.** Scores can be compared. Results can be compared if the study is replicated.
(A) Strength of Quantitative Data
(B) Strength of Qualitative Data
(C) Weakness of Quantitative Data
(D) Weakness of Qualitative Data
- 859.** TRUE OR FALSE Quantitative Research Designs are either descriptive (measured once) or experimental (measured before and after treatment).
(A) TRUE
(B) FALSE
- 860.** What does quantitative research attempt to test through the collection of numerical data?
(A) Values
(B) Theories
(C) Assumptions
(D) Hypotheses
- 861.** What is the main focus of quantitative research questions?
(A) When and where
(B) How much and how often
(C) What and how
(D) Who and why
- 862.** What is the purpose of background research in a quantitative research study?
(A) To determine the sample size for the study.
(B) To gather existing knowledge and information about the topic of study.
(C) To analyze the data collected in the study.
(D) To collect primary data for the study.
- 863.** Which kind of research is the collection and analysis of numerical data in order to explain, predict and or control a phenomenon?
(A) Quantitative
(B) Qualitative
(C) Narrative
(D) Ethnographic
- 864.** There are 13 boys and 14 girls in fifth period.
(A) Qualitative Data
(B) Quantitative Data
- 865.** All of these are type of Quantitative Research except:
(A) Experimental
(B) Correlational study
(C) Descriptive study
(D) Phenomenological study
- 866.** Which statement best describes a quantitative observation?
(A) It involves numerical measurements
(B) It describes the quality of an object
(C) It is based on personal opinions
(D) It cannot be measured
- 867.** Data that contains information regarding quantities, that can be measured and interpreted with numbers.
(A) Quantitative Data
(B) Qualitative Data
(C) Primary Research
(D) Secondary Research
- 868.** Quantitative data is descriptive, relating to words and language.
(A) True
(B) False
(C) All the above
(D) None of the above
- 869.** Quasi-experiments are generally
(A) Quantitative
(B) Qualitative
- 870.** A ___ aims to classify features, count them and create statistical models to test hypothesis.
(A) Qualitative Method
(B) Quantitative Method
(C) Interviews
(D) Fieldwork Studies

- 871.** The bug was 5cm long.
(A) Qualitative
(B) Quantitative
- 872.** In quantitative research, which of the following is the most commonly used data collection method?
(A) Experiments
(B) Interviews
(C) Surveys
(D) Observations
- 873.** What is collected in quantitative research?
(A) Opinions and stories
(B) Numerical information
(C) Historical facts
(D) Personal interviews
- 874.** Five students had blue backpacks, ten students had red backpacks, and three students had green backpacks.
(A) Qualitative
(B) Quantitative
- 875.** Quantitative is a research that based on ____
(A) Measurements
(B) Words
(C) Opinions
(D) Expressions
- 876.** Refers to evaluation of alternatives using any technique in a group classified as rational and analytical.
(A) Quantitative evaluation
(B) Qualitative evaluation
(C) Relative evaluation
(D) Subjective evaluation
- 877.** It is defined as a systematic investigation of phenomena by gathering quantifiable data and performing statistical, mathematical, or computational techniques.
(A) Qualitative research
(B) Quantitative research
(C) Case study
(D) Case history
- 878.** Discuss the role of graphs and charts in data analysis in quantitative research.
(A) Graphs and charts do not provide any useful information
(B) Graphs and charts make data analysis more confusing
(C) Graphs and charts are irrelevant in data analysis
(D) Graphs and charts visually represent quantitative data, making it easier to identify patterns, trends, and relationships within the data.
- 879.** Identify whether the following are strengths or limitations of quantitative research.
(A) Strength
(B) Weakness
- 880.** Quantitative research is characterized by
(A) The collection of non-numerical data
(B) The use of statistical methods to analyze data
(C) The exploration of subjective experiences
(D) The emphasis on small sample sizes.
- 881.** Mostly, the answers being acquired in a quantitative research, are come in?
(A) Descriptive type
(B) Words
(C) Numerals
(D) Both a and b
- 882.** A thermometer and a stop watch are tools use for what type of research?
(A) Quantitative
(B) Qualitative
(C) All the above
(D) None of the above
- 883.** Conveys facts and details through numbers, statistics, things that are measurable
(A) Oral information
(B) Visual elements
(C) Quantitative information
(D) Sound elements

- 884.** In quantitative research, researchers know in advance what they are looking for.
(A) True
(B) False
- 885.** Classify the observation as qualitative or quantitative: 75 days
(A) Qualitative
(B) Quantitative
- 886.** Quantitative data deals with:
(A) Numbers and measurements
(B) Opinions
(C) Attitudes
(D) Descriptions
- 887.** Correlational research is best used when:
(A) You want to prove causation
(B) You need to collect qualitative data
(C) You're analyzing relationships between variables
(D) You need exploratory findings
- 888.** Which statement best describes why online surveys are widely used in quantitative research today?
(A) They provide slow data collection with deep interviews
(B) They enable quick and efficient large-scale data collection
(C) They focus exclusively on qualitative focus groups
(D) They rely on paper forms mailed to participants
- 889.** The dolphins eat the equivalent of 4 to 5% of their body weight each day.
(A) This is quantitative data
(B) This is qualitative data
- 890.** Evidence that comes from direct experience, scientifically gathered data, or experimentation
(A) Ethnography
(B) Field research
(C) Empirical evidence
(D) None of above
- 891.** What are observations that are measured or counted called?
(A) Qualitative data
(B) Quantitative data
- 892.** You would like to know the effectiveness of the COVID-19 response in different localities by analyzing approval ratings.
(A) Qualitative
(B) Quantitative
- 893.** Which of the following qualifies a good quantitative research question?
(A) How would the parents respond to the current educational challenge?
(B) Is blended learning more effective than face to face learning?
(C) Does a social medium lead to more social awareness?
(D) Are the teachers well-motivated?
- 894.** Represent research collected in numerical form that can be counted
(A) Primary data
(B) Quantitative data
(C) Qualitative data
(D) None of above
- 895.** What is the primary purpose of quantitative research output?
(A) Flexible structure in the final written report
(B) Testing theories deductively
(C) Building protections against bias
(D) Combination provides a more complete understanding
- 896.** The first plant had 3 more leaves than the second plant.
(A) Qualitative
(B) Quantitative

- 897.** Number of persons in the household who use personal desktop computer.
(A) Qualitative
(B) Quantitative
- 898.** What is an example of quantitative evidence?
(A) The metal bar is hot
(B) The metal bar is 78 degrees Fahrenheit
(C) The metal bar is shiny
(D) The metal bar is rough
- 899.** Reading on a graduated cylinder
(A) Qualitative
(B) Quantitative
- 900.** One of the preoccupations of quantitative researchers is with generalization, which is a sign of:
(A) External validity
(B) Internal reliability
(C) External reliability
(D) Internal validity
- 901.** Which of the following cannot be applied to quantitative market research?
(A) Deals with questions such as how much, how many and how often
(B) Is based on numerical data and information
(C) Is based on only using primary research techniques
(D) Uses hard data and facts to aid statistical analyses
- 902.** Which type of Research uses statistical analysis in numbers or numerical comparisons.
(A) Qualitative Research
(B) Quantitative Research
(C) Descriptive Research
(D) None of above
- 903.** T/F: A quantitative observation always includes a number and a unit.
(A) True
(B) False
- 904.** Which choice represents the BEST example of quantitative data?
(A) A patient records their headache as 7 out of 10 on the pain scale
(B) A doctor assembles a list of the likely diagnoses for a patient
(C) A patient experiences a symptom and reports it to a doctor
(D) A doctor determines that a patient's headache is throbbing
- 905.** A judge records the scores of gymnasts participating in the competition. What type of data is this?
(A) Quantitative
(B) Qualitative
- 906.** Observations that are made with instruments such as rulers, balances, graduated cylinders, thermometers, timers, etc. and are measurable.
(A) Manipulated
(B) Quantitative
(C) Qualitative
(D) Operational
- 907.** The importance of instrument validity and reliability in quantitative research is to:
(A) Ensure accurate and consistent measurement of variables
(B) Increase the sample size of the study
(C) Reduce the time required for data collection
(D) Guarantee the use of qualitative methods
- 908.** It quantifies the data and generalizes the result from a sample or target population.
(A) Quasi-Experimental
(B) Quantitative Research
(C) Qualitative Research
(D) Quali-Quanti Research

- 909.** Kaysen, Eason, and Juan are working on a school project. They are trying to figure out the type of data or observations that can be represented as a number or quantity in their science experiment. Can you help them out?
- (A) Data table
 - (B) Conclusion
 - (C) Quantitative
 - (D) Qualitative
- 910.** The dresser is 1 meter wide
- (A) Quantitative data
 - (B) Qualitative data
- 911.** What is the primary reason that researchers use theories in quantitative research?
- (A) To explore a phenomenon inductively
 - (B) To generate new research questions
 - (C) To test hypotheses and explain relationships between variables
 - (D) To guide the selection of qualitative research methods
- 912.** If we collect the ages of your classmates will it be an example of qualitative or quantitative data?
- (A) Primary
 - (B) Secondary
 - (C) Qualitative
 - (D) Quantitative
- 913.** Using questionnaires with closed questions will most likely generate
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Rich data
 - (D) Mixed data
- 914.** A characteristic of quantitative research when the data gathering and analysis of results are done accurately, and are unaffected by the researcher's intuition and personal guesses.
- (A) Generalized data
 - (B) Fast data collection
 - (C) Visual representation
 - (D) Objective
- Explanation:** Quantitative research is objective, as it relies on accurate data gathering and analysis, unaffected by personal intuition or guesses.
- 915.** Which of the following is an example of quantitative data classification?
- (A) The color of a chemical solution
 - (B) The pH level of a solution
 - (C) The texture of a rock
 - (D) The smell of a gas
- 916.** A ___ observation is an information that you can learn about an object using numbers or measurements. Usually exact.
- (A) Qualitative
 - (B) Quantitative
- 917.** It is used to examine the relationship between variables by using numbers and statistics to explain and analyze their findings.
- (A) Correlational Research Design
 - (B) Qualitative Research Design
 - (C) Quantitative Research Design
 - (D) None of above
- 918.** Temperature
- (A) Qualitative
 - (B) Quantitative
- 919.** Pre-determined methods
- (A) Quantitative Methods
 - (B) Mixed Methods
 - (C) Qualitative Methods
 - (D) None of above
- 920.** In which phase does a quantitative researcher collect and code the data?
- (A) The empirical phase
 - (B) The conceptual phase
 - (C) The design phase
 - (D) The analytic phase

- 921.** Decide if the following literature review statements belong to quantitative or qualitative research. Literature review can point out methodological problems specific to the research question(s) being studied, such as special groups/pieces of equipment needed to conduct the research.
- (A) Quantitative
 - (B) Qualitative
- 922.** What type of data is commonly used in numerical analysis and statistical calculations?
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Categorical data
 - (D) Ordinal data
- 923.** Qualitative or Quantitative: The book weighs 1.2 kilograms.
- (A) Qualitative Observation
 - (B) Quantitative Observation
- 924.** Examples of instruments In quantitative data collection are:
- (A) Survey questionnaires, standardized tests, and checklists.
 - (B) Semi-structured, unstructured techniques and no test based.
 - (C) Not use test, data not usually measurable.
 - (D) None of above
- 925.** Quantitative research involves the collection of ___ data.
- (A) Quantitative
 - (B) Qualitative
 - (C) Subjective
 - (D) Descriptive
- 926.** This research method explores whether two variables are related to each other.
- (A) Survey research
 - (B) Correlational research
 - (C) Grounded theory research
 - (D) Narrative research
- 927.** An observation that has to do with numbers and labels like 3.5 cm.
- (A) Observation
 - (B) Touch, Taste, Sight, Hearing, Smell
 - (C) Qualitative Observation
 - (D) Quantitative Observation
- 928.** A social worker wishes to precisely predict elements of the social world and how they interact. Which method is MOST useful?
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Constructivist research
 - (D) None of above
- 929.** The following research question was addressed in what type of study? "Do the babies of women who do not get prenatal care have lower birth weights than other babies"
- (A) Qualitative
 - (B) Quantitative
- 930.** What type of data below is Quantitative data?
- (A) I feel annoyed
 - (B) 2 out of 5 students had red pens
 - (C) Students used red pens
 - (D) Red pens are used by students
- 931.** A checklist used in quantitative research is primarily designed to:
- (A) Record subjective observations
 - (B) Gather standardized quantitative data
 - (C) Analyze narrative accounts
 - (D) Ensure anonymity of participants
- 932.** Which statement best defines quantitative research in business studies?
- (A) Describes unique cases without generalization
 - (B) Explores meanings through open-ended interviews
 - (C) Builds theory from prolonged field observation
 - (D) Collects numerical data to test relationships

- 933.** Correlational research is useful for identifying relationships but lacks the ability to — them fully.
(A) Explain
(B) Measure
(C) Ignore
(D) Prove
- 934.** Uses mostly statistics and aggregated data.
(A) Qualitative
(B) Quantitative
(C) Mixed
(D) None of the above.
- 935.** Qualitative or Quantitative: There is 300 mL of liquid in this beaker.
(A) Qualitative Observation
(B) Quantitative Observation
- 936.** The effect of gender on mathematics attitudes among elementary school students: a multiple indicators, multiple causes (MIMIC) modelling
(A) Qualitative
(B) Quantitative
- 937.** Separate the Facts from Myths regarding the purpose and assumptions of quantitative research. Objectivity is of the highest priority for quantitative researchers.
(A) Fact
(B) Myth
- 938.** A quantitative study cannot be conducted in different settings or contexts.
(A) False
(B) True
(C) Maybe
(D) I don't know
- 939.** The cup had a mass of four hundred fifty-four grams.
(A) QUALITATIVE OBSERVATION
(B) QUANTITATIVE OBSERVATION
- 940.** A literature review summarizing trends statistically is:
(A) Case study
(B) Meta-analysis
(C) Qualitative coding
(D) Factor analysis
- 941.** There are 3 burritos.
(A) Quantitative
(B) Qualitative
(C) Inference
(D) Prediction
- 942.** Seeks to quantify the primary data that the researcher gathers for the purpose of solving a specific problem, and in general a statistical analysis is applied.
(A) Qualitative Research
(B) Quantitative Research
(C) Marketing Research
(D) Marketing Mix
- 943.** Price, weight, height and velocity are examples of
(A) Qualitative Data
(B) Quantitative Data
(C) Variable Data
(D) Ordinal Data
- 944.** A kind of quantitative research that assesses relationships between two or more phenomena
(A) Correlational Design
(B) Ex Post Facto (Causal-Comparative Research)
(C) Descriptive Research Design
(D) Single Subject Design
- 945.** The quantitative investigation includes the following except:
(A) Exploratory
(B) Descriptive
(C) Correlational
(D) Ethnography

946. Determine if the following Questions are Qualitative OR Quantitative
The mass of the beaker was 122g
(A) Qualitative
(B) Quantitative
947. We bought 3.4 pounds of fruit.
(A) Qualitative Observation
(B) Quantitative Observation
948. Numerical Data is measurable by the number of objects, length, height or weight.
(A) False
(B) True
949. Which of the following is not a goal of the introduction of a quantitative research report?
(A) Explain the purpose of the research
(B) Explain why the research is important
(C) Explain how the research relates to existing knowledge in the field
(D) Explain the procedure of the study
950. Data based on measurable characteristics of things such as weight, volume, distance, height, amount
(A) Testable question
(B) Observation
(C) Qualitative data
(D) Quantitative data
951. The following title is an example of quantitative research "The effect of mobile phone usage on student learning."
(A) TRUE
(B) FALSE
(C) PARTIALLY YES
(D) PARTIALLY NO
952. In qualitative and quantitative research, even though researchers might use similar approaches in data collection such as interview yet for quantitative research, they use more closed-ended approaches in which they identify set responses categories such as strongly agree and such.
(A) True
(B) False
953. What type of research answers questions that begin with 'how many' or 'how much'?
(A) Qualitative research
(B) Quantitative research
(C) Market intelligence
(D) Attitude research
954. Anika is conducting a research project where she collects survey responses and analyzes the results using statistical methods. Which feature characterizes the type of research Anika is doing?
(A) Use of naturalistic observation only
(B) Reliance on descriptive narratives
(C) Focus on numerical data analysis
(D) Preference for single-case designs
955. A researcher records the temperature of a liquid every minute. What type of data is being collected?
(A) Qualitative
(B) Quantitative
(C) Descriptive
(D) Subjective
956. This research uses numbers in stating generalizations about a given problem or inquiry in contrast to qualitative research.
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
(C) PURE/BASIC RESEARCH
(D) APPLIED RESEARCH
957. The purpose of quantitative research is
(A) To test hypothesis
(B) To look for cause and effect
(C) To make predictions
(D) All of the above
958. Income of a family is an example of
(A) Quantitative data
(B) Qualitative data

- (C) Saving
(D) None of above
- 959.** The number of people attending a school fete is an example of:
(A) Qualitative data
(B) Quantitative data
- 960.** You want to know how many users completed a task in under 5 minutes. What type of data is this?
(A) Descriptive
(B) Quantitative
(C) Subjective
(D) Qualitative
- 961.** Statistical analysis
(A) Quantitative Methods
(B) Mixed Methods
(C) Qualitative Methods
(D) None of above
- 962.** What type of data would a geographer use to study the impact of climate change on a region's agriculture?
(A) Qualitative data
(B) Quantitative data
(C) Anthropogenic data
(D) Systematic data
(E) Idiographic data
- 963.** What category would the following statement fall under? The mass of the chocolate cake is 250 g.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Not enough information
- 964.** These kind of observations are made using instruments such as rulers, balances and thermometers.
(A) Qualitative
(B) Quantitative
(C) Scientific
(D) None of above
- 965.** Which of the following is an example of Quantitative Research:Hard Sciences
(A) SOCIOLOGY
(B) BIOLOGY
(C) PSYCHOLOGY
(D) ECONOMICS
- 966.** What is quantitative data?
(A) Data collected the written / descriptive form
(B) A study of an individual or group over a long period of time
(C) A small scale study done prior to the actual study
(D) Data collected in the numeric form
- 967.** How is reliability achieved in quantitative research?
(A) Through subjective interpretation
(B) Through replicable procedures
(C) By ensuring data complexity
(D) Using a flexible research design
- 968.** Quantitative Research controls or limits Respondents answers by giving options.
(A) True
(B) False
- 969.** What is Quantitative Research?
(A) The process of collecting and analyzing numeric data.
(B) The process of measuring quantities and determining their weight.
- 970.** The desk is 26 cm tall
(A) Quantitative observation
(B) Qualitative observation
(C) Inference
(D) —

971. A kind of Quantitative Research that is systematic investigations of the nature of relationships, or association between and among variables without necessarily investigating into casual reasons underlying them.
- (A) Descriptive Research
 - (B) Correlational Research
 - (C) Evaluation Research
 - (D) Survey Research
972. The characteristics Quantitative Research do not include which of the following?
- (A) The measurement of variables
 - (B) Graphically portrayed information
 - (C) Descriptions, use of metaphors, comparisons
 - (D) None of the above
973. Quantitative research works best when:
- (A) You choose the right number of people
 - (B) You choose the right type of people
 - (C) You ask the right questions and analyze the data you get in the right way
 - (D) All the first three options are correct
- Explanation:** Quantitative research works best when you choose the right number and type of people, ask the right questions, and analyze the data effectively.
974. Research based on specific, measurable elements is using what type of data?
- (A) Qualitative
 - (B) Vague
 - (C) Unreliable
 - (D) Quantitative
975. What are quantitative researchers primarily interested in examining?
- (A) Perspectives
 - (B) Hypotheses
 - (C) Viewpoints
 - (D) Descriptions
976. The Quantitative Data Collection Methods are not often based on mathematical calculations
- (A) True
 - (B) False
977. The flower has 25 petals.
- (A) Qualitative data
 - (B) Quantitative data
978. A researcher conducted a correlational research study on the change in technology prices and homelessness rates in inner-city areas. The resulting data showed a correlation of 0.0. This is an example of what?
- (A) Perfect correlation
 - (B) No correlation
979. Easy to communicate results to others using tables, graphs and charts such as histograms, bar charts and box and whisker plots.
- (A) Quantitative
 - (B) Qualitative
980. You measure speed and collect the following data: 3 km/hr, 4 km/hr, 3.2 km/hr. What type of data in this?
- (A) Quantitative
 - (B) Qualitative
981. Which of the following is TRUE about quantitative purpose statements and research questions?
- (A) The researcher do not compare or relate groups.
 - (B) The researcher seeks a deep understanding of the views of one group or single individuals.
 - (C) The researcher tests theories and identifies multiple variables.
 - (D) The researcher seeks to gather information on a single concept.
982. In the ___ research is based on the measurement of quantity or amount.
- (A) Qualitative
 - (B) Descriptive
 - (C) Quantitative
 - (D) Numerical

- 983.** Is often seen as being more objective and reliable than the other type of data but this is not always the case
(A) Quantitative
(B) Qualitative
- 984.** Relate the scenario to the conduct of a quantitative research study.
(A) The scenario can be related by identifying measurable variables and collecting numerical data.
(B) The scenario can be related by focusing only on opinions and beliefs.
(C) The scenario can be related by avoiding any form of data collection.
(D) The scenario can be related by using only qualitative interviews.
- 985.** A primary goal of Quantitative Research is to test hypotheses, which is accomplished through the employment of which type of data?
(A) Narrative Data
(B) Empirical Data
(C) Individual
(D) None of above
- 986.** In order to understand whether two variables are related to each other a researcher would use what type of research method?
(A) Case study
(B) Survey
(C) Observation
(D) Correlation
- 987.** When you make an observation using numbers and/or measurements you are using a ____
(A) Prediction
(B) Measurement
(C) Quantitative observation
(D) Inference
- 988.** This approach surveys a large number of individuals and applies statistical techniques to recognize overall patterns in the relations of processes. Importantly, the use of surveys can be done across groups. Using survey methods across a large group of individuals enables generalization.
(A) Quantitative approach
(B) Qualitative approach
(C) Benchmarking
(D) None of above
- 989.** Correlation aims at ____
(A) To find out the difference between groups after treatment is given
(B) To find out the relationship between the two variables, whether it is positive or negative
(C) To find out the phenomena happen in large population about an object
(D) To find out the phenomena happen in small population about an object
- 990.** Tallying how many people use their cell phones at work for personal reasons.
(A) Quantitative
(B) Qualitative
- 991.** Which of the following is NOT a type of quantitative research mentioned in the text?
(A) Causal comparative research
(B) Qualitative research
(C) Correlational research
(D) Survey research
- 992.** What type of data did Peterson and Peterson (1959) use in their study?
(A) Qualitative data
(B) Quantitative data
(C) Mixed methods data
(D) Observational data
- 993.** Quantitative research data can be very consistent, precise and reliable
(A) True
(B) False
- 994.** An assertion that presents a claim based on numerical data or statistical analysis is known as a:

- (A) Quantitative assertion
(B) Qualitative assertion
(C) Unsupported assertion
(D) Speculative assertion
- 995.** Why is objectivity important in quantitative research?
(A) It eliminates the need for representative sampling
(B) It guarantees unbiased data collection and analysis
(C) It ensures results are based on personal intuition
(D) It makes the research more expensive
Explanation: Objectivity ensures that data collection and analysis in quantitative research are unbiased.
- 996.** Data in quantitative research are often presented in:
(A) Poems and essays
(B) Tables, charts, and graphs
(C) Personal journals
(D) Interviews only
- 997.** A shop owner records information about his customers. The average amount of money spent is ___ data
(A) Qualitative
(B) Quantitative
- 998.** "Findings of quantitative research should be applicable to people and setting other than those who participated in the study." What characteristic of research is being explained here?
(A) Builds on the works of others
(B) Systematic
(C) Empirically verifiable
(D) Generalizable
- 999.** Quantitative data is also known as
(A) Descriptive data
(B) Numerical data
(C) Qualitative data
(D) Categorical data
- 1000.** Data that can be counted or measured is called:
(A) Qualitative data
(B) Subjective data
(C) Numerical data
(D) Quantitative data
- 1001.** Which of the following shows quantitative data collection?
(A) Recording test scores of students
(B) Asking for opinions about a school rule
(C) Writing a reflection journal
(D) Conducting an oral history project
- 1002.** Quantitative research answer questions such as this:
(A) How many? or How much?
(B) Why? or How?
- 1003.** In the field of medicine, quantitative research is used to:
(A) Interpret poetry about illness
(B) Develop statistical tests for drug effectiveness
(C) Create fictional stories
(D) Observe patient emotions only
- 1004.** Quantitative research uses:
(A) Measurement and observation to represent communication as amounts, frequencies, degrees, values, or intensity
(B) Measurement and observation to represent the complexity of interaction
(C) Statistics to represent communication phenomena as amounts, frequencies, degrees, values, or intensity
(D) Statistics to determine data collection methods
- 1005.** Statistical methods such as surveys with large numbers of participants.
(A) Quantitative
(B) Qualitative
(C) Paradigms
(D) Hypothesis

- 1006.** Research Title: Enhancing Students' Performance Through PowerPoint. Which type of research should you use?
(A) Grounded theory
(B) Quantitative Research
(C) Mixed Research
(D) Qualitative Research
- 1007.** These are information which can be counted or expressed in numerical values.
(A) Quantitative Data
(B) Qualitative Data
(C) Primary Data
(D) Secondary Data
Explanation:Quantitative data refers to information that can be counted or expressed in numerical values.
- 1008.** Quantitative is ____?
(A) Data drawn from the five senses
(B) A classification of matter based on the interactions of its molecules
(C) Data based on numerical findings
(D) A particle made of atoms joined together
- 1009.** Purpose is to generalize about a larger population.
(A) Mixed
(B) Qualitative
(C) Quantitative
(D) None of the above.
- 1010.** A researcher measures the heights of 50 students in centimeter.
(A) Qualitative
(B) Quantitative
- 1011.** What characteristics refers to quantitative research?
(A) Collecting data based on words from a small member of individuals so that the participants' views are obtained
(B) Exploring a problem and developing a detailed understanding of a several phenomenon
(C) Describing a research problems through a description of trends or a need for an explanation of the relationship among variables
(D) Having a literature review play a minor role but justify the problem
- 1012.** We measured 12g of salt to place into the beaker.
(A) Qualitative
(B) Quantitative
- 1013.** A survey consisting of yes-or-no and multiple choice s questions is an example of ____ research methods.
(A) Qualitative
(B) Quantitative
- 1014.** Control and manipulation of research conditions by the researcher
(A) QUALITATIVE
(B) QUANTITATIVE
- 1015.** Quantitative research might be more suitable to be used if a researchers want to explore issues with research questions which trends or explanations need to be made
(A) True
(B) False
- 1016.** Type of data that contains numbers.
(A) Qualitative Data
(B) Quantitative Data
- 1017.** An observation that includes NUMBERS
(A) Qualitative
(B) Quantitative
(C) Inference
(D) Prediction
- 1018.** Focuses on testing theories and hypotheses
(A) QUANTITATIVE
(B) QUALITATIVE
- 1019.** Usually needs a sample of hundreds or even thousands of subjects
(A) Qualitative

- (B) Quantitative
(C) Mixed Method
(D) None of above
- 1020.** How is generalizability primarily concerned in quantitative research?
(A) Applying findings to broader contexts
(B) Ensuring data reliability
(C) Enhancing data analysis methods
(D) Focusing on specific participant experiences
- 1021.** Classify the observation as qualitative or quantitative: 84 beats per minute
(A) Qualitative
(B) Quantitative
- 1022.** This research approach aims to measure variables and describe frequencies, averages, and correlations.
(A) Quantitative Approach
(B) Mixed Method Approach
(C) Qualitative Approach
(D) Holistic Approach
- 1023.** Which research approach aims to analyze and interpret numerical data exclusively?
(A) Qualitative
(B) Quantitative
(C) Mixed Methods
(D) Action
- 1024.** You want to measure the return on investment of a trade show.
(A) Quantitative
(B) Qualitative
- 1025.** Is a type of research in which a researcher measures two variables, understands and assesses the statistical relationship between them with no influence from any extraneous variable.
(A) NONEXPERIMENTAL RESEARCH
(B) DESCRIPTIVE RESEARCH
(C) CORRELATIONAL RESEARCH
(D) CAUSAL-COMPARATIVE RESEARCH
- 1026.** Identify whether the following are strengths or limitations of quantitative research. Nomothetic Causation
(A) Strength
(B) Limitation
- 1027.** How does quantitative research achieve validity and reliability?
(A) By using standardized research instruments
(B) By conducting in-depth interviews
(C) By involving emotional experiences
(D) By using complex statistical methods
Explanation: Quantitative research achieves validity and reliability by using standardized research instruments to collect consistent and accurate data.
- 1028.** James and Freya are discussing different research paradigms. Which of the following is a type of quantitative paradigm?
(A) Feminist paradigm
(B) Scientific
(C) Critical Theory
(D) Qualitative paradigm
- 1029.** Which research method gathers numerical data?
(A) Quantitative Research
(B) Narrative Inquiry
(C) Case Study
(D) Action Research
(E) Qualitative Research
- 1030.** Decide if the following literature review statements belong to quantitative or qualitative research. Literature review can identify appropriate data-collection instruments so that there will not be a need to construct a new instrument.
(A) Quantitative
(B) Qualitative
- 1031.** The beaker was stirred for 32 seconds.
(A) Qualitative
(B) Quantitative

- 1032.** How does quantitative research typically analyze data?
- (A) Using quotes
 - (B) Using numbers and statistics
 - (C) Using observations
 - (D) Using themes
- 1033.** The Quantitative method can be repeated to verify findings enhancing its validity, free from false or immature conclusions.
- (A) TRUE
 - (B) FALSE
 - (C) PARTIALLY TRUE
 - (D) PARTIALLY FALSE
- 1034.** What is the best research approach for a problem that calls for understanding the best predictors of outcomes?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed methods
 - (D) None of these
- 1035.** This type of research is expressed in numbers and graphs. It is used to test or confirm theories and assumptions.
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Mixed Method Research
 - (D) None of above
- 1036.** Which statement below cannot be applied to quantitative market research?
- (A) Uses hard data and facts to aid statistical analyses.
 - (B) Is based on numerical data and information.
 - (C) Is based on only using primary research techniques.
 - (D) Deals with questions such as “how much”, “how many”, and “how often”.
- 1037.** What is the purpose of correlational research?
- (A) Describe trends in a large population of individuals
 - (B) Determine if and to what degree there is a relationship between two or more quantifiable variables
 - (C) Predict outcomes using certain variables as predictors
 - (D) Determine the cause of differences between groups of people
- 1038.** Key terms are: testing, measurement, objectivity, replicability
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 1039.** The following statements describes the characteristics of a quantitative research study EXCEPT
- (A) The purpose is to examine relationships among variables.
 - (B) The purpose is to describe new situation, events or concepts.
 - (C) The purpose is to describe life experiences.
 - (D) The purpose is to generate numerical information through an objective process.
- 1040.** Closed (multiple choice) questions
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 1041.** Observations that deal with a number or amount are called
- (A) Operational observations
 - (B) Quantitative observations
 - (C) Qualitative observations
 - (D) None of above
- 1042.** Quantitative research focuses mainly on:
- (A) Numerical data and statistical analysis
 - (B) Subjective experiences
 - (C) Observations without measurement
 - (D) Narrative reports
- 1043.** Quantitative approaches have near total dominance
- (A) True
 - (B) False

- 1044.** In an experiment to measure the growth of plants, which type of data would be most appropriate to collect?
- (A) The color of the plant leaves
 - (B) The height of the plants in centimeters
 - (C) The type of soil used
 - (D) The time of day the plants are watered
- 1045.** A significant disadvantage of the correlational approach is that it:
- (A) Does not provide evidence of cause and effect.
 - (B) Cannot be used to examine relationships between variables that exist naturally.
 - (C) Does not aid in the process of prediction.
 - (D) Does not provide information about how two variables are related.
- 1046.** Used to create conclusions that can be generalised to the target population
- (A) Quantitative
 - (B) Qualitative
- 1047.** Quantitative research focuses on measurable, numerical data.
- (A) TRUE
 - (B) FALSE
- 1048.** Sample size determination in quantitative research primarily depends on:
- (A) Preference of the lead researcher
 - (B) Amount of time for fieldwork
 - (C) Number of interviewers available
 - (D) Desired confidence level and margin of error
- 1049.** It is a research type under quantitative research.
- (A) Narrative
 - (B) Correlational
 - (C) Phenomenology
 - (D) None of above
- 1050.** Decide whether the statement is true or false: Durkheim used statistics in research.
- (A) True
 - (B) False
- 1051.** A ____ is best defined as a quantitative method for combining the results of all the published and even unpublished results on one question and drawing a conclusion based on the entire set of studies on the topic.
- (A) Case study
 - (B) Naturalistic observation
 - (C) Meta-analysis
 - (D) Systematic review
- 1052.** Which of the following is a quantitative data collection technique?
- (A) Interviewing participants
 - (B) Observing animal behaviour
 - (C) Measuring the height of plants
 - (D) Describing the texture of a surface
- 1053.** The leaf is 5mm wide.
- (A) Qualitative
 - (B) Quantitative
- 1054.** Which among statement below is considered as a weakness of Quantitative Research
- (A) Allows greater objectivity and accuracy of results
 - (B) Allows for a broader study, involving a greater number of objects and enhancing the generalization of the results
 - (C) Results provide less detail on behavior, attitudes, and motivation
 - (D) Personal bias can be avoided
- 1055.** In a scientific experiment, which of the following would be considered a quantitative observation?
- (A) The plant grew 5 cm in one week.
 - (B) The plant looks healthy and green.
 - (C) The plant has a pleasant smell.
 - (D) The plant is tall.

- 1056.** Weight
(A) Quantitative
(B) Qualitative
(D) When collecting opinions on a new policy
- 1057.** In which scenario would quantitative data be more appropriate than qualitative data?
(A) When exploring customer satisfaction
(B) When measuring the average income level
(C) When describing a person's emotions
- 1058.** Which type of research uses numerical data?
(A) Qualitative
(B) Quantitative
(C) Observational
(D) Case study

1.2.6 Qualitative Research

1. Aims to discuss and analyze underlying concepts and theories related to the study
(A) QUANTITATIVE RESEARCH
(B) QUALITATIVE RESEARCH
2. Which type of observation involves descriptions that cannot be measured?
(A) Quantitative
(B) Qualitative
(C) Numerical
(D) Statistical
3. Narrative research focuses on ____
(A) The description of people's experiences told about themselves and others.
(B) Anecdotes that make sense of mental states or emotions
(C) A particular phenomenon of process
(D) None of above
4. What does Qualitative Research center on?
(A) Numerical data
(B) Thoughts, feelings, and perceptions
(C) Statistical analysis
(D) Objective measurements
5. Qualitative research generates textual data.
(A) True
(B) False
6. Qualitative research methods are particularly useful when focusing on:
(A) Numerical data and statistics
(B) Generalizable psychological phenomena
(C) Subjective experiences, thoughts, and feelings
(D) Objective measurements of behavior
7. Anika, Mia, and Zoe are conducting a research project for their sociology class. They need to collect qualitative evaluation data. What methods could they use?
(A) Surveys, experiments, questionnaires
(B) Literature review, case studies, content analysis
(C) Statistical analysis, data mining, machine learning
(D) Interviews, focus groups, observations, and document analysis
8. The theoretical framework of "Grounded Theory" originates from ____
(A) Sociology
(B) Education
(C) Archeology
(D) Philosophy
9. "Leaves turn red in the fall" is an example of a observation
(A) Quantitative
(B) Qualitative
(C) Neither quantitative nor qualitative
(D) None of above

10. Nora, Ethan, and Abigail are conducting a research study on the impact of social media on teenagers. What kind of qualitative data might they collect during their study?
- (A) Interview transcripts from teenagers, field notes from observations, thematic analysis of social media posts
 - (B) Survey responses from teenagers, statistical analysis of social media usage, experimental data from social media platforms
11. Which type of research is primarily concerned with understanding human behavior and the reasons that govern such behavior?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Experimental Research
 - (D) Descriptive Research
12. — designed to reveal a target audience's range of behavior and the perceptions that drive it with reference to specific topics or issues. The results of are descriptive rather than predictive.
- (A) Quantitative Research
 - (B) Primary Research
 - (C) Secondary Research
 - (D) Qualitative Research
13. A qualitative research approach is most appropriate for which study.
- (A) A study measuring nutrition and weight loss or gain in clients with cancer
 - (B) A study examining oxygen levels after endotracheal suctioning
 - (C) A study examining client reactions to stress after open heart surgery
 - (D) A study measuring differences in blood pressure before, during, and after a procedure
14. The following are the characteristics of qualitative research except
- (A) Emergent
 - (B) Focus on outcome
 - (C) Exploratory
 - (D) Focus on process
15. One of the objectives of qualitative research is to:
- (A) Generalize results to the population
 - (B) Quantify variables
 - (C) Understand subjective experiences
 - (D) Conduct large-scale experiments
16. During a classroom discussion, Anaya asked, 'Which of the following is a type of qualitative paradigm?'
- (A) Scientific
 - (B) Quantitative paradigm
 - (C) Critical Theory
 - (D) None of the above
17. What must a researcher do in order for Grounded Theory to work?
- (A) Use the ATLAS.ti.5 analysis software
 - (B) Collaborate with researchers using quantitative methods
 - (C) Suspend existing expectations and biases
 - (D) Hire a diverse staff
18. A focus group is conducted to understand people's perception of a new product.
- (A) Qualitative
 - (B) Quantitative
19. Which theoretical framework utilizes coding to build explanatory models during the data analysis phase?
- (A) Narrative Inquiry
 - (B) Phenomenology
 - (C) Grounded theory
 - (D) Ethnography
20. What is the purpose of ethnographic research?
- (A) Describe, analyze and interpret
 - (B) Describe, criticize and reflect
 - (C) Interpret, reflect, observe
 - (D) None of above

21. Qualitative variables are used to:
- (A) Measure and analyze data
 - (B) Describe characteristics that cannot be measured numerically
 - (C) Conduct experiments in a controlled environment
 - (D) Analyze statistical data
22. The literature review in qualitative research often focuses on:
- (A) Testing hypotheses with statistical tools
 - (B) Exploring themes, patterns, and existing theories
 - (C) Providing definitions of terms
 - (D) Explaining sampling techniques
23. A way to reach a conclusion based on a pattern and observation
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Given statement
 - (D) None of above
24. If an engineering server's risk of being hacked is assigned a risk level of very high, which assessment strategy is being used?
- (A) Quantitative.
 - (B) Qualitative.
 - (C) Impact.
 - (D) Discretionary.
25. What method is commonly used in ethnography to gather data?
- (A) Laboratory experiments
 - (B) Participant observation
 - (C) Surveys
 - (D) Archival research
26. In grounded theory, when is the literature review typically conducted?
- (A) After theory generation
 - (B) Before data collection
 - (C) During data analysis
 - (D) Before writing the research report
27. Qualitative data tells us how much, how many and how often.
- (A) True
 - (B) False
28. Approach to the study of human behavior that seeks to understand the meanings, motives, and beliefs that underlie a person's experiences.
- (A) Meta analysis
 - (B) Theoretical inquiry
 - (C) Qualitative
 - (D) Quantitative
29. Seeks to understand the world view of a cultural group
- (A) Quantitative Data
 - (B) Ethnography Research
 - (C) Null Hypothesis (H0)
 - (D) Reference
30. What element connects people's beliefs to their behaviors in grounded theory?
- (A) Social scene interactions and context
 - (B) Biochemical pathways involvement
 - (C) Longitudinal time series patterns
 - (D) Genomic variation differences
31. In analyzing the role of mass media in shaping public perception, which of the following approaches provides the most comprehensive understanding?
- (A) An exploration of the interaction between media content and audience interpretation.
 - (B) A focus solely on the content produced by mass media
 - (C) An examination of the historical development of media technologies
 - (D) A quantitative analysis of media consumption statistics
32. Which of the following is a qualitative data collection technique?
- (A) Measuring temperature
 - (B) Counting the number of leaves

- (C) Describing the colour of a flower
(D) Weighing a rock
33. Associated with the constructivist tradition
(A) Quantitative research
(B) Qualitative research
34. Which method best fits Interpretivism for studying consumer behavior?
(A) Structured ethnographies
(B) High-throughput microbiology
(C) Finite element simulations
(D) Randomized controlled trials
35. What type of data will Jamal most likely collect to answer his research question?
(A) Quantitative survey responses measuring student satisfaction on a rating scale
(B) Narrative accounts from participants describing their personal experiences
(C) Institutional data on student retention and graduation rates
(D) Behavioral observations of student study habits in the library
36. How does inductive reasoning contribute to scientific discovery?
(A) By allowing scientists to apply known laws to new situations
(B) By enabling the formulation of new theories based on observed patterns
(C) By testing existing theories through experimentation
(D) By providing a framework for mathematical proofs
37. Inductive reasoning is:
(A) Based on observations
(B) Based on known/established facts/evidence
38. Determine the first process step in qualitative data collection:
(A) To consider what types of information will best answer your research questions.
(B) To engage in a sampling strategy that will best help you understand your central phenomenon and the research question you are asking
(C) To design protocols or instruments for collecting and recording the information
(D) Gain access to these individuals and sites by obtaining permissions
39. What type of data is descriptive and detailed?
(A) Quantitative
(B) Primary
(C) Secondary
(D) Qualitative
40. Which option is the correct one according to Analysis and interpretation of qualitative data?
(A) Requires numerical data to obtain results
(B) It requires numerical data to obtain results and to observe the images of the investigation
(C) All options are correct
(D) Requires knowing how to make sense of the text and images in order to answer the research questions
41. Which marketing research term is defined as: 'Research that explores attitudes, motivations, and opinions through non-numerical data like interviews or observations?'
(A) Qualitative Research
(B) Quantitative Research
(C) Experimental Research
(D) Descriptive Research
42. What is the PRIMARY purpose of inductive research?
(A) To use theory to create a hypothesis to test
(B) To look for mathematical truth
(C) To gather data, look for patterns, and develop a theory
(D) None of above

43. What is a qualitative observation for this picture?
(A) There are 5 characters in this play.
(B) Dorothy is 4 foot 10 inches tall.
(C) 50% of the characters are boys.
(D) The tin man's costume is shiny.
44. Choose the research title below which can be conducted qualitatively..
(A) The experiences of healthcare providers during the COVID-19 crisis in China
(B) The Association Between Health Status and Insomnia, Mental Health, and Preventive Behaviors: The Mediating Role of Fear of COVID-19
(C) Mental Health Disorders and Associated Risk Factors in Quarantined Adults During the COVID-19 Outbreak in China: Cross-Sectional Study
(D) None of above
45. This technique uses an ordered rank procedure where the objects are classified in groups depending on their similarity to a specific criterion
(A) Paired Comparison
(B) Likert
(C) Constant Sum
(D) Q-Sort
46. Which of the following is NOT a source of qualitative data?
(A) Observations
(B) Unstructured interviews
(C) Official statistics
(D) Diary entries
47. In qualitative studies, researchers collect primarily qualitative data, that is:
(A) Numeric Value
(B) Narrative Description
(C) Alphanumeric Value
(D) Coded Value
48. Thematic analysis is a qualitative data analysis technique.
(A) True
(B) False
49. How to evaluate an ethnography research?
(A) Being transparent with the data
(B) Researchers are not prevented from entering the site in the future
(C) Involve negotiating how to gain access to the people and places
(D) By applying the standards used in qualitative research.
50. Approach: Subjective
(A) Quantitative
(B) Qualitative
51. Which of the following is an example of qualitative data?
(A) Blue is the best selling color for all models in the product line.
(B) A certain brand's products are an average of 15% more expensive than comparable products from their direct competitor.
(C) Sales for the newest product model have amounted to \$260, 000 over the last three months.
(D) Consumers feel that a certain brand is not stylish enough to interest them.
52. An observation using your senses
(A) Qualitative data
(B) Quantitative data
53. Two or more researchers may independently analyse the data; their interpretations are compared and the higher the degree of similarity between their analyses, the more credible the findings/conclusions are deemed to be.
(A) Quantitative
(B) Qualitative
54. What is the main reason for conducting member checks in qualitative research?
(A) To recruit participants for the study
(B) To end the study quickly

- (C) To ensure the accuracy of the data collected
(D) To analyze the data collected
55. The term used to describe suspending pre-conceptions and learned feelings about a phenomenon is called
(A) Axial coding.
(B) Design flexibility.
(C) Ethnography.
(D) Bracketing.
56. One problem with qualitative research is:
(A) It is always objective
(B) It is easy to replicate
(C) It is time-consuming
(D) Results are easily generalized
57. Qualitative approach to research is concerned with the subjective assessment of
(A) Research problems.
(B) Research methods.
(C) Data, analysis and interpretation.
(D) Attitudes, opinions and behavior.
58. Ethnography is a type of:
(A) Quantitative study
(B) On-field qualitative study
(C) Laboratory experiment
(D) Simulation
59. To hold in abeyance their presuppositions about a phenomenon, Descriptive phenomenologists use the strategy called:
(A) Bracketing
(B) Randomization
(C) Interpretation
(D) None of above
60. In an experiment, a scientist records the color change of a solution. What type of data is this?
(A) Quantitative
(B) Qualitative
(C) Experimental
(D) Theoretical
61. This type of research involves collecting and analyzing non-numerical data to understand concepts, opinions or experiences (Romero & Romero, 2000, cited in Abdelgafur, et al., 2020).
(A) Experimental research
(B) Qualitative research
(C) Quantitative research
(D) Survey research
62. Teaching experiences of TPNHS teachers during Modular Distance Learning. Which of the following research designs should be used in this topic?
(A) Ethnography
(B) Phenomenology
(C) Grounded Theory
(D) Narrative
63. Traditionally those engaging this research spend years in the place of study, also known as the "field." Which research design is this statement related to?
(A) Experimental
(B) Case study
(C) Ethnography
(D) None of above
64. Grounded theory does not want to start with any theory or hypotheses.
(A) True
(B) False
65. Which of these characteristics does NOT describe qualitative research?
(A) Collecting non-numerical data
(B) Using non-statistical method
(C) Involving experimental procedure
(D) All of the above
66. Which of the following statements is TRUE of interviews as an example of qualitative research?
(A) They enable researchers to observe and record behavior in the real world.

- (B) They involve data gathered from open-ended answers rather than numeric answers.
- (C) They always evoke structured answers.
- (D) They can be easily used for summarizing and calculating trends and averages.
67. You want to explore the cultural factors that influence people's purchasing decisions.
- (A) Quantitative
- (B) Qualitative
68. Which research tool is best suited to gathering qualitative market data?
- (A) Business records
- (B) Census statistics
- (C) Surveys
- (D) In-depth interviews
69. Which approach to research uses qualitative data, that deals on how people behave in the surroundings?
- (A) Naturalistic
- (B) Positive
- (C) Scientific
- (D) Triangulation
70. Qualitative research usually happens in?
- (A) Hard science
- (B) Medicine
- (C) Physics
- (D) Education
71. Identify if the data point listed below is an example of qualitative data or quantitative data: melting ice
- (A) Qualitative data
- (B) Quantitative data
72. Teacher Jean wants to understand how learners make friends and socialize through the pandemic's flexible learning, by documenting their experiences. Which research method is she more likely to use?
- (A) Ethnographical research
- (B) Grounded theory research
- (C) Correlational research
- (D) Phenomenological research
73. Qualitative Research uses statistical formulas in interpreting gathered data.
- (A) True
- (B) False
74. Which scenario shows qualitative research in the arts?
- (A) Analyzing the themes of local paintings
- (B) Counting the number of artworks in a gallery
- (C) Recording sales of art pieces
- (D) Measuring the size of canvases
75. Data are "rich" and time-consuming to analyze
- (A) Qualitative Research
- (B) Quantitative Research
76. Which is NOT a qualitative data collection method?
- (A) Ethnography
- (B) Experiment
- (C) Focus Group
- (D) Interviews
77. The ABM students interviewed the HUMSS students to know the difficulties HUMSS students experience. What is the type of qualitative study used?
- (A) Case Study
- (B) Ethnography
- (C) Phenomenology
- (D) Historical Analysis
78. Which of the following is "an approach for exploring & understanding the meaning individuals or groups ascribe to a social problem" (Creswell 2014)
- (A) Transformative research approach
- (B) Qualitative research approach
- (C) Quantitative research approach
- (D) None of above

79. Qualitative research requires less interaction with respondents.
(A) True
(B) False
80. Data analysis in qualitative research reveals
(A) Statistical data
(B) Findings
(C) Themes
(D) Errors
81. What is 'Verstehen' in relation to marketing research?
(A) Any approach that focuses on qualitative issues like social meanings
(B) Any orientation that favours quantitative practices
(C) Neither of these
(D) None of above
82. Focus groups are particularly strong at:
(A) Causal inference
(B) Exploring group norms and interactions
(C) Measuring frequency of behaviors
(D) Avoiding groupthink
83. What is one way of ensuring viability of your qualitative research?
(A) Peer Debriefing
(B) Just leave it
(C) Personal Opinions
(D) None of above
84. The slug was slimy.
(A) Qualitative Data
(B) Quantitative Data
85. Open-ended questions are especially useful in exploratory research.
(A) TRUE
(B) FALSE
86. Which type of research focuses on understanding the underlying reasons and motivations behind human behavior?
(A) Experimental Research
(B) Descriptive Research
(C) Qualitative Research
(D) Quantitative Research
87. Which of the following is a characteristic of qualitative data?
(A) It is measured in numbers
(B) It is often collected through interviews
(C) It is always objective
(D) It is analysed using statistical software
88. A benefit of grounded theory is that ____
(A) It fosters creativity
(B) It involves an exhaustive process
(C) It covers limited generalizability
(D) None of above
89. What kind of experiences Phenomenologists study?
(A) Historical experiences
(B) Clinical experiences
(C) Lived experiences
(D) None of above
90. Which type of research uses unstructured or semi-structured tools?
(A) Quantitative research.
(B) Qualitative research.
(C) Survey research.
(D) Experimental research.
(E) Meta-analysis.
91. The differences between qualitative and quantitative lie in these aspects below, except:
(A) Measurement used
(B) The aims of research
(C) The presence of human in measurement
(D) Its logic
92. Which of the following factors is likely to require a qualitative approach?
(A) Specifically measured variables
(B) Reliable and valid IQ test

- (C) Limited number of participants and research sites
(D) None of above
93. What is an example of a qualitative research question?
(A) What percentage of students use technology?
(B) Does technology improve learning outcomes?
(C) How do students perceive their learning environment?
(D) What is the average age of participants?
94. What research design aims to describe the lived experience of the participants from a phenomenon?
(A) Case study
(B) Narrative research
(C) Phenomenology
(D) Ethnography
95. What is usually the starting point for a qualitative research study?
(A) Identify a phenomenon or research question to explore
(B) Form a testable hypothesis
(C) Run statistical models
(D) Create a frequency distribution
96. The major objective of a qualitative research study is to
(A) Understand a process or concept.
(B) Study group-differences.
(C) Predict relationships.
(D) Explain variation in measurements.
97. One goal of qualitative research is to empower individuals to share their stories.
(A) True
(B) False
98. What does Qualitative research explore?
(A) Ideas
(B) Perception
(C) Behavior
(D) All the above
99. All of the following are the advantages or strengths of Qualitative research except,
(A) It adopts a naturalistic approach to its subject matter
(B) It promotes a full understanding of human behavior or personality
(C) It is hard to know the validity or reliability of the data
(D) It is a way of understanding and interpreting social interactions
100. A qualitative research design seeking to describe and analyze all or part of the culture of a community is known as a(n)
(A) Historical study
(B) Action research
(C) Ethnographic study
(D) Grounded theory
101. Which type of data is often used to understand participant's opinions and thoughts?
(A) Quantitative
(B) Qualitative
(C) Statistical
(D) Numerical
102. An inductive approach in qualitative research means:
(A) Starting with a theory
(B) Building a theory from data
(C) Testing a theory with data
(D) Quantifying variables
103. Multiple Choice: Read each question carefully and choose the BEST answer. Because qualitative research involves interpretation, one common limitation is that:
(A) Data collection is purely numerical
(B) Results may reflect researcher perspectives
(C) Participants control all outcomes
(D) Analysis is faster than quantitative research

- 104.** Phenomenology-
- (A) Describing individuals' experiences of a particular event, such as the death of a loved one
 - (B) Addressing research questions through in-depth analysis of a single (small group of people) instance(s) or individuals
 - (C) Inductively generating a theory explain a process
 - (D) Describing lives/ stories to add to understanding
- 105.** Which of the following is not a way of assessing the trust worthiness of qualitative research?
- (A) Dependability.
 - (B) Accessibility.
 - (C) Credibility.
 - (D) Transferability.
- 106.** What type of data are not easily measured or counted?
- (A) Qualitative Data
 - (B) Quantitative Data
 - (C) Correlational Data
 - (D) Causal Data
- 107.** Classify as either qualitative research or quantitative research. The purpose is to explain and gain insight and understanding of phenomena through intensive collection of narrative data.
- (A) Qualitative
 - (B) Quantitative
- 108.** Qualitative questions include
- (A) Social research/surveys
 - (B) Prediction of outcomes
 - (C) Numeric from data collected
 - (D) Experiments or Intervention
- 109.** Qualitative researchers often conduct data collection and analysis ____ during the study process.
- (A) In repeated cycles over time
 - (B) At a single point in time
- 110.** Grounded theory is commonly used in quantitative analysis.
- (A) True
 - (B) False
- 111.** Is the primary source of data in phenomenological research:
- (A) Observation
 - (B) Self-report
- 112.** A researcher studies how students who flunk out of high school experienced high school. She found that it was common for such students to report that they felt like they had little control of their destiny. Her report that this lack of control was an invariant part of the student's experiences suggests that lack of control is ____ of the "flunking out" experience
- (A) An essence.
 - (B) A probabilistic cause.
 - (C) A grounded theory.
 - (D) A narrative.
- 113.** What is a characteristic of guided inductive inquiry?
- (A) It focuses solely on rote learning
 - (B) It involves passive listening by the students.
 - (C) Learners progress from specific observations to inferences or generalizations.
 - (D) The teacher does not interact with students during the lesson
- 114.** What type of questions are typically framed in qualitative research?
- (A) Hypothesis-driven questions
 - (B) Closed-ended questions
 - (C) Open-ended exploratory questions
 - (D) Multiple-choice questions
- 115.** Which of the following is qualitative
- (A) Sour taste
 - (B) 27 degrees Celsius
 - (C) The mass of an apple is 230 grams
 - (D) The pH of rain water is about 5.5

116. What does the term "bracketing" refer to in phenomenological research?
- (A) The process of categorizing philosophical theories
 - (B) Suspending judgment and avoiding pre-suppositions
 - (C) The act of comparing different philosophical schools
 - (D) The method of analyzing historical texts
117. Which of the following can be "ethnographic instrument"?
- (A) Tape recorders, cameras, field notes, interviews, observation
 - (B) Survey, secondary data, test, questionnaire, interviews
118. Feminist research follows some steps, one of them is ____
- (A) Should be bias free
 - (B) Should be traditional research
 - (C) Should be emphasized on trivial topics.
 - (D) None of above
119. Give one advantage of qualitative research
- (A) You can compare results
 - (B) It is usually high in reliability
 - (C) It is usually high in validity
 - (D) Research sample is representative
120. Most qualitative researchers believe that social reality is embedded within and cannot be abstracted from their social settings. This perspective leads them to believe the best way to understand such reality is what?
- (A) To engage in "sense-making"
 - (B) Hypothesis testing
 - (C) Experiments
 - (D) Historical analysis
121. A phenomenological research describes ____
- (A) What all participants have in common in their lived experience
 - (B) An in-depth view into one subjects lived experience
 - (C) A shallow overview of multiple participants
 - (D) The cause a particular disease has on a specific culture group
122. Typically engage in extensive fieldwork, participate in extent possible life of culture under study. Learn from cultural group.
- (A) Field Scientists
 - (B) Anthropologist
 - (C) Medical Scientist
 - (D) Ethnographers
123. Which of the following represent a good qualitative problem statement?
- (A) Defines the independent and dependent variables.
 - (B) Conveys a sense of emerging design.
 - (C) Specifies a research hypothesis to be tested.
 - (D) Specifies the relationship between variables that the researcher expects to find.
124. The statement "The number of cases that allow us to answer the research questions, which will later be called category saturation," corresponds to which criterion for sample size in qualitative research?
- (A) Understanding of the phenomenon
 - (B) Availability of participants
 - (C) Statistical power requirements
 - (D) Convenience of access
125. What is the final product of phenomenological research expected to do?
- (A) Convincingly convey the shared essence of the experience to the reader
 - (B) Provide a detailed statistical analysis of the phenomenon
 - (C) Focus solely on the researcher's personal experiences
 - (D) Avoid any philosophical interpretations
126. Observations(recording what you have seen, heard, or encountered in detailed field notes) is an example of:

- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Characteristics of Qualitative Research
 - (D) Types of Quantitative Research
- 127.** In which of the following do both methods provide primary qualitative data?
- (A) Experiments and interviews
 - (B) Questionnaires and sampling
 - (C) Literature reviews and surveys
 - (D) Observations and case studies
- 128.** Which of the following best describes process consent in qualitative research?
- (A) Obtaining consent once at the start of the study
 - (B) Using a written form signed before data collection
 - (C) Assuming consent when participants return questionnaires
 - (D) Continuously renegotiating consent as the study evolves
 - (E) Seeking consent only from the research institution
- 129.** Which of the following is an example of a qualitative design?
- (A) Narrative research
 - (B) Experimental research
 - (C) Survey research
 - (D) Convergent research
- 130.** A major disadvantage of Grounded Theory is:
- (A) Too structured
 - (B) Requires less data
 - (C) Time-consuming
 - (D) Produces minimal data
- 131.** What qualitative research method gathers insights from a group discussion?
- (A) Case Study
 - (B) Experiment
 - (C) Focus Group Discussion
 - (D) Narrative Research
- 132.** These are descriptive information which has no numerical value.
- (A) Quantitative Data
 - (B) Qualitative Data
 - (C) Primary Data
 - (D) Secondary Data
- 133.** Which of the following is NOT a component of Guba & Lincoln's criterion 'trustworthiness'?
- (A) Credibility
 - (B) Dependability
 - (C) Measurability
 - (D) Transferability
- 134.** Ethnographic studies most directly aim to uncover what type of information?
- (A) Contextual behaviors in real-life settings
 - (B) Preferred pricing tiers in surveys
 - (C) Competitor financial ratios benchmarking
 - (D) Quarterly channel partner discounts
- 135.** Takes an Idiographic Approach
- (A) Qualitative
 - (B) Quantitative
- 136.** Sophie and Thomas are conducting a study to understand people's experiences. Qualitative research places special interest in:
- (A) Statistical significance
 - (B) Participants' thoughts
 - (C) Experimental controls
 - (D) Predictive models
- 137.** Requires few respondents
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 138.** Feelings, attitudes, opinions and thoughts of human being
- (A) QUALITATIVE RESEARCH
 - (B) QUANTITATIVE RESEARCH

139. The ____ of qualitative research contends that knowledge is socially constructed.
- (A) Epistemology
 - (B) Ontology
 - (C) Thought and behavior
 - (D) Research focus
140. Rosie shared her life experiences with the researcher. Which of the following is a study of an individual and their experiences as told to the researcher?
- (A) Biography
 - (B) Autobiography
 - (C) Oral History
 - (D) Case Study
141. These type of observations are described, not measured.
- (A) Qualitative
 - (B) Quantitative
142. What characteristic of qualitative research is employed in the situation below? "Studying real-world situation as it unfolds naturally"
- (A) Dynamic
 - (B) Emergent
 - (C) Naturalistic
 - (D) Purposeful
143. It originated in the social and behavioral sciences: sociology, anthropology, and psychology.
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Practical Research
 - (D) None of above
144. Researcher & their biases may be known to participants in the study and participants characteristics may be known to the researcher
- (A) QUALITATIVE RESEARCH
 - (B) QUANTITATIVE RESEARCH
145. What is the purpose of asking key questions in phenomenological research?
- (A) To list significant statements from the data
 - (B) To understand the experiences and contexts influencing the phenomenon
 - (C) To group statements into meaningful themes
 - (D) To perform statistical analysis of the data
146. An unstructured and indirect form of questioning that encourages respondents to project their underlying motivations, beliefs, attitudes, or feelings regarding the issues of concern is called the ____
- (A) Motivation elicitation
 - (B) Quantitative technique
 - (C) Survey technique
 - (D) Evaluation technique
 - (E) Projective technique
147. Observing person for a period of time in the workplace is a form of ethnography
- (A) True
 - (B) False
148. Market research that gathers the opinions, ideas, views and thoughts of consumers in a non-statistical manner is
- (A) Desk research
 - (B) Field research
 - (C) Quantitative research
 - (D) Qualitative research
149. Follows more flexible format for the research document.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed
 - (D) None of the above.
150. Qualitative research involves a large number of respondents.
- (A) True
 - (B) False

- 151.** What method is typical in qualitative research?
- (A) Structured surveys with large samples.
 - (B) Controlled experimentation with variables.
 - (C) Content analysis of texts or interviews.
 - (D) Use of standardized tests and measurements.
- 152.** A scientist that studies a specific culture's behaviors, beliefs, values, and norms is called a(n) ____
- (A) Ethnographer
 - (B) Paleontologist
 - (C) Archaeologist
 - (D) Sociographer
- 153.** A qualitative researcher wants to understand how people construct their identities through storytelling. Which method is most appropriate?
- (A) Narrative Inquiry
 - (B) Grounded Theory
 - (C) Case Study
 - (D) Ethnography
- 154.** Qualitative data is characterized by:
- (A) Numbers and statistics.
 - (B) In-depth descriptions indicating the quality of a psychological characteristic.
 - (C) Simple yes or no responses.
 - (D) Data that is easily quantified.
- 155.** A meteorologist is writing a report on the weather shown in the picture. Which of his statements reports qualitative data about this weather?
- (A) "It seems to be much colder and windier than last week."
 - (B) "Expect the temperature to drop to 10 degrees by midnight."
 - (C) "The winds reached up to 25 mph this morning."
 - (D) "It snowed 2 more inches than on this date last year."
- 156.** Data that describes certain distinctions based on some quality or characteristics.
- (A) Quantitative Data
 - (B) Qualitative Data
- 157.** Which of the following task requires delivery text-based answers?
- (A) Physiological task
 - (B) Qualitative tasks
 - (C) Meta tasks
 - (D) Quantitative tasks
- 158.** Two main types of Qualitative Research are:
- (A) Grounded Theory and Observation.
 - (B) Case Study and Phenomenology.
 - (C) Historical and Practical
 - (D) Ethnography and Epidemiological
- 159.** Ethnography is qualitative research of a distinct group of ____ in society.
- (A) Culture
 - (B) Literature
 - (C) Interest
 - (D) Majors
- 160.** What is the definition of phenomenological research?
- (A) A quantitative approach that measures statistical data.
 - (B) A qualitative approach that describes the meaning for several individuals of their lived experiences of a concept or phenomenon.
 - (C) A method to analyze numerical data for scientific experiments.
 - (D) A theoretical approach to predict future events based on past data.
- 161.** This type of research is likely to engage in fieldwork in natural settings because they are interested in the contexts of people's lives and experiences:
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Experimental Research
 - (D) Non-Experimental Research

- 162.** What type of observation is this? The liquid is pink.
(A) Quantitative
(B) Qualitative
(B) . Poth
(C) Sage
(D) Reuters
- 163.** Themes, patterns interpretation
(A) Qualitative Methods
(B) Mixed Methods
(C) Quantitative Methods
(D) None of above
- 164.** This approach is commonly used to elicit different ideas, opinions, or beliefs from the respondents.
(A) Sampling
(B) Belief theory
(C) Grounded theory
(D) Brainstorming Edit
- 165.** Select TRUE statement about Qualitative ResearchI. Focuses on exploring ideas and formulating a theory or hypothesisII. Key terms:testing, measurement, objectivity, replicabilityIII. Key terms:understanding, context, complexity, subjectivityIV. Focuses on testing theories and hypotheses
(A) I & II
(B) I & III
(C) III & IV
(D) I & IV
- 166.** Lived experiences of caregivers for individuals with Alzheimer's disease
(A) Qualitative Research
(B) Quantitative Research
- 167.** A qualitative observation describes the specific number or amount of something
(A) TRUE
(B) FALSE
- 168.** Sophia is writing a paper on qualitative research and comes across a quote about it being like an intricate fabric. Who is the author of this quote?
(A) John W. Creswell
- 169.** This involves re-reading the transcript and categorising the statements, identifying further codes
(A) Axial Coding
(B) Open Coding
(C) Selective Coding
(D) None of above
- 170.** The box is brown
(A) Quantitative data
(B) Qualitative data
- 171.** Qualitative research emphasizes:
(A) Measurement and analysis of causal relationships
(B) Understanding meaning and experiences
(C) Use of numerical data
(D) Randomized control
- 172.** What is the main focus of qualitative research methods?
(A) Analyzing numerical data
(B) Solving complex issues by breaking them into meaningful inferences
(C) Presenting data using graphs and tables
(D) Generalizing results from representative samples
- 173.** Match the statement below to the correct description:That man is very tall.
(A) Qualitative data
(B) Quantitative data
- 174.** The main goal of ethnographic research is to prove that a specific thing solve a particular problem.
(A) TRUE
(B) FALSE

175. Which of the following is not key characteristics of ethnography?
- (A) Control group
 - (B) Cultural sharing group
 - (C) Researcher reflexivity
 - (D) Fieldwork
176. Qualitative researchers may seek patterns of association as a way of illuminating the underlying meaning and dimensionality of phenomena of interest
- (A) Cause-and-effect
 - (B) Associative
 - (C) Qualitative study of pattern
 - (D) None of above
177. Decide if the following literature review statements belong to quantitative or qualitative research. The literature can stimulate questions. The literature can assist in deriving an initial list of pertinent questions to ask or behaviors to observe.
- (A) Quantitative
 - (B) Qualitative
178. There are two types of data. Which type of data involves descriptions/photographs/illustrations that cannot be counted or measured?
- (A) Qualitative
 - (B) Quantitative
179. Nana would like to study the content of the 2019 revised handbook and see if it still has relevance under the CBL program.
- (A) In-depth Interview
 - (B) Content Analysis
 - (C) Structured Interview
 - (D) Self-administered questionnaire
- Explanation:** Content Analysis is the best method to study the relevance of the 2019 revised handbook under the CBL program. It allows for a thorough examination of the content and its applicability.
180. What is the most common source of data in qualitative research?
- (A) Surveys
 - (B) Experiments
 - (C) Interviews
 - (D) Psychological test
181. Which research method is best suited for exploring complex phenomena within their contexts?
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Survey Research
 - (D) Experimental Research
182. Studies are harder to replicate so findings can be less reliable.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
183. Data which is accurate, valid and expressed in word form. It takes feelings and emotion into account.
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Validity
 - (D) Reliability
184. In a classroom discussion, Benjamin asked, 'Who described the five traditions of qualitative research mentioned in the document?'
- (A) John W. Creswell
 - (B) Sigmund Freud
 - (C) Carl Rogers
 - (D) Abraham Maslow
185. What is the primary advantage of using participant observation as a data collection method in qualitative research?
- (A) Reduced risk of observer bias
 - (B) In-depth understanding of participants' perspectives
 - (C) Quick and efficient data collection
 - (D) Standardized data gathering process

- 186.** What type of research would be appropriate in the following situation? Nestle wants to investigate the impact of children on their parents' decisions to buy breakfast foods.
- (A) Quantitative research.
 - (B) Qualitative research
 - (C) Secondary Research
 - (D) Mixed methodology
- 187.** Why is data from interviews difficult to analyze?
- (A) It is mostly quantitative.
 - (B) It is often incomplete.
 - (C) It is more qualitative.
 - (D) It is always accurate.
- 188.** Qualitative data is great for recording people's experiences, attitudes, and beliefs.
- (A) True
 - (B) False
- 189.** Which method of data collection would qualitative researchers be likely to use?
- (A) Standardized tests
 - (B) Grades from a gradebook
 - (C) Observations in natural environments
 - (D) Structured surveys
- 190.** A group of people brought together to discuss a specific topic. Usually consist of 6-9 people
- (A) Observation
 - (B) Interview
 - (C) Focus group
 - (D) Survey
- 191.** In qualitative research it is important to fit the research findings back into the relevant research literature even if the study is exploratory.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 192.** The bearded iris smells sweet.
- (A) Qualitative data
 - (B) Quantitative data
- 193.** Which one of these definitions explains Ethnography?
- (A) Observing a group without their knowledge or consent
 - (B) Observing a group's activities, while not taking part in them
 - (C) Observation and description of a group of people and their way of life
 - (D) Collecting information through unstructured interviews and postal questionnaires
- 194.** What is the type of research design that focuses on telling stories of one or more individuals, collecting and telling stories about the lives of these individuals, and writing narratives about their experiences?
- (A) Phenomenological design
 - (B) Ethnographic design
 - (C) Case study design
 - (D) Narrative design
- 195.** Which characteristics shows that Qualitative Research is a kind of research that has words, words and more words?
- (A) Human Understanding and Interpretation
 - (B) Abound with Words and Visuals
 - (C) Contextualization
 - (D) Internal Analysis
- 196.** The dog has brown fur on his paws.
- (A) Qualitative observattion
 - (B) Quantitative observation
 - (C) An observation
 - (D) None of the answers.
- 197.** It has a rough texture.
- (A) Qualitative
 - (B) Quantitative

- 198.** Which data collection method is best suited for gathering non-numerical insights on customer emotions and motivations?
- (A) Secondary Data Analysis
 - (B) Experiments
 - (C) Surveys
 - (D) Qualitative Interviews
- 199.** The setting in narrative research may be
- (A) Home
 - (B) Work place
 - (C) School
 - (D) All of the above
- 200.** What is a research type that requires an extensive time on the setting of the ethnic group?
- (A) Ethnographic
 - (B) Phenomenological
 - (C) Case study
 - (D) Policy analysis
- 201.** The sidewalk is long.
- (A) QUALITATIVE OBSERVATION
 - (B) QUANTITATIVE OBSERVATION
- 202.** What term refers to the insider's perspective?
- (A) Ethnocentrism.
 - (B) Holism.
 - (C) Emic perspective.
 - (D) Etic perspective.
- 203.** It is the understanding the essence of the phenomenon through interview.
- (A) Phenomenology
 - (B) Case Study
 - (C) Ethnography
 - (D) Narrative Inquiry
- 204.** Grounded Theory is a research method used to:
- (A) Develop theories based on data collected from the field
 - (B) Test existing theories through experiments
 - (C) Analyze statistical data using software
 - (D) Conduct surveys to gather quantitative data
- 205.** Data provides an in-depth understanding of the thoughts and feelings of participants.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
- 206.** In qualitative research, "designs" refers ____?
- (A) Research methods
 - (B) Research objectives
 - (C) Research studies
 - (D) None of above
- 207.** Which of the following is not a common objective of qualitative research?
- (A) Holistic descriptions
 - (B) Naturalistic observation
 - (C) Unobtrusive observation
 - (D) Laboratory experimentation
- 208.** This is ethnography ONLINE ____
- (A) Netnography
 - (B) Winography
 - (C) Scenography
 - (D) Internography
- 209.** One possible definition of Qualitative Research is:
- (A) Type of social science research that collects and works with numerical data.
 - (B) Type of social science research that collects and works with professional experience.
 - (C) Type of social science research that collects and works with non-numerical data.
 - (D) Type of social science research that collects and works with pictures and diagrams.

210. When the purpose of the study is to explore parents stories regarding distance learning with teachers about their students in the division of Manila, the purpose statement is —
- (A) Quantitative
 - (B) Qualitative
 - (C) Both quantitative and qualitative
 - (D) Can not be determined tagsSpeci
211. Qualitative Observation (what you would need to conduct it). Good social skills. Trust and rapport
- (A) True
 - (B) False
212. According to Neumann (2007), ethnography aims to:
- (A) Focus on the material expressions of culture
 - (B) Present the worldview of the studied community
 - (C) Interpret culture using written state records
 - (D) Describe a way of life from the native viewpoint
213. Mostly associated with the sciences
- (A) Deductive reasoning
 - (B) Inductive reasoning
214. What is the first step in conducting narrative research?
- (A) Identify a phenomenon to explore that addresses an educational problem
 - (B) Write a story about the participant's experiences
 - (C) Purposefully select an individual from whom you can learn about the phenomenon
 - (D) Collaborate with the participant-storyteller
215. In a grounded theory study, what is the main goal of data analysis?
- (A) Develop a theory based on patterns in collected data
 - (B) Compare statistical results across studies
 - (C) Test a pre-existing hypothesis
 - (D) Measure cause-and-effect relationships
216. What does the historical method of qualitative research focus on?
- (A) Testing hypothetical ideas
 - (B) Understanding present patterns
 - (C) Anticipating future choice s
 - (D) Describing past events
217. Can a narrative researcher select more than one participant?
- (A) Yes
 - (B) No
218. Why does qualitative research need longer time to research than quantitative research?
- (A) Because qualitative research has wider topic
 - (B) Because quantitative doesn't have many variables
 - (C) Because qualitative research needs to find a discovery/finding
 - (D) Because quantitative research doesn't need to discuss the problem
219. An ethnographic record consists of field notes, tape recordings, pictures, artifacts, and anything else that documents.
- (A) True
 - (B) False
220. Naturalistic observations
- (A) Are easy to replicate
 - (B) Have a manipulated IV
 - (C) Have high ecological validity
 - (D) Are highly reliable
221. In qualitative research, what is the purpose of "Bracketing"?
- (A) Forming hypotheses
 - (B) Setting aside biases and beliefs
 - (C) Data interpretation
 - (D) None of above

222. How do qualitative researchers primarily collect data?
- (A) Through standardized tests
 - (B) Via large-scale surveys
 - (C) Through interviews and observations
 - (D) Using experimental manipulations
223. Which of the following pairs of methods provide qualitative data?
- (A) Experiments and interviews
 - (B) Questionnaires and experiments
 - (C) Literature reviews and surveys
 - (D) Observations and focus groups
224. What type of data does a focus group provide to market research?
- (A) To provide quantitative data
 - (B) To provide qualitative data
225. Which primary data collection method involves collecting data by interviewing individuals who have experienced a particular phenomenon or event, with the goal of understanding their subjective experiences and perspectives?
- (A) Phenomenological interviews
 - (B) Narrative interviews
 - (C) Life history interviews
 - (D) Discourse-based interviews
226. Research Goals: Explore, describe, discover
- (A) Quantitative
 - (B) Qualitative
227. The way you smile is an example of which type of data?
- (A) Qualitative
 - (B) Quantitative
228. What qualitative data analysis method identifies patterns and themes within the data?
- (A) Statistical testing
 - (B) Descriptive statistics
 - (C) Thematic analysis
 - (D) Regression analysis
229. Propose a qualitative data analysis plan for exploring how teachers adapt to new technologies in the classroom.
- (A) Perform a thematic analysis of interview transcripts
 - (B) Use descriptive statistics to summarize responses
 - (C) Conduct a correlation analysis of survey data
 - (D) Apply regression analysis to the responses
230. ____ are the stories people tell about themselves, their situation, and others around them.
- (A) Case study
 - (B) Ethnography
 - (C) Narratives
 - (D) None of above
231. What tool can help qualitative research?
- (A) SPSS
 - (B) SAS
 - (C) Ms. Excel
 - (D) Nvivo
232. Qualitative Research has a hypothesis to be proven.
- (A) True
 - (B) False
233. Approach of qualitative data collection involves interview that conducting through email, face-to-face, focus group, online focus group and telephone interviews.
- (A) True
 - (B) False
234. Of the following is the characteristic/s of Hypotheses in qualitative research studies?
- (A) Hypotheses are very specific and stated prior to beginning the study.
 - (B) Hypotheses are never use.
 - (C) Hypotheses are often generated as the data are collected, interpreted, and analyzed.

- (D) Hypotheses are always stated after the research study has been complete.
- 235.** Which is NOT a qualitative research design?
- (A) Case study
 - (B) Survey
 - (C) Historical
 - (D) Ethnography
- 236.** What is the importance of triangulation in educational research?
- (A) To simplify data
 - (B) To use a single method for understanding
 - (C) To use multiple methods for a holistic understanding
 - (D) To focus on one perspective
- 237.** What is the main role of thick description in ensuring the trustworthiness of qualitative research?
- (A) To ensure a large sample size
 - (B) To analyze the data collected
 - (C) To provide a detailed and rich description of the participants and context
 - (D) To end the study quickly
- 238.** The laptop is white.
- (A) Qualitative data
 - (B) Quantitative data
- 239.** Generally, inductive approaches is:
- (A) Quarantine
 - (B) Quantitative
 - (C) Qualitative
 - (D) Questionnaire
- 240.** Sometimes a comprehensive review of the literature prior to data collection is not recommended by grounded theorists.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 241.** Qualitative research requires the researcher to use an interpretive lens that is critical to the process.
- (A) True
 - (B) False
- 242.** Which survey question isn't collecting qualitative data?
- (A) Do you like chocolate or vanilla, yes or no?
 - (B) Is Messi better than Ronaldo?
 - (C) What kind of toppings do you like on your pizza?
 - (D) How should you discipline a child?
- 243.** According to ____: Phenomenology is a form of qualitative research that focuses on the study of an individual's lived experiences within the world.
- (A) Neubauer, Witkop and Lara (2019)
 - (B) Plummer, Stanley and Wise (1993)
 - (C) Neubauer, Witkop and Varpio (2019)
 - (D) None of above
- 244.** What type of data is mainly gathered in cultural mapping?
- (A) Data expressed through numerical values
 - (B) Data presented through descriptive accounts
 - (C) Data arranged into statistical categories as subsets
 - (D) Data collected through experimental figures
- 245.** Which of the below are also sources of qualitative data?
- (A) Maps
 - (B) Monuments
 - (C) Art
 - (D) All of the above
- 246.** What are some of the advantages of the ethnographic approach?
- (A) Richer comprehensive perspective
 - (B) Lends itself well to research topics that are not easily quantified

- (C) Particularly appropriate to behaviors that are best understood by observing them within their natural settings
- (D) Especially suited to studying group behavior over time
- (E) All answers are correct
- 247.** Researchers spent years eavesdropping on a group of monkeys. What did they find out about the monkey's sounds?
- (A) They sound like dolphins
- (B) Vervet monkeys make different calls depending on which type of preator they spot.
- 248.** What is the first step in conducting phenomenological research according to Moustakas?
- (A) Bracket personal views
- (B) Identify a phenomenon
- (C) Collect data from individuals
- (D) Analyze statistical data
- 249.** Which research method studies the beliefs, social interactions, and behaviors of small societies or an entire group that shares a common culture, involving participation and observation over a long period and interpretation of this data?
- (A) Case Study
- (B) Grounded Theory
- (C) Ethnographical Research
- (D) Phenomenological Research
- 250.** Use studies from the literature that focused on grief after a miscarriage examining the themes across those studies to identify intersecting themes
- (A) Meta-analyses
- (B) Meta-syntheses
- 251.** What type of research design is often used in sociology and anthropology?
- (A) Ethnography
- (B) Phenomenology
- (C) Case study
- (D) Historical research
- 252.** Choose one challenges of Ethnography research
- (A) People are best studied in their natural environment and ethnography provides a better comprehensive perspective of the user and their environment than other forms of research.
- (B) Ethnographic research only examine one culture, setting or organization, because is not easily generalizable to other contexts.
- (C) You can build a detailed record of their behaviors and beliefs over time.
- (D) None of above
- 253.** In ethnographic research, what is the primary method for obtaining information from the cultural group?
- (A) Controlled experiments
- (B) Participant observation and field research
- (C) Surveys and questionnaires
- (D) Longitudinal studies
- 254.** Key terms are: understanding, context, complexity, subjectivity
- (A) QUALITATIVE
- (B) QUANTITATIVE
- 255.** The term phenomenology is associated with the process of [2010-DECEMBER]
- (A) Qualitative Research
- (B) Analysis of Variance
- (C) Correlational Study
- (D) Probability Sampling
- 256.** What role does theory play in qualitative research?
- (A) It is always derived from quantitative data
- (B) It is tested using hypotheses
- (C) It is predefined and static
- (D) It is generated through data analysis
- 257.** What is the structure of a qualitative research report?
- (A) Flexible

- (B) Predetermined
 - (C) Rigid
 - (D) None of the above
- 258.** Asking students as they walk into the lunch-room and asking what their favorite school lunch is
- (A) Quantitative
 - (B) Qualitative
- 259.** A focus group is mainly used to obtain qualitative research insights. True or false?
- (A) True
 - (B) False
- 260.** Dominant participants can sometimes influence the outcomes of FGDs.
- (A) True
 - (B) False
- 261.** This describes data reported as descriptions (words).
- (A) Qualitative
 - (B) Quantitative
 - (C) Reliable
 - (D) Valid
- 262.** Which of the following cannot be included in qualitative research?
- (A) Sampling Size
 - (B) Hypothesis
 - (C) Operational Definition
 - (D) Demographics Analysis
- 263.** Inductive research is
- (A) A method of reasoning based on random guesses.
 - (B) A method of reasoning that involves making generalizations from specific observations.
 - (C) A technique for collecting data without analysis.
 - (D) A process of deriving specific conclusions from general principles.
- 264.** A method not commonly used in qualitative research is:
- (A) Case studies
 - (B) Large-scale surveys
 - (C) Interviews
 - (D) Observations
- 265.** How can businesses use qualitative data to improve their products?
- (A) By understanding the reasons behind customer preferences
 - (B) By focusing only on numerical data
 - (C) By avoiding customer feedback
 - (D) By reducing the need for data collection
- 266.** Characteristics of qualitative research design are
- (A) Flexible and elastic design
 - (B) Use of mixed methodologies
 - (C) Ongoing analysis to formulate subsequent strategies
 - (D) Researcher becomes the instrument
 - (E) All of the above
- 267.** Qualitative researchers are connected primarily with
- (A) Process
 - (B) Outcomes
 - (C) Data
 - (D) Product
- 268.** Which of the following is a component of ethnographic research?
- (A) Immersion in a social group or setting
 - (B) Axial coding
 - (C) Restorying
 - (D) All of the above
- 269.** What type of data is non-numerical?
- (A) Quantitative
 - (B) Qualitative
 - (C) Primary
 - (D) Secondary

270. Who is a “Key Informant” in qualitative research?
- (A) Primary researcher
 - (B) Participant with unique insights
 - (C) Control group member
 - (D) None of above
271. Which qualitative data collection method examines texts, images, or videos?
- (A) Document and content analysis.
 - (B) Statistical modeling.
 - (C) Laboratory experiment.
 - (D) Survey distribution.
 - (E) Random sampling.
272. In which science is ethnography developed?
- (A) Astronomy
 - (B) Anthropology
 - (C) Geology
 - (D) Pedagogy
273. Which term describes detailed descriptions of contexts and behaviors in qualitative research?
- (A) Numerical synthesis
 - (B) Quantitative analysis
 - (C) Thick description
 - (D) Case sampling
274. Narrative report with contextual description & direct quotations from search participants
- (A) Qualitative
 - (B) Quantitative
275. Data collection in qualitative research are analyzed and interpreted and then written using a ___ report style that is less formal and includes contextual description and direct quotations.
- (A) Passive voice
 - (B) Statistical
 - (C) Narrative
 - (D) 3rd person
276. It is the direct description of a group, culture or community. Nevertheless, the meaning of the word ethnography can be ambiguous
- (A) Ethnography
 - (B) Phenomenology
 - (C) Case study
 - (D) Grounded theory
277. What does content analysis aim to achieve in qualitative research?
- (A) Identify patterns and themes within textual data
 - (B) Quantify the number of words in a document
 - (C) Compare numerical values across different studies
 - (D) Summarize a participant’s experiences through storytelling
278. How can a researcher increase the validity of a ethnographic study?
- (A) Visit multiple locations to gather data
 - (B) Visit only one location to gather data
 - (C) Choose a calm, quiet place to gather information
 - (D) Only record data in natural environments
279. Which of the following is the process wherein the researchers immerse themselves in the culture they are studying?
- (A) Inquiry
 - (B) Investigation
 - (C) Immersion
 - (D) Research
280. Qualitative research is just the opinion of the researcher and is based only on idiosyncratic and anecdotal information.
- (A) True
 - (B) False
281. Which research design emphasizes individual experiences, beliefs and perceptions?
- (A) Case Study
 - (B) Ethnography

- (C) Historical Analysis
(D) Phenomenological
- 282.** Which statement best distinguishes qualitative from quantitative data in research?
(A) Both are words but qualitative are computed
(B) Both are numbers but quantitative are descriptive
(C) Qualitative are words; quantitative are numbers
(D) Qualitative are numbers; quantitative are words
- 283.** People cooperating in qualitative study
(A) Study subject or participant
(B) Informants
(C) Researchers or investigators
(D) Study site
- 284.** Describing characteristics, or qualities, based on what you see, hear, smell, taste, or feel.
(A) Inference
(B) Qualitative Observation
(C) Prediction
(D) Quantitative Observation
- 285.** Qualitative research provides insights into the problem or helps to develop ideas or hypotheses for potential quantitative research
(A) True
(B) False
- 286.** Historians describe a civilization's ____ by identifying its motivators, goals, values, and basic beliefs.
(A) Politics
(B) Society
(C) Ideas
(D) Technology
(E) Economy
- 287.** What is the focus of "structural description" in phenomenological research?
(A) The universal essence of the experience
(B) What the participants experienced
(C) How the participants experienced it (the context and conditions)
(D) The methods used to collect data
- 288.** The qualitative approach is better defined with the word ____, and the quantitative approach is defined with the word ____
(A) Explanation, exploration
(B) Exploration, explanation
(C) Description, prediction
(D) Prediction, explanation
- 289.** A qualitative storytelling structure is ____
(A) A research report presented to an audience
(B) A flexible approach to writing a qualitative report
(C) The underlying organization of topics that forms a structure for a research report
(D) A plan for a research report
- 290.** Abigail, Nora, and Liam are conducting a research study. They are collecting data that is descriptive and can be observed but not measured. What type of data are they collecting?
(A) Quantitative
(B) Numeric
(C) Objective
(D) Qualitative
- 291.** When would Sociologists do content analysis?
(A) To investigate norms in society
(B) To investigate the media
(C) To investigate the Government
(D) To investigate equality and Human Rights in Society
- 292.** Case Study data would be an example of
(A) Quantitative data
(B) Qualitative data
(C) Mixed data
(D) Reliable data

- 293.** Which type of research is best suited for exploring new or under-researched topics?
- (A) Qualitative research.
 - (B) Quantitative research.
 - (C) Experimental research.
 - (D) Secondary analysis.
 - (E) Survey research.
- 294.** Qualitative analysis is not, at all, used in
- (A) Ethnographical research.
 - (B) Descriptive research.
 - (C) Experimental research.
 - (D) Historical research.
- 295.** Which of the following sounds most like an ethnographic study?
- (A) Going to Northern Africa to live with a Bedouin tribe for a year to understand its culture.
 - (B) None of these answers are good examples of an ethnographic study.
 - (C) Interviewing a number of different people from a different culture to write about their culture.
 - (D) Using high school GPA as an indicator of college graduation.
- 296.** This information answers questions where an opinion or judgement is necessary.
- (A) Quantitative
 - (B) Qualitative
 - (C) Segmentation
 - (D) None of above
- 297.** Seeks open-ended responses. Answers questions about “why” and “how”
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Survey
 - (D) Questionnaire
- 298.** Which of the following generally cannot be done in qualitative studies conducted in the field?
- (A) Getting informed consent
 - (B) Having full anonymity rather than just confidentiality
 - (C) Keeping participants from physical harm
 - (D) Maintaining consent forms
- 299.** Qualitative researchers seek to analyze which of the following?
- (A) Numerical data derived from the frequency of particular behaviors
 - (B) Statistical associations between variables
 - (C) The social meaning people attribute to their experiences and circumstances
 - (D) All of the above
- 300.** Choose the alternative that is EXCEPT among the factors that influence or suggest the number of cases in an initial qualitative sample:
- (A) Definition of the units of analysis or initial cases
 - (B) Available time and resources
 - (C) Heterogeneity of the study context
 - (D) Theoretical saturation criterion
- 301.** What type of reasoning might use a pattern of specific events to predict a future occurrence?
- (A) Analytical reasoning
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Abstract reasoning
- 302.** Qualitative data generally can include
- (A) Only written material that respondents provide in response to open-ended questions
 - (B) Any sort of the data that can be summarized with numbers
 - (C) Text, pictures, drawings, videos, sound recordings
 - (D) Survey data
 - (E) Equations
- 303.** Observing people in their natural surroundings; includes participant observation, case studies, etc.

- (A) Content analysis
 - (B) Evaluation research
 - (C) Field research
 - (D) None of above
304. Qualitative methods are based on statistical data
- (A) True
 - (B) False
305. What words can be related with a qualitative type of research?
- (A) Control
 - (B) Test
 - (C) Explain
 - (D) Confirm
306. Research questions for Narrative Inquiry should be what?
- (A) Open Ended
 - (B) Specific
- Explanation:** Narrative Inquiry Methodology. Open Ended Research Question2. Literature review woven throughout work, not presented separately 3. Homogeneous Sampling, Deviant Sampling or Criterion Sampling
307. What is the ontological assumption of qualitative research?
- (A) Reality is independent of context
 - (B) Reality is universally applicable
 - (C) Reality is subjective and constructed
 - (D) Reality is singular and objective
308. The researcher focuses on studying shared practices and belief systems (i.e. culture) of a group people in their natural context over a prolonged period of time. Which research design is applicable to use?
- (A) Case Study
 - (B) Phenomenological
 - (C) Ethnography
 - (D) Historical Analysis
309. Why is qualitative data from focus groups challenging to analyze?
- (A) It is numerical and straightforward.
 - (B) It is descriptive and not numerical.
 - (C) It is always accurate.
 - (D) It is easy to process by computers.
310. What is a type of educational research in which the researcher collects data consisting largely of words?
- (A) Action research
 - (B) Qualitative Research
 - (C) Quantitative Research
 - (D) Science Investigatory Project
 - (E) Not Given
311. Which word is an example of an exploratory verb to use in developing qualitative research questions?
- (A) Determine
 - (B) Influence
 - (C) Impact
 - (D) Discover
312. Unlike in quantitative research studies, qualitative research questions are typically ___ in their subject and scope.
- (A) Overarching
 - (B) Precise
313. Use of multiple sources or referents to draw conclusions about what constitutes the truth
- (A) Triangulation
 - (B) Authenticity
 - (C) Transferability
 - (D) None of above
314. In which cases is not possible to use Ethnography?
- (A) Study of working-class youth culture.
 - (B) The natives of Papua New Guinea.
 - (C) Mother tongue interference in a class of high school of learners of English as a Foreign Language.
 - (D) None of above
315. The table top is smooth.
- (A) Qualitative Observation
 - (B) Quantitative Observation

316. What does "etic" perspective mean in qualitative research?
- (A) The emphasis on numerical analysis
 - (B) The researcher's external viewpoint
 - (C) The focus on subjective data
 - (D) The participant's insider viewpoint
317. In which field of inquiry is grounded theory commonly used?
- (A) Philosophy and psychology
 - (B) Sociology
 - (C) Anthropology and sociology
 - (D) Humanities
318. Which of the following is not the critical feature of qualitative research? [2016-August]
- (A) Actual settings are the direct source of data.
 - (B) Data take the forms of words or pictures.
 - (C) Seeking to establish relationships among measured social facts.
 - (D) Researcher becomes immersed in the situation, present or past related to the phenomena.
319. Which one is not an appropriate way to gather narrative data?
- (A) By having conversations with participants
 - (B) By making notes about how participants behave in naturalistic settings
 - (C) Through diaries
 - (D) Through the use of a validated instrument, with numeric variables
320. Which is an example of qualitative research in healthcare?
- (A) Counting patient visits
 - (B) Interviewing patients about their treatment experiences
 - (C) Recording daily hospital expenses
 - (D) Calculating medicine inventory
321. All of the mold samples have grown this week.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
322. Qualitative research includes:
- (A) Numbers
 - (B) Words
 - (C) Statistics
 - (D) Formulae
323. Which of the following is an example of qualitative research?
- (A) Appraisal
 - (B) Mentoring
 - (C) Case study
 - (D) Random survey
324. Does qualitative research have a nomothetic or idiographic approach?
- (A) Nomothetic
 - (B) Idiographic
325. The concepts are viewed as sensitizing ideas or terms that enhance understanding.
- (A) QUANTITATIVE RESEARCH
 - (B) QUALITATIVE RESEARCH
 - (C) PURE/BASIC RESEARCH
 - (D) APPLIED RESEARCH
326. Which qualitative method is best aligned with exploring lived experience of patients with chronic pain?
- (A) Ethnographic fieldwork
 - (B) Phenomenological inquiry
 - (C) Historical document review
 - (D) Grounded theory approach
327. Biases will interfere with qualitative research if not bracketed properly.
- (A) True
 - (B) False

- 328.** What does ethnography explore?
- (A) Natural phenomena from the point of view of the researcher
 - (B) Cultural phenomena from the point of view of the subject of the study
 - (C) Historical events from the point of view of the historian
 - (D) Economic trends from the point of view of the economist
- 329.** ____ are group discussions conducted with the participation of 7 to 12 people to capture their experiences and views regarding specific issues closely related to research question(s).
- (A) Interview
 - (B) Observation
 - (C) Focus Group
 - (D) Survey
- 330.** The extent to which the findings can be transferred to other settings or groups
- (A) Transferability
 - (B) Authenticity
- 331.** A disadvantage of qualitative research is:
- (A) It uses numerical data
 - (B) It is highly structured
 - (C) It is time-consuming
 - (D) It involves experiments
- 332.** A qualitative study limits only to:
- (A) Figures
 - (B) Method
 - (C) Statistics
 - (D) Words
- 333.** Which of the following best describes qualitative research?
- (A) Qualitative uses numbers and statistics as data
 - (B) Qualitative research uses short questionnaires to gather a lot of data quickly.
 - (C) Qualitative studies tell a detailed story about a theory or phenomenon.
 - (D) Qualitative research is focused on answering the question 'when'?
- 334.** A qualitative research is deductive in process: Theory-Hypothesis-Observation-Confirmation
- (A) TRUE
 - (B) FALSE
- 335.** In phenomenological research, what is the initial step in data analysis?
- (A) Developing psychological meaning units
 - (B) Reading transcriptions for overall impressions
 - (C) Obtaining descriptions of experiences from participants
 - (D) Identifying parts within the transcript
- 336.** Critical evaluation of both ____ and quantitative research methodologies is essential in AP Psychology Science Practices.
- (A) Qualitative
 - (B) Experimental
 - (C) Theoretical
 - (D) Statistical
- 337.** It put's emphasis on research participant's interpretations and the meaning they associate.
- (A) Emergent Design
 - (B) Participant's Meaning
 - (C) Reflexivity
 - (D) Holistic Account
- 338.** His hair is black.
- (A) Qualitative
 - (B) Quantitative
- 339.** Data collection and analysis in qualitative studies are often ____
- (A) Triangulated and thematic
 - (B) Statistical and time-limited
- 340.** Why is it harder to analyze qualitative research data?
- (A) Because it has no tool to help researcher analyzing data.
 - (B) Because it is hard to determine the validity and reliability of data

- (C) Because there are many sources that provide data
(D) Because it deals with data in form of interviews, picture, texts, etc.
341. — is the study of human consciousness and individuals' experience of some phenomenon.
(A) Ethnography.
(B) Phenomenology.
(C) Grounded theory.
(D) Case study research.
342. Dolphins in this pod engage in playful behaviour.
(A) This is quantitative data
(B) This is qualitative data
343. Does the following experiment use quantitative or qualitative data?"Mia decided to take a survey of her classmates to find out their favorite types of food."
(A) Quantitative
(B) Qualitative
344. What is the consequence of developing themes or theories too early in field research?
(A) It leads to biased data collection.
(B) It enhances the accuracy of findings.
(C) It speeds up the research process.
(D) It ensures comprehensive data analysis.
345. This kind of Qualitative Research refers to a particular group articular group in which it reveals the nature or characteristics of their own culture through the world perceptions of the cultural group's members.
(A) Content Analysis
(B) Case Study
(C) Ethnography
(D) Historical Research
346. Researcher setting aside own feelings and expectations
(A) Bracketing
(B) Sampling
(C) Deviant case
(D) Misdirection
347. TRUE or FALSE:As an ethnographer, you have to always assume a researcher role and never a social role in the field.
(A) True
(B) False
348. Qualitative research:
(A) Measure, report and analyze a phenomenon
(B) Examines, study and explain a phenomenon
(C) Describe, explain and measure a phenomenon
(D) Describe, understand and explain a phenomenon
Explanation:
349. Data that is descriptive, using qualities or characteristics, and your 5 senses is called —
(A) Quantitative
(B) Qualitative
(C) Non-scientific
(D) Hypothesis
350. What words would be most appropriate to see if a student was describing the QUALITATIVE properties of an organism?
(A) Rough skin
(B) Fourteen pounds
(C) Twice as many teeth
(D) 16 inches long
351. Before setting up in business as a personal trainer in 2010, Marvin Burton undertook qualitative and quantitative market research. Which one of the following questions is most likely to lead to qualitative results?
(A) How often do you visit a gym?
(B) What price are you currently paying for gym membership?
(C) What motivated you to join a gym?
(D) How long have you been a member of a gym?

352. Which type of research is more likely to focus on the meaning and interpretation of human experiences?
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Experimental research
 - (D) Observational research
353. Which type of research relies on words or language, but may also use pictures or photographs and observations?
- (A) Qualitative Research
 - (B) Case Study Research
 - (C) Quantitative Research
 - (D) Descriptive Research
 - (E) All options correct
354. What is the focus of qualitative research according to Pathak et al.?
- (A) Numerical data
 - (B) People's beliefs and experiences
 - (C) Statistical analysis
 - (D) Experimental results
355. Using your senses and describing in words are what kind of data?
- (A) Quantitative data
 - (B) Qualitative data
356. Which of the following best represents a qualitative observation?
- (A) Quality, description
 - (B) Quantity, number
 - (C) Based on fiction
 - (D) Uses scientific instruments
357. A type of non-numerical, descriptive data
- (A) Quantitative
 - (B) Qualitative
 - (C) Control
 - (D) Independent
358. Pure words, phrases, sentences, compositions and stories are used in data analysis
- (A) QUALITATIVE
 - (B) QUANTITATIVE
359. Which is NOT a way of conducting Narrative Inquiry?
- (A) Comparing ethnic view
 - (B) Reading documents
 - (C) Look for themes
 - (D) Access to feelings
360. What distinguishes qualitative research in terms of data?
- (A) Focuses on numerical data
 - (B) Emphasizes large sample sizes
 - (C) Utilizes words, images, and categories
 - (D) Relies on statistical analysis
361. Which of the following consists of a qualitative interview technique, where the informants are encouraged to talk about unusual organizational events instead of answering direct questions, deemphasising the inclusion of general opinions about management and working procedures, instead focusing on specific events?
- (A) Job/Task Analysis
 - (B) Critical Incident Technique
 - (C) Work Domain Analysis
 - (D) Staffing Model
362. 'Qualitative Measures' in research methods and design refer to:
- (A) Non-numerical data such as interviews and observations
 - (B) Statistical analysis of numerical data
 - (C) Use of large sample sizes for generalization
 - (D) Measurement using standardized tests
363. If you note the flavors of ice cream people prefer, is that qualitative data?
- (A) True
 - (B) False

- 364.** Which qualitative research methods are commonly used by business anthropologists to gather information from stakeholders?
- (A) Surveys and case studies
 - (B) Interviews and focus groups
 - (C) Experiments and simulations
 - (D) Observational studies and questionnaires
- 365.** What is an example of a qualitative research method mentioned in the text?
- (A) Statistical analysis
 - (B) Interviews
 - (C) Surveys
 - (D) Numerical measurements
 - (E) Hypothesis testing
- 366.** The reason why qualitative research requires data collection in varied forms is ____
- (A) To gather comprehensive and rich description of the subject.
 - (B) To give options to the researcher which data are the best.
 - (C) To keep the researcher busy for the entire period of the study.
 - (D) To give justice to the chosen participants of the study by exposing them to different situations.
- 367.** What is an alternative method for evaluating qualitative research?
- (A) Truthfulness
 - (B) Trustworthiness
 - (C) Impressiveness
 - (D) Skilfulness
- 368.** What does "inductive reasoning" in qualitative research involve?
- (A) Using pre-existing theories to analyze data.
 - (B) Relying on random sampling methods.
 - (C) Drawing conclusions based on observed data.
 - (D) Analyzing numerical data for statistical significance.
- 369.** In ____ research, the researcher is less concerned about confounding variables
- (A) Qualitative
 - (B) Quantitative
- 370.** Which of the following is not a characteristic of Qualitative Research?
- (A) Qualitative Research is concerned with the process as well as the product.
 - (B) Qualitative research deals with how people make sense out their lives
 - (C) The direct source of data is the natural setting and the researcher is the key instrument in qualitative research.
 - (D) The attributes of the subjects of a study is a major concern.
- 371.** Qualitative research is based on data that cannot be measured or counted but can be collected and interpreted through observation.
- (A) True
 - (B) False
- 372.** Is the following qualitative or quantitative?
"The mixture turned pink."
- (A) Qualitative
 - (B) Quantitative
- 373.** Hair color of each student in class
- (A) Discrete quantitative
 - (B) Continuous quantitative
 - (C) Qualitative
 - (D) None of above
- 374.** The milk had gone sour and smelled very bad
- (A) Quantitative data
 - (B) Qualitative data
- 375.** An ethnography that studies small units in a group or culture is called:
- (A) Group ethnography
 - (B) Focused ethnography

- 376.** What is the focus of a biographical study in narrative research?
- (A) The researcher writes and records the experiences of another person's life.
 - (B) The individual writes and records their own life experiences.
 - (C) A narrative study that portrays an individual's entire life.
 - (D) Gathering personal reflections on events and their causes from one or several individuals.
- 377.** Qualitative or Quantitative: The butterfly is on a pink flower.
- (A) Qualitative
 - (B) Quantitative
- 378.** The penguins are black and white.
- (A) Qualitative Observation
 - (B) Quantitative Observation
- 379.** Which of the following is not a criticism of qualitative research?
- (A) The studies are difficult to replicate
 - (B) There is a lack of transparency
 - (C) The approach is too rigid and inflexible
 - (D) The accounts are too subjective and impressionistic
- 380.** Which of the following is not a feature of grounded theory?
- (A) Simultaneous data collection and analysis
 - (B) Continual assessment of data
 - (C) Pre-existing hypothesis testing
 - (D) Data-driven theory development
- 381.** Qualitative designs that require an ongoing analysis of data to suggest profitable new strategies are called:
- (A) Historical
 - (B) Interpretative
 - (C) Emergent
 - (D) None of above
- 382.** This approach to ethnographic research is frowned upon as it entails the researcher to assume a false role, name, and identity and consistently lie to his/her study group.
- (A) Closed Setting
 - (B) Covert Ethnography
 - (C) Overt Ethnography
 - (D) Passive Observation
- 383.** Which feature best distinguishes qualitative research from quantitative research in nursing studies?
- (A) Focuses on numerical measurement and statistics
 - (B) Directly aims to improve clinical procedures
 - (C) Tests laboratory-developed theoretical models
 - (D) Emphasizes meanings and perceptual realities
- 384.** Take place in naturalistic settings by researchers who engage in fieldwork
- (A) Qualitative
 - (B) Quantitative
- 385.** In qualitative studies, a critical concern is to access:
- (A) Information-rich sources of data
 - (B) Randomization
 - (C) Stratified sampling
 - (D) None of above
- 386.** Which of the following is a benefit of conducting qualitative research?
- (A) You can do in depth exploration of real life experiences
 - (B) You can collect data from a large sample quickly
 - (C) You do not need to do a literature review
 - (D) None of the above
- 387.** A key feature of grounded theory is ____
- (A) Categories are integrated into a theoretical framework.

- (B) Social processes are not discovered in the data.
- (C) Data collection and analysis occur before.
- (D) None of above
- 388.** Which method did anthropologists begin applying to market research during the 1970s and 1980s?
- (A) Participant observation
- (B) Ethnographic methods
- (C) Cultural relativism
- (D) Social factor analysis
- 389.** What are facts and figures based on opinion and personal interpretations?
- (A) Quantitative Data
- (B) Situation Analysis
- (C) Qualitative Data
- (D) External Data
- 390.** Which of these is a strength of qualitative data?
- (A) Easy to analyse
- (B) Provides strong descriptions and detailed information
- (C) Reliable
- (D) Cheap
- 391.** Ethnography is generally associated with naturalistic approaches in social research.
- (A) True
- (B) False
- 392.** James, Anika, and Arjun are conducting a science experiment. They need to record some qualitative data. Which of the following could be an example of qualitative data they could record?
- (A) The color of the flowers in their garden
- (B) The speed of their school bus
- (C) The temperature of their classroom
- (D) The weight of a rock they found in the park
- 393.** What is the primary goal of phenomenological research?
- (A) To analyze statistical data from human behavior
- (B) To understand the underlying meaning and common essence of a specific human experience
- (C) To develop new technologies for human interaction
- (D) To study the physical structure of the human brain
- 394.** Ethnographic research is one form of ___ research which concerns with studying human behavior within the context in which that behavior would occur naturally and in which the role of the researcher would not affect the normal behavior of the subjects.
- (A) Quantitative
- (B) Qualitative
- 395.** A qualitative research approach that analyzes the data in an organized, detailed, and comprehensive manner. It's more than counting words or phrases in a text.
- (A) Coding
- (B) Thematic development
- (C) Data Driven Coding
- (D) Concept Driven Coding
- 396.** Qualitative research is important in the field of behavioral sciences because
- (A) The aim is to discover the underlying motives of human behavior.
- (B) The motive is to analyze the data to draw inferences.
- (C) The objective is to find out the truth of the study.
- (D) The purposive is to bring out the qualitative and quantitative aspects of research.
- 397.** Which of the following techniques allows the researcher to interact with consumers over a period to observe and ask questions?
- (A) Observational studies
- (B) Ethnographies

- (C) Projective techniques
(D) In-depth Interview
- 398.** Green, slimy, and several spots
(A) Qualitative data
(B) Quantitative data
- 399.** Marian tastes brown sugar and white sugar. She records in her data log that the brown sugar tastes sweeter.
(A) Quantitative
(B) Qualitative
- 400.** When researcher is involved in the research process, s/he is studying ____
(A) Objective reality
(B) Subjective reality
(C) Neutral reality
(D) Phenomenon
- 401.** For items 37-39, identify the qualitative research designs that may correspond in the given statements in each item. Choose your answers in the box provided (case study; ethnography; historical study; phenomenology). The researcher wants to increase his understanding on the burial practices of Mangyans.
(A) Case study
(B) Ethnography
(C) Historical study
(D) Phenomenology
- 402.** Which research method is commonly associated with ethnography?
(A) Structured surveys
(B) Randomized trials
(C) Participant observation
(D) Laboratory experiments
- 403.** Which of the following is a challenge associated with ethnographic fieldwork?
(A) Lack of ethical dilemmas
(B) Gaining access, reciprocity, and dealing with power imbalances
(C) Avoiding social-cultural concepts
(D) Writing exclusively for a technical audience
- 404.** Is generated by asking open ended questions or taking field notes
(A) Quantitative
(B) Qualitative
- 405.** Which research paradigm is least concerned about generalizing its findings?
(A) Quantitative research
(B) Qualitative research
(C) Mixed research
(D) None of the above
- 406.** What skill is essential for identifying stories in narrative research?
(A) A keen eye to identify stories that capture the individual's experiences.
(B) The ability to generalize information from the source material.
(C) A focus on quantitative data analysis.
(D) The ability to ignore multilayered contexts.
- 407.** Nature of Data: Words, phrases, sentences
(A) Quantitative
(B) Qualitative
- 408.** Qualitative analysis are simple to depict using statistics, graphs, charts, and numbers
(A) True
(B) False
- 409.** Which method is used in qualitative research to ensure confirmability?
(A) Increasing the sample size
(B) Using statistical tools
(C) Maintaining an audit trail
(D) Applying random sampling techniques
- 410.** Which qualitative research method involves observing how a product or service is incorporated into daily functioning and routines?
(A) Mystery shopping

- (B) UX research
(C) Ethnographic market research
(D) UI research
- 411.** Which of the following is NOT a concern of qualitative research?
(A) Attitudes
(B) Behavior
(C) Experiences
(D) Statistics
- 412.** Ethnographic research (also called ethnography) is the study of the ___ and ___ in their natural settings.
(A) Social patterns and community perspectives
(B) Economic patterns and population perspectives
(C) Cultural patterns and participants perspectives
(D) Political patterns and public perspectives
- 413.** What type of research seeks to find in-depth, open-ended responses?
(A) Quantitative
(B) Marketing
(C) Chi square
(D) Experimental
(E) Qualitative
- 414.** Which type of validity refers to the trustworthiness of the portrayal of study participants' perspectives and meanings in qualitative research?
(A) Interpretive validity
(B) Theoretical validity
(C) Internal validity
(D) Descriptive validity
- 415.** This type of ethnographic research is focused on understanding how knowledge is constructed and used.
(A) Case study
(B) Performance ethnography
(C) Cognitive ethnography
(D) Realist ethnography
- 416.** Interpretivist studies usually involve which kind of data?
(A) Quantitative
(B) Positivist
(C) Interactive
(D) Qualitative
- 417.** An instructional technology coordinator decides to hold a focus group to gather information on an aspect of the professional learning program. A key feature of a focus group is that it: ___
(A) Explores participants' beliefs, opinions, and attitudes.
(B) Provides quantitative data through surveys.
(C) Focuses on individual written responses only.
(D) Requires participants to complete standardized tests.
- 418.** This design allows you to understand the ways of how people go through inevitable events in their lives.
(A) Evaluation design
(B) Descriptive design
(C) Phenomenological design
(D) Ethnographic design
- 419.** In narrative research, what must a researcher be to acknowledge how their background shapes the 'restoring' process?
(A) Objective
(B) Reflexive
(C) Analytical
(D) Neutral
- 420.** Qualitative research involves controlling and manipulating variables.
(A) True
(B) False

- 421.** Ethnography: — entails both observing people as an outsider would and actively participating in the various activities of studied people's lives.
- (A) Semi-structured interviews
 - (B) Participant observation
 - (C) Informants
 - (D) None of above
- 422.** Why must participants in phenomenological research be carefully selected?
- (A) To ensure they have all experienced the phenomenon in question
 - (B) To ensure they have diverse backgrounds
 - (C) To ensure they have no prior knowledge of the topic
 - (D) To ensure they are experts in research methods
- 423.** An approach to study perceptions, experiences and accounts of an event or to gather historical knowledge as viewed by individuals. It is a picture of something in someone's own words.
- (A) Participant observation
 - (B) Oral history
 - (C) Interview
 - (D) Workshop
- 424.** What research looks for open-ended responses?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Survey
 - (D) Questionnaire
- 425.** Which is not an important characteristic of a grounded theory study?
- (A) Use of interview data only
 - (B) Use of the inductive method
 - (C) Constant checking of interpretations against data
 - (D) Production of an emergent theory
- 426.** In which of the following qualitative methods are subjects asked to complete an incomplete stimulus?
- (A) Word association
 - (B) Projective techniques
 - (C) Visualization
 - (D) Brand personification
 - (E) Laddering
- 427.** Two popular types of ethnography include realist ethnography and — ethnography.
- (A) External
 - (B) Critical
 - (C) Similar
 - (D) Internal
- 428.** Which one of these is NOT normally associated with qualitative data?
- (A) Words.
 - (B) Images.
 - (C) Pie charts.
 - (D) Narrative.
- 429.** Process: Inductive (Bottom to Up)
- (A) Quantitative
 - (B) Qualitative
- 430.** This type of research design is better suited to extracting meaning from an event or phenomenon (the 'why') than its cause (the 'how').
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Experimental research
 - (D) Non-experimental research
- 431.** Qualitative research is — and broad compared to quantitative research.
- (A) Concise
 - (B) Complex
 - (C) Complicated
 - (D) None of above

432. Describe whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of qualitative research. wide-angle and “deep-angle” lens, examining breadth & depth of phenomena, Not interested in generalizing beyond individuals/groups studied
- (A) Ontology
 - (B) Epistemology
 - (C) View of thought and behavior
 - (D) Research focus
433. Useful lessons for the provision of services in long-term care facilities in South Korea: operators’ experiences illuminate the phenomenon of working with the elderly in the field
- (A) Qualitative
 - (B) Quantitative
434. In grounded theory, the process of comparing data with emerging categories is known as:
- (A) Member checking
 - (B) Ethnography
 - (C) Constant comparative method
 - (D) Phenomenological analysis
435. The purpose of interviews and focus groups in research is to:
- (A) Collect quantitative data
 - (B) Gather qualitative insights
 - (C) Test hypotheses
 - (D) Analyze statistical data
436. Classify each research method as belonging to either the quantitative or qualitative research. Case Study
- (A) Quantitative
 - (B) Qualitative
437. Phenomenology often relies almost exclusively on which of the following to elicit detailed descriptive accounts of the lived experience?
- (A) Participant observation
 - (B) Extensive, in-depth interviews
 - (C) Multiple forms of data collection
 - (D) Reports and observations
438. Trey is the fastest runner in the class!
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
439. Focus group discussions, literature reviews, interviews are common data collection methods of this research.
- (A) Qualitative Research
 - (B) Quantitative Research
440. During a class discussion, Scarlett asked, ‘Which of the following is NOT one of the five traditions of qualitative research described by Creswell (1998)?’
- (A) Biographical / Narrative
 - (B) Phenomenology
 - (C) Grounded Theory
 - (D) Experimental Design
441. It’s a set of approaches that allows researchers to observe consumption behavior in natural settings.
- (A) Market-oriented ethnography
 - (B) Process checkpoint evaluations
 - (C) Service research program
 - (D) None of the above
442. What is a main strength of qualitative research?
- (A) Generates results that are relatively independent of the research
 - (B) Leads to a complex understanding about events or phenomenon
 - (C) Produces integrated knowledge that informs theory and practice
 - (D) Empowers practitioners to contribute to knowledge base
443. It is the direct description of a group, culture or community.
- (A) Case Study
 - (B) Ethnography

- (C) Biographical Study
 - (D) Phenomenology
 - (E) Grounded Theory
- 444.** What is the role of stories in a community, as considered in narrative research?
- (A) To determine the community's population
 - (B) To analyze the economic status of the community
 - (C) To explore what stories do among the community members
 - (D) To calculate the average length of narratives
- 445.** Qualitative data are subjectively expressed.
- (A) TRUE
 - (B) FALSE
- 446.** Circle the best answer. Dorothy Smith argued sociology should begin from:
- (A) Institutions
 - (B) Everyday life
 - (C) Statistics
 - (D) Theory
- 447.** Which research method focuses on the shared experience of a common phenomenon across multiple participants?
- (A) Phenomenology
 - (B) Ethnography
 - (C) Grounded Theory
 - (D) Case Study
- 448.** Qualitative research should not be conducted by social scientists
- (A) True
 - (B) False
- 449.** True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. One limitation of qualitative research is the possibility of researcher bias in interpreting data.
- (A) True
 - (B) False
- 450.** Exploratory research to gain insights into opinions and motivations of customers is
- (A) Primary data
 - (B) Secondary data
 - (C) Quantitative data
 - (D) Qualitative data
- 451.** The methods used vary using unstructured or semi-structured techniques.
- (A) Qualitative Research
 - (B) Quantitative Research
- 452.** Develop a strategy for using pattern coding in a qualitative study of student engagement in online learning.
- (A) Use statistical software to run the analysis
 - (B) Categorize responses into recurring patterns of behavior and attitudes
 - (C) Use descriptive codes to summarize interview responses
 - (D) None of above
- 453.** Subjective; sometimes personally engaged
- (A) QUANTITATIVE
 - (B) QUALITATIVE
- 454.** A qualitative research which deals why people buy or didn't buy the product or service.
- (A) Product research
 - (B) Motivation Research
 - (C) Sales Research
 - (D) Distribution Research
- 455.** In depth written data that comes from unstructured interviews or observations and often contains opinions and facts is known as what?
- (A) Quantitative data
 - (B) Qualitative data
 - (C) Cross section study
 - (D) Content analysis
- 456.** Classify the observation as qualitative or quantitative: soapy smell
- (A) Qualitative
 - (B) Quantitative

457. Which description aligns with qualitative research design evolution during a study?
- (A) Design defined by statistical tests only
 - (B) Predefined design constrained by instrumentation
 - (C) Fixed design that never changes
 - (D) Emergent design shaped by ongoing decisions
458. Phenomenological Research is a
- (A) Descriptive Research.
 - (B) Quantitative Research.
 - (C) Trend Research.
 - (D) Qualitative Research.
459. Deciding to go and live in IP communities and study the culture and their educational practices.
- (A) ETHNOGRAPHY
 - (B) PHENOMENOLOGY
 - (C) All the above
 - (D) None of the above
460. True or False: Inductive reasoning is associated with Qualitative Research
- (A) True
 - (B) False
461. Categorical data can also be known as ____ data.
- (A) Quantitative
 - (B) Qualitative
462. ____ research usually focuses on the relationships among variables, while ____ attempts to understand concrete human reality in its local context, with all of its complexity. Answer the second blank only
- (A) Qualitative
 - (B) Quantitative
463. The use of multiple data sources to help understand a phenomenon is one strategy that is used to promote qualitative research validity. Which of the following terms describes this strategy?
- (A) Data matching.
 - (B) Data feedback.
 - (C) Data triangulation.
 - (D) Pattern matching.
464. A(n) ____ is a gathering of 6 to 10 people carefully selected by researchers based on certain demographic, psychographic, or other considerations and brought together to discuss various topics of interest at length.
- (A) Target group
 - (B) Pilot group
 - (C) Focus group
 - (D) Customer base
 - (E) Ethnographic group
465. The researcher has direct contact with and gets close to the people, situation, and phenomenon under study; researcher's personal experiences and insights are important part of the inquiry and critical to understanding the phenomenon.
- (A) Personal contact and insight
 - (B) Dynamic systems
 - (C) Emphatic neutrality
 - (D) Qualitative data
466. Data can be rich in detail and insightful, so not reductionist.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
467. Categorical data such as eye color and birthplace is called ____
- (A) Qualitative
 - (B) Quantitative
468. What is the purpose of coding in qualitative data analysis?
- (A) To organize and categorize data based on themes
 - (B) To test the hypothesis
 - (C) To summarize data numerically
 - (D) To measure the frequency of data

469. An established “strength” of qualitative research occurs when data is collected in which kind of setting?
- (A) Small population pool
 - (B) Naturalistic
 - (C) Unrepeatable
 - (D) Researcher-biased
470. What is the next step after “Horizontalization” in analyzing data in phenomenological research?
- (A) Statistical analysis
 - (B) Grouping statements into meaningful themes
 - (C) Conducting interviews
 - (D) Writing a research report
471. The center of the flower is yellow and fuzzy.
- (A) Qualitative data
 - (B) Quantitative data
472. Naming the types of animals you saw at the zoo an example of qualitative data?
- (A) NO
 - (B) YES
473. What is the primary advantage of using qualitative research methods?
- (A) They focus on large sample sizes
 - (B) They provide statistical data
 - (C) They allow for in-depth exploration of complex issues
 - (D) They are less time-consuming than quantitative methods
474. It does not require a huge number of participants.
- (A) QUALITATIVE
 - (B) QUANTITATIVE
475. These researchers are interested in people’s lived experiences; they seek to interpret and find meaning in these experiences
- (A) Quantitative
 - (B) Qualitative
476. Data related to a person’s experiences as represented through words and non-verbal cues is called?
- (A) Secondary Data
 - (B) Primary Qualitative Data
 - (C) Primary Quantitative Data
 - (D) None of above
477. Which is the weakest reason for interpretivist/qualitative research findings to be not-generalisable?
- (A) Sample size is too small
 - (B) Research is concerned with understanding uniqueness
 - (C) Social phenomena is a subjective matter
 - (D) Data is from interview alone
478. Which is most likely to produce qualitative data?
- (A) An experiment
 - (B) A structured observation
 - (C) A questionnaire of closed questions
 - (D) An interview Edit
479. Thick description is ____
- (A) Focused on the fine detail of human experience
 - (B) Focused on the actions of human being
 - (C) Focused on the religion of human being
 - (D) None of above
480. Which of the following is NOT a general feature that characterizes most qualitative research?
- (A) Holistic perspective.
 - (B) Naturalistic inquiry.
 - (C) Personal contact and insight.
 - (D) Inflexible design.
481. Who developed Grounded Theory?
- (A) Creswell
 - (B) Strauss and Glaser
 - (C) Punch
 - (D) Elizabeth

482. The patient complained of aches and pains.
(A) Qualitative
(B) Quantitative
483. Qualitative research is also called as?
(A) Subjective
(B) Divergent
(C) Objective
(D) Convergent
484. What does qualitative research enable researchers to do, according to Edward (2001)?
(A) Simplify social interactions
(B) Grasp social complexities
(C) Conduct experiments
(D) Generate numerical data
485. What is a central component of both the purpose statement and the research questions in qualitative research?
(A) The main hypothesis
(B) Central phenomenon
(C) Research problem
(D) Gathering data
486. Data analysis in qualitative studies, compared to quantitative studies, is:
(A) Inductive rather than deductive
(B) Deductive rather than inductive
(C) Theoretical rather than applied
(D) Applied rather than theoretical
487. What type of question is best answered using qualitative data?
(A) What is the average height of students?
(B) How much revenue was made in sales?
(C) What do customers think about a product?
(D) How many students passed an exam?
488. The grounded theorist is finished analyzing data when theoretical saturation occurs.
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
489. Which of these is an example of qualitative market research
(A) Government statistics
(B) Questionnaire
(C) Focus group
(D) Trade reports
490. What does this mean by “ethnographic research”?
(A) A type of research that is used to describe the characteristics of a population
(B) A logical exploration of a system of beliefs and assumptions
(C) Research conducted with a scientific approach using two sets of variables
(D) A qualitative method for collecting data often used in the social and behavioral sciences
491. A qualitative investigation focuses on
(A) Why and how
(B) What and how many
(C) Who and where
(D) When and where
492. Which is not the research requirements for Qualitative Research?
(A) Extensive time in the field
(B) Complex and long process of data analysis
(C) Intense social interaction and communication
(D) Writing short text
493. This research relies on textual data.
(A) Qualitative Research
(B) Quantitative Research
494. What type of research is introduced in today's session?
(A) Quantitative Research
(B) Qualitative Research
(C) Experimental Research
(D) Descriptive Research

495. Which of the following is an example of a focus group that might be discouraged due to power dynamics?
- (A) Peer-to-peer focus group
 - (B) Teacher-student focus group
 - (C) Student-student focus group
 - (D) Employee-employee focus group
496. You are developing a new product and want to understand the needs of the target market.
- (A) Quantitative
 - (B) Qualitative
497. Fill in the missing word. Due to the ____ nature of qualitative research, there is no agreed process in designing a qualitative research project. To this end, researchers can use certain design principles in designing their qualitative projects.
- (A) Unstructured
 - (B) Numerical
 - (C) Rigid
 - (D) Structured
498. Name the following paradigm: The arts are able to access that which is otherwise out of reach. Researchers value preverbal ways of knowing, including sensory, emotional, perceptual, kinesthetic, and imaginal knowledge (Chilton, Gerber, & Scotti 2015; Conrad & Beck, 2015; Cooper, Lamarque & Sartwell, 1997)
- (A) Critical
 - (B) Pragmatic
 - (C) Art-based or Aesthetic
 - (D) Constructivist
499. ____ describes people's life stories to add to our understanding.
- (A) Ethnography
 - (B) Narrative Inquiry
 - (C) Phenomenology
 - (D) Case Study
 - (E) Grounded theory
500. We can use our five senses to measure qualitative data.
- (A) True
 - (B) False
501. Qualitative researchers are more interested in which question?
- (A) Who
 - (B) How
 - (C) What
 - (D) When
502. The data in qualitative research are numeric in nature
- (A) True
 - (B) False
503. An example source for a data of a qualitative research is ____
- (A) Financial report
 - (B) Recorded voice or video
 - (C) Experiment
 - (D) Exam marks
504. This kind of research tends to be subjective, since not all data can be fully controlled.
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Experimental research
 - (D) Non-experimental research
505. Which of the following is NOT a common interpretivist school approach?
- (A) Ethnography.
 - (B) Phenomenology.
 - (C) Hermeneutics.
 - (D) Biological determinism.
506. Qualitative observations are made when you use your senses to observe the results (see, smell, taste, hear, feel)
- (A) True
 - (B) False

- 507.** What is an "insider account" in qualitative research?
- (A) Statistical analysis of participant behavior
 - (B) Data interpreted by external observers
 - (C) Generalized findings from case studies
 - (D) Descriptions provided by participants of their own experiences
- 508.** In this type of research, the researcher gathers data or facts from one or two subjects through interviews, documents etc. over a period of time.
- (A) Phenomenology
 - (B) Ethnography
 - (C) Narrative
 - (D) None of above
- 509.** When wanting to know a combined reaction of audience before launching a seemingly controversial ad, the following research method is usually used before per-launch.
- (A) Survey
 - (B) In-depth interviews
 - (C) Focused Group Discussions
 - (D) Taking photos
- 510.** Which qualitative research tradition involves the discovery of a core variable that is central in explaining what is going on in a social scene?
- (A) Phenomenology
 - (B) Philology
 - (C) Ethnography
 - (D) Grounded theory
- 511.** What is the primary focus of phenomenological research according to its core philosophical assumptions?
- (A) The study of metaphysical entities
 - (B) Conscious, lived experiences
 - (C) The analysis of historical events
 - (D) The exploration of abstract mathematical concepts
- 512.** The main aim of mapping in ethnography is to:
- (A) Draw geographic maps of towns and provinces
 - (B) Record the local worldviews and perspectives
 - (C) Produce written history books for reference in schools
 - (D) Replace existing traditions with new practices
- 513.** Qualitative researchers typically:
- (A) Conduct surveys
 - (B) Examine behaviors and perceptions in detail
 - (C) Focus on numerical data
 - (D) Generalize findings
- 514.** Which of the followings is the wrong statement about Qualitative research?
- (A) Only about "what" people think
 - (B) Focuses on obtaining data through open-ended and conversational communication
 - (C) Based on the disciplines of social sciences like psychology, sociology, and anthropology
 - (D) Among the types of qualitative research methods are in-depth interview, focus groups, ethnographic research, content analysis, case study research
- 515.** Which of the following is NOT a qualitative research method?
- (A) Interviews
 - (B) Questionnaires
 - (C) Experiments
 - (D) Case Studies
- 516.** Researchers conducting qualitative study focus on exploring the world as it is ____ occurs in order to capture participants' perspectives.
- (A) Naturally
 - (B) Broadly
 - (C) Artificially
 - (D) Generally

517. When it comes to data analysis, which of the following focuses mainly interpretative, descriptive and extensive narrative?
- (A) Quantitative
 - (B) Qualitative
 - (C) Both
 - (D) None of above
518. It is defined as a process of naturalistic inquiry that seeks an in-depth understanding of social phenomena within their natural setting.
- (A) Quantitative Research
 - (B) Practical Research
 - (C) Qualitative Research
 - (D) None of above
519. This type of generalization is when thick descriptions are provided so the researcher can determine if the research applies to her/his instance.
- (A) Case-to-case generalization
 - (B) Theoretical generalization
 - (C) Sample-to-population generalization
 - (D) None of above
520. One of the two types of codes in qualitative research that show up during analysis.
- (A) Emergent
 - (B) Preset
 - (C) Code
 - (D) Coding
521. Which type of research focuses on understanding meanings and experiences?
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Experimental Research
 - (D) Descriptive Research
522. The researcher wants to conduct a study regarding the life of a fisherman from Obando, Bulacan. What research design is most appropriate?
- (A) Phenomenology
 - (B) Case study
 - (C) Grounded theory
 - (D) Narrative research
523. Qualitative is primarily exploratory research. It is used to gain an understanding of underlying reasons, opinions, and motivations.
- (A) True
 - (B) False
524. Data classified under the basis of some attributes is known as ___ classification.
- (A) Qualitative
 - (B) Quantitative
 - (C) Geographical
 - (D) Chronological
525. Which research method is best for collecting detailed descriptions and insights?
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Survey Research
 - (D) Experimental Research
526. Which type of data describes characteristics or qualities and is often categorical?
- (A) Discrete data
 - (B) Qualitative data
 - (C) Quantitative data
 - (D) Continuous data
527. Qualitative research uses ___ approaches to generate insights into social problems that can't be measured in a quantitative way (Curry, 2015).
- (A) Inductive
 - (B) Deductive
 - (C) Mixed
 - (D) None of above
528. Qualitative Data is often seen as more subjective
- (A) True
 - (B) False

- 529.** Open-Ended Questions
(A) Qualitative Research
(B) Quantitative Research
- 530.** Select the odd one out
(A) Qualitative
(B) Phenomenological
(C) Survey
(D) Interpretive
- 531.** Using a customer discovery interview quote in a pitch would be an example of which kind of data?
(A) Quantitative data
(B) Qualitative data
- 532.** Choosing how to categorise elements observed in a content analysis can prove to be highly
(A) Objective
(B) Direct
(C) Subjective
(D) None of above
- 533.** What kind of observation is being made in the following statement: The candy was sour.
(A) Qualitative
(B) Quantitative
- 534.** Considering that Ethnography is a systematic study of people and culture, in which situation it could be used?
(A) Searching for the meanings of cultural norms and views.
(B) Identifying a problem or phenomenon to explore
(C) Writing a story about a participant
(D) None of above
- 535.** Which pair correctly matches research type with primary data form?
(A) Applied-randomized numerical trials
(B) Qualitative-controlled experiments
(C) Quantitative-words and stories
(D) Qualitative-interviews and narratives
- 536.** The six steps to validate rigor are repeat the cycle, prolonged engagement and persistent observation, experience with the process, triangulating data, member checking, and participant debriefing.
(A) False
(B) True
- 537.** What type of data is collected through interviews and focus groups to understand consumer behavior?
(A) Quantitative Data
(B) Qualitative Data
(C) Secondary Research
(D) Primary Research
- 538.** What career is qualitative research mostly incorporated in?
(A) Humanities/Social Sciences
(B) Construction
(C) Accounting
(D) Sports
- 539.** What is the best research approach for a problem that calls for a concept or phenomenon that needs to be explored and understood because it involves an understudied sample?
(A) Qualitative
(B) Quantitative
(C) Mixed methods
(D) All of these
- 540.** The term 'phenomenology' is associated with the process of
(A) Correlational Study
(B) Analysis of Variance
(C) Probability Sampling
(D) Qualitative Research
- 541.** Which qualitative research design focuses on exploring an individual's lived experiences?
(A) Ethnography
(B) Phenomenology
(C) Case Study
(D) Grounded Theory

542. Which of the following is true about focus group research?
- (A) It is strong on external validity.
 - (B) It is commonly used in quantitative research designs.
 - (C) It is good for testing hypotheses.
 - (D) It is useful when researchers seek in-depth responses from a small group of people.
543. The coffee was a rich, brown color and smelled delicious
- (A) Quantitative data
 - (B) Qualitative data
544. Which research approach requires philosophical assumptions and theoretical frameworks?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed
 - (D) Scientific
545. This research is exploratory. It is carried out to gain an understanding of primary reasons, motivations, and opinions.
- (A) Qualitative
 - (B) Quantitative
 - (C) Descriptive
 - (D) Opinionated
546. What are 'field notes' in the context of ethnographic research?
- (A) Notes on the research methodology
 - (B) A summary of the research findings
 - (C) Detailed notes describing activities and interactions for analysis
 - (D) A list of subjects to be interviewed
547. Which of the following is not the critical feature of qualitative research?
- (A) Researcher becomes immersed in the situation, present or past related to the phenomena.
 - (B) Seeking to establish relationships among measured social facts.
 - (C) Actual settings are the direct source of data.
 - (D) Data take the forms of words or pictures.
548. Qualitative research aims to
- (A) Gather statistical data
 - (B) Understand why customers behave in a certain way or how they may respond to a new product
549. Qualitative Research is ____
- (A) Deductive
 - (B) Inductive
 - (C) Fixed
 - (D) None of above
550. What is the primary focus of qualitative research?
- (A) Understanding subjective meanings
 - (B) Numerical data analysis
 - (C) Testing hypotheses
 - (D) Establishing universal truths
551. The case-study method of observation was practiced by
- (A) B F Skinner
 - (B) Sigmund Freud
 - (C) Wilhelm Wundt
 - (D) John B Watson
552. The duck is yellow
- (A) Quantitative data
 - (B) Qualitative data
553. Searches for themes and categories using inductive reasoning.
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed
 - (D) None of the above.
554. What is a key characteristic of ethnographic research?
- (A) Emphasis on randomized sampling
 - (B) Focus on numerical analysis

- (C) Reliance on hypothesis testing
(D) Study of cultural contexts from an insider's perspective
555. An advantage of using computer programs for qualitative data is that they —
(A) Can reduce time required to analyze data (i. e., after the data are transcribed).
(B) Help in storing and organizing data.
(C) Make many procedures available that are rarely done by hand due to time constraints.
(D) All of the above.
556. This type of research enables you to gather in-depth insights on topics that are not well understood.
(A) Qualitative Research
(B) Quantitative Research
(C) Mixed Method Research
(D) None of above
557. Student nurse Rianne reviewed the two broad categories of research-qualitative and quantitative. Which among these utilize inductive reasoning?
(A) Qualitative research
(B) Quantitative research
(C) Both of these
(D) Phenomenology
558. You are expected to undertake the following in qualitative research: — (Please select the most accurate response.)
(A) Lab work
(B) Fieldwork
(C) Experimental study
(D) Post-analysis
559. Raccoons tend to have striped tails and black eye masks is an example of — data.
(A) Qualitative
(B) Quantitative
560. Which type of research corresponds to the description: "The subjective testimony of an informant is intended to be shown"?
(A) Biographical or narrative designs
(B) Grounded theory designs
(C) Correlational designs
(D) Survey designs
561. Research results will be descriptive rather than predictive.
(A) Quantitative research
(B) Qualitative research
(C) Fundamental research
(D) Applied research
562. What is information represented with words, pictures, objects?
(A) Qualitative data
(B) Quantitative data
563. Conclusions in qualitative research are based on patterns and themes. What are patterns and themes?
(A) Words and phrases that collectively describe experience of participant
(B) Words and pictures that collectively describe experience of participant
(C) Words and observations that collectively describe experience of participant
(D) Words that collectively describe experience of participant
564. The qualitative research design involves
(A) Emergent design
(B) Correlative design
(C) Experimental design
(D) Cohort design
565. What type of data is "The leaves are dark green"?
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
566. Interviews and questionnaires are largely —
(A) Qualitative

- (B) Quantitative
 - (C) Subjective
 - (D) Objective
567. The ocean water looked bluish green.
- (A) Qualitative
 - (B) Quantitative
568. Siya has always been fascinated by the culture of the indigenous tribes in the Amazon rainforest. To truly understand their way of life, she decides to live among them for several years, immersing herself in their daily activities and traditions. Which research design is this statement related to?
- (A) Experimental
 - (B) Case study
 - (C) Ethnography
 - (D) None of above
569. Qualitative Questions Specify the ____ and the ____ for the study
- (A) Specify the time and the date for the study
 - (B) Specify the gender and the race for the study
 - (C) Specify the participants and the research site for the study
 - (D) None of above
570. Commonly used when the variables are generally poorly studied.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed
 - (D) None of the above.
571. Match each type of research report with the corresponding type of qualitative research. Account that includes patterns, connections, and insights uncovered
- (A) Case study
 - (B) Ethnography
 - (C) Narrative inquiry
 - (D) Phenomenology
 - (E) Grounded theory
572. During a field trip, which of the following is a direct source and key element in qualitative research?
- (A) Laboratory experiments
 - (B) The natural setting
 - (C) Statistical data
 - (D) Computer simulations
573. What is one of the key requirements for conducting ethnographic research?
- (A) A short time in the field to gather quick observations
 - (B) A prolonged time in the field to gain an "insider" perspective
 - (C) Avoiding cultural anthropology concepts
 - (D) Writing in a purely technical style
574. Which qualitative method uses iterative cycles of data collection and analysis?
- (A) Case Study Method
 - (B) Phenomenological Analysis
 - (C) Grounded Theory
 - (D) Narrative Inquiry
575. Which insight would ethnographic research most likely uncover?
- (A) Optimal pallet stacking algorithms
 - (B) Quarterly bond covenant thresholds
 - (C) Changes in municipal tax mill rates
 - (D) Unarticulated habits influencing purchase
576. What research approach studies lived experiences?
- (A) Experimental
 - (B) Phenomenology
 - (C) Descriptive
 - (D) Correlational
577. Why might the data collected from focus groups be considered rich?
- (A) Because it includes statistical significance.
 - (B) Because it is based on a large sample size.

- (C) Because it considers participants' interactions.
(D) Because it can be easily replicated.
578. Which type of data is more likely to be in-depth?
(A) Qualitative data
(B) Quantitative data
579. Ethnography in qualitative research is used to:
(A) Analyze statistical data
(B) Study cultures and communities
(C) Test hypotheses
(D) Conduct experiments
580. It is believed to be one of the weaknesses of qualitative research.
(A) It can develop theories.
(B) It has several avenues to understand phenomena.
(C) It is a way a researcher perceives things as he is immersed in the study.
(D) It answers certain phenomena-social, economic, political, and psychological.
581. What is a qualitative observation?
(A) A qualitative observation is a numerical measurement of data.
(B) A qualitative observation is a statistical analysis of trends.
(C) A qualitative observation is a descriptive assessment based on qualities observed
(D) A qualitative observation is a mathematical calculation of values.
582. Ethnography is originating in ____
(A) Sociology
(B) Psychology
(C) Anthropology
(D) Philosophy
583. Which of the following methods is used to analyze qualitative data?
(A) Regression analysis
(B) Content analysis
(C) ANOVA
(D) T-test
584. It is primarily used to generate theory through relevant information taken from very reliable sources and its focus is theory development.
(A) Ethnography
(B) Phenomenology
(C) Grounded Theory
(D) Case Study
585. Which type of data involves people's feelings and opinions?
(A) Quantitative
(B) Qualitative
586. A qualitative research involves ____ data.
(A) Numerical
(B) Statistical
(C) Categorical
(D) Non numerical
587. What is a more accurate label for what is commonly called "qualitative research?"
(A) Phenomenology
(B) Non-experimental research
(C) Interpretive research
(D) Case research
588. What is a strategy used by qualitative researchers to address researcher bias?
(A) Prolonged engagement in the field
(B) Quantifying turn types
(C) Using coded data for analysis
(D) Triangulation of statistical methods
589. ____ refers to qualitative research designed to probe consumers' hidden, subconscious motivations.
(A) Perception analysis
(B) Subliminal analysis
(C) Motivation research
(D) Need recognition
(E) Market segmentation

- 590.** Which methodological approach uses 'logic-in-use'?
- (A) Quantitative
 - (B) Mixed methods
 - (C) Qualitative
 - (D) Experimental
- 591.** Understanding the millennials study habits.
- (A) Case Study
 - (B) Ethnography
 - (C) Grounded Theory
 - (D) Phenomenology
- 592.** In qualitative research, the researcher typically:
- (A) Tries to generalize results
 - (B) Studies a specific group in detail
 - (C) Conducts controlled experiments
 - (D) Uses pre-existing categories
- 593.** What type of observation is "YES" and "NO"?
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 594.** What is the sample size in qualitative analysis?
- (A) Usually small, as long as the collected information reaches saturation
 - (B) The larger, the better
 - (C) Not too many are needed
 - (D) Must be large enough to perform correlation and regression analysis
- 595.** Who most often uses ethnography to study cultures?
- (A) Professionals in the field of engineering
 - (B) Professionals in the field of teacher education
 - (C) Professionals in the field of anthropology
 - (D) Professionals in the political sector
- 596.** Research participants who carefully observe and report their immediate reaction and feelings in response to different musical sounds are using the method known as introspection
- (A) Bodily function
 - (B) Introspection
 - (C) Meditation
 - (D) Prayer
- 597.** What distinguishes qualitative data analysis?
- (A) Inductive reasoning
 - (B) Statistical calculations
 - (C) Use of control groups
 - (D) Deductive reasoning
- 598.** Which of the following emphasized within a narrative report of a phenomenological research study?
- (A) Narrative descriptions of a cultural context
 - (B) Reporting of participants stories and relationships over time
 - (C) Descriptions of common perceptions of a unique event
 - (D) Discussion of themes, issues and implications of a specific case
- 599.** Qualitative Data is descriptive.
- (A) True
 - (B) False
- 600.** The principle used by qualitative researchers to determine when to stop sampling is called:
- (A) Sample size
 - (B) Data saturation
 - (C) Convenient sampling
 - (D) None of above
- 601.** Qualitative observations are helpful in science.
- (A) True
 - (B) False

- 602.** What is the primary focus of phenomenologic studies in research?
- (A) To analyze documents and artifacts from the past
 - (B) To develop a theory of social phenomenon based on field data
 - (C) To explore the subject's thoughts and feelings to elicit the essence of an individual's experience
 - (D) To test hypotheses using numerical data
- 603.** A type of research which focuses on human experiences
- (A) Ethnography
 - (B) Case Study
 - (C) Phenomenon
 - (D) Phenomenology
- 604.** What is the process of analyzing data in qualitative research?
- (A) Inductively building from particulars to general themes
 - (B) Testing a hypothesis
 - (C) Observing participants in a lab
 - (D) All of the above
- 605.** Which of the following is not one of the 4 major approaches to qualitative research.
- (A) Ethnography.
 - (B) Phenomenology.
 - (C) Grounded theory.
 - (D) Nonexperimental.
- 606.** Describe whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of qualitative research. subjective, mental, personal, constructed
- (A) Ontology
 - (B) Epistemology
 - (C) View of thought and behavior
 - (D) Research focus
- 607.** In a study conducted by Benjamin and Anaya, what do research studies that investigate the quality of relationships, activities, situations, or materials frequently refer to?
- (A) Quantitative Research
 - (B) Experimental Research
 - (C) Qualitative Research
 - (D) Theoretical Research
- 608.** The followings are data collection technique of qualitative research,
- (A) Questionnaire and tests
 - (B) Interview and observation
 - (C) Diary and tests
 - (D) None of above
- 609.** 'Why' questions are answered by ____ studies.
- (A) Quantitative
 - (B) Qualitative
- 610.** A research that is conducted to explore and understand people's beliefs, experiences, attitudes, behavior and interactions through methods such as interviews or focus group discussions is known as:
- (A) Qualitative research
 - (B) Fundamental research
 - (C) Applied research
 - (D) Quantitative research
- 611.** An approach for generating knowledge using methods of inquiry that emphasize subjectivity and the meaning of an experience for the individual.
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed method
 - (D) None of above
- 612.** What characterizes an exploratory research inquiry?
- (A) Seeking a greater understanding of a problem
 - (B) Describing something in detail
 - (C) Understanding causal inferences
 - (D) Predicting future outcomes

- 613.** More inclined to purposive sampling or use of chosen samples based on some criteria
(A) QUALITATIVE
(B) QUANTITATIVE
- 614.** Which research approach allows you to generalise findings
(A) Qualitative
(B) Ethnographic
(C) Phenomenological
(D) None of the answers
- 615.** Accurate portrayal of meanings attached by participants
(A) Descriptive
(B) Interpretive
(C) Theoretical
(D) Internal
(E) External
- 616.** In qualitative research paradigm, which of the following features may be considered critical? [2016-JULY]
(A) Data collection with standardised research tools.
(B) Sampling design with probability sample techniques.
(C) Data collection with bottom-up empirical evidences.
(D) Data gathering to take with top-down systematic evidences.
- 617.** Qualitative research focuses on:
(A) Numbers
(B) Large samples
(C) Meaning and depth
(D) Measurement
- 618.** The role of focus groups in field research is to:
(A) Collect quantitative data
(B) Gather qualitative insights
(C) Conduct experiments
(D) Analyze statistical data
- 619.** Qualitative data refers to information that describes:
(A) Numbers and amounts.
(B) Opinions and feelings.
(C) Characteristics and descriptions.
(D) Mathematical relationships.
- 620.** If the results of the research are interpreted from a variety of perspectives, the research is said to be ____ in nature.
(A) Quantitative
(B) Qualitative
- 621.** The qualitative analysis strategy focusing on complex interdependencies and system dynamics is ____
(A) Holistic perspective
(B) Inductive analysis
(C) Reflexivity
(D) Context sensitivity
- 622.** In qualitative research, what is the primary purpose of conducting focus groups?
(A) To gather diverse perspectives on a topic
(B) To ensure data reliability through replication
(C) To collect numerical data for statistical analysis
(D) To test a specific hypothesis
- 623.** The eye colour of students in OHS
(A) Qualitative
(B) Quantitative
(C) Continuous
(D) Discrete
- 624.** Recognize the strengths of qualitative research in this scenario. A student researcher conducts an in-depth investigation into the diverse problems experienced by senior high school students during work immersion.
(A) Cost-efficient
(B) Time-Consuming
(C) Compliments to quantitative data
(D) Provides detailed information to explain a complex issue

625. Which aspect should not be considered in critiquing the strength of evidence in a qualitative study?
- (A) Reliability
 - (B) Trustworthiness
 - (C) Credibility
 - (D) Transferability
626. Sometimes a comprehensive review of the literature prior to data collection is not recommended by:
- (A) Ethnomethodology
 - (B) Grounded theory
 - (C) Symbolic interactionism
 - (D) Feminist theory
627. Phenomenological research emphasizes:
- (A) Statistical significance
 - (B) Conceptual theory development
 - (C) Lived experiences of participants
 - (D) Generalization to population
628. What is the main role of peer debriefing in ensuring the trustworthiness of qualitative research?
- (A) To analyze the data collected
 - (B) To recruit participants for the study
 - (C) To ensure the accuracy of the data collected
 - (D) To obtain feedback from other researchers to enhance the credibility of the study
629. Ethnography is challenging to use for the following reasons:
- (A) The researcher needs to have a grounding in cultural anthropology
 - (B) Researchers need a permission to investigate
 - (C) It is limited to conflictive groups
 - (D) None of above
630. What does "thick description" aim to explore?
- (A) Only the surface level of cultural phenomena.
 - (B) All the possible meanings of a phenomenon within a particular cultural setting.
 - (C) The photographic evidence of cultural practices.
 - (D) The statistical significance of cultural rituals.
631. In qualitative research, what is the primary purpose of 'Personal Reflexivity'?
- (A) To allow the researcher to reflect on how their own values and experiences may have biased the data.
 - (B) To ensure that the participants are reflecting on their own behavior.
 - (C) To check if the results can be replicated by a different researcher.
 - (D) To change the research hypothesis mid-way through the study.
632. Is the following qualitative or quantitative? "The flower is leaning toward the window."
- (A) Qualitative
 - (B) Quantitative
633. Aisha is conducting a research study on consumer behavior. She believes that qualitative methods are based on statistical data.
- (A) True
 - (B) False
634. Qualitative research reports do not need a Method section.
- (A) True.
 - (B) False.
 - (C) Doubtful.
 - (D) None of the above.
635. When is narrative research most effective?
- (A) When studying the behavior of animals in their natural habitat
 - (B) When the research problem is best understood by telling the stories of those who have experienced it
 - (C) When analyzing numerical data for trends

- (D) When conducting laboratory experiments
- (D) Philosophy
(E) Human storytelling and education
- 636.** In qualitative research, sampling that involves selecting diverse cases is referred to as:
(A) Typical-case sampling
(B) Critical-case sampling
(C) Intensity sampling
(D) Maximum variation sampling
- 637.** What is meant by "thick description" in qualitative research?
(A) Detailed, context-rich accounts of phenomena
(B) Abstract numerical summaries
(C) Standardized observational data
(D) Theoretical generalizations
- 638.** In qualitative research, data is primarily collected through:
(A) Surveys
(B) Interviews and observations
(C) Experiments
(D) Testing
- 639.** Which of the following research designs is primarily focused on understanding the experiences and perspectives of participants?
(A) Qualitative Research
(B) Mixed Methods Research
(C) Experimental Research
(D) Quantitative Research
- 640.** Phenomenologists identify a phenomenon which serves as an object or the unit of analysis and is related to an individual ____
(A) Experience
(B) Feelings
(C) Observation
(D) Stories
- 641.** Phenomenology originated from ____?
(A) Sociology
(B) Multiple disciplines
(C) Anthropology
- 642.** Why might researchers use a small sample in qualitative research?
(A) To ensure the data is statistically significant.
(B) To gather in-depth insights from a subset of the population.
(C) To avoid the need for primary research.
(D) To validate hypotheses with numerical data.
- 643.** Jane Goodall video recorded chimpanzees hunting pigs, this type of data is called ____
(A) Qualitative
(B) Quantitative
- 644.** What does 'saturation' mean in the context of qualitative research?
(A) The point at which no new information is obtained
(B) The maximum number of participants
(C) Data overload
(D) Completing all planned interviews
- 645.** What type of observation is the texture of grass?
(A) QUALITATIVE
(B) QUANTITATIVE
- 646.** Which major research approach seeks to understand people's subjective and shared experiences through systematic observation?
(A) Action
(B) Mixed Methods
(C) Quantitative
(D) Qualitative
- 647.** Which of the following is a primary feature of qualitative research?
(A) Manipulation of independent variables to observe effects
(B) Structured surveys and objective measurements
(C) Statistical analysis of numerical data

- (D) Exploration of complex phenomena through detailed, contextual understanding
- 648.** Qualitative research is often described as ____
- (A) Deductive
 - (B) Inductive
 - (C) Reductionist
 - (D) None of above
- 649.** An advantage of ethnography is ____
- (A) Explain the complexity of group behaviours
 - (B) It is time consuming
 - (C) Having little data lead to false assumptions.
 - (D) None of above
- 650.** This is the phrase used when the researcher explains not just the observed behavior, but the also the context in which it occurs.
- (A) Thick description
 - (B) Thin description
 - (C) Detailed observation
 - (D) Thick analysis
- 651.** This type of research provides a collection of data about opinions.
- (A) Qualitative
 - (B) Quantitative
 - (C) Stratified
 - (D) None of above
- 652.** Which type of reasoning starts with specific examples and leads to a general rule?
- (A) Inductive
 - (B) Conditional
 - (C) Deductive
 - (D) Comparative
- 653.** Findings result from the method used in ethnography by:
- (A) Collecting quantitative data
 - (B) Analyzing cultural phenomena
 - (C) Conducting laboratory experiments
 - (D) Performing statistical analysis
- 654.** A researcher immerses oneself to the community of T'boli in South Cotabato in order to become familiar with their belief system. This method is called:
- (A) Case Study
 - (B) Ethnography
 - (C) Grounded Theory Research
 - (D) Phenomenological Research
- 655.** Qualitative or Quantitative? The sand feels rough. The day is very hot. The camels smell funny.
- (A) Qualitative Observations
 - (B) Quantitative Observations
- 656.** Taste-testing candy bars to choose the best one
- (A) Qualitative
 - (B) Quantitative
- 657.** What is the key difference between the two schools of thought regarding the use of literature reviews in qualitative research?
- (A) The timing of the literature review.
 - (B) The purpose of the literature review.
 - (C) The research methodology.
 - (D) The theoretical framework.
- 658.** Cherry tomatoes are small.
- (A) Inference
 - (B) Quantitative
 - (C) Qualitative
 - (D) None of above
- 659.** Match each type of research report with the corresponding type of qualitative research. Answer options may be used more than once or not at all. Account that includes patterns, connections, and insights uncovered.
- (A) Phenomenology
 - (B) Ethnography
 - (C) Narrative Inquiry
 - (D) Case Study
 - (E) Grounded Theory

- 660.** You want to understand the reasons why customers churn from your service.
- (A) Quantitative
 - (B) Qualitative
- 661.** Qualitative methods are probably the oldest of all the scientific techniques, the method of qualitative research is:
- (A) Questionnaire
 - (B) Attitude Scales
 - (C) Depth Interview
 - (D) Observation
- 662.** Observations, like the color or texture of an object, are ___ observations.
- (A) Quantitative
 - (B) Qualitative
 - (C) Operational
 - (D) Scientific
- 663.** Which of the following is not a major qualitative research analysis strategy?
- (A) Holistic perspective
 - (B) Context sensitivity
 - (C) Creative synthesis
 - (D) Purposeful sampling
- 664.** You want to increase understanding about the planting traditions of Ifugao.
- (A) Qualitative
 - (B) Quantitative
- 665.** The researcher seeks immersion in the details and specifics of the data to discover important patterns, themes, and interrelationships. Begins by exploring, then confirming; is guided by analytical principles rather than rules. Study ends with a creative synthesis.
- (A) Unique case orientation
 - (B) Inductive analysis and creative synthesis
 - (C) Holistic perspective
 - (D) Context sensitivity
 - (E) Voice, perspective, and reflexivity
- 666.** Phenomenological approaches aim to explain:
- (A) How something is interpreted by humans
 - (B) Something as it is without interpretation
 - (C) Behavioral patterns
 - (D) Theoretical concepts
- 667.** Multiple Choice: Read each question carefully and choose the BEST answer. What best differentiates qualitative research from quantitative research?
- (A) Use of surveys only
 - (B) Use of numerical data
 - (C) Focus on meanings and experiences
 - (D) Large sample size requirement
- 668.** What does "naturalistic inquiry" emphasize in qualitative research?
- (A) Contextual and holistic understanding
 - (B) Controlled variables
 - (C) Standardized data collection
 - (D) Laboratory-based experimentation
- 669.** A strategy of inquiry in which the researcher derives a general, abstract theory of a process, action, or interaction grounded in the views of participants.
- (A) Ethnography
 - (B) Grounded Theory
 - (C) Case Studies
 - (D) Phenomenological Research
- 670.** Observations that are made when you use your senses to gather information.
- (A) Manipulated
 - (B) Quantitative
 - (C) Qualitative
 - (D) Operational
- 671.** What does ethnography study?
- (A) Abstract theories of a process
 - (B) Lived experiences of individuals
 - (C) Shared patterns of behaviors
 - (D) Intact cultural group in a natural setting

672. Which of the following is an example of a phenomenon that might be studied using qualitative research?
- (A) The number of students in a school.
 - (B) The causes of tardiness among students.
 - (C) The average age of students in a class.
 - (D) The financial performance of a school.
673. Researcher/s in qualitative research generally collect their own research data through participant observation, documentation, or direct interviews with participants. What characteristic of qualitative research is this?
- (A) Participants meanings
 - (B) Reflexivity
 - (C) Researcher as a key instrument
 - (D) None of above
674. Which option accurately captures inductive reasoning?
- (A) Synthesizing theories by statistical modeling
 - (B) Deriving specifics from general principles
 - (C) Building general conclusions from specific cases
 - (D) Applying protocols without evaluating evidence
675. A study exploring how senior high students cope with academic stress through interviews falls under:
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Experimental Research
 - (D) Correlational Research
676. Data that are descriptive but not numeric
- (A) Qualitative
 - (B) Quantitative
677. Tick the most appropriate response, What type of research are you most likely to conduct using sociological research methods?
- (A) A current social issue such as consumers attitudes to climate change, social attitudes to asylum seekers, homelessness, education among different classes
 - (B) Study of individuals personality
678. What is autoethnography?
- (A) A statistical analysis method used in sociological research.
 - (B) A form of participant observation where the researcher's feelings and actions are central to the study.
 - (C) A historical study of ancient cultures and their languages.
 - (D) A scientific experiment conducted in laboratory settings.
679. How does qualitative research contribute to understanding the context and meaning of participants' experiences?
- (A) By testing hypotheses and generalizing findings
 - (B) By integrating both qualitative and quantitative approaches in a single study
 - (C) By exploring subjective experiences, meanings, and social phenomena
 - (D) By analyzing data collected over time to identify patterns, trends, or seasonality
680. It is a qualitative research which analyzes the language "beyond the sentence". It is the study of the ways in which language is used by the people, both written and spoken contexts.
- (A) Historical Research
 - (B) Discourse Analysis
 - (C) Biography
 - (D) Narrative Report.
681. Classify the observation as qualitative or quantitative: gritty texture
- (A) Qualitative
 - (B) Quantitative
682. Qualitative research has words as its
- (A) Qualitative data
 - (B) Unit of analysis
 - (C) Quantitative data
 - (D) Analysis of data

683. Data collected in qualitative research are analyzed and interpreted and then written using —
(A) Statistical
(B) Passive-voice
(C) Third-person
(D) Narrative
684. The experiences of students whose parents lost their job due to the Covid-19 pandemic.
(A) Historical Study
(B) Ethnography
(C) Phenomenology
(D) Case Study
685. How can qualitative data be useful in market research?
(A) By providing numerical data
(B) By offering in-depth insights into customer motivations and preferences
(C) By being easy to measure
(D) By reducing the need for data collection
686. Data Analysis: Looking for patterns, themes
(A) Quantitative
(B) Qualitative
687. Qualitative researchers try to understand multiple layers of reality in research settings. Which of the following is NOT an example of one of these layers?
(A) Relationships between participants
(B) Types of people in a group
(C) Results from outside studies
(D) Established cultural norms
688. Which content is used in qualitative data analysis?
(A) Regression analysis
(B) Correlation analysis and group comparison.
(C) Describing, classifying phenomena and connecting data
(D) Reliability analysis of the measurement scale
689. This research method explores cultural knowledges and beliefs.
(A) Ethnographical research
(B) Survey research
(C) Phenomenological research
(D) Grounded theory research
690. What kind of observation is being made in the following statement: It feels smooth.
(A) Qualitative
(B) Quantitative
691. A research method that focuses on collecting non-numerical data through observations, interviews, and open-ended questions to understand deeper meanings and experiences is called —
(A) Qualitative Research
(B) Quantitative Research
(C) Experimental Research
(D) Survey Research
692. Cathy and Mira are doing an ethnographic study. How can they gather the information they needed?
(A) Through interviews and survey
(B) Through documentary
(C) Through observations and interviews
(D) Through stories from individuals
693. It regards phenomenon which can be observed but not measured.
(A) Qualitative research
(B) Quantitative research
694. The tile floor is hard.
(A) Quantitative
(B) Qualitative
(C) Inference
(D) Prediction
695. What is one challenge of bracketing personal experiences in phenomenological research?
(A) It is considered an interpretive impossibility by some
(B) It requires advanced statistical analysis

- (C) It eliminates the need for participant interviews
- (D) It simplifies the research process significantly
- 696.** Which of the following is a primary characteristic of qualitative research methods?
- (A) Numerical data
- (B) Subjective analysis
- (C) Statistical testing
- (D) Hypothesis testing
- 697.** What is the role of "intuitions or premonitions" in qualitative research?
- (A) They are the sole basis for formulating research questions.
- (B) They can guide the research process but are not definitive.
- (C) They should be disregarded in favor of quantitative data.
- (D) They are irrelevant to qualitative research.
- 698.** Which is an example of qualitative approach?
- (A) Experiment
- (B) Focused interview
- (C) Case study
- (D) Survey
- 699.** When conducting interviews to identify societal factors, what type of research is likely being used?
- (A) Quantitative research
- (B) Qualitative research
- (C) Experimental research
- (D) Historical research
- 700.** What does this mean by "contextual"?
- (A) The research involves the interaction between participants
- (B) Carried out in the context in which the subjects normally live and work
- (C) The researcher does not try to control or handle the phenomenon
- (D) Obtain data which do not support their original questions or hypothesis but are suggestive of others
- 701.** In looking at the relationships between coding categories, the relation, "X is a place in Y; X is part of Y" in Spradley's taxonomy of semantic relations is labeled
- (A) Strict inclusion.
- (B) Spatial.
- (C) Means-end.
- (D) Rationale.
- 702.** Which of the following is an example or characteristic of using a "holistic" approach in qualitative research?
- (A) Transcribing a distinctive communication pattern of a community member
- (B) Focusing only on the data available on a single day within a study
- (C) Documenting the ethnic background of a study participant
- (D) Describing the established cultural norms of a given population
- 703.** A type of research method that deals with the characteristics observed from the respondents
- (A) Quantitative research
- (B) Comparative research
- (C) Qualitative research
- (D) Experimental Research
- 704.** Which approach is commonly used for organizing and visualizing patterns and themes in qualitative research?
- (A) Descriptive statistics
- (B) Thematic mapping
- (C) Inferential analysis
- (D) Hypothesis testing
- 705.** What is a limitation of qualitative methods?
- (A) It has a limited scope(seeing little) + bias
- (B) Quantitative data uses numeric information
- (C) It uses too many types of documents
- (D) None of above

706. Select the option to complete correctly the ethnographic research technique. “___ is the use of multiple methods, data collection ___, and data sources to get a more complete picture of the ___ under study to cross-check information”
- (A) Field notes, data, participant.
 - (B) Observation, methods, man.
 - (C) Triangulation, strategies, group.
 - (D) Triangulation, steps, people.
707. Which of the following is a qualitative observation?
- (A) The solution turned blue after the reaction.
 - (B) The temperature increased by 5 degrees Celsius.
 - (C) The mass of the sample is 10 grams.
 - (D) The volume of the liquid is 50 milliliters.
708. Which type of research uses purely narrative?
- (A) Quantitative
 - (B) Qualitative
709. Which research method emphasizes open-ended insights?
- (A) Quantitative
 - (B) Qualitative
 - (C) Experimental
 - (D) None of these
710. Is the color of a flower an example of quantitative or qualitative data?
- (A) Quantitative
 - (B) Numerical
 - (C) Qualitative
 - (D) Measurable
711. Its application ranges from helping to further define the research problem, to generating hypotheses or identifying the variables to be included in the investigation
- (A) Trace Research
 - (B) Quantitative Research
 - (C) Qualitative Research
 - (D) Longitudinal Research
712. In a market research study, a question that is asking for an answer about a reaction, perception, or feeling is classified as what type of data?
- (A) Quantitative Data
 - (B) Qualitative Data
 - (C) All the above
 - (D) None of the above
713. The leaves on the second plant specimen were green, while the leaves on the first plant specimen were turning brown.
- (A) Qualitative
 - (B) Quantitative
714. Which of the following contributes to the trustworthiness of qualitative research?
- (A) Member checks and thick description
 - (B) Reflexivity and audit trail
 - (C) Peer debriefing
 - (D) All of the above
715. Which of the following is a qualitative research method?
- (A) Survey research
 - (B) Experimental research
 - (C) Case study research
 - (D) Correlational research
716. Which research design is most flexible and evolving?
- (A) Quantitative
 - (B) Qualitative
 - (C) Experimental
 - (D) Cross-sectional
717. Using open-ended questions and interviews allows researchers and practitioners to understand how individuals are doing, what their experiences are, and recognize important antecedents and outcomes of interest that might not surface when surveyed with pre-determined questions.
- (A) Quantitative approach

- (B) Qualitative approach
(C) Benchmarking
(D) None of above
- 718.** It involves the identification, examination, and interpretation of patterns and themes in textual data.
(A) Quantitative analysis
(B) Content analysis
(C) Qualitative analysis
(D) Thematic analysis
- 719.** Participant observation is a part of
(A) Quantitative research.
(B) Qualitative research.
(C) Ethnographic research.
(D) Both B and C.
- 720.** It is concerned with qualitative phenomenon (i.e.) phenomena relating to or involving quality or kind. This type of research aims at discovering the underlying motives and desires, using in-depth interviews for the purpose.
(A) Predictive research
(B) Analytical research
(C) Quantitative research
(D) Qualitative research
(E) Conceptual research
- 721.** Studying cultural practices of a surgical team over months of observation most closely exemplifies which method?
(A) Historical review
(B) Phenomenology study
(C) Ethnography approach
(D) Grounded theory work
- 722.** When a political party's election agenda for the past 20 years is analyzed to identify the most frequently focused agenda, this analysis is called:
(A) Thematic analysis
(B) Phenomenology
(C) Grounded theory
(D) Content Analysis
- 723.** Hypotheses in qualitative research usually:
(A) Emerge as the study progresses
(B) Are stated at the outset
(C) Are irrelevant
(D) Are nondirectional
- 724.** What do advocates of narrative analysis prefer to study?
(A) The extent to which analytic induction can be value-free
(B) The iterative process of grounded
(C) The ethical implications of conducting a secondary analysis of qualitative data
(D) The ways in which people use stories to make sense of events in their lives
- 725.** One of the benefits of ethnography includes:
(A) Giving a voice to a culture to express their views, which might not otherwise be heard.
(B) Able to generalize findings.
(C) Time-consuming.
(D) Possibility that researcher is changing the natural way a culture behaves by being present.
- 726.** Ms. Adamski walked outside and noticed the air was dry, flowers were dying, and the temperature was increasing. She wrote her observations down in her notebook. What kind of data was she recording?
(A) Examination Data
(B) Laboratory Data
(C) Qualitative Data
(D) Quantitative Data
- 727.** Qualitative data analysis primarily involves numerical values and patterns rather than descriptive context.
(A) True
(B) False
- 728.** If a researcher were planning a qualitative study, which data-collection methods would most likely be considered? Select all that apply.

- (A) Closed-ended questions and nonparticipant observations
 - (B) Participant observations and semi-structured interviews
 - (C) Structured interviews and physiological measures
 - (D) Closed-ended questions and structured interviews
 - (E) All of these data collections methods would probably be considered.
- 729.** The main purpose of a researcher using qualitative market research is to ____
- (A) Understand the behavior, attitudes, and perceptions of customers or employees.
 - (B) Aid marketing or organizational decision-making.
 - (C) Aid statistical analysis of factual findings.
 - (D) Gather the views of a small group of people before the mass launch of a product.
- 730.** If a researcher aims to understand student experiences of online learning during the pandemic, what research design is most suitable?
- (A) Experimental research
 - (B) Phenomenology
 - (C) Case study
 - (D) Correlational research
- 731.** Interviews, focus groups, observations, and oral histories are part of ____ data collection method.
- (A) Random
 - (B) Qualitative
 - (C) Quantitative
 - (D) Stratified
- 732.** Which of the following is not a type of triangulation used in ethnographic studies?
- (A) Environment
 - (B) Theoretical
 - (C) Conceptual
 - (D) Methodological
- 733.** Qualitative research focuses on studying particular people, groups, schools, and places.
- (A) True
 - (B) False
- 734. QUALITATIVE-VS-QUANTITATIVE OBSERVATIONS:** Which of the following is a QUALITATIVE observation?
- (A) Ten puppies frolicked in the yard.
 - (B) Each puppy ate 2 treats.
 - (C) All the puppies were brown with white spots.
 - (D) Three of the puppies fell asleep.
- 735.** What type of data are measures of 'types' and may be represented by a name, symbol, or a number code?
- (A) Quantitative
 - (B) Continuous
 - (C) Ordinal
 - (D) Qualitative
- 736.** In qualitative research paradigm, which of the following features may be considered critical?
- (A) Data collection with standardised research tools.
 - (B) Sampling design with probability sample techniques.
 - (C) Data collection with bottom-up empirical evidences
 - (D) Data gathering to take place with top-down systematic evidences.
- 737.** The qualitative research strategy places a value on:
- (A) Using numbers, measurements and statistical techniques
 - (B) Conducting research that is of a very high quality
 - (C) Generating theories through inductive research about social meanings
 - (D) All of the above
- 738.** What does "thick data" primarily focus on?
- (A) Quantitative data and numerical analysis

- (B) Qualitative information and human experiences
- (C) Statistical models and predictive analytics
- (D) Financial data and market trends
- 739.** In qualitative research, researchers use more open-ended approaches in which they ask general questions of participants, and the participants shape the response possibilities
- (A) True
- (B) False
- 740.** Consist of open-ended questions and provide qualitative data. Depth interviews. Allows a researcher to enter into the inner world of another person and to gain an understanding of that person's perspective (Patton, 1987)
- (A) QUALITATIVE INTERVIEWS
- (B) QUANTITATIVE INTERVIEWS
- 741.** Determine whether the data is qualitative or quantitative: Responses on an opinion poll.
- (A) Qualitative
- (B) Quantitative
- 742.** Which type of data is descriptive and can be observed but not measured?
- (A) Ordinal data
- (B) Categorical data
- (C) Qualitative data
- (D) Quantitative data
- 743.** What is the benefit of a community-based participatory research model?
- (A) It increases the relevance of data
- (B) Developing time-travel capabilities for historical data.
- (C) Creating a secret pizza-controlling society.
- (D) Communicating with dolphins for insights into marine biology.
- 744.** What is the purpose of negotiating the meaning of stories in narrative research?
- (A) To validate the analysis and gain insight into the participant's story
- (B) To ensure the researcher's perspective dominates the findings
- (C) To eliminate the need for participant involvement
- (D) To focus solely on statistical validation
- 745.** What is the primary focus of narrative researchers when collecting information about the context of stories?
- (A) Statistical data analysis
- (B) Situating stories within participants' personal experiences, culture, and historical contexts
- (C) Conducting experiments in controlled environments
- (D) Writing fictional accounts based on real events
- 746.** An advantage of qualitative research is that data are easier to process.
- (A) True
- (B) False
- 747.** When writing the qualitative results section, you will need to find an appropriate balance between description and interpretation.
- (A) True.
- (B) False.
- (C) Neither True nor False just a statement.
- (D) None of the above.
- 748.** It tastes sour.
- (A) Qualitative data
- (B) Quantitative data
- 749.** Open-ended questions, interviews, and focus groups.
- (A) Qualitative research
- (B) Quantitative Research
- (C) Primary research
- (D) Secondary research
- 750.** Asking an open ended question in an interview generates

- (A) Quantitative data
 - (B) Qualitative data
 - (C) Discrete data
 - (D) Continuous data
751. Immersing oneself in a culture for extended time to study it is characteristic of:
- (A) Grounded theory
 - (B) Case study
 - (C) Ethnography
 - (D) Action research
752. The flexibility and limited structure of qualitative research designs is an advantage because:
- (A) *All of these suggestions
 - (B) The researcher does not impose any pre-determined formats on the social world
 - (C) It allows for unexpected results to emerge from the data
 - (D) The researcher can adapt their theories and methods as the project unfolds
753. When do you use the grounded theory design?
- (A) When you need a broad theory or explanation of a process
 - (B) When you need explanation of the rules
 - (C) When you need theoretical material
 - (D) When you need to know how to use different methods on the lesson
754. What is an example of a question that researchers ask when using phenomenology during qualitative research
- (A) What is the meaning of the phenomenon experienced by the people
 - (B) What are the psychological phases that characterize a particular event
 - (C) What are the patterns and lifeways of a defined cultural group
 - (D) What is the core variable that explains what is happening in the social scene
755. Qualitative observation is usually done for exploratory purposes; it is also called ____ observation.
- (A) Probed.
 - (B) Complete.
 - (C) Structured.
 - (D) Naturalistic.
756. This type of observation DESCRIBES a quality of an object being observed
- (A) Qualitative Observation
 - (B) Quantitative Observation
757. Qualitative research allows us to
- (A) Present the context of the phenomena
 - (B) Test the strength of the relationship between variables
 - (C) Give highly generalisable results
 - (D) None of above
758. Researchers can gain an understanding of why people behave in a particular way.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
759. What is a key theme in narrative research?
- (A) The focus on collecting numerical data for statistical analysis
 - (B) The turn toward the relationship between the researcher and the researched
 - (C) The use of laboratory experiments to validate findings
 - (D) The emphasis on avoiding interaction with participants
760. Which of the following is a qualitative research problem under the field of social work?
- (A) Marriage rituals of the Tagbanuas
 - (B) Coping mechanisms of families of alleged drug addicts killed in drug busts
 - (C) Smartphone use of call center agents
 - (D) Language learning practices of high school students

- 761.** How does qualitative research differ from quantitative research?
- (A) Qualitative research is focused on numbers and statistics.
 - (B) Qualitative research is descriptive, subjective, and exploratory.
 - (C) Quantitative research is subjective and exploratory.
 - (D) Qualitative research relies on surveys and questionnaires.
- 762.** What is the focus of a phenomenological study?
- (A) People who have experienced a phenomenon
 - (B) Individual experience & sequence
 - (C) Context
 - (D) Develop a theory from grounded in field data
- 763.** Multiple Choice: Read each question carefully and choose the BEST answer. Which statement about qualitative and quantitative research is NOT correct?
- (A) Qualitative research explores experiences in depth
 - (B) Quantitative research uses measurable variables
 - (C) Qualitative research relies heavily on statistics
 - (D) Quantitative research often uses closed-ended questions
- 764.** Which of these statements is criteria to evaluate an ethnography in a high quality? a. The researcher draws from the anthropology literature on “culture” and identifies one or more concepts that become the focus of understanding how the culture-sharing group worksb. The researcher either states too many diverse concepts being explored with the cultural group or does not identify the cultural concept being explored in the study.
- (A) A
 - (B) B
- 765.** Qualitative research focuses on numerical data.
- (A) True
 - (B) False
- 766.** During a focus-group session, one set of participants indicated that Dell computers reminded them of a surfer, Apple computers of a mad scientist, and IBM was equated to Ebenezer Scrooge from Charles Dickens’s tale, “A Christmas Carol.” Which of the following qualitative research approaches relates to the approach described above?
- (A) Projective techniques
 - (B) Visualization
 - (C) Brand personification
 - (D) Laddering
 - (E) Brand architecture
- 767.** What is the main characteristic of grounded theory in research?
- (A) It promotes objectivity and numerical data collection
 - (B) It develops a theory of social phenomenon based on field data
 - (C) It analyzes historical documents and artifacts
 - (D) It identifies relationships among variables without manipulation
- 768.** What approach involves studying a particular group or population in the natural setting or in their habitat?
- (A) Grounded theory
 - (B) Case study
 - (C) Phenomenology
 - (D) Ethnography Edit
- 769.** ____ is a means of labeling or naming data in qualitative research.
- (A) Coding
 - (B) Sorting
 - (C) Typing
 - (D) Auditing

770. Do satisfied customers make purchases online?
(A) Quantitative
(B) Qualitative
771. True or False: An ethnography can take years to complete.
(A) True
(B) False
772. Which purpose aligns with qualitative research in nursing?
(A) Gaining insight by discovering meanings
(B) Testing cause-effect relationships
(C) Calculating measurement reliability coefficients
(D) Generating precise prevalence estimates
773. According to Cresswell (1994), qualitative research is:
(A) A process focused on gathering numerical information
(B) A procedure centered on analyzing statistical results
(C) A method focused to studying historical documents of a community
(D) An inquiry process that explores meanings through words
774. What type of data will an interview likely produce?
(A) Qualitative.
(B) Quantitative.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
775. You are outside in the courtyard of the school. You notice that the day feels warm, the flowers smell pretty, and the birds are singing. You are making ____ observations.
(A) Inference
(B) Quantitative
(C) Qualitative
(D) None of above
776. What is the primary goal of critical ethnography?
(A) To study cultural rituals and traditions
(B) To advocate for change and challenge the status quo
(C) To analyze economic systems
(D) To focus on technological advancements
777. The word Ethnography was formed from which language?
(A) Swahili
(B) Turkish
(C) Greek
(D) Spanish
778. Choose the correct type of ethnographic research: "What is central is the idea of exploring everyday life and cultural reality"
(A) Critical ethnography
(B) Virtual ethnography
(C) Structured-ethnography
(D) Holistic ethnography
779. Which type of marketing research involves using interviews and focus groups to gather rich, non-numerical data?
(A) Quantitative research
(B) Descriptive research
(C) Causal research
(D) Qualitative research
780. Lincoln & Guba (1985) propose that an alternative criterion for evaluating qualitative research would be:
(A) Impressiveness
(B) Trustworthiness
(C) Joyfulness
(D) Messiness
781. What is the main aim of the phenomenological study mentioned by Amelia in her research?
(A) To analyze the nutritional content of human breastmilk
(B) To understand women's experience of breastfeeding

- (C) To compare breastfeeding rates in different countries
(D) To study the health benefits of breastfeeding for infants
- 782.** This research aims to understand concepts, thoughts and experiences.
(A) Qualitative Research
(B) Quantitative Research
- 783.** Color of hair
(A) Quantitative
(B) Qualitative
- 784.** What distinguishes a “Longitudinal Study” in qualitative research?
(A) Cross-sectional design
(B) Data collected over an extended period
(C) Short-term observations
(D) None of above
- 785.** Data saturation is:
(A) The point where no new data is uncovered.
(B) The point where there is too much data to analyze.
(C) When the statistician begins their analysis using statistical programs.
(D) None of above
- 786.** What is a key requirement for conducting phenomenological research?
(A) Access to individuals who are willing and able to articulate their lived experiences of the phenomenon
(B) Advanced knowledge of mathematical modeling
(C) A laboratory equipped with high-tech instruments
(D) A large sample size for statistical analysis
- 787.** In qualitative research, the literature review section might be more of a literary opening with a personal vignette or passage
(A) True
(B) False
- 788.** Words, images, or objects
(A) QUALITATIVE
(B) QUANTITATIVE
- 789.** The nature of this research is exploratory, which means that its primary goal is to provide in-depth knowledge.
(A) Qualitative Research
(B) Quantitative Research
- 790.** During a group project, Eesha and Aarav are discussing research methods. What is there a greater emphasis on in qualitative research?
(A) Statistical analysis
(B) Holistic description
(C) Numerical data
(D) Predictive modeling
- 791.** The leaves are stiff.
(A) Qualitative data
(B) Quantitative data
- 792.** Which type of research involves non-numerical data to obtain meanings and feelings involved in a situation?
(A) Mixed-methods research
(B) Quantitative research
(C) Qualitative research
(D) Experimental research
- 793.** What is the unit of analysis in grounded theory?
(A) The individual level
(B) The group experience
(C) The social action, interaction, or process itself
(D) A defined 'bounded system'
- 794.** Which of the following is a method that is commonly used in qualitative research?
(A) Self-completion questionnaires
(B) Surveys
(C) Ethnography
(D) Structured observation

- 795.** What is the key characteristic of "qualitative research problems"?
- (A) They always start with a clearly defined hypothesis.
 - (B) They often emerge from personal experiences and observations.
 - (C) They are exclusively based on quantitative data.
 - (D) They are not relevant to educational research.
- 796.** Which of the following is a characteristic of qualitative research?
- (A) It relies heavily on numerical data
 - (B) It often involves structured interviews
 - (C) It seeks to understand phenomena in context
 - (D) It uses large sample sizes
- 797.** Quality criteria of qualitative studies include the following except:
- (A) Persistence
 - (B) Confirmability
 - (C) Credibility
 - (D) Authenticity
- 798.** Which of the following research tools is appropriate for qualitative study?
- (A) Questionnaire
 - (B) Rating scale
 - (C) Opinionnaire
 - (D) In-depth interview
- 799.** Which of the following is not a strategies of inquiry of qualitative research?
- (A) Ethnography
 - (B) Case study
 - (C) Survey research
 - (D) None of the above
- 800.** QUALITATIVE-VS-QUANITATIVE OBSERVATIONS: Which of the following is NOT a quantitative observation?
- (A) The class ordered 10 pizzas for their party.
 - (B) Each pizza had eight slices.
 - (C) There were 5 plain pizzas and 5 pepperoni pizzas.
 - (D) All the pizzas were very hot!
- 801.** Researchers engage in fieldwork when performing qualitative studies
- (A) True
 - (B) False
- 802.** Qualitative research generally provides
- (A) Richer data
 - (B) Numerical data
 - (C) Easily interpreted data
 - (D) Large amounts of data
- 803.** Interview, document and visual data are very useful in this type of research.
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Mixed Methods Research
 - (D) None of above
- 804.** Several aspects of a qualitative research project vary from researcher to researcher — Another consideration regarding qualitative research is the structure and writing of the qualitative project. This varies across different approaches such as — and performances including theatre and poems.
- (A) Focus groups
 - (B) Storytelling
 - (C) Interviews
 - (D) Problem-solving
- 805.** When should you use qualitative data?
- (A) When you want to measure variables
 - (B) When you want to understand opinions or experiences
 - (C) When you need to perform statistical analysis
 - (D) When you want to confirm a hypothesis
- 806.** These researchers recognise their role in the construction of meaning; their relationship

- with the participant shapes the data obtained and the active construction of meaning is seen as a subjective process.
- (A) Quantitative
(B) Qualitative
- 807.** The favorite food of students in your class
- (A) Qualitative
(B) Quantitative
- 808.** To gain insight to people's attitudes, behaviors, value systems, concerns, motivations, aspirations, culture or lifestyles.
- (A) Qualitative.
(B) Quantitative.
(C) Key Informants.
(D) Research.
- 809.** What does content analysis focus on?
- (A) Direct experiments
(B) Physical activities
(C) Analyzing text-based data
(D) Brain scans
- 810.** Focuses on obtaining descriptions of the lived experiences either in writing or through interviews
- (A) Historical design
(B) Case-study
(C) Grounded theory design
(D) Phenomenological design
- 811.** Which of the following Qualitative Research is derived from the Greek terms ethnos which means "people, folk, or nation and grapho which means "to write?"
- (A) Case Study
(B) Ethnography
(C) Phenomenology
(D) Historical Analysis
- 812.** In business, qualitative research is commonly used to:
- (A) Calculate market share
(B) Analyze consumer behavior and preferences
(C) Measure annual profit
(D) Perform tax audits
- 813.** What does "Grounded Theory" emphasize in qualitative research?
- (A) Deductive reasoning
(B) Inductive development of theories
(C) Experimenter bias
(D) None of above
- 814.** Which statement best captures the purpose of sensitization in qualitative designs?
- (A) Descriptive efforts to encourage reader participation
(B) Numerical categorization of dependent variables
(C) Statistical procedures to quantify reliability
(D) Randomization to reduce selection bias
- 815.** Which of the following qualitative methods focuses on the description and interpretation of cultural behaviour?
- (A) Phenomenology
(B) Grounded theory
(C) Ethnography
(D) Symbolic interactionism
- 816.** What is a common research tool used in qualitative studies?
- (A) Interview
(B) Experiment
(C) Survey
(D) Statistical Analysis
- 817.** Classify the observation as qualitative or quantitative: smooth surface
- (A) Qualitative
(B) Quantitative
- 818.** In qualitative research, what is meant by 'emic' perspective?
- (A) The researcher's external view

- (B) The insider's subjective view
 - (C) A quantitative measurement
 - (D) An abstract conceptualization
- 819.** In Narrative Inquiry, temporal unity (the chronology of events) is maintained through the use of a ____
- (A) Plot
 - (B) Bibliography
 - (C) Conclusion
 - (D) Index Page
- 820.** Information that is not expressed numerically, such as descriptions of behavior, thoughts, attitudes, and experiences.(Unit 1 Vocabulary)
- (A) Cross-Sectional design
 - (B) Qualitative Data
 - (C) Experimenter Bias
 - (D) Quantitative Data
- 821.** What is the primary data type used in qualitative research?
- (A) Numerical data that can be mathematically analyzed
 - (B) Nonnumerical data such as texts, photographs, and recordings
 - (C) Statistical data for finding correlations
 - (D) Biological samples for laboratory analysis
- 822.** In phenomenological research, what does "textural description" refer to?
- (A) The context and conditions of the experience
 - (B) What the participants experienced
 - (C) The universal essence of the experience
 - (D) How the participants analyzed the experience
- 823.** Which of the following is a key limitation of using focus groups in qualitative research?
- (A) Some participants may dominate the discussion
 - (B) It requires large sample sizes
 - (C) It provides limited qualitative insights
 - (D) It prevents social interaction
- 824.** What is the key consideration when choosing a qualitative research method?
- (A) Cost-effectiveness
 - (B) Suitability to the research question
 - (C) Ease of implementation
 - (D) Popularity of the method
- 825.** Ethnography in cultural mapping refers to:
- (A) Estimating population size through surveys
 - (B) Tracing boundaries of land and territory
 - (C) Collecting numerical and statistical records
 - (D) Studying people's daily life and activities
- 826.** A researcher asks, "Why do fans consider Portsmouth the best team in league one?" What type of data will this question most likely collect, and why?
- (A) Qualitative, because it invites detailed explanations
 - (B) Quantitative, because it yields percentage counts
 - (C) Qualitative, because it uses numerical rating scales
 - (D) Quantitative, because it requires yes or no answers
- 827.** Qualitative data are
- (A) Hard to find
 - (B) Unnecessary
 - (C) Statistical
 - (D) Descriptive
- 828.** Photographs, drawings, and videos can give additional information on the data being gathered in writing a qualitative study.
- (A) Yes
 - (B) No
 - (C) Does not say
 - (D) Maybe

- 829.** Classify each research method as belonging to either the quantitative or qualitative research. Ethnography
(A) Quantitative
(B) Qualitative
- 830.** Classify the observation as qualitative or quantitative: dry air
(A) Qualitative
(B) Quantitative
- 831.** A qualitative researcher can collect data using
(A) Focus group discussion
(B) Closed ended questionnaire
(C) Experiment
(D) None of above
- 832.** It smells like flowers.
(A) Qualitative
(B) Quantitative
- 833.** True or False: In the IB Paper 3, Transferability is the qualitative equivalent of External Validity.
(A) True (Both deal with applying findings to different contexts/settings)
(B) False (They do not apply findings to different contexts/settings)
- 834.** The type of research that tries to answer questions about “why” or “how” is called
(A) Quantitative
(B) Qualitative
- 835.** When writing the qualitative results section, an overriding concern should be to provide sufficient and convincing evidence to back up your assertions.
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
- 836.** Grounded theory is called that because the ____ is grounded in the ____
(A) Theory/data
(B) Data/theory
(C) Theory/code
(D) None of above
- 837.** The goal is to understand. Generalizability is not claimed.
(A) QUALITATIVE
(B) QUANTITATIVE
- 838.** Which is not an importance of qualitative research?
(A) Understanding social issues
(B) Capturing human emotions
(C) Producing statistical charts only
(D) Documenting real-life stories
- 839.** A company sent a trained observer to watch and interact with consumers in their natural environments in order to gain deeper insights on consumer needs. This is an example of ____
(A) Viral marketing
(B) Survey research
(C) Ethnographic research
(D) Experimental research
(E) Niche marketing
- 840.** Seeks to understand key social psychological processes that are grounded in reality
(A) Grounded theory research
(B) Phenomenological research
(C) Ethnographic research
(D) None of above
- 841.** Read this statement and identify the qualitative data: On the hottest day in summer it can reach a temperature of 115 degrees fahrenheit in Arizona. To ensure the safety of all the wildlife the governor announces that if you see or smell smoke to call for help to avoid a wildfire.
(A) Temperature of 115 degrees fahrenheit in Arizona
(B) See or smell smoke to call for help to avoid a wildfire

- 842.** What research design utilizes 10-25 participants in gathering information?
(A) Grounded Theory
(B) Case Study
(C) Ethnography
(D) Phenomenology
- 843.** In your research, you would like to answer the question "How can your study program/curriculum be improved?"
(A) Qualitative
(B) Quantitative
- 844.** A researcher studying teacher burnout finds that different teachers define 'burnout' differently. What should the researcher do?
(A) Analyze common themes in the teachers' definitions
(B) Ignore inconsistent definitions
(C) Use a survey with pre-defined burnout categories
(D) Change the research topic
- 845.** Market research that obtains opinions, beliefs, attitudes:
(A) Qualitative research
(B) Large scale surveys with closed questions
(C) Quantitative research
(D) None of above
- 846.** You conduct interviews to find out how satisfied students are with their study habits.
(A) Qualitative
(B) Quantitative
- 847.** Focus is subjective in nature as it aims to determine the subject's perception, feelings, and motives.
(A) Qualitative
(B) Quantitative
- 848.** It is a type of data that includes words, ideas, phrases, and concepts.
(A) Quantitative Data
(B) Qualitative Data
(C) Mixed Methods
(D) None of above
- 849.** In what kind of research is the researcher's influence most acknowledged?
(A) Constructivism
(B) Empiricism
(C) Pragmatism
(D) Positivism
- 850.** How can a researcher ensure that their qualitative research problem is not too broad or too narrow?
(A) By starting with a very specific question and gradually broadening it.
(B) By starting with a very broad topic and gradually narrowing it down through preliminary exploration and analysis.
(C) By avoiding any preliminary exploration or analysis.
(D) By assuming that all qualitative research problems are automatically appropriate in scope.
- 851.** Which type of research focuses on understanding concepts, thoughts, or experiences?
(A) Quantitative
(B) Qualitative
(C) Mixed Methods
(D) Analytical
- 852.** A doctor orders a urinalysis for a patient complaining of fatigue. Which of the specific test parameters represents an example of qualitative data?
(A) PH-4.5-8
(B) Specific gravity-1.005-1.025
(C) Glucose-greater than 130 mg/d
(D) Clarity/turbidity: clear
- 853.** Phenomenology in qualitative research primarily aims to:
(A) Develop new theories from data
(B) Study cultural practices in communities
(C) Understand and describe lived experiences
(D) Analyze historical texts

- 854.** What is the focus of analysis in qualitative research?
- (A) Numerical data and measurements
 - (B) Themes and tendencies
 - (C) Controlled variables and constants
 - (D) Predictive modeling
- 855.** Focuses on exploring ideas and formulating a theory or hypothesis
- (A) QUANTITATIVE
 - (B) QUALITATIVE
- 856.** Critical theory research is concerned with all of the following except
- (A) Transformation
 - (B) Emancipation
 - (C) Social justice
 - (D) Generalisability
- 857.** Theory is often the end result of the research (inductive reasoning). information gained from study participants is used to develop the theory which is rooted in the experiences of the participants
- (A) Quantitative research
 - (B) Qualitative research
- 858.** Which approach aim to gather an in-depth understanding of human behavior?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Mixed Research
 - (D) Correlational
- 859.** A key criterion, achieved to the extent that researchers can engender confidence in the truth of the data and their interpretations
- (A) Trustworthiness
 - (B) Credibility
 - (C) Confirmability
 - (D) Dependability
- 860.** Information gathered in observations in which no measurement takes place.
- (A) Data analysis
 - (B) Value data
 - (C) Qualitative data.
 - (D) Quality data.
- 861.** What is the purpose of mystery shopping in qualitative research?
- (A) To explore thoughts and opinions
 - (B) To study user experiences
 - (C) To collect data on process adherence in real customer service situations
 - (D) To conduct blind studies
- 862.** It is a research type under qualitative research.
- (A) Casual-comparative
 - (B) Case study
 - (C) Correlational
 - (D) None of above
- 863.** A research approach focusing on meaning and non-numerical data.
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Experimental research
 - (D) Survey research
- 864.** The observation and description of a group of people and their way of life
- (A) Case study
 - (B) Experiment
 - (C) Longitudinal Study
 - (D) Ethnography
- 865.** The quality of being believable or trustworthy is called?
- (A) Credibility
 - (B) Evidence
 - (C) Support
 - (D) Cite
- 866.** Credibility in Qualitative researches is:
- (A) The use of more than one method to collect data
 - (B) The confidence in the truth value of the data

- (C) The statistical analysis resulting in a p value of 0.05
(D) None of above
- 867.** How is qualitative information typically analyzed?
(A) Using statistical methods like averages
(B) Identifying themes and patterns within textual information
(C) Calculating correlations
(D) Measuring quantities
- 868.** Gender
(A) Quantitative
(B) Qualitative
- 869.** If the observation has describing words and characteristics, then it is ____
(A) Qualitative
(B) Quantitative
- 870.** What is the focus of research in interpretive approaches?
(A) Calculating frequencies of actions.
(B) Extracting the meaning of action.
(C) Establishing universal laws.
(D) Punishing offenders for their actions.
- 871.** The candle is white.
(A) Quantitative
(B) Qualitative
(C) Inference
(D) Prediction
- 872.** A researcher interviews college students to learn more about their experiences of learning from bad instructors. This would be an example of which type of qualitative research?
(A) Ethnography
(B) Case study
(C) Grounded theory
(D) Phenomenology
- 873.** Qualitative research emphasizes depth over breadth in understanding complex human experiences by:
(A) Focusing on numerical data and statistical analysis
(B) Prioritizing detailed and in-depth exploration of individual cases
(C) Using large sample sizes to generalize findings
(D) Emphasizing quick and broad surveys
- 874.** What refers to a close field observation of sociocultural phenomena?
(A) Case study
(B) Ethnography
(C) Grounded Theory
(D) Phenomenology
- 875.** Which method of research allows qualitative studies' explanations to develop throughout the process?
(A) Right left
(B) Front back
(C) Bottom up
(D) Top down
- 876.** What is the key concept, idea or process studied in qualitative research?
(A) Quantitative research.
(B) Qualitative report.
(C) Central phenomenon.
(D) None of above
- 877.** A magnifying glass is best for making ____ observations.
(A) Qualitative
(B) Quantitative
- 878.** Unreliable technique in which participants report on their subjective experience
(A) Functionalism
(B) Mind-body problem
(C) Mind-body dualism
(D) Introspection
(E) Structuralism

879. It involve the collection and analysis of data about cultural groups; making sense of the world to identify life ways or patterns, what qualitative research design is this?
- (A) Phenomenological studies
 - (B) Ethnographic studies
 - (C) Grounded theory studies
 - (D) Case studies
880. Observations that deal with descriptions that cannot be expressed in numbers called
- (A) Manipulated observations
 - (B) Quantitative observations
 - (C) Qualitative observations
 - (D) Responding observations
881. The opinions are subjective
- (A) QUALITATIVE RESEARCH.
 - (B) QUANTITATIVE RESEARCH.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
882. Ideally, samples for qualitative research should follow the concept of ____
- (A) Interpretivism
 - (B) Saturation
 - (C) Sampling
 - (D) None of above
883. TRUE or FALSE: Ethnographic research may be grounded on theory and may also generate or build theories.
- (A) True
 - (B) False
884. In which qualitative research method do participants covertly pose as consumers to collect data?
- (A) Mystery shopping
 - (B) Ethnographic market research
 - (C) Focus groups
 - (D) UI research
885. What does the term "going native" refer to in ethnographic research?
- (A) Losing access to the research group
 - (B) Becoming so immersed in the group that the researcher's analytical perspective is lost
 - (C) Gaining a superficial understanding of the group
 - (D) Writing overly technical reports
886. During a research project, Priya and Thomas are trying to understand the primary goal of Grounded Theory. What is it?
- (A) To test existing theories
 - (B) To generate or discover theory
 - (C) To conduct experiments
 - (D) To review literature
887. Which type of research is primarily focused on understanding and interpreting individual experiences?
- (A) Experimental research
 - (B) Quantitative research
 - (C) Qualitative research
 - (D) Longitudinal research
888. A researcher wants to know the essence of teaching among senior faculty members. Meaning making is an important aspect of:
- (A) Case study
 - (B) Ethnographic research
 - (C) Participatory research
 - (D) Phenomenological research
889. Results are HIGHLY dependent on a researcher's skills
- (A) Quantitative
 - (B) Qualitative
890. What is often true about the researcher in phenomenological studies?
- (A) They have no personal experience with the phenomenon
 - (B) They often have personal experience with the phenomenon
 - (C) They rely solely on secondary data
 - (D) They focus on laboratory experiments

- 891.** The overall integrity of the study's evidence
(A) Trustworthiness
(B) Credibility
(C) Confirmability
(D) Dependability
- 892.** What signifies a qualitative research approach?
(A) Statistical analysis
(B) Subjective experiences and meanings
(C) Large sample sizes
(D) Controlled experiments
- 893.** In terms of product development, which idea does not belong to qualitative research?
(A) Explore
(B) Quantify
(C) Deepen
(D) Seeking to understand
- 894.** The presentation of data is in the form of words (from interviews) and images (videos) or objects (such as artifacts).
(A) QUALITATIVE
(B) QUANTITATIVE
- 895.** TRUE or FALSE: Ethnographic research is mainly characterized as field-based and seen as a long-term commitment.
(A) True
(B) False
- 896.** Qualitative data are data that describe characteristics or qualities, such as color, odor, or texture.
(A) True
(B) False
- 897.** In which type of research are themes and patterns typically analyzed?
(A) Quantitative
(B) Qualitative
(C) Experimental
(D) Correlational
- 898.** Sir Marvin made an analysis of the speech of President Duterte for his inaugural speech.
(A) Case Study
(B) Content Analysis
(C) Experimental
(D) Historical
(E) Survey
- 899.** True or False? Both qualitative and quantitative research relies on analyzing data, but qualitative research relies more on the researcher's own interpretation.
(A) True
(B) False
- 900.** What is a potential topic for qualitative research mentioned in the text?
(A) The cost of technology in education
(B) How students in low-income schools adapt to technology
(C) The number of students using technology
(D) The impact of technology on test scores
- 901.** Isabella is conducting a research study to understand the lived experiences of individuals who have undergone a significant life event. Which of the following research traditions should she use?
(A) Biographical / Narrative
(B) Phenomenology
(C) Grounded Theory
(D) Ethnography
- 902.** Which of the following is true of an inductive approach to carrying out observations?
(A) Researchers analyse the data to see what ideas "emerge" from their notes in order to decide what is important about the study.
(B) The results may be generalized to a more global population.
(C) A hypothesis is being investigated.
(D) None of above

- 903.** Rona went to Cebu City and studied their rituals about Sinulog. Which of the following research methodology can answer Rona's research questions?
- (A) Ethnography
 - (B) Grounded Theory Research
 - (C) Participatory Research
 - (D) Strategic Research
- 904.** Narrative Inquiry-
- (A) Describing individuals' experiences of an event, such as the death of a loved one
 - (B) Addressing research questions through in-depth analysis of a single (small group of people) instance(s) or individuals
 - (C) Inductively generating a theory explaining a process
 - (D) Describing lives/ stories to add to understanding
- 905.** What is the primary goal of ethnographic research within organizations?
- (A) To create new cultural norms
 - (B) To observe and document everyday activities, interactions, and cultural practices
 - (C) To eliminate cultural differences
 - (D) To focus solely on quantitative data
- 906.** The researcher serves as the primary data gathering instrument.
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 907.** Identify if the data point listed below is an example of qualitative data or quantitative data: orange daylilies
- (A) Qualitative data
 - (B) Quantitative data
- 908.** Ex-study to describe the experience of having a heart attack
- (A) Quantitative
 - (B) Qualitative
- 909.** The IB classes naturalistic observations as
- (A) Quantitative
 - (B) Qualitative
- 910.** Which study has its origins in anthropology?
- (A) Ethnography
 - (B) IPA
 - (C) Narrative
 - (D) Grounded Theory
 - (E) Thematic Analysis
- 911.** Which assumption about the nature of knowledge characterizes qualitative research?
- (A) It is personal
 - (B) It is universal
 - (C) It is generally agreed-upon
 - (D) It is objective
- 912.** The researcher assumes that each case is special and unique. The first level of analysis is being true to, respecting, and capturing the details of the individual cases being studied; cross-case analysis follows from and depends on the quality of individual case studies.
- (A) Unique case orientation
 - (B) Inductive analysis and creative synthesis
 - (C) Holistic perspective
 - (D) Context sensitivity
 - (E) Voice, perspective, and reflexivity
- 913.** Which type of research method is best suited for revealing the meaning of events as experienced by individuals?
- (A) Quantitative
 - (B) Qualitative
- 914.** These are often used in the social sciences to collect, compare and interpret information, has a linguistic-semiotic basis and is used in techniques such as discourse analysis, interviews, surveys, records and participant observations.
- (A) Qualitative research,
 - (B) Quantitative research
 - (C) Experimental Research
 - (D) Non-Experimental Research

- 915.** Photos, archival documents and interview transcripts are examples of quantitative data
(A) True
(B) False
- 916.** This involves carefully reading statements and mapping them with the research aims and objectives, assigning codes.
(A) Axial Coding
(B) Open Coding
(C) Selective Coding
(D) None of above
- 917.** ___ are the basic building blocks of qualitative data?
(A) Categories
(B) Units
(C) Individuals
(D) None of the above
- 918.** Which option is not correlated with qualitative research?
(A) Answers “why? ”
(B) Only uses a small group of people
(C) Answers “how much? ”
(D) Answers “how? ”
- 919.** What is the key question asked in phenomenological research?
(A) “What are the statistical trends in this phenomenon?”
(B) “What is the essence of this experience as perceived by those who have lived it?”
(C) “How can this phenomenon be predicted in the future?”
(D) “What are the theoretical implications of this phenomenon?”
- 920.** Quantitative or Qualitative Observation? John’s shirt is blue.
(A) Quantitative
(B) Qualitative
- 921.** Data that is verbally descriptive or more narrative in form is
(A) Experimental design
(B) Qualitative data
(C) Hypothetical data
(D) Quantitative data
- 922.** Which type of research typically uses small, purposeful samples?
(A) Qualitative research.
(B) Quantitative research.
(C) Mixed methods only.
(D) Experimental research.
(E) Survey research.
- 923.** “why and how people behave in the way that they do?”
(A) QUALITATIVE
(B) QUANTITATIVE
- 924.** Ethnography: ___ are insiders who help the researcher in being accepted by the community and assist with the interpretation of information and behaviour
(A) Semi-structured interviews
(B) Participant observation
(C) Informants
(D) None of above
- 925.** If your teacher asked you to make qualitative observations about the class’s pet hamster, which group of words might be used?
(A) A mass of 3 kg, 11 cm long, age of 16 months
(B) A mass of 3 kg, 11 cm long, cute
(C) A long hair, white and brown colored, soft
(D) A temperature, length, weight Edit
- 926.** The liquid is a pink color.
(A) Qualitative
(B) Quantitative
- 927.** The jaguar was very quiet and sneaky as it hunted its prey
(A) Quantitative data
(B) Qualitative data

- 928.** Which of the following statements described ethnography?
- (A) Analysis of persons or groups, that are studied holistically by one or more methods
 - (B) It is an approach that generates and modifies a theory.
 - (C) Study of cultural patterns of people
 - (D) Understanding of an individual's experience
- 929.** Classify the data as qualitative data or quantitative data. Rank 5
- (A) Qualitative data
 - (B) Quantitative data
- 930.** Qualitative or Quantitative: The flower has a sweet fragrance.
- (A) Qualitative Observation
 - (B) Quantitative Observation
- 931.** Using your 5 senses to describe something as it appears (color, shape)
- (A) Qualitative
 - (B) Quantitative
 - (C) Observation
 - (D) Inference
- 932.** Which of the following is NOT a typical data collection method in qualitative research?
- (A) Interviews
 - (B) Participant observation
 - (C) Field notes
 - (D) Surveys with closed-ended questions
- 933.** Which research method heavily emphasizes interviews as the data collection is intrinsically linked to the emergent theoretical categories?
- (A) Ethnography
 - (B) Case Study
 - (C) Grounded Theory
 - (D) Phenomenology
- 934.** Qualitative research is often exploratory and has all of the following characteristics except:
- (A) It is typically used when a great deal is already known about the topic of interest
 - (B) It relies on the collection of non-numerical data such as words and pictures
 - (C) It is used to generate hypotheses and develop theory about phenomena in the world
 - (D) It uses the inductive scientific method
- 935.** The roar of a lion is louder than the purr of a kitten
- (A) Quantitative
 - (B) Qualitative
- 936.** Is a qualitative research approach that involves studying and understanding the culture, behavior, and practices of a specific group of people through fieldwork, participant observation, interviews, and immersion in the social context under investigation.
- (A) Historical approach
 - (B) Ethnographic research
 - (C) Phenomenological design
 - (D) Case-study
- 937.** Recording data on how yellow or orange leaves turn in October by describing them as "green" "slightly yellow" "very yellow" or "orange" is ___ data
- (A) Quantitative
 - (B) Qualitative
- 938.** How is the person conducting ethnographic research commonly known?
- (A) Researcher of the investigation
 - (B) Instrument of the investigation
 - (C) Creator of the investigation
 - (D) None of above
- 939.** Why is it important to align the research topic with a qualitative approach?
- (A) To avoid ethical issues
 - (B) To limit the scope of the research
 - (C) To support the investigation of the topic
 - (D) To ensure the research is quantitative

- 940.** What type of data is used in qualitative research?
- (A) Numbers
 - (B) Percentages
 - (C) Words
 - (D) Statistics
- 941.** What is a key advantage of using qualitative data?
- (A) It provides numerical data
 - (B) It offers in-depth insights into customer motivations and preferences
 - (C) It is easy to measure and analyze
 - (D) It is difficult to present
- 942.** Ethnographic designs employ a — approach:
- (A) Qualitative
 - (B) Quantitative
- 943.** A research method based on direct personal observation that, for extended periods of time, may be of a social group of animal or vegetable population, or of recognition of specific geographic areas.
- (A) Ethnography
 - (B) Quantitative research
 - (C) Qualitative Evaluation
 - (D) Fieldwork
- 944.** What type of data is described as non-numerical and often subjective, such as eye or hair color?
- (A) Qualitative
 - (B) Quantitative
 - (C) Discrete
 - (D) Continuous
- 945.** In which approach to Qualitative Research do the researchers intend to generate a theory that is based on data systematically gathered and analyzed?
- (A) Biography
 - (B) Case Study
 - (C) Grounded Theory
 - (D) Phenomenology
- 946.** A disadvantage of Ethnography as study method could be
- (A) It is expensive and time consuming
 - (B) It allows for comparisons between cultures
 - (C) It is a type of qualitative research
 - (D) It provides quantitative data
- 947.** Ethnography is a complex long-term commitment to work with participants?
- (A) TRUE
 - (B) FALSE
- 948.** A researcher interviews adolescent mothers to learn more about their experiences of childbirth. This would be an example of which type of qualitative research?
- (A) Phenomenology
 - (B) Ethnography
 - (C) Narrative inquiry
 - (D) Case study
 - (E) Grounded theory
- 949.** Which of the two leans to more exploration of the data?
- (A) Qualitative
 - (B) Quantitative
- 950.** Some marketers prefer more — methods for gauging consumer opinion because consumer actions do not always match their answers to survey questions.
- (A) Quantitative
 - (B) Qualitative
 - (C) Psychographic
 - (D) Covert
 - (E) Subliminal
- 951.** How does Hermeneutic Analysis differ from Grounded Theory and Content Analysis?
- (A) It takes the context and author's environment into consideration
 - (B) It is much older, and therefore less reliable
 - (C) It analyzes data pulled from online sources
 - (D) It is much harder to spell

- 952.** Parental Attitudes Towards Vaccination
(A) Qualitative Research
(B) Quantitative Research
- 953.** Which of the following observations in QUALITATIVE?
(A) The table is black.
(B) The table has 4 legs.
(C) The table is 3 feet high.
(D) The table is 5 feet long.
- 954.** Orville Redenbacher popcorn yielded deep consumer insights from its ____ research, which suggested that the essence of popcorn was that it was a "facilitator of interaction."
(A) Cognitive
(B) Inductive
(C) Archaeological
(D) Ethnographic
(E) Deductive
- 955.** The color of your shoes
(A) Qualitative
(B) Quantitative
- 956.** This type of marketing research focuses on smaller numbers of people and focuses on trying to answer questions about "why" or "how"; generally relies on in-depth interviews
(A) Exit polls
(B) Quantitative research
(C) Qualitative research
(D) Action research
- 957.** Which of the following best describes the role of the researcher in qualitative studies?
(A) To remain objective and detached
(B) To actively engage and interpret data
(C) To apply statistical methods
(D) To ensure replicability of results
- 958.** Narrative report with contextual description & direct quotations from research participants
(A) Quantitative
(B) Qualitative
- 959.** What is the scenario provided for Ethnography?
(A) Studying traditions and rituals in an indigenous community.
(B) Analyzing financial markets for investment opportunities.
(C) Designing a new software application.
(D) Conducting laboratory experiments on chemical reactions.
- 960.** Open-ended questions provide primarily ____ data.
(A) Confirmatory data
(B) Qualitative data
(C) Predictive data
(D) None of the above
- 961.** Qualitative research explores concepts and experiences through non-numerical data like words, interviews, and observations to understand the "why" and "how" behind a phenomenon.
(A) TRUE
(B) FALSE
- 962.** Involves collecting, analyzing, and interpreting data by observing what people do and say.
(A) Quantitative
(B) Qualitative
(C) Mixed Methods
(D) None of above
- 963.** In Inductive Reasoning, there is a degree of probability that the conclusion is true following from the premises. But it could also be false.
(A) True
(B) False
- 964.** In qualitative research, what does "Qualitative Data" consist of?
(A) Numerical data
(B) Descriptive data
(C) Predictive data
(D) None of above

- 965.** Contextualization refers to the process of identifying when and where an event took place
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 966.** Which example treats a property qualitatively rather than quantitatively?
- (A) Income stated as Rs. 15,000 per month
 - (B) Farm size recorded as 2 acres
 - (C) Describing income as higher or lower
 - (D) Listing height as 172.4 centimeters
- 967.** A content analysis is a research method used to
- (A) Study content of people's lives
 - (B) Study media content, counting and classifying them.
 - (C) Study Official statistics
 - (D) None of above
- 968.** Which of the following involves interaction between the researcher and the subjects or respondents?
- (A) Simulation
 - (B) Nonparticipant observation
 - (C) Naturalistic observation
 - (D) Participant observation
- 969.** Identify the data as QuaLitative or QuaNti-tiative: male/female gender
- (A) Qualitative
 - (B) Quantitative
- 970.** A researcher observing classroom behaviour is likely conducting:
- (A) Quantitative research
 - (B) Mixed method
 - (C) Experimental research
 - (D) Qualitative research
- 971.** Qualitative data
- (A) Is data that can be measured and shown with numbers
 - (B) Is data that can be changed
 - (C) Is data that shows the characteristics of an object
 - (D) None of above
- 972.** To explore new ideas
- (A) Qualitative Research
 - (B) Quantitative Research
- 973.** This type of analysis is used to understand how participants construct history from their own personal experiences
- (A) Content Analysis
 - (B) Narrative Analysis
 - (C) Discourse Analysis
 - (D) Grounded Theory
- 974.** Using your senses to describe a situation is known as a:
- (A) Quantitative observation
 - (B) Hypothesis
 - (C) Qualitative observation
 - (D) Inference
- 975.** In qualitative research, where is the literature review typically placed?
- (A) Always in a separate chapter dedicated to the literature review
 - (B) Only in the introduction to provide context for the research problem
 - (C) Qualitative research does not typically include a literature review
 - (D) The placement varies; it can be in the introduction, a separate section, or even at the end
- 976.** Sample size is variable depending on the purpose of the researcher.
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed
 - (D) None of the above.

977. What is the key advantage of using focus groups in communication research?
- (A) It offers in-depth insights into stakeholders' perceptions and attitudes
 - (B) It provides large-scale numerical data
 - (C) It is faster than conducting surveys
 - (D) It eliminates the need for qualitative analysis
978. Which type of research uses surveys, observations, and interviews?
- (A) Observational research
 - (B) Experimental research
 - (C) Quantitative research
 - (D) Qualitative research
979. Analysed by generating themes; this can be done by transcribing every word, arranging quotes into categories; categories and themes and then turned into models or flow charts to show links and relationships between themes
- (A) Quantitative
 - (B) Qualitative
980. Are qualitative procedures for describing, analyzing, and interpreting a cultural group's
- (A) Narrative research designs.
 - (B) Action research designs.
 - (C) Ethnographic designs.
 - (D) None of above
981. What is the purpose of providing rich, contextually nuanced descriptions when drawing conclusions in qualitative research?
- (A) To oversimplify complex findings
 - (B) To enhance the credibility and transferability of the study
 - (C) To speed up the data analysis process
 - (D) To avoid the need for member checking
982. A study of a certain cultural group with their organizational set-up, practices, culture, and lifestyle.
- (A) Ethnography
 - (B) Phenomenology
 - (C) Content Analysis
 - (D) Discourse Analysis
983. What discipline did ethnography originate from in the early 20th century?
- (A) Sociology
 - (B) Cultural Anthropology
 - (C) Psychology
 - (D) Political Science
984. Identify what type of Qualitative Research is the topic: Cancer Patients' Struggles: Survival for Life
- (A) Phenomenological
 - (B) Case Study
 - (C) Ethnographic
 - (D) Ground Theory
 - (E) Biography
985. When you study the group culture, you would employ an approach called
- (A) Grounded theory
 - (B) Case study
 - (C) Ethnography
 - (D) None of above
986. In food science, which study most aligns with Interpretivism?
- (A) Running shelf-life tests with accelerated aging
 - (B) Exploring cultural meanings of traditional dishes
 - (C) Modeling heat transfer in retort processing
 - (D) Measuring microbial counts in packaged salads
987. A researcher notes that a chemical reaction produces a blue color. What type of observation is this?
- (A) Quantitative
 - (B) Qualitative
 - (C) Numerical
 - (D) Experimental

- 988.** Qualitative Data Analysis is often
(A) Quick and easy
(B) Straightforward and obvious
(C) A Nuanced Struggle
(D) A Multistage Process
(E) Pointless and frustrating
- 989.** Which research method focuses on meanings, experiences, and interpretations?
(A) Qualitative research.
(B) Quantitative research.
(C) Mixed methods.
(D) Statistical research.
(E) Experimental research.
- 990.** Qualitative data is related to ____
(A) People's feelings or opinion.
(B) Numbers
(C) Profit and lose
(D) None of above
- 991.** In narrative research, how do researchers collaborate with participants?
(A) By avoiding direct interaction with participants
(B) By actively involving them, negotiating relationships, and providing ways to be useful
(C) By focusing solely on the researcher's perspective
(D) By collecting data without participant consent
- 992.** In qualitative research, the role of the researcher is to:
(A) Reduce information to numerical form
(B) Become highly familiar with the context of the study
(C) Develop instruments for data collection
(D) Carry out statistical analyses
- 993.** When should qualitative research be used over quantitative research?
(A) When proving hypotheses
(B) When analyzing statistical significance
(C) When exploring society
(D) When using numbers and statistics
- 994.** Personal, lacks formality
(A) QUALITATIVE
(B) QUANTITATIVE
- 995.** What is the main advantage of using focus groups in marketing research?
(A) Large sample size
(B) Cost-effectiveness
(C) In-depth qualitative insights
(D) Statistical generalization
- 996.** Which of the following is a discipline that you think might have a history with narrative research?
(A) Biology
(B) Geography
(C) Geology
(D) Sociology
- 997.** Choose the definition of member checking:
(A) Summary of quantitative information presented as a chart, graph
(B) Is a process in which the researcher asks one or more participants in the study to check the accuracy of the account.
(C) Potential weaknesses or problems with the study identified by the researcher
(D) Statement that reviews the major conclusions to each of the research questions
- 998.** Method of Collecting Data: Based on interviews, observation, field notes
(A) Quantitative
(B) Qualitative
- 999.** Some other popular qualitative research approaches to get inside consumers' minds and find out what they think or feel about brands and products include, except:
(A) Word associations
(B) Visualization
(C) Laddering
(D) Marketing Plan

- 1000.** Motivation Research is a ____ research.
- (A) Quantitative
 - (B) Qualitative
 - (C) Both Quantitative & Qualitative
 - (D) None of these
- 1001.** Which type of reasoning is based on OBSERVATIONS and EXAMPLES?
- (A) Inductive
 - (B) Deductive
 - (C) Causal
 - (D) None of the above
- 1002.** In a phenomenological study, which is an example of data?
- (A) What is the essence of the phenomenon of struggling with a mental illness?
 - (B) I didn't want to get out of bed, I was afraid to face the world
 - (C) The lived experience of having a terminal illness
 - (D) 110.0 mg/dl
- 1003.** Which type of research focuses on understanding the meaning and experiences of participants?
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Experimental research
 - (D) Descriptive research
- 1004.** Places more emphasis on the study of phenomena from the perspective of those who experience it.
- (A) Quantitative Research
 - (B) Qualitative Research
- 1005.** A researcher studies one gifted student in order to better understand how this student's school day differs from that of more typical students. This is a qualitative study because of the following reasons EXCEPT ____
- (A) It aims to analyze cases and situations using numerical data.
 - (B) It aims to investigate existing situations or problems.
 - (C) It aims to provide solutions to problems.
 - (D) It aims to explore or analyze more certain issues.
- 1006.** True or False. In qualitative research, the researcher often becomes a part of the study environment.
- (A) False
 - (B) True
- 1007.** A researcher is studying the impact of social media on youth mental health. Which qualitative method would be most effective?
- (A) Statistical Analysis
 - (B) Experimental Research
 - (C) Surveys
 - (D) Focus Groups
- 1008.** Its data analysis commonly involves themes and pattern interpretation.
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Mixed Methods Research
 - (D) None of above
- 1009.** Which activity in qualitative research reflects the researcher as key data collection instrument?
- (A) Role of the researcher as responsible data collector
 - (B) Random assignment to treatment and control groups
 - (C) Use of prevalidated numerical scales exclusively
 - (D) Blind hypothesis testing without field notes
- 1010.** Which of the following questions is NOT being answered by ethnographic studies?
- (A) Why?
 - (B) What?
 - (C) How?
 - (D) When?
- 1011.** When ice cream tastes sweet, we call this what kind of data?

- (A) Qualitative
 - (B) Quantitative
- 1012.** If researchers are asking consumers for opinions and feelings about a new product, what type of data are they collecting?
- (A) Specific
 - (B) Qualitative
 - (C) Quantitative
 - (D) Unusable
- 1013.** Which qualitative strategy involves analyzing documents related to educational practices?
- (A) Document Analysis
 - (B) Observation
 - (C) Triangulation
 - (D) Interviews
- 1014.** Which generally cannot be guaranteed in conducting qualitative studies in the field?
- (A) Keeping participants from physical and emotional harm
 - (B) Gaining informed consent
 - (C) Assuring anonymity rather than just confidentiality
 - (D) Maintaining consent forms
- 1015.** This kind of ethnography narrates the study in a third-person dispassionate voice and reports in what is observed or heard from participants.
- (A) Phenomenology
 - (B) Case Study
 - (C) Ethnography
 - (D) Narrative
- 1016.** Which method studies people's lived experiences?
- (A) Phenomenology
 - (B) Survey
 - (C) Content analysis
 - (D) Correlational study
- 1017.** Which type of data involves descriptions that cannot be measured?
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 1018.** What type of observation is this? The bacterial colonies vary in color. Colors include green, grey, black, and blue.
- (A) Quantitative
 - (B) Qualitative
- 1019.** What is the research design that focuses on documenting or portraying the everyday experiences of individuals through observation and interview?
- (A) Ethnographic design
 - (B) Phenomenological design
 - (C) Narrative design
 - (D) Case study design
- 1020.** Naturalistic Observations are a form of ____
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Mixed Methods Research
 - (D) None of the above
- 1021.** Which type of research design is least likely to use a predetermined plan?
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed methods
 - (D) Correlational
- 1022.** Interviews, surveys, observations, to gather data
- (A) Qualitative
 - (B) Quantitative
- 1023.** Matilda is conducting a study to understand how people interpret social interactions. Which of the following is a characteristic of her qualitative research?
- (A) Testing, measuring to find the truth

- (B) Numbers, cause and effect, statistics
(C) Draw meaning from the social world so it can be better understood
(D) Experimental studies
- 1024.** Grounded theory is primarily used for:
(A) Confirming existing theories
(B) Developing new theories
(C) Statistical analysis
(D) Descriptive studies
- 1025.** In this type of research, “Why” questions are often used, the researcher is part of the process, and information is open to a high degree of interpretation.
(A) Qualitative
(B) Quantitative
(C) Stratified
(D) None of above
- 1026.** The purpose of qualitative research is to:
(A) Conduct large-scale surveys
(B) Explore human experiences
(C) Test interventions
(D) Collect numerical data
- 1027.** Every time you eat fast food your stomach feels funny. You conclude that fast food makes your stomach feel funny.
(A) Deductive
(B) Inductive
- 1028.** What is NOT a disadvantage of narrative inquiry?
(A) Cannot be generalized
(B) Data can be faked
(C) Lacks Detail
(D) Cannot be quantified
- 1029.** Observations that include descriptive words.
(A) Qualitative
(B) Quantitative
(C) Opinions
(D) Inferences
- 1030.** In qualitative research, interviews and focus group discussions are standard methods for gathering data.
(A) True
(B) False
- 1031.** Questions 5Siya is conducting a research project to understand people’s experiences with remote work. She needs to gather information that reflects personal opinions and feelings. What is a suitable source for qualitative data in her research?
(A) Financial report
(B) Recorded voice or video
(C) Experiment
(D) Exam marks
- 1032.** What type of report outlines the methods, processes, and findings of a qualitative method of systematic investigation?
(A) Research Report
(B) Qualitative Research Report
(C) Quantitative Research Report
(D) Popular Research Report
- 1033.** What is an example of a participatory action research outcome?
(A) Improved practices within a community
(B) A theoretical framework
(C) A laboratory experiment report
(D) Statistical regression analysis
- 1034.** Which of the following best describes the role of a researcher in the data analysis step of qualitative research?
(A) Applying complex statistical methods.
(B) Describing and categorizing data based on patterns.
(C) Conducting laboratory experiments.
(D) Collecting data through surveys and questionnaires.
- 1035.** Your eye color
(A) Quantitative
(B) Qualitative

- 1036.** Which is commonly used in the presentation of data in qualitative research?
- (A) Tabular form
 - (B) Graphical form
 - (C) Narrative form
 - (D) None of above
- 1037.** Which type of research typically involves collecting and analyzing non-numerical data, such as text or images?
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Both
 - (D) Neither
- 1038.** You want to know why consumer prefer the old packaging to the recently new launched packaging.
- (A) Qualitative
 - (B) Quantitative
- 1039.** Describe whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of qualitative research. relativism, individual/group justification, varying standards, social construction
- (A) Ontology
 - (B) Epistemology
 - (C) View of thought and behavior
 - (D) Research focus
- 1040.** There is no standard format for reporting qualitative research
- (A) Yes
 - (B) No
- 1041.** The samples are smaller and not randomly selected
- (A) Qualitative Research
 - (B) Quantitative Research
- 1042.** Takes many specific observations to reach a general conclusion
- (A) Deductive reasoning
 - (B) Abductive reasoning
 - (C) Inductive reasoning
 - (D) Syllogistic reasoning
- 1043.** Chooses small sample sizes purposely.
- (A) Qualitative
 - (B) Quantitative
- 1044.** — uses the scientific method to make nonnumeric observations, from which conclusions are drawn without the use of statistical analysis.
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Basic research
 - (D) Applied research
- 1045.** During fieldwork in ethnography, the following data is not applicable
- (A) Negotiation data
 - (B) Etic data
 - (C) Emic data
 - (D) Ethic data
- 1046.** Which one is the best describe for forecast approach on qualitative method?
- (A) Used when situation is stable and historical data exist.
 - (B) Used when situation is vague and little data exist.
 - (C) Involves mathematical techniques.
 - (D) Forecast on existing product and current technology.
- 1047.** Which type of research corresponds to the description: “Complex studies of a human group focused on material and immaterial culture”?
- (A) Ethnographic designs
 - (B) Grounded theory designs
 - (C) Experimental designs
 - (D) Case study designs
- 1048.** How can Alliza be a participant observer?
- (A) She needs to go to the site and observe the subject

- (B) She needs to look from afar
(C) She needs to observe
(D) She needs to participate on the activities of the subject
- 1049.** Types of qualitative methods include: Survey research, Descriptive research, Correlational research
(A) True
(B) False
(C) All the above
(D) None of the above
- 1050.** Which research is a method that collects data using conversational methods
(A) Qualitative method
(B) Analytical method
(C) Quantitative method
(D) Conceptual method
- 1051.** What does qualitative research typically involve?
(A) Tests of significance and numerical analysis
(B) Developing constructs based on trends and themes
(C) Using strict controls and tables
(D) Focusing on heart rate and questionnaire responses
- 1052.** Multiple Choice: Read each question carefully and choose the BEST answer. Which is a major strength of qualitative research?
(A) Produces generalized statistical results
(B) Provides detailed understanding of phenomena
(C) Eliminates all subjectivity
(D) Requires minimal researcher involvement
- 1053.** Ava and Ella are conducting a qualitative research project. Their data collection is primarily in the form of:
(A) Numbers and statistics
(B) Words or pictures
(C) Graphs and charts
(D) Mathematical models
- 1054.** What is the main consideration in selecting study participants in qualitative research?
(A) Their age
(B) Their willingness to participate
(C) Their gender
(D) Their income level
- 1055.** A phenomenological question is:
(A) What is the essence of this phenomenon
(B) What is the probability of this event?
(C) What is the historical context of this phenomenon?
(D) None of above
- 1056.** This type of analysis involves the theory being grounded into the actual data.
(A) Content Analysis
(B) Discourse Analysis
(C) Grounded Theory
(D) Framework Analysis
- 1057.** The “emic” approach to cultural research is best described as:
(A) An outsider’s view guided by theoretical concepts
(B) A detached view that avoids cultural interpretation
(C) A balanced view combining internal and external perspectives
(D) An insider’s view focused on the perspectives of participants
- 1058.** Qualitative research allows Issues to be examined in detail and in depth.
(A) True
(B) False
- 1059.** What distinguishes grounded theory from other qualitative methodologies?
(A) It emphasizes cultural contexts
(B) It uses random sampling exclusively
(C) It focuses on lived experiences
(D) It generates theory inductively from data

- 1060.** Qualitative or Quantitative: The sky is clear and blue.
(A) Qualitative Observation
(B) Quantitative Observation
- 1061.** Which of the following is NOT a qualitative approach?
(A) Thematic analysis
(B) Grounded theory
(C) Content analysis
(D) Regression analysis
- 1062.** Asking customers how they feel when they try on a new pair of jeans.
(A) Quantitative
(B) Qualitative
- 1063.** What is one of the characteristics of qualitative research that its purpose is to paint a larger picture?
(A) Holistic Account
(B) Multiple sources of data
(C) Natural Setting/Real-World Setting
(D) None of above
- 1064.** Research that uses observation and relies on descriptive data is known as:
(A) Query Research
(B) Quality Research
(C) Qualitative Research
(D) Quantitative Research Edit
- 1065.** Ethnography originates from anthropology and ____
(A) Psychology
(B) Philosophy
(C) History
(D) Sociology
- 1066.** What theorist used the methodology of clinical interviews, really opened the door to understand student thinking?
(A) Bruner
(B) Vygotsky
(C) Piaget
(D) Dewey
- 1067.** What is attitude research designed to obtain information about?
(A) Product usage and consumer acceptance
(B) The effectiveness of advertising copy
(C) The size and location of a market, the competition, and segmentation within the market
(D) How people feel about certain products, services, companies, or ideas
- 1068.** Why is immersion in the community important in ethnography?
(A) It allows access to community and key informants readily
(B) It shortens the duration of the study period
(C) It provides rich and detailed cultural insights
(D) It makes comparisons between groups easier
- 1069.** What do Interpretivists prefer?
(A) Quantitative data
(B) Facts and numbers
(C) Qualitative data
(D) None of above
- 1070.** Naturalistic
(A) QUALITATIVE
(B) QUANTITATIVE
- 1071.** Which research method focuses on experiences and meanings?
(A) Survey
(B) Qualitative Research
(C) Action Research
(D) Quantitative Research
(E) Experimental Research
- 1072.** The purpose of this type of research is to describe a culture's characteristics. It identifies culture variables for study, and review literature.
(A) Correlational Research
(B) Survey Research
(C) Ethnography
(D) Causal-Comparative

- 1073.** The candy was sour.
(A) Qualitative Data
(B) Quantitative Data
- 1074.** Is collecting, analyzing and interpreting data by observing what people do and say
(A) Qualitative Research
(B) Quantitative Research
- 1075.** As a narrative researcher it is important to collaborate how often?
(A) At the beginning of the research
(B) At the end of the study
(C) Ongoing throughout the process
(D) At the beginning and end of the study
- 1076.** In qualitative research, audio or video being recorded should be written out per word. It is called as?
(A) Transcription
(B) Subscription
(C) Transpiration
(D) None of above
- 1077.** Which of the following is the type of research method that requires the collection of narrative data and utilize an inductive approach to reasoning which includes phenomenology, ethnography, grounded theory and case studies?
(A) Qualitative Research Method
(B) Quantitative Research Method
(C) Statistic Research Method
(D) Narrative Research Method
- 1078.** Which of the following are false on qualitative research
(A) Issues can be examined in detail and in depth.
(B) Data can be very consistent, precise and reliable
(C) Interviews are not restricted to specific questions and can be guided/redirected by the researcher in real time.
(D) Complexities about the research subjects and/or topic are discovered that are often missed.
- 1079.** A projective technique uses
(A) Unstructured stimulus situations such as ink-blot, photographs etc.
(B) A short structured interview schedule.
(C) On the spot participants observations for measuring an individual's qualities.
(D) Direct observations of a person's behavior.
- 1080.** The ___ of qualitative studies involves a wide angle lens to capture the entirety of a phenomenon.
(A) Epistemology
(B) Ontology
(C) Thought and behavior
(D) Research focus
- 1081.** The central focus of participant observation is on:
(A) Taking part in cultural roles and activities

(B) Compiling photo and narrative records of the community
(C) Reconstructing timelines of past traditions
(D) Performing physical tests and experiments
- 1082.** Which of the following is not a potential benefit of exploratory research?
(A) It can generate new ideas or concepts
(B) It can inform practical applications in the field
(C) It can establish cause-and-effect relationships
(D) It can be completed quickly and inexpensively
- 1083.** What is the natural setting in qualitative research?
(A) A laboratory
(B) A classroom
(C) The participant's setting
(D) Any of the above

- 1084.** Which of the following is more likely to be found in a qualitative study compared to other methods?
- (A) A description of the patterns of interaction among the members of a group
 - (B) A description of the skills of the members of a group
 - (C) An analysis of group productivity
 - (D) A description of group attitudes toward various issues
- 1085.** If a researcher categorizes the social behaviour of children into one of three types, what kind of data is being collected?
- (A) Quantitative data
 - (B) Qualitative data
- 1086.** Which set of skills should a researcher apply in qualitative research projects?
- (A) Observing, listening, comparing, and writing
 - (B) Calculating, coding, randomizing, and graphing
 - (C) Measuring, calibrating, weighing, and timing
 - (D) Budgeting, purchasing, contracting, and auditing
- 1087.** What is the main purpose of reflexivity in qualitative research?
- (A) To recruit participants for the study
 - (B) To ensure the accuracy of the data collected
 - (C) To analyze the data collected
 - (D) To critically examine the researcher's influence on the study
- 1088.** What is a major limitation of qualitative research?
- (A) Difficult to generalize findings
 - (B) Requires numerical data
 - (C) Does not explore deep meaning
 - (D) Lacks participant interaction
- 1089.** Classify each of the following data as quantitative or qualitative-color of the eye
- (A) Qualitative
 - (B) Quantitative
- 1090.** Ethnography is a research process used to study human interactions in social settings.
- (A) True
 - (B) False
- 1091.** In which of the following types of tests is a picture presented and respondents are asked to make up a story about what they think is happening or may happen in the picture?
- (A) Semantic differential test
 - (B) Word association test
 - (C) Story completion test
 - (D) Thematic apperception test
 - (E) Picture test
- 1092.** Which of the following is true of most qualitative research?
- (A) It has a very structured and inflexible design.
 - (B) It offers naturalistic inquiry with personal contact and insight.
 - (C) It is used to test hypotheses.
 - (D) It is usually appropriate to use statistical analyses in analyzing qualitative research.
- 1093.** A research objective stating "to explore the lived experiences of patients with chronic pain" is an example of a qualitative research objective.
- (A) True
 - (B) False
- 1094.** What kind of question should Qualitative Research start with?
- (A) Do or Does
 - (B) Does or Did
 - (C) Is or Are
 - (D) Why or How
- 1095.** How does phenomenology differ from narrative inquiry?
- (A) Phenomenology describes personal experiences, while narrative inquiry tells stories.

- (B) Narrative inquiry is based on surveys, while phenomenology uses interviews.
- (C) Phenomenology uses numbers, while narrative inquiry is qualitative.
- (D) They are the same approach under different names.
- 1096.** Religious affiliation is an example of?
- (A) Quantitative/numeric data
- (B) Qualitative/categorical data
- (C) Quantitative and discrete
- (D) Quantitative and continuous
- 1097.** Which of the following is a method commonly used to collect qualitative data in marketing research?
- (A) Focus group discussions
- (B) Online sales tracking
- (C) Customer loyalty program data
- (D) Website traffic analysis
- 1098.** Which of the following is not a component of 'trustworthiness' in qualitative research?
- (A) Transferability
- (B) Generalisability
- (C) Dependability
- (D) Credibility
- 1099.** The qualitative data collection involves audio-visual materials such as examine photographs or videotapes.
- (A) True
- (B) False
- 1100.** Ethnography originated from ____?
- (A) Sociology
- (B) Multiple disciplines
- (C) Anthropology
- (D) Philosophy
- (E) Human storytelling and education
- 1101.** In "phenomenology", a well written report will be highly descriptive of the participants' experiences and will often elicit in the reader a feeling that they feel as though they are experiencing the phenomenon themselves. This experience is called ____
- (A) A phenomenal experience.
- (B) A vicarious experience.
- (C) A dream.
- (D) A significant experience.
- 1102.** Which of the following applies to a qualitative research design.
- (A) Numerical
- (B) Correlational
- (C) Survey
- (D) Grounded theory
- 1103.** In qualitative research, what is a "World-view"?
- (A) Experimental framework
- (B) Cultural perspective
- (C) Statistical method
- (D) None of above
- 1104.** If you describe the colors of the leaves in the park as red, yellow, and orange, is that qualitative or quantitative data?
- (A) Current
- (B) Quantitative
- (C) Qualitative
- (D) Primary
- 1105.** Qualitative or Quantitative: The solution turned blue.
- (A) Qualitative Observation
- (B) Quantitative Observation
- 1106.** What is the primary goal of content analysis in media research?
- (A) To analyze the effectiveness of media campaigns
- (B) To understand media consumption patterns
- (C) To examine media content for specific themes or patterns
- (D) To measure audience attitudes towards media messages

- 1107.** Which of these types of research is best described as qualitative?
- (A) Closed ended questionnaire, structured interview
 - (B) Case study, statistical analysis
 - (C) Researchers own observation using data recording sheet
 - (D) Open-ended questionnaire, unstructured interview
- 1108.** Integrate and amplify findings across qualitative studies; focus is amplifying and interpreting information
- (A) Meta-analyses
 - (B) Meta-syntheses
- 1109.** Harry and Eesha are conducting a study to understand the main goal of interpretivist research. What is their main objective?
- (A) To test and measure to find the truth
 - (B) To draw meaning from the social world so it can be better understood
 - (C) To conduct experimental studies
 - (D) To perform correlation studies
- 1110.** What is the main focus of interpretive research?
- (A) To monitor the effects of remedial action
 - (B) To solve practical problems
 - (C) To develop or refine theory models
 - (D) To study social phenomenon
- 1111.** A researcher needs to analyze public speeches for political bias. Which method is most appropriate?
- (A) Content Analysis
 - (B) Grounded Theory
 - (C) Phenomenology
 - (D) Observation
- 1112.** This approach is best suited for addressing a research problem that needs to be explained.
- (A) Action research
 - (B) Quantitative research
 - (C) Mixed methods research
 - (D) Qualitative research
- 1113.** A method of self-observation in which participants report their thoughts and feelings.
- (A) Introspection
 - (B) Observation
 - (C) Experimentation
 - (D) Survey
 - (E) Testing
- 1114.** For double points, besides studying cultures, when is ethnography most likely to be used?
- (A) To study the researcher's surroundings
 - (B) To study a cat who is accused of stealing
 - (C) To investigate a community that has a high crime rate
 - (D) To investigate why magnesium sulfate works as a laxative
- 1115.** Qualitative research aims to obtain "universal understanding" of the researched subject.
- (A) True
 - (B) False
- 1116.** An observation that includes what something LOOKS LIKE
- (A) Qualitative
 - (B) Quantitative
 - (C) Inference
 - (D) Prediction
- 1117.** What characteristic of qualitative research refers to the ability to seek understanding without judgement?
- (A) Emphatic Neutrality
 - (B) Personal Experience
 - (C) Dynamic Systems
 - (D) Unique Case Orientation
- 1118.** Codes developed before examining the current data being coded are called ____
- (A) A priori codes.
 - (B) Co-occurring codes.
 - (C) Inductive codes.
 - (D) Face sheet codes.

- 1119.** Seeks an in-depth, holistic understanding of individual people/situations; generalisation is unimportant
(A) Quantitative
(B) Qualitative
- 1120.** In Qualitative study, researchers discover way of illuminating the underlying meaning and dimensionality of phenomena of interest:
(A) Connections
(B) Relationship
(C) Patterns of Association
(D) Predictions
- 1121.** The researcher has secretly placed him or herself (as a member) in the group that is being studied. This researcher may be which of the following?
(A) A complete participant
(B) An observer-as-participant
(C) A participant-as-observer
(D) None of the above
- 1122.** Which qualitative research design is appropriate when a researcher's purpose is to study people's experiences, explore how people make meaning in their lives, and examine relationships between events and people's understanding?
(A) Narrative research
(B) Phenomenology
(C) Grounded theory
(D) Ethnography or case study
- 1123.** Which of the following might influence the choice of a Masters program according to qualitative research?
(A) The number of students enrolled
(B) The proximity to the student's home
(C) The statistical success rate of graduates
(D) The use of tables and graphs in the curriculum
- 1124.** A method for presenting Qualitative findings would be in the form of
(A) Numerical tables
(B) Written accounts
(C) Statistical analysis
(D) Measures of central tendency
- 1125.** When drawing conclusions in qualitative research, what role does member checking play?
(A) To manipulate the study environment
(B) To validate findings with participants
(C) To select the final sample size
(D) To conduct additional interviews
- 1126.** Qualitative Data is usually numerical using measurements, numerical surveys, and statistics.
(A) True
(B) False
- 1127.** Administers either unstructured or semi-structured instruments.
(A) Qualitative
(B) Quantitative
- 1128.** A researcher writes, "The fish in the pond are small and fast." What kind of data is this?
(A) Qualitative
(B) Quantitative
(C) Neither
(D) Both
- 1129.** This involves narrative data and seeks to explore subjective meaning of experiences of a person, a group of people or a social unit.
(A) Basic research
(B) Pure research
(C) Quantitative research
(D) Qualitative research
- 1130.** What is the main advantage of using qualitative data in market research?
(A) It provides numerical data that can be easily analyzed.
(B) It offers in-depth insights into customer opinions and motivations.

- (C) It reduces the need for data collection.
(D) It focuses on closed-ended questions with yes/no options.
- 1131.** A B2C firm wants to understand external social and cultural influences on buying. Which approach is most suitable?
(A) Daily currency futures trading analysis
(B) ISO audit of manufacturing quality systems
(C) Linear programming of truck routing
(D) In-depth interviews with ethnographic observation Edit
- 1132.** What is the term for the following definition? Data that describe characteristics or qualities, such as color, odor, or texture, or data that describe category frequency or ratings, such as stem sturdiness (e.g., 'sturdy', 'somewhat sturdy', 'limp').
(A) Qualitative data
(B) Quantitative data
(C) Numerical data
(D) Continuous data
- 1133.** Which classification is based on attributes or characteristics?
(A) Quantitative
(B) Qualitative
(C) Geographical
(D) Temporal
- 1134.** The type of shoes
(A) Qualitative Data
(B) Quantitative Data
- 1135.** The disadvantage of ____ method is participants' opinions may be influenced by others. Sometimes participants could be out of the context of the task given.
(A) Survey
(B) Interview
(C) Observation
(D) Focus group
- 1136.** What is the main role of key informants in ethnography research?
(A) To recruit participants for the study
(B) To serve as translators and provide cultural knowledge
(C) To analyze the data collected
(D) To conduct interviews with participants
- 1137.** It requires non-numerical data, which means the use of words rather than numbers to express the results, the inquiry or the investigations about people's thought, beliefs, feelings, views, and lifestyles regarding the object of the study
(A) Quantitative
(B) Qualitative
(C) Qualitative-objective
(D) Quantitative-subjective
- 1138.** What category would the following statement fall under? The leaves on the plant are turning brown.
(A) Qualitative
(B) Quantitative
(C) Both
(D) Neither
- 1139.** Qualitative research is essential in social sciences because it:
(A) Provides personal insights into human experiences
(B) Only measures numerical trends
(C) Eliminates researcher interpretation
(D) Predicts economic growth
- 1140.** A common challenge in qualitative research is:
(A) Managing large amounts of data
(B) Limited data collection
(C) Quick and easy analysis
(D) Simple interpretation
- 1141.** Which one is true about qualitative research
(A) To test hypotheses or specific research question

- (B) Observe and interpret
(C) Measured and test
(D) Large samples to produce generalizable results
- 1142.** What is the first step in gathering data for an ethnography according to the text?
(A) Writing field notes
(B) Establishing a good rapport with subjects
(C) Analyzing the field notes
(D) Choosing the research methods
- 1143.** Non-structured techniques like in-depth interviews, group discussions etc.
(A) QUALITATIVE RESEARCH
(B) QUANTITATIVE RESEARCH
- 1144.** It provides insight and understanding of the problem at hand.
(A) Qualitative Research
(B) Quantitative Research
(C) Quasi-Experimental
(D) Quali-Quanty Research
- 1145.** How do our customers feel about our new store lay-out?
(A) Quantitative
(B) Qualitative
- 1146.** What aspect of life does narrative research focus on?
(A) The chronological unfolding of experiences and the meaning of key 'epiphanies' or turning points in life
(B) The statistical trends in population growth
(C) The chemical reactions in biological systems
(D) The economic impact of global trade
- 1147.** Why is case study used in qualitative research? It is used to ____
(A) Study involving children.
(B) Understand complex issues in real-life context.
(C) Study involving women
(D) None of above
- 1148.** Concepts and tools from anthropology and other social sciences to provide deep cultural understanding on how people live and work
(A) Observation
(B) FGD
(C) Ethnographic
(D) Experimentation
- 1149.** What makes narrative research challenging to use?
(A) It requires minimal information about the participant.
(B) It involves a straightforward understanding of the context of an individual's life.
(C) It requires extensive information about the participant and a clear understanding of their life context.
(D) It does not require identifying specific stories from the source material.
- 1150.** If two researchers conduct the same qualitative study but reach different conclusions, what is the most likely reason?
(A) Researcher bias and subjective interpretation
(B) Inaccurate statistical analysis
(C) Poorly defined research questions
(D) A mistake in sampling procedure
- 1151.** Qualitative researchers use a ____ approach?
(A) Top-down
(B) Bottom up
- 1152.** Applies more flexible processes.
(A) Qualitative
(B) Quantitative
- 1153.** What is a key feature of qualitative research?
(A) Testing hypotheses
(B) Seeking generalization of results
(C) Using narrative data (verbal, visual, auditory, etc.)
(D) Emphasizing objective analysis

- 1154.** If two researchers analyze the same interview data but interpret results differently, what does this indicate?
- (A) The data lacks credibility.
 - (B) Qualitative research is subjective.
 - (C) The study is invalid.
 - (D) The participants were unreliable.
- 1155.** Why might a historian choose qualitative research?
- (A) To explore written accounts and oral histories
 - (B) To measure the number of artifacts
 - (C) To calculate historical trends
 - (D) To test scientific theories
- 1156.** In qualitative research, we depend mostly on our senses.
- (A) True
 - (B) False
- 1157.** A phenomenological study makes the assumption that:
- (A) There is an objective reality
 - (B) Individual perceptions vary greatly
 - (C) Unique phenomena are especially enlightening
 - (D) Important agreements exist among individual perceptions
- 1158.** Is the following qualitative research purpose statement "well stated" or "poorly stated"? "The focus of the present study was to explore distressing and nurturing encounters of patients with caregivers and to ascertain the meanings that are engendered by such encounters. The study was conducted on one of the surgical units and the obstetrical/gynecological unit of a 374-bed community hospital."
- (A) It is well-stated
 - (B) It is poorly stated
- 1159.** Data are collected through face-to-face interviews.
- (A) QUALITATIVE
 - (B) QUANTITATIVE
- 1160.** The results and discussion section of a qualitative research report includes:
- (A) All of the data the researcher collected
 - (B) One quote for each claim the researcher is making
 - (C) More analysis than description
 - (D) A balance between description and analysis
- 1161.** Observations that deal with descriptions are called
- (A) Qualitative observations
 - (B) Quantitative observations
 - (C) Method observations
 - (D) None of above
- 1162.** How can responses from interviews be grouped in qualitative data analysis?
- (A) By theme, topic, or category
 - (B) By numerical value
 - (C) By experimental design
 - (D) None of above
- 1163.** This type of qualitative research aims to observe and report on a certain phenomenon.
- (A) Correlational
 - (B) Descriptive
 - (C) Quasi
 - (D) *Experimental*
- 1164.** The sky was blue and filled with clouds today.
- (A) Quantitative
 - (B) Qualitative
 - (C) Both
 - (D) Neither
- 1165.** What methods were employed in the study to explore the culture of interprofessional collaboration (IPC) and family member involvement in ICUs?
- (A) Quantitative methods
 - (B) Ethnographic methods
 - (C) Experimental methods
 - (D) Survey methods

- 1166.** Nike develops a focus group to ask their target market whether they would purchase a newly designed pair of socks.
- (A) Quantitative
 - (B) Qualitative
 - (C) Data that provide explanations or descriptions
 - (D) Research that someone else has collected and published
- 1167.** What is the significance of using open-ended questions in qualitative research?
- (A) To obtain informed consent from participants
 - (B) To explore subjective experiences, meanings, and social phenomena
 - (C) To analyze data collected over time to identify patterns, trends, or seasonality
 - (D) To test hypotheses, examine cause-effect relationships, and generalize findings
- 1168.** Which of the following is a qualitative research question?
- (A) What is the average age of college students?
 - (B) How do college students perceive online learning?
 - (C) How many students are enrolled in online courses?
 - (D) What is the pass rate for online courses?
- 1169.** Use a wide-angle and “deep-angle” lens, examining the breadth and depth of phenomena to learn anything and everything that might be important.
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Mixed methods research
 - (D) Action research
- 1170.** Which qualitative research design is the most appropriate for studying how students experience the transition to university?
- (A) Ethnography
 - (B) Phenomenology
 - (C) Case study
 - (D) Grounded theory
- 1171.** When researching issues relating to parenting, what is qualitative research?
- (A) Selecting a random sample of people
 - (B) Measuring facts in the form of numbers
 - (C) Data that provide explanations or descriptions
 - (D) Research that someone else has collected and published
- 1172.** Taking the final report/ specific descriptions/themes back to participants to verify the findings is an example of ____
- (A) Triangulation
 - (B) Peer debriefing
 - (C) Member check
 - (D) Clarify bias
- 1173.** Views and experiences of Grade 12 students during their work immersion program. This is study is
- (A) Qualitative
 - (B) Quantitative
- 1174.** Analysis is prone to researcher bias as the interpretation is more subjective.
- (A) Strength of Quantitative Data
 - (B) Strength of Qualitative Data
 - (C) Weakness of Quantitative Data
 - (D) Weakness of Qualitative Data
- 1175.** Which method is considered a hallmark of anthropology for studying organizational behavior?
- (A) Quantitative analysis
 - (B) Ethnographic research and cross-cultural comparative analysis
 - (C) Psychological experiments
 - (D) Historical documentation
- 1176.** Qualitative market research gathers:
- (A) Replies from closed questions
 - (B) Statistically significant data
 - (C) Opinions and attitudes
 - (D) Data from large scale surveys

- 1177.** What does reflexivity refer to in the context of ethnographic research?
- (A) The process of analyzing statistical data in the field setting.
 - (B) How the identity and activities of the researcher influence what is going on in the field setting.
 - (C) The method of recording observations in a systematic manner.
 - (D) The technique of interviewing subjects without bias.
- 1178.** The plant has purple flowers on it.
- (A) Qualitative data
 - (B) Quantitative data
- 1179.** Meta-synthesis
- (A) Quantitative
 - (B) Qualitative
- 1180.** The studyAutism spectrum disorder: what makes them unique? is an example of a qualitative research.
- (A) TRUE
 - (B) FALSE
- 1181.** Which of the following is the primary sacrifice that qualitative research entails?
- (A) Generate Model
 - (B) Generalisation
 - (C) Non-random sampling
 - (D) Hypothesis
- 1182.** Which statement best describes inductive reasoning?
- (A) It starts with a general rule and applies it to a specific case
 - (B) It starts with observations and develops a general rule
 - (C) It relies on mathematical calculations
 - (D) It only applies to scientific experiments
- 1183.** What is the primary goal of phenomenological research in communication studies?
- (A) To establish causation
 - (B) To explore and describe the lived experiences of individuals
 - (C) To analyze media content
 - (D) To conduct experiments
- 1184.** Post-positivist researchers often use which type of data analysis technique?
- (A) Statistical analysis
 - (B) Content analysis
 - (C) Discourse analysis
 - (D) Grounded theory analysis
- 1185.** Participants cant discuss the topics freely all together in focus group discussion
- (A) TRUE
 - (B) FALSE
- 1186.** It is a kind of qualitative research that is a study of a certain cultural group to get a clear understanding of its organizational setup, internal operations, and lifestyles.
- (A) Case Study
 - (B) Ethnography
 - (C) Content and Discourse Analysis
 - (D) None of above
- 1187.** Describe whether each of the following apply to the ontology, epistemology, view of thought and behavior, or research focus of qualitative research. personal, social, contextual/situational, fluid, unpredictable
- (A) Ontology
 - (B) Epistemology
 - (C) View of thought and behavior
 - (D) Research focus
- 1188.** Which type of data analysis technique involves interpretive analysis?
- (A) Qualitative data analysis
 - (B) Quantitative data analysis
 - (C) Scales analysis
 - (D) Statistical analysis
- 1189.** What is the characteristics of qualitative research?

- (A) Researcher has to use facts.
 - (B) Concerned with generalization
 - (C) Evidence in the form of visual
 - (D) Evidence in the form of numbers
- 1190.** Qualitative data includes:
- (A) An amount
 - (B) Measurement
 - (C) A number
 - (D) A written description like a color
- 1191.** In qualitative research, the research problem discussion is used to highlight the importance of central idea
- (A) True
 - (B) False
- 1192.** Which research approach focuses on “Narrative Analysis” in qualitative research?
- (A) Grounded Theory
 - (B) Thematic Analysis
 - (C) Studying stories and narratives
 - (D) None of above
- 1193.** Seeks pattern of association as a way of illuminating underlying meaning of interests. Patterns of interconnected themes & processes are identified as means of understanding the whole.
- (A) Data Set
 - (B) Qualitative Studies
 - (C) Quantitative Studies
 - (D) Formulating Hypothesis
- 1194.** Often used in the social sciences to collect, compare and interpret information, has a linguistic-semiotic basis and is used in techniques such as discourse analysis, interviews, surveys, records and participant observations.
- (A) Applied research
 - (B) Exploratory research
 - (C) Qualitative research
 - (D) Non-experimental research
- 1195.** Quantitative or Qualitative Observation? The science lab tables are green and round.
- (A) Quantitative
 - (B) Qualitative
- 1196.** In which type of research is it more likely that the research plan could change as more data is collected?
- (A) Qualitative
 - (B) Quantitative
 - (C) Applied
 - (D) Action
- 1197.** In a qualitative study, the individuals cooperating in the study play an active rather than a passive role and are therefore referred to as:
- (A) Informants
 - (B) Respondents
 - (C) Subject
 - (D) Interviewee
- 1198.** Grounded theorists use an analytic strategy called:
- (A) Historical research
 - (B) Constant comparison
 - (C) Interpretation
 - (D) None of above
- 1199.** The accurate portrayal of meanings attached by participants (thoughts, feelings, point of view ____)
- (A) External validity
 - (B) Internal validity
 - (C) Theoretical validity
 - (D) Interpretive validity
 - (E) Descriptive validity
- 1200.** Which of the following is not a tool of grounded theory?
- (A) Constant comparison
 - (B) Theoretical sampling
 - (C) Coding
 - (D) External Validity

- 1201.** Qualitative research relies on ____
- (A) Numerical data
 - (B) Words, observations, or pictures
 - (C) Statistical analysis of data
 - (D) Variable analysis
- 1202.** Which statement is true about external validity in qualitative research?
- (A) External validity is confirmed through random assignment in qualitative research
 - (B) External validity evidence can be obtained by replication in qualitative research, but it is not a focus very often
 - (C) External validity is confirmed through random sampling in qualitative research
 - (D) External validity is always irrelevant in qualitative research
- 1203.** What is narrative analysis?
- (A) A literary approach to documents
 - (B) An approach that is sensitive to questions that concern how people choose to sequence and represent people and events
 - (C) A form of thematic analysis
 - (D) A method of improving the quality of interview material
- 1204.** What is the initial phase of coding in qualitative analysis known as?
- (A) Closed Coding
 - (B) Open Coding
 - (C) Selective Coding
 - (D) None of above
- 1205.** What must a researcher decide when conducting phenomenological research?
- (A) How and to what extent their personal understandings will be introduced into the study
 - (B) The number of participants required for statistical significance
 - (C) The best way to avoid philosophical assumptions
 - (D) How to eliminate all subjective elements from the study
- 1206.** What is virtual ethnography?
- (A) Studying online cultures and communities through digital methods
 - (B) Avoiding participant interaction in online studies
 - (C) Collecting data only from offline sources
 - (D) Conducting surveys without ethical approval
- 1207.** Which qualitative paradigm emphasizes the inseparability of the knower and the known?
- (A) Positivism
 - (B) Interpretivism
 - (C) Constructivism
 - (D) Critical Theory
- 1208.** Which is a qualitative research tool?
- (A) Questionnaires
 - (B) Interviews
 - (C) Numerical tests
 - (D) None of these
- 1209.** What is meant by the term "grounded theory"?
- (A) Theories should be tested by rigorous scientific experiments
 - (B) Theoretical ideas and concepts should emerge from the data
 - (C) As a social researcher, it is important to keep your feet on the ground
 - (D) Theories should be grounded in political values and biases
- 1210.** Qualitative researchers are interested in global truth rather than rich and detailed local understanding.
- (A) True
 - (B) False
- 1211.** ____ is the primary focus of a research problem designed for qualitative studies.
- (A) Statistically describing an event
 - (B) Evaluating control and experimental groups

- (C) Predicting a causal relationship
(D) Understanding a group or phenomenon
- 1212.** Which topics below do not lend themselves well to ethnographic research?
(A) Topics that can be best understood in a natural setting;
(B) Topics that involve studying individual or group activities overtime;
(C) Topics that require quantification;
(D) Topics that involve studying the behaviors of groups Edit
- 1213.** MaxQDA is used for open coding and axial coding
(A) True
(B) False
- 1214.** A form of strategy in qualitative research in which attitudes, opinions or perceptions towards an issue, product, service or programme are explored through a free and open discussion between members of a group and the researcher.
(A) Focus group discussion
(B) Workshop
(C) Interview
(D) Reflective journal log
- 1215.** This is usually done by developing a close interaction with members of a group or 'living' in the situation which is being studied.
(A) Ethnography
(B) Case study
(C) Community discussion forum
(D) Reflective journal log
- 1216.** Qualitative data can be observed but not —
(A) Scientific
(B) Measured
(C) Collected
(D) Studied
- 1217.** What was the focus of the phenomenological research conducted by Anderson & Spencer (2002)?
(A) The impact of AIDS on physical health
(B) The lived experience and mental images of patients diagnosed with AIDS
(C) The effectiveness of AIDS treatments
(D) The genetic causes of AIDS
- 1218.** What is the primary advantage of using triangulation in research?
(A) It allows for statistical analysis of the collected data
(B) It provides a more comprehensive and valid understanding of the research topic
(C) It simplifies the research process and saves time
(D) It ensures a representative sample of the population
- 1219.** Involves observing all potentially relevant phenomena and taking extensive field notes without specifying in advance exactly what is to be observed. Usually done for exploratory purposes.
(A) Qualitative Observation
(B) Quantitative Observation
- 1220.** When do we use Qualitative Research?
(A) When we want to gather numerical data and there is many information exist on a topic.
(B) When we want to gather non-numerical data and there is little information exist on a topic.
(C) When we want to calculate statistical data and there is plenty of information to exist on a topic.
(D) When we want to analyze financial data and relevant theory base is answered
- 1221.** The term ethnography refers to which of the following?
(A) The research design
(B) The product or the written report
(C) The practice
(D) All of these choice s

- 1222.** A qualitative observation focuses on the quantity of an object, true or false?
(A) True
(B) False
- 1223.** It tends to be associated with small-scale studies and a holistic perspective, often studying a single occurrence or small number of occurrences/case studies in great depth.
(A) Quantitative
(B) Qualitative
- 1224.** In the context of data analysis, what does 'qualitative data' refer to?
(A) Data that can be measured numerically
(B) Data that describes qualities or characteristics
(C) Data that is always accurate
(D) Data that is collected from books
- 1225.** Select the qualitative research appropriate for this title. "The Lived Experiences of Street Children in Tondo Manila"
(A) Case Study
(B) Ethnography
(C) Phenomenology
(D) Grounded Theory
- 1226.** It is cloudy outside today.
(A) Qualitative Data
(B) Quantitative Data
- 1227.** Developing a theory grounded in data is the hallmark of:
(A) Ethnography
(B) Grounded theory
(C) Phenomenology
(D) Experimental research
- 1228.** Which of the following is NOT a key question in phenomenological research?
(A) What have you experienced in terms of the phenomenon?
(B) What contexts have influenced your experiences?
(C) How can the phenomenon be statistically analyzed?
(D) What are the significant statements related to the phenomenon?
- 1229.** Qualitative = descriptive data or data that has been put into ____ (i.e., categorized data).
(A) Categories
(B) Numbers
(C) Equations
(D) Graphs
- 1230.** It is used to explore the meaning and understanding of complex social environments, like the nature of people's experience, using case studies.
(A) Correlational Research Design
(B) Qualitative Research Design
(C) Quantitative Research Design
(D) None of above
- 1231.** What is a focus on "intersubjectivity" in qualitative research?
(A) The study of a single individual, organization, or event
(B) The exploration of shared meanings and interpretations among participants
(C) The use of statistical analysis
(D) The manipulation of variables
- 1232.** It deals with designs, techniques and measures that do not produce discrete numerical data.
(A) Qualitative research
(B) Quantitative research
(C) Theory
(D) Inquiry
- 1233.** Which one of these statements is an example of qualitative research?
(A) 20% of survey respondents bought ice cream today
(B) 50% of people in New York strongly enjoy pizza
(C) "I like a lot of toppings on my pizza-cheese, sauce, pepperoni, olives"

- (D) On average, respondents rate their grocery store a 3.5 out of 5
- (C) Qualitative
(D) None of above
- 1234.** 'Ethnography' describes ____
(A) Way of life
(B) Culture
(C) Both (A) and (B)
(D) Progeny
- 1235.** What does this mean by "qualitative research"?
(A) Involves collecting and analyzing non-numerical data (e.g., text, video, or audio)
(B) Research conducted with a scientific approach using two sets of variables
- 1236.** Which of the following is an example of qualitative data about a restaurant's customer service?
(A) "75% of customers rated the service 4 stars or higher."
(B) "Customers described the staff as friendly and helpful."
(C) "The average wait time for service is 10 minutes."
(D) "The restaurant served 120 customers during lunch hours."
- 1237.** Which of the following is not a strategy used to promote qualitative research validity?
(A) Peer review.
(B) Theory triangulation.
(C) Extended fieldwork.
(D) Random assignment.
- 1238.** Ethnographic research studies individuals rather than groups.
(A) True
(B) False
- 1239.** Read each statement and then determine which type of data it characterizes: qualitative, quantitative, or both. Produces anecdotal notes, impressions
(A) Quantitative
(B) Both
- 1240.** In qualitative research, what does "Hermeneutics" prioritize?
(A) Statistical analysis
(B) Interpretation and understanding
(C) Random sampling
(D) None of above
- 1241.** Qualitative research is used in all the following circumstances, EXCEPT ____
(A) It often uses small samples
(B) It uses the inductive method
(C) It is based on a collection of non-numerical data such as words and pictures
(D) It is typically used when a great deal is already known about the topic of interest
- 1242.** Which reasoning method can support the population prediction below?
(A) Inductive
(B) Deductive
- 1243.** Which characteristics of Qualitative Research shows an individual's mental, social, and spiritual understanding of the world?
(A) Human Understanding and Interpretation
(B) Active, Powerful and Forceful
(C) Contextualization
(D) Internal Analysis
- 1244.** It smells sweet.
(A) Qualitative data
(B) Quantitative data
- 1245.** What words would be most appropriate to see if a student was describing the QUALITATIVE properties of a metal?
(A) Melts at 1,500 degrees F
(B) Density of 1.75 pounds per cubic inch
(C) Reflective shine
(D) 15.3% copper

- 1246.** Interview is an approach that is being used to collect the data in the ____ research design.
(A) Qualitative
(B) Quantitative
- 1247.** Generalization in qualitative research is:
(A) Impossible
(B) Different from quantitative research
(C) Dependent upon type of sample
(D) Of little interest
- 1248.** Which of the following is most closely associated with qualitative research?
(A) Surveys
(B) Participant observation
(C) Precollected data
(D) Numeral analysis
- 1249.** What kind of data helps you understand the reasoning, opinions and motivations of why customers provide positive or negative feedback to your value proposition?
(A) Quantitative data
(B) Qualitative data
- 1250.** What kind of data describes personal preferences and opinions?
(A) Open-ended data
(B) Closed-ended data
(C) Qualitative data
(D) None of above
- 1251.** What is the purpose of “Joint Coding” in qualitative research?
(A) Increased reliability and reduced bias
(B) Individual data coding
(C) Quantitative analysis
(D) None of above
- 1252.** A question asking “How does scrolling through instagram make you feel?” would obtain which type of data
(A) Quantitative data
(B) Qualitative data
- 1253.** What information comes from qualitative research?
(A) Facts, opinions, statistics
(B) Experiences, facts and numbers
(C) Numbers, statistics, opinions
(D) Opinions, feelings and experiences
- 1254.** What type of validity ensures findings are transferable across contexts in qualitative research?
(A) Internal validity
(B) External validity
(C) Construct validity
(D) Ecological validity
- 1255.** Qualitative researchers prefer natural settings because:
(A) They believe context is crucial
(B) They are easier to arrange
(C) They lead to more reliable data
(D) They require less training
- 1256.** An example of introspective technique is:
(A) Surveys
(B) Think aloud protocol
(C) Video-recordings
(D) None of above
- 1257.** What is the purpose of probes on an interview guide in qualitative research?
(A) To confuse the interviewee
(B) To distract the interviewee
(C) To gather additional information and clarify responses
(D) To end the interview quickly
- 1258.** Construct interpretative narratives from the data.
(A) Qualitative
(B) Quantitative
(C) Both
(D) None of above

1259. Research that relies on what is seen in field or naturalistic settings
- (A) Qualitative Research
 - (B) Quantitative Data
 - (C) Qualitative Data
 - (D) Primary Data
1260. What is one of the uses of qualitative research?
- (A) Determine the allocation of resources.
 - (B) Obtain insights into what it feels like to be another person.
 - (C) Predict trends.
 - (D) None of above
1261. This research uses data taken from a small sample of the population that are purposively selected.
- (A) Qualitative Research
 - (B) Quantitative Research
1262. In a music review, the author describes the emotional impact of a song.
- (A) Qualitative
 - (B) Quantitative
1263. The extent to which qualitative findings can be transferred to other settings
- (A) Generalizability
 - (B) Transferability (qualitative)
 - (C) Thick description
 - (D) None of above
1264. The design of a qualitative study commences with broad — regarding the qualitative — and the theoretical lens which shape and direct the study.
- (A) Assumptions. Inquiry
 - (B) Inspirations. Assumptions
 - (C) Dreams. Assumptions
 - (D) Details. Structure
1265. Qualitative data gives researchers
- (A) Useful figures to analyse
 - (B) Insightful and in-depth info
 - (C) More reliable information
 - (D) Simple info to interpret
1266. In-depth interviewing, focus group discussion, mapping, and observation are information-collection techniques of:
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Survey research
 - (D) Pilot study
1267. Searching through the transcripts for specific words with a predefined set of 'codes' is called:
- (A) Inductive Coding
 - (B) Deductive Coding
 - (C) Combination of both
 - (D) Qualitative coding
1268. Disadvantage of content analysis is.
- (A) Spontaneous feelings can be recorded when they occurred.
 - (B) Provides access on the subjects to which researcher does have physical access.
 - (C) Researcher can increase the sample size.
 - (D) Sometime documents provide incomplete account to the researcher.
1269. What type of research would be appropriate in the following situation? A college or university bookshop wants to get some insights into how students feel about the shop's merchandise, prices and service.
- (A) Secondary data
 - (B) Qualitative research
 - (C) Focus groups
 - (D) Quantitative research
1270. What are observations made using our five senses called?
- (A) Qualitative data
 - (B) Quantitative data

- 1271.** The holistic perspective means ____
- (A) There are "holes" in the account that can make it invalid.
 - (B) The researcher is guided by analytical principles.
 - (C) The entire phenomena is understood to be complex and more than a sum of its parts.
 - (D) None of above
- 1272.** What insights can ethnographic research provide to researchers in business anthropology?
- (A) Insights into technological advancements
 - (B) Insights into cultural norms, values, and beliefs that shape organizational behavior
 - (C) Insights into political ideologies
 - (D) Insights into ancient trade practices
- 1273.** In inductive reasoning, conclusions are:
- (A) Always true if the premises are true.
 - (B) Impossible to verify.
 - (C) Probable but not certain.
 - (D) Based on mathematical proofs.
- 1274.** Which research method would be most useful in symbolic interactionism?
- (A) Participant observation
 - (B) Survey
 - (C) Experiment
 - (D) Case study
- 1275.** What kind of data does not use numbers, but involves descriptions? (ex. noticing that your partner's hair is brown)
- (A) Qualitative data
 - (B) Quantitative data
- 1276.** What is the primary goal of focus groups?
- (A) Gather quantitative data
 - (B) Explore thoughts, opinions, and observations
 - (C) Conduct blind studies
 - (D) Collect artifacts
- 1277.** Which of the following best describes inductive reasoning in the scientific process?
- (A) Starting with a general theory and making specific predictions about outcomes
 - (B) Using logical rules to deduce what must be true in all cases
 - (C) Making specific observations and constructing a broad general theory from patterns
 - (D) Testing a hypothesis multiple times until it becomes a proven fact
- 1278.** The giraffes have a very long neck. This is an example of a(n):
- (A) Quantitative observation.
 - (B) Qualitative observation.
 - (C) Inference.
 - (D) None of above
- 1279.** Qualitative research uses the ____ or ____ part of an inclusive scientific method.
- (A) Top down
 - (B) Bottom up
 - (C) Deductive
 - (D) Inductive
- 1280.** Which type of data helps explain people's thoughts, feelings, and experiences?
- (A) Quantitative data
 - (B) Ordinal data
 - (C) Interval data
 - (D) Qualitative data
- 1281.** A challenge of qualitative data analysis is that it often includes data that are unwieldy and complex; it is a major challenge to make sense of the large pool of data
- (A) True
 - (B) False
- 1282.** How are behavioral patterns typically observed in qualitative data analysis?
- (A) Through mathematical equations
 - (B) Through visualizations
 - (C) Through narrative descriptions
 - (D) Through statistical tests

- 1283.** A type of research mainly expressed in words
(A) Qualitative
(B) Quantitative
- 1284.** Teacher Vera observed that learners nowadays are more flooded by media. She wants to understand the guiding concepts of how learners navigate the media of today. What method is she most likely going to use?
(A) Experimental research
(B) Grounded theory research
(C) Phenomenological research
(D) Narrative research/ case studies
- 1285.** Grounded theory is useful when:
(A) Testing existing theories
(B) Developing new theories from data
(C) Studying large populations
(D) Conducting experiments
- 1286.** Type of QUALITATIVE central question
(A) Ethnography
(B) Null
(C) Alternative hypothesis
(D) Nondirectional
- 1287.** Which approach does not typically use random sampling?
(A) Quantitative
(B) Qualitative
(C) Experimental
(D) Descriptive
- 1288.** Multiple Choice: Read each question carefully and choose the BEST answer. A researcher analyzes historical documents to trace the development of an institution. What design is most appropriate?
(A) Phenomenology
(B) Case Study
(C) Textual Analysis
(D) Grounded Theory
- 1289.** Which of the following is an advantage of Grounded Theory?
(A) Little structure
(B) Less time-consuming
(C) Produces a rich description
(D) Requires minimal data
- 1290.** Which research approach views humans as anticipatory, meaning-making beings?
(A) Experimental research
(B) Quantitative research
(C) Mixed methods research
(D) Qualitative research
- 1291.** Which of the following characterizes naturalistic research methods
(A) Fixed design
(B) Deductive processes
(C) Qualitative information
(D) Seeking of generalizations
- 1292.** What type of data is used to understand experiences and perspectives?
(A) Ordinal data
(B) Quantitative data
(C) Interval data
(D) Qualitative data
- 1293.** Research "DATA" based on what people think or feel about something.
(A) Qualitative
(B) Quantitative
(C) Quantitative
(D) Potatative
- 1294.** What is the first step in the ethnographic process?
(A) Drafting the written letter of request for immersion
(B) Identifying the cultural issue or topic
(C) Analyzing the collected field results
(D) Living with the community participants

- 1295.** In qualitative research, when does a hypothesis emerge?
(A) At the beginning of the research process.
(B) After data collection and analysis.
(C) During the interpretation phase.
(D) Only if the data supports it.
- 1296.** Which of these characteristics does NOT describe the nature of a qualitative interview?
(A) Getting accurate answers to questions of how much or how many
(B) Producing highly structured data on people's opinions
(C) Investigating participants' subjective interpretations of social phenomena
(D) Facilitating a more suggestive communication of people's life experiences
- 1297.** Chloe is conducting a research project. Which of the following is NOT typically associated with qualitative research?
(A) Phenomenology
(B) Ethnography
(C) Grounded theory
(D) Statistics
- 1298.** What does ethnography contribute?
(A) Inferring what happens within the study group
(B) Social anthropology and education studies
(C) Theoretical and methodological elements
(D) None of above
- 1299.** What strategy is specifically used in qualitative research to ensure data quality?
(A) Random sampling
(B) Triangulation
(C) Statistical analysis
(D) Replicability
- 1300.** What is one way business anthropologists support human resources departments?
(A) By designing office layouts
(B) By conducting research on organizational culture and workplace dynamics
(C) By managing company finances
(D) By creating marketing strategies
- 1301.** What type of research is designed to obtain information on how people feel about certain products, services, companies, or ideas?
(A) Attitude research
(B) Market intelligence
(C) Media research
(D) Product research
- 1302.** The inductive nature of qualitative research means it:
(A) Relies on deductive reasoning
(B) Builds theories from specific observations
(C) Starts with general theories
(D) Tests variables
- 1303.** Dr. Mon wants to know the meaning of food offering during All Soul's among the Ilocanos. Dr. Mon should have this perspective:
(A) Critica
(B) Emic
(C) Etic
(D) Structural functionalist
- 1304.** The qualitative research process is typically:
(A) Highly structured
(B) Flexible
(C) Pre-planned
(D) Quantitative
- 1305.** Which research type is used to understand how consumers feel about a brand or product?
(A) Attitude Research
(B) Product Research
(C) Media Research
(D) Geographic Research

- 1306.** Allows researchers to capture new ideas which can be used to create more scientific and objective studies in the future; provides researchers with an in-depth working knowledge of the topic area having worked with participants who have fully explained their experiences.
- (A) Qualitative
 - (B) Quantitative
 - (B) False
 - (C) It depends on the research topic
 - (D) Both A and C
- 1307.** Qualitative research uses an inductive mode of science and often focuses on exploration and discovery.
- (A) True
 - (B) False
- 1308.** Which process of research involves emerging questions and procedures, data typically collected in the participant's setting, data analysis, inductively building from particulars to general themes, and the researcher making interpretations of the meaning of the data?
- (A) Qualitative
 - (B) Scientific
 - (C) Quantitative
 - (D) Mixed
- 1309.** Which statement best reflects the basis of grounded theory as described?
- (A) Aggregates numerical trends across large samples
 - (B) Measures causal effects using controlled experiments
 - (C) Discovers how people describe their own reality
 - (D) Explains universal laws detached from context
- 1310.** These are the designs of qualitative research method
- (A) Case study & phenomenology
 - (B) Phenomenology and survey
- 1311.** Qualitative research generally uses larger sample sizes than quantitative research.
- (A) True
- 1312.** In qualitative research, findings are:
- (A) Easily generalized
 - (B) Statistical
 - (C) Specific to the studied context
 - (D) Numerical
- 1313.** Qualitative research tends to ask these type of questions
- (A) How or Why
 - (B) What or Why
 - (C) Is
 - (D) Where
- 1314.** The logic of purposive sampling is
- (A) To use participants because the researcher has access to them.
 - (B) That a random sample can generalize to a population.
 - (C) That a few information-rich participants studied in depth yield many insights about a topic.
 - (D) To include all participants, even though they are not all relevant to the problem.
- 1315.** How are called procedures in which researchers describe the lives of individuals and tell stories about these individuals' lives and write narratives about their experiences?
- (A) Survey designs
 - (B) Action research designs
 - (C) Mixed Methods Designs
 - (D) Narrative research designs
- 1316.** What branch of study does ethnography belong to?
- (A) Sociology
 - (B) Psychology
 - (C) Anthropology
 - (D) Biology

- 1317.** Why do qualitative researchers like to give detailed descriptions of social settings?
(A) To provide a contextual understanding of social behavior
(B) Because once they have left the field, it is difficult to remember what happened
(C) So that they can compare their observations as a test of reliability
(D) Because they do not believe in going beyond the level of description
- 1318.** How many participants are needed in a grounded theory research?
(A) 1
(B) 5 to 15
(C) 15 to 25
(D) 20 to 30 or until saturation is achieved
- 1319.** Which of the categories from Tony's data table includes qualitative observations?
(A) Color
(B) Temperature
(C) Mass
(D) Volume
- 1320.** Which of the following is NOT a focus of ethnography?
(A) Patterns of behavior
(B) Customs
(C) Ways of life
(D) Genetic makeup
- 1321.** Research that uses descriptive data and is written in text form would be called?
(A) Quantitative
(B) Qualitative
(C) Discriptive
(D) Formulative
- 1322.** The Grounded theory involves a series of —
(A) Books
(B) Designs
(C) Instructions
(D) Theories
- 1323.** What does qualitative research collect?
(A) Statistical figures
(B) Narrative data in natural settings
(C) Experiment results
(D) Computer data
- 1324.** When the codes are analyzed and a pattern emerges leading to defined themes, this type of qualitative study is called:
(A) Thematic Analysis
(B) Grounded theory
(C) Content Analysis
(D) None of the above.
- 1325.** What was the name of a pioneering book that expounded in detail on grounded theory procedures?
(A) Creswell & Brown, 1992
(B) The Discovery of Grounded Theory (1967)
(C) Charmaz, 2000
(D) Discovery
- 1326.** In qualitative research, what is a "theoretical lens"?
(A) A specific hypothesis that is tested using qualitative data
(B) A statistical method for analyzing qualitative data
(C) A perspective that guides the research process, such as a focus on gender or class
(D) A type of qualitative research design, such as ethnography or grounded theory
- 1327.** In this research design, the researcher has to become immersed in a culture for a prolonged period of time.
(A) Narrative inquiry
(B) Case studies
(C) Ethnographic research
(D) None of above
- 1328.** Is "Identify your intent, the appropriate design and how intent relates to your research problem" the first step to conduct an Ethnographic Research?

- (A) TRUE
(B) FALSE
- 1329.** Social Action theorists prefer qualitative data
(A) True
(B) False
- 1330.** Which of the following is a characteristics of qualitative method?
(A) The researcher uses hypothesis for testing.
(B) Uses small size sample
(C) Concerned with generalization.
(D) Evidence in the form of numbers
- 1331.** “TOGETHER WE ARE UNBEATABLE”:young sisters’ narration of a sibling’s cancer in personal blogs on the internet
(A) Qualitative
(B) Quantitative
- 1332.** This refers to the object of human experience
(A) Philosophy
(B) Data
(C) Respondents
(D) Phenomenon
- 1333.** According to Bandura, social learning believes that people learn from others through observation, imitation, and ____
(A) Interview
(B) Question and answer
(C) Interaction
(D) Modeling
- 1334.** In-depth study of people in their natural setting to understand lifestyle and buying behavior.
(A) Ethnographic Research
(B) Interviews
- 1335.** This type of data from research answers questions such as “how” and “why”.
(A) Research data
(B) Quantitative data
(C) Number data
(D) Qualitative data
- 1336.** In qualitative research the researcher can also be known as the ____ of data collection
(A) Organizer
(B) Manipulator
(C) Bystander
(D) Instrument
- 1337.** Match each type of research report with the corresponding type of qualitative research. Rich narrative that lets readers experience phenomenon through eyes of participants
(A) Case study
(B) Ethnography
(C) Narrative inquiry
(D) Phenomenology
(E) Grounded theory
- 1338.** Methods of data collection in ethnographic research:
(A) Interview, observation, reviewing artefacts and visual materials
(B) Essay, observation, tests, checklist
(C) Just observation and checklist
(D) Test, checklist, reviewing artefacts
- 1339.** Statistical analysis cannot be made, so it is less scientific.
(A) Strength of Quantitative Data
(B) Strength of Qualitative Data
(C) Weakness of Quantitative Data
(D) Weakness of Qualitative Data
- 1340.** When is phenomenological research most suitable?
(A) When studying the molecular structure of materials
(B) When analyzing economic trends
(C) When you need a deep, structural understanding of a phenomenon to inform practice, policy, or theory

- (D) When developing new software applications
- 1341.** Data are often collected from a few individuals or cases, making it hard to generalize the findings of the research or to say that the findings of the study are applicable to a larger population.
- (A) Quantitative
(B) Qualitative
- 1342.** A researcher's personal participation in people's activities is necessary for ____
- (A) Case Study
(B) Ethnography
(C) Historical
(D) Phenomenological
- 1343.** It focuses on an entire cultural group which describes their shared patterns of values, behavior, language, culture, and tradition.
- (A) Phenomenological Research
(B) Narrative Research
(C) Ethnographic Research
(D) Ground Theory
- 1344.** The five reasons to use qualitative research are
- (A) Connecting theory to practice, improving educational practice, fostering school improvements, empowering teachers and other educators, professional growth and development
(B) Connecting theory to practice, fostering school improvement, professional growth and development, make immediate changes, collaborate with others.
- 1345.** She observed that all the dolphins have smooth skin.
- (A) This is qualitative data
(B) This is quantitative data
- 1346.** Market research that is based on opinions and thoughts is called ____
- (A) Quantitative research
(B) Secondary research
(C) Primary research
(D) Qualitative research
- 1347.** In qualitative research, "propositions" may be used:
- (A) As flexible tools
(B) To help guide data collection
(C) To help with data analysis
(D) All of the above
- 1348.** Data such as open-ended responses, interviews, participant observations, field notes, & reflections
- (A) Quantitative
(B) Qualitative
- 1349.** The sample with the baking soda appeared bubbly.
- (A) Qualitative
(B) Quantitative
- 1350.** What do we call the approach used when analysing interviews?
- (A) Inductive content analysis
(B) Deductive content analysis
(C) Interview analysis
(D) Transcription data analysis
- 1351.** Subjective research might be considered superior due to:
- (A) Independence
(B) Replicability
(C) Author's credibility
(D) Quantitative analysis
- 1352.** The rock sample was reddish brownish.
- (A) Qualitative
(B) Quantitative
- 1353.** You want to collect data on the taste of apples to help a farmer grow sweeter apples in his orchard. You have your assistants describe apples as "sweet" or "tart". This is called ____ data

- (A) Quantitative
(B) Qualitative
(C) Not scientific
(D) Hypothetical
- 1354.** Research that focuses on smaller numbers of people & tries to answer questions that begin with “why” or “how”
(A) Quantitative
(B) Media
(C) Market
(D) Qualitative
- 1355.** Which type of research uses interviews and observations?
(A) Quantitative
(B) Qualitative
(C) Statistical
(D) Experimental
- 1356.** What of the following is not a characteristic of participatory action research?
(A) It intends to empower individuals and groups
(B) It emphasises collaboration
(C) It intends to result in social change
(D) It is not subject to political pressures
- 1357.** Match each type of research report with the corresponding type of qualitative research. Answer options may be used more than once or not at all. Extensive description of physical and social settings aimed at holistic understanding.
(A) Phenomenology
(B) Ethnography
(C) Narrative Inquiry
(D) Case Study
(E) Grounded Theory
- 1358.** Focus groups collect
(A) Qualitative data
(B) Quantitative data
- 1359.** The ethnographer develops personal relationships with the individuals of the context that is studied.
(A) NO
(B) YES
- 1360.** This is concerned with establishing answers to the “whys and hows” of the phenomenon in question. What is this?
(A) Research design
(B) Quantitative research design
(C) Qualitative research design
(D) Research
- 1361.** Analysis can be long and laborious exercise and answers vary so much from each other that they are hard to compare; may need to collect more data to verify whether emergent themes apply to the experience of others or whether they are completely unique.
(A) Quantitative
(B) Qualitative
- 1362.** Grounded theory
(A) Quantitative research
(B) Qualitative research
- 1363.** If a study is aiming at an in-depth exploration of a phenomenon on a small but profound scale, the following research approach is more appropriate.
(A) Quantitative research
(B) Deductive research
(C) Qualitative research
(D) None of above
- 1364.** There are two types of data. Which type of data involves descriptions/photographs/illustrations?
(A) Qualitative
(B) Quantitative
- 1365.** Noticing that a bird is blue is a ____ observation.
(A) Qualitative
(B) Quantitative

- 1366.** What is a key aspect of qualitative research design?
- (A) Fixed procedures
 - (B) Standardized methods
 - (C) Emergent design
 - (D) Predetermined outcomes
- 1367.** Which characteristics of Qualitative Research lets you choose varied methods and approaches for your research?
- (A) Specificity to Generalization
 - (B) Abounds with words and visuals
 - (C) Multiple Research Methods and Approaches
 - (D) Internal Analysis
- 1368.** How did narrative research develop?
- (A) To examine what draws nursing to this method and why nurses think they may be good at it
 - (B) Is the study of social interaction and culture
 - (C) 1990 Clandinin and Connelly first overview of narrative research in education
 - (D) Barney Glaser and Anselm Strauss collaboration in research on dying hospital patients led them to write *Awareness of Dying* in 1965
- 1369.** In which qualitative research tradition is a literature review least likely to be done prior to going into the field to collect data?
- (A) Ethnography
 - (B) No major qualitative research tradition does a literature review at the outset
 - (C) Phenomenology
 - (D) Grounded theory
- 1370.** The cat has thick fur.
- (A) Inference
 - (B) Quantitative
 - (C) Qualitative
 - (D) None of above
- 1371.** In an ethnographic study, the researcher participates in daily activities of a remote village for six months. What is the main advantage of this method?
- (A) It provides deep cultural insights
 - (B) It guarantees objectivity
 - (C) It speeds up data collection
 - (D) It prevents participant bias
- 1372.** Which of the following activities would most likely result in qualitative data?
- (A) Students rate enjoyment on a scale
 - (B) A girl writes a diary describing daily life
 - (C) Students record hours spent revising
 - (D) Researcher uses 'yes' or 'no' questions
- 1373.** Focuses on the lived experience of humans
- (A) Grounded theory research
 - (B) Phenomenological research
 - (C) Ethnographic research
 - (D) None of above
- 1374.** Which type of research is more focused on exploring and understanding society?
- (A) Qualitative research
 - (B) Quantitative research
 - (C) Observational research
 - (D) Experimental research
- 1375.** Triangulation is a validation approach based on the search for the ___ of results obtained by multiple sources and perspectives.
- (A) Convergence
 - (B) Absence
 - (C) Divergence
 - (D) None of above
- 1376.** Which research method maintains the broadest scope, focusing holistically on the culture-sharing group?
- (A) Narrative research
 - (B) Phenomenology
 - (C) Ethnography
 - (D) Case Study

- 1377.** Which type of qualitative research involves studying people in their natural environment?
- (A) Experimental
 - (B) Correlational
 - (C) Ethnographic
 - (D) Narrative
- 1378.** Which kind of qualitative research refers to an inductive technique developed for health-related topics?
- (A) Case Study
 - (B) Grounded Theory
 - (C) Ethnography
 - (D) Historical Research
- 1379.** Which of the following does not apply to qualitative research?
- (A) Data are often words and pictures
 - (B) Uses the inductive scientific method
 - (C) Ends with a statistical report
 - (D) Involves direct and personal contact with participants
- 1380.** Qualitative data is ____
- (A) Descriptive information about qualities that cannot be expressed numerically or measured
 - (B) Numerical information that can be measured, counted, or calculated
- 1381.** Choose true or false: If you are doing an ethnographic research study, it is important to keep in mind the concept CULTURE as an organizing principle.
- (A) TRUE
 - (B) FALSE
- 1382.** When is the theory developed in Grounded Theory?
- (A) Before data collection
 - (B) During the course of the study
 - (C) After the study is completed
 - (D) Before the study begins
- 1383.** What type of documentation resources can be coded and divided based on their content in qualitative data analysis?
- (A) Graphs
 - (B) Charts
 - (C) Tables
 - (D) Documents
- 1384.** WHAT I KNOW Directions: Read each statement carefully. Tell whether the statement is TRUE or FALSE. 1. Qualitative research is most suited in language and arts.
- (A) TRUE
 - (B) FALSE
- 1385.** In an experiment, a scientist notes that a chemical reaction produces a strong odor. This observation is:
- (A) Qualitative
 - (B) Quantitative
 - (C) Neither
 - (D) Both
- 1386.** Grounded theory produces:
- (A) Quantifiable data
 - (B) Rich, diverse data
 - (C) Generalized theories
 - (D) Structured results
- 1387.** Which methodological approach emphasizes the researcher as the primary instrument?
- (A) Quantitative
 - (B) Experimental
 - (C) Qualitative
 - (D) Mixed methods
- 1388.** How does saturation affect the completion of qualitative data analysis?
- (A) It ensures the researcher collects more data
 - (B) It indicates that no new themes are emerging, allowing the researcher to conclude data collection
 - (C) It reduces the need for coding
 - (D) It requires triangulation of all data

- 1389.** ____ is a qualitative research approach that seeks to understand and describe the universal essence of a phenomenon.
- (A) Phenomenology Research
 - (B) Nature Research
 - (C) Oral Research
 - (D) Concurrent Research
- 1390.** Why is qualitative research considered flexible?
- (A) It allows changes in design as the study progresses
 - (B) It has fixed procedures from the start
 - (C) It is entirely dependent on numerical results
 - (D) It uses standardized tests
- 1391.** Specific Findings
- (A) Quantitative
 - (B) Qualitative
- 1392.** What is the primary purpose of using narrative research?
- (A) To analyze statistical data from a large population
 - (B) To capture the detailed life story of a single individual or a small number of individuals
 - (C) To study the effects of environmental changes on a community
 - (D) To conduct experiments in controlled settings
- 1393.** Rigor in qualitative research is enhanced with
- (A) Memoing
 - (B) Coding
 - (C) Audit trail
 - (D) Statistical analysis
- 1394.** Qualitative research is based on numerical data that can be analyzed using statistics.
- (A) True
 - (B) False
- 1395.** Color of the leaves of a pechay plant is an example of ____
- (A) Qualitative data
 - (B) Quantitative data
- 1396.** Representing the views and perspective of the people or participants of the study in the results of the research mirror the values and meaning of the people who live them, not by the researcher.
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Both types of Research
 - (D) None of the two
- 1397.** A focus group is an example of
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Secondary research
 - (D) No research
- 1398.** Because information gathered during a participant observation is mostly ____, rather than ____, the end results are often descriptive or interpretive.
- (A) Qualitative, quantitative
 - (B) Quantitative, qualitative
- 1399.** What is the type of research that explores experiences, opinions, and meanings?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed Methods
 - (D) Explanatory
 - (E) Applied
- 1400.** Which type of research approach best suits Jamal's interest in exploring lived experiences?
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed methods
 - (D) Experimental

- 1401.** Which of the following should an ethnographer look for in his/her study?
- (A) Patterns of the group's mental activities.
 - (B) Ideas and beliefs
 - (C) Social networks
 - (D) All of these
- 1402.** Not quantitative research
- (A) The researcher places itself separately with the research object
 - (B) Variables can be identified and measured by objective and standard tools
 - (C) The process of finding knowledge that uses data in the form of numbers as an analysis tool
 - (D) Deduction thinking patterns and positivistic logic
 - (E) The research results are not in the form of generalization and prediction
- 1403.** Your role as a qualitative researcher is to develop your own hypothesis
- (A) True
 - (B) False
- 1404.** Case studies collect both qual and quan data but they are the favoured research method for
- (A) Idiographic research
 - (B) Nomothetic research
- 1405.** Match the following characteristics of reviewing research literature to the most appropriate research approaches
- Encourages theoretical sensitivity of repeatedly identified relationships.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed
 - (D) Action
- 1406.** In Grounded Theory, what does it mean for data to be "grounded" in a study conducted by Arthur and Kiara?
- (A) Data is collected from the internet
 - (B) Data is systematically collected and analyzed
 - (C) Data is randomly selected
 - (D) Data is based on assumptions
- 1407.** A researcher studies how parents in rural areas support children's education. This study is important because it:
- (A) Highlights human behavior in context
 - (B) Produces generalizable results
 - (C) Relies only on surveys
 - (D) Avoids interpretation
- 1408.** The primary data analysis approach in ethnography is:
- (A) Open, axial and selective coding
 - (B) Holistic description and search for cultural themes
 - (C) Cross-case analysis
 - (D) Identifying essences of a phenomenon
- 1409.** What is the preferred sample size for qualitative research methods?
- (A) 1-5
 - (B) 5-15
 - (C) 15-30
 - (D) 30-50
- 1410.** Made by the researcher with another person involved in the data analysis regarding the truthfulness and trustworthiness of the data being researched
- (A) Pragmatic use
 - (B) Correspondence
 - (C) Member-checking procedure
 - (D) Critical-friend technique
- 1411.** What does "Validity" in qualitative research refer to?
- (A) Reliability of data
 - (B) Credibility and trustworthiness of findings
 - (C) Generalizability
 - (D) None of above

- 1412.** Which of the following is one of the major challenge of performing good ethnographic research?
- (A) Finding people to study using this method
 - (B) Getting paid to study a culture for a whole year
 - (C) None of these answers are correct
 - (D) Obtaining the level of understanding and awareness about the people
- 1413.** What does "bracketing personal views" mean in phenomenological research?
- (A) Setting aside the research topic
 - (B) Ignoring participants' experiences
 - (C) Consciously setting aside one's own pre-conceptions
 - (D) Collecting data from individuals
- 1414.** In qualitative research, data is analyzed to:
- (A) Test hypotheses
 - (B) Identify patterns and themes
 - (C) Compare results across populations
 - (D) Prove theories
- 1415.** Cultural meanings and practices surrounding end-of-life care in diverse communities
- (A) Qualitative Research
 - (B) Quantitative Research
- 1416.** Qualitative research is a time-consuming process of data analysis requiring the researcher to sort through large amounts of data and reduce them to a few themes/categories.
- (A) True
 - (B) False
- 1417.** The following are advantages of ethnographic research except for one. Which of the following is it?
- (A) Researcher has direct access to the study group.
 - (B) It is an open and flexible method.
 - (C) It provides more authentic information.
 - (D) There is no researcher bias.
- 1418.** Grounded Theory originated from ____?
- (A) Sociology
 - (B) Multiple disciplines
 - (C) Anthropology
 - (D) Philosophy
 - (E) Human storytelling and education
- 1419.** In which of the following are both research methodologies best described as qualitative?
- (A) Closed ended questionnaire, structured interview
 - (B) Case study, statistical analysis
 - (C) Content analysis, observation using data recording sheet
 - (D) Open-ended questionnaire, unstructured interview
- 1420.** Gathered through a focus group or interview
- (A) Qualitative research
 - (B) Also known as opinion research
 - (C) Quantitative research
 - (D) Defines the size and location of a market
- 1421.** Qualitative Methods are all about numbers
- (A) True
 - (B) False
- 1422.** Research aimed at gathering an in-depth understanding of an issue by way of open ended questioning, non-statistical research techniques, or value-based observations. This describes which of the following?
- (A) Quantitative Research
 - (B) Qualitative Research
- 1423.** Which research methodology emphasizes non-numerical data?
- (A) Quantitative
 - (B) Mixed-methods
 - (C) Theoretical
 - (D) Qualitative

- 1424.** In single case research designs, qualitative data analysis involves identifying patterns that match with ____ or are inferred from the data.
- (A) Theoretical predications/hypotheses
 - (B) Statistical averages
 - (C) Random variables
 - (D) Experimental errors
- 1425.** This type of reasoning typically begins with an incomplete set of observations and proceeds to the likeliest possible explanation.
- (A) Fallacious
 - (B) Inductive
 - (C) Deductive
 - (D) Abductive
- 1426.** Why has qualitative research been seen to have an affinity with feminism?
- (A) It allows women's voices to be heard, rather than objectifying and exploiting them
 - (B) It has always been carried out by female sociologists
 - (C) It allows the researcher to control variables and suppress women's voices
 - (D) It claims to be value-free and non-political
- 1427.** Is a type of educational research in which the researcher relies on the views of participants; asks broad, general questions; collects data consisting largely words (text) from participants; describes and analyzes these words for themes; and conducts the inquiry in a subjective, biased manner.
- (A) QUALITATIVE RESEARCH
 - (B) QUANTITATIVE RESEARCH
 - (C) APPLIED RESEARCH
 - (D) PURE/BASIC RESEARCH
- 1428.** The whole phenomenon under study is understood as a complex system that is more than the sum of its parts
- (A) Qualitative data
 - (B) Holistic perspective
 - (C) Inductive analysis
 - (D) Naturalistic inquiry
- 1429.** When inferring patterns and themes from qualitative data, what role does constant comparison play in the analysis process?
- (A) Ensuring a predetermined outcome
 - (B) Minimizing inter-rater reliability
 - (C) Iteratively comparing data to refine themes
 - (D) Eliminating participant biases
- 1430.** Qualitative research often requires a small sample size.
- (A) Strength
 - (B) Weakness
- 1431.** In qualitative studies, the research problem primarily focuses on ____
- (A) Understanding a group or phenomenon
 - (B) Statistically describing an event
 - (C) Predicting a causal relationship
 - (D) Evaluating control and experimental groups
- 1432.** Understanding Social behavior by putting yourself in the place of others.
- (A) Positivism
 - (B) Society
 - (C) Culture Theory
 - (D) Verstehen
- 1433.** Qualitative Data is Numerical Data
- (A) True
 - (B) False
- 1434.** Diagrams, matrices, tables, and figures should never be used in qualitative research reports.
- (A) True.
 - (B) False.
 - (C) Doubtful.
 - (D) None of the above.

- 1435.** What words would be most appropriate to see if a student was describing the QUALITATIVE properties of a planet?
- (A) 13,500,000 miles in diameter
 - (B) 16 light years away
 - (C) Orbits a star in 854 days
 - (D) Gaseous
- 1436.** Which type of observation involves descriptions that do not include numbers?
- (A) Quantitative
 - (B) Qualitative
 - (C) Numerical
 - (D) Statistical
- 1437.** Purpose is to understand& interpret social interactions.
- (A) Quantitative
 - (B) Qualitative
- 1438.** An approach that studies social life as a system of human relationships is called
- (A) Psychological
 - (B) Interactionist
 - (C) Demographic
 - (D) Collectivist
 - (E) Cultural
- 1439.** A qualitative observation ____
- (A) Does NOT include numbers
 - (B) DOES include numbers
 - (C) Is an educated guess
 - (D) Is guessing about the future
- 1440.** This is an example of a qualitative data
- (A) Bottle is 16 ounces
 - (B) 3 cars in the parking lot
 - (C) Two dozens of eggs
 - (D) My shirt smells like orange
- 1441.** What does synthesizing the essence aim to convey in phenomenological research?
- (A) The universal essence of the experience
 - (B) The statistical significance of the findings
 - (C) The individual opinions of participants
 - (D) The methods used for data collection
- 1442.** True or false: The primary purpose of qualitative research is to generalize the findings to entire populations
- (A) True
 - (B) False
- 1443.** In a ____ the research problem focuses on understanding the inner world of a particular group or exploring some process, event, or phenomenon
- (A) Qualitative Research Study
 - (B) Quantitative Research Study
- 1444.** Which qualitative research method focuses on understanding the lived experiences of individuals?
- (A) Case study
 - (B) Phenomenology
 - (C) Grounded theory
 - (D) Ethnography
- 1445.** A qualitative research question:
- (A) Asks a question about some process or phenomenon to be explored
 - (B) Is generally an open-ended question
 - (C) Both a and b are correct
 - (D) None of the above
- 1446.** Qualitative Research is all about numbers
- (A) True
 - (B) False
- 1447.** The researcher's presence during data gathering is often unavoidable
- (A) Quantitative
 - (B) Qualitative
- 1448.** TRUE OR FALSE: An example of a case where ethnographic research can be applied in the Philippines is the study of indigenous communities and their traditional practices.
- (A) True
 - (B) False

- 1449.** Day of the week on which you were born
(A) Qualitative
(B) Quantitative
- 1450.** Which of the following is a formal research method?
(A) Talking with your boss
(B) Organizing a focus group
(C) Brainstorming
(D) Looking in company files
- 1451.** Which is NOT TRUE about qualitative data?
(A) It is a type of data that is contextual.
(B) It can be collected by conducting an interview.
(C) The results are often reported in graphs and tables.
(D) Data analysis is by qualitative content analysis and thematic analysis.
- 1452.** Which of the following is true of ethnographic research?
(A) It is a type of experimental research that involves evaluating group responses.
(B) It involves sending observers to watch and interact with consumers in their natural environments.
(C) It is a traditional quantitative research approach.
(D) Information used in this mode of research is mainly derived from secondary data sources.
(E) It is a form of survey research.
- 1453.** A researcher prepared a report based on the interviews of 25 people. Under which category, this research can be placed?
(A) Scientific.
(B) Quantitative.
(C) Historical.
(D) Qualitative.
- 1454.** Open questions: questionnaire, interview or test items that produce ___ data participants give full and detailed answers in their ___ own ___ words, no choices or categories are given.
(A) Qualitative
(B) Quantitative
(C) Statistical
(D) Numerical
- 1455.** This type of research focuses on describing the culture of a group of people.
(A) Ethnography
(B) Phenomenology
(C) Case Study
(D) Historical Research
- 1456.** I used qualitative ___ in my research.
(A) Approach
(B) Validation
(C) Development
(D) Distribution
- 1457.** Qualitative research always starts with ___
(A) What
(B) How
(C) When
(D) Who
- 1458.** Which method aims to understand the "imponderabilia of everyday life"?
(A) Action research
(B) Phenomenology
(C) Grounded theory
(D) Ethnography
- 1459.** This research intends to investigate the reality of the world which is relative to the perspective of everyone. Which type of research is being described?
(A) Qualitative Research
(B) Quantitative Research
(C) Both
(D) Neither
- 1460.** Which approach explicitly seeks to critique and transform societal structures?
(A) Descriptive case study

- (B) Critical ethnography
 - (C) Grounded theory
 - (D) Phenomenology
- 1461.** It is the most familiar and applicable type of qualitative research which refers to the investigation of a culture through an in-depth study of the members of the cultural society
- (A) Ethnography
 - (B) Phenomenology
 - (C) Grounded Theory
 - (D) Case Study
- 1462.** Ethnographic studies are concerned with individual rather than group characteristics.
- (A) NO
 - (B) YES
 - (C) SOMETIMES
 - (D) None of above
- 1463.** Read each statement and then determine which type of data it characterizes: qualitative, quantitative, or both. Information is not quantified
- (A) Quantitative
 - (B) Both
 - (C) Qualitative
 - (D) None of above
- 1464.** This research design has a broader cultural orientation.
- (A) Narrative inquiry
 - (B) Case study
 - (C) Ethnographic research
 - (D) None of above
- 1465.** Conceptual research often involves which of the following types of analysis?
- (A) Statistical analysis
 - (B) Content analysis
 - (C) Discourse analysis
 - (D) Ethnographic analysis
- 1466.** Which of the following is a benefit of qualitative data?
- (A) Quick and simple to conduct
 - (B) Provides meaningful data and an explanation behind a participant's thoughts
 - (C) Focused solely on numbers and facts
 - (D) Results are easier to analyse and understand
- 1467.** What is the main benefit of obtaining data through qualitative research?
- (A) It ensures confidentiality of data.
 - (B) It is quick and simple to interpret.
 - (C) Large quantities of data can be measured.
 - (D) Opinions, attitudes and beliefs on the topic are gained.
- 1468.** Which process is emphasized in Grounded Theory?
- (A) Linear process of data collection
 - (B) Recursive process of sampling and analysis
 - (C) Random process of data selection
 - (D) Fixed process of hypothesis testing
- 1469.** Which type of data is focused on providing a description and reason behind feelings?
- (A) Quantitative
 - (B) Qualitative
 - (C) Numerical
 - (D) Statistical
- 1470.** Grounded theory researchers often identify a social process that explains how people resolve a problem:
- (A) Basic social process (BSP)
 - (B) Interpretative social process (ISP)
- 1471.** How does triangulation contribute to the validity of conclusions drawn from qualitative data?
- (A) By narrowing the focus on a single data source
 - (B) By comparing findings from multiple data sources
 - (C) By ignoring potential biases in the study
 - (D) By excluding participant perspectives

- 1472.** Information that cannot actually be measured is
(A) Qualitative data
(B) Quantitative data
(C) An Inference
(D) An Observation
- 1473.** This type of data includes but is not limited to words, pictures, discussions, audio and video recordings, comments, observations.
(A) Quantitative
(B) Qualitative
- 1474.** Voices of Experience: What Do Low-Income Older Adults Tell Us About Mobility, Technology, and Social Participation? Question: This is a type of ____
(A) Qualitative study
(B) Quantitative study
- 1475.** What is the purpose of theoretical sampling in grounded theory studies?
(A) To select participants based on predetermined criteria
(B) To end the study quickly
(C) To ensure adequate representation of important theoretical categories
(D) To select participants randomly
- 1476.** Below are the quantitative strategies of inquiry, except:
(A) Survey
(B) Experiments
(C) Ethnography
(D) Correlation
- 1477.** Identify what type of Qualitative Research is the topic: Marital failures for underage couples.
(A) Phenomenological
(B) Biography
(C) Ground Theory
(D) Ethnographic
(E) Case Study
- 1478.** A marketing research company asked members of a focus group to describe several brands as animals. The purpose of the request is to measure the prestige of the various brands. This is an example of ____
(A) Brand strength analysis
(B) Interpretive consumer research
(C) Quantitative research
(D) Buzz marketing
(E) Brand extension
- 1479.** When writing about cultural heritage, an ethnographer should:
(A) Present personal viewpoints of events in the community observed
(B) Use formal English terms to inform global community
(C) Keep descriptions brief to communicate ideas concisely
(D) Write objectively and include community perspectives
- 1480.** Researcher relies on the views of participants
(A) Qualitative research.
(B) Quantitative research.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 1481.** What type of research relies on words, open-ended responses, and visual data rather than numbers?
(A) Quantitative Research
(B) Secondary Research
(C) Qualitative Research
(D) Correlational Research
- 1482.** Focus groups are what type of research?
(A) Quantitative research
(B) Qualitative research
- 1483.** What is the main challenge in stating a qualitative research problem?
(A) Finding a problem that is too specific.
(B) Balancing the need for focus with the openness to emerging insights during data collection.

- (C) Identifying a phenomenon that is not worth exploring.
(D) Qualitative research does not require a research problem.
- 1484.** Values research participants' voices
(A) Quantitative
(B) Qualitative
- 1485.** Focus groups help providing the researcher all the following, EXCEPT ____
(A) Access to hard to approach customers, like kids
(B) Allowing researcher to directly observe their customers
(C) Cheap research method to conduct
(D) Generating fresh ideas
- 1486.** When researcher become the part of phenomenon being studied, it is referred as
(A) Postivism
(B) Interpretivism
(C) Realism
(D) Pragmatism
- 1487.** Focus group discussion is a:
(A) Survey tool
(B) Qualitative method
(C) Sampling technique
(D) Statistical tool
- 1488.** A qualitative observation is ____
(A) Describing qualities and characteristics
(B) A guess you make using an observation
(C) Numbers and labels
(D) What is kept the same in an experiment
- 1489.** Which type of research focuses on verbal reports, pictures, observations, documents, etc. instead of a focus on numbers.
(A) Quantitative
(B) Qualitative
(C) Mixed Methods
(D) None of above
- 1490.** Rich and thorough descriptions of the context or setting allowing others to make inferences about contextual similarities; supports transferability
(A) Generalizability
(B) Transferability
(C) Thick description
(D) None of above
- 1491.** A study that intends to describe the shared beliefs and practices of individuals living in a community in the foothills of the Mountain Province would be an example of which type of qualitative research?
(A) Ethnography
(B) Grounded Theory
(C) Narrative Research
(D) Phenomenology
- 1492.** Concerned about in-depth understanding of the situation.
(A) Quantitative Research
(B) Qualitative Research
- 1493.** Studying human society and culture. It is less a method of data collection and more the use of a socio-cultural lens through which the data are interpreted. Extensive fieldwork is usually required
(A) Grounded theory
(B) Case study
(C) Ethnography
(D) Phenomenology
- 1494.** Qualitative researchers view ongoing changes in procedures as:
(A) A result of poor planning
(B) Desirable
(C) A necessary evil
(D) Unacceptable
- 1495.** Which technique will the manager use when evaluating alternative using qualitative evaluation?
(A) Comparison technique
(B) Rational technique

- (C) Intuition and subjective judgment
(D) Analytical technique
- 1496.** Which additional qualitative methods are often used in cultural mapping?
(A) Content analysis and systematic meta-analysis
(B) Sampling procedures and computerized data mining
(C) Survey questionnaires and controlled experimental groups
(D) Participant observation and structured interviewing
- 1497.** Immersion in the details and specifics of the data to discover important categories, dimensions, and interrelationships
(A) Qualitative data
(B) Holistic perspective
(C) Inductive analysis
(D) Naturalistic inquiry
- 1498.** Qualitative or quantitative? The slime is bright blue.
(A) Qualitative
(B) Quantitative
- 1499.** Refers to a exploratory and preliminary and are conducted to clarify problem definition, prepare for more formal research or gain insight when more formal research is not necessary.
(A) Quantitative research
(B) Qualitative research
(C) Marketing research
(D) Service research
- 1500.** A key advantage when the researcher belongs to the studied group is:
(A) They take detailed field notes
(B) They can maintain objectivity throughout the study
(C) They are well versed in writing extensive reports and process data
(D) They have insider knowledge and cultural access
- 1501.** The plant is green.
(A) Qualitative data
(B) Quantitative data
- 1502.** The petals are smooth and silky.
(A) Qualitative data
(B) Quantitative data
- 1503.** Dolphin colors range from gray to white.
(A) Quantitative observation
(B) Qualitative observation
- 1504.** What is the purpose of grounded theory?
(A) To generate theory from data
(B) To develop explanatory models
(C) To support theoretical frameworks
(D) To find significant differences among groups of people
- 1505.** Qualitative research is mainly based on
(A) Secondary data
(B) Primary data
- 1506.** What does "Utilization-focused Evaluation" prioritize in qualitative research?
(A) Theoretical development
(B) Making findings directly applicable and useful
(C) Internal validity
(D) None of above
- 1507.** According to Cresswell (1994), qualitative research builds a holistic picture through:
(A) Graphic presentations of patterns and numbers
(B) Informants' detailed views expressed in words
(C) Scientific equations explaining causal relations
(D) Financial records and program budgets
- 1508.** Type of data that contains descriptions like color, shape, smell, or texture.
(A) Qualitative Data
(B) Quantitative Data

- 1509.** How does phenomenology describe specific experiences?
(A) By using mathematical models
(B) By describing them as found in concrete situations as they appear to people living it
(C) By comparing them to historical events
(D) By analyzing their chemical composition
- 1510.** The phenomenological study involves all the following features, EXCEPT
(A) Bracket out
(B) Intuition
(C) Analysis
(D) Description
(E) Manipulation
- 1511.** Qualitative research is defined as a
(A) Method that focuses on collecting numerical data
(B) Method that focuses on collecting non-numerical data
(C) Method that focuses on collecting data through experiments
(D) Method that focuses on collecting data through surveys
- 1512.** Dramaturgical interviewing is carried out through ____
(A) Debating
(B) Sampling
(C) Case study
(D) Role playing
- 1513.** Are participant observations qualitative or quantitative research?
(A) Quantitative
(B) Qualitative
(C) Either
(D) None of above
- 1514.** An example of qualitative research is when a group of teenagers are asked about how they feel about a film
(A) True
(B) False
- 1515.** Which of the following is not an example of a research question that could be answered using ICT?
(A) What is the prevalence of obesity in a specific population?
(B) How do individuals respond to a specific medication?
(C) What is the meaning of a specific literary work?
(D) All of the above could be answered using ICT.
- 1516.** Which of the following is the characteristic of Qualitative Research:Soft Sciences
(A) WORDS
(B) TEST THEORY
(C) CAUSE AND EFFECT RELATIONSHIP
(D) OBJECTIVE
- 1517.** Which of the following is NOT a mode of qualitative data collection in a case study?
(A) Interviews
(B) Document Analysis
(C) Surveys
(D) Observation
- 1518.** Which of the following best defines qualitative data?
(A) Data that can be measured or counted
(B) Data that describes qualities or characteristics
(C) Data that is collected through surveys
(D) Data that is collected through experiments
- 1519.** In qualitative research, 'triangulation' is used to:
(A) Increase the sample size
(B) Test a specific hypothesis
(C) Enhance the credibility of the findings
(D) Focus on a single case
- 1520.** In qualitative research, what does the study of "Xenophobia" involve?
(A) Fear of the unknown

- (B) Hostility towards foreigners
(C) Cross-cultural collaboration
(D) None of above
- 1521.** When you collect data in Ethnography, the researcher needs to record everything that is happening during an observation
(A) TRUE
(B) FALSE
- 1522.** Which of the following would be an advantage of content analysis?
(A) It is unobtrusive
(B) It is easy to establish validity
(C) It is always reliable
(D) It is rational
- 1523.** It is a field of qualitative research pursued if the researcher wants to know how to sell out a product to the customers.
(A) Psychology
(B) Advertising
(C) Social Work
(D) Technical Communication
- 1524.** What visual records do qualitative researchers scrutinize to discover patterns or themes?
(A) Handwritten letters
(B) Diaries and journal entries
(C) E-mail correspondences
(D) Photographs
- 1525.** Qualitative or quantitative? The slime was soft and shiny.
(A) Qualitative
(B) Quantitative
- 1526.** What is an in-depth study of naturally occurring behavior within a culture or social group conducted in a natural setting or field through observation?
(A) Ethnography
(B) Case study
- 1527.** It takes place when there is a new discovery of theory which underlies your study at the time of data collection and analysis
(A) Case Study
(B) Historical Analysis
(C) Content And Discourse Analysis
(D) Grounded Theory
- 1528.** What is the main goal of qualitative research?
(A) To test hypotheses
(B) To measure variables
(C) To explore meaning and experience
(D) To calculate statistics
- 1529.** You are testing the effect of fertilizer on plant appearance. What would be an appropriate qualitative measure of this effect?
(A) Description of leaf color and shape
(B) Count of the number of leaves on each plant
(C) Measurement in cm of the size of each leaf
(D) The height of the plant in cm.
- 1530.** What are common methods used in qualitative research?
(A) Experiments and surveys
(B) Interviews and observations
(C) Quantitative data and statistics
(D) Hypothesis testing and validation
- 1531.** The study of the human behavior in its natural context is an example of ____
(A) Experimental research
(B) Survey research
(C) Focus groups
(D) Ethnographic research
- 1532.** Ethnographic instruments are:
(A) Observation, Interview, Questionnaires, Video & Audio Taping
(B) Observation, Interview, Video & Audio Taping, Field-note
(C) Observation, Survey, Video & Audio Taping, Field-note
(D) None of above

- 1533.** Which of the following is a limitation of phenomenological research?
(A) Limited generalizability of findings
(B) Lack of focus on subjective experiences
(C) Exclusion of cultural contexts
(D) Overemphasis on numerical analysis
- 1534.** Which of the following is an example of a performance-based output in ethnography?
(A) Play or poem.
(B) Statistical analysis.
(C) Research paper.
(D) Survey results.
- 1535.** How is qualitative research useful in education?
(A) It eliminates the need for tests.
(B) It ensures equal learning speeds.
(C) It helps analyze student behaviors.
(D) It replaces standard exams.
- 1536.** What is a common characteristic of a qualitative research question?
(A) It is open-ended to collect as much information as possible about a phenomenon.
(B) It is focused on driving change within the context of the study.
(C) It identifies a relationship between two or more variables.
(D) It tries to identify a predictive relationship between variables.
- 1537.** Isla and Eesha are conducting a study where they systematically collect and analyze data to develop theories grounded in real-world observations. What type of research tradition are they using?
(A) Biographical / Narrative
(B) Phenomenology
(C) Grounded Theory
(D) Case Study
- 1538.** Biographical research of teacher's experience of supportive relationships with colleagues.
(A) Case study
(B) Ethnography
(C) Grounded theory
(D) Phenomenology
(E) Narrative
- 1539.** The leaves on the first plant specimen appeared healthier.
(A) Qualitative
(B) Quantitative
- 1540.** ____ is a type of qualitative research which involves the study of tribes and their traditions/cultures.
(A) Ethnography
(B) Content Analysis
(C) Cultural Studies
(D) Traditional Studies
- 1541.** Qualitative research is a type of research that focuses more on quantity that is the number of respondents.
(A) True
(B) False
- 1542.** What type of data is based on written descriptions from observations?
(A) Quantitative data
(B) Numerical data
(C) Qualitative data
(D) Experimental data
- 1543.** Research carried out via in-depth interviews in order to determine the reasons behind consumers' attitudes and opinions is best described as
(A) Market research
(B) Qualitative research
(C) Quantitative research
(D) Secondary research
- 1544.** What is the purpose of conducting focus groups in market research?
(A) To gather information from a large number of people.
(B) To observe customer behavior in stores.

- (C) To collect in-depth insights from a small group of people.
(D) To analyze existing data.
- 1545.** The following answers are correct about Qualitative Research, EXCEPT
(A) Qualitative research is used to understand concepts, thoughts or experiences.
(B) Qualitative enables you to gather in-depth insights on topics that are not well understood.
(C) Qualitative research is mainly expressed in numbers and graphs
(D) Qualitative research requires few respondents
- 1546.** Identify if the data point listed below is an example of qualitative data or quantitative data: buttery popcorn
(A) Qualitative data
(B) Quantitative data
- 1547.** What is the main goal of inductive reasoning?
(A) To provide absolute proof.
(B) To start with a general principle.
(C) To derive a general conclusion from specific data.
(D) To test the validity of premises.
- 1548.** Identify the following statement as qualitative or quantitative: The athlete was sweaty and breathing hard after three laps around the track
(A) Qualitative
(B) Quantitative
- 1549.** "Perceptions of Generation Z towards Online Dating Applications"
(A) QUALITATIVE
(B) QUANTITATIVE
- 1550.** Ethnographic research analyzes a particular event or individual while case study describes a group or culture collectively.
(A) True
(B) False
- 1551.** What is ethnography described as in terms of its approach today?
(A) A singular approach focused on structural functionalism
(B) A pluralistic approach with many 'schools'
(C) A method exclusive to anthropology
(D) A historical study of ancient cultures
- 1552.** All of the following are examples of Qualitative Research: Soft Sciences EXCEPT FOR
(A) ANTHROPOLOGY
(B) HISTORY
(C) CHEMISTRY
(D) POLITICAL SCIENCES
- 1553.** Qualitative research typically examines:
(A) Statistical trends
(B) Subjective experiences
(C) Numerical data
(D) Controlled experiments
- 1554.** Institutional Ethnography: — are based on informants experience
(A) Ruling interests
(B) Ruling relations
(C) Experiential
(D) Disjuncture
- 1555.** Qualitative data analysis focuses on examining
(A) Numbers
(B) Visions
(C) Words
(D) Concepts
- 1556.** Marital status, beauty and quality are examples of a —
(A) Qualitative Data
(B) Quantitative Data
(C) Continuous Data
(D) Discrete Data
- 1557.** The juice tastes like oranges
(A) Quantitative data
(B) Qualitative data

- 1558.** Content analysis is mainly used in:
- (A) Quantitative data
 - (B) Qualitative data
 - (C) Sampling
 - (D) Report writing
- 1559.** The Literature Review for a Narrative Inquiry should be what?
- (A) Woven throughout the story
 - (B) Presented as a separate chapter
- Explanation:** Narrative Inquiry Methodology. Open Ended Research Question2. Literature review woven throughout work, not presented separately 3. Homogeneous Sampling, Deviant Sampling or Criterion Sampling
- 1560.** It is a qualitative strategy in which the researcher derives a general abstract theory of a process action, or interaction grounded in the views of participants in a study
- (A) GROUNDED THEORY
 - (B) PHENOMENOLOGICAL
 - (C) ETHNOGRAPHIC
 - (D) CASE STUDY
- 1561.** What is the main focus of qualitative data?
- (A) Numerical data
 - (B) Customer opinions and experiences
 - (C) Internal data
 - (D) Market trends
- 1562.** Why are interviews effective as a research method?
- (A) They are time efficient.
 - (B) They focus on qualitative data.
 - (C) They easily allow for quantitative information to be collected.
 - (D) They provide secondary research data.
- 1563.** Qualitative data collection not involving observations that gather field notes by conducting an observation as a participant
- (A) True
 - (B) False
- 1564.** The main focus of cultural mapping in qualitative research is to:
- (A) Count the quantity of identified cultural sites
 - (B) Survey individuals to record their preferences and daily lives
 - (C) Create diagrams using numbers and visual symbols to promote culture of a community
 - (D) Document resources and community narratives in detail
- 1565.** The following research question was addressed in what type of study? "What does it mean to a patient to receive a diagnosis that he or she has colon cancer?"
- (A) Qualitative
 - (B) Quantitative
- 1566.** As opposed to literature reviews for quantitative studies, literature reviews for qualitative studies ____
- (A) Occur extensively in the beginning of the article.
 - (B) Occur extensively at the beginning and end of the article.
 - (C) Occur minimally in the beginning of the article to justify the need for the study.
 - (D) None of above
- 1567.** It refers to reasoning that takes specific information and makes a broader generalization that's considered probable while still remaining open to the fact that the conclusion may not be 100% guaranteed.
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) None of the choices mentioned
 - (D) Teaching
- 1568.** Decide if the following literature review statements belong to quantitative or qualitative research. The literature can provide some information about the situations and populations to study in order to uncover phenomena that are important to development of the theory.

- (A) Quantitative
(B) Qualitative
- 1569.** Which characteristics of Qualitative Research involves all variables, factors, or conditions affecting the study?
(A) Human Understanding and Interpretation
(B) Abound with Words and Visuals
(C) Contextualization
(D) Internal Analysis
- 1570.** What is the primary difference between the role of related literature in quantitative and qualitative research?
(A) Qualitative research often delays the literature review until after data analysis.
(B) Qualitative research uses a more extensive literature review.
(C) Quantitative research relies more heavily on previous findings.
(D) Quantitative research uses literature to justify the need for the study.
- 1571.** Qualitative data, as it is widely open to interpretation, must be “coded” so as to facilitate the grouping and labeling of data into identifiable themes.
(A) True
(B) False
- 1572.** Data that describes something using the 5 senses is ____
(A) Qualitative
(B) Quantitative
- 1573.** Ms DF carried out a research design using a phenomenological approach to explore the first clinical experience of students. This research design is ____
(A) Quantitative research
(B) Exploratory research
(C) Qualitative research
(D) Evaluative research
- 1574.** Qualitative data analysis does not involve categorizing different types of documentation resources based on the content they contain
(A) True
(B) False
- 1575.** Content analysis is used to study:
(A) Numbers
(B) Written or visual material
(C) Weather patterns
(D) Chemical reactions
- 1576.** Which of the following makes qualitative interviewing distinct from structured interview?
(A) The procedure is less standardized.
(B) “Rambling” off the topic is not a problem.
(C) The researcher seeks rich, detailed answers.
(D) All of the option are correct.
- 1577.** Conclusions from qualitative research are:
(A) Seldom justified
(B) Of descriptive value only
(C) Of little practical value
(D) Less certain than from quantitative research
- 1578.** What type of research generates responses from the research participants?
(A) Quantitative Study
(B) Qualitative Study
(C) Grounded Theory
(D) Mixed Method
- 1579.** What is the significance of examining “sites, people, and situations” in formulating a qualitative research problem?
(A) To avoid collecting any data.
(B) To gather preliminary insights and refine the research focus.
(C) To make the research process more time-consuming.
(D) To ensure the research problem is irrelevant to real-world issues.

- 1580.** This type of research involves collecting data through interviews and observations to understand a phenomenon in depth.
- (A) Exploratory
 - (B) Descriptive
 - (C) Quantitative
 - (D) Qualitative
- 1581.** The following research question was addressed in what type of study? “What is it like for women to be the victims of physical abuse?”
- (A) Qualitative
 - (B) Quantitative
- 1582.** Which of the following related topics is most conducive to narrative research?
- (A) The gain score of SATs after preparation classes
 - (B) The experiences of an average achieving student prepping for SAT
 - (C) The differences in SAT gain scores between preparation classes participants and non participants
 - (D) The effect of two type of preparation classes on student SAT score
- 1583.** The unique perceptions of individuals are most likely to be viewed by qualitative researchers as:
- (A) Undesirable and unreliable sources of data
 - (B) Useful for illustrating the results of a study
 - (C) Irrelevant to the purposes of the study
 - (D) An essential part of an investigation
- 1584.** Determine whether the data is qualitative or quantitative: Species of mammals in a rain forest.
- (A) Qualitative
 - (B) Quantitative
- 1585.** Data collecting limitations are very common in qualitative research.
- (A) True
 - (B) False
- 1586.** Which of the following is a common technique for collecting qualitative data?
- (A) Randomized controlled trials
 - (B) Statistical analysis
 - (C) Interviews and focus groups
 - (D) Surveys with closed-ended questions
- 1587.** A property that uses one of the five senses to describe an object.
- (A) Quantitative property
 - (B) Qualitative property
 - (C) Color
 - (D) Texture
- 1588.** Which is least likely to apply to participant observations?
- (A) The risk of ‘going native’
 - (B) Giving a first-hand account
 - (C) Insight into group mentality
 - (D) Low external validity Edit
- 1589.** The difference between ethnographic research and other types of qualitative research is that ethnographers specifically use the concept of “culture” to help understand the results.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 1590.** Perspectives of survivors of domestic violence on support services and interventions
- (A) Qualitative Research
 - (B) Quantitative Research
- 1591.** A moderated discussion with a small group of people to gather insights and opinions is a research method known as:
- (A) Survey
 - (B) Experiment
 - (C) Focus Group
 - (D) Observation

- 1592.** A research problem in qualitative research can be examined with greater detail and depth.
- (A) Strength
 - (B) Weakness
 - (A) Case study
 - (B) Ethnography
 - (C) Grounded theory
 - (D) Narrative
 - (E) Phenomenology
- 1593.** What types of participants are there in an ethnographic research?
- (A) Methodical observer
 - (B) Objective observer
 - (C) Active participant, observer and passive observer
 - (D) None of above
- 1594.** Text and image analysis
- (A) Qualitative Methods
 - (B) Mixed Methods
 - (C) Quantitative Methods
 - (D) None of above
- 1595.** Qualitative research is an easy substitute for statistical or quantitative research.
- (A) True
 - (B) False
- 1596.** 'Qualitative data' can be BEST explained as,
- (A) Any research that uses data for analysis
 - (B) Collecting and analyzing numerical data to understand a concept
 - (C) Research that collects non-numerical data and seeks to understand and explain the concepts or factors which influence the phenomena in query.
 - (D) The absence of numbers when conducting research
- 1597.** The following are the assumptions of the qualitative design EXCEPT ____
- (A) Process
 - (B) Deductive
 - (C) Fieldwork
 - (D) Primary Instrument
- 1598.** Spending half a year living with the people in Surigao City.
- 1599.** Data that is based on experience (nonnumerical)
- (A) Qualitative
 - (B) Quantitative
- 1600.** Which of the following is a reason that marketers conduct qualitative research:
- (A) To create hypotheses for further testing
 - (B) To test hypotheses
 - (C) To make accurate predictions
 - (D) To analyze relationships between market factors
- 1601.** The brand of your shirt
- (A) Quantitative
 - (B) Qualitative
- 1602.** What is information collected about opinions and views called?
- (A) Quantitative data
 - (B) Qualitative data
 - (C) Segmentation
 - (D) None of above
- 1603.** When analyzing qualitative data, what is the most important aspect to consider?
- (A) Numerical values
 - (B) The context and meaning of responses
 - (C) Statistical significance
 - (D) Sample size
- 1604.** Qualitative data is countable or measurable.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above

- 1605.** Gender, Religion, Marital status will come under ____ classification
(A) Quantitative
(B) Geographical
(C) Spatial
(D) Qualitative
- 1606.** Which approach starts with observations and builds theory?
(A) Deductive
(B) Inductive
(C) Hypothetical
(D) Statistical
- 1607.** Classify the observation as qualitative or quantitative: hot water
(A) Qualitative
(B) Quantitative
- 1608.** It is primarily exploratory research.
(A) Qualitative Research
(B) Quantitative Research
- 1609.** Understanding the coping mechanisms of survivors of natural disasters
(A) Qualitative Research
(B) Quantitative Research
- 1610.** Qualitative research relies heavily on ____ groups.
(A) Large
(B) Small
- 1611.** In qualitative research, a guiding principle in deciding sample size is
(A) Effect size
(B) Number of variables
(C) Data saturation
(D) Sub-group analysis
- 1612.** What does the concept of "trustworthiness" relate to in qualitative research?
(A) Sample size
(B) Data analysis software
(C) Quality and credibility of data
(D) Statistical power
- 1613.** Institutional Ethnography: ____ is the gap between knowledge produced from two or more different perspectives
(A) Ruling interests
(B) Ruling relations
(C) Experiential
(D) Disjuncture
- 1614.** You need to collect data on how the feeling of fabric affects someone's mood. You would collect ____ data.
(A) Quantitative
(B) Qualitative
- 1615.** Qualitative
(A) Numerical values that are measurements or counts
(B) Measurements that cannot be measured on a natural numerical scale
- 1616.** Qualitative research objectives often include words like "discover," "explore," and "describe."
(A) True
(B) False
- 1617.** This type of ethnography examines cultural systems of power, prestige, privilege, and authority in society.
(A) Case study ethnography
(B) Critical ethnography
(C) Realist ethnography
(D) None of above
- 1618.** ____ is used to describe cultural scenes or the cultural characteristics of a group of people
(A) Phenomenology.
(B) Grounded theory.
(C) Instrumental case study.
(D) Ethnography.
- 1619.** Which of these is an example of qualitative data collection?
(A) Statistical surveys
(B) Focus group discussions
(C) Experiments
(D) Surveys with Likert scale questions

- 1620.** This type of qualitative study focuses on building conceptual models from data
(A) Phenomenology
(B) Grounded Theory
(C) Thematic Analysis
(D) Narrative Inquiry
- 1621.** In qualitative research, what is the significance of using a reflexive journal?
(A) To ensure statistical validity
(B) To collect data from participants
(C) To summarize findings for publication
(D) To document the researcher's thoughts and biases
- 1622.** Is the following practice more aligned with qualitative or quantitative research methods? Can use a reflection Journal kept by researcher.
(A) Qualitative
(B) Quantitative
(C) Both
(D) None
- 1623.** Jennie observed how the dancers choreograph their dances to prove that dancers have three philosophies in dancing, namely: choreology, sociology, and rhythm. What type of Qualitative Research was used?
(A) Phenomenology
(B) Case Study
(C) Grounded Theory
(D) Historical Analysis
- 1624.** Which of the following research types focuses on patterns in textual data?
(A) Content Analysis
(B) Experimental Study
(C) Correlational Study
(D) Longitudinal Study
- 1625.** Which of the following is NOT a question typically considered in narrative research?
(A) Who can tell the story?
(B) Whose version is convincing?
(C) What is the word count of the story?
(D) What happens when narratives compete?
- 1626.** Qualitative research examines and interprets nonnumerical material.
(A) True
(B) False
- 1627.** Which of the following is a strength of FGDs?
(A) Limited participant interaction
(B) Requires minimal planning
(C) Generates rich qualitative data
(D) Avoids moderator influence
- 1628.** "The pig is pink." is an example of a(n)
(A) Quantitative Observation
(B) Qualitative Observation
- 1629.** Select the correct answer in each item by encircling the letter of your choice. What type of research requires non-numerical data which means that the research uses words rather than the number to express results?
(A) Action research
(B) Correlational research
(C) Experimental research
(D) Qualitative research
- 1630.** It involves collecting and analyzing non-numerical data (e.g., text, video, or audio) to understand concepts, opinions, or experiences ____
(A) Research
(B) Quantitative Research
(C) Qualitative Research
(D) Theory
- 1631.** True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. Individuals who take part in qualitative research are referred to as respondents.
(A) True
(B) False

- 1632.** A type of research that aims to explain and describe is ____ research.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed methods
 - (D) None of the above
- 1633.** The most important characteristic to take into account when conducting ethnographic research is culture?
- (A) TRUE
 - (B) FALSE
- 1634.** Which is not a limitation of phenomenological research?
- (A) Small samples of participants.
 - (B) Time to gather data
 - (C) Unique perspective based on peoples perception.
 - (D) None of above
- 1635.** This kind of study tells the story of individuals unfolding in a chronology of their experiences
- (A) Narrative study
 - (B) Ethnographic study
 - (C) Phenomenological study
 - (D) None of above
- 1636.** Which method best fits studying buying patterns and decision processes?
- (A) Warehouse scanning for shrinkage
 - (B) Time series price elasticity
 - (C) A/B testing of online banners
 - (D) Ethnographic studies and journey mapping
- 1637.** Which of the following studies is based on qualitative research?
- (A) A study measuring differences in blood pressure before, during and after a procedure.
 - (B) A study examining client's reactions to stress after open heart surgery
 - (C) A study measuring nutrition and weight loss/gain in clients with cancer
 - (D) A study examining oxygen levels after endotracheal suctioning
- 1638.** True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. Qualitative research primarily relies on numerical data and statistical analysis.
- (A) True
 - (B) False
- 1639.** You want to understand the experiences of customers who have used your product to lose weight.
- (A) Quantitative
 - (B) Qualitative
- 1640.** A researcher conducts interviews to gather detailed personal experiences. What type of research is this?
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Experimental Research
 - (D) Correlational Research
- 1641.** Using words to describe what is observed
- (A) Qualitative data
 - (B) Quantitative data
- 1642.** What kind of form of narrative research is written and recorded by the individuals who are the subject of the study?
- (A) A life history
 - (B) Biographical study
 - (C) Autobiography
 - (D) Oral History
- 1643.** Some of the data gathering methods in this kind of research are diary and journal exercises; and in-context observations. Sessions may be conducted in person, by telephone, via video conferencing, and via the Internet.
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Practical Research
 - (D) None of above

- 1644.** In qualitative research the saturation point determines the sample size.
(A) True
(B) False
- 1645.** Identify what type of Qualitative Research is the topic: Child rearing practices of Bajao
(A) Phenomenological
(B) Ethnographic
(C) Ground Theory
(D) Case Study
(E) Biography
- 1646.** ____ is the lowest inference descriptor of all because it uses the participant's own words.
(A) Investigator triangulation.
(B) Data triangulation.
(C) Participant feedback.
(D) A verbatim.
- 1647.** Liam is a researcher, she was tasked to gather data about the culture of Aeta in Porac. What specific qualitative research design is this?
(A) Phenomenology
(B) Ethnography
(C) Case Study
(D) Narrative
- 1648.** Which statement best reflects the basis of phenomenology in qualitative research?
(A) Understanding lived experience and meaning-making
(B) Measuring variables through controlled experiments
(C) Generating theory from coded data patterns
(D) Predicting outcomes using statistical modeling
- 1649.** Which type of research relies on non-numerical data such as narratives and experiences?
(A) Quantitative research
(B) Qualitative research
(C) Experimental research
(D) Survey research
- 1650.** The following are the key elements in an ethnographic interview except
(A) Asking friendly questions
(B) Ethnographic questions
(C) Explicit purpose
(D) Ethnographic explanations
- 1651.** You ask every student their eye color.
(A) Qualitative
(B) Quantitative
(C) Using adjectives or senses to describe an object
(D) ____
- 1652.** Inductive reasoning relies on patterns and observations rather than fixed rules. (True)
(A) True
(B) False
- 1653.** It is commonly used in presenting qualitative data
(A) Graphical form
(B) Tabular graph
(C) Textual form
(D) None of above
- 1654.** Marketing research that focuses on smaller numbers of people and tries to answer "why" or "how"
(A) Quantitative
(B) Qualitative
- 1655.** Which arrow represents the inductive method of qualitative research?
(A) The exploratory arrow
(B) The confirmatory arrow
(C) The arrow from Theory to Hypotheses, Predictions
(D) The arrow from Hypotheses, Predictions to Observations, Data Edit

- 1656.** Researcher as human instrument means
- (A) The researcher is sensitive and responsive to the participants needs and will adjust accordingly
 - (B) The researcher brings along a co-researcher to facilitate the data collection activities
 - (B) To integrate both qualitative and quantitative approaches in a single study
 - (C) To analyze data collected over time to identify patterns, trends, or seasonality
 - (D) To explore subjective experiences, meanings, and social phenomena
- 1657.** All of the following are strengths of qualitative research EXCEPT
- (A) Explores sensitive issues
 - (B) Captures diversity of experiences and perceptions
 - (C) Allows participants to freely exchange ideas
 - (D) Proves a certain theory or principle
- 1658.** Nationality, literacy, religion, gender, marital status, drinking habits etc are classified as:
- (A) Quantitative
 - (B) Spatial
 - (C) Qualitative
 - (D) Chronological
- 1659.** Which approach is best suited for exploring participant perspectives in depth?
- (A) Ethnography
 - (B) Statistical analysis techniques
 - (C) Observational research methods (e.g., field studies)
 - (D) Quantitative research methods (e.g., surveys, experiments)
- 1660.** Which type of research involves keeping a self-reflective journal or engaging in self-reflection?
- (A) Ethnographic
 - (B) Longitudinal
 - (C) Autoreflective
 - (D) Autoethnographic
- 1661.** What is the role of qualitative research in exploring subjective experiences and social phenomena?
- (A) To test hypotheses and generalize findings
 - (B) To integrate both qualitative and quantitative approaches in a single study
 - (C) To analyze data collected over time to identify patterns, trends, or seasonality
 - (D) To explore subjective experiences, meanings, and social phenomena
- 1662.** What is a potential challenge of using qualitative data?
- (A) It is easy to measure
 - (B) It provides numerical data
 - (C) It can be difficult to summarize and present
 - (D) It is always accurate
- 1663.** What is one of the fundamental ways that qualitative and quantitative research differ?
- (A) Qualitative research does not use sampling.
 - (B) Qualitative research relies heavily on purposive sampling.
 - (C) Quantitative research relies heavily on purposive sampling.
 - (D) Qualitative research does not use data.
- 1664.** Refers to the objectivity or neutrality of the data and interpretations
- (A) Trustworthiness
 - (B) Credibility
 - (C) Confirmability
 - (D) Dependability
- 1665.** A theory including human actions and interactions; and how they result from and influence one another.
- (A) Theory of Relativity
 - (B) Grounded Theory
 - (C) Quantum Theory
 - (D) Mismo Theory
- 1666.** Determine whether the given data is Qualitative or Quantitative. Data: Employee classification (Permanent, Part-time, Probationary)
- (A) Qualitative Data
 - (B) Quantitative Data

- 1667.** Which qualitative method often employs semi-structured interviews?
- (A) Grounded theory
 - (B) Phenomenology
 - (C) All of the above
 - (D) Ethnography
- 1668.** Qualitative studies can often suffer from which limitation?
- (A) Insight into participants construct interpretation
 - (B) Access to local contexts
 - (C) Cross-case comparisons
 - (D) Lower credibility with some authorities
- 1669.** Qualitative research often seeks to:
- (A) Conduct statistical analysis
 - (B) Generate in-depth insights
 - (C) Test existing data
 - (D) Examine large samples
- 1670.** Involves an interpretive, naturalistic approach to the world
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Experimental Research
 - (D) Descriptive Research
- 1671.** Source for qualitative data is ____
- (A) Financial report
 - (B) Experiment
 - (C) Recorded voice or video
 - (D) Exam marks
- 1672.** This type of research starts with a question or collection of data.
- (A) Case study
 - (B) Grounded theory study
 - (C) Ethnography
 - (D) None of above
- 1673.** Which of the following would be the best qualitative evidence for the claim: "Listening to music reduces stress"?
- (A) "60% of listeners reported a drop in stress levels after listening to music."
 - (B) "Listeners said they felt more relaxed and calm after listening to their favorite songs."
 - (C) "Heart rate and blood pressure numbers decreased in participants who listened to music."
 - (D) "Stress hormone levels were reduced by 25% after a music session."
- 1674.** For my dissertation my research question is: "How do the final round candidates for the honor of "Teacher of the Year" in the Midwest region describe and exhibit the use of affective behaviors and performance skills to engage students in learning?" What type of research is this?
- (A) Mixed methods
 - (B) Quantitative
 - (C) Qualitative
 - (D) Terminal
- 1675.** Ethnography is considered both a process and a product. What does the process involve?
- (A) Writing theories
 - (B) Conducting fieldwork
 - (C) Analyzing historical texts
 - (D) Creating statistical models
- 1676.** In which type of qualitative research designs, individual stories to describe the lives of people are explored?
- (A) Ethnography
 - (B) Grounded theory research
 - (C) Symbolic interaction
 - (D) Narrative research
- 1677.** Decide if the following literature review statements belong to quantitative or qualitative research. The literature review can stimulate theoretical sensitivity toward concepts and relationships that prior literature has repeatedly identified and appear to be meaningful and significant.
- (A) Quantitative
 - (B) Qualitative

- 1678.** The powder under the microscope is purple with spikes.
(A) Inference
(B) Qualitative observation
(C) Quantitative observation
(D) None of above
- 1679.** What research approach seeks to generate new theories?
(A) Experimental
(B) Grounded Theory
(C) Historical
(D) Phenomenological
- 1680.** It is a research design which involves collecting and analyzing non-numerical data (e.g., text, video, or audio) to understand concepts, opinions, or experiences
(A) Action research
(B) Qualitative research
(C) Quantitative research
(D) Secondary research
- 1681.** Which belief underpins qualitative inquiry?
(A) Sampling must be probability-based for validity
(B) Variables are manipulated to test hypotheses
(C) Reality is based on perceptions that vary over time
(D) Reality is fixed and measurable across individuals
- 1682.** What is 'Ethnography'?
(A) A qualitative research method for studying cultures and communities through observation and participation.
(B) A quantitative method for analyzing statistical data.
(C) A technique for laboratory experiments in physics.
(D) A mathematical approach to economic modeling.
- 1683.** These are examples of qualitative data analysis methods, EXCEPT
(A) Content Analysis
(B) In depth interview
(C) Narrative analysis
(D) Grounded Theory
- 1684.** Consider the study title, "The Lived Experience of Long-Term Complications from a Football-Related Concussion." Which design is most likely for this title?
(A) Grounded theory
(B) Action research
(C) Phenomenology
(D) Case study
- 1685.** What is a characteristic of autoethnography?
(A) Researcher-centered narratives
(B) Focus on large sample sizes
(C) Exclusion of personal experiences
(D) Generalizability to broad populations
- 1686.** Qualitative research answer questions that begin with ____
(A) How much or how many
(B) When or where
(C) Why or who
(D) How or why
- 1687.** What is a key characteristic of narrative inquiry in qualitative research?
(A) It focuses on the stories and personal experiences of individuals.
(B) It relies heavily on statistical data.
(C) It tests predefined hypotheses.
(D) It uses large sample sizes for generalization.
- 1688.** An example of a qualitative question would be ____
(A) How do you like french vanilla coffee in the school store?
(B) How many candy bars should be stocked in the school store?

- (C) On a scale of 1 to 10 how do you rate the pizza in the school store?
- (D) True or False, most students prefer water instead of soda
- 1689.** Qualitative research is popular in market research due to the fact that there is no better way to understand the in-depth motivations and feelings of consumers.
- (A) True
- (B) False
- 1690.** Studies groups and individuals in natural settings; seeks to understand insider views.
- (A) Qualitative
- (B) Quantitative
- 1691.** Which type of data includes interviews and observations?
- (A) Survey Data
- (B) Numerical Data
- (C) Statistical Data
- (D) Quantitative Data
- (E) Qualitative Data
- 1692.** Institutional Ethnography: ___ are helping to serve the needs of the institution, often at the cost of their clients and themselves
- (A) Ruling interests
- (B) Ruling relations
- (C) Experiential
- (D) Disjuncture
- 1693.** It is an emergent, inductive, interpretative and naturalistic approach to the study of people, cases, phenomena, social institutions and processes in their natural settings in order to reveal in descriptive terms the meanings that people attach to their experiences of the world
- (A) QUANTITATIVE
- (B) QUALITATIVE
- (C) EXPERIMENTAL
- (D) DESCRIPTIVE
- 1694.** Who are the authors mentioned as providing a general procedural guide for conducting narrative research?
- (A) Smith and Johnson
- (B) Clandinin and Connelly
- (C) Brown and Taylor
- (D) Miller and Davis
- 1695.** To study lived experiences of patients, best method:
- (A) Quantitative
- (B) Qualitative (Phenomenological)
- (C) Experimental
- (D) Simulation
- 1696.** How does coding improve the organization of qualitative data?
- (A) It allows the researcher to quantify the data
- (B) It groups data into meaningful categories
- (C) It reduces the sample size
- (D) It ensures the data is unbiased
- 1697.** What is a key requirement for conducting narrative research?
- (A) Access to individuals willing to tell their stories
- (B) A large sample size for statistical analysis
- (C) Controlled experimental conditions
- (D) A focus on numerical data collection
- 1698.** Research expressed by natural language description; involved qualities
- (A) Qualitative Research
- (B) Quantitative Research
- (C) Descriptive Research
- (D) Experimental Research
- 1699.** In which type of research is the researcher more likely to be an active participant?
- (A) Quantitative research
- (B) Qualitative research
- (C) Survey research
- (D) Experimental research

- 1700.** When conducting qualitative research, we look at the data points generated and create a theory from them.
(A) True
(B) False
- 1701.** Which German word means to be empathic in qualitative research?
(A) Vergehen
(B) Verstaendnis
(C) Verstehen
(D) Gestehen
- 1702.** Why might a researcher choose to use qualitative data in a study?
(A) To measure the exact number of occurrences
(B) To understand the underlying reasons or motivations
(C) To calculate statistical averages
(D) To determine the age of the participants
- 1703.** Which of these researcher is most likely conducting ethnographic research?
(A) Angela is investigating images to understand a demographic.
(B) Johnny is shadowing 3 emerging bilinguals at 3 high schools.
(C) Sara analyzes children's play from behind a two-way mirror.
(D) Kendall lives on a reservation; she interacts and observes.
- 1704.** Questions are mostly open-ended and exploratory.
(A) Mixed
(B) Quantitative
(C) Qualitative
(D) None of the above.
- 1705.** What is the minimum number of participants required in a phenomenological research?
(A) 5
(B) 10
(C) 15
(D) 1
- 1706.** The whole phenomenon under study is understood as a complex system that is more than the sum of its parts. The focus is on complex interdependencies and system dynamics that cannot meaningfully be reduced to a few discrete variables and linear, cause-effect relationships.
(A) Unique case orientation
(B) Inductive analysis and creative synthesis
(C) Holistic perspective
(D) Context sensitivity
(E) Voice, perspective, and reflexivity
- 1707.** Match the type of research report with the corresponding type of qualitative research. Methodological description followed by proposed theory built during the study
(A) Ethnography
(B) Narrative Inquiry
(C) Phenomenology
(D) Case Study
(E) Grounded Theory
- 1708.** Research objectives can be used to connect study purpose to the data collection plan in what type of research?
(A) Qualitative
(B) Quantitative
(C) Mixed methods
(D) None of above
- 1709.** Qualitative research involves measurement of data.
(A) True
(B) False
- 1710.** Which of the following "shares the belief of the importance to investigate subjective perspective or personal constructs of participants"
(A) Content Analysis
(B) Thematic Analysis
(C) Repertory Grid Analysis
(D) None of above

- 1711.** Which of the following is an example of a topic studied in phenomenology?
- (A) The chemical reactions in a lab
 - (B) The economic growth of a country
 - (C) Being left out, falling asleep, being afraid of the dark
 - (D) The architectural design of buildings
- 1712.** Using specific examples to reach a general conclusion.
- (A) Deductive
 - (B) Inductive
- 1713.** — research approach uses concepts and tools from anthropology and other social science disciplines to provide deep cultural understanding of how people live and work.
- (A) Cognitive
 - (B) Inductive
 - (C) Archaeological
 - (D) Ethnographic
 - (E) Deductive
- 1714.** Which of the following techniques is used in qualitative data analysis to detail behavioral patterns within an observation group?
- (A) Surveys
 - (B) Experiments
 - (C) Observations
 - (D) None of above
- 1715.** Having the patient be self-reflective (looking inward), and training them to report elements of their experience.
- (A) Self-actualization
 - (B) Introspection
 - (C) Behavior reinforcement
 - (D) Intelligence testing
- 1716.** The scientific description of different peoples and cultures, with their customs, habits and differences
- (A) Ethnography
 - (B) Duet
 - (C) Duo
 - (D) Empirical
 - (E) Dramaturgy
- 1717.** One disadvantage of ethnographic research is:
- (A) Helps identify and analyse unexpected issues.
 - (B) Access to a wider and more accurate data scope
 - (C) Subjects may not act naturally during a short study
 - (D) None of above
- 1718.** Qualitative Research is much credible than quantitative research
- (A) TRUE
 - (B) FALSE
 - (C) PARTIALLY TRUE
 - (D) PARTIALLY FALSE
- 1719.** Data that is descriptive and uses adjectives is called —
- (A) Quantitative
 - (B) Qualitative
- 1720.** Results of qualitative research
- (A) Tables
 - (B) Quotes from interviews
 - (C) Graphs/Charts
 - (D) Statistical Percentages
- 1721.** What is the focus of analysis in narrative studies?
- (A) The structure of scientific experiments
 - (B) How individuals are enabled and constrained by social resources
 - (C) The mathematical models used in research
 - (D) The historical timeline of events
- 1722.** In which qualitative research approach is the primary goal to gain access to individuals' inner worlds of experience?
- (A) Ethnography.
 - (B) Phenomenology.
 - (C) Case study.
 - (D) Grounded theory.

1.2.7 Mixed Methods Research

1. You should mix methods in a way that provides complementary strengths and non overlapping weaknesses. This is known as the fundamental principle of mixed research.
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
2. Refers to the use of a mix of methods for organizing the study and collecting data with an objective of combining different methods that have non overlapping weaknesses and strengths.
(A) Data triangulation
(B) Investigation triangulation
(C) Methods triangulation
(D) Theory triangulation
3. Which of the following is NOT a mixed methods research logic?
(A) Parallel logic
(B) Rhetorical logic
(C) Deductive logic
(D) Integrative logic
4. Aarush is conducting a study on the impact of online learning on student performance. In the first phase, he gathers qualitative data through interviews with students and teachers. In the next phase, he analyzes quantitative data from test scores to draw conclusions. This research approach is known as:
(A) Action Research
(B) Mixed-Method Research
(C) Rational Research
(D) None of above
5. How can combining quantitative and qualitative data benefit businesses?
(A) By providing a more comprehensive understanding of customer preferences
(B) By reducing the need for data collection
(C) By focusing only on numerical data
(D) By avoiding customer feedback
6. Which research paradigm is based on the pragmatic view of reality?
(A) Quantitative research.
(B) Qualitative research.
(C) Mixed research.
(D) None of the above.
7. Which of these is a principle of mixed methods research?
(A) Separation of data collection methods
(B) Integration of qualitative and quantitative data
(C) Prioritization of quantitative methods
(D) Exclusive use of numerical analysis
8. By combining two or more research methods in a research study, researchers can prevent what from happening?
(A) They will collect all applicable data.
(B) They will cover several aspects about the participants.
(C) They will overlook a certain aspect and perspective about the participants.
(D) None of above
9. Mixed Methods combine ____ and qualitative approaches for comprehensive analysis.
(A) Quantitative
(B) Subjective
(C) Theoretical
(D) Descriptive
10. Here is a mixed design using notation QUAL + QUAN. What does this mean?
(A) Qualitative has the dominant status and it is followed by a quantitative phase.
(B) Quantitative has the dominant status and it is followed by a qualitative phase.
(C) Qualitative and quantitative are given equal status but the qualitative phase occurs before the quantitative phase.
(D) Qualitative and quantitative are given equal status and they are done concurrently.

11. The nature of data is a mixture of variables, words, and images.
(A) Mixed Research
(B) Qualitative Research
(C) Quantitative Research
(D) Descriptive Research
(E) Experimental Research
12. Which paradigm supports mixed method research?
(A) Positivist
(B) Constructivist
(C) Pragmatist
(D) Interpretivist
13. What is the type of research design that collects both quantitative and qualitative data?
(A) Mixed methods design
(B) Case study design
(C) Causal-comparative research design
(D) Phenomenological research design
14. What does mixed research aim to achieve?
(A) Integrate qualitative and quantitative data
(B) Explore and understand the meaning of social or human problems
(C) Test objective theories by examining relationships among variables
(D) Collect both quantitative and qualitative data, integrate them for a more complete understanding
15. If you develop and use a questionnaire that includes closed-ended and open-ended items then you have done which type of research?
(A) Within-stage mixed model research.
(B) Across-stage mixed model research.
(C) Not mixed model research.
(D) None of above.
16. Which research approach is based on the epistemological viewpoint of pragmatism?
(A) Mixed-methods research
(B) Scientific research
(C) Qualitative research
(D) Quantitative research
17. Combining qualitative and quantitative research produces integrated knowledge that best informs theory and practice.
(A) Strength.
(B) Limitation.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
18. Involves the use of a variety of theories and perspectives to explain the phenomena under study (including prior theories and/or other researchers). These contrasting perspectives can provide researchers with insights and help in the development of a more cogent explanation that fits their data.
(A) Data triangulation
(B) Investigation triangulation
(C) Methods triangulation
(D) Theory triangulation
19. What must a researcher determine before conducting a mixed analysis?
(A) Type of analysis
(B) Type of variables
(C) Type of validity
(D) Type of data
20. Analysing data from a mixed-methods research may be like the analysis of data from —
(A) Quantitative studies
(B) Qualitative studies
(C) Both A & B
(D) None of above
21. The purpose of triangulation in Mixed Methods Research is to:
(A) Increase the validity of the research findings by using multiple data sources or methods.
(B) Focus solely on qualitative data analysis.
(C) Limit the scope of the research to a single method.

- (D) Ensure that only quantitative data is considered.
22. What two questions must be answered in order to select one of the specific mixed method designs provided in the textbook?
- (A) Is the qualitative or quantitative paradigm going to be given priority, or will they be given equal status in your study?.
- (B) Should the qualitative and quantitative components be carried out concurrently or sequentially.
- (C) Should the study be theory driven or data driven?.
- (D) A and B.
23. Conceptual research typically involves which of the following types of data?
- (A) Quantitative data
- (B) Qualitative data
- (C) Both quantitative and qualitative data
- (D) None of the above
24. It is a design in mixed methods that appeals to individuals with a strong quantitative background and it involves two stages.
- (A) Convergent parallel mixed method design
- (B) Explanatory sequential methods design
- (C) Basic Method design.
- (D) None of above
25. What is a challenge in mixed method research?
- (A) Lack of data
- (B) Limited sample size
- (C) Complexity in design and analysis
- (D) Absence of variables
26. Data obtained from the sample during the first phase of the study are used to shape or structure the sample selection of the next phase of the study (i.e., quantitative phase followed by qualitative phase, or vice versa).
- (A) Sequential time orientation
- (B) Concurrent time orientation
27. What combination of techniques do business anthropologists use to study cultural dimensions of business organizations?
- (A) Qualitative and quantitative techniques
- (B) Historical and archaeological techniques
- (C) Psychological and philosophical techniques
- (D) Technological and scientific techniques
28. In a mixed methods research study, when the researcher wants to focus on the purpose of complementarity, focus will be placed on the enhancement, illustration, and clarification of results from one method with that of another. Which of the following also falls under this purpose?
- (A) Extension of the breadth of the study
- (B) Elaboration
- (C) Exaggeration
- (D) None of above
29. In terms of mixed methods design, “QUAN → qual” refers to —
- (A) A qualitative core design supplemented by quantitative approaches
- (B) A concurrent design with the researcher listening to the interacting equally with the quantitative and qualitative approaches
- (C) A predominantly quantitative core design supplemented by qualitative approaches
- (D) None of above
30. What is the best research approach for a problem that calls for generalizing the findings to a population and examining a phenomenon in depth?
- (A) Qualitative
- (B) Quantitative
- (C) Mixed methods
- (D) All of these
31. Mixed Methods Research provides a comprehensive approach to exploring complex research questions by:
- (A) Combining qualitative and quantitative approaches

- (B) Focusing solely on quantitative data
 - (C) Ignoring qualitative insights
 - (D) Relying only on theoretical frameworks
32. A researcher who utilizes methods triangulation”
- (A) Mixes research methods with nonoverlapping strengths and weaknesses
 - (B) Corroborates the observations of multiple observers
 - (C) Uses multiple methods of data collection to capture a single phenomenon
 - (D) Examines multiple theories in order to explain study results
33. On which principle do mixed method researchers base their design and research?
- (A) Relativism.
 - (B) Pragmatism.
 - (C) Realism.
 - (D) Pluralism.
34. The design which combines aspects of various research design and methods is referred to as —
- (A) Sequential design
 - (B) Mixed-method design
 - (C) Descriptive design
 - (D) Causal design
35. When both qualitative and quantitative methods are used:
- (A) Meta-analysis
 - (B) Mixed-method research
 - (C) Longitudinal
 - (D) Case study
36. Which of the six major research purposes in education research is unique to Mixed Methods Research?
- (A) Explanation
 - (B) Description
 - (C) Understanding
 - (D) Influence
 - (E) Integration
37. Qualitative studies can be used to be validate the results of the quantitative/empirical study
- (A) True
 - (B) False
38. Mixed methods researchers usually agree with the —
- (A) Realism thesis
 - (B) Compatibility thesis
 - (C) Incompatibility thesis
 - (D) None of above
39. How are mixed methods implemented in research studies?
- (A) Quantitative methods are always conducted before qualitative methods.
 - (B) Qualitative methods are always conducted before quantitative methods.
 - (C) Both methods can be conducted simultaneously, sequentially, or fused throughout the research process.
 - (D) Mixed methods studies exclude either quantitative or qualitative data.
40. In a language survey, what type of data is typically collected?
- (A) Qualitative data
 - (B) Quantitative data
 - (C) Both qualitative and quantitative data
 - (D) Neither qualitative nor quantitative data
41. Mixed researchers typically use the pragmatist philosophy.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
42. This design combines elements from various research designs and uses both qualitative and quantitative methods.
- (A) Exploratory
 - (B) Mixed-method
 - (C) Descriptive
 - (D) Experimental

43. Triangulation involves using multiple methods or data sources to ____ results.
(A) Validate
(B) Invalidate
(C) Ignore
(D) Complicate
44. In evaluating high-quality action research, what kind of data is used?
(A) Qualitative
(B) Quantitative
(C) Qualitative and Quantitative
(D) Case-Study
45. A business wants to improve its product based on customer feedback from both surveys and focus groups. What is the best approach to analyze this information?
(A) Compare and combine insights from both methods to identify common themes
(B) Ignore the feedback
(C) Only use survey results
(D) Only use focus group results
46. An action researcher designs a study that has weak internal validity. What might the researcher do to help strengthen the research?
(A) Used mixed methods to align both the strengths and limitations of each approach.
(B) Address issues in the research that might directly limit generalization.
(C) Use qualitative methods and focus on descriptive validity.
(D) Adjust for these limitations by enhancing statistical conclusion validity.
47. A mixed methods researcher makes data transformations, qualitative to quantitative or vice-versa. Which type of validity is the researcher ensuring?
(A) Conversion validity
(B) Sample integration validity
(C) Sociopolitical validity
(D) Sequential validity
48. Two or more of the methods of data collection are used in a research study. For example, standardized test data and qualitative interview data might be mixed/combined in a given study.
(A) Intermethod mixing.
(B) Intramethod mixing.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
49. The term 'Mixed Methods' refers to an emergent methodology of research that advances the systematic integration, or "mixing," of quantitative and qualitative data within a single investigation or sustained program of inquiry.
(A) True
(B) False
50. A scenario where mixed methods research can be applied in evaluating a digital literacy curriculum is:
(A) When assessing both quantitative test scores and qualitative student feedback.
(B) When only quantitative data is needed for evaluation.
(C) When only qualitative interviews are conducted.
(D) When no data collection is required.
51. When a mixed methods research study considers the relative weight given to quantitative or qualitative parts, or if one is the core part of the study, this is known as ____
(A) Paradigm/research-approach emphasis decision
(B) Time orientation decision
(C) Complementarity
(D) None of above
52. Both quantitative and qualitative data are obtained through the creative use of a single method of data collection (i.e., using a mixed form of just one of the six major methods of data collection).
(A) Intermethod mixing
(B) Intramethod mixing

53. Quantitative and qualitative methods can be used in conducting one particular piece of research.
(A) True
(B) False
54. When a researcher utilizes a hybrid of quantitative and qualitative approaches to create a research problem, ____ research is reflective of this.
(A) Mixed Methods
(B) Nonexperimental
(C) Qualitative
(D) Quantitative
55. What is a key feature of the pragmatic worldview in mixed methods research?
(A) Emphasis on a unified theory
(B) Acknowledgment of a fixed reality
(C) Singular worldview
(D) Flexibility, drawing from both quantitative and qualitative assumptions
56. What defines a mixed methods study?
(A) The use of qualitative and quantitative methods
(B) The focus on triangulation
(C) The method used to sample the population
(D) None of above
57. Mixed Method Research: Which is NOT a MIXED METHOD question type
(A) The qualitative question
(B) The quantitative question/hypothesis
(C) The investigative question
(D) The mixed-methods question
58. Triangulation means ____
(A) To use three methods to understand the problem
(B) To use more than one method to compensate for weaknesses of each one
(C) Neither of these
(D) None of above
59. What is the multiple-method approach in research?
(A) The multiple-method approach operationalized constructs in different ways to minimize the limitations of each measurement strategy.
(B) It is a method that uses only qualitative data to analyze research questions.
(C) It refers to using a single measurement tool for all constructs in a study.
(D) It is a statistical technique for combining results from different experiments.
60. Before deciding to design a mixed study, which of the following is a crucial point to consider?
(A) Does the study have a good title
(B) Will the study be published
(C) Is the planned study feasible
(D) None of above
61. Which mixed research purpose seeks to “broaden the breadth and range of inquiry” by combining research methods?
(A) Development
(B) Initiation
(C) Expansion
(D) None of above
62. Two or more of the different methods of data collection are used
(A) INTERMETHOD MIXING
(B) INTRAMETHOD MIXING
63. Which model involves the separate collection of QUAL and QUAN data and merging them to arrive at a validated result?
(A) Data Transformation Model
(B) Convergence Model
(C) Validating Quantitative Data Model
(D) Multi-Level Research Model
64. In explanatory sequential mixed research, what is the correct order of data collection and analysis?
(A) Qualitative data first, then quantitative data.

- (B) Quantitative data first, then qualitative data.
- (C) Both qualitative and quantitative data simultaneously.
- (D) Only quantitative data is collected.
65. A researcher uses both surveys and interviews in a study. What is this approach called?
- (A) Quantitative
- (B) Mixed methods
- (C) Qualitative
- (D) Experimental
66. A study on 12th grade AP English Literature curriculum pulls test scores of students in one classroom for the quantitative phase of the study. A few weeks later, open-ended questionnaires are used to collect data from students in a different classroom in the same school for the qualitative phase.
- (A) Parallel sequential
- (B) Multilevel sequential
- (C) Identical concurrent
- (D) Nested concurrent
67. It uses design characteristics from both qualitative and quantitative approaches in a single studies or series of studies.
- (A) Qualitative research design
- (B) Quantitative research design
- (C) Mixed-method research design
- (D) None of above
68. All of the following are strengths of mixed methods research, except: ____
- (A) It can add insights and understanding that might be missed when only a single method is used.
- (B) Some of the details of mixed research remain to be worked out by research methodologist.
- (C) It has the ability to produce practical theory
- (D) None of above
69. When a research uses both quantitative and qualitative methods it is known as ____
- (A) Dual Methods
- (B) Alternative Methods
- (C) Mixed-Methods
- (D) Optional Methods
70. Match the following characteristics of reviewing research literature to the most appropriate research approaches. Develops awareness of comparative strengths of quantitative and qualitative methods
- (A) Quantitative
- (B) Qualitative
- (C) Mixed
- (D) Action
71. This is the use of different methods in combination, which can compensate for their individual limitations and reinforce their strengths.
- (A) Method triangulation
- (B) Data triangulation
- (C) Researcher triangulation
- (D) Theory triangulation
72. In the notation QUAL + quan, the dominant strand is the:
- (A) Quantitative component
- (B) Qualitative component
73. Mixed-methods research
- (A) Is designed to produce a descriptive and predictive findings within a single study
- (B) Was developed to speed up the transfer of research findings into educational practice
- (C) Uses a combination of quantitative and qualitative research methods
- (D) Uses theories from multiple disciplines to study problems of practice.
74. Although quantitative and qualitative research methods have advantages, mixed methods researchers generally consider single approach or monomethod research studies to be ____ in addressing many research questions.

- (A) Limiting
(B) Fully
(C) Sufficient
(D) None of above
75. What does triangulation in mixed methods aim to achieve?
(A) Data duplication
(B) Research bias
(C) Validity and credibility
(D) Sampling error
76. Because healthcare is complex, mixed methods research is increasingly popular as a way to explore complex problems that influence health and health outcomes.
(A) TRUE
(B) FALSE
77. What is one reason for choosing a mixed-methods design over a qualitative or quantitative design?
(A) Mixed-methods designs can produce more integrated knowledge.
(B) Mixed-methods designs are less expensive and time-consuming.
(C) Mixed-methods designs do not require as much research design knowledge.
(D) Mixed-methods designs are easier for a single researcher to conduct.
78. The advantages of using mixed methods research include:
(A) Combining qualitative and quantitative data for comprehensive analysis
(B) Focusing solely on numerical data
(C) Relying only on subjective opinions
(D) Ignoring contextual factors
79. What is the defining feature of mixed research?
(A) It uses only qualitative data.
(B) It uses only quantitative data.
(C) It combines both quantitative and qualitative data.
(D) It focuses solely on past research.
80. What is the relationship between quantitative and qualitative research approaches?
(A) They are complementary and can be integrated into mixed methods.
(B) They are competing and mutually exclusive.
(C) They are identical and interchangeable.
(D) They are irrelevant and unnecessary in scientific research.
81. Uses information from two (or more) different data collection method.
(A) Intermethod mixing.
(B) Intramethod mixing.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
82. Multiple forms of data drawing on all possibilities
(A) Qualitative Methods
(B) Mixed Methods
(C) Quantitative Methods
(D) None of above
83. Mixed methods research aims to strengthen research outcomes by combining the strengths of both qualitative and quantitative approaches.
(A) True
(B) False
84. This method studies use some amount of design characteristics from both qualitative and quantitative approaches in a single study or series of studies.
(A) Qualitative Research
(B) Mixed-Method Research Design
(C) Quantitative Research Design
(D) Quasi-Experimental Research Design
85. Extent mixed researcher appropriately address the interests, values, and standpoints of multiple stakeholders.
(A) Sequential
(B) Conversion
(C) Sample integration

- (D) Sociopolitical
(E) Multiple
86. ____ is a research approach that combines qualitative and quantitative methods.
(A) Positivism
(B) Mixed Methods
(C) Triangulation
(D) None of above
87. What is the significance of using a mixed-methods approach in research?
(A) To avoid any form of data collection
(B) To focus solely on numerical data
(C) To combine qualitative and quantitative data for a comprehensive analysis
(D) To limit the scope of the research
88. What does combined quantitative / qualitative research designs include?
(A) Exploring shared culture of a group of people
(B) Using quantitative and qualitative data for individuals to study education problems that they face in their settings
(C) Describing trends for a population of people
(D) Associating or relating variables in a predictable pattern for one group of individuals
89. ____ is a powerful technique that facilitates validation of data through cross verification from two or more sources. In particular, it refers to the application and combination of several research methods in the study of the same phenomenon.
(A) Phenomenology
(B) The Milgram (technique)
(C) Conversion
(D) Triangulation
90. Which of the following is a type of Mixed Methods Design?
(A) Sequential Explanatory Design
(B) Random Sampling Design
(C) Cross-sectional Design
(D) Longitudinal Design
91. Writing a research proposal may only employ numerical data.
(A) TRUE
(B) FALSE
92. How can mixed method research address complex educational issues?
(A) By using only quantitative data
(B) By combining multiple data sources and perspectives
(C) By avoiding qualitative analysis
(D) By simplifying the research process
93. In mixed methods research, one important kind of legitimation or validity requires that the researcher strategically alternate between the qualitative or emic perspective and the quantitative or etic perspective. Through this process the researcher attempts to create an integrated viewpoint. When this is done successfully, the researcher will have achieved ____
(A) Inside-outside validity
(B) Sociopolitical validity
(C) Weakness minimization validity
(D) None of above
94. Why is the exploratory sequential method used in research?
(A) To test a pre-existing theory.
(B) To explore unknown variables and develop findings empirically.
(C) To validate a quantitative framework.
(D) To compare two existing theories.
95. Extent to which weakness from one research approach is compensated for by the strengths from the other approach, combining qualitative and quantitative approaches with nonoverlapping weaknesses
(A) Inside-out
(B) Paradigmatic/philosophical
(C) Commensurability approximation
(D) Weakness minimization

96. What are the two primary differences between mono and multi-analysis techniques in mixed research? Choose 2 answers
- (A) The types of data analyzed
 - (B) The number of forms of analysis
 - (C) The number of variables
 - (D) The type of validity
97. Is defined as the combination of qualitative and quantitative research methods with the aim of gaining the advantages of both.
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed Methods
 - (D) None of above
98. It can address and answer a broader and more complete range of research questions and provide fuller answers.
- (A) Strength
 - (B) Limitation
99. What type of research may have more than one stated purpose?
- (A) Qualitative
 - (B) Quantitative
 - (C) Mixed methods
 - (D) Applied
100. How can qualitative data complement quantitative data in a research study?
- (A) Providing numerical measurements
 - (B) Offering detailed insights into the reasons behind numerical trends
 - (C) Calculating statistical correlations
 - (D) Determining the exact number of occurrences
101. In the given scenario, what methods does the researcher use to study workplace diversity?
- (A) Surveys and Interviews
 - (B) Case Studies
 - (C) Observational Research
 - (D) All of the above
102. The use of two or more research methods where the weaknesses of one method can be balanced by the strengths of another to improve the overall reliability and validity of the research
- (A) Positivism
 - (B) Triangulation
 - (C) Interpretivism
 - (D) Ethnography
103. Mixed methods researchers reject which philosophical belief?
- (A) Compatibility theses
 - (B) Incompatibility thesis
 - (C) Pragmatism
 - (D) None of above
104. In the 2010s, integrated audits with ethnographic studies aimed to achieve which outcome?
- (A) Avoid qualitative interpretation
 - (B) Blend behavioral data with context
 - (C) Replace sampling entirely
 - (D) Prioritize lab-only experiments
105. Which research design collects both numeric and narrative data?
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed method
 - (D) Experimental
106. How can a researcher ensure integration in a convergent design?
- (A) Collect data at different times
 - (B) Analyze data separately
 - (C) Merge findings during interpretation
 - (D) Use only one method
107. What are combined designs?
- (A) Mixed methods, action research
 - (B) Correlational, survey
 - (C) Grounded theory, ethnography
 - (D) Narrative, survey

- 108.** Which of the following mixed research rationales seeks elaboration, enhancement, illustration, clarification of the results from one method with the results from the other method?
- (A) Triangulation.
 - (B) Complementarity.
 - (C) Development.
 - (D) All of the above.
- 109.** According to the typology used in your text, research in which a quantitative phase and a qualitative phase are included in the overall research study is specifically called
- (A) Mixed model research.
 - (B) Mixed research.
 - (C) Mixed method research.
 - (D) Multimethod research.
- 110.** A study on elementary math skills simultaneously collects classroom data using teacher interviews in its qualitative phase and individual students' achievement scores from that classroom in its quantitative phase.
- (A) Identical sequential
 - (B) Nested concurrent
 - (C) Parallel sequential
 - (D) Multilevel concurrent
- 111.** The purpose of using a Concurrent Triangulation Design in Mixed Methods Research is to:
- (A) Collect both quantitative and qualitative data simultaneously and compare the results
 - (B) Use only qualitative data for in-depth analysis
 - (C) Focus solely on quantitative data collection
 - (D) Avoid any form of data triangulation
- 112.** If a researcher wants to explore student experiences and then measure academic performance, which design is best?
- (A) Convergent
 - (B) Exploratory sequential
 - (C) Explanatory sequential
 - (D) Embedded
- 113.** Taking a ___ approach results in a research study that uses two or more techniques discussed above.
- (A) Content analysis
 - (B) Mixed Methods
 - (C) Action research
 - (D) Grounded theory
- 114.** ___ refers to researchers using a range of methods in the same piece of research. This allows for triangulation where qualitative and quantitative data can be produced in order to maximise validity and reliability.
- (A) Methodological pluralism
 - (B) Ethnomethodology
 - (C) Symbolic interactionism
 - (D) Positivism
- 115.** Which variant of explanatory sequential research involves conducting follow-up questions to support quantitative data?
- (A) Participation Selection Model
 - (B) Follow Up Explanation Model
 - (C) Descriptive Research Model
 - (D) Correlational Research Model
- 116.** What is the benefit of using both quantitative and qualitative data?
- (A) It provides a limited perspective
 - (B) It offers a more complete and nuanced understanding
 - (C) It reduces the need for data collection
 - (D) It focuses only on numerical data
- 117.** How does triangulation improve research quality?
- (A) By increasing sample size
 - (B) By reducing cost
 - (C) By validating findings through multiple sources
 - (D) By simplifying analysis

118. When qualitative and quantitative data are analyzed using qualitative techniques within a single study, this is reflective of which of the following?
- (A) Monodata-multianalysis
 - (B) Multidata-multianalysis
 - (C) Multidata-monoanalysis
 - (D) None of above
119. When does exploratory sequential mixed methods design use qualitative research?
- (A) After quantitative research
 - (B) Initially, to explore views of participants
 - (C) To avoid contradictions in data
 - (D) Simultaneously with quantitative research
120. A researcher has decided to conduct a mixed methods study. Which of these factors would have led to this decision?
- (A) Wanting to provide a complex explanation incorporating multiple perspectives
 - (B) Wanting to observe behaviors as they occur in natural settings
 - (C) Wanting to generate knowledge about a little-known phenomenon
 - (D) Wanting to determine the benefits of a new strategy in the researcher's workplace
121. A mixed methods researcher is studying the effect of recently changed curriculum standards. Which of the following would best reflect intermethod mixing data collection?
- (A) Interviewing both teachers and students for insider perspectives
 - (B) Comparing test scores from the current and previous school year
 - (C) Obtaining test scores and interview students
 - (D) None of above
122. How does mixed methods research differ from quantitative and qualitative research?
- (A) By focusing solely on numerical data
 - (B) By combining both qualitative and quantitative approaches
 - (C) By using only interviews and observations
 - (D) By relying exclusively on experimental designs
123. Why should a researcher include both qualitative and quantitative methods in a mixed methods research proposal?
- (A) To increase the length of the proposal
 - (B) To provide a comprehensive understanding of the research problem by combining numerical data and in-depth perspectives
 - (C) To reduce the need for statistical analysis
 - (D) To simplify data collection
124. Participants selected for one phase represent a subset of participants selected for another phase. Select a large number of students for quantitative phase, then interview only three for Qualitative phase
- (A) Identical
 - (B) Parallel
 - (C) Nested
 - (D) Multilevel
125. Is a methodology for conducting research that involves collecting, analyzing and integrating quantitative (e.g., experiments, surveys) and qualitative (e.g., focus groups, interviews) research.
- (A) Qualitative Research
 - (B) Quantitative Research
 - (C) Mixed Method Research
 - (D) None of above
126. Consider the following Statements: Mixed methods research contends that human behavior and thought is both complex and predictable to a degree. Two styles of purposeful drafting are "quick and dirty" and "slow and clean". An author who is NOT an expert may still be reliable. Which of the following statement(s) is/are true?
- (A) Only 1, 2.
 - (B) Only 1, 3.

- (C) Only 1, 2, 3.
(D) Only 2, 3.
- 127.** The philosophy of ____ is popular in mixed methods research.
(A) Pragmatism
(B) Realism
- 128.** Extent to which one has appropriately built on the prior stage in a sequential design. For example, qualitative part is done first and quantitative second, then ask what results might have been if the quantitative part had been done first and the qualitative second.
(A) Sequential
(B) Conversion
(C) Sample integration
(D) Sociopolitical
(E) Multiple
- 129.** What is the benefit of choosing a mixed method approach in a proposal?
(A) Reliability increases with this type of approach.
(B) Qualitative and quantitative do not represent a complete study, and mixed methods do
(C) Strengths from qualitative and quantitative approaches can be combined to develop a stronger understanding
(D) None of above
- 130.** When a researcher collects qualitative and quantitative data through a mixed version of one method of data collection such as a mixed questionnaire, this is known as what?
(A) Intramethod mixing
(B) Intermethod mixing
- 131.** Research that uses qualitative methods for one phase and quantitative methods for the next phase is known as
(A) Action research
(B) Mixed-method research
(C) Quantitative research
(D) Pragmatic research
- 132.** Triangulation, complementarity, development, problem clarification and relevance are examples of ____
(A) Problems associated with mixed design approach
(B) Advantages of using mixed design approach
(C) Neither of these
(D) None of above
- 133.** The use of a qualitative research objective, collection of qualitative data, and performance of quantitative analysis is an example of
(A) Monomethod research.
(B) Within-stage mixed model research.
(C) Mixed method research.
(D) Across-stage mixed model research.
- 134.** The type of research that integrates qualitative and quantitative data is
(A) Two-types research
(B) Mixed methods research
(C) Qualitative research
(D) None of above
- 135.** Hey there! Aashi, Mira, and Vanya are planning a research project. They want to mix things up by using qualitative methods for one phase and quantitative methods for the next phase. What is this type of research known as?
(A) Action Research
(B) Mixed-Method Research
(C) Rational Research
(D) None of above
- 136.** Both open-and closed-ended questions
(A) Mixed method
(B) Research design
(C) Qualitative method
(D) None of above
- 137.** Uses information collected by a mixed version of a single method of data collection.
(A) Intermethod mixing.

- (B) Intramethod mixing.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 138.** The instrumentation in this type of research may involved both closed and open-ended questions.
(A) Quantitative Research
(B) Qualitative Research
(C) Mixed Methods Research
(D) None of above
- 139.** Which of the following cannot be a purpose or rationale for a mixed research design?
(A) Triangulation.
(B) Complementarily.
(C) Development.
(D) All of the above can be purposes.
- 140.** Conducting a mixed-methods research design may be more difficult than conducting a study using just one type of data. Why?
(A) Sampling considerations are more complex
(B) Rigorous application of both qualitative and quantitative procedures
(C) Considering the best way to integrate the results of both forms of data collection
(D) All of the above
- 141.** Which of the following is an example of a mixed-methods research approach?
(A) Using only surveys
(B) Combining interviews and surveys
(C) Conducting experiments only
(D) Analyzing statistical data only
- 142.** What type of data is collected in mixed-methods research?
(A) Only qualitative
(B) Only quantitative
(C) Both qualitative and quantitative
(D) Neither qualitative nor quantitative
- 143.** What is the most common form in SLA mixed-methods researches?
(A) Triangulation design
(B) Explanatory design
(C) Exploratory design
(D) None of above
- 144.** What is the primary sequence of data collection in the exploratory sequential method?
(A) Quantitative data is collected first, followed by qualitative data.
(B) Qualitative data is collected first, followed by quantitative data.
(C) Both qualitative and quantitative data are collected simultaneously.
(D) Only qualitative data is collected.
- 145.** Communication becomes more effective if qualitative and quantitative observations are used.
(A) True
(B) False
(C) All the above
(D) None of the above
- 146.** Seeks convergence, correspondence, and corroboration of results from different methods
(A) Triangulation
(B) Development
(C) Initiation
(D) Expansion
- 147.** What is the role of the literature review in a mixed methods study?
(A) It is solely determined by the qualitative strand of the study
(B) Mixed methods studies do not typically include a literature review
(C) It should strictly adhere to quantitative research conventions
(D) It depends on the specific mixed methods design and the weight given to each approach (qualitative or quantitative)

148. Which design in mixed methods research uses qualitative data to explain quantitative results?
- (A) Explanatory sequential design
 - (B) Descriptive exploratory design
 - (C) Concurrent triangulation design
 - (D) Embedded design
149. Triangulation in research involves:
- (A) Using a single method for data collection.
 - (B) Combining different methods to study the same phenomenon.
 - (C) Randomly assigning participants to groups.
 - (D) None of above
150. A need for mixed-method research exists because one data source may be ____
- (A) Excessive
 - (B) Insufficient
 - (C) Irrelevant
 - (D) Overwhelming
151. Research in which the researcher uses the qualitative paradigm for one phase and the quantitative paradigm for another phase is known as ____
- (A) Action research
 - (B) Basic research
 - (C) Quantitative research
 - (D) Mixed-method research
152. Mixed methods research contends that human behavior and thought is both complex and predictable to a degree.
- (A) True
 - (B) False
153. Mixed data analysis can use qualitative and quantitative techniques which ____ produces findings at approximately the same time.
- (A) Concurrently
 - (B) Sequentially
154. Good mixed methods research understands and integrates the important ideas from the quantitative and qualitative data, findings, and perspectives. This is called ____
- (A) Emic perspective
 - (B) Meta-inference
 - (C) Statistical generalization
 - (D) None of above
155. In mixed methods research, the design notation of a plus sign (+) designates a design that is:
- (A) Concurrent
 - (B) Sequential
156. Both statistical analysis and text analysis are being used in this type of research.
- (A) Quantitative Research
 - (B) Qualitative Research
 - (C) Mixed Methods Research
 - (D) None of above
157. What is the definition of Triangulation in research?
- (A) Using multiple data sources, methods, investigators, or theories to validate findings.
 - (B) Using a single data source to validate findings.
 - (C) Relying solely on theoretical frameworks without empirical data.
 - (D) Focusing on qualitative data only without quantitative analysis.
158. It is a type of mixed method research in which you collect and analyze qualitative data and then follow up your results with a quantitative phase.
- (A) Sequential Exploratory Design
 - (B) Sequential Explanatory Design
 - (C) Concurrent Triangulation Design
 - (D) None of above
159. There are still some details of mixed research that remain to be worked out by research methodologists, including all of the following except ____

- (A) Problems of paradigm mixing
 - (B) How to interpret conflicting results
 - (C) Techniques of quantitatively analyzing qualitative data
 - (D) None of above
- 160.** This is using a combination of different approaches to collecting and interpreting data.
- (A) Triangulation
 - (B) Data analysis
 - (C) Qualitative analysis
 - (D) Quadratic formulation
- 161.** Which approach combines induction and deduction in research?
- (A) Mixed approach
 - (B) Empirical Method
 - (C) Inductive reasoning
 - (D) Bacon's method
- 162.** Extent researcher understands and documents "integrated" mixed research philosophical and methodological paradigm, including epistemological, ontological, axiological, and rhetorical beliefs about mixed research.
- (A) Inside-out
 - (B) Paradigmatic/philosophical
 - (C) Commensurability approximation
 - (D) Weakness minimization
- 163.** What is the primary rationale for using mixed methods in research design?
- (A) To replace qualitative viewpoints entirely
 - (B) To achieve breadth and depth of understanding
 - (C) To eliminate quantitative analysis
 - (D) To avoid triangulation of findings
- 164.** Which research method combines both quantitative and qualitative approaches?
- (A) Ethnographic
 - (B) Longitudinal
 - (C) Experimental
 - (D) Mixed-methods
- 165.** At the present time, educational researchers generally believe that
- (A) Qualitative research belongs more to the humanities than to the sciences.
 - (B) Quantitative research is more powerful than qualitative research in shedding light on problems of practice.
 - (C) Quantitative and qualitative research can coexist in a state of mutual respect.
 - (D) The primary purpose of qualitative research is to act as a validity check on quantitative research findings.
- 166.** What does "mixed method research" combine?
- (A) Quantitative and qualitative approaches
 - (B) Experimental and descriptive designs
 - (C) Primary and secondary data
 - (D) Deductive and inductive reasoning
- 167.** What is the purpose of mixed method study that is conducted to extend the breadth and range of inquiry by using different methods for different inquiry components?
- (A) Complementarity
 - (B) Triangulation
 - (C) Expansion
 - (D) Initiation
- 168.** Luis conducted a study on breakfast eating on student alertness in elementary schools by providing a numeric based survey on student breakfast practices and alertness. After analyzing the data, he then conducted interviews of a smaller sample of the student body. Which type of design did he use?
- (A) Explanatory sequential design
 - (B) Exploratory sequential design
 - (C) Convergent Design
 - (D) All of the above
- 169.** Looking at the overall research picture from a number of angles is known as ____
- (A) Hexagonisation
 - (B) Circularisation
 - (C) Multi-angled theory
 - (D) Triangulation

170. Mixed-method research refers to use of both:
- (A) Experimental and correlational methods
 - (B) Quantitative and qualitative methods
 - (C) Description and intervention
 - (D) Group and single subject designs
171. Here is a mixed design using notation "QUAL ____ > quan". What type of mixed research is this?
- (A) Specific method.
 - (B) Mixed model.
 - (C) Specific model.
 - (D) Mixed method.
172. In the Mixed Methods Design Matrix, the use of a plus sign indicates ____
- (A) Concurrent data collection in the mixed methods design
 - (B) Sequential data collection in mixed methods design
 - (C) Priority (primary or supplemental) of use of the qualitative and quantitative approaches
 - (D) None of above
173. Which mixed methods tactic explicitly aims to achieve triangulation using both data types?
- (A) Use quantitative data to explain words
 - (B) Use numbers to replace interviews
 - (C) Use qualitative methods without numbers
 - (D) Use both methods to reach triangulation
174. Which research method has the strength of being able to include words, pictures, and narrative to add meaning to numbers?
- (A) Quantitative
 - (B) Qualitative
 - (C) Mixed methods
 - (D) Experimental
175. Mixed methods research and methodological pluralism are the same thing.
- (A) True
 - (B) False
176. Which of the following is a weakness of mixed research?
- (A) Words, pictures, and narrative can be used to add meaning to numbers.
 - (B) Researchers can generate and test a grounded theory.
 - (C) Numbers can be used to add precision to words, pictures, and narrative.
 - (D) It is more time consuming and expensive.
177. What kind of data is used in the following statement: Starbucks espresso coffee is quite strong in flavor and has a burnt flavor taste. It is sold in 50 ml, 100 ml and 150 ml cups and cost from 13 to 20 AED.
- (A) Qualitative Data only
 - (B) Quantitative Data only
 - (C) Mixed Methods
 - (D) None of above
178. What does the convergent parallel design involve?
- (A) Sequential data collection
 - (B) Collecting qualitative data only
 - (C) Collecting both data types simultaneously
 - (D) Using only numeric data
179. Mixed-methods research is best defined as:
- (A) Combining quantitative and qualitative approaches
 - (B) Analyzing only numerical data
 - (C) Focusing exclusively on lived experiences
 - (D) Using thematic analysis
180. Why is timing important in mixed method designs?
- (A) It affects sample size
 - (B) It determines the order of data collection
 - (C) It influences the research title
 - (D) It controls for bias

- 181.** What is the purpose of mixed-methods research in IT?
- (A) To combine qualitative and quantitative data in a single study
 - (B) To conduct interviews with a diverse group of participants
 - (C) To analyze numerical data using statistical techniques
 - (D) To explore subjective experiences and meanings
- 182.** A(n) ____ level of interaction occurs when the researcher mixes the two methods, which can occur at different points in the process but must occur prior to the final interpretation of results.
- (A) Active
 - (B) Independent
 - (C) Interdependent
 - (D) Compensating
- 183.** You can use both Quantitative and Qualitative Method in your research.
- (A) True
 - (B) False
- 184.** In mixed methods research, what does 'corroborative logic' involve?
- (A) Data embellishment
 - (B) Data triangulation
 - (C) Exclusive qualitative analysis
 - (D) Exclusive quantitative analysis
- 185.** If researchers have addressed the interests, values, and viewpoints of multiple stakeholders in a mixed research study, then they have attained ____ validity.
- (A) Sociopolitical
 - (B) External
 - (C) Internal
 - (D) Sequential
- 186.** Which of the following is not a primary focus of mixed methods research design?
- (A) Data embellishment
 - (B) Data triangulation
 - (C) Integration of data streams
 - (D) Providing a comprehensive analysis
- 187.** Who contributed extensively to the development of mixed methods design and analysis, working alongside John W. Creswell?
- (A) Vicki L. Plano Smith
 - (B) Jane Doe
 - (C) John W. Creswell
 - (D) Vicki L. Plano Clark
- 188.** How does the exploratory sequential design benefit theory development?
- (A) It tests existing theories
 - (B) It generates new insights from qualitative data
 - (C) It avoids interpretation
 - (D) It uses only numeric data
- 189.** A mixed-methods design combines:
- (A) Two qualitative methods
 - (B) Survey and experimental
 - (C) Quantitative and qualitative methods
 - (D) Longitudinal and cross-sectional
- 190.** A blend of qualitative and quantitative methods
- (A) Mixed Methods Research
 - (B) Abstract
 - (C) Validity
 - (D) Acknowledgement
- 191.** Extent of meta-inferences made in a mixed research study reflect a mixed worldview, based on a deep understanding and appreciation of what a qualitative researcher and quantitative researcher would "see" in the world.
- (A) Inside-out
 - (B) Paradigmatic/philosophical
 - (C) Commensurability approximation
 - (D) Weakness minimization
- 192.** Which type of triangulation involves using multiple researchers to collect and analyze data?

- (A) Methodological triangulation
 - (B) Data triangulation
 - (C) Investigator triangulation
 - (D) Theoretical triangulation
- 193.** Statistical and text analysis
- (A) Qualitative Methods
 - (B) Mixed Methods
 - (C) Quantitative Methods
 - (D) None of above
- 194.** Which type of mixed method design uses qualitative data first to determine an intervention or measurement tool, and then analyzes that tool using quantitative data?
- (A) Explanatory sequential design
 - (B) Exploratory sequential design
 - (C) Convergent design
 - (D) None of the above
- 195.** What is the main Criteria for selecting an approach?
- (A) To select the problem and involved that into the research.
 - (B) The explanation of mechanism of descriptions and concepts for individuals.
 - (C) The Intervention or understanding of qualitative approach.
 - (D) To Involved a mixed of methods design to capture the best of both quantitative and qualitative approaches.
- 196.** When conducted by a single researcher, it can be difficult logistically (especially in a concurrent design) and it requires the researcher to have deep knowledge of both qualitative and quantitative research.
- (A) Strength
 - (B) Limitation
- 197.** Both quantitative and qualitative data are obtained through the creative use of a single method
- (A) INTRAMETHOD MIXING
 - (B) INTERMETHOD MIXING
- 198.** A challenge faced in mixed methods research related to data integration is:
- (A) Difficulty in merging qualitative and quantitative data
 - (B) Lack of research participants
 - (C) High cost of research
 - (D) Limited access to research tools
- 199.** A study uses qualitative observation methods, followed by quantitative data analysis methods. This is an example of what kind of study conduct.
- (A) Sequential
 - (B) Concurrent
 - (C) Synchronized
 - (D) None of above
- 200.** Compared to the other major research approaches, what is the main strength of mixed methods research?
- (A) It generates results that are relatively independent of the researchers.
 - (B) It produces integrated knowledge that informs theory and practice.
 - (C) It can be entirely conducted in a natural setting.
 - (D) It empowers practitioners to contribute to a base of knowledge.
- 201.** The researcher has obtained what kind of validity in mixed methods research when he or she has addressed the relevant various mixed validity types as well as the kinds of validity required for the qualitative and quantitative parts of the research study?
- (A) Multiple validities
 - (B) Paradigmatic/philosophical validity
 - (C) Sequential validity
 - (D) None of above
- 202.** In the scenario of researching the effectiveness of a blended learning model, what type of data might you collect?
- (A) Quantitative data such as test scores and attendance records

- (B) Qualitative data such as student feedback and interviews
(C) Both quantitative and qualitative data
(D) Neither quantitative nor qualitative data
- 203.** Which design is most appropriate for evaluating a school program using surveys and interviews simultaneously?
(A) Exploratory sequential
(B) Explanatory sequential
(C) Convergent parallel
(D) Embedded
- 204.** ____ is the use of at least three narratives, theoretical perspectives, or investigators to examine the same phenomenon.
(A) Positivism
(B) Mixed Methods
(C) Triangulation
(D) None of above
- 205.** Mixed-Methods-A research approach that uses two or more methods, with at least one being quantitative and one being qualitative in nature
(A) True
(B) False
- 206.** Data are collected for the quantitative phase and qualitative phase of the study at the same or during approximately the same time period. Data from both samples (i.e., the quantitative sample and the qualitative sample) are combined and interpreted at the study's data interpretation stage.
(A) Concurrent time orientation
(B) Sequential time orientation
- 207.** The ____ of mixed methods research often values the standard of determining what works for whom in particular contexts.
(A) Epistemology
(B) Ontology
- 208.** This kind of research allows the marketer to both explore and validate findings.
(A) Sampling plan
(B) Quantitative research
(C) Mixed methods
(D) None of above
- 209.** If a researcher can switch between a quantitative and qualitative viewpoint to create an integrated viewpoint, the researcher has achieved ____ validity.
(A) Commensurability approximation
(B) Sequential
(C) Paradigmatic
(D) None of above
- 210.** Samples for quantitative and qualitative components are different but drawn from same population. Students of one 4th grade class for Quantitative and students of another 4th grade class for qualitative phase.
(A) Identical
(B) Parallel
(C) Nested
(D) Multilevel
- 211.** The Sequential Explanatory scenario in mixed methods research involves:
(A) Collecting qualitative data first, followed by quantitative data
(B) Collecting quantitative data first, followed by qualitative data
(C) Collecting both qualitative and quantitative data simultaneously
(D) Using only qualitative data
- 212.** Mixed methods research employs a narrow-angle lens rather than a multi-angle lens of research focus.
(A) True
(B) False
- 213.** Mixed methods research can enhance validity by:
(A) Combining qualitative and quantitative approaches
(B) Focusing solely on quantitative data
(C) Ignoring qualitative insights
(D) Relying only on statistical analysis

214. Combining qualitative and quantitative methods in a single study is known as
(A) Traingulation.
(B) Systematic analysis.
(C) Prospective design.
(D) Transferability.
215. To understand customers' attitudes to suppliers and frequency of purchases, which method aligns best?
(A) Market tests using experimental designs
(B) Quantitative surveys and focus groups combined
(C) Desk research of published statistics only
(D) Hall tests in controlled retail settings
216. What does integration in mixed methods refer to?
(A) Separating data sources
(B) Combining findings from both strands
(C) Using only one method
(D) Avoiding triangulation
217. Research Question: How do minority students experience the science curriculum, both in terms of achievement and perceptions of quality and enjoyment? Which research method would be used to answer this research question?
(A) Mixed methods
(B) Design
(C) Quantitative
(D) Qualitative
218. How does explanatory sequential design help clarify quantitative results?
(A) Through statistical analysis
(B) Through qualitative follow-up
(C) Through random sampling
(D) Through hypothesis testing
219. When quantitative and qualitative study parts are performed one after the other, this is considered which of the following.
(A) Synchronized
(B) Sequential
(C) Concurrent
(D) None of above
220. Extend mixed researcher successfully address and resolves all relevant validity types, including the quantitative and qualitative validity types.
(A) Sequential
(B) Conversion
(C) Sample integration
(D) Sociopolitical
(E) Multiple

1.2.8 Experimental Research

1. The concept of control is very important in ____ research.
(A) Humanities
(B) Business
(C) Communications
(D) Scientific, technical, and medical
2. A business tests three price points for the same product in different cities. What research method are they using?
(A) Descriptive
(B) Experimental
(C) Focus Group
(D) Observational
3. The experimental group gets the placebo.
(A) True
(B) False
4. What distinguishes quasi-experimental studies from true experiments?
(A) Quasi-experimental studies do not involve any variables
(B) Participants are not randomly assigned to treatment or control groups in quasi-experimental studies

- (C) Quasi-experimental studies rely solely on deductive reasoning
(D) Quasi-experimental studies are based on divine revelation
5. Which question can be answered by an experiment?
(A) Do sugar substitutes cause cancer?
(B) Did an ice age kill off the mastodons?
(C) What caused the extinction of the dinosaurs?
(D) Are all people susceptible to the Hantavirus?
6. It is a form of experimental research that focuses on the effects of the researcher's direct actions within a participating community with the goal of improving the performance of the community.
(A) Peer review
(B) Focus group
(C) Action Research
(D) None of above
7. Studies using quasi-experimental variables can easily establish causation
(A) F
(B) T
8. What is facilitated by manipulating independent variables in lab experiments?
(A) Decreased control over the experiment
(B) Establishing cause-and-effect relationships
(C) Generalization to larger populations
(D) Detailed and systematic data collection
9. A placebo (fake) drug would be given to which group in a research study?
(A) Experimental
(B) Control group
(C) Descriptive
(D) Homogenous
10. A biologist reported success in breeding a tiger with a lion, producing healthy offspring.
Other biologists will accept this report as fact only if
(A) A-research shows that other animals can be crossbred
(B) B-the offspring are given a scientific name
(C) C-the biologist included a control in the experiment
(D) D-other researchers can replicate the experiment
11. What is a key component of designing feasible experiments?
(A) Making them complex
(B) Ensuring they can be replicated
(C) Avoiding any form of control
(D) Limiting sample size
12. The experimenter effect might occur when participants in an experiment
(A) Undergo the same procedures as an experimental group, but do not experience effects of the independent variable(s).
(B) Are all tired from participating from experiments throughout the day.
(C) Alter their behaviour because of conscious or unconscious cues given to them by the researcher.
(D) Consciously or unconsciously affect the behaviour of the experimenters in the experiment.
13. Double-blind studies control for ____
(A) Neither subjects' nor experimenters' expectations
(B) Subjects' but not experimenters' expectations
(C) Experimenters' but not subjects' expectations
(D) Both subjects' and experimenters' expectations
14. Which of the following best describes a double-blind experiment?
(A) Neither the participants nor the researchers know who is receiving a particular treatment

- (B) Only the participants know the details of the treatment
(C) Only the researchers know the details of the treatment
(D) Both participants and researchers know the details of the treatment
15. This type of research probes into the cause of an effect by exposing one or more experimental groups to one or more treatments or conditions.
(A) Experimental research.
(B) Causal-Comparative Research.
(C) Historical Research.
(D) Ethnographic Research.
16. What do we call experiments in which neither the participants nor the scientists know who is in the control group?
(A) Control
(B) Blind experiments
(C) Variable
(D) Double Blind experiment Edit
17. The main difference between 'Laboratory Experiment' and 'Field Experiment' is in
(A) Precision in measurement of variables
(B) Degree of control of extraneous variables
(C) Use of data analysis techniques
(D) Application of research instrument
18. Once you have written your question, collected information, and written a hypothesis, it is a time to come up with an ____ to test your hypothesis
(A) Question
(B) Data
(C) Wild guess
(D) Experiment
19. The procedure designed to ensure that the experimental and control groups do not differ in any way that might affect the experiment's results is called
(A) Variable controlling.
(B) Random assignment.
(C) Representative sampling.
(D) Stratification.
20. Which type of research probes into cause-and-effect relationships by exposing experimental groups to treatments and comparing the results with a control group?
(A) Experimental Research
(B) Descriptive Research
(C) Correlational Research
(D) Exploratory Research
21. An experiment that tests only one factor at a time by using a comparison of a control group with an experimental group is ____
(A) Controlled experiments
(B) Theory
(C) Law
(D) Area
22. Four groups of randomly selected people are assigned a different diet. After six months, the blood pressures of each group are compared.
(A) Observational Study
(B) Experiment
23. A high level of control allows cause and effect to be shown.
(A) Strength of Laboratory Experiment
(B) Strength of Field Experiment
(C) Weakness of Laboratory Experiment
(D) Weakness of Field Experiment
24. What does basic experimental research frequently use?
(A) Plants
(B) Chemicals
(C) Animals
(D) Computers
25. In an experimental study, which group has no treatment done on them?
(A) Control group
(B) Experimental group
(C) Treatment group
(D) Variable group

26. When designing an experiment, one way to avoid bias is to make sure all people in the sample to be studied have an equal opportunity to be placed in the experimental group.
- (A) Random assignment
 - (B) Random sampling
27. Which of the following is a characteristic feature only of experimental studies?
- (A) Control of extraneous variables.
 - (B) Study of cause and effect relationship.
 - (C) Observing variation in the dependent variable.
 - (D) Manipulation of treatment variable.
28. Which of the following is a type of experimental validity?
- (A) Analogue validity
 - (B) Specific validity
 - (C) Control validity
 - (D) External validity
29. In an experiment designed to determine if taking a nap each afternoon leads to fewer dinnertime arguments, what would be true of the control group?
- (A) They are the participants who would not nap in the afternoon.
 - (B) They are the participants who had fewer arguments at dinner.
 - (C) They are the participants who would nap in the afternoon.
 - (D) They are the participants who had more arguments at dinner.
30. In a new study the clients do not know whether they are receiving an experimental treatment for depression or whether they are simply part of the control group. This is, nevertheless, known to the researcher. Thus, this is a
- (A) Double-blind study
 - (B) Single-blind study
 - (C) Baseline for intensive N=1 design
 - (D) Participant observer model
31. In a research experiment, which condition represents different levels of the independent variable?
- (A) Control condition
 - (B) Experimental condition
 - (C) Random condition
 - (D) Standard condition
32. To test pricing effectiveness, which experimental design is most relevant?
- (A) Price A/B tests across segments
 - (B) Dual-sourcing contracts with vendors
 - (C) Randomized safety drills monthly
 - (D) Balanced scorecard rollout timing
33. If you wanted to test whether drinking coffee improves memory, which design would be best?
- (A) Correlational
 - (B) Observational
 - (C) Experimental
 - (D) Archival
34. Dr. Lee is interested in the effect of lighting on people's ability to concentrate. Dr. Lee studies this by manipulating the amount of lighting while participants read and then measuring their scores on a reading comprehension test. Which of the following research methods is Dr. Lee using?
- (A) Case study
 - (B) Survey
 - (C) Correlational study
 - (D) Experiment
 - (E) Simulation
35. Field experiments are:
- (A) Experiments conducted in a natural environment
 - (B) Experiments conducted in a laboratory
 - (C) Experiments conducted using only surveys
 - (D) Experiments conducted without any control group

36. Which research design is best for identifying causal relationships?
(A) Descriptive
(B) Correlational
(C) Exploratory
(D) Experimental
37. Which of the following would help to improve the 'ecological validity' of an experiment?
(A) Doing the experiment at the normal time of day for that activity
(B) Doing the experiment in a different room to normal
(C) Doing the experiment in controlled conditions
(D) Doing the experiment with everyone all at the same time Edit
38. For how many weeks did Group one perform aerobic dance in the Applied Experimental Research study?
(A) 6 weeks
(B) 9 weeks
(C) 12 weeks
(D) 15 weeks
39. What ensures unbiased participant grouping for accurate results in experimental research?
(A) Random assignment
(B) Measurement and data analysis
(C) Controlled conditions
(D) Manipulation of variables
40. It investigates possible cause-effect relationships by exposing one or more experimental groups to one or more treatment conditions and comparing the results to not receiving the treatment.
(A) True experimental method
(B) Historical method
(C) Causal-comparative method
(D) Quasi-experimental method
41. Controlled procedure that involves careful examination through scientific observation and/or manipulation of variables
(A) Research
(B) Experiment
(C) Case study
(D) None of above
42. In learning experiments in classroom settings, the independent variable is
(A) A response
(B) A stimulus of some kind
(C) A hypothesized outcome
(D) A variable being tested
43. Which of the following is a feature of experimental research?
(A) Observation without manipulation
(B) Interviewing participants about past experiences
(C) Analyzing trends using existing data
(D) Manipulating variables to observe effects
44. In nursing research, the stage that focuses on manipulating conditions to achieve desired outcomes is known as:
(A) Data Collection
(B) Experimental Stage
(C) Literature Review
(D) Problem Identification
45. The experimental study is based on:
(A) Survey of literature
(B) Conceptual parameters
(C) Replication of research
(D) The manipulation of variables
46. Choosing people at random at the supermarket and asking them to taste two brands of orange juice to determine which brand they prefer.
(A) Census
(B) Sample Survey
(C) Experiment
(D) Observational Study

47. If possible, recruit a large sample in order to create the matched pairs, one of which will be allocated to each group.
- (A) Solution to Independent Measures Design
 - (B) Solution to Repeated Measures Design
 - (C) Solution to Matched-Pair Design
 - (D) None of above
48. Controlled group condition is applied in
- (A) Survey Research
 - (B) Historical Research
 - (C) Descriptive Research
 - (D) Experimental Research
49. In order to prove the hypothesis, a scientist must?
- (A) Identify the problem
 - (B) Conduct experiment
 - (C) Formulate conclusion
 - (D) Make educated guess
50. What would students most likely learn from an experiment about soil
- (A) Plants can never have too much water
 - (B) Rocks are good places for plants to grow
 - (C) Cotton keeps the plant from growing
 - (D) Plants grow the best in soil
51. A distinctive feature insisted in experimental design in research is
- (A) Cause and effect relationship
 - (B) Control of intervening variables
 - (C) Complex statistical treatment of data
 - (D) Manipulation of independent variable
52. Manipulation is always a part of [2009-DECEMBER]
- (A) Historical research
 - (B) Fundamental research
 - (C) Descriptive research
 - (D) Experimental research
53. Which of the following is a most likely to be a drawback of a $2 \times 3 \times 4 \times 5$ factorial design?
- (A) The four-way interaction effect will be challenging to interpret.
 - (B) Researchers will not be able to fully manipulate all the independent variables.
 - (C) While the main effects might be significant, it is unlikely for any interaction to be significant.
 - (D) Higher-level factorial designs have less generalizability than simpler experimental designs.
54. In order for an experiment to be considered verifiable, —
- (A) It must be replicable by another researcher
 - (B) It should not have any mistakes in the procedure
 - (C) It should be capable of being disproved
 - (D) It should make predictions about future events
55. Experimental research requires:
- (A) Case studies
 - (B) Observational techniques only
 - (C) Manipulation of variables
 - (D) No control over variables
56. How can you create a 'fair test'?
- (A) By changing one factor and keeping all the other conditions constant
 - (B) By changing some variables but keeping one constant
 - (C) But repeating the experiment more than 10 times
 - (D) By allowing each scientist to record the results separately
57. True or False: "The more "blind" the study, the more bias is eliminated, so many researchers think blind studies are best."
- (A) True
 - (B) False

58. Should experiments be repeated over and over to see if the results are the same each time?
- (A) Yes
 - (B) No
59. Group in an experiment that DOES NOT receive the independent variable
- (A) Control group
 - (B) Experimental group
60. Random Allocation: Participants are randomly distributed to each level of the IV to reduce the effect of individual differences (which is a confounding variable) affecting the study's results. This can be done by tossing a coin or allowing a computer to allocate groups.
- (A) Solution to Independent Measures Design
 - (B) Solution to Repeated Measures Design
 - (C) Solution to Matched-Pair Design
 - (D) None of above
61. When all participants receive all treatment conditions, the study is susceptible to
- (A) Order effects.
 - (B) Carryover effects.
 - (C) Analysis of covariance.
 - (D) Both A and B.
62. A list of steps that tells how to complete an experiment
- (A) Materials
 - (B) Procedure
 - (C) Solution
 - (D) Dependent variable
63. What is the primary function of a control group in an experimental study?
- (A) To provide a baseline for comparison
 - (B) To manipulate the independent variable
 - (C) To ensure random sampling
 - (D) To increase the sample size
64. In an experiment that looks at the effects of caffeine on alertness in class, one group of students get caffeinated coffee, another group of students gets water, and a final group of students get decaffeinated coffee (but thinks it is caffeinated). The last (decaf) group would be the ____
- (A) Control Group
 - (B) Placebo Group
 - (C) Experimental Group
 - (D) Confound
65. Compared to all other types of research, experimental research
- (A) Requires greater number of participants.
 - (B) Provides evidence concerning cause-effect relationships.
 - (C) Measures dependent and independent variables.
 - (D) Collects samples to generalize to populations.
66. The group subjected to treatment or intervention in experimental research is called the ____ group.
- (A) Treatment
 - (B) Control
 - (C) Placebo
 - (D) Experimental
67. What does random assignment ensure?
- (A) Equal sample size
 - (B) Equal chance of group assignment
 - (C) Equal treatment exposure
 - (D) Equal measurement tools
68. In an experiment the researcher intends to find a ____
- (A) Causal relationship whereby changes in the DV are caused by the IV
 - (B) Causal relationship whereby changes in the IV are caused by the DV
 - (C) A correlation where if one co-variable goes up the other goes up
 - (D) A correlation where if one co-variable goes up the other goes down

69. ____: an investigation looking for a casual relationship in which the independent variable cannot be directly manipulated by the Researcher. Instead they study the effect of an existing difference or change period since the researcher cannot manipulate the levels of the IV it is not a true experiment.
- (A) Field
 - (B) Natural Experiment
 - (C) Lab experiment
 - (D) Case Study
70. What is the term for the phenomenon where participants in a study alter their behavior due to the awareness of being observed?
- (A) Observer bias
 - (B) Social desirability bias
 - (C) Hawthorne effect
 - (D) Selection bias
71. If a researcher wants to understand if eating more bananas causes increased irritability, what type of study should they perform?
- (A) Descriptive
 - (B) Experimental
 - (C) Correlational
 - (D) Meta-analysis
72. What is a limitation mentioned for participants in experimental designs?
- (A) Might not have access to the target population.
 - (B) May always receive the treatment.
 - (C) Are guaranteed to be unbiased.
 - (D) Can only participate in surveys.
73. Scott wants to know if lemongrass spray will protect his chickens from lice. He sprays 10 of his chickens with the lemongrass spray, and 10 with plain water. The next day, he counts the number of lice he finds on each chicken. What is the control in Scott's experiment?
- (A) Plain water spray
 - (B) Lemongrass spray
 - (C) Number of lice
 - (D) Number of chickens
74. Identify the data collection method used. Scientist think the new medicine that made may help lower blood sugar. They select 100 males and 100 females of all ages with diabetes and randomly assign each one to a group that receives the medicine or a group that gets a placebo
- (A) Experiment
 - (B) Simulation
 - (C) Survey
 - (D) Observation
75. How does precise control of variables in lab experiments benefit the research?
- (A) It decreases internal validity
 - (B) It increases confounding factors
 - (C) It minimizes confounding factors and enhances internal validity
 - (D) It makes the experiments less reliable
76. When the researcher is not allowed control of the treatment variable and cannot achieve randomization because of ethical considerations, institutional policies or other situational factors, the researcher chooses
- (A) True experimental studies
 - (B) Quasi experimental studies
 - (C) Exploratory studies
 - (D) Qualitative studies
77. What is a feature of a laboratory experiment?
- (A) It involves naturalistic observation.
 - (B) It is conducted in a controlled environment.
 - (C) It relies on participant self-reports.
 - (D) It is always conducted in the field.
78. In clinical research, Phase I is for:
- (A) Efficacy
 - (B) Marketing
 - (C) Safety
 - (D) Comparison

79. A marketing analyst tests different ad creatives to determine which results in more website traffic. What type of marketing research design is applied?
- (A) Descriptive
 - (B) Exploratory
 - (C) Correlational
 - (D) Experimental
80. An experimental design that has 2 comparable groups employed as control and experimental groups or 2 groups that are both experimental groups.
- (A) Two-group design
 - (B) Two pair group design
 - (C) Parallel-group design
 - (D) None of above
81. A psychological or physical treatment given to the control group that resembles the treatment given to the experimental group, but that contains no active ingredient.
- (A) Independent variable
 - (B) Placebo
 - (C) Dependent variable
 - (D) None of above
82. Which of the following control techniques available to the researcher controls for both known and unknown variables?
- (A) Building the extraneous variable into the design.
 - (B) Matching.
 - (C) Random assignment.
 - (D) Analysis of covariance.
83. Which practice helps reduce selection bias in experiments?
- (A) Blinding treatment allocation single or double
 - (B) Randomization assigning subjects to groups
 - (C) Replication repeating experiments for reliability
 - (D) Confidentiality protecting participant information
84. Which of the following could be used for randomly assigning participants to groups in an experimental study?
- (A) Split-half (e. g., first half versus second half of a school directory).
 - (B) Even versus odd numbers.
 - (C) Use a list of random numbers or a computer randomization program.
 - (D) Let the researcher decide which group will be the best.
85. A response to the belief that the independent variable will have an effect on the subjects when they haven't been given the independent variable.
- (A) Placebo effect
 - (B) Case study
 - (C) Experiment
 - (D) None of above
86. This involves using other groups of participants where the order of the conditions is reversed.
- (A) Order reversal
 - (B) Condition balancing
 - (C) Counterbalancing
 - (D) Order variation
87. Sometimes, researchers will administer a(n) _____ to participants in the control group to control for the effects that participant expectation might have on the experiment.
- (A) Dependent variable
 - (B) Independent variable
 - (C) Statistical analysis
 - (D) Placebo
88. Experiments in research are:
- (A) A method to collect data through observation only
 - (B) A process of testing hypotheses under controlled conditions
 - (C) A way to analyze existing literature
 - (D) A technique for conducting interviews

89. A doctor studies the relative effectiveness of two drugs of dengue fever. His research would be classified as [2010-DECEMBER]
(A) Descriptive Survey
(B) Experimental Research
(C) Case Study
(D) Ethnography
90. A constant environment is needed for all the groups in an experiment because:
(A) It ensures that only the variable being tested affects the results.
(B) It makes the experiment more complicated.
(C) It allows for more random results.
(D) It helps to increase the number of variables.
91. He was credited with conducting the first formal experiment in Germany in the field of psychology, where he tried to assess the speed of thought by measuring how long it took test subjects to make a judgment.
(A) WILHELM WUNDT
(B) WILLIAM JAMES
(C) STANLEY HALL
(D) CHARLES DARWIN
92. A simple experimental setup for testing if using background music affects student focus should include which of the following elements?
(A) Variables, control group, and measurement of focus
(B) Only background music and students
(C) A survey about music preferences
(D) Randomly playing music during class without measurement
93. A city measures accident rates before and after a new traffic rule. Which application is demonstrated?
(A) Policy evaluation of outcomes
(B) Generalizable results only
(C) Trend analysis without baselines
(D) Attitude surveys not behavioral
94. A control can also be a known measurement or level of the independent variable.
(A) True
(B) False
95. The idea that an experimental process should be repeated is called?
(A) Replacement
(B) Refraction
(C) Redistribution
(D) Replication
96. The use of chance in order to control for the effects of bias best describes which of the following?
(A) Situational variables
(B) Demand characteristics
(C) Standardised instructions
(D) Randomisation Edit
97. An experiment in which the participants are unaware of who received the treatment
(A) Placebo Effect
(B) Double Blind
(C) Self-Fulfilling Prophecy
(D) Single Blind
98. Experiments CAN establish causality. WHY?
(A) In an experiment, IV is manipulated BEFORE measuring DV
(B) In an experiment, only difference is manipulation of IV
(C) Both
(D) None of the above
99. Which technique controls for both experimenter and subject bias?
(A) Demand characteristics
(B) Double blind study
(C) Single blind study
(D) None of above

- 100.** What makes isolating specific variables in natural experiments difficult?
- (A) The artificial nature of events
 - (B) The natural and complex nature of events
 - (C) The short duration of natural events
 - (D) The predictable outcomes of natural events
- 101.** The development of an experimental research plan should NOT include a
- (A) A-list of safety precaution for the experiment
 - (B) B-list of equipment needed for conducting the experiment
 - (C) C-procedure for the use of technologies needed for the experiment
 - (D) D-conclusion based on data expected to be collected in the experiment
- 102.** The process of manipulating one or more independent variables and measuring their effect on one or more dependent variables while controlling extraneous variables is called a(n) _____
- (A) Experiment
 - (B) Test unit
 - (C) Hypothesis
 - (D) Manipulation measurement
- 103.** For his true experimental study, Flora prepared four groups. Two groups were pretested and the other two was directly exposed to the treatment. One of the pretested group and one of the non-pretested group experienced the traditional lectures while the remaining two groups were exposed to the Direct-Translation method. After which, all four groups were posttested.
- (A) Posttest Only
 - (B) Pretest-Posttest Only
 - (C) Solomon Four Group
 - (D) Factorial
 - (E) Crossover
- 104.** For the organization of which research tasks are being developed, the methodology and program of the experiment are selected, according to which they will be performed:
- (A) Experimental
 - (B) Mathematical
 - (C) Traditional
 - (D) Targeted
 - (E) Organizational
- 105.** This type of psychological research can identify cause and effect between two variables.
- (A) Experiment
 - (B) Case study
 - (C) Evolutionary
 - (D) Survey
- 106.** The only research method which can determine if there is a cause and effect relationship between two variables.
- (A) Experiment
 - (B) Correlation study
- 107.** An experiment that uses both a control group and an experimental group to determine whether the independent variable influences behavior and, if so, how does it so
- (A) Controlled experiment
 - (B) Random sample
 - (C) Longitudinal method
 - (D) Target population
- 108.** The participants in research who receive the experimental treatment to measure its effects.
- (A) Experimental group
 - (B) Random Sample
 - (C) Control group
 - (D) Population
- 109.** Is a group that receives a treatment in an experiment. The "group" is made up of test subjects (people, animals, plants, cells etc.) and the "treatment" is the variable you are studying ____ The group that does not receive the treatment is called the control group.
- (A) Attrition rate
 - (B) Cross-sectional

- (C) Longitudinal
(D) Control group
(E) Treatment group = experimental group
110. Statistical design of experiments is used to:
(A) Collect random data
(B) Control variability and test hypotheses efficiently
(C) Eliminate sampling
(D) Avoid replication
111. Why are controlled conditions in a lab setting important?
(A) They decrease the reliability of findings
(B) They allow for less detailed data collection
(C) They increase the reliability of findings
(D) They make it harder to replicate experiments
112. What is the function of control group in a study design?
(A) To quantify the impact of extraneous variables
(B) To quantify the impact of stimulus on the independent variables
(C) To change the independent variables
(D) To measure the impact of independent variables
113. The part of the experiment that is used for comparison and is the “normal state”:
(A) Dependent variable
(B) Independent variable
(C) Control Group
(D) Constants
114. A single-case experimental design uses the same methodology as a case study design.
(A) T
(B) F
115. A plan on how you will conduct your experiment
(A) Data
(B) Procedures
(C) Monkeys
(D) Hypothesis
116. Which of the following distinguishes the true experimental research from the quasi-experimental research?
(A) IV & DV
(B) Cause & effect
(C) Random assignment of subjects
(D) Experimental and control groups
117. Experiments are said to have ___ validity when observed changes in the dependent variable(s) can be causally related to the independent or treatment variable.
(A) Analogue
(B) Construct
(C) Internal
(D) External
118. Repeating an experiment using same procedures and similar/same sample. Important part of scientific process and proving original results are valid.
(A) Replication
(B) Operational definition
119. Why is it important to have a detailed procedure in an experiment?
(A) To make the experiment more complex.
(B) To ensure that the experiment can be replicated and verified by others.
(C) To confuse the participants in the experiment.
(D) To increase the length of the experiment.
120. Which studies typically require hypotheses?
(A) Explanatory studies.
(B) Experimental studies.
(C) Exploratory studies.
(D) Philosophical essays.
(E) Editorials.

121. Two containers were placed in front of a lamp for 10 minutes. Both containers were filled with air. Additional carbon dioxide was added to one container. The final temperatures of both containers are shown. What does this experiment prove?
- (A) Carbon dioxide is a greenhouse gas that traps heat.
 - (B) Carbon dioxide is not a greenhouse gas that traps heat.
 - (C) The experiment does not prove anything.
 - (D) None of above
122. What is the main advantage of experimental designs?
- (A) They can establish causality
 - (B) They are always ethical
 - (C) They require no hypothesis
 - (D) They are quick to conduct
123. In single-participant research, what design is often adopted for experimental purposes?
- (A) Pretest-posttest design
 - (B) Baseline and treatment design
 - (C) Quasi-experimental design
 - (D) Systematic review design
124. If you participate in a study and find out that the medication you received did not contain actual medication inside, then that pill is considered a(n) ____
- (A) Dependent variable
 - (B) Placebo
 - (C) Experimental tool
 - (D) Active treatment
125. Which data collection method provides the most control over variables and is best for determining cause-and-effect relationships?
- (A) Surveys
 - (B) Observations
 - (C) Focus groups
 - (D) Experiments
126. A research method best suited for examining causal relationships in which some variable or group of variables is systematically manipulated to examine its effect on an outcome.
- (A) Evaluation
 - (B) Subjective observation
 - (C) Interview
 - (D) Experiment
127. The most scientifically valid research is ____ research.
- (A) Observation
 - (B) Focus group
 - (C) Survey
 - (D) Behavioral
 - (E) Experimental
128. What is the term for the following definition? The groups or trials in an experiment that receive all the same conditions except varying amounts or qualities of the independent variable.
- (A) Experimental groups
 - (B) Control groups
 - (C) Dependent variables
 - (D) Constants
129. Experimental research evaluates the effects of an independent variable on a ____ variable in a controlled setting.
- (A) Dependent
 - (B) Independent
 - (C) Extraneous
 - (D) Moderator
130. The experimental method is
- (A) A method for verifying a hypothesis.
 - (B) A method deriving inferences.
 - (C) A variable controlling method.
 - (D) None of the above.
131. The conductor has control over the environment in this setting
- (A) Experiment
 - (B) Observational study
 - (C) Population
 - (D) Sample

132. In an experiment, subjects in an experiment who are not subjected to the independent variable and who may receive a placebo treatment is the
- (A) Experimental group
 - (B) Control group
 - (C) Selected group
 - (D) Formal group
133. Which is not a type of experimental design?
- (A) Repeated measures
 - (B) Independent groups
 - (C) Matched pairs
 - (D) Participant design Edit
134. What is a strength of field experiments?
- (A) They have more control over extraneous variables
 - (B) They offer higher ecological validity
 - (C) They are easier to replicate
 - (D) They have a lower risk of confounding factors
135. Define the term: Experimental design.
- (A) Experimental design is the plan for assigning subjects to experimental and control groups and for measuring the dependent variable.
 - (B) Experimental design is the process of collecting data through surveys only.
 - (C) Experimental design refers to the statistical analysis of results after an experiment is completed.
 - (D) Experimental design is the method of writing a research paper.
136. Rats with cancer are divided into two groups. One group receives 5 milligrams of a medication that is thought to fight cancer and the other receives 10 mg. After 2 years, the spread of cancer is measured.
- (A) Observational Study
 - (B) Experiment
137. What is counterbalancing used for in psychological research?
- (A) To eliminate the influence of the experimenter
 - (B) To control for participant variables
 - (C) To control for order effects
 - (D) To increase the sample size
138. Also called as a true experimentation that uses scientific method.
- (A) Descriptive
 - (B) Experimental
 - (C) Correlational
 - (D) Quasi-Experimental
139. A controlled scientific procedure to determine whether certain variables manipulated by the researched have an effect on other variables
- (A) Hypothesis
 - (B) Experiment
 - (C) Standard deviation
 - (D) Correlation
140. The process of maneuvering the independent variable so that its effect on the dependent variable can be observed is
- (A) Deductive Reasoning
 - (B) Delimitation
 - (C) Manipulation
 - (D) Meta-analysis
141. The ___ method is an approach to research that begins with a theory about how things work and derives testable hypotheses from it. ___ The hypotheses are then tested by gathering and analyzing data and the theory is then either supported or refuted by the results
- (A) Hypothetical-deductive
 - (B) Scientific
 - (C) Paradigm
 - (D) Covert
142. A ___ experiment is a research method in which there is an IV, DV, and strict controls. It is conducted in a setting that is not the natural environment for the participants with regard to the behavior they are performing.

- (A) Laboratory
 - (B) Field
 - (C) Natural
 - (D) Case study
- 143.** What research design is often conducted in a controlled setting with corresponding research treatment?
- (A) Correlational
 - (B) Ex post facto
 - (C) Survey Research
 - (D) Experimental
- 144.** Matched pairs design: an experimental design in which participants are arranged into pairs. Each pair is similar in ways that are important to the study and one member of each pair performs in a ____ level of the IV.
- (A) Different
 - (B) Same
 - (C) Sets
 - (D) Similar
- 145.** A large study at a major university gave an experimental group of clients a new type of therapy that was intended to ameliorate test anxiety. The control group did not receive the new therapy. Neither the clients nor the researchers knew which students received the new treatment. This was a
- (A) Double-blind study
 - (B) Single-blind study
 - (C) Typical AB design
 - (D) Case of correlational research
- 146.** What is the role of a control group in experimental research?
- (A) To provide a baseline for comparison
 - (B) To validate the researcher's assumptions
 - (C) To ensure all variables are manipulated
 - (D) To entertain the audience
- 147.** In a true experimental design, what does the 'R' stand for?
- (A) Randomize
 - (B) Record
 - (C) Review
 - (D) Report
- 148.** What does easier replication in lab experiments allow for?
- (A) More complex experiments
 - (B) Verification of results by other researchers
 - (C) Decreased reliability of findings
 - (D) Increased confounding factors
- 149.** Group that is tested and given the independent variable
- (A) Control group
 - (B) Experimental group
- 150.** In an experimental research study, the primary goal is to isolate and identify the effect produced by the ____
- (A) Confounding variable.
 - (B) Dependent variable.
 - (C) Extraneous variable.
 - (D) Independent variable.
- 151.** Process of undertaken to demonstrate that already observed events will occur consistently under a particular set of conditions.
- (A) OBSERVATION
 - (B) MEASUREMENT
 - (C) EXPERIMENTATION
 - (D) RESEARCH
- 152.** It is a method of studying psychological phenomena and processes.
- (A) Experimental Psychology
 - (B) Social Psychology
 - (C) Biological Psychology
 - (D) Developmental Psychology
- 153.** There may be deception of the aim of the study to ensure validity.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment

154. What is a recommendation for achieving tight experimental control in internal validity?
- (A) Controlled environment, such as a sterile, windowless, charmless lab.
 - (B) Allowing participants to choose their own conditions.
 - (C) Collecting data in a natural, uncontrolled setting.
 - (D) Ignoring confounding variables.
155. What are the different ways you can incorporate controls into a study?
- (A) Inclusion, logic, theory, randomization, and elimination
 - (B) Exclusion, logic, elimination, statistical control, and randomization
 - (C) Manipulation, elimination, inclusion, statistical control, and randomization
 - (D) The only way is through statistical control.
156. An advantage of this type of research is that it offers a controlled environment. A disadvantage is that subjects may act abnormally in such conditions.
- (A) Experiment
 - (B) Survey
 - (C) Natural Observation
 - (D) Laboratory Observation
157. Which research design compares two or more groups under controlled conditions?
- (A) Descriptive Design
 - (B) Phenomenology
 - (C) Action Research
 - (D) Case Study
 - (E) Experimental Design
158. How does maintaining controlled conditions affect the internal validity of research findings?
- (A) It has no effect on the internal validity of the research findings.
 - (B) It decreases the internal validity by allowing more variables to interfere.
 - (C) It enhances the internal validity by reducing confounding factors.
 - (D) It enhances the external validity by including a wider range of variables.
159. Each experiment should have a ____, or a group that does NOT get the independent variable
- (A) Experiment Group
 - (B) Control Group
 - (C) Testing Group
 - (D) Study Group
160. In conducting experimental research, we need both the data from facts and common-sense belief. And, we need to do it in a scientific method.
- (A) True
 - (B) False
 - (C) Either true or false
 - (D) None of above
161. Is this statement true or false: 'the only thing that should cause a change in the DV is the IV'
- (A) True
 - (B) False
162. In the context of experimental design, what does 'IV' stand for?
- (A) Independent Variable
 - (B) Internal Validity
 - (C) Inferred Value
 - (D) Input Vector
163. Participants who undergo the intervention condition in an investigation are known as the ____
- (A) Controlled variable
 - (B) Treatment group
 - (C) Control group
 - (D) None of these
164. In a between-subjects design, each participant is in ____ of the IV conditions.
- (A) One

- (B) All
(C) None
(D) Two
- 165.** This individual conducted experiments on human behavior that measured the compliance to authority in opposition to normal human values.
(A) . Skinner
(B) Stanley Milgram
(C) Abraham Maslow
(D) Sir Francis Galton
- 166.** ____ search for causal explanations. This type of research is usually experimental.
(A) Exploratory studies
(B) Descriptive studies
(C) Explanatory studies
(D) Phenomenology studies
- 167.** Which of the following is not a characteristic of a field experiment?
(A) It is conducted in a natural environment
(B) The IV is directly manipulated by the experimenter
(C) Extraneous variables can be well controlled
(D) Participants are often not aware that they are being studied.
- 168.** The objective of causal research is to ____
(A) Test hypotheses about cause-and-effect relationships
(B) Gather preliminary information that will help suggest hypotheses
(C) Describe things, such as the market potential for a product
(D) Assign a cause to a seemingly random event
(E) Predict the effect of a random event on unrelated entities
- 169.** The step by step directions of the experiment are found in the:
(A) Hypothesis
(B) Conclusion
(C) Procedure
(D) Data table
- 170.** Which principle of experimental design involves controlling variables?
(A) Randomization
(B) Replication
(C) Local control
(D) Hypothesis testing
- 171.** Counterbalancing is used to overcome order effects in a repeated measures design. Each possible order of levels of the IV is performed by a ____ subgroup of participants. This can be described as an ABBA design, as ____ half ____ the participants do condition A then B, and half do B then A. M then N or N then M.
(A) Different
(B) Half
(C) Same
(D) All
- 172.** Which method has made educational psychology a science?
(A) Observation Method
(B) Clinical method
(C) Survey method
(D) Experimental method.
- 173.** An advantage of controlled experiments is that
(A) They have high ecological validity because they are conducted in real-world settings.
(B) When conducted well, they allow causation to be inferred.
(C) No active manipulation of variables is required by the researcher.
(D) They always prevent confounding and extraneous variables.
- 174.** An agriculturist wants to determine the effect of fertilizer type on the yield of tomatoes. There are four types of fertilizer under study. She plants tomatoes on five plots of land, one plot receives no fertilizer. Each plot is treated identically except for receiving a different type

- of fertilizer. Does this experimental research study involve a control group?
- (A) Yes
 - (B) No
 - (C) All the above
 - (D) None of the above
- 175.** While conducting experimental research a researcher should control the
- (A) No variables.
 - (B) Extraneous variables.
 - (C) Independent variables.
 - (D) Dependent variables.
- 176.** The Buffalo Bills wanted to raise ticket prices. For two games, they decided to increase prices by \$10 per ticket to see if it would change the amount of people who purchased tickets. What type of primary research is this?
- (A) Focus Group
 - (B) Experiment
 - (C) Observation
 - (D) Survey
- 177.** A researcher finds a strong correlation between sleep and academic performance. What should be the next step to explore causality?
- (A) Conduct a survey
 - (B) Perform a case study
 - (C) Design an experiment
 - (D) Use a cross-sectional design
- 178.** Randomly assigning participants to experiment conditions is a strategy that helps the external validity but not the internal validity of a study.
- (A) F
 - (B) T
- 179.** How does random assignment enhance the validity of an experiment?
- (A) By ensuring that each participant has an equal chance of being in any group.
 - (B) By increasing the sample size to include more participants.
 - (C) By allowing researchers to control all external variables.
 - (D) None of above
- 180.** Which group serves as a baseline to compare data?
- (A) Hypothesis Tester
 - (B) Dependent Group
 - (C) Control Group
 - (D) Independent Group
- 181.** An investigator decided that a quantitative research study would be appropriate. Which of these factors would have led to this decision?
- (A) Wanting to observe behaviors as they occur in natural settings
 - (B) Wanting to determine cause-and-effect relationships under controlled conditions
 - (C) Wanting to determine the benefits of a new strategy
 - (D) Wanting to provide a complex explanation incorporating multiple perspectives
- 182.** Stan is working with a type of research study with some limitations. This study cannot respond to other functions within a living organism or whole body systems. This type of research can be identified as:
- (A) IN VITRO
 - (B) Clinical
- 183.** What is In an experiment, the group that is not exposed to the treatment; contrasts with the experimental group and serves as a comparison for evaluating the effect of the treatment?
- (A) Statistical Significance
 - (B) Experimental Group
 - (C) Control Group
 - (D) Dependent Variable
- 184.** Which of the following research approaches would be best for testing the hypothesis that the presence of certain odors causes people to gamble more?
- (A) Experimental

- (B) Naturalistic Observation
 - (C) Correlational
 - (D) Survey
 - (E) Case study Edit
- 185.** An experimental design in which different participants are used in each level of IV
- (A) Repeated measures design
 - (B) Independent measures design
 - (C) Matched pairs design
 - (D) None of above
- 186.** A weakness of experiments is they can be
- (A) Affected by demand characteristics
 - (B) Have high internal validity
 - (C) Generalisable to target population
 - (D) High in ecological validity
- 187.** If results of an experiment are inconsistent, what should the scientist do?
- (A) Conduct multiple trials to check for accuracy
 - (B) Change the hypothesis immediately
 - (C) Report only the results that match expectations
 - (D) Guess the most likely answer
- 188.** Experimental event rate
- (A) Tells us the absolute rates of events in each group
 - (B) How many events or cases you have / the total number of people in that exp. group
 - (C) How many events or cases you have / total subjects in control group
 - (D) Tells us the risk in the experimental group relative to the risk in the control group
- 189.** An experimental medicine is being tested on research mice. To get the BEST accurate results, there should be an experimental group and a ____ group
- (A) Loose
 - (B) Control
 - (C) Epidemic
 - (D) Descriptive
- 190.** Random allocation: reduce the effect of confounding variables such as individual differences. Participants are put in each level of the IV such that each person has an ____ chance of being in any condition.
- (A) Equal
 - (B) Random
 - (C) Fixed
 - (D) Biased
- 191.** Elise gave each member of the class a random cookie, some from recipe A and some from recipe B. Then she observed which students returned for a second cookie. What are the treatments in this scenario?
- (A) Students A and B
 - (B) Students who returned for another cookie
 - (C) The different cookie recipes
 - (D) Elise is the treatment
- 192.** This is a method that uses controlled elements of traditional lab experiments.
- (A) Quasi Experiment
 - (B) Correlational Research
 - (C) Field Experiment
 - (D) Survey
- 193.** A scientist is testing if a certain fertilizer increases crop yield. What should remain constant in the experiment?
- (A) The amount of sunlight, water, and type of plant used
 - (B) The amount of fertilizer for each plant
 - (C) The type of fertilizer used
 - (D) The crop yield
- 194.** You are conducting an experiment to see if tomatoes thrive in red or green light. Which type of SAE is this?
- (A) Exploratory
 - (B) Research/ Experimental
 - (C) Placement
 - (D) Entrepreneurship

- 195.** In the context of a laboratory 'true' experiment on stress and memory function, what is the dependent variable?
- (A) The standardized task used to induce stress.
 - (B) The ethical considerations taken into account.
 - (C) The memory function that is being measured.
 - (D) The procedure outline using key terms of true experiments.
- 196.** In quantitative research reports, what is the main purpose of using control groups in experimental research?
- (A) To increase sample size
 - (B) To manipulate independent variables
 - (C) To control extraneous variables and ensure validity
 - (D) To identify significant patterns in non-numerical data
- 197.** A about the effect of nitrogen, sulfur and phosphorus-based fertilizers to the quality of food.
- (A) Exploratory Research.
 - (B) Descriptive Research.
 - (C) Experimental Research.
 - (D) None of the above.
- 198.** According to the scientific method, how would you test a hypothesis?
- (A) Use false data
 - (B) Communicate your results to others
 - (C) Design and conduct an experiment
 - (D) Collect information on the Internet
- 199.** What does 'O' represent in the context of a true experimental design?
- (A) Observation/Measurement
 - (B) Organization
 - (C) Operation
 - (D) Optimization
- 200.** Which technique is used in experiments but not in the correlational method?
- (A) Measurement of a variable such as how aggressive or how helpful people are
 - (B) Systematically manipulating the situation that is presented to participants
 - (C) Representative sampling of people from a population
 - (D) Surveys
- 201.** What do you do to test a hypothesis?
- (A) Guess
 - (B) Design an experiment
 - (C) Create a spreadsheet with data
 - (D) Create a testable question
- 202.** To ensure results are reliable the experiment should be
- (A) Done once
 - (B) Repeated
 - (C) Done as exactly the same as the method outlines
 - (D) Repeated if necessary
- 203.** In the orange/vitamin C experiment, what would the control group be?
- (A) The control group would be the level of vitamin C while still attached to the tree (or shortly thereafter).
 - (B) The control group would be oranges stored in a refrigerator for a week.
 - (C) The control group would be oranges exposed to sunlight for 24 hours.
 - (D) The control group would be oranges treated with extra vitamin C supplements.
- 204.** The study of behavior in a controlled situation
- (A) Laboratory observation
 - (B) Naturalistic observation
 - (C) Cross-sectional method
 - (D) Correlation
- 205.** What is the purpose of a debriefing session in experimental research?
- (A) To manipulate independent variables

- (B) To provide participants with information about the study's purpose and procedures after their participation
- (C) To analyze content in media messages
- (D) To conduct a literature review
- 206.** Quantitative research is most useful for determining cause and effect relationships when ____ assignment is used.
- (A) Random
- (B) Nonrandom
- 207.** A researcher provided enrichment and extra handling to one group of rats but deprived a second group of rats of handling and enrichment. She then measured how quickly each group learned a maze. The researcher engaged in what type of research?
- (A) Correlational
- (B) Naturalistic observation
- (C) Field research
- (D) A controlled experiment
- 208.** A limited research study that cannot respond to other living organisms or body systems is done where?
- (A) In Vitro
- (B) Clinical
- (C) In Vivo
- (D) Basic
- 209.** An example of scientific knowledge is
- (A) Authority of the prophet or great men.
- (B) Social traditions and customs.
- (C) Religious Scriptures.
- (D) Laboratory and field experiments.
- 210.** In an experimental design, what is the name of the group where the intervention or change is being observed?
- (A) Control group
- (B) Effect group
- (C) Experimental group
- (D) Core group
- 211.** Which of the following is not common to experimental and ex post facto designs of research?
- (A) Cause and effect relationship
- (B) Observation of dependent variable
- (C) Controlling extraneous variable
- (D) Manipulation of independent variable
- 212.** A researcher randomly assigned boys and girls to each of two groups. One group was assigned to watch a violent television program while the other group watched a nonviolent program. The children's behavior was then recorded for incidences of aggressive behavior. This research method is best characterized as ____
- (A) Experimental
- (B) Case study
- (C) Correlational
- (D) Observation
- 213.** Define the term: Treatment.
- (A) Treatment refers to the condition or intervention applied to the experimental group in a study.
- (B) Treatment refers to the process of collecting data from participants.
- (C) Treatment refers to the method of analyzing statistical results.
- (D) Treatment refers to the selection of participants for a study.
- 214.** Which is not true about an Experiment?
- (A) It must be controlled and done carefully.
- (B) It is based on the hypothesis.
- (C) It includes only 1 or 2 trials.
- (D) It is used to discover an answer to a question.
- 215.** A boy waters one plant with fresh water and one with salt water and measures growth. What is the control?
- (A) Plant with salt water
- (B) Plant with fresh water
- (C) Growth of salt water plant
- (D) Growth of fresh water plant

- 216.** A psychologist designed a study to test the effects of cell phone use on driving safety. Participants were randomly assigned either to drive an automobile simulator while talking to a friend on a cell phone or to drive a simulator without talking on a phone. Which type of research does the scenario describe?
- (A) Correlational
 - (B) Observation
 - (C) Case Study
 - (D) Experiment
- 217.** Which research design manipulates conditions/variables and studies its effects?
- (A) Correlational
 - (B) Descriptive
 - (C) Exploratory
 - (D) Experimental
- 218.** Random assignment is the following: A procedure for dividing participants into groups, equal opportunity for assignment to treatment or control group, key characteristics of a “true experiment and participant already identified through another procedure”-Such as random sampling, purposive sampling
- (A) True
 - (B) False
- 219.** In an experimental design, what is the process called where participants are assigned to either the experimental or control condition?
- (A) Random assignment
 - (B) Manipulation
 - (C) Measurement
 - (D) Outcome assessment Edit
- 220.** The control of extraneous variables in experimental research after the treatment is given can be done through a technique called
- (A) Statistical Regression.
 - (B) One-way ANOVA.
 - (C) Analysis of Co-variance.
 - (D) Post-Test.
- 221.** The Use of Flipped Classroom in Improving the Reading Comprehension of the Grade 10 Students Above is an example of what type of research.
- (A) Correlational
 - (B) Experimental
 - (C) Descriptive
 - (D) Causal-Comparative
- 222.** Erica’s study uses a ____ design.
- (A) Within-subjects
 - (B) Matched-groups
 - (C) Between-subjects
 - (D) Counterbalanced
- 223.** A company tests whether changing their website’s background color affects the number of items added to the cart. This is an example of:
- (A) Exploratory Research
 - (B) Experimental Research
 - (C) Observational Research
 - (D) Descriptive Research
- 224.** Research that takes place where both the researcher and the participant are unaware which experimental group they belong to is an example of?
- (A) Counterbalancing
 - (B) Double Blind procedure
 - (C) Standardised Instructions
 - (D) Single Blind procedure
- 225.** Experiment or study where the participants and researchers are unaware of who has obtained the treatment.
- (A) Single blind
 - (B) Double blind
 - (C) Longitudinal method
 - (D) Cross-sectional method
- 226.** What is the primary purpose of a control group in a scientific experiment?
- (A) To provide a standard for comparison
 - (B) To introduce new variables
 - (C) To ensure the experiment is biased
 - (D) To increase the sample size

227. What is exposed to the experimental variable?
- (A) Test Group
 - (B) Control Group
 - (C) Dependent Variable
 - (D) Data
228. You want to know if light intensity inside the classroom affects the attentiveness of students during a discussion. What do you think is the best type of quantitative research to be used for this kind of inquiry?
- (A) True Experimental Research
 - (B) Descriptive Research
 - (C) Quasi-experimental Research
 - (D) Comparative Research
229. Standardization: Keeping the procedure for each participant in an experiment ____ to ensure that any differences between the participants or conditions are due to the variables under investigation rather than differences in the way they were treated.
- (A) Exactly the same
 - (B) Randomly different
 - (C) Slightly varied,
 - (D) Completely different
230. In a scientific experiment, which reasoning method is typically used to formulate a hypothesis?
- (A) Inductive reasoning
 - (B) Deductive reasoning
 - (C) Both inductive and deductive reasoning
 - (D) Neither inductive nor deductive reasoning
231. Two or more groups that are similar on many dimensions; in experimental research often one group of participants receives some type of treatment or experimental intervention but the other group does not.
- (A) Matched group
 - (B) Peer review
 - (C) Sampling
 - (D) Twin study
232. A research approach that focuses on the most scientifically valid research designed to capture cause and effect relationships.
- (A) Exploratory research
 - (B) Observational research
 - (C) Experimental research
 - (D) Behavioral research
233. Because of the problems associated with testimonials, what is psychology's most powerful tool for sorting reality from wishful thinking?
- (A) Control group
 - (B) Meta-analysis
 - (C) Experiment group
 - (D) Survey
 - (E) Statistics
234. In order to ensure that the impact on dependent variable is only due to independent variable, which of the following methods will be more appropriate?
- (A) Descriptive method
 - (B) Experimental method
 - (C) Field study
 - (D) Ex-Post Facto research
235. What is a "quasi-experiment"?
- (A) An experiment without random assignment
 - (B) A true experiment
 - (C) A correlational study
 - (D) An observational study
236. A characteristic feature of the quasi-experimental design is all, EXCEPT
- (A) Experimental and control groups may be nonequivalent
 - (B) Less powerful than true-experimental design
 - (C) Limited confidence in the internal validity of the study
 - (D) Random assignment of units to comparison groups

237. What does "Artificiality" in the context of lab experiments refer to?
- (A) The use of synthetic materials in experiments
 - (B) The creation of artificial settings that do not reflect real-world conditions
 - (C) The artificial intelligence used to analyze experimental data
 - (D) The simulation of natural environments in a laboratory
238. Where researchers introduce a treatment and study the effects and subjects are usually grouped by change.
- (A) Census
 - (B) Observational study
 - (C) Survey
 - (D) Experiment
239. Repeated measures designs are when
- (A) Participants only complete one condition of the experiment
 - (B) All participants complete all conditions of the experiment
 - (C) No participants complete all conditions of the experiment so it is repeated
 - (D) Participants are matched on characteristics such as race and only take part in one condition
240. The testing of a hypothesis under controlled conditions
- (A) Experiment
 - (B) Field research
 - (C) Hawthorne effect
 - (D) None of above
241. The purpose of experimental research is to determine ____
- (A) Independent variables.
 - (B) Cause/effect.
 - (C) Dependent variables.
 - (D) None of above
242. A scientist who wants to study the possible side effects of a new medicine would probably ____
- (A) Give each experimental group the same dose of medicine
 - (B) Simply ask the subjects about the medicine's effects
 - (C) Include a control group that received no medicine
 - (D) Use different numbers of subjects in each treatment group
243. What does it mean if experimental results do support the hypothesis?
- (A) The hypothesis is now a scientific law
 - (B) The hypothesis is correct forever
 - (C) The results align with the prediction, but further testing is needed
 - (D) The experiment should not be repeated
244. The part of the experiment that does not contain the independent variable. Used for comparison.
- (A) Control Group
 - (B) Experimental Group
 - (C) Results
 - (D) Data
245. In an experiment studying the impact of meditation on stress, the control group should
- (A) Not meditate at all.
 - (B) Meditate as often as the experimental group.
 - (C) Be able to choose whether to meditate or not.
 - (D) Meditate more often than the experimental group.
246. What is the purpose of using a control group in research?
- (A) To increase sample size
 - (B) To provide a baseline for comparison
 - (C) To ensure random sampling
 - (D) To reduce research costs

247. Researchers are evaluating the waste treatment facility located on the Moose River in the northeastern United States. They are sampling the river and its tributaries at several locations, as shown on the map below. Water from which of the following locations on the map would best serve as a control group for the study?
- (A) A
 - (B) B
 - (C) C
 - (D) D
248. Data in experimental research must be able to be ____
- (A) Quantified
 - (B) Reorganised
 - (C) Reevaluated
 - (D) None of above
249. The city of Smyrna wants to know which brand of paint will last longer. They paint 2 streets with brand A and two streets with brand B and checked which lasted longer.
- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
250. The group to which an independent variable is applied
- (A) Single Blind
 - (B) Double Blind
 - (C) Experimental Group
 - (D) Control Group
251. A carefully designed and controlled situation in which all important factors are the same except the one being studied is called a(n)
- (A) Survey
 - (B) Hypothesis
 - (C) Interview
 - (D) Experiment
252. The procedure(s) used to test a hypothesis.
- (A) Observation
 - (B) Experiment
 - (C) Infer
 - (D) Control
253. Statement:How does the amount of light affect bacteria growth in a pond? Question:Determine the control group.
- (A) The group with light.
 - (B) The group without light.
 - (C) There is no control group in this experiment.
 - (D) The group with a little bit of light.
254. Experimental designs can be differentiated most clearly from descriptive, correlational, or causal-comparative designs on which of the following characteristics?
- (A) Collecting numerical data
 - (B) A clear intent to establish cause and effect relationships.
 - (C) The use of structured designs.
 - (D) The statistical analysis of data.
255. Which research model best describes cause-and-effect relationships?
- (A) Experimental
 - (B) Comparative
 - (C) Causal
 - (D) Correlational
256. In this design, the researcher manipulates the variables and determines its effects.
- (A) Longitudinal
 - (B) Cohort
 - (C) Action
 - (D) Experimental
257. This diagram illustrates the purpose of random assignment in an experiment.
- (A) It ensures that each participant has an equal chance of being assigned to any group.
 - (B) It guarantees that the results will be statistically significant.

- (C) It eliminates the need for a control group.
- (D) It increases the sample size of the experiment. Edit
- 258.** Switching the order in which stimuli are presented to a subject in a study is known as
- (A) The Pygmalion effect
- (B) Counterbalancing
- 259.** An experiment is ____
- (A) A planned activity whose results yield a set of data
- (B) A numerical value that summarizes all of the data of an entire population
- (C) The set of values collected from the variable from each of the elements that belong to the sample
- (D) A numerical value summarizing the sample data
- 260.** What is the only difference between the experimental and control groups?
- (A) Dependent variable
- (B) Hypothesis
- (C) Sample size
- (D) Experimental manipulation
- 261.** In this research the study and the focus group cannot be randomly selected, but are chosen from existing groups or populations.
- (A) Quasi experimental research
- (B) Deductive research
- (C) Inductive research
- (D) Hypothetical deductive research
- 262.** This experiment was designed to study aggressive behavior in children by having them observe how adults treated an inflatable figure.
- (A) The Asch Conformity Study
- (B) The Bobo Doll Experiment
- (C) The Milgram Study
- (D) The Little Albert Experiment
- 263.** What is one of the weaknesses of natural experiments due to the lack of control over variables?
- (A) Increased speed of research
- (B) Confounding factors influencing results
- (C) Easier replication of the study
- (D) Reduced costs of data collection
- 264.** To make sure your experimental results are reliable, you should:
- (A) Write more than one hypothesis
- (B) Use more than one variable
- (C) Only do the experiment one time
- (D) Repeat the experiment many times
- 265.** Which type of study is best suited to find a causal effect?
- (A) Experimental
- (B) Observational
- 266.** Which science process skill uses a test under controlled conditions and follows steps?
- (A) Measuring
- (B) Experimenting
- (C) Collecting information
- (D) Inferring
- 267.** In an experiment, the group that is exposed to the treatment or manipulated variable is known as the:
- (A) Independent Group
- (B) Experimental Group
- (C) Control Group
- (D) Variable Group
- 268.** Which of the following is NOT an essential characteristic of experimental designs?
- (A) Randomization
- (B) Control
- (C) Manipulation
- (D) Observation
- 269.** What method Pavlov created?
- (A) Cause and effect
- (B) Natural conditioning

- (C) Extraordinary conditioning
 - (D) Classical conditioning
270. The degree to which the effects observed in an experiment are due to the IV and not to confounds
- (A) Construct validity
 - (B) External validity
 - (C) Internal validity
 - (D) None of above
271. Which type of experimental design is the best option when seeking to learn about the behavior of single individuals rather than groups?
- (A) Repeated measures experiments.
 - (B) Single subject experiments.
 - (C) Quasi-experiments.
 - (D) True experiments
272. McDonalds creates pizza and puts it in 10 of its stores to see how it sells. What kind of research is this?
- (A) Observation
 - (B) Experiment
 - (C) Focus Group
 - (D) Survey
273. If you want to test the effect of various planting times on yields of fruits and/or vegetables, which project should you select?
- (A) Develop a test plot for various types of crops
 - (B) Use the school lab to manage small vegetable crop variety plots
 - (C) Work at an area garden center
 - (D) Research the best turf grass varieties for your area
274. "Order of conditions in subjects design that can affect data collected in other conditions." is referring to ____
- (A) Testing effect
 - (B) Order effect
 - (C) Experimenter bias
 - (D) Hawthorne effect
275. Which from the following, fall under experimental research?
- (A) Comparative
 - (B) Descriptive
 - (C) Correlational
 - (D) Pre-experimental
276. The outcome of an experiment must be measurable or quantifiable.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
277. Why is understanding experimental designs essential in research?
- (A) To ensure the validity and reliability of research findings
 - (B) To increase the complexity of the research
 - (C) To reduce the cost of the research
 - (D) To follow the tradition of previous researchers
278. What does the 'R' stand for in the experimental design notation?
- (A) Randomize
 - (B) Repeat
 - (C) Record
 - (D) Review
279. Testing a hypothesis often involves a(n):
- (A) Answer
 - (B) Experiment
 - (C) Problem
 - (D) Safety check
280. What key feature distinguishes a field experiment from a true experiment?
- (A) The presence of a control group
 - (B) The manipulation of the independent variable
 - (C) The use of random assignment to conditions
 - (D) The experiment takes place in a natural setting

- 281.** What do researchers use experimental designs for?
- (A) To control and manipulate variables to observe their impact on outcomes
 - (B) To collect qualitative data only
 - (C) To prove their hypotheses without testing
 - (D) To analyze historical events
- 282.** What is the role of control variables in an experiment?
- (A) To manipulate the independent variable
 - (B) To increase the external validity
 - (C) To ensure the outcome is not altered
 - (D) To control the dependent variable
- 283.** The aim of Milgram's experiment was to
- (A) Find out if humans are inherently bad.
 - (B) Investigate factors that influence obedience.
 - (C) Investigate factors that influence status
 - (D) Investigate factors that influence conformity
- 284.** In an experiment, it is useful to have a control group to
- (A) Show the effect of the treatment and no other factors
 - (B) Help minimize the effects of volunteer bias
 - (C) Ensure that the target population is represented
 - (D) Complete a stratified sample
- 285.** In scientific research, what is the role of a control group?
- (A) To provide a standard for comparison
 - (B) To receive the experimental treatment
 - (C) To ensure the experiment is valid
 - (D) To eliminate all variables
- 286.** The absence of the experimental variable
- (A) Control condition
 - (B) Extraneous variable
 - (C) Order effects
 - (D) Participant variable
- 287.** In research, which group is given a treatment the researcher intends to study?
- (A) Control
 - (B) Peer
 - (C) Vehicle
 - (D) Treatment
- 288.** What research method studies cause and effect relationships?
- (A) Experimental
 - (B) Descriptive
 - (C) Historical
 - (D) Case Study
- 289.** In experimental research, the group that does not receive the treatment is called the:
- (A) Experimental group
 - (B) Control group
 - (C) Treatment group
 - (D) Independent group
- 290.** When participants guess the hypothesis of a study and then act accordingly.
- (A) Participant variability
 - (B) Demand characteristics
 - (C) Researcher bias
 - (D) All of the above
- 291.** In a double-blind procedure:
- (A) Only the participants are unaware of the treatment
 - (B) Only the researchers are unaware of the treatment
 - (C) Both participants and researchers are unaware of the treatment
 - (D) The control group receives a placebo
- 292.** Compared to applied research, the variables in basic experimental research are:
- (A) Less controlled
 - (B) Equally controlled
 - (C) More tightly controlled
 - (D) Not controlled

- 293.** Assigning participants to experimental and control groups by chance:
- (A) Rample sample
 - (B) Double-blind procedures
 - (C) Random assingment
 - (D) Population
- 294.** What's an experimental group?
- (A) The group that gives an experimental procedure or a test sample.
 - (B) The group in which conditions produce a negative outcome.
 - (C) The group in which the conditions guarantee a positive result.
 - (D) The group that receives an experimental procedure or a test sample.
- 295.** Randomized controlled trial (RCT) is defined as:
- (A) A study in which participants are randomly assigned to different groups to test the effects of a variable.
 - (B) A study that only observes participants without any intervention.
 - (C) A study that collects data from past records.
 - (D) A study that surveys participants once without follow-up.
- 296.** In an experiment, the group that does not receive the treatment(does not have the independent variable in it)
- (A) Control group
 - (B) Experimental group
- 297.** What do we call it when we have repetition of the methods used in a previous experiment to see whether the same methods will yield the same results?
- (A) Validity
 - (B) Research
 - (C) Replication
 - (D) None of above
- 298.** A scientific experiment in which only one variable is changed at a time is called
- (A) Independent variable
 - (B) Dependent variable
 - (C) Data
 - (D) Controlled experiment
- 299.** In a study to test the effectiveness of a new teaching method, what is the role of a control group?
- (A) To ensure that the sample size is large enough.
 - (B) To eliminate all variables except the independent variable.
 - (C) To provide a baseline for comparison with the experimental group.
 - (D) None of above
- 300.** The number of times each experimental condition is observed in a factorial design is known as
- (A) Partition
 - (B) Factor
 - (C) Experimental condition
 - (D) Replication
- 301.** What is the difference between experimental and nonexperimental research?
- (A) Experimental research involves manipulation of variables, while nonexperimental research does not.
 - (B) Nonexperimental research involves manipulation of variables, while experimental research does not.
 - (C) Both involve manipulation of variables.
 - (D) Neither involves manipulation of variables.
- 302.** A quasi-experimental research design does not include
- (A) Random assignment of research participants to the experimental and control conditions.
 - (B) Pretests.
 - (C) Posttests.
 - (D) Manipulation of the independent variable.

- 303.** In a controlled experiment, how many independent variables can be worked with at a time?
- (A) One
 - (B) None
 - (C) Two or more
 - (D) However many makes sense.
- 304.** A research study where neither the researchers nor the subjects know who have been assigned to which treatment group is called a(n) ____ study
- (A) Blind
 - (B) Double-blind
 - (C) Experimental
 - (D) Observational
- 305.** This research type uses the scientific method to establish the cause-effect relationship among a group of variables that make up a study.
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
- 306.** ____ occurs when study participants respond in a certain manner because they are aware that they are being observed.
- (A) Hawthorne Effect
 - (B) Experimenter Effect
 - (C) Reactive Effects of the Pretest
 - (D) Instrumentation Change
- 307.** Control Group
- (A) Subjects in an experiment who are not subjected to the independent variable and may receive a placebo treatment.
 - (B) The group to which the researchers manipulate the independent variable.
 - (C) Study in which the subject do not know if they are in the experimental or the control group.
 - (D) Study in which neither the experimenter nor the subjects know if the subjects are in the experimental or the control group.
- 308.** Only one group is blinded (ex. study participants)
- (A) Single blind
 - (B) Double blind
 - (C) Open study
 - (D) Closed study
- 309.** The process of repeating an experiment under the same of similar conditions is called ____
- (A) Replication
 - (B) Randomization
 - (C) Control
 - (D) Treatment
- 310.** The aim of a controlled experiment is
- (A) To establish a causal relationship between variables.
 - (B) To understand the general relationships and associations between variables.
 - (C) All the above
 - (D) None of the above
- 311.** Often involves taking participants to a lab setting to allow for more control over confounding variables.
- (A) Experiment
 - (B) Naturalistic Observation
 - (C) Survey
 - (D) Case Study
- 312.** What can the findings from experimental research inform in psychology?
- (A) The development of new medication
 - (B) Evidence-based practices
 - (C) Historical perspectives
 - (D) Statistical analysis techniques
- 313.** What is the role of statistical control in experimental research?
- (A) To eliminate randomization
 - (B) To manipulate independent variables
 - (C) To control variables not physically manageable
 - (D) To assign subjects to groups

- 314.** An experiment in which neither the research subjects nor the scientists know the correct responses is called a ____
(A) Phenomenon
(B) Double blind experiment
(C) Aptitude
(D) Attribute
- 315.** Research that is designed to capture cause-and-effect relationships by eliminating competing explanations of observed findings is called ____
(A) Experimental research
(B) Behavioural data
- 316.** Which type of research provides the strongest evidence about the existence of cause-and-effect relationships?
(A) Non experimental Research.
(B) Experimental Research.
(C) Both A and B.
(D) None of the above.
- 317.** Bases its research method on a scientific activity called experiment
(A) Non-experimental
(B) Experimental
(C) Correlative
(D) None of above
- 318.** Which approach tests cause-effect relationships?
(A) Descriptive
(B) Correlational
(C) Experimental
(D) Exploratory
- 319.** Single-blind experiments control for ____
(A) Neither subjects' nor experimenters' expectations
(B) Subjects' but not experimenters' expectations
(C) Experimenters' but not subjects' expectations
(D) Both subjects' and experimenters' expectations
- 320.** The experimental group receives the treatment, while the ____ group does not, allowing for comparison.
(A) Control
(B) Variable
(C) Test
(D) Placebo
- 321.** Single-case experimental designs often produce findings that are as generalizable as other more common forms of experimental design.
(A) T
(B) F
- 322.** What is the control?
(A) What we are changing or testing
(B) What we are observing or measuring
(C) What we keep the same to make the experiment fair
(D) None of above
- 323.** A scientist hypothesizes that playing video games improves hand-eye coordination. What should they do next?
(A) Immediately assume the hypothesis is correct
(B) Conduct an experiment to test the hypothesis
(C) Ask people their opinions on video games
(D) Avoid testing negative outcomes
- 324.** Why is it important to only test one variable at a time in an experiment?
(A) To make the experiment easier to understand
(B) To accurately determine the effect of that variable
(C) To ensure the hypothesis is correct
(D) To speed up the experiment
- 325.** True or False: To ensure conclusions are accurate in an experiment, several trials must often be conducted.
(A) True
(B) False

326. How are experimental designs called in a different way?
- (A) Correlational designs
 - (B) Intervention studies or group comparison studies
 - (C) Survey designs
 - (D) Basic studies
327. This research instrument is a procedure undertaken specifically and systematically to make a discovery and test hypothesis. It may be performed in a laboratory or in a natural setting.
- (A) Experiment
 - (B) Interview
 - (C) Survey
 - (D) Questionnaire
328. If someone acts as if they received what the subjects in the experimental group received, that is called the what effect?
- (A) Control
 - (B) Placebo
 - (C) Neutral
 - (D) P-value
329. If you are doing experiments on a large group of samples which method of controlling will you adopt?
- (A) Matching
 - (B) Elimination
 - (C) Randomization
 - (D) Elimination and matching
330. Which research method is best suited for studying the impact of a new teaching strategy on student performance?
- (A) Experimental research
 - (B) Historical research
 - (C) Theoretical research
 - (D) Archival research
331. Which of the following is a limitation of the experimental research method?
- (A) Cannot always apply conclusions to general behaviors in the real world.
 - (B) Cannot measure the effect on a dependent variable.
 - (C) Cannot manipulate an independent variable.
 - (D) Cannot establish cause and effect.
332. Participants do not know they are taking part, so they are less likely to show demand characteristics.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment
333. Bern would like to test the effectiveness of lemon grass and calamansi as fabric softener. He exposed his subject to the following exposures: one to commercialized fabric softener, another to 100% lemon grass fabric softener, another to 100% calamansi fabric softener, and the last one to 50% lemon grass and 50% calamansi fabric softener.
- (A) Posttest Only
 - (B) Pretest-Posttest Only
 - (C) Solomon Four Group
 - (D) Factorial
 - (E) Crossover
334. Select the correct graph. Mikey had two mice that were about the same age and weight. Mikey fed each of the two mice a different feed for a month. He measured how much the mice weighed every two days until the month was over. Mikey's results showed that although both mice gained weight over the month, mouse 2 gained more weight than mouse 1. Which graph below best shows these results?
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
335. Why are natural experiments particularly suitable?
- (A) They reflect natural settings, increasing generalizability of findings.

- (B) They are suitable for investigating long-term effects or rare events.
- (C) They have high ecological validity.
- (D) They can be ethically or practically manipulated in controlled experiments.
- 336.** To ensure that the experiment results are valid it is important that the experiment be —
- (A) Replicated
- (B) Controlled
- (C) Randomized
- (D) All of the above
- 337.** — 28. In an experiment, it is useful to have a control group to
- (A) Help minimize the effects of volunteer bias
- (B) Ensure that the target population is represented
- (C) Complete a stratified sample
- (D) Show the effect of the treatment and no other factors
- 338.** In an experiment to see if location has an effect on recall, there is a group in which students learn the words in one location and recall them in the same location. In the other group, the students learn words in a classroom and are asked to recall them in the gymnasium. What would you call the second group?
- (A) The experimental group
- (B) The independent variable
- (C) The control group
- (D) The exposure group
- 339.** What type of study is where the researcher manipulates one or more aspects of the environment (variables) and then measures the effects?
- (A) Descriptive
- (B) Experimental
- (C) Correlational
- (D) Rational
- 340.** A study that evaluates whether a training program improves employee performance is:
- (A) Descriptive
- (B) Analytical
- (C) Experimental
- (D) Conceptual
- 341.** Researchers are able to have strict control of variables in a — experiment.
- (A) Field
- (B) Natural
- (C) Laboratory
- (D) University Edit
- 342.** A fake treatment
- (A) Case study
- (B) Double blind
- (C) Placebo
- (D) Experimental group
- 343.** What research design manipulates variables to determine cause and effect?
- (A) Descriptive Research
- (B) Correlational Research
- (C) Experimental Research
- (D) Historical Research
- 344.** Matched pairs designs are when
- (A) Participants only complete one condition of the experiment
- (B) All participants complete all conditions of the experiment
- (C) No participants complete all conditions of the experiment so it is repeated
- (D) Participants are matched on characteristics such as race and only take part in one condition
- 345.** What is the purpose of the post test in the experimental design?
- (A) To measure the initial abilities of the participants
- (B) To provide the treatment to the control group
- (C) To evaluate the effect of the treatment
- (D) To eliminate any biases in the study

346. Students experimented to see if fertilizer affected a plant's growth. They recorded their setup and results in the data table. What was their independent variable in this experiment?
- (A) Amount of fertilizer
 - (B) Amount of light
 - (C) Amount of water
 - (D) Plant height
347. In an experiment, the group of participants that receives the manipulation
- (A) Experimental group
 - (B) Internal validity
 - (C) Consciousness
 - (D) Rem
348. Experimental research is best suited for gathering descriptive information.
- (A) TRUE
 - (B) FALSE
349. Which method is best to establish cause-and-effect relationships?
- (A) Case study.
 - (B) Experimental research.
 - (C) Interviews.
 - (D) Focus groups.
 - (E) Document analysis.
350. In an experiment, the group that's exposed to the treatment is called the
- (A) Experimental group
 - (B) Control group
351. With an experimental research study, the participants in both the treatment and control groups are randomly assigned.
- (A) True
 - (B) False
352. What type of research has the following objective: To test a hypothesis of a causal relationship between variables.
- (A) Exploratory or formulative research studies
 - (B) Descriptive research
 - (C) Diagnostic research
 - (D) Hypothesis-testing research
353. This is the group that we will compare our experimental group to. This group stays "normal."
- (A) Control Group
 - (B) Experimental Group
 - (C) Normal Group
 - (D) Weird Group
354. Dr. Silvanna designs an experiment for studying lab rats' reaction to energy drinks in relation to problem solving. Dr. Silvanna is most interested in the goal of
- (A) Control
 - (B) Prediction
 - (C) Explanation
 - (D) Description
355. Carefully controlled artificial situation where an experimental group is exposed to independent variable
- (A) Evaluation research
 - (B) Survey
 - (C) Experiment
 - (D) None of above
356. What is the Aim of an experiment?
- (A) A statement that describes what the investigation is trying to find out
 - (B) A statement that tells you the results of the experiment
 - (C) A statement showing how you did the experiment
 - (D) A statement describing your observations throughout the experiment
357. What does 'O' represent in the experimental design notation?
- (A) Observation/Measurement
 - (B) Operation
 - (C) Organization
 - (D) Outcome

- 358.** The subjects in a study who receive some special treatment in regard to the independent variable.
- (A) Extraneous variables
 - (B) Correlation coefficient
 - (C) Experimental Group
 - (D) Control group
- 359.** Researchers will often consciously manipulate one variable, such as the number of questions teachers ask, to measure its effect on another variable, such as student achievement. This process is best described as:
- (A) Descriptive research.
 - (B) Correlational research.
 - (C) Experimental research.
 - (D) Longitudinal research.
- 360.** What is the role of experimental designs in research?
- (A) To provide a basis for personal opinions
 - (B) To provide structured methods to study cause-and-effect relationships
 - (C) To summarize the findings of other research studies
 - (D) To create graphical representations of data
- 361.** Experimental research requires advanced statistical and research methods training because it requires that you should randomly assign participants to the treatment and control groups.
- (A) True.
 - (B) False.
 - (C) I disagree because I was told that I don't need random assignment in experiments.
 - (D) I disagree because I don't know what random assignment is.
- 362.** Study without blinding is sometimes called
- (A) Single blind
 - (B) Double blind
 - (C) Open study
 - (D) Closed study
- 363.** The experimental method does not reveal cause-and-effect relationships.
- (A) True
 - (B) Neither
 - (C) Both
 - (D) False
- 364.** Taking people and randomly assigning them to two groups, 2 conditions, and 2 levels of IV is a typical study design involving a ___ group and a control group.
- (A) Treatment
 - (B) Experimental
 - (C) Placebo
 - (D) Matched
- 365.** Experimental research is best suited for gathering ___ information.
- (A) Exploratory
 - (B) Causal
 - (C) Random
 - (D) Unstructured
 - (E) Descriptive
- 366.** Which one of these definitions explains Experiments?
- (A) Observing a group without their knowledge or consent
 - (B) Collecting information through unstructured interviews and postal questionnaires
 - (C) Observation and description of a group of people and their way of life
 - (D) An investigation that tests a hypothesis. The aim is to find out why something happens by controlling the variables
- 367.** In an experiment the ___ group is NOT exposed to the independent variable.
- (A) Experimental
 - (B) Control
 - (C) Double blind
 - (D) Single blind
- 368.** In experimental studies which group receives nothing? In other words, they do not get the variable that is under study.

- (A) Experimental group
(B) Control group
- 369.** All of the following are part of a true experiment EXCEPT:
(A) The random assignment of subjects.
(B) The manipulation of variables.
(C) A control condition.
(D) A correlation coefficient
- 370.** What is an additional concern in terms of assumptions that one must check when conducting repeated measures design that is not a concern in a between subjects design?
(A) Homogeneity of variance
(B) Normality
(C) Dependence
(D) Sphericity
- 371.** What does a control group refer to in an experiment?
(A) A group of subjects whose performance is ignored
(B) A group of subjects whose performance is used to evaluate the performance of the experimental group on the same dependent variable
(C) A group of subjects who are not part of the experiment
(D) A group of subjects who receive the experimental treatment
- 372.** Which type of empirical inquiry involves arranging a situation where variables are controlled prior to data collection?
(A) Non-experimental studies
(B) Experimental studies
(C) Quasi-experimental studies
(D) Correlational studies
- 373.** Two companies make golf balls, and each claim its ball goes farthest when hit. Which would be the best scientific evidence to decide which ball goes farther?
(A) A golfer hits each ball and how far each ball goes is measured
(B) A machine hits each ball with the same force and how far each ball goes is measured
(C) The results of tests conducted on the two balls by each company is read
(D) A survey asks 500 baseball players which ball goes farther
- 374.** Dr. Larson was interested in whether classical music helps students perform better on a test. Dr. Larson randomly assigned half of the study's participants to a group that listened to classical music while taking a test. The other half of the participants did not listen to music while taking a test. The research design Dr. Larson used is ____
(A) A case study
(B) An experiment
(C) An observation
(D) A survey
- 375.** Field experiments are considered to have a more authentic representation of individual behavior for which of the following reasons?
(A) They are conducted in artificial settings.
(B) They are less likely to suffer from artificiality compared to lab experiments.
(C) They have a reduced impact of ecological validity.
(D) They are more likely to suffer from demand characteristics.
- 376.** A taxi company in Atlanta puts a new type of tire with a special tread on a random sample of 50 cars, and the regular type of tire on another random sample of 50 cars. After a month, the gas mileage of each car was measured. What type of research study is described?
(A) Experimental Research Study
(B) Observational Research Study
(C) All the above
(D) None of the above
- 377.** Good experiments have ____
(A) A control group
(B) Small sample sizes
(C) Unreplicable results
(D) Possible bias of results

378. Is composed of participants who do not receive the experimental treatment. When conducting an experiment, these people are randomly assigned to be in this group. They also closely resemble the participants who are in the experimental group or the individuals who receive the treatment.
- (A) Attrition rate
 - (B) Cross-sectional
 - (C) Longitudinal
 - (D) Control group
 - (E) Treatment group
379. Which is NOT an example of experimental research?
- (A) Covid-19 and related anxiety cases among college students
 - (B) The consequences of improper examination methods
 - (C) The effect of gender on algebra achievement
 - (D) None of above
380. What is a “double blind study”?
- (A) A study where both the researcher and the participants are unaware of the group assignments
 - (B) A study where the participants are blind-folded
 - (C) A study where the researcher is blind-folded
 - (D) A study where the participants are unaware of the group assignments
381. Which of the following can be done to counter experimenter bias?
- (A) Placebo
 - (B) Double-blind design
 - (C) Single-blind design
 - (D) Counterbalance
382. What is the main purpose of using a placebo in psychological studies?
- (A) To disentangle effects related to expecting a treatment.
 - (B) To increase the sample size of the study.
 - (C) To ensure all participants receive the actual treatment.
 - (D) To reduce the cost of the experiment.
383. In experimental studies, but NOT in other studies,
- (A) The researcher manipulates the dependent variables.
 - (B) The researcher manipulates the independent variables.
 - (C) The researcher tries to eliminate the effects of extraneous variables.
 - (D) The researcher examines a priori differences between groups.
384. It is important for researchers to use precise operational definitions when ____
- (A) They want to ensure that conditions are assigned randomly
 - (B) They want to be able to replicate the experiment
 - (C) They want to organize the hypothesis appropriately
 - (D) They are conducting experimental research but not correlational research
 - (E) They are conducting an experiment with no independent and dependent variables
385. A natural experiment is named so because
- (A) It takes place in a natural setting
 - (B) It only uses natural products
 - (C) It is carried out by naturalists
 - (D) A change in the IV occurs naturally rather than by manipulation
386. The most effective method of studying psychology is
- (A) Introspection Method.
 - (B) Observation Method.
 - (C) Survey Method.
 - (D) Experimental Method.
387. Outpatients and inpatients with a diagnosis of Blood Pressure were recruited for a randomized, double blind, placebo controlled study. What type of study is?

- (A) Randomized controlled trial
 - (B) Non randomized controlled trial
 - (C) Cohort study
 - (D) None of above
- 388.** Features of the environment which give away the aim of the study.
- (A) Internal Validity
 - (B) Social Desirability Bias
 - (C) Subjectivity
 - (D) Demand Characteristics
 - (E) Low Controls
- 389.** Researcher & their biases are not known to participants in the study, & participant characteristics are deliberately hidden from the researcher (double blind studies)
- (A) Quantitative
 - (B) Qualitative
- 390.** Experimental research design often called true experimentation
- (A) True
 - (B) False
- 391.** Based on the results of a two-factor experiment, one can initially choose a linear regression equation, in which, in addition to linear coefficients, there will be a coefficient that takes into account:
- (A) The effect of pair interaction
 - (B) Anti-interaction effect
 - (C) Feedback effect
 - (D) Direct interaction effect
 - (E) The process of thinking, constituting a sequence of two or more judgments
- 392.** What do lab experiments offer in terms of data collection and analysis?
- (A) Limited data collection and random analysis
 - (B) Detailed and systematic data collection and analysis
 - (C) Unsystematic data collection and analysis
 - (D) No opportunity for data collection
- 393.** A researcher interested in proving a casual relationship between two variables should choose which research method
- (A) Correlation
 - (B) Survey
 - (C) Naturalistic observation
 - (D) Experiment
 - (E) Case study
- 394.** The purpose of an experiment is to:
- (A) Test extraneous variables
 - (B) Measure an independent variable
 - (C) Demonstrate a cause and effect relationship
 - (D) Change a dependent variable
- 395.** Quasi-experimental research is used because
- (A) Random selection is not possible.
 - (B) Neither random selection nor random assignment is possible.
 - (C) Random assignment is not possible.
 - (D) There are no comparison groups available.
- 396.** If an experiment doesn't provide the same results, it could mean ____
- (A) The first experiment was fine, publish the results
 - (B) The first experiment was flawed, retest
 - (C) The second experiment is fine, publish the results
 - (D) The second experiment was flawed and must be thrown out
- 397.** Which experimental design allows you to compare all means and the grand mean using one way ANOVA?
- (A) Multiple group treatment-control, post only.
 - (B) Single group pre-post design.
 - (C) Matched pairs design.
 - (D) Repeated measures design.

- 398.** Controlled scientific study of specific variables
(A) Experiment
(B) Model
(C) Law
(D) Theory
- 399.** In medical and epidemiologic research, an experimental study usually is called a ____
(A) Clinical Trial
(B) Observational Study
(C) Comparative Study
(D) Qualitative study
- 400.** Expectations by the experimenter that might influence the results of an experiment or their interpretation are called
(A) Experimental blinds
(B) Sample bias
(C) Treatment bias
(D) Experimenter bias
- 401.** In this design, researchers randomly separate participants into the experimental condition and the control condition.
(A) Independent measures
(B) Repeated measures
(C) Matched pairs
(D) None of above
- 402.** Which example shows CAUSATION?
(A) Taller people have larger shoe sizes and shorter people have smaller shoe sizes.
(B) If you exercise, the calories burned per minute increases.
- 403.** Where the same group of participants are used in different conditions, is which experimental design
(A) Independent groups
(B) Matched participants
(C) Repeated measures
(D) Separate groups
- 404.** The primary objective of the experimental methodology is
(A) Ensure external validity
(B) Improve internal validity
(C) To eliminate type I error
(D) To reduce ethical problems
- 405.** What serves as a basis for comparison and controls for chance factors that might influence the results of the study?
(A) Experimental group
(B) Control group
(C) Cross-sectional research
(D) None of above
- 406.** What is required for a study to be considered experimental?
(A) Random sampling
(B) Random assignment
(C) A placebo
(D) None of above
- 407.** True or False. When two groups in the pre-test of pre-test/post-test NECG have similar result the confound of individual differences is eliminated.
(A) True
(B) False
- 408.** A group in a study that does not receive the tested treatment.
(A) A control group
(B) A diverse group of participants
(C) A study group
(D) None of the above
- 409.** Sometimes participants effects (reactivity) or experimenter gives something away that cues the participant on how to respond. What is this called?
(A) Reactivity/demand characteristics
(B) Placebo effect
(C) Confirmation bias
(D) Double-blind procedure

410. In order to compare the effects that different types of liquid on plant growth the following experiment was conducted. One plant received water, another plant received milk, and the third plant was given orange juice. What would be the control in this investigation?
- (A) The plant that gets the orange juice
 - (B) The plant that receives the water
 - (C) The plant that receives the milk
 - (D) The plant that receives the soda
411. Manipulating the independent variable by varying the type on the independent variable that is presented to the different comparison groups is known as ____
- (A) Presence technique.
 - (B) Type technique.
 - (C) Amount technique.
 - (D) Absence technique.
412. Fewer participants are needed, which is useful if samples are limited.
- (A) Strength of Independent Measures Design
 - (B) Strength of Repeated Measures Design
 - (C) Strength of Matched-Pair Design
 - (D) None of above
413. An example of an experimental design in research is:
- (A) Case study
 - (B) Survey
 - (C) Randomized controlled trial
 - (D) Interview
414. Dr. Anderson, who spends much of his time studying the behavior of rats, and other basic animal behaviors is an ____
- (A) Behavioral psychologist
 - (B) Clinical psychologist
 - (C) Experimental psychologist
 - (D) Mental psychologist
415. Why are experiments considered the gold standard for establishing causation?
- (A) Because they do not manipulate variables
 - (B) Because they can manipulate variables and control conditions
 - (C) Because they only observe variables
 - (D) Because they do not require control groups
416. You must ____ an experiment to show if your basic findings can be reproduced making them likely to be accurate.
- (A) Theorize
 - (B) Replicate
 - (C) Functionalize
 - (D) Empericize
417. What kind of experiment is Schachter & Singer (The Cognitive, social and physiological determinants of emotional state)?
- (A) Field
 - (B) Laboratory
 - (C) Quasi-experiment
 - (D) None of above
418. What is the purpose of the series of observations in the before-time period in a time series design?
- (A) To introduce the experimental independent variable
 - (B) To establish a baseline
 - (C) To conclude the experiment
 - (D) To compare different groups
419. Experimental research is a quantitative research dealing with the object or subject of a research in an exact manner.
- (A) The statement above is correct.
 - (B) The statement above is incorrect.
- Explanation:** Experimental research is a quantitative research method that deals with the object or subject of a study in an exact manner. The correct answer is 'The statement above is correct.'
420. Which of the following is a key characteristic of a scientific experiment?

- (A) Subjectivity
 - (B) Reproducibility
 - (C) Randomness
 - (D) Bias
- 421.** A comparison group that does not receive experimental treatment. (Research Methods and Statistics Part I)
- (A) Experimental Group
 - (B) Case Study
 - (C) Control Group
 - (D) Negative Correlation
- 422.** The most accurate research results are obtained during ____
- (A) Experiment
 - (B) Conversation
 - (C) Analysis
 - (D) Comparison
 - (E) Reflection
- 423.** In an experiment, the group not exposed to the treatment, serves as the comparison
- (A) Control group
 - (B) Experimental group
 - (C) Placebo
 - (D) None of above
- 424.** In an experiment, how should data be collected?
- (A) Subjectively, based on what is expected
 - (B) Only once at the beginning of the experiment
 - (C) Systematically and objectively
 - (D) Randomly, without any specific method
- 425.** What is an experiment?
- (A) Observing and collecting data
 - (B) Scientists design and carry out tests and trials to determine if their hypothesis is correct
 - (C) A good question to be answered
 - (D) Analyzing the results
- 426.** What is the researcher's expectations skew the results of the study called?
- (A) Experimenter bias
 - (B) Confirmation bias
 - (C) Illusory correlation
 - (D) None of above
- 427.** One way to prevent bias is to conduct a double-blind study, in which neither the experimenters nor the participants know who is receiving treatment.
- (A) TRUE
 - (B) False; single-blind
 - (C) False; longitudinal
 - (D) None of above
- 428.** Gaining information from a cause and effect relationship is an example of what type of data collection method?
- (A) Experimental method
 - (B) Observation method
 - (C) Survey method
 - (D) Consumer panel
- 429.** What is a field experiment?
- (A) An investigation conducted in a laboratory setting
 - (B) A study looking for a causal relationship in a natural environment
 - (C) A research method that does not manipulate variables
 - (D) A survey conducted outside
- 430.** Field experiments are conducted in:
- (A) Laboratory settings
 - (B) Real-life environments
 - (C) Simulated systems only
 - (D) Virtual settings
- 431.** Asher conducted a study to determine the effects of different fertilizers on plant growth. He used various types of fertilizers and measured the growth of the plants over several weeks. This type of research is known as ____ research, which is based on experimentation or observations.

- (A) Empirical
(B) Casual
432. In an experiment, the group with independent variable is known as what?
(A) Single blind Group
(B) Control Group
(C) Experimental Group
(D) The effect
433. Experimental research is rarely used in computer engineering.
(A) True
(B) False
434. This experiment set the foundation for behavioral research by proving that a child could be given conditioned phobias.
(A) The Asch Conformity Study
(B) The Little Albert Experiment
(C) The Bobo Doll Experiment
(D) The Milgram Study
435. Derek and Lauren want to see who has greater social appeal. They go to a large department store. Each randomly selects and approaches 25 customers while the other one times the length of the interaction. They then compute the average times of interaction as a measure of social appeal.
(A) Observational
(B) Experimental
(C) Survey
(D) None of above
436. The result of a successfully conducted experiment is the confirmation of ___ research.
(A) Hypothesis
(B) Argument
(C) Topic
(D) Relevance
(E) Validity
437. What tests the hypothesis?
(A) Research
(B) The teacher
(C) The experiment
(D) None of above
438. Type of experimental research design which is very common in educational research, where administrators are unwilling to allow the random selection of students for experimental samples.
(A) Pre-experimental Research Design
(B) Quasi-experimental Research Design
(C) True Experimental Research Design
(D) None of above
439. A type of research method that involves studying the effects of a naturally occurring IV on a DV.
(A) True experiment
(B) Field experiment
(C) Case study
(D) Natural experiment
440. The experimental study is based on the law of
(A) Interest of the subject.
(B) Replication.
(C) Occupation.
(D) Single variable.
441. In quasi-experimental designs, there is at least one IV; ___ assignment to groups is not used.
(A) Random
(B) Systematic
(C) Voluntary
(D) Alphabetical
442. What is the primary strength of an experimental design?
(A) External validity
(B) Generalizability
(C) Internal validity
(D) Theoretical

- 443.** When a participant doesn't know the group they're in is called?
(A) Validity
(B) Placebo effect
(C) Blind procedure
(D) Double blind procedure
- 444.** An experimenter looking to prove that stating goals out loud lowers the chance that a person will achieve them might design a test in such a way that the results he expects come true is most likely experiencing
(A) Confirmation bias
(B) Experimenter bias
(C) Hindsight bias
(D) Participant bias
- 445.** A study where neither participants nor experimenters know who is receiving a treatment.
(A) Systematic study
(B) Experimental study
(C) Double-blind study
(D) Cohort study
- 446.** A research design where an independent variable is manipulated to determine the effects on the dependent variables.
(A) Correlational
(B) Descriptive
(C) Experimental
(D) Quasi-Experimental
- 447.** A pedagogical experiment is:
(A) Deliberate introduction of changes in the process of education and training
(B) Mass information collection method
(C) Analysis of the situation
(D) Test method
(E) Monitoring children's behavior
- 448.** A taxi company in Atlanta puts a new type of tire with a special tread on a random sample of 50 cars, and the regular type of tire on another random sample of 50 cars. How many experimental units (subjects) were included in this experimental research study?
(A) 0
(B) 50
(C) 100
(D) 150
- 449.** The phenomenon to be studied in this research is measured through study and control groups, and according to the guidelines of the scientific method.
(A) Quantitative research
(B) Qualitative research
(C) Experimental research
(D) Non experimental research
- 450.** An independent measures design uses:
(A) A single group of participants for all levels of the independent variable
(B) Different groups of participants for each level of the independent variable
(C) The same participants for different conditions
(D) Matched pairs for each level of the independent variable
- 451.** A group where no treatment is applied:
(A) Experimental group
(B) Treatment group
(C) Controlled group
(D) Focus group
- 452.** One important type of study and methodology in psychology is a controlled experiment. Compared to other investigation methodologies, controlled experiments generally involve
(A) More control of variables and conditions.
(B) Less control of variables and conditions.
(C) All the above
(D) None of the above
- 453.** The group was divided into two groups receiving treatment during 6 and 12 weeks. Administration of dexamethasone was 0.5 mg/kg, intraperitoneal (IP).

- (A) DESCRIPTIVE
(B) EXPERIMENTAL
(C) SURVEY
(D) None of above
- 454.** It is only possible to state a causal relationship between IV and DV, if all other variables that might affect the DV have been ____
(A) Isolated
(B) Controlled
(C) Maintained
(D) Eliminated
- 455.** Why do field experiments have higher ecological validity?
(A) Because they are conducted in controlled environments.
(B) Because they allow for findings to be more easily generalized to real-world scenarios.
(C) Because they provide a less authentic representation of behavior.
(D) Because they are less likely to uncover unexpected insights.
- 456.** This part of the experiment serves as a basis of comparison; the one variable being tested has been omitted.
(A) Experimental group
(B) Control group
(C) Data
(D) Variables
- 457.** Which of the following is not considered as one of the characteristics of experimental research?
(A) RANDOMIZATION
(B) MANIPULATION
(C) CONTROL
(D) LARGE SAMPLE SIZE
- 458.** An experiment's generalizability or applicability beyond the original sample to other subjects, settings, and times is called ____ validity.
(A) Analogue
(B) Construct
(C) Internal
(D) External
- 459.** Type of research that manipulates a variable of interest (independent variable) to uncover cause-and-effect relationships
(A) Correlational study
(B) Scientific method
(C) Experimental method
(D) None of above
- 460.** A researcher examines the effects of three different antihypertensive medications to patients with hypertension.
(A) Exploratory Research.
(B) Descriptive Research.
(C) Experimental Research.
(D) None of the above.
- 461.** In the experimental method, how is the control group different than the experimental group?
(A) The control group is smaller than the experimental group.
(B) The control group is larger than the experimental group.
(C) The control group receives the treatment
(D) The control group does not receive the treatment.
- 462.** Which of the following is an example of a "natural experiment" as defined in the article?
(A) Assigning participants to different groups in a laboratory
(B) Taking advantage of naturally occurring events or situations rather than manipulating variables in a laboratory
(C) Conducting a survey online
(D) Interviewing participants after a study
- 463.** What is a 'Placebo'?
(A) A substance or treatment with no active therapeutic effect, often used as a control in experiments.
(B) A rare type of bacteria found in soil.

- (C) A medical device used to measure blood pressure.
(D) A surgical procedure to remove tumors.
- 464.** Experimental journals and lab reports both focus on purposes, procedures, and ____ of a lab experiment.
(A) Results
(B) Possible causes
(C) Opportunities
(D) Hypothetical situations
- 465.** What is the purpose of a double-blind procedure in research?
(A) To ensure that the control group is unaware of the experimental group's activities
(B) To prevent the researcher from knowing which participants are in the control or experimental group
(C) To reduce demand characteristics in participants
(D) To ensure that the sample size is balanced between groups
- 466.** What is the purpose of using an experiment in quantitative research?
(A) To test cause-and-effect relationships between variables.
(B) To collect opinions and narratives.
(C) To summarize literature.
(D) To interpret meanings.
(E) To review theoretical models.
- 467.** Experiments are not often used in Sociology because
(A) The level of control is too high
(B) There are too many ethical concerns involved
(C) They are too difficult to set up
(D) The results are unreliable
- 468.** It is a kind of experimental research design wherein the participants are NOT randomly selected.
(A) Descriptive
(B) Quasi-Experimental
(C) True Experimental
(D) Pre-Experimental
- 469.** In an experiment, what is the procedure where neither the researcher or the experimental know who has the placebo?
(A) Random Assignment
(B) Blind procedure
(C) Double blind procedure
(D) Experimental Assignment
- 470.** What does randomization ensure in experimental research?
(A) Uniformity of the groups.
(B) Similarity of the groups.
(C) Uniformity and similarity of the groups.
(D) Uniformity, similarity and equalization of the groups.
- 471.** Kristine choose ABM 1 as the treatment group and ABM 2 as another group as the respondents of her study. What type of quasi-experimental research did she used?
(A) Time series
(B) Single Subject Quasi
(C) Matched Comparison
(D) Matched Comparison and Time Series
- 472.** Which of the following refers to the method of forming experimental conditions?
(A) The method of forming experimental conditions;
(B) The objectives of the study of the experiment;
(C) Organization of the experiment;
(D) The structure of the studied objects and phenomena;
(E) The type of models studied in the experiment;
- 473.** Which type of study is the human equivalent of animal testing and is administered by providing or withholding a substance to determine its toxic or beneficial effects?
(A) Experimental epidemiology
(B) Descriptive epidemiology

474. Erica is running a study to investigate the effect of exercise on insomnia symptoms. She recruits participants who report having experienced insomnia at least once a week and assigns them to either exercise for 30 minutes every day or to read a book for 30 minutes every day. How many level/s of the experimental variable is/are there in her study?
- (A) 30
 - (B) 1
 - (C) 2
 - (D) 60
475. The group that does not receive the experimental treatment condition is the ____
- (A) Experimental group.
 - (B) Treatment group.
 - (C) Control group.
 - (D) Independent group.
476. An experiment in which neither the participant nor the researcher knows whether the participant has received the treatment or the placebo
- (A) Negative correlation
 - (B) Single-blind study
 - (C) Double-blind study
 - (D) Standard deviation
477. "Internal validity" refers to:
- (A) Whether or not there is really a causal relationship between two variables
 - (B) Whether or not the findings are relevant to the participants' everyday lives
 - (C) The degree to which the researcher feels that this was a worthwhile project
 - (D) How accurately the measurements represent underlying concepts
478. Which threat to internal validity involves dropout of subjects?
- (A) History
 - (B) Mortality
 - (C) Instrumentation
 - (D) Testing
479. The different conditions under which experimental and control groups are put usually referred to as
- (A) Treatment
 - (B) Control
 - (C) Causation
 - (D) Experiment
480. Random assignment is easy to perform in real-world experiments
- (A) True
 - (B) False
481. Which of the following statement is incorrect with respect to "An experimental design is a set of procedures specifying"
- (A) How the extraneous variables are to be controlled?.
 - (B) What dependent variables are to be measured?.
 - (C) How the test units (subjects) are to be divided into homogenous sub samples.
 - (D) What independent variables or treatments are to be measured?.
482. What is an experiment in which the researcher knows which participants are in the experimental group and which are in the control group called?
- (A) Single-blind study
 - (B) Double-blind study
 - (C) Randomized controlled trial
 - (D) Observational study
483. Which research design focuses on cause-effect relationships?
- (A) Exploratory
 - (B) Experimental
 - (C) Descriptive
 - (D) Case study
484. A study that manipulates an independent variable in a naturalistic setting and measures the effects of this.
- (A) True experiment
 - (B) Field experiment

- (C) Quasi experiment
 - (D) Natural experiment
- 485.** Two groups (ex. study participants and people collecting the outcome data) are blinded
- (A) Single blind
 - (B) Double blind
 - (C) Open study
 - (D) Closed study
- 486.** A list of how to carry out the experiment (instructions):
- (A) Hypothesis
 - (B) Conclusion
 - (C) Procedure
 - (D) Data
- 487.** Mr. S. uses a new spray cleaner to remove the green slime left by students on the tables. Identify the control group
- (A) Type of cleaner
 - (B) Test with a new cleaner
 - (C) Test with the old cleaner
 - (D) The green slime
- 488.** Randomization of test units is a part of ____
- (A) Pretest
 - (B) Posttest
 - (C) Matching
 - (D) Experiment
- 489.** Designed to study the effects of a particular intervention, usually a treatment for a specific disease (clinical trial) where subjects in the study population are randomly allocated to intervention and control groups, and the results are assessed by comparing outcomes.
- (A) Randomized controlled trials
 - (B) Case control study
- 490.** A quasi-experimental design ensures validity even without random assignment by:
- (A) Using comparison groups to control for confounding variables.
 - (B) Randomly assigning participants to groups.
- (C) Eliminating all sources of bias.
 - (D) Guaranteeing cause-and-effect relationships.
- 491.** Psychologists generally prefer the experimental method to other research methods bc
- (A) Experiments are more likely to support psychologists hypotheses
 - (B) Experiments can show cause effect relationships
 - (C) It is easier to obtain a random sample for an experiment
 - (D) Experiments are more likely to result in statistically significant findings.
- 492.** Participants often do not know they are taking part so this removes their right to withdraw and means debriefing is often impossible.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment
- 493.** Which type of psychology is described below: builds psychology's knowledge base through research-study behavior and the mind, conduct experiments, etc
- (A) Experimental Psychology
 - (B) Applied Psychology
- 494.** If you were planning a project to test the drought tolerance of different types of fruits and/or vegetables, which other research topic from the material could support your investigation?
- (A) Research the effect of various planting times on yields of fruits and/or vegetables
 - (B) Test forage samples under various conditions to determine feed values
 - (C) Test organic versus inorganic fertilizers on plant development
 - (D) Operate a hay-hauling service

495. Process of carrying out research in an objective and controlled fashion
- (A) Experimental design
 - (B) Descriptive statistic
 - (C) Correlation design
 - (D) Sensory adaptation
496. This method involves setting up a contrived situation and then watching participants' behaviours
- (A) Participant observation
 - (B) Field experiment
 - (C) Natural experiment
 - (D) Controlled observation
497. Which type of research involves the systematic manipulation of one variable to study its effect on another variable?
- (A) Historical Research
 - (B) Experimental Research
 - (C) Non-experimental Research
 - (D) Phenomenologic Studies
498. The concept of experiment comes from the Latin word:
- (A) Trial, experience;
 - (B) Twig, trunk;
 - (C) Proportion;
 - (D) The ratio;
 - (E) Practice;
499. Dr. Alix, a psychologist wants to find the cause-and-effect relationship between two psychology-related variables. He is most probably engage to
- (A) Experimental Research
 - (B) Correlational Research
 - (C) Action Research
 - (D) Qualitative Research
500. Which type of experiment is conducted in real-life environments?
- (A) Field experiments
 - (B) Quasi experiments
 - (C) Natural experiments
 - (D) Controlled experiments
501. How can you experiment with soils to see which one promotes life?
- (A) Use the same soil and different seeds.
 - (B) Use the same soil and different amounts of light and water.
 - (C) Use different soil and the same seed to check its growth in a few days.
 - (D) Use the same soil and no seeds to see what will happen prior to planting.
502. Experimental research is distinguished by its use of
- (A) Association analysis without causation
 - (B) Population lists called sampling frames
 - (C) Random observation without intervention
 - (D) Controlled manipulation of variables
503. ____ set up an experiment, known as the Stanford Prison experiment, where people played the role of a prison guard. The goal was to observe if this authority position would cause them to act differently.
- (A) Solomon Asch
 - (B) Philip Zimbardo
 - (C) Stanley Milgram
 - (D) Leon Festinger Edit
504. What aspect of lab experiments allows results to be generalized to larger populations?
- (A) Uncontrolled environments
 - (B) Controlled environments
 - (C) Lack of detailed data collection
 - (D) Increased confounding factors
505. What goes through all aspects of the experiment but is not exposed to the experimental variable?
- (A) Test Group
 - (B) Data
 - (C) Control Group
 - (D) Dependent Variable

506. A procedure you carry out under controlled conditions to test a hypothesis.
- (A) Hypothesis
 - (B) Inquiry
 - (C) Experiment
 - (D) Investigation
507. An investigation looking for a causal relationship in which an IV is manipulated and is expected to be responsible for changes in the DV.
- (A) Experiment
 - (B) Laboratory Experiment
 - (C) Field Experiment
 - (D) None of above
508. A GOOD experiment will have ___ independent variable and ___ controlled variables.
- (A) One, many
 - (B) Many, one
 - (C) One, one
 - (D) Many, many
509. What step in The Scientific Method involves a step-by-step procedure involving variables and controls?
- (A) Experiment
 - (B) Research
 - (C) Analyze Data
 - (D) Hypothesis
510. Which of the following is NOT one of the experimental and research designs mentioned in the text?
- (A) Independent measures
 - (B) Repeated measures
 - (C) Matched pairs
 - (D) Cross-sectional design
511. Dr. Hermann wants to determine whether the use of distributed practice causes higher scores on a final exam. To determine whether a cause-effect relationship exists between two variables, a researcher must use which of the following?
- (A) Descriptive statistics
 - (B) Naturalistic observation
 - (C) An experimental approach
 - (D) A correlational study
512. This is conducted in an artificial or controlled conditions by isolating the study in a thoroughly specified and equipped area.
- (A) Library research
 - (B) Field research
 - (C) Laboratory research
 - (D) None of above
513. A(n) ___ group (sometimes called a treatment group) is a group that receives a treatment in an experiment. The “group” is made up of test subjects (people, animals, plants, cells etc.) and the “treatment” is the variable you are studying.
- (A) Control group
 - (B) Experimental group
 - (C) Non-participant group
 - (D) Objective group
514. A researcher hired by a department store wants to examine whether manipulating the room temperature to be hotter as opposed to cooler affects sales of air conditioners. The best method for answering this question would be
- (A) Experimental
 - (B) Correlational
 - (C) Observational
 - (D) Archival analysis
515. In a(n) ___ a scientist determines how one particular variable affects the outcome of the experiment.
- (A) Controlled experiment
 - (B) Hypothesis
 - (C) Variable
 - (D) Data
516. What distinguishes a double blind procedure from a single blind procedure in experiments?

- (A) Neither participants nor researchers know which participants are receiving the treatment
- (B) Only participants know which treatment they are receiving
- (C) Only researchers know which treatment participants are receiving
- (D) Both participants and researchers know which treatment is being given
- 517.** Why might the findings from natural experiments have limited generalizability?
- (A) They are universally applicable
- (B) They are always conducted in laboratory settings
- (C) Findings may be specific to the unique conditions of the natural setting
- (D) Natural experiments have a wide range of variables
- 518.** This research is about designing or replicating a phenomenon whose variables are manipulated under strictly controlled conditions in order to identify or discover its effect on another independent variable or object.
- (A) Quantitative research
- (B) Qualitative research
- (C) Experimental research
- (D) Non-experimental research
- 519.** In a controlled experiment there is a greater chance of a relationship of ___ between the IV and DV; because the impact of extraneous variables is minimized.
- (A) Relatedness
- (B) Causality
- (C) Correlation
- (D) Significance
- 520.** When completing a psychological experiment, researchers are required to conduct a ___ in which they explain the research afterward.
- (A) Debrief
- (B) Survey
- (C) Case study
- (D) Interview
- 521.** Imagine you did an experiment in which you grew five different groups of rose bushes, and each group received a different amount of fertilizer. Which of the following would be the best title for this lab report?
- (A) The effect of fertilizer on the growth of rose bushes.
- (B) Rose bushes with large amount of fertilizer grow better than rose bushes with small amount of fertilizer.
- (C) Plants and fertilizer.
- (D) Rose bushes versus fertilizer.
- 522.** What does 'strength' refer to when picking a treatment in experimental design?
- (A) The number of participants
- (B) The dosage or intensity of the treatment
- (C) The length of the study
- (D) The number of variables measured
- 523.** Harper wants to find out which fertilizer helps her plants grow best. She decides to set up an experiment where she observes and tests different fertilizers on her plants over several weeks. What does Harper's approach primarily rely on to build knowledge?
- (A) Consensus and public agreement
- (B) Authority and expert opinion
- (C) Systematic observation and testing
- (D) Anecdotes and personal intuition
- 524.** Which environment is a researcher least able to control, when conducting an experiment?
- (A) Classroom.
- (B) Field.
- (C) Natural.
- (D) Laboratory.
- (E) The Library. Edit
- 525.** ___ is an advantage of an independent-groups experimental design; ___ is a disadvantage.
- (A) Complexity of administration | the possibility of order effects
- (B) Ease of administration | the possibility of participant variables influencing the outcome

- (C) Complexity of administration | intrusive pre-testing
(D) Ease of administration | the possibility of order effects Edit
526. The most important research method of the behaviorists was ____
(A) Observation with the use of instruments
(B) Testing methods
(C) The verbal report method
(D) The conditioned reflex method
527. Experiments have shown that communication improves when the situation moves from zero feedback to complete interaction
(A) True
(B) False
528. What property of experimental design is NOT present in non-experimental design?
(A) Random assignment of participants
(B) Dependent variables
(C) Interaction effects
(D) Potential of confounding variables
529. What do Lab experiments allow researchers to do?
(A) Study people in their natural setting
(B) Understand the real world
(C) Control variables
(D) None of above
530. Experimental research is completed in what type of environment?
(A) Controlled
(B) Chaotic
(C) Vibrant
(D) None of above
531. What is the purpose of randomization in experiments?
(A) To manipulate the independent variable
(B) To increase external validity
(C) To minimize bias and increase validity
(D) To control the dependent variable
532. Which field of study involves experimentation and research to understand the world around us?
(A) Mathematics
(B) Engineering
(C) Technology
(D) Science
533. The type of SAE that involves planning and conducting an agricultural experiment using the specific method is:
(A) Improvement
(B) Placement
(C) Entrepreneurship
(D) Experimental
534. In the context of psychological research, what is the primary purpose of a control group?
(A) To receive the treatment being tested.
(B) To provide a baseline for comparison with the experimental group.
(C) To ensure that all participants are treated equally.
(D) To increase the sample size of the study.
535. An experimental procedure in which both the research participants & the research staff are ignorant to who received the treatment or the placebo.
(A) Double-blind procedure
(B) Random sample
(C) Random assignment
(D) Placebo
536. In a study on alcohol and aggressive behavior, subjects are randomly assigned to one of two groups. One group receives real alcohol while the other group receives tonic water which tastes identical to real alcohol. Although the researchers know which group got the real alcohol, none of the subjects know. This study is designed as a ____ placebo-control study.
(A) Single-blind
(B) Double-blind

- (C) Longitudinal
(D) Correlational
- 537.** A true experimental research must have the following criteria that must be met except:
(A) Independent variable
(B) Random assignment
(C) Extraneous Variable
(D) Control group
- 538.** TRUE OR FALSE: Without random assignment, an experiment cannot find a true cause-and-effect relationship
(A) True
(B) False
- 539.** Some engineers want to see how different buildings designs might withstand a strong earthquake. What is the best way to determine this?
(A) Test one building during different earthquakes.
(B) Study past earthquakes strengths on a graph.
(C) Test multiple model buildings for one model earthquake.
(D) Construct a real building to observe during an earthquake.
- 540.** An experimental medication is being tested on research mice. To obtain the most accurate results, the test should include an experimental group and a/an:
(A) Epidemic group
(B) CONTROL group
- 541.** It controls for both time-related and group-related threats. Two features mark true experiments.
(A) EXPERIMENTAL RESEARCH DESIGN
(B) PRE-EXPERIMENTAL DESIGN
(C) QUASI-EXPERIMENTAL DESIGN
(D) TRUE-EXPERIMENTAL DESIGN
- 542.** Research design in which participants don't know whether they are in experimental or control group.
(A) Double blind
(B) Naturalistic observation
(C) Single blind
(D) None of above
- 543.** Study in which neither the researchers nor the participants know who receives treatment
(A) Single-blind study
(B) Double-blind study
(C) Experimental study
(D) Observations
- 544.** Experimental results caused by expectations alone or any effect on behavior caused by an inert substance or condition.
(A) Double-blind procedure
(B) Random sampling
(C) Placebo
(D) Random assignment
- 545.** When the findings of an experimental research are generalized to target population, the research is said to possess
(A) Predictive validity.
(B) External validity.
(C) Concurrent validity.
(D) Internal validity.
- 546.** The strongest evidence for causality comes from which of the following research methods
(A) Experimental
(B) Causal-comparative
(C) Correlational
(D) Ethnography
- 547.** What is the easiest design for a placebo in a psychological study?
(A) Real pill vs. sugar pill
(B) Waitlist control
(C) Treatment as usual
(D) Persuasive appeal

548. How can we strengthen a causal argument?
- (A) Use fewer observations
 - (B) Use controls
 - (C) Avoid having more than two variables
 - (D) Do not randomize
549. A primary research technique in which the researcher observes the results of changing one or more marketing variables while keeping others constant under controlled conditions
- (A) Experimental method
 - (B) Survey method
 - (C) Observation method
 - (D) Focus group method
550. When participants act differently simply because they know that they are in a study.
- (A) Demand Characteristics
 - (B) Artificial Validity
 - (C) Reliability
 - (D) Being fake
551. What is the primary goal of a scientific experiment?
- (A) To entertain
 - (B) To educate
 - (C) To test a hypothesis
 - (D) To confuse
552. A control group is used in an experiment to compare results with the experimental group.
- (A) TRUE
 - (B) FALSE
553. Whether the study accurately shows that the independent variable caused changes in the dependent variable.
- (A) Internal Validity
 - (B) Social Desirability Bias
 - (C) Subjectivity
 - (D) Demand Characteristics
 - (E) Low Controls
554. Wilhelm Wundt founded the first experimental psychology laboratory in ____
- (A) Germany
 - (B) United States
 - (C) Australia
 - (D) United Kingdom
555. A control group is ____
- (A) The clear prediction of the anticipated results of an experiment
 - (B) The group in an experiment where the independent variable being tested is not applied
 - (C) The measurable effect, outcome, or response in which the research is interested
 - (D) A document showing all the sources used to research information
556. Field experiment: an investigation looking for a casual relationship in which an independent variable is manipulated and is expected to be responsible for changes in the dependent variable. It is conducted in the ____ environment for the participants for the behavior being investigated.
- (A) Normal, behavior
 - (B) Artificial, behavior
 - (C) Normal, condition
 - (D) Artificial, condition
557. A science experiment done by a skin cancer researcher about sunscreen
- (A) Credible
 - (B) Not credible
558. To avoid differences in an experimenter's behavior toward subjects, you should implement a:
- (A) Controlled experiment
 - (B) Placebo
 - (C) Single-blind procedure
 - (D) Double-blind procedure
559. Used to answer cause and effect, participants may receive a treatment.
- (A) Naturalistic

- (B) Longitudinal
(C) Experimental
(D) Survey
- 560.** What is the defining characteristic of experimental research?
(A) Resistance to manipulation
(B) Manipulation of the independent variable
(C) The use of open-ended questions
(D) Focuses only on local problems
- 561.** The best way to assure the post-treatment differences found between the experimental and control groups is due to the treatment is by
(A) Random assignment
(B) Training your subjects well
(C) Letting your subjects know which group they are in
(D) Using a placebo
- 562.** Which of the following occurs in a comparison group design when one of the two groups of participants grows or naturally develops faster than the other group?
(A) Main effect.
(B) Sequencing effect.
(C) Selection-maturation effect.
(D) Order effect.
- 563.** What allows for testing cause-and-effect relationships in experimental research?
(A) Random assignment
(B) Measurement and data analysis
(C) Controlled conditions
(D) Manipulation of variables
- 564.** Participants in an experiment are called?
(A) Experimenters
(B) Scientists
(C) Subjects
(D) Teammates
- 565.** A study of effect on the human respiration system of a new oxygen delivery system for deep sea divers
(A) Simulation
(B) Survey
(C) Experiment
(D) Observational Study
- 566.** How can external validity be improved in experimental research?
(A) Use random assignment
(B) Use homogeneous samples
(C) Use diverse settings and populations
(D) Use pretest-posttest design
- 567.** Is the following practice more aligned with qualitative or quantitative research methods? Experimental Design used.
(A) Qualitative
(B) Quantitative
(C) Both
(D) None
- 568.** ____ are those in which there is either no comparison group or subjects are not randomly assigned to groups. The researcher uses existing, or intact, groups for the experimental and comparison groups.
(A) Pre-experimental design
(B) True experimental design
(C) Quasi-experimental design
(D) Survey studies
- 569.** The group that does not participate in the critical part of the experiment is known as what?
(A) Control group
(B) Dependent group
(C) Experimental group
(D) Independent group
- 570.** Which of the following is not needed in experimental research?
(A) Manipulation
(B) Observation
(C) Control
(D) Reference collection

571. When a researcher conducts an experiment he or she wants to be sure that any differences between the control and experiment groups are due to
- (A) The operational definition.
 - (B) Differences among the subjects.
 - (C) The hypothesis.
 - (D) The experimental manipulation.
572. Which one is not a type of experiment used in Psychology
- (A) Lab
 - (B) Natural
 - (C) Qualitative
 - (D) Field
573. This part of the experiment serves as a basis of comparison.
- (A) Experimental group
 - (B) Control group
574. ____ are conducted in a real life setting. The researcher manipulates the IV, but the participants are in their natural setting.
- (A) Natural exp.
 - (B) Field exp.
 - (C) Lab exp.
 - (D) Case study
575. To increase the validity of an experiment, you:
- (A) Ensure all variables are controlled except for 1
 - (B) Repeat the experiment multiple times to gather a similar result
 - (C) Ensure all measurements are accurate
 - (D) None of above
576. In order to prove a cause-and-effect relationship, we must use
- (A) Naturalistic observation.
 - (B) The experimental method
 - (C) Human subjects
 - (D) Correlation coefficients
577. What are the key components of an experimental design?
- (A) Statistical analysis, hypothesis testing, ethics
 - (B) Literature review, peer review, publication
 - (C) Hypothesis, variables, control groups, randomization, sample size, data collection methods
 - (D) Theory, assumptions, conclusions
578. Which of the following is a characteristic of a well-designed scientific experiment?
- (A) It has multiple variables changing at once
 - (B) It is based on subjective opinions
 - (C) It includes a control group
 - (D) It avoids data collection
579. The sample groups must be assigned randomly in true experimental research.
- (A) True
 - (B) False
580. A specific condition applied to the individuals in an experiment
- (A) Hypothesis
 - (B) Data Analysis
 - (C) Treatment
 - (D) Mixed Methods Research
581. Which type of research involves manipulating variables to determine cause-and-effect relationships?
- (A) Descriptive Research
 - (B) Correlational Research
 - (C) Experimental Research
 - (D) Qualitative Research
582. One limitation of a field experiment is ____
- (A) Null hypothesis
 - (B) Extraneous variables
 - (C) Artificiality
 - (D) Low ecological validity

583. Identify the method used to collect data-Karl fertilized his front yard but not his backyard to see if there was a difference in lawn health.
- (A) Survey
 - (B) Simulation
 - (C) Experiment
 - (D) Observational Study
584. Which one is not usually a strength of a lab experiment?
- (A) High external validity
 - (B) Establishes cause and effect
 - (C) Precise control of variables
 - (D) Replication is possible Edit
585. A custodian notices some dirty tables and wants to know which cleaner is the best to use. He tests three different cleaners and looks at how well they clean compared to tap water. What is the control group?
- (A) Type of cleaner
 - (B) Tap water
586. A benefit of using random assignment in an experiment is that it equalizes the groups.
- (A) True
 - (B) False
587. Researchers give one group a new cold medicine and compare them to a group that takes no medicine. What is the group that is not given any medicine?
- (A) The control group in an experiment
 - (B) The treated group in a survey study
 - (C) The treated group in an experiment
 - (D) The control group in an observational study
588. Experiment where only one variable is changed at a time
- (A) Hypothesis
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Controlled experiment
589. When neither the participants nor the experimenter knows which group of participants is the experimental one, the study is known as a
- (A) Placebo study
 - (B) Longitudinal study
 - (C) Single-blind study
 - (D) Double-blind study
590. The primary objective of a true experimental research design is to identify a cause-effect relationship between the variables where the samples are randomized.
- (A) Correlational Research
 - (B) True Experimental Research
 - (C) Quasi Experimental Research
 - (D) Descriptive Research
591. James is conducting an experiment to test the effectiveness of a new drug. He divides the participants into different groups. Which group does not receive the treatment?
- (A) Single blind group
 - (B) Control group
 - (C) Experimental group
 - (D) Placebo group
592. This is the limitation to repeated measures designs where the results of the experiment may be different depending on which condition comes first.
- (A) Order effects
 - (B) Counterbalancing
 - (C) Participant variability
 - (D) Experimenter bias
593. Of the different forms of explanatory research, what studies are generally believed to be the strongest for establishing cause-and-effect relationships?
- (A) Experimental
 - (B) Impact
 - (C) Orientational
 - (D) Applied

- 594.** Which primary data collection method involves collecting data by manipulating an independent variable and measuring its effect on a dependent variable, while controlling for extraneous variables?
- (A) Quasi-experiments
 - (B) Natural experiments
 - (C) Field experiments
 - (D) Laboratory experiments
- 595.** A marketing researcher wants to find out how color schemes influence consumer mood. Which method is most appropriate?
- (A) Literature Review
 - (B) Experimental Research
 - (C) Secondary Data Collection
 - (D) Observational Research
- 596.** Which research design is used to determine causality?
- (A) Observational
 - (B) Correlational
 - (C) Experimental
 - (D) Archival
- 597.** It is critically important for any new treatment for COVID-19 to be done in a ____ study.
- (A) Double blind
 - (B) Randomized
 - (C) Controlled
 - (D) All of the above
- 598.** Research methods: Name a key benefit of EXPERIMENTS
- (A) Able to test cause-and-effect using the scientific method
 - (B) Able to see real-life behavior unfold in an authentic way
 - (C) They ensure participant confidentiality.
 - (D) They are cheap and easy to get lots of participants
- 599.** What is one disadvantage of factorial designs?
- (A) They are limited to investigating two independent variables
 - (B) They require a smaller number of participants
 - (C) Interaction effects become more complex with each added independent variable
 - (D) They eliminate the need for experimental control
- 600.** Assigning participants to experimental and control conditions by chance, minimizing pre-existing differences between those assigned to the different groups.
- (A) Random sampling
 - (B) Double blind procedure
 - (C) Random assignment
 - (D) Random mugging
- 601.** In a scientific experiment, a line graph is used to display the results. What does the slope of the line represent?
- (A) The rate of change between the variables
 - (B) The total change in the dependent variable
 - (C) The average value of the independent variable
 - (D) The maximum value of the dependent variable
- 602.** What technique most clearly minimizes the likelihood that any outcome differences between the experimental and control conditions can be attributed to age or personality differences in research participants?
- (A) Replication
 - (B) Statistical measures
 - (C) Random assignment
 - (D) Operational definitions
- 603.** Who conducts experiments?
- (A) A firefighter
 - (B) A farmer
 - (C) A scientist
 - (D) A waiter

- 604.** When manipulating the independent variable in an educational experiment, which of the following describes this method?
- (A) An independent variable is manipulated using the presence or absence technique.
 - (B) The researchers varies the amount of the independent variable that is administered.
 - (C) The researcher varies the type of the independent variable.
 - (D) All of the above are possible.
- 605.** What determines the type of experimental design in research?
- (A) The number of participants
 - (B) The amount of funding
 - (C) The amount of control the researcher is able to exercise over the research condition
 - (D) The duration of the study
- 606.** The independent variable is manipulated by the researcher. It takes place in a controlled setting.
- (A) Experiment
 - (B) Laboratory Experiment
 - (C) Field Experiment
 - (D) None of above
- 607.** True or false. Any type of research beyond the 4 concepts of control, manipulation, measurement and comparison are real experiments.
- (A) True
 - (B) False
- 608.** A research design that follows basic experimental steps but fails to include a control group. In other words, a single group is often studied but no comparison between an equivalent non-treatment group is made.
- (A) EXPERIMENTAL RESEARCH
 - (B) PRE-EXPERIMENTAL RESEARCH
 - (C) QUASI-EXPERIMENTAL RESEARCH
 - (D) TRUE EXPERIMENTAL RESEARCH
- 609.** ____ establishes causal relationships between two or more variables. In this method, an independent variable is manipulated. All other variables except the independent variable are held constant.
- (A) Experimental research design
 - (B) Ex post Facto research design
 - (C) Historical research design
 - (D) Survey research design
- 610.** What does the experimental group receive in experimental research?
- (A) A control
 - (B) A placebo
 - (C) A treatment
 - (D) No intervention
- 611.** In experimental research, what do researchers measure to assess the effects of their manipulations?
- (A) Extraneous variables
 - (B) Control groups
 - (C) Dependent variables
 - (D) Independent variables
- 612.** What are the types of scientific research depending on the research methods:
- (A) Experimental
 - (B) Total
 - (C) Terms
 - (D) Formal
 - (E) Local
- 613.** The design that best reveal cause-and-effect relationship is:
- (A) Quasi-experimental
 - (B) Cohort
 - (C) Experimental
 - (D) Descriptive
- 614.** What is the best way to determine if experimental results are accurate?
- (A) Perform the experiment only once
 - (B) Ask other people if they think the results are right
 - (C) Repeat the experiment multiple times and compare results
 - (D) Change the hypothesis to match the results

- 615.** What is a challenge in establishing cause-and-effect relationships in field experiments?
- (A) There are usually no influencing factors in field experiments.
 - (B) The presence of multiple influencing factors can make it challenging.
 - (C) Field experiments are too controlled to determine cause and effect.
 - (D) Cause-and-effect relationships are not relevant in field experiments.
- 616.** To test, experimentally, 3 propositions regarding the interaction between physiological and cognitive factors in the experience of emotion
- (A) Canli's Aim
 - (B) Bandura's Aim
 - (C) Schanter and Singer Aim
 - (D) None of above
- 617.** Matched-group designs generally have higher statistical power than between-subjects designs.
- (A) T
 - (B) F
- 618.** Repeated measures design: an experimental design in which each participant performs in ____ level of the IV.
- (A) Every
 - (B) Some
 - (C) One
 - (D) No
- 619.** An experiment is reliable if
- (A) The experiment is done 3 times with big differences in results
 - (B) You made a mistake in one trail but did not change it in the next
 - (C) The same/similar results are obtained from 3 or more trials
 - (D) It takes the same amount of time to complete each trail
- 620.** Define the term: Control group.
- (A) A control group is a group in an experiment that does not receive the treatment and is used as a baseline for comparison.
 - (B) A control group is a group that always receives the treatment in an experiment.
 - (C) A control group is a group that collects data from outside the experiment.
 - (D) A control group is a group that changes the variables during the experiment.
- 621.** What does high ecological validity in natural experiments allow for?
- (A) Reduced demand characteristics compared to lab experiments.
 - (B) The observation of real-world behaviors.
 - (C) Insights into causal relationships in complex real-life situations.
 - (D) The ability to study phenomena that cannot be ethically manipulated.
- 622.** A sham or empty treatment that to subjects of an experiment appears to be the real treatment.
- (A) Response variable
 - (B) Subjects
 - (C) Placebo
 - (D) Lurking variable
- 623.** Theoretically, random assignment should eliminate
- (A) Sampling error
 - (B) Need to use statistics
 - (C) Concerns over validity
 - (D) Many confounding variables
- 624.** The Stanford prison experiment shows the power of:
- (A) Social roles
 - (B) Genes
 - (C) Empathy
 - (D) Parents
- 625.** All of the following falls under experimental research, EXCEPT?
- (A) True experimental
 - (B) Single subject

- (C) Time series
(D) Pre-experimental
- 626.** While designing an experiment, the important thing is to decide ____ which precisely is what the participants should do.
(A) Measurement
(B) Stimuli
(C) Task
(D) Unit of measurement
- 627.** What is the purpose of experimental research in IT?
(A) To study naturally occurring phenomena in real-world settings
(B) To explore the subjective experiences and meanings of individuals
(C) To manipulate variables and establish cause-and-effect relationships
(D) To analyze numerical data and patterns
- 628.** It is a type of research according to approach that Raises a questions based on the necessity of manipulating specific condition in a controlled or laboratory-like setting in order to investigate the effects of different conditions.
(A) EXPLANATORY RESEARCH
(B) EXPERIMENTAL RESEARCH
(C) EXPLORATORY RESEARCH
(D) DESCRIPTIVE RESEARCH
- 629.** An experimental psychologist is ____
(A) A large strong dog bred in Newfoundland, Canada, and having a thick, usually black coat.
(B) A doctor who deals with mental illness.
(C) A person trained to do research and testing that deals with the processes of the human mind and human behavior.
(D) None of above
- 630.** She was the first woman to form a experimental psychology lab at Wellesley College.
(A) Mary Whiton Calkins
(B) Karen Horney
(C) Mary Ainsworth
(D) Melanie Klein
- 631.** To determine the effects of a new drug on memory, one group of people is given a pill that contain the drug. A second group is given a placebo pill. The second group is the
(A) Random sample
(B) Experimental group
(C) Control group
(D) Test group
- 632.** In an experimental situation, subjects of group B are not exposed to the special treatment, effects of which are under study, making group B the ____ group.
(A) Nonexperimental
(B) Experimental
(C) Uncontrolled
(D) Control
- 633.** The “method of difference” establishes cause and effect in experimental designs by:
(A) Comparing situations where only one factor is different to identify its effect
(B) Using random sampling to eliminate bias
(C) Measuring the correlation between two variables
(D) Repeating the experiment multiple times to ensure accuracy
- 634.** Which of the following is a method to control extraneous variables?
(A) Ignoring them
(B) Randomisation
(C) Changing the hypothesis
(D) Increasing sample size
- 635.** Experiments aim to measure the effect which one or more independent variables have on a dependent variable. ____ take place in an artificial, controlled environments; not in a real world contexts such as a schools or a hospitals.
(A) Field experiments
(B) Hypothetical experiments
(C) Theoretical experiments
(D) Laboratory experiments

- 636.** Latin square is a form of ____ that accounts for ____ effects.
- (A) Randomization; order
 - (B) Randomization; Hawthorne
 - (C) Counterbalancing; order
 - (D) Counterbalancing; Hawthorne
- 637.** What compose the experimental research?
- (A) Control group
 - (B) Experimental group
 - (C) Experimental and match group
 - (D) Experimental and control group
- 638.** Artificial conditions (setting and task) can produce unnatural behavior, lowering ecological validity.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment
- 639.** What is the term for withholding critical information to avert bias in a study?
- (A) Homogeneity
 - (B) Randomization
 - (C) Crossover
 - (D) Blinding
- 640.** A quasi-experimental design is better at establishing causality than a fully experimental design.
- (A) T
 - (B) F
- 641.** ____ refers to the extent to which findings can be generalized from the experiment to other settings or situations.
- (A) Internal validity
 - (B) Ecological validity
 - (C) Population validity
 - (D) None of above
- 642.** Which method should a psychology researcher use if she is interested in testing whether a specific reward in a classroom situation causes students to behave better?
- (A) Case Study
 - (B) Experiment
 - (C) Survey
 - (D) Naturalistic Observation
- 643.** What does a researcher do in the method of manipulation?
- (A) Gives intervention to both experimental and control groups
 - (B) Withholds intervention from both groups
 - (C) Gives intervention to the experimental group and withholds it from the control group
 - (D) Administers the same treatment to both groups
- 644.** In order to replicate the experiment, what do you need to have?
- (A) Hindsight Bias
 - (B) Self-Reflection
 - (C) Placebo Effect
 - (D) Operational Definitions
- 645.** What paradigm was used to study dialogue experimentally?
- (A) Referential communication paradigm
 - (B) Translation paradigm
 - (C) Testing paradigm
 - (D) Observation paradigm
 - (E) Interview paradigm
- 646.** A researcher cannot randomize store locations but still introduces a new display in some stores to compare sales. What design is this?
- (A) True experiment with random assignment
 - (B) Cross-sectional descriptive survey
 - (C) Longitudinal cohort intervention
 - (D) Quasi-experiment with nonrandom groups

- 647.** Scenario: A researcher had one group of children go trick-or-treating wearing masks, and a second group of children go trick-or-treating without masks. The researcher found that the children who wore masks took more candy than the children who were not wearing masks. What is the EXPERIMENTAL GROUP?
- (A) Whether or not the children wore masks
 - (B) Amount of candy taken
 - (C) The kids who wore masks
 - (D) Whether or not the children wore masks and trick-or-treated
- 648.** In a new experiment, a counselor educator wants to ferret out the effects of more than one Independent Variable. She will use a ____ design.
- (A) Pearson Product-Moment r
 - (B) Spearman rank order rho
 - (C) Factorial
 - (D) Solomon four-group
- 649.** What is the process called where participants are assigned to either receive the treatment (experimental group) or not receive the treatment (control group)?
- (A) Stratification
 - (B) Randomization
 - (C) Blinding
 - (D) Matching
- 650.** In a laboratory experiment, how are participants allocated to different conditions?
- (A) Based on their preferences
 - (B) Randomly
 - (C) According to their age
 - (D) By their academic performance
- 651.** When conducting an ____, it is important to control all variables to ensure accurate results.
- (A) Laboratory
 - (B) Experiment
 - (C) Infection
 - (D) Species
- 652.** A reliable experiment produces results which
- (A) Are consistent
 - (B) Vary greatly
 - (C) Are different from sample answers
 - (D) Are not consistent
- 653.** The degree to which it can be inferred that the independent variable caused or influenced the outcome variable is:
- (A) External validity
 - (B) Internal validity
 - (C) Reliability
 - (D) None of above
- 654.** What is the second step in experimental research?
- (A) Write your hypothesis
 - (B) Design your experimental treatments
 - (C) Assign your subjects to treatment groups
 - (D) Define your research question and variables
- 655.** In an experiment, the group that is not exposed to the treatment being studied.
- (A) Experimental group
 - (B) Random sampling
 - (C) Control group
 - (D) Confounding variable
- 656.** In a study of effects of alcohol on driving ability, the control group should be given
- (A) A high dosage of alcohol
 - (B) One-half the dosage given the experimental group
 - (C) A driving test before and after drinking alcohol
 - (D) No alcohol at all
- 657.** Research design that involves variable manipulation and randomized selection and assignment of participants
- (A) True Experimental
 - (B) Quasi-Experimental
 - (C) Correlational
 - (D) Cross-sectional

- 658.** Experimentation consists of systematically recording the behaviour patterns of people, objects and events in order to gain information on the area of interest.
(A) True
(B) False
- 659.** You plant 30 African violet seeds and 9 of them sprout. Use experimental probability to predict how many will sprout if you only plant 20 seeds?
(A) 6
(B) 11
(C) 18
(D) 21
- 660.** A numbered step by step description that tells exactly how the experiment is to be done.
(A) Results
(B) Problem
(C) Materials
(D) Procedures Edit
- 661.** Two ways of a matched design
(A) Measure the characteristic of participants and put them into groups which they share the same characteristic
(B) Measure the characteristic during the experiment and compare the groups in an additional analysis
(C) Participants are matched on a characteristic that may contribute to group differences and random assigned to different groups
(D) None of above
- 662.** In true experimental designs, one variable must be manipulated (IV) and subjects are randomly assigned to conditions.
(A) True
(B) False
- 663.** In scientific research, what is the purpose of an experiment?
(A) To prove a theory
(B) To test a hypothesis
(C) To gather opinions
(D) To publish findings
- 664.** The reason which is most often — for using animals in scientific research is for experimental control.
(A) Input
(B) Assignments
(C) Cited
(D) Subsidy
- 665.** In experimental research, when are the control and experimental groups tested?
(A) Both groups are pretested and post-tested
(B) Only the experimental group is pretested and post-tested
(C) Only the control group is pretested and post-tested
(D) Both groups are only post-tested
- 666.** Experiments may contain a —, or a substance or treatment that has no effect apart from the person's belief in it.
(A) Variable
(B) Observation
(C) Placebo
(D) Blind
- 667.** The setting for a quasi-experimental study is generally
(A) An experimental lab
(B) A naturalistic setting
(C) A research setting
(D) A highly controlled setting
- 668.** Which of the following research methods is being described? manipulates factors, uses random assignment
(A) Descriptive method
(B) Correlational method
(C) Experimental method
(D) None of above

669. What is the purpose of including manipulation checks in an experiment?
- (A) To identify if the independent variable (IV) is doing what you expected it would.
 - (B) To increase the sample size of the experiment.
 - (C) To ensure the results are statistically significant.
 - (D) To measure the dependent variable more accurately.
670. In an experiment designed to study the effectiveness of a new drug, research participants who receive a placebo are participating in the ____ condition.
- (A) Dependent variable
 - (B) Correlational
 - (C) Experimental
 - (D) Naturalistic observation
 - (E) Control
671. For this research one has to follow certain steps, such as do some empirical work, share experience, provide data, and conclude everything based on that data.
- (A) Analytical
 - (B) Experimental
 - (C) Persuasive
 - (D) Cause and Effect
672. This experimenter was interested in researching how far people would go in obeying an instruction if it involved harming another person.
- (A) This was Leon Festinger
 - (B) This was Solomon Asch
 - (C) This was Philip Zimbardo
 - (D) This was Stanley Milgram
673. What is internal validity in experimental research?
- (A) The extent to which researchers' conclusions about cause and effect relationships are accurate
 - (B) The accuracy of measurement instruments used in the study
 - (C) The reliability of the study results
 - (D) The generalizability of study findings to different populations
674. Ensure that any changes to the dependent variable are due to the manipulation of the independent variable.
- (A) Controls
 - (B) Participant Variables
 - (C) Situational Variables
 - (D) Standardized Procedures
 - (E) Uncontrolled Variables
675. Neither the researcher nor the subjects knew whether or not they received the drug studied or a placebo. This is an example of
- (A) Expectancy effects
 - (B) Placebo effects
 - (C) Double blind
 - (D) Nothing. It would be ridiculous
676. Which research design involves manipulation of variables and random assignment?
- (A) Descriptive
 - (B) Experimental
 - (C) Correlational
 - (D) Historical
677. What step relates to experimental research?
- (A) Identify the Research Questions or Hypotheses
 - (B) Decide if an Experiment Addresses Your Research Problem
 - (C) Decide if a Survey Is the Best Design to Use
 - (D) Identify the Population, the Sampling Frame, and the Sample
678. Researchers use experiments when they have more than two variables to consider.
- (A) True
 - (B) False

- 679.** Which one of the following qualities is unique to single-case experimental design?
- (A) Ability to produce highly generable findings
 - (B) Lack of confounding variables that plague other experimental designs
 - (C) Can establish causality with only one subject
 - (D) Allows researchers to study topics that raise ethical concerns if subjects are assigned to particular conditions
- 680.** A study that manipulates one variable and observes its effect on another is:
- (A) Grounded Theory
 - (B) Experimental Research Design
 - (C) A case study
 - (D) Large-n studies
- 681.** What's the most common type of experimental design performed in classroom settings?
- (A) Quasi-experiments.
 - (B) True experiments.
 - (C) Time series experiments.
 - (D) Single subject experiments.
- 682.** Using a funnel, water, and different soil samples, what experiment would you be testing?
- (A) Which soil has the most nutrients
 - (B) Which soil has the most minerals
 - (C) Which soil allows plants to grow the best
 - (D) Which soil holds the most water
- 683.** Why might natural experiments face replication challenges?
- (A) Because they are less expensive to conduct
 - (B) Due to the simplicity of natural events
 - (C) Because of the uniqueness of natural events
 - (D) They do not face any replication challenges
- 684.** According to the organization of the experiment, it is divided into:
- (A) Preparation, execution, and analysis
 - (B) Theory and practice
 - (C) Planning and reporting
 - (D) Observation and conclusion
- 685.** What is a "single blind study"?
- (A) A study in which the participants are unaware of whether they are in the control group or the experimental group
 - (B) A study in which both the participants and the researchers are unaware of the group assignments
 - (C) A study in which only the researcher is unaware of the group assignments
 - (D) A study in which neither the participants nor the researchers are unaware of the group assignments
- 686.** Unaware of whether one is in the experimental or control group
- (A) Blind
 - (B) Thalamus
 - (C) Existence proof
 - (D) Perception
- 687.** Double-Blind procedures are good because they prevent —
- (A) Social Desirability
 - (B) Correlations
 - (C) Experimenter Bias
 - (D) Outliers
- 688.** What is an example of quasi-experimental research?
- (A) Testing the impact of interactive learning apps
 - (B) Studying the effects of a new reading curriculum in one school without randomly assigning students
 - (C) Documenting the average daily screen time
 - (D) Distributing an online survey
- 689.** There is less control over extraneous variables, making research difficult to replicate.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment

- (C) Weakness of Laboratory Experiment
(D) Weakness of Field Experiment
- 690.** What is the role of the independent variable in experimental research?
(A) It is the observed and measured variable
(B) It is the manipulated variable
(C) It identifies relationships among variables without manipulation
(D) It analyzes past documents and artifacts
- 691.** What is a study where only one variable is manipulated at a time?
(A) Control Variable
(B) Controlled Experiment
(C) Operational Definition
(D) Dependent Variable
- 692.** This school of thought focuses on observable behavior and how it can be manipulated and changed
(A) Structuralism
(B) Behaviorism
(C) Gestalt
(D) Psychoanalysis
- 693.** The process in which each participant has an equal and known probability of being assigned to either the control or the experimental group is
(A) Randomization
(B) Manipulation
(C) Research control
(D) All the above
- 694.** A company tests different ad copies in different regions and compares sales. What type of research is this?
(A) Descriptive
(B) Experimental
(C) Observational
(D) Correlational
- 695.** This is a method used to prevent investigator bias
(A) Standardisation
(B) Double-blind study
(C) Single-blind study
(D) Randomisation
- 696.** What are the types of experimental research design?
(A) Pre-experimental research design
(B) True experimental research design
(C) Quasi-experimental research design
(D) All of them
- 697.** In order to control for experimenter bias as well as extraneous variables such as severity of condition, attitudes, age, etc., researchers assign subjects to groups by:
(A) Random assignment
(B) Replication
(C) Naturalistic observation
(D) Operational definitions
- 698.** Which of the following research types involves controlled manipulation of variables to determine cause-and-effect relationships?
(A) Descriptive research
(B) Historical research
(C) Experimental research
(D) Qualitative research
- 699.** Which research method could be used when studying memory?
(A) Interview
(B) Case study
(C) Laboratory experiment
(D) Questionnaire
- 700.** Experimental research aims at ____
(A) To find out the difference between groups after treatment is given
(B) To find out the relationship between the two variables
(C) To find out the phenomena happen in large population about an object
(D) To find out the phenomena happen in small population about an object

- 701.** What do you understand about "Explanatory Research"?
- (A) Cause-effect
 - (B) It describes the behavior of a sample population
 - (C) It helps to ask research questions
 - (D) It is the best way to find information
- 702.** When an experiment was conducted using appropriate controls so that it supports the conclusion that the independent variable caused observed differences in the dependent variable.
- (A) Reliability
 - (B) Ecological validity
 - (C) External validity
 - (D) Internal validity
- 703.** Research method in which an investigator manipulates one or more factors to observe the effect on some behavior or mental process:
- (A) Naturalistic observation
 - (B) Experiment
 - (C) Survey
 - (D) Case study
- 704.** The question in a controlled experiment includes:
- (A) A controlled variable and an independent variable
 - (B) An independent & a dependent variable
 - (C) An unknown variable & a independent variable
 - (D) A cheeseburger & fries
- 705.** Counterbalancing is a procedure that is intended to reduce ___ in a/n ___ design.
- (A) Order effects | independent-groups
 - (B) Order effects | repeated-measures
 - (C) The influence of participant variables | matched-participants
 - (D) The influence of participant variables | independent-groups Edit
- 706.** How would you determine the best research method for studying the effect of sleep on student performance?
- (A) Use correlational research to determine the link between sleep and performance.
 - (B) Conduct an experiment to manipulate sleep hours and measure its effect on performance.
 - (C) Use archival research to examine past data on student sleep and grades.
 - (D) Perform a case study on a single student with different sleep patterns. Edit
- 707.** Which study would benefit from using an experimental research method?
- (A) A study determining the effect of adding nitrogen to soil in which pea seeds are planted
 - (B) A study determining the relationship between a student's social class and their standardized test scores
 - (C) A study determining the accuracy of a focus group's first impressions of a new product
 - (D) A study determining why more people patronize one cafe over another similar cafe
- 708.** To increase the reliability of an experiment, you:
- (A) Ensure that all measurements are accurate
 - (B) Ensure that all variables are controlled except for 1
 - (C) Repeat the experiment multiple times to gather a similar result
 - (D) None of above
- 709.** A research design involves two randomly assigned groups of participants. One group receives a one-time treatment, and the other does not. Later, the two groups are compared to see whether the treatment had an effect. Psychologists call this kind of research
- (A) A correlational study
 - (B) An experiment
 - (C) A case study
 - (D) A survey

- (E) A cross-sequential study
- 710.** It approximates the conditions of the true experiments in a setting which does not allow the control or manipulation of all relevant variables.
- (A) True experimental method
 - (B) Historical method
 - (C) Causal-comparative method
 - (D) Quasi-experimental method
- 711.** A type of research method that investigates the effect of an IV on a DV.
- (A) Correlational study
 - (B) Experimental method
 - (C) Case study
 - (D) Brain imaging
- 712.** ____ research is where an investigator manipulates one or more factors (independent variables) to observe the effect on some behavior or mental process (the dependent variable).
- (A) Experimental
 - (B) Correlational
 - (C) Descriptive
 - (D) Observational
- 713.** Matched pairs is a type of
- (A) Experimental design
 - (B) Experimental control
 - (C) Experimental method
 - (D) Extraneous variable
- 714.** Testing different versions of a product, website, or ad to see which performs better.
- (A) Experiments & A/B Testing
 - (B) Market Segmentation Research
- 715.** A disadvantage of ____ is that the artificiality of the lab may not lend itself to real results that are unaffected by sampling, participant, or experimenter bias.
- (A) Experiments
 - (B) Case Study
 - (C) Survey
 - (D) Natural observation
 - (E) Correlational
- 716.** A company wants to sell more sports drinks so they decide to add more sugar. For Group A they give them Gatorade with an added teaspoon of sugar. For Group B they give them plain Gatorade without adding sugar. Which Group is the CONTROL GROUP?
- (A) Group A
 - (B) Group B
 - (C) The Gatorade
 - (D) The Company
- 717.** Which would not be classed as a 'true' experiment?
- (A) Field experiment
 - (B) Lab experiment
 - (C) Quasi-experiment
 - (D) Controlled experiment
- 718.** Which of the following is not considered as an example of experimental research design?
- (A) True Experimental
 - (B) Pre-experimental
 - (C) Post-experimental
 - (D) Quasi Experimental
- 719.** Why is Wilhelm Wundt often considered the first scientific psychological researcher?
- (A) He did field work
 - (B) He had the most fun with it
 - (C) He gathered data through experiments in a lab
 - (D) He incorporated biological neuroscience into it
- 720.** Which of the following is true for those assigned to a control group?
- (A) The experimental treatment is absent.
 - (B) The experimenter exerts the greatest influence on participants' behavior.
 - (C) The research participants are exposed to the most favorable levels of experimental treatment.
 - (D) The research participants are exposed to all the different experimental treatments.

721. The subgroup of the sample that receives the independent variable.
(A) Experimental group
(B) Control group
(C) Population
(D) None of above
722. An experiment in which neither the experimenter nor the participants know which participants received which treatment.
(A) Double-blind experiment
(B) Single-blind experiment
(C) Control study
(D) Pilot study
(E) Correlation study
723. Which of the following best describes "Experimental"
(A) Quantitative
(B) Qualitative
(C) Independent variable manipulation
(D) Dependent variable
724. What is it called when a scientist repeats an experiment several times in the exact same way?
(A) Hypothesis testing
(B) Repeated trials
(C) Sloppy work
(D) None of above
725. A within-subjects design requires that
(A) The participants do not undergo the same conditions.
(B) Quasi-experimental variables within each participant are measured.
(C) There are fewer statistical assumptions during analysis than a between-subjects design.
(D) Researchers assign each participant to all possible conditions.
726. To ensure that the influence of all relevant variables is the same for all the subjects and does not change during the experimental period is the main objective of
(A) Experimental Variables.
(B) Hypothesis Testing.
(C) Experimental Error.
(D) Experimental Control.
727. Why do researchers incorporate various methods in the experimentation process?
(A) To increase the complexity of the experiment
(B) To decrease the impact of inherent flaws
(C) To make the results more difficult to interpret
(D) To extend the duration of the experiment
728. What is one limitation of experimental research due to the setting in which it is conducted?
(A) It can be too costly.
(B) It may not fully represent real-life situations.
(C) It always requires a large number of participants.
(D) It cannot be replicated.
729. What is a series of procedures designed to test a hypothesis?
(A) Prediction
(B) Experiment
(C) Scientific Method
(D) Research
730. How can you ensure that your experiment is reproducible?
(A) Conduct experiments in isolation
(B) Use random procedures
(C) Document procedures, use standardized protocols, and share data.
(D) Ignore data sharing
731. Keith exposes half of his participants to an episode of a sitcom and half to an episode of a violent television show and then observes them for signs of aggressive behavior.
(A) Random Assignment
(B) Random Sampling

732. Keeping the procedure the same for each part to ensure any differences are due to the variables being investigated
- (A) Standardization
 - (B) Randomization
 - (C) Counterbalancing
 - (D) Generalizing
733. In France, the legal working hours were reduced from 40 hours to 35 hours a week in the late 1990s in some companies. Researchers are interested in the effect of fewer working hours on individual well-being by exploiting the change in the French context. By doing so, they are doing a:
- (A) Field experiment
 - (B) Natural Experiment
734. Experimental methods can be typically be described by which of the following?
- (A) DESCRIPTIVE
 - (B) CAUSE-AND-EFFECT
 - (C) CORRELATIONAL
 - (D) QUALITATIVE
735. Keeping the hypothesis of an experiment secret from participants reduces the potential of a floor effect
- (A) T
 - (B) F
736. ____ are conducted in the participants natural environment and the researcher has no control over the IV, the IV occurred naturally.
- (A) Field exp.
 - (B) Natural exp.
 - (C) Lab exp.
 - (D) Case study
737. If you wanted to determine if people who take vitamin C every day are less likely to get colds, what is the best method of data collection?
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
738. A laboratory experiment:
- (A) Is easier to repeat.
 - (B) Is more realistic.
 - (C) Has no ethical issues.
 - (D) None of the above.
739. ____ examine the effectiveness of instructional practices by implementing them with students and determining if there are any advantages for the students who use them. These studies are considered the best source of evidence.
- (A) Experimental research studies
 - (B) Descriptive research studies
 - (C) Correlational research studies
 - (D) Case studies
740. A dog owner wants to know what shampoo is better for his dogs. He washes one dog with shampoo A and one with shampoo B. He then compared their fur.
- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
741. The subjects in the study that receive the treatment are called the ____
- (A) Control Group
 - (B) Experimental Group
 - (C) Independent Variable
 - (D) Dependent Variable
742. Which step refers to collecting data by doing an experiment?
- (A) Research
 - (B) Test the Hypothesis
 - (C) Conclusion
 - (D) Analyze data
743. Demand characteristics: the experimental situation which give away the aims. They can cause participants to try to change their behavior to match their beliefs about what is ____

- to happen, which reduces the validity of the study.
- (A) Validity
 - (B) Cause
 - (C) Supposed
 - (D) Behavior
- 744.** What is “debriefing” in a psychological experiment?
- (A) A process where the participants are informed about the purpose of the experiment after it is completed
 - (B) A process where the participants are given a brief summary of the experiment before it starts
 - (C) A process where the participants are given a break during the experiment
 - (D) A process where the participants are asked to give feedback about the experiment before it starts
- 745.** Which type of research design is used to examine a causal relationship and involves manipulating one variable, randomly assigning participants or subjects to different levels of that manipulated variable, and measuring the effect of that manipulation on another variable?
- (A) Descriptive research
 - (B) Correlational research
 - (C) Quasi-experimental research
 - (D) Experimental research
- 746.** Order effect is most likely to occur in ____?
- (A) Within-subjects experiment
 - (B) Between subject experiments
- 747.** What happens after a treatment is assigned to a group in an experimental study?
- (A) Data is compared based on the results of the treatment
 - (B) The group is dismissed
 - (C) No further action is taken
 - (D) The treatment is ignored
- 748.** An attempt by a different group to conduct the same experiment
- (A) Bias
 - (B) Repeated trial
 - (C) Replication
 - (D) Scientific explanation
- 749.** One of the appropriate statistics that can be used for Solomon four experimental designs is
- (A) Median Test.
 - (B) Chi-square.
 - (C) Co relational Analysis.
 - (D) One-way ANOVA.
- 750.** Which is an example of scientific approach?
- (A) Experiment
 - (B) Case study
 - (C) Literature review
 - (D) Focus group interview
- 751.** An experiment is conducted to test how different cleats change an athletes running speed. Six different types of cleats are tested and the 100m run time is recorded. What is the independent variable?
- (A) The type of cleat
 - (B) The run time
 - (C) The 100 meters
 - (D) The athlete
- 752.** What does a manipulation check in psychology research ensure?
- (A) It ensures the experimental 'treatment' took hold.
 - (B) It measures participant intelligence.
 - (C) It guarantees random assignment.
 - (D) It checks for experimenter bias.
- 753.** A double-blind design results in more rigorous control of the experiment than a single-blind design.
- (A) T
 - (B) F

754. The most important element of Experimental research design is:
- (A) Manipulation of Dependent Variable
 - (B) Manipulation of Independent Variable
 - (C) Randomization
 - (D) Control and Experiment group
755. In an experiment, the group that is exposed to the treatment (the group that has the independent variable given)
- (A) Control group
 - (B) Experimental group
756. In this research, subjects are randomly assigned to experimental treatment and control groups who are treated to the same except for the treatment variable.
- (A) Correlational
 - (B) Descriptive
 - (C) Experimental
 - (D) Quasi-experimental
757. What is a 'Causal Relationship'? A relationship where one variable directly affects another.
- (A) True
 - (B) False
758. What is the process of maneuvering the independent variable (IV) to observe its effect on the dependent variable (DV) called?
- (A) Observation
 - (B) Measurement
 - (C) Manipulation
 - (D) Analysis
759. He established the world's third experimental psychology lab at the University of Pennsylvania.
- (A) James McKeen Cattell
 - (B) Stanley Hall
 - (C) Edwin Boring
 - (D) Lee Cronbach
760. One strength of experimental findings is that they should ____
- (A) Be easy to replicate due to the standardised procedure
 - (B) Be high in ecological validity
 - (C) Avoid demand characteristics
 - (D) Be generalisable to the target populations
761. Which comes first in an experiment?
- (A) Creating a hypothesis
 - (B) Collecting data
 - (C) Analyzing data
 - (D) Dividing subjects into groups
762. How can the setting of field experiments benefit researchers?
- (A) By limiting the scope of the study to controlled environments.
 - (B) By increasing the impact of demand characteristics.
 - (C) By helping researchers uncover unexpected insights and nuances in behavior.
 - (D) By making the experiments more artificial.
763. In a single-case experimental design, multiple exposures to the intervention could affect the responses of the subject. This is similar to ____ of within-group designs.
- (A) Accounting for individual differences
 - (B) Generalizability limitations
 - (C) The carryover effect
 - (D) The Hawthorne effect
764. All good experiments should be:
- (A) Questionable
 - (B) Testable
 - (C) Explainable
 - (D) Thoughtful
765. Features of the environment may reveal the aim, leading participants to act in a way they feel the researcher wants them to (demand characteristics).
- (A) Strength of Laboratory Experiment

- (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment
- 766.** Experiments are controlled environments to test specific ____
- (A) Hypotheses
 - (B) Theories
 - (C) Variables
 - (D) Results
- 767.** The control group in an experiment differs from the treatment group such that:
- (A) It is quasi-experimental
 - (B) Participants are randomly assigned
 - (C) Receives the treatment
 - (D) Does not receive the treatment
- 768.** What does experimental research allow researchers to establish?
- (A) Correlations between subjective opinions
 - (B) Cause-and-effect relationships between variables
 - (C) Historical timelines of events
 - (D) Statistical significance of random samples
- 769.** What is the main characteristic of experimental design?
- (A) Manipulation of independent variables
 - (B) Collection of secondary data
 - (C) Literature reviews only
 - (D) Passive observation
 - (E) Case study approach
- 770.** What do we call a response to the belief that the independent variable will have an effect on the subjects when they haven't been given the independent variable?
- (A) Placebo effect
 - (B) Case study
 - (C) Experiment
 - (D) None of above
- 771.** In the quasi-experimental design, what does "O" represent?
- (A) Randomization
 - (B) Observation or measurement
 - (C) Treatment or intervention
 - (D) Effect
- 772.** In an experimental study, what is the purpose of assigning a treatment to a group?
- (A) To study a specific characteristic and compare data based on the results
 - (B) To entertain the group members
 - (C) To avoid collecting any data
 - (D) To ensure all groups are identical
- 773.** This type of research is guided specifically by a hypothesis.
- (A) Cultural Research
 - (B) Historical Research
 - (C) Case Study
 - (D) Experimental Research
- 774.** Researchers use the double-blind procedure to avoid:
- (A) Random assignment.
 - (B) Replication.
 - (C) Researcher and participant bias.
 - (D) The placebo effect.
- 775.** Conducted in a laboratory-setting.
- (A) Structured Observations
 - (B) Unstructured Observations
 - (C) Naturalistic Observations
 - (D) Controlled Observations
- 776.** The aim of the experiment:
- (A) Is in the format "if ____ then ____ because"
 - (B) Starts with "To ____"
 - (C) Always uses personal pronouns
 - (D) Is a prediction of what you think will happen

777. What is the significance of experiential validation?
- (A) Experiential validation is only relevant in academic settings.
 - (B) Experiential validation is a method for theoretical analysis without practical application.
 - (C) Experiential validation confirms theories or products through real-world experiences, enhancing trust and effectiveness.
 - (D) Experiential validation focuses solely on statistical data rather than real-world experiences.
778. Where is basic experimental research normally conducted?
- (A) In the field
 - (B) In a laboratory
 - (C) At home
 - (D) In a library
779. Equating through matched pairs is the method used in
- (A) Sociological Research.
 - (B) Experimental Research.
 - (C) Survey Research.
 - (D) Trend Research.
780. Which approach is the strongest for establishing that a relationship is causal?
- (A) Co relational.
 - (B) Causal-comparative.
 - (C) Historical.
 - (D) Experimental.
781. Chemical, mechanical & computer simulations are effective research methods but cannot replace
- (A) Building blocks
 - (B) Lab testing on animals
 - (C) Reduce number of researchers needed
 - (D) Reduce time spent on research
782. Which type of epidemiological study is greatly limited by ethical and legal considerations?
- (A) Experimental
 - (B) Observational
783. Which of the following research designs is the gold standard for research studies that involve an intervention?
- (A) Non-experimental Descriptive.
 - (B) Non experimental Correlational.
 - (C) Randomized Controlled Trials.
 - (D) Quasi-experimental.
784. Which design features random assignment and controlled manipulation of variables?
- (A) Experimental
 - (B) Descriptive
 - (C) Correlational
 - (D) Case series
785. Manipulation is always a part of
- (A) Historical research
 - (B) Fundamental research
 - (C) Descriptive research
 - (D) Experimental research
786. What is the Hawthorne Effect?
- (A) People who volunteer for research differ from those who do not.
 - (B) General tendency to respond in a certain way regardless of the question.
 - (C) Participants change behavior because they know they are being observed.
 - (D) Systematic differences between those who drop out and those who remain.
787. Which of the following is an experiment in which both the participants and the researchers do not know which group is receiving a treatment and which is receiving a placebo?
- (A) Double Blind Study
 - (B) Single Blind Study
 - (C) Longitudinal Study
 - (D) Cross Sectional Study

788. This occurs when behavior differs due to the administration of an inert substance or condition which the recipient assumes is an active agent.
- (A) Standard deviation
 - (B) Correlation
 - (C) Confounding variable
 - (D) Placebo effect
789. A counselor educator is running an experiment to test a new form of counseling. Unbeknownst to the experimenter one of the clients in the study is secretly seeing a gestalt therapist. This experiment
- (A) Is parsimonious
 - (B) Is an example of Occam's Razor
 - (C) Is confounded/flawed
 - (D) Is valid and will most likely help the field of counseling
790. In a typical study design, what is the group called that receives the treatment?
- (A) Control group
 - (B) Experimental group
 - (C) Placebo group
 - (D) Random group
791. What research method used to establish cause and effect?
- (A) Descriptive Research
 - (B) Correlational Research
 - (C) Experimental Research
 - (D) Observational Research Edit
792. Conducting scientific experiments is a method to gather formal research.
- (A) True
 - (B) False
793. Effects of Morning Exercise on the Health Anxiety Level of Senior Citizens Quantitative Research Design: ____
- (A) Experimental
 - (B) Descriptive
 - (C) Correlational
 - (D) Case Study
794. Which research design is the ONLY design in which we can assert that one variable is causing another variable?
- (A) Survey research
 - (B) Case study research
 - (C) Experimental research
 - (D) Archival research
795. Which type of research question examines cause-and-effect?
- (A) Causal.
 - (B) Comparative.
 - (C) Descriptive.
 - (D) Exploratory.
 - (E) Descriptive-comparative.
796. A research that is conducted in artificial and controlled conditions
- (A) Developmental research
 - (B) Laboratory research
 - (C) Field research
 - (D) Applied research
797. What helps to isolate the effects of manipulated variables in experimental research?
- (A) Random assignment
 - (B) Measurement and data analysis
 - (C) Controlled conditions
 - (D) Manipulation of variables
798. The Solomon four-group design is a pre-test post-test design where ____
- (A) The experimental and control groups are randomly assigned
 - (B) There are two experimental and control groups, one that takes the pre-test and one that does not take the pre-test
 - (C) A historical event is used at the "treatment"
 - (D) The experimental group is randomly assigned

- 799.** In nonexperimental research designs, what distinguishes experimental studies from non-experimental studies?
- (A) The use of surveys
 - (B) Manipulation of factors
 - (C) The number of participants
 - (D) The nature of the study question
- 800.** When participants are assigned to the control group and to the experimental group by chance, this is an example of:
- (A) Selective sampling
 - (B) Random assignment
 - (C) Hindsight bias
 - (D) Population
- 801.** Which type of study usually includes random assignment to interventions?
- (A) Quasi-experimental
 - (B) Experimental
 - (C) Correlational
 - (D) Descriptive
- 802.** What is the purpose of an experiment in data collection?
- (A) To obtain facts about the subject
 - (B) To evaluate results after giving a treatment
 - (C) To ask questions orally
 - (D) To obtain statistical information
- 803.** Which method best captures cause-and-effect by manipulating variables under controlled conditions?
- (A) Longitudinal panel without interventions
 - (B) Structured observations in natural settings
 - (C) Cross-sectional surveys at one time point
 - (D) Experiments with randomized assignment
- 804.** Allowing certain aspects of the study to be left to chance rather than to researcher or participant choice
- (A) Randomness
 - (B) Masking or blinding
- 805.** How does the independent variable affect the dependent variable? This group is the ____ group.
- (A) Experimental
 - (B) Control
- 806.** To determine the effectiveness of a new pain reliever, a researcher divides a random sample of patients into two groups: one group is assigned to take the new drug and the second group takes a placebo. Does this experimental research study involve blinding?
- (A) Yes
 - (B) No
 - (C) All the above
 - (D) None of the above
- 807.** In this study, the researcher manipulates one of the variables and tries to determine how manipulation influences other variables.
- (A) Observational study
 - (B) Cross-sectional study
 - (C) Longitudinal study
 - (D) Experimental study
- 808.** Controlled study in which researchers manipulate an IV to study its effect on a DV
- (A) Descriptive research
 - (B) Analytical research
 - (C) Experimental research
 - (D) None of above
- 809.** What is the main function of a control group?
- (A) Provide baseline without treatment exposure
 - (B) Conceal allocation to reduce bias
 - (C) Ensure accuracy in measuring constructs
 - (D) Receive the intervention during study

- 810.** A design that describes what will be when certain variables are carefully controlled or manipulated.
- (A) Qualitative research design
 - (B) Mixed-method research design
 - (C) Experimental research design
 - (D) None of above
- 811.** Experimental psychology utilizes ____ methods to answer these questions by researching the mind and behavior.
- (A) Scientific
 - (B) Systematic
 - (C) Automatic
 - (D) Synthetic
- 812.** The procedure in experimental studies is highly standardized, meaning every participants has the exact same experience within the study (except for the manipulation of the IV) and this should improve the study's ____
- (A) Reliability
 - (B) Generalisability
 - (C) Ethics
 - (D) External validity
- 813.** Suppose you are looking at how daisies grow in different light sources. What would your control group be?
- (A) Blue filtered light
 - (B) Red filtered light
 - (C) Green filtered light
 - (D) Sunlight or white light
- 814.** A company tries two different TV ads to see which one makes more people buy their product. What type of research design is used?
- (A) Experimental
 - (B) Descriptive
 - (C) Exploratory
 - (D) Explanatory
- 815.** A double-blind study is sometimes needed because researchers may have expectations that affect their observations.
- (A) True
 - (B) False
- 816.** Both researcher and participants in a memory study are ignorant about which participants have actually received a potentially memory enhancing drug and which have received a placebo. This investigation involves the use of:
- (A) Naturalistic observation
 - (B) Replication
 - (C) The double blind procedure
 - (D) Random sampling
- 817.** Define the term: Experimental group.
- (A) An experimental group is the group in an experiment that receives the treatment or intervention being tested.
 - (B) An experimental group is the group that is not exposed to any variables.
 - (C) An experimental group is the group that collects data only.
 - (D) An experimental group is the group that observes the experiment without participating.
- 818.** A term used to describe how people look for cues in experiments and this changes their behaviour
- (A) The Hawthorne effect
 - (B) Social desirability bias
 - (C) Demand characteristics
 - (D) Investigator bias
- 819.** The variables in a field experiment operate more strongly than those used in
- (A) Laboratory Experiment.
 - (B) Introspective method.
 - (C) Observational Method.
 - (D) Case study.
- 820.** In an experiment, in which group would placebos be used?
- (A) Variable group
 - (B) Control group

- 821.** Which of the following would be best for determining whether alcohol impairs memory?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Survey
 - (D) Experiment
 - (B) Content Analysis
 - (C) Experimental
 - (D) Historical
 - (E) Survey
- 822.** What do researchers manipulate in an experimental research design?
- (A) Dependent variables
 - (B) Control groups
 - (C) Independent variables
 - (D) Extraneous variables
- 823.** The comparison group, the subgroup of the sample that is similar to the experimental group in every way except for the presence of the independent variable.
- (A) Experimental group
 - (B) Control group
 - (C) Population
 - (D) None of above
- 824.** What is the experimental method in the experiment?
- (A) The conclusion to your experiment
 - (B) The materials needed to complete experiment
 - (C) Step by step directions of how to complete your experiment
 - (D) An educated, best guess Edit
- 825.** What does experimental research involve?
- (A) Observing natural phenomena without interference
 - (B) Manipulating variables to observe their effects on another variable
 - (C) Conducting surveys and interviews
 - (D) Analyzing statistical data from archives
- 826.** Sir O would like to test the effectiveness of the cooperative approach in improving students' performance. He used two of his classes for the study.
- (A) Case Study
- 827.** Both participant and experimenter are unaware of condition / eliminates potential demand characteristics
- (A) Double-blind studies
 - (B) Random assignment
 - (C) Random sampling
 - (D) None of above
- 828.** How can a researcher control for selection bias?
- (A) Use instrumentation
 - (B) Use random assignment
 - (C) Use pretest
 - (D) Use cluster sampling
- 829.** Participant variables are controlled.
- (A) Strength of Independent Measures Design
 - (B) Strength of Repeated Measures Design
 - (C) Strength of Matched-Pair Design
 - (D) None of above
- 830.** Why can replication of field experiments be particularly difficult?
- (A) Because they are always conducted in a controlled environment.
 - (B) Because they do not involve real-world conditions.
 - (C) Because real-world conditions can vary, making replication difficult.
 - (D) Because they are less ethical than other types of experiments.
- 831.** Why are natural experiments considered ethically suitable?
- (A) Because they allow researchers to manipulate participants freely.
 - (B) Because they require a large number of participants.

- (C) Because they ensure research can be conducted ethically when manipulating variables is unethical.
- (D) Because they are less expensive than other types of experiments.
- 832.** In an experiment, the standard that is used for comparison.
- (A) Control
- (B) Conclusion
- 833.** In an experiment research, the control group is:
- (A) The one that is not manipulated and in which any changes are observed
- (B) The one that is manipulated in order to observe any effects on the other
- 834.** What is the first step when conducting a scientific experiment?
- (A) Writing a scientific article
- (B) Collecting samples
- (C) Formulating a hypothesis
- (D) Making graphs
- 835.** Researchers performing a well-designed experiment should base their conclusions on
- (A) A-the hypothesis of the experiment
- (B) B-data from repeated trials of the experiment
- (C) C-a small sample size to insure a reliable outcome of the experiment
- (D) D-results predicted before performing the experiment
- 836.** Which of the following features would one find in a double-blind experiment?
- (A) Experimenters are aware of both dependent and independent variables prior to the experiment
- (B) The independent variable remains unknown to both subjects and researchers during the course of the experiment
- (C) Neither experimenters nor subjects are aware of dependent-variable levels
- (D) The Hawthorne effect should not be an issue in testing
- 837.** A counselor educator decides to increase the sample size in her experiment. This will
- (A) Confound the experiment in nearly every case
- (B) Raise the probability of Type I and Type II errors
- (C) Have virtually no impact on Type I and Type II errors
- (D) Reduce Type I and Type II errors
- 838.** ____ is used when the same group of participants is exposed to 2 or more conditions and the conditions are compared.
- (A) Matched pair design
- (B) Independent measures design
- (C) Repeated measures design
- (D) Correlational measures design
- 839.** What are lab experiments conducted in?
- (A) Natural environments with uncontrolled variables
- (B) Controlled environments with carefully manipulated variables
- (C) Unstructured settings with random variables
- (D) Public spaces with minimal supervision
- 840.** They are attempts to establish a cause-and-effect relationship between two variables by manipulating one variable.
- (A) Observations
- (B) Experiments
- (C) Correlations
- (D) Self-reports
- 841.** What is one of the strengths of field experiments compared to lab experiments?
- (A) They have a higher risk of demand characteristics.
- (B) They are more artificial.
- (C) They mimic natural settings for behavior observation.
- (D) They are more difficult to generalize to real-world scenarios.

- 842.** An agriculturist wants to determine the effect of fertilizer type on the yield of tomatoes. There are four types of fertilizer under study. She plants tomatoes on five plots of land, one plot receives no fertilizer. Each plot is treated identically except for receiving a different type of fertilizer. What are the treatments?
- (A) Tomato plants
 - (B) Plots of Land
 - (C) Types of fertilizer
 - (D) Yield of tomatoes
- 843.** A research design that determines cause and effect relationships. This method involves manipulating one variable to determine if changes in one variable cause changes in another variable?
- (A) Action Research
 - (B) Naturalistic Research
 - (C) Experimental
 - (D) Sequential
- 844.** Which data collection method would you use to collect data for this study? A study of the effect of changing flight patterns on the number of airplane accidents.
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
- 845.** In experimental research, researchers actively introduces:
- (A) Treatment
 - (B) Recommendation
 - (C) Summary
 - (D) Findings
- 846.** What does random assignment in experimental research involve?
- (A) Assigning participants to experimental conditions based on their preferences
 - (B) Assigning participants to different experimental conditions or groups in a random and unbiased manner
 - (C) Assigning participants to experimental conditions based on their previous experience
 - (D) Assigning participants to experimental conditions based on the researcher's hypothesis
- 847.** A laboratory experiment is a research study in which the variance of all the possible influential independent variables not pertinent to the immediate problem of the investigations is kept at a
- (A) Maximum.
 - (B) Minimum.
 - (C) Constant level.
 - (D) Highest Point.
- 848.** What is the group designed to answer the research question; experimental manipulation is the only difference between the experimental and control groups?
- (A) Experimental group
 - (B) Control group
 - (C) Cross-sectional research
 - (D) None of above
- 849.** In what kind of situation can the placebo effect be used?
- (A) Fun and entertainment
 - (B) Medicine trials
 - (C) For school
 - (D) Dance rehearsals
- 850.** Double-Blind Study
- (A) Study in which neither the experimenter nor the subjects know if the subjects are in the experimental or the control group.
 - (B) Study in which the subject do not know if they are in the experimental or the control group.
 - (C) A measure of the relationship between two variables.
 - (D) The observation of human or animal behavior in its natural setting.

- 851.** Which of the following is an example of the method of manipulation?
- (A) Using the same teaching strategy for all students
 - (B) Using a particular teaching strategy for one group and not for another
 - (C) Not using any teaching strategy at all
 - (D) Using different teaching strategies for different subjects
- 852.** What does random assignment ensure in a study?
- (A) Study participants have the same chance of being assigned to the intervention group or the comparison group.
 - (B) Study participants are always assigned to the intervention group.
 - (C) Study participants are always assigned to the comparison group.
 - (D) Study participants are assigned based on their preferences.
- 853.** In a ____ participants don't know if they're part of the experimental group or the control group.
- (A) Single-blind study
 - (B) Survey
 - (C) Naturalistic observation
 - (D) Double-blind study
- 854.** 'Subject Mortality' leads to internal invalidity of
- (A) Experimental Research.
 - (B) Philosophical Research.
 - (C) Descriptive Research.
 - (D) Historical Research.
- 855.** In a study on alcohol and aggressive behavior, subjects are randomly assigned to one of two groups. One group receives real alcohol while the other group receives tonic water which tastes identical to real alcohol. In this way, neither group of subjects knows who got the real alcohol. In this study, the non-alcoholic tonic water serves as a(n) ____
- (A) Selection factor
 - (B) Dependent variable
 - (C) Independent variable
 - (D) Placebo
- 856.** How the IV influences the DV in an experiment can also be referred to as the
- (A) Experimenter Bias
 - (B) Standardised procedure
 - (C) Cause and effect relationship
 - (D) The effecting cause relationship
- 857.** In a time series design, what follows the introduction of the experimental independent variable?
- (A) A series of observations to establish a baseline
 - (B) The conclusion of the experiment
 - (C) Another series of observations to examine the effect of the independent variable
 - (D) The introduction of a dependent variable
- 858.** In a double-blind experiment, neither the participants nor the researchers know which group is the control group and which group is the experimental group ____
- (A) True
 - (B) False
- 859.** What is the best way to ensure internal validity in a hospital-based study?
- (A) Use pre-experimental design
 - (B) Use randomization and control groups
 - (C) Use descriptive design
 - (D) Use systematic sampling
- 860.** In an experiment, the experimental group is defined by
- (A) Containing only representative samples
 - (B) Being measured but never manipulated
 - (C) Receiving the studied treatment
 - (D) Not receiving the studied treatment
- 861.** In a medical study, one group is given a new drug developed to help cure the common cold. The other group is given a sugar pill. What is the sugar pill called?

- (A) A control drug
(B) A placebo
(C) An independent drug
(D) A null drug
- 862.** “Controlled Group” is a term used in ____
(A) Survey research
(B) Historical research
(C) Experimental research
(D) Descriptive research
- 863.** The group that receives the experimental treatment condition is the ____
(A) Participant group.
(B) Control group.
(C) Experimental group.
(D) Independent group.
- 864.** Type of study in which neither the researchers who are administering the independent variable nor the participants know what type of treatment is being given
(A) Blind study
(B) Controlled study
(C) Double blind study
(D) None of above
- 865.** Where is a laboratory experiment conducted?
(A) In a marketplace
(B) In a controlled environment
(C) In a forest
(D) At home
- 866.** What is the Operational Definition of an experiment?
(A) Clear and detailed statements about how you will measure the data collected about the variables.
(B) The entire group of people or animals in which the researcher is interested.
(C) A sample that has characteristics that are similar to those in the population
(D) A measure of the relationship between two variables
- 867.** The control group is the ____
(A) Group you are testing
(B) Group that is NOT being tested
- 868.** Which of the following is not an advantage of field experiments?
(A) They are naturalistic.
(B) Consent is often not required
(C) The studies have high ecological validity.
(D) They are easily replicated.
- 869.** A process where the independent and dependent are included?
(A) Formulating Conclusions.
(B) Research Question.
(C) Experimentation.
(D) Making recommendations.
- 870.** A farmer puts fertilizer on half his corn plants and no fertilizer on the other half. He determines which half produced more corn at the end of the season.
(A) Survey
(B) Observational Study
(C) Experiment
(D) None of above
- 871.** In an experiment, the group that does not receive the intervention is called:
(A) The experimental group
(B) The participant group
(C) The control group
(D) The treatment group
- 872.** Demand characteristics are:
(A) Features of an experiment that cannot be controlled
(B) Threats to external validity
(C) Problem behaviours
(D) Cues in a study which help a participant work out the research hypothesis

- 873.** What is the main goal of random allocation in an experiment?
- (A) To increase external validity
 - (B) To control for participant variables and reduce selection bias
 - (C) To ensure the experiment has ecological validity
 - (D) To prevent demand characteristics from influencing behavior
- 874.** When more than one independent variable works in an experimental situation, it is called
- (A) Interaction.
 - (B) Multisituational Effect.
 - (C) Situational Crisis.
 - (D) Variable Crisis.
- 875.** The process not needed in Experimental Researches is [2009-DECEMBER]
- (A) Observation
 - (B) Manipulation
 - (C) Controlling
 - (D) Content Analysis
- 876.** In a psychological experiment, the control group is:
- (A) The group that gets “messed with”
 - (B) The group that doesn’t get “messed with”
 - (C) The group that is shut out from the world
 - (D) The group that pushes the buttons
- 877.** The most powerful tool in a research study would be a(n)
- (A) Case study
 - (B) Survey
 - (C) Experiment
 - (D) Naturalistic observation study
- 878.** What is random allocation, and why is it used in experiments?
- (A) Assigning participants based on their preferences to increase reliability
 - (B) Randomly assigning participants to different groups to minimize bias
 - (C) Selecting participants randomly from a population to increase sample size
 - (D) Randomly assigning participants to different conditions to increase validity
- 879.** What is the only form of psychological research that can determine cause and effect?
- (A) Survey
 - (B) Longitudinal Study
 - (C) Correlational Study
 - (D) Experiment
 - (E) Comparative Study
- 880.** If a researcher wants to study the cause-and-effect relationship between two variables, which type of research design is most appropriate?
- (A) Descriptive research
 - (B) Correlational research
 - (C) Experimental research
 - (D) Cross-sectional research
- 881.** Which type of research is the only type that has a chance at showing a cause and effect relationship?
- (A) Experiment
 - (B) Naturalistic Observation
 - (C) Case Study
 - (D) Survey
- 882.** What is an independent kind of analytical research:
- (A) Experiment
 - (B) Database
 - (C) Facts
 - (D) The model
 - (E) Type
- 883.** William Wundt founded one of the first psychological laboratories to conduct:
- (A) Experimental research
 - (B) Physiological research
 - (C) Quantitative research
 - (D) Qualitative research

- 884.** What is an advantage of experimental research?
- (A) Results are specific to the experiment
 - (B) Easy to conduct
 - (C) Time consuming
 - (D) None of above
- 885.** In the context of the passage, what does the word 'trials' refer to?
- (A) The number of treatment replications that you perform on experimental and control groups.
 - (B) The final results obtained from an experiment.
 - (C) The equipment used during the experiment.
 - (D) The duration of the experiment.
- 886.** In experiment that determines the effect of exercise on heart rate, what is the control group?
- (A) The group that exercises
 - (B) The group that drinks water
 - (C) The group that does not exercise
 - (D) The group that tracks the time it takes to exercise
- 887.** What does "experimental" mean from Latin?
- (A) Trial
 - (B) Equality
 - (C) Activity
 - (D) None of above
- 888.** Procedures involve standardized instructions and procedures, giving consistency.
- (A) Strength of Laboratory Experiment
 - (B) Strength of Field Experiment
 - (C) Weakness of Laboratory Experiment
 - (D) Weakness of Field Experiment
- 889.** Natural experiments are true experiments
- (A) True
 - (B) False
- 890.** Experimenter subconsciously changes behavior to elicit desired result
- (A) Extraneous variables (confounds)
 - (B) Experimenter bias
 - (C) Participant variables
 - (D) None of above
- 891.** What is the Rosenthal effect in experimental research?
- (A) When the experimenter projects expectancies onto participants based on internal beliefs
 - (B) When participants act as their own control group
 - (C) When two or more extraneous variables overlap
 - (D) When a research feature influences the dependent variable
- 892.** Disadvantages of a laboratory experiment:
- (A) Does not always fully model the real course of the studied process;
 - (B) Always completely models the real course of the studied process;
 - (C) Does not always fully confirm the real course of the studied process;
 - (D) Does not always fully model the ideal course of the studied process;
 - (E) Does not always fully model the classical course of the process under study;
- 893.** Replicate groups that are exposed to the same conditions in an experiment are known as ____
- (A) Trials
 - (B) Constants
 - (C) Hypothesis
 - (D) Research question
- 894.** What is an advantage of field experiments?
- (A) Controlling variables
 - (B) Quantifying results
 - (C) Ecological validity
 - (D) None of above

- 895.** In a clinical trial to test a new medication, what is the purpose of using a double-blind study design?
- (A) To ensure the study results are more reliable and valid.
 - (B) To eliminate placebo effects and researcher bias.
 - (C) To prevent both participants and researchers from knowing who receives the treatment.
 - (D) None of above
- 896.** What are the 2 forms of validity use to assess the validity of an experiment?
- (A) Cross-sectional and Longitudinal
 - (B) Internal and External
 - (C) Independent and Dependent
 - (D) Continuous and Non-continuous
- 897.** Ana error in the design of an experiment
- (A) Bias
 - (B) Repeated trial
 - (C) Replication
 - (D) Scientific explanation
- 898.** Changes in one variable cause the changes in the other variable; can be determined only through an experimental research design. What is this relationship called?
- (A) Correlation
 - (B) Cause-and-effect relationship
 - (C) Illusory correlation
 - (D) None of above
- 899.** Deliberate manipulation is always a part of
- (A) Historical research.
 - (B) Descriptive research.
 - (C) Fundamental research.
 - (D) Experimental research.
- 900.** There are a number of ways in which confounding extraneous variables can be controlled Which control technique is considered to be the best?
- (A) Random assignment.
 - (B) Matching.
 - (C) Counterbalancing.
 - (D) None of the above.
- 901.** An experiment in which neither the subjects nor the people who work with them know which treatment each subject is receiving is called
- (A) Double blind
 - (B) Single blind
 - (C) Controlled
 - (D) Replicated
- 902.** Involves concealing information from the participants, data collectors, care providers, or data analysis in order to enhance objectivity
- (A) Randomness
 - (B) Masking or blinding
- 903.** Which of the following is NOT a consideration when evaluating if an experimental design is realistic?
- (A) Naturally occurring behaviours
 - (B) Full range of behaviours
 - (C) The color of the lab
 - (D) How often the scenario would occur in real life
- 904.** An investor decided that a quantitative research study would be appropriate. Which of these factors would have led to this decision?
- (A) Wanting to observe behaviors as they occur in natural settings
 - (B) Wanting to determine the cause-and-effect relationships under controlled conditions
 - (C) Wanting to determine the benefits of a new strategy
 - (D) Wanting to provide a complex explanation incorporating multiple perspectives
- 905.** What is one of the weaknesses of field experiments compared to lab experiments?
- (A) Field experiments can control extraneous variables more effectively.

- (B) Field experiments have less control over extraneous variables.
- (C) Field experiments ensure better replication due to consistent conditions.
- (D) Field experiments are less likely to suffer from sample bias.
- 906.** A paper company located on the banks of a river discharges its treated wastewater into the river. Which of the following would be the best control group to evaluate the treated wastewater from the paper company?
- (A) A sample of distilled water
- (B) A sample of water from a nearby river
- (C) A sample of water downstream from the same river
- (D) A sample of water upstream from the same river
- 907.** Why might a laboratory experiment be the most suitable method to conduct Jacob's study?
- (A) It allows for naturalistic observation.
- (B) It provides a controlled environment to test variables.
- (C) It relies on participant self-reports.
- (D) It is always conducted in the field.
- 908.** Internal validity is concerned with:
- (A) Data reliability
- (B) Generalizability to other contexts
- (C) Random assignment
- (D) X-Y Causation
- 909.** What makes the randomized block design effective?
- (A) It uses random selection
- (B) It controls extraneous variables by grouping
- (C) It avoids manipulation
- (D) It eliminates testing threats
- 910.** The control group
- (A) The parts of the experiment you keep the same.
- (B) The only group you collect data from.
- (C) The group you change on purpose.
- (D) Does not have the independent variable and is used for comparison.
- 911.** What is the advantage of factorial designs in experimental research?
- (A) They require a smaller number of participants
- (B) They allow investigation of the main effects of each independent variable
- (C) They involve only one independent variable
- (D) They eliminate the need for random assignment
- 912.** Suppose a researcher wants to study the effect of drug A on subjects' alertness. He divides 100 subjects into two groups of 50, an experimental group and a control group. He dissolves drug A in saline solution and injects it into all the subjects in the experimental group. He then gives all the control group subjects an injection of only saline solution. What is the independent variable?
- (A) Drug A
- (B) Saline solution
- (C) The subjects
- (D) The needles
- 913.** In an experiment, what is not tested and is used as a comparison?
- (A) Independent Variable
- (B) Constant
- (C) Dependent Variable
- (D) Control
- 914.** One of the factors that influence external validity:
- (A) Attrition/mortality
- (B) Order effect
- (C) Testing effect
- (D) Experimenter bias
- 915.** In a fair experiment, only one variable should be changed at a time.
- (A) TRUE
- (B) FALSE

- 916.** Why is it important to repeat experiments in scientific research?
- (A) To save time and resources in scientific studies.
 - (B) To ensure that the results are reliable and not due to random chance.
 - (C) To prove that the initial experiment was incorrect.
 - (D) To create more data for analysis.
- 917.** A student conducts an experiment to measure the growth of a plant over time. The graph of the plant's height versus time is a straight line. What does the slope of this line represent?
- (A) The initial height of the plant
 - (B) The rate of growth of the plant
 - (C) The maximum height of the plant
 - (D) The time taken for the plant to reach maximum height
- 918.** In an experiment the thing that is changed or manipulated by the researcher is referred to as the
- (A) EV
 - (B) IV
 - (C) DV
 - (D) IP
- 919.** What does "Limited Generalizability" imply about lab experiment results?
- (A) The results can be applied to any population without limitations
 - (B) The results are only valid within the laboratory setting
 - (C) Results from lab experiments may not apply to diverse populations or outside the experimental setting
 - (D) The results are universally accepted by the scientific community
- 920.** What is the key feature of a field experiment?
- (A) Complete control over all variables
 - (B) Real-life environment with manipulation of independent variable
 - (C) Strict lab conditions
 - (D) Large sample size
- 921.** In ____, the researcher attempts to control and/ or manipulate the variables in the study.
- (A) Hypothesis.
 - (B) Research design.
 - (C) Experiment.
 - (D) Theoretical framework.
- 922.** What is an experimental design characterized by having independent and dependent variables and strict controls, usually in a non-natural setting?
- (A) Field experiment
 - (B) Laboratory experiment
 - (C) Natural experiment
 - (D) None of above
- 923.** This research method can prove causation.
- (A) Experiment
 - (B) Naturalistic Observation
 - (C) Survey
 - (D) Case Study
- 924.** Which research design allows for causal inference via random assignment?
- (A) Cross-sectional
 - (B) Experimental
 - (C) Survey
 - (D) Correlational
- 925.** A 'Treatment Group' is:
- (A) A group that receives the experimental treatment in a study.
 - (B) A group that is not observed in a study.
 - (C) A group that receives no treatment in a study.
 - (D) A group that collects data from other groups.
- 926.** Who conducted a hospital experiment to test the diagnosis that hospitals make on patients; wanted to see the impact of behavior on being a patient; proved that once you are diagnosed with a disorder, your care would not be very good in a mental hospital setting

- (A) David Rosenhan
 - (B) Philip Zimbardo
 - (C) Herman Rorschach
 - (D) Albert Ellis
- 927.** How do natural experiments contribute to understanding causal relationships?
- (A) By allowing for the observation of real-world behaviors.
 - (B) By reflecting natural settings, increasing generalizability of findings.
 - (C) By being suitable for investigating long-term effects or rare events.
 - (D) By providing insights into causal relationships in complex real-life situations.
- 928.** Which is the only research method that shows CAUSATION?
- (A) Case Studies
 - (B) Surveys
 - (C) Correlational
 - (D) Experimental
- 929.** Which of the following statements best describes the role of random assignment in research?
- (A) It is used to ensure that researchers don't infringe on people's rights.
 - (B) It is used to ensure that the costs of conducting research studies are within government limits.
 - (C) It is used to ensure that research studies are based on appropriate learning theory.
 - (D) It is used to ensure that groups used in research studies are comparable.
- 930.** A famous quantitative experiment on deferred gratification was ____
- (A) The Malteser Test
 - (B) The Marble Test
 - (C) The Marzipan Test
 - (D) The Marshmallow Test
- 931.** Internal validity enables researchers to determine possible ____ relationships between independent and dependent variables.
- (A) Cause-and-effect
 - (B) Descriptive
- 932.** Mr. Payne randomly assigned half of his AP Computer Science students to study for 3 hours, and the other half to study for 6 hours.
- (A) Because he randomly assigned students, he can make assumptions about the entire class.
 - (B) Because he randomly assigned students, he can assume causation.
 - (C) Because he did not randomly assign students, he can assume causation.
 - (D) Because he randomly assigned students, he can only assume correlation but not causation.
- 933.** What is the experimental group in psychology?
- (A) The group that is not exposed to the treatment
 - (B) The group that is exposed to the treatment
 - (C) The group that is given a placebo
 - (D) The group that is observed for changes
- 934.** What is "internal validity"?
- (A) The degree to which a study establishes causality
 - (B) Generalizability
 - (C) Ethical approval
 - (D) Sample size
- 935.** What is a true experiment in the context of psychological research?
- (A) An experiment conducted in real-life environments
 - (B) An experiment conducted on pre-existing groups of participants
 - (C) An experiment using naturally-occurring variables
 - (D) Research that includes psychological concepts which are manipulated through random allocation

- 936.** Which is not possible in quasi-experiment?
(A) Operationalisation
(B) Random allocation
(C) Standardisation
(D) Replication Edit
(A) Random assignment
(B) Debriefing
(C) Stratified Sampling
(D) Subject matching
(E) Correlational study Edit
- 937.** This is when neither the participants nor the researcher know which group received treatment and which received a placebo.
(A) Double-blind
(B) Confounding variable
(C) Hindsight bias
(D) Placebo effect
- 938.** In experimental design, the strategy of varying test items and tasks applies to:
(A) Between-subjects designs only.
(B) Matched-groups designs only.
(C) Within-subjects designs only.
(D) Within-subjects designs and matched-groups designs.
- 939.** Which study title could not use an experimental design?
(A) The effect of exercise on self-esteem in adolescents
(B) The effect of diet on sleep patterns in older men
(C) The effect of body position on dyspnea in patients with COPD
(D) The effect of age on pulmonary complications in surgical patients
- 940.** This type of experimental research design involves the random distribution of participants into four groups. These four groups consist of two control groups and two experimental groups
(A) Pre-Experimental Design
(B) Quasi-Experimental Design
(C) True-Experimental Design
(D) None of above
- 941.** Which of the following methods best limits the influence of unknown variables in an experiment?
(A) Experiment
(B) Observational study
(C) Neither
(D) Both experiment and observational study.
- 942.** To test the effects of eating breakfast on test grades. I randomly select half of my students and feed them breakfast while giving the other half nothing to eat. I then give them all a test and compare the test grades of each group. Is this an experiment or an observational study?
(A) Experiment
(B) Observational study
(C) Neither
(D) Both experiment and observational study.
- 943.** The process of repeating an experiment in other settings or at other times is called ____
(A) Reiteration
(B) Correlation
(C) Replication
(D) A control study
- 944.** An experiment where neither the participants nor the experimenter know who has received the treatment, until the experiment has concluded, is known as what?
(A) Random Experiment
(B) Single-blind Experiment
(C) Stratified Experiment
(D) Double-blind Experiment
- 945.** Factorial experiments
(A) Include two or more dependent variables.
(B) Include two or more independent variables.
- 946.** In a repeated-measures experimental design, all participants
(A) Are allocated to either the control or experimental group.
(B) Are allocated to both the control and experimental group

- (C) Are matched on characteristics relevant to the study
(D) Are followed up at predetermined time intervals
- 947.** What are the three types of experimental designs by Campbell & Stanley?
(A) Descriptive, exploratory, comparative
(B) Pre-experimental, quasi-experimental, true experimental
(C) Randomized, factorial, crossover
(D) Latin square, block, solomon
- 948.** The degree to which treatment effects in an experiment can be accounted for by the theoretical mechanisms represented in the independent variables is called ____
(A) Face validity
(B) Construct validity
(C) Internal validity
(D) External validity
- 949.** The group who is subjected to the therapy being tested is called the:
(A) Control group
(B) Experimental group
(C) Sample group
(D) Survey group
- 950.** Which are essential characteristics of experimental research?
(A) Manipulation, control, randomization
(B) Observation, prediction, description
(C) Sampling, analysis, reporting
(D) Hypothesis, theory, conclusion
- 951.** In which of the following research methods does the researcher have the most control?
(A) Correlational
(B) Experimental
(C) Observational
(D) Descriptive
- 952.** Using a factorial design can increase the ____ of a study as compared to isolating the effect of a single independent variable in simpler experimental designs.
(A) External validity
(B) Experimenter bias
(C) Reliability
(D) Order effects
- 953.** Studies that examine cause-effect relationship by manipulating one or more factors
(A) Experimental Research
(B) Classroom Action Research
(C) Research and Development (R&D) in Education
(D) Correlational Research
- 954.** This is a method of research where an investigator manipulates one or more factors to find the cause and effect in relationships
(A) Experimental
(B) Naturalistic
(C) Correlational
(D) Observational
- 955.** One of the four basic element of experimental research, which refers to the people, places, things and events.
(A) Treatment
(B) Condition
(C) Subjects
(D) Intervention
- 956.** If an experiment can be replicated by others with almost identical findings, then the experiment is
(A) Said to be a naturalistic observation
(B) Said to be reliable
- 957.** Why is it important to standardise procedures in an experiment?
(A) To reduce the number of participants needed
(B) To ensure that all participants experience the same conditions, increasing internal validity
(C) To increase ecological validity
(D) To manipulate extraneous variables effectively

- 958.** Which approach manipulates independent variables to infer causal links under controlled conditions?
(A) Survey design observing already-occurred events
(B) Experimental design with control and measurement
(C) Investigative design tracing phenomena
(D) Interpretive design focusing on meanings
- 959.** In a double-blind study, only the participants do not know whether they are receiving a treatment or not.
(A) True
(B) False
- 960.** A research exercise carried out in a laboratory environment is called
(A) A focus group
(B) An experiment
(C) A hall test
(D) An observation test
- 961.** At the end of an experiment, researchers sometimes ask participants to guess the purpose of the experiment. This step serves to detect:
(A) Participant characteristics.
(B) He Hawthorne effect.
(C) Individual differences.
(D) Demand characteristics.
- 962.** Control helps to either eliminate the effects of extraneous variables or measure the effects of extraneous variables
(A) True
(B) False
- 963.** What term refers to both participants and researchers being unaware of who is assigned to which group?
(A) Placebo
(B) Double-Blind Procedure
(C) Confounding Variables
(D) Illusory Correlation
- 964.** The experimental study is based on:[2007-DECEMBER]
(A) The manipulation of variables
(B) Conceptual parameters
(C) Replication of research
(D) Survey of literature
- 965.** An experiment in which "participants" unanimously choose the wrong line. It is clear to you that they are wrong, but they have all given the same answer.
(A) Stanley Milgram Shock Experiment
(B) Leon Festinger Cognitive Dissonance Experiment
(C) Solomon Asch Line Experiment
(D) Philip Zimbardo Prison Experiment
- 966.** The process not needed in experimental research is:[2008-DECEMBER]
(A) Observation
(B) Manipulation and replication
(C) Controlling
(D) Reference collection
- 967.** In a trial of a new allergy medicine, one group of participants is given the new drug while the other receives a placebo. The group receiving the experimental drug is the
(A) Control group.
(B) Experimental group.
(C) Dependent group.
(D) Independent group.
- 968.** Which research method can support causal statements?
(A) Correlational (cross-sectional) research
(B) Longitudinal research
(C) Experimental research
(D) Archival research
- 969.** ____ research occurs when the researcher manipulates the independent variable.
(A) Causal-comparative research.
(B) Experimental research.
(C) Ethnography.
(D) Co relational research.

- 970.** The purpose of this research is to study the cause and effect relationships.
(A) EXPERIMENTAL
(B) NON-EXPERIMENTAL
(C) All the above
(D) None of the above
- 971.** Usually used in experiment-based studies.
(A) The Input-Process-Output (IPO) Model
(B) Research paradigm
(C) The Independent Variable-Dependent Variable (IV-DV) Model
(D) The Flow Chart System
- 972.** Pre-test-post-test randomized matching control group design is an example of
(A) Quasi-experimental design.
(B) Post-facto experimental design.
(C) True experimental design.
(D) Pre-experimental design.
- 973.** A(n) ___ research design happens when only participants don't know whether they are in experimental or control group, but the researchers do know who is assigned to which group.
(A) Double blind.
(B) Naturalistic observation.
(C) Single blind.
(D) Correlational.
- 974.** What is the purpose of control in an experiment?
(A) To introduce bias
(B) To eliminate bias
(C) To increase variability
(D) To confuse subjects
- 975.** A procedure in which researchers nor participants know which group is the experimental group and which is the control group
(A) Double blind procedure
(B) Blind procedure
(C) Placebo Effect
(D) Validity
- 976.** In experimental terminology IV stands for ___ and DV stands for ___
(A) Independent variable; dependent variable
(B) Dependent variable; independent variable
(C) Individual variable; dependent variable
(D) Independent variable; designer variable
- 977.** What research design applies when a study tests an intervention's effectiveness?
(A) Descriptive
(B) Experimental
(C) Historical
(D) Case Study
- 978.** In Fred's study, there are three levels of only one independent variable that also happens to be a participant variable. His study is:
(A) A quasi-experimental design.
(B) A higher order factorial design.
(C) A single-case experimental design.
(D) A two by two factorial design.
- 979.** Experimental method starts with some problems which have
(A) No adequate solution.
(B) No solution for a brief time span.
(C) No hypothesis.
(D) An immediate solution.
- 980.** What is the role of "research confederates"?
(A) They secretly work with researchers and pretend to be regular participants to influence others.
(B) They collect data from participants without interacting with them.
(C) They analyze the results after the study is completed.
(D) They are the main subjects of the research.
- 981.** A drawback of a higher order factorial design is that some interaction effects obtained could be difficult to interpret
(A) T
(B) F

- 982.** In experimental research, the main objective is to:
- (A) Describe a situation
 - (B) Establish cause and effect relationships
 - (C) Develop new theories
 - (D) Collect qualitative data only
- 983.** In a controlled FDA study, the group receiving the treatment is the ____ group.
- (A) Experimental.
 - (B) Control.
 - (C) Placebo.
 - (D) Sample.
- 984.** Randomized clinical trials are the highest level of evidence
- (A) True
 - (B) False
- 985.** In a study on alcohol and aggressive behavior, subjects are randomly assigned to one of two groups. One group receives real alcohol while the other group receives tonic water which tastes identical to real alcohol. Neither the subjects nor the researchers know which group got the real alcohol until after the study is completed. This study is designed as a ____ placebo-control study.
- (A) Single-blind
 - (B) Double-blind
 - (C) Longitudinal
 - (D) Correlational
- 986.** Which of the following is a threat to the internal validity of experiment using a repeated measures design?
- (A) Instrumentation effect.
 - (B) Cohort effect.
 - (C) Attrition effect.
 - (D) All of the given options.
- 987.** Which of the following allows researchers to examine the effect of multiple independent variables simultaneously?
- (A) Quasi-experimental design
 - (B) Case study
 - (C) Reversal design
 - (D) Factorial design
- 988.** Group that does receive the treatment
- (A) Experimental group
 - (B) Control group
- 989.** In addition to history, regression, maturation, instrumentation, and testing threats to internal validity in experiments, what other issue threatens internal validity?
- (A) The possibility that subjects may be dropping out from the treatment and control groups at different rates
 - (B) The possibility that the difference between pretest and posttest scores is not due to the treatment
 - (C) Too large a sample of subjects
 - (D) A random sample
- 990.** Which of the following is the most accurate representation of the order that an experiment should be conducted?
- (A) 1.Hypothesis 2.Question 3. Analyze data 4. Formulate conclusion
 - (B) 1.Question 2. Gather materials 3. Test the hypothesis 4. Formulate a conclusion
 - (C) 1.Gather materials 2. Analyze data 3. Hypothesis 4. Question
 - (D) 1.Analyze data 2. Hypothesis 3. Question 4. Gather materials
- 991.** Controlled observation: a study conducted by watching the participants' behavior in a situation in which the social or physical environment has been ____ by the researchers. It can be conducted in either the participants' normal environment or in an artificial situation.
- (A) Uncontrolled
 - (B) Natural
 - (C) Manipulated
 - (D) Environment
- 992.** Which group in an experiment is exposed to the independent variable?
- (A) Control Group

- (B) Experimental Group
(C) Participant Group
(D) All groups
- 993.** Which kind of study can establish a cause-effect relationship between variables, assuming that the research is appropriate and well conceived?
(A) Survey
(B) Case study
(C) Correlational study
(D) Experiment Edit
- 994.** The group that is treated the same way as the experimental group except that the experimental variable is not applied
(A) Single Blind
(B) Double Blind
(C) Experimental Group
(D) Control Group
- 995.** Which of the following research methods is being described?explores cause and effect
(A) Descriptive method
(B) Correlational method
(C) Experimental method
(D) None of above
- 996.** How is the control group different than the experimental group?
(A) The control group is smaller
(B) The control group receives the treatment
(C) The control group does not receive the treatment
(D) The control group is larger than the experimental group.
- 997.** Which of the following is a characteristic of experimental research?
(A) It involves manipulation of variables
(B) It relies on naturalistic observation
(C) It studies relationships between variables
(D) It uses existing data for analysis
- 998.** How does a placebo function in an experiment?
(A) It is a treatment with no real effect used as a control.
(B) It is the main treatment given to all participants.
(C) It is a variable that is always manipulated.
(D) It is a measurement tool for data collection.
- 999.** A set of controlled observations that test a hypothesis.
(A) Experiment
(B) Control
(C) Conclusion
(D) Scientific method
- 1000.** Although the experimentation is highly controlled by the researcher, the participants in this study are not randomly assigned. This study is —
(A) Descriptive study
(B) Correlational study
(C) Quasi-experimental study
(D) True experimental study
- 1001.** What type of Supervised Agricultural Experience uses the scientific process to discover new knowledge?
(A) Entrepreneurship
(B) Experimental
(C) Exploratory
(D) Placement
- 1002.** In an experimental study, what does the term “treatment” refer to?
(A) The process of collecting data
(B) What is changed or added to the population or sample
(C) The analysis of results
(D) The selection of participants

- 1003.** List one weakness of experimental design.
- (A) May lack ecological validity or be subject to ethical concerns.
 - (B) Always guarantees accurate results in all settings.
 - (C) Ensures all variables are controlled perfectly every time.
 - (D) Is never influenced by participant behavior.
- 1004.** Which of the following is used to reduce the effects of confounding variables in experiments?
- (A) Descriptive statistics
 - (B) Inferential statistics
 - (C) Meta-analysis
 - (D) An algorithm
 - (E) Random assignment
- 1005.** This is the only method of data collection that can establish causation.
- (A) Experiment
 - (B) Survey
 - (C) Simulation
 - (D) Observation
- 1006.** Experiment the group of participants that does not receive the manipulation
- (A) Hypothesis
 - (B) Transduction
 - (C) Control group
 - (D) Parallel processing
- 1007.** Which type of research involves manipulation of independent variables to observe effects on dependent variables, allowing for causal inferences?
- (A) Experimental Research
 - (B) Quasi-Experimental Research
 - (C) Correlational Research
 - (D) Naturalistic Observation
- 1008.** This tactic involves misleading participants about the nature of an experiment and its methodology (Research Methods and Statistics Part II)
- (A) Coercion
 - (B) Forgery
 - (C) Standard Deviation
 - (D) Deception
- 1009.** What is the main purpose of conducting experiments in science?
- (A) To prove personal beliefs
 - (B) To test hypotheses and gather evidence
 - (C) To write stories
 - (D) To make friends
- 1010.** ____ can be defined as those studies in which participants do not know the experimental condition (group) to which they have been assigned.
- (A) Descriptive studies
 - (B) Experiments
 - (C) Single-blind studies
 - (D) Double-blind studies
- 1011.** If random sampling is required to test a given hypothesis, which method of quantitative researcher would be the most effective?
- (A) Causal-comparative
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
- 1012.** What kind of results does basic experimental research typically produce?
- (A) Less reliable results
 - (B) More generalizable results
 - (C) Results that are difficult to replicate
 - (D) Results that are specific to one case
- 1013.** It is a process of testing a hypothesis in which a particular behavior will occur in certain situations.
- (A) Observation
 - (B) Experimentation
 - (C) Measurement
 - (D) Data gathering

- 1014.** Random assignment is used in experiments to:
- (A) Ensure the sample is representative of the population
 - (B) Minimize pre-existing differences between groups
 - (C) Control the independent variable
 - (D) Avoid the placebo effect
- 1015.** The primary advantage of ___ is that it allows for more control than naturalistic observation.
- (A) Laboratory Observation.
 - (B) Correlation.
 - (C) Case Study.
 - (D) Survey.
- 1016.** A scientist who wants to study the affects of fertilizer on plants sets up an experiment. Plant A gets no fertilizer, Plant B gets 5 mg. of fertilizer each day, and Plant C gets 10mg. of fertilizer each day. Which plant is the control group
- (A) Plant D
 - (B) Plant B
 - (C) Plant A
 - (D) None of above
- 1017.** What was the main purpose of the scientific experiment involving the separated triplets?
- (A) To study the effects of heredity versus environment on development
 - (B) To test new adoption procedures
 - (C) To improve child nutrition
 - (D) To find cures for genetic diseases
- 1018.** Laboratory, field, clinical, production experiments are united by:
- (A) The organization of the experiment;
 - (B) Research objectives of the experiment;
 - (C) The structure of the studied objects and phenomena;
 - (D) The type of models studied in the experiment;
 - (E) Method of forming experimental conditions;
- 1019.** Which design includes the researchers observing a group multiple times before and after an intervention?
- (A) A natural experiment
 - (B) Time series design
 - (C) Pre-experimental design
 - (D) None of above
- 1020.** Differential attrition occurs when the people dropping out from one group are different from the others in their group or from the people in the comparison group.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 1021.** The research which fails to qualify as a genuine experimental research, and highly susceptible to doubts.
- (A) True-experimental
 - (B) Single subject
 - (C) Quasi-experimental
 - (D) Pre-experimental
- 1022.** Experimental research involves:
- (A) No control
 - (B) Manipulating variables
 - (C) Library work
 - (D) Writing essays
- 1023.** ___ involves the control or manipulation of conditions for the purpose of studying the relative effects of various treatments applied to members of a sample, or of the same treatment applied to members of different samples
- (A) Descriptive Research
 - (B) Experimental Research
 - (C) Applied Research
 - (D) Strategic Research
- 1024.** In a weight reduction experiment, an overweight individual was given what the researcher called a new type of diet tablet that would help curb the desire to eat. In fact the tablet contained powdered milk, but ever

- since the individual started taking the tablet, he has reported that his desire to eat has decreased. This illustrates the
- (A) Curvilinear relationship
 - (B) Effect of extraneous variables
 - (C) A natural experiment
 - (D) Placebo effect
- 1025.** — refers to gathering primary data by selecting matched groups of subjects, giving them different treatments, controlling related factors, and checking for differences in group responses.
- (A) Experimental research
 - (B) Constructive research
 - (C) Observational research
 - (D) Survey research
 - (E) Descriptive research
- 1026.** Of the following, which can establish a cause and effect relationship? I. controlled experiment II. quasi-experiment III. correlational research
- (A) I only
 - (B) II only
 - (C) I and II only
 - (D) I and III only
 - (E) I, II, and III
- 1027.** The experimental group is the group that —
- (A) You are testing
 - (B) Is "normal"
- 1028.** Group receiving manipulation
- (A) Experimental group
 - (B) Control group
- 1029.** Where do scientists typically conduct experiments on matter?
- (A) In grocery stores
 - (B) On athletic fields
 - (C) In bustling playgrounds
 - (D) Inside laboratories
- 1030.** Which research strategy is described here: The introduction of planned change on one or more of the variables; measurement on a small number of variables and control of other variables.
- (A) Experiment.
 - (B) Ethnography.
 - (C) Survey.
 - (D) Case study.
- 1031.** Self-fulfilling prophecies can be avoided by
- (A) Calculating tendencies
 - (B) Making a double blind study
 - (C) Obtaining random sample
 - (D) Using cross-sectional methods Edit
- 1032.** Viola's mother is a scientist. She makes model houses and tests them on platforms that shake and move, just as the ground might move in an earthquake. In which way does this testing help prepare people for earthquakes?
- (A) Shows which furniture will be safest
 - (B) Teaches people to survive earthquakes
 - (C) Develops building designs that will be stable
 - (D) Informs people about how to avoid earthquakes
- 1033.** Nestor would like to see if negative reinforcement has an effect on student participation. He randomly assigned subjects to his experimental and control group.
- (A) Case Study
 - (B) Content Analysis
 - (C) Experimental
 - (D) Historical
 - (E) Survey
- 1034.** Which of the following factors does not affect internal validity of an experimental design?
- (A) Maturation of subjects.
 - (B) Statistical regression.
 - (C) Noise during experiment.
 - (D) Pretesting.

- 1035.** While higher-order factorial designs allow the researcher to take more variables into consideration, a drawback is that the ___ of some ___ might be challenging to interpret.
- (A) Simplicity; main effects
 - (B) Simplicity; interactions
 - (C) Complexity; main effects
 - (D) Complexity; interactions
- 1036.** What term best describes an actor in an experiment who is working for the researcher?
- (A) Confederate
 - (B) Participant
 - (C) Learner
 - (D) Subject
- 1037.** Natural experiments are characterized by the use of:
- (A) Pre-selected variables
 - (B) Randomly assigned variables
 - (C) Naturally-occurring variables
 - (D) Artificially manipulated variables
- 1038.** Experimental method is based on
- (A) Researcher's point of view.
 - (B) Mill's Cannon of Single Variable.
 - (C) Formulation of hypothesis.
 - (D) Scientific method.
- 1039.** An intervention in research refers to:
- (A) A condition or treatment applied to participants
 - (B) A summary of findings
 - (C) Statistical data analysis
 - (D) Sampling procedure implementation
- 1040.** Video Integration in Teaching Science in Grade 12 of Upper Tumapoc National High School
- (A) Survey Research Design
 - (B) Experimental Research Design
 - (C) Comparative Research Design
 - (D) Correlational Research Design
- 1041.** What are demand characteristics in an experimental setting?
- (A) Features that enhance participant performance
 - (B) Cues that inform participants about the study's aims
 - (C) Controls that minimize confounding variables
 - (D) Random assignments to groups
- 1042.** Solomon's Four Group design falls under
- (A) Pre-experimental design
 - (B) True-experimental design
 - (C) Quasi-experimental design
 - (D) Factorial design
- 1043.** Causal research tests whether or not one variable causes another to change.
- (A) YES.
 - (B) NO.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 1044.** Both the researcher and the participants are unaware of who is receiving the drug in an experimental trial. What is this known as?
- (A) Naturalistic observation
 - (B) Random sampling
 - (C) Double blind procedure
 - (D) Replication
- 1045.** A study that tests the effects of some kind of treatment on a dependent variable, but one or more characteristics of a true experiment can't be met, since the IV is pre-existing.
- (A) True experiment
 - (B) Field experiment
 - (C) Quasi experiment
 - (D) Natural experiment
- 1046.** Experiments in which information about the test is kept from participants to reduce bias
- (A) Experimental Variable
 - (B) Blind Experiments
 - (C) Double-Blind Experiments
 - (D) Control (of an experiment)

- 1047.** In an experiment, the group of test subjects left untreated or unexposed to some procedure and then compared with treated subjects in order to validate the results of the test
- (A) Experimental group
 - (B) Control group
 - (C) All the above
 - (D) None of the above
- 1048.** Dr. Anderson conducts an experiment to see whether exposure to helpful models leads to helping behavior in young children. Of the forty girls and boys in his study, half are exposed to helpful models while the other half watch the same models not engaged in helping behavior. In this experiment, the dependent variable is:
- (A) The gender of the children.
 - (B) Helpful or non-helpful models.
 - (C) The age of the children.
 - (D) Helping behavior.
- 1049.** Research that aims to test hypotheses and determine the influence between variables?
- (A) Causal Research
 - (B) Descriptive Research
 - (C) Exploratory Research
 - (D) Survey Research
- 1050.** An investigation looking for a cause-and-effect relationship
- (A) Observation
 - (B) Experiment
 - (C) Case study
 - (D) Correlation
- 1051.** A valid experiment
- (A) Has more than 1 independent variable.
 - (B) Has multiple dependent variables.
 - (C) Tests the thing you want to test.
 - (D) Has an uncontrolled variable.
- 1052.** What is a double blind procedure?
- (A) Participants don't know which group they're in
 - (B) Researchers don't know which group the participants are in
 - (C) Neither participants nor researcher knows who is in which group
 - (D) Both researcher and participants know who is in each group
- 1053.** Subjects in a study who do not receive the special treatment given to the experimental group.
- (A) Experimental group
 - (B) Control Group
 - (C) Hypothesis
 - (D) Meditation
- 1054.** The most valuable type of research is
- (A) Always conducted using a factor analysis
 - (B) Conducted using the chi-square
 - (C) The experiment, used to discover cause and effect relationships
 - (D) The quasi-experiment
- 1055.** The purpose of random assignment in an experiment is to:
- (A) Ensure all participants are treated the same
 - (B) Eliminate bias in assigning participants to groups
 - (C) Increase the sample size
 - (D) Allow participants to choose their groups
- 1056.** What is the nature of the statement that experimental generalizations are statistical inferences; they can only attain a degree of probability somewhere along a continuum between truth and falsity?
- (A) Not wholly true.
 - (B) Wholly true.
 - (C) Incorrect entirely.
 - (D) None of the above.
- 1057.** The goal of a well-designed experiment is to allow anyone who reads it to understand the process you are using and to allow someone else to complete the experiment just by ____

- (A) Following your instructions(procedures)
(B) Making things up
(C) Guessing
(D) Looking things up online
- 1058.** What type of research design answers the question “What causes something to occur? ”
(A) Evaluative Research Design
(B) Descriptive Research Design
(C) Correlational Research Design
(D) Experimental Research Design
- 1059.** Which of the following is an example of a scientist applying the principle of objectivity in an experiment?
(A) Designing procedures that minimize personal biases and subjective interpretations
(B) Allowing personal beliefs to influence the interpretation of results
(C) Disregarding empirical data that contradicts initial expectations
(D) Choosing methods based solely on convenience rather than reliability
- 1060.** What aspect of natural experiments increases the generalizability of findings?
(A) Reduced demand characteristics compared to lab experiments.
(B) The observation of real-world behaviors.
(C) The ability to study phenomena that cannot be ethically manipulated.
(D) Reflecting natural settings.
- 1061.** According to the table, what is the suggested number of subjects or participants for Experimental research design?
(A) 30 or more
(B) 5 or less
(C) 10-15
(D) 100 or more
- 1062.** The main goal of causal research is:
(A) To directly seek the solution to a particular, pragmatic problem
(B) To identify cause-and-effect relationships between variables.
(C) To clarify the nature of problems
(D) To provide a conclusive statement about the characteristics of a particular population or phenomenon.
- 1063.** What is the term for the group of individuals in a research study who do not receive the experimental treatment?
(A) Experimental group
(B) Control group
(C) Sample group
(D) Treatment group
- 1064.** How does a factorial design help in research?
(A) It isolates one variable
(B) It compares multiple treatments
(C) It controls for mortality
(D) It eliminates testing threats
- 1065.** Which research method involves manipulating an independent variable in an artificial setting?
(A) Field experiment
(B) Natural experiment
(C) Laboratory experiment
(D) Case study
- 1066.** Type of study where only the subjects do not know if they are part of control/experimental group
(A) Single blind
(B) Double blind
(C) Longitudinal
(D) Naturalistic
- 1067.** The fundamental assumption of experimental method is related with
(A) Law of two variable.
(B) Law of single variable.
(C) Intermediary variables.
(D) Controlled conditions.

- 1068.** What is the main advantage of using random assignment in experimental research?
- (A) It ensures that the sample is representative of the population
 - (B) It reduces the impact of confounding variables
 - (C) It eliminates the need for a control group
 - (D) It guarantees a large sample size
- 1069.** What is the primary advantage of a repeated measures design in experimental research?
- (A) It requires a larger number of participants
 - (B) Participants serve as their controls
 - (C) It eliminates the need for a control group
 - (D) It allows for random assignment of participants
- 1070.** Which is a difference between the experimental method and naturalistic observation?
- (A) Experiments yield qualitative data, whereas naturalistic observation yields quantitative data
 - (B) Naturalistic observation involves surveys, whereas experiments measure behavior
 - (C) Experiments can yield statistically significant results and naturalistic observation cannot
 - (D) Researchers can exercise greater control over experiments than in naturalistic observation
- 1071.** What variety of action research has the greatest potential value for the advanced scientific knowledge since it can provide under favorable circumstances a definitive test of specific hypothesis?
- (A) Empirical
 - (B) Experimental
- 1072.** Which group is exposed to the independent variable?
- (A) Control Group
 - (B) Experimental Group
 - (C) Representative Sample
 - (D) Cross-Sectional Group
- 1073.** A ____ study is one where both the observer and the participants are unaware of the experiment's methods/reasons
- (A) Single Blind
 - (B) Double Blind
 - (C) Triple Blind
 - (D) Naturalist Observation
- 1074.** What is essential to the experimentation process when assigning participants to groups?
- (A) Completely random assignment
 - (B) Assignment by alphabetically order
 - (C) Assignment in order they signed-up for the experiment
 - (D) Let them choose their group
- 1075.** Given that field experiments are high in external validity, why is it that social psychologists still rely on laboratory experiments?
- (A) Laboratory experiments are more psychologically realistic.
 - (B) Laboratory experiments allow for better control over extraneous variables.
 - (C) Laboratory experiments permit random assignment of participants to conditions.
 - (D) Laboratory experiments are more reliable.
- 1076.** When gathering causal information, the best research approach is ____
- (A) Observation
 - (B) Survey
 - (C) Experimental
 - (D) Online
- 1077.** You want to find out if people who eat a candy bar immediately before a math test get higher scores than people who do not.
- (A) Survey
 - (B) Observational study
 - (C) Experiment
 - (D) None of above

- 1078.** Which research design is best for testing cause-and-effect relationships?
- (A) Descriptive
 - (B) Experimental
 - (C) Correlational
 - (D) Case Study
- 1079.** Which of the following is an advantage of a double-blind study?
- (A) It prevents confounding variables from influencing an experiment.
 - (B) It prevents experimenter expectancy effects.
 - (C) It ensures that any differences between participants are not affected by the independent variable.
 - (D) It ensures that participants know the experimental condition to which they have been assigned.
- 1080.** Which statement(s) are part of the definition of an experiment?
- (A) Manipulating one variable, measuring a second variable
 - (B) Comparing the scores between treatments
 - (C) Controlling all other variables
 - (D) All of the above
- 1081.** When members of the control group believe they are getting better without the trial treatment, it is called
- (A) The hindsight bias
 - (B) The tarantula effect
 - (C) The placebo effect
 - (D) A false positive
- 1082.** Katie is trying to determine what type of flower grows the fastest in the same type of soil after a month. She takes 3 different seeds and plants them. She collected the data month. What would a control be?
- (A) Types of flower seeds
 - (B) Type of soil
 - (C) Height of flowers
 - (D) None of above
- 1083.** How many manipulated variables does an experiment have?
- (A) 0
 - (B) 1
 - (C) Between 1 and 5
 - (D) As many as needed
- 1084.** A marketing manager wants to determine the effect of different email subject lines on customer engagement. He splits the customer list and sends two versions of an email. What method is being used?
- (A) Observational Research
 - (B) Focus Groups
 - (C) Experimental Research
 - (D) Secondary Research
- 1085.** The following is the IV of the Dement & Kleitman Experiment
- (A) Intensity of emotional arousal to each of the 96 scenes presented to each participant
 - (B) Woken up during REM or NREM sleep
 - (C) Dreams recalled
 - (D) The situation (euphoria or anger)
- 1086.** Experimental research involves manipulation of variables to establish ____ relationships.
- (A) Cause-and-effect
 - (B) Correlational
 - (C) Random
 - (D) Descriptive
- 1087.** Which of the following best describes research typical of Wilhelm Wundt's first psychology laboratory?
- (A) Examining the unconscious to determine behavior motivation
 - (B) Using a brain-scanning device to determine the impact events have on brain function
 - (C) Measuring the reaction time between hearing a sound and pressing a button
 - (D) Studying helping behavior, based on the premise that people are good

1088. A field experiment:

- (A) Controls extraneous variables well
- (B) Has no DV
- (C) Does not have standardised procedures
- (D) Takes place in a natural setting

1089. Define the term: Random assignment.

- (A) Random assignment is the process of assigning participants to experimental and control groups by chance to reduce bias.
- (B) Random assignment is the process of selecting participants based on their preferences.
- (C) Random assignment is the process of grouping participants according to their test scores.
- (D) Random assignment is the process of assigning participants to groups based on age or gender.

1090. Which type of research involves testing theories under controlled conditions?

- (A) Experimental research
- (B) Descriptive research
- (C) Qualitative research
- (D) Action research

1091. It is a group in an experiment that receives the variable being tested (Treatment)

- (A) Experimental Group
- (B) Control Group

1092. The experimental group is:

- (A) Study in which neither the experimenter nor the subjects know if the subjects are in the experimental or control group
- (B) Study in which the subject do not know if they are in the experimental group or control group
- (C) Subjects in an experiment who are not subjected to the independent variable and may receive a placebo treatment
- (D) The group to which the researchers manipulate the independent variable

1093. How can "Experimenter Effects" influence lab experiments?

- (A) By providing state-of-the-art equipment for the experiment
- (B) Through researchers' biases or expectations influencing participants' responses
- (C) By ensuring the experiment is conducted efficiently
- (D) Through the physical presence of the experimenter in the lab

1094. A set of mental and physical operations, placed in a certain sequence to achieve the goal of the study:

- (A) Experimental technique
- (B) Purpose of the experiment
- (C) The objective of the experiment
- (D) The value of the experiment
- (E) Scheme of the experiment

1095. This is a method of research where an investigator manipulates one or more factors (independent variables) to observe the effect on some behavior or mental process (the dependent variable).

- (A) Experiments
- (B) Case Study
- (C) Survey
- (D) Observational
- (E) Correlational

1096. Experimental research deals with

- (A) Variables.
- (B) Controls.
- (C) Scientific inferences.
- (D) All of the above.

1097. In an experiment, a randomly selected group of subjects that gets no treatment, gets a placebo, or gets an established or standard treatment.

- (A) Control group
- (B) Subjects
- (C) Treatments
- (D) Observational study

- 1098.** What does employing controls in a study seek to accomplish?
- (A) Minimizes the effects of other variables and eliminates alternative explanations.
 - (B) Reduce data collection efforts.
 - (C) Explain research bias.
 - (D) Initiate survey research.
- 1099.** Researchers use the strategy of ____ (or masking) to guard against expectations biases.
- (A) Blinding
 - (B) Controlling
 - (C) Selecting
 - (D) None of above
- 1100.** Researchers actively introduce an intervention or treatment-called clinical trial in medical research
- (A) Experimental research
 - (B) Non-experimental research
- 1101.** The practice of patients and experimenter's assistants remaining unaware of which patients get real treatment and which patients get a placebo
- (A) Double-Blind Procedure
 - (B) Cross-Sectional Study
 - (C) Hindsight Bias
 - (D) Representative Sampling
- 1102.** What is a type of study in which the participants are unaware of whether they are in the control group or the experimental group?
- (A) Single-Blind Study
 - (B) Case-Study
 - (C) Double-Blind Study
 - (D) Controlled Experiment
- 1103.** What is the role of the control variable in experimental research?
- (A) A variable that is manipulated
 - (B) A variable that is measured
 - (C) A variable held constant to prevent its effects on the dependent variable
 - (D) A constant
- 1104.** What is the primary goal of experimental research in communication studies?
- (A) To establish causation
 - (B) To analyze media content
 - (C) To collect data from a large number of people
 - (D) To conduct case studies
- 1105.** He research antagonistic to ex-post facto research is
- (A) Experimental studies.
 - (B) Normative researches.
 - (C) Library researches.
 - (D) All of the above.
- 1106.** Which data collection method is used in causal research?
- (A) Panels
 - (B) Expert surveys
 - (C) Surveys
 - (D) Experiments
- 1107.** An experiment is set up and a hypothesis is tested by creating a situation in which one of the variable is manipulated.
- (A) Exploratory research
 - (B) Basic research
 - (C) Experimental research
 - (D) None of these
- 1108.** People who stay in the study vs. drop out of the study may influence internal validity. What is this threat to internal validity called?
- (A) Mortality/attrition
 - (B) Selection bias
 - (C) Testing effect
 - (D) Instrumentation
- 1109.** The advantage of this descriptive method of research is that the strict control of variables offers researchers the opportunity to draw conclusions about cause and effect relationships.
- (A) Experiments
 - (B) Case Study

- (C) Survey
 - (D) Observational
 - (E) Correlational
- 1110.** The group that receives the I.V.
- (A) Experimental Group
 - (B) Control Group
 - (C) Longitudinal Group
 - (D) Cross-sectional Group
- 1111.** The main goal of explanatory research is to:
- (A) Explore unknown topics
 - (B) Describe phenomena
 - (C) Establish causal relationships
 - (D) Provide statistical data
- 1112.** In a — experiment, only the participants do not know who is getting the independent variable.
- (A) Single-blind
 - (B) All-blind
 - (C) Legally-blind
 - (D) Double-blind
- 1113.** A single-case experimental design is able to establish causality
- (A) T
 - (B) F
- 1114.** Researchers want to test a specific hypothesis and applies random assignment for the study. Which quantitative research method should be used for this study?
- (A) Experimental
 - (B) Correlational
 - (C) Causal comparative
 - (D) Grounded theory
- 1115.** The technique of regulating various variables in an experiment is called
- (A) Controlled variable.
 - (B) Dependent variable.
 - (C) Independent Variable.
 - (D) Experimental control.
- 1116.** Experimental design is the only appropriate design where relationship can be established
- (A) Strong
 - (B) Linear
 - (C) Weak
 - (D) Cause and Effect
- 1117.** Read the following statements about a laboratory experiment It has relatively complete control of extraneous variables. Its results are applicable to real life situations. Which of the following is correct?
- (A) Both I and II are correct.
 - (B) I is incorrect, but II is correct.
 - (C) Neither of I and II is correct.
 - (D) I is correct, but II is incorrect.
- 1118.** It allows the researcher to answer the question, "What causes something to occur?"
- (A) Experimental Research Design
 - (B) Non-experimental Research Design
- 1119.** Elise gave each member of the class a random cookie, some from recipe A and some from recipe B. Then she observed which students returned for a second cookie What data collection method was used?
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
- 1120.** The group that does not receive the I.V.
- (A) Experimental Group
 - (B) Control Group
 - (C) Longitudinal Group
 - (D) Cross-sectional Group
- 1121.** What term best describes an individual in an experiment who is being studied?
- (A) Confederate
 - (B) Participant
 - (C) Learner
 - (D) Client Edit

- 1122.** In an appropriately designed experiment, a scientist is able to test the effect of
- (A) A single variable
 - (B) Multiple variables
 - (C) The hypothesis
 - (D) Scientific observations
- 1123.** Participants in an experiment who are exposed to the independent variable make up the
- (A) Control
 - (B) Experimental
 - (C) Variable
 - (D) Single-blind
- 1124.** Using this when you place participants in the control group and the experimental group minimizes preexisting differences between the two groups.
- (A) Double blind procedure
 - (B) Random sample
 - (C) Placebo effect
 - (D) Random assignment
- 1125.** What do we call the subgroup of the sample that receives the independent variable?
- (A) Experimental group
 - (B) Control group
 - (C) Population
 - (D) None of above
- 1126.** An investigator uses two matched groups to compare effectiveness of two methods of teaching science. This study would come in the ambit of:
- (A) Experimental research
 - (B) Causal comparative research
 - (C) Descriptive research
 - (D) Correlational research
- 1127.** What are the two groups of a controlled experiment?
- (A) Experimental and Constant Variables
 - (B) Control Group and Dependent Variable
 - (C) Experimental Group and Control Group
 - (D) Independent Variable and Hypothesis
- 1128.** Hannah assigns children to different teaching method groups and test their math performance after six weeks. This example of what type of research?
- (A) DESCRIPTIVE
 - (B) HISTORICAL
 - (C) EXPERIMENTAL
 - (D) UNCONTROLLED
- 1129.** Which data collection method would you use to collect data for this study? A study of the effect of eating oatmeal on lowering blood pressure.
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
- 1130.** Why is it sometimes useful to conduct double-blind studies?
- (A) Researchers may have expectations that affect their observations.
 - (B) Researchers need to know who had the treatment
 - (C) Researchers may not have time for a longitudinal study.
 - (D) Researchers are bound to follow a code of ethics.
- 1131.** Wilhelm Wundt's laboratory work involved experimental studies of
- (A) Animal intelligence.
 - (B) Personality development.
 - (C) Learning and memory.
 - (D) Reactions to sensory stimulation.
- 1132.** Which experiment would best demonstrate the effects of acid rain on water bodies?
- (A) Measuring pH levels of rainwater
 - (B) Observing plant growth in acidic soil
 - (C) Testing metal corrosion in acidic solutions

- (D) Monitoring fish health in varying pH levels
- 1133.** The group in an experiment or study that does not receive treatment by the researchers and is then used as a benchmark to measure how the other tested subjects do.
- (A) Independent variable
 - (B) Control group
 - (C) Dependent variable
 - (D) Random sample
- 1134.** What is the method of experimental group assignment in which all participants have an equal chance of being assigned to either group?
- (A) Random assignment
 - (B) Systematic assignment
 - (C) Sequential assignment
 - (D) Stratified assignment
- 1135.** A taxi company in Atlanta puts a new type of tire with a special tread on a random sample of 50 cars, and the regular type of tire on another random sample of 50 cars. What is the independent (explanatory) variable in this experimental research study?
- (A) Type of Tire
 - (B) Gas mileage
 - (C) Taxi company
 - (D) Type of Car
- 1136.** If the scientist does not know which group is experimental and which group is control, what type of experiment is it?
- (A) Single-Blind
 - (B) Double-Blind
 - (C) Triple-Blind
 - (D) Quadruple Blind
- 1137.** The most common experiment in scientific research, which is carried out in laboratory conditions with the use of special modeling installations, stands, equipment:
- (A) Laboratory
 - (B) Production
 - (C) Practical
 - (D) Technological
 - (E) Industrial
- 1138.** Experimental groups are sometimes called treatment groups because they receive the change of the independent variable.
- (A) True
 - (B) False
- 1139.** In a clinical trial conducted by Dr. Rohan, one group of patients receives a new medication while another group does not receive any treatment. The group that does not receive the intervention is called:
- (A) The experimental group
 - (B) The participant group
 - (C) The control group
 - (D) The treatment group
- 1140.** The group in an experiment that does not have the independent variable is known as what?
- (A) Double blind group
 - (B) Outlier
 - (C) Experimental group
 - (D) Control group
- 1141.** A kind of Quantitative Research that utilizes scientific method to test cause-and-effect relationships under conditions controlled by the research.
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Causal-Comparative Research
 - (D) Experimental Research
- 1142.** Which research design studies cause-and-effect relationships?
- (A) Descriptive
 - (B) Historical
 - (C) Experimental
 - (D) Case study

- 1143.** Members of the ____ group of an experiment do not receive treatment.
- (A) Control
 - (B) Experimental
 - (C) Test
 - (D) Sample
- 1144.** In a research study, researchers seek to measure the average hours of sleep for teenagers who use their phones before bed with no restrictions versus those who only use it for 15 minutes before bed. Which group is the experimental group?
- (A) Those who only use their phones for 15 minutes.
 - (B) Those who have unlimited use of their phones before bed.
- 1145.** The research topic "Can peer counselling lessen the stress and anxiety of students?" on which of the following research methodologies?
- (A) Descriptive
 - (B) Relational
 - (C) Causal / Experimental
 - (D) Correlational
- 1146.** Which method is regarded as the most preferred method of psychology?
- (A) Observation.
 - (B) Experimental Method.
 - (C) Case Study.
 - (D) Introspection.
- 1147.** What does random allocation help to reduce in research?
- (A) Sample size
 - (B) Confounding variables
 - (C) Participant attrition
 - (D) Data collection methods
- 1148.** Which research method involves manipulating an independent variable (IV) under strict conditions and measuring its effect on a dependent variable (DV)?
- (A) Experiment
 - (B) Survey
 - (C) Case Study
 - (D) Naturalistic Observation
- 1149.** What are the two groups of participants in the experimental design?
- (A) Students who study at night and students who study during the day.
 - (B) Students who are sleep-deprived and students who are well-rested.
 - (C) Students who drink coffee before the test and students who do not.
 - (D) Students who have studied the material and students who have not.
- 1150.** What is "experimental realism"?
- (A) The extent to which participants are engaged and affected by the manipulation
 - (B) The use of real-world settings
 - (C) The sample size
 - (D) The correlation coefficient
- 1151.** An appropriate title of Experimental Research should give information related to
- (A) Treatment & Dependent Variable
 - (B) Dependent Variable & Intervening Variables
 - (C) Duration of Treatment
 - (D) Methods of Controlling Intervening Variables
- 1152.** A scientist wants to know if a new medicine lowers blood pressure. What should the control group receive?
- (A) A different medicine
 - (B) No treatment or a placebo
 - (C) A higher dose of the medicine
 - (D) A completely different experiment
- 1153.** A fake treatment that appears real.
- (A) A variable
 - (B) A placebo
 - (C) A hypothesis
 - (D) A research question

- 1154.** In a double-blind procedure, who is unaware of the experimental group assignment?
(A) The experimenter
(B) The participants
(C) Neither the experimenter nor the participants are aware
(D) Both the experimenter and participants are aware
- 1155.** In the study of the cause of a disease, the essential difference between an experimental study and an observational study is that in the experimental investigation
(A) The investigators determine who is and who is not exposed to the suspected causal factor
(B) The study and control groups are of equal size
- 1156.** Uses random selection of participants. It is free from bias and ensures objectivity of results. It is the best design to use when examining causal relationships
(A) True Experimental
(B) Experimental
(C) Quasi-Experimental
(D) None of above
- 1157.** Behaviorists often utilize N=1, which is called intensive experimental design. The first step in this approach would be to
(A) Consult a random number table
(B) Decide on a nonparametric statistical test
(C) Take a baseline measure
(D) Compute the range
- 1158.** Sir Joyce wants to improve the students' attendance in the different school activities. He would like to see if reinforcements can improve the attendance. He gathered the students' attendance before and after their exposure to reinforcements.
(A) Descriptive
(B) Correlational
(C) Experimental
(D) Quasi-experimental
- 1159.** What type of experiments are conducted in real-life settings?
(A) Lab experiments
(B) Field experiments
(C) One-shot experiments
(D) Solomon four-group experiments
- 1160.** The experimental method manipulates a variable.
(A) True
(B) False
(C) Neither
(D) Both
- 1161.** What does using 'counterbalancing' in an experiment help to prevent?
(A) Order effect
(B) Participant variables
(C) Demand characteristics
(D) Bias Edit
- 1162.** What is one of the future directions for experimental research in psychology?
(A) Decreasing the diversity of study populations
(B) Ignoring technological advancements
(C) Incorporating more diverse populations in studies
(D) Focusing solely on past research methods
- 1163.** An experiment that measured the effects of an earthquake on stress levels (measured before and after) would be a:
(A) Quasi-experiment
(B) Lab experiment
(C) Natural experiment
(D) Field experiment Edit
- 1164.** In experimental research an investigator normally prefers to formulate null hypotheses rather than research hypotheses because
(A) It is easy to formulate null hypotheses
(B) It is wrong to formulate research hypotheses
(C) Null hypotheses are statistically testable
(D) None of these

- 1165.** In order to minimize the extent to which placebo effects contribute to outcome differences between experimental and control conditions in a drug-treatment study, researchers are likely to make us of:
- (A) Random sampling
 - (B) Replication
 - (C) Operational definitions
 - (D) The double blind procedure
- 1166.** To determine the effects of a new drug on memory, one group is given a pill that contains the drug. A second group is given a sugar pill that does not contain the drug. This second group constitutes the
- (A) Random sample
 - (B) Experimental group
 - (C) Control group
 - (D) Test group
- 1167.** This type of research describes as “what will” when certain variables are carefully controlled and manipulated.
- (A) Field research
 - (B) Survey research
 - (C) Correlational research
 - (D) Experimental research
- 1168.** Which of the following allows us to support claims about cause-and-effect relationships?
- (A) Experiment
 - (B) Introspection
 - (C) Naturalistic observation
 - (D) Controlled observation
- 1169.** What does experimental research allow researchers to conclude about in psychological processes?
- (A) Cultural influences
 - (B) Causal relationships
 - (C) Philosophical theories
 - (D) Economic models
- 1170.** You can do experiments in the laboratory in this subject.
- (A) Music
 - (B) Physical Education
 - (C) Science
 - (D) Portuguese
- 1171.** Which of the research methods discussed in this section would be best suited to study the impact of diet and exercise on the prevalence of a disease such as diabetes?
- (A) Case-control study
 - (B) Randomized controlled trial
 - (C) Cohort study
 - (D) Cross-sectional study
- 1172.** What is a strength of lab experiments?
- (A) They offer low replicability
 - (B) They provide a broad generalization to real-life contexts
 - (C) They offer high replicability and precise control over variables
 - (D) They are conducted without any control over variables
- 1173.** What is a potential weakness of laboratory experiments?
- (A) High situational variables
 - (B) Low internal validity
 - (C) High external validity
 - (D) Artificial setting
- 1174.** Which of the following best demonstrates a double-blind procedure?
- (A) Neither the research staff nor the participants know who is getting the treatment.
 - (B) Only the research staff know who is getting the treatment.
 - (C) Only the participants know who is getting the treatment.
 - (D) Both the research staff and participants know who is getting the treatment.
- 1175.** Experimental research attempts to affect a certain variable by directly manipulating the — variable.
- (A) Independent
 - (B) Dependent
 - (C) Extraneous
 - (D) Control

- 1176.** In experimental research, which group is the one containing the subjects who were administered one or more experimental stimulus?
- (A) Control group
 - (B) Treatment group
 - (C) Non-equivalent group
 - (D) Equivalent group
- 1177.** What is an experiment in which both the researchers and the participants are blind to group assignments called?
- (A) Double-blind study
 - (B) Control group
 - (C) Experimental group
 - (D) None of above
- 1178.** Participants who are treated the same as the experimental group, but are not exposed to the independent variable are in the ____ group.
- (A) Independent
 - (B) Dependent
 - (C) Control
 - (D) Experimental
- 1179.** According to the method of forming the conditions, the experiment is divided into:
- (A) Natural and artificial
 - (B) Search, control and decisive
 - (C) Laboratory, field and production
 - (D) Material, energy, informational
 - (E) Primary, secondary
- 1180.** A student wants to know which soil is the best to plant tomatoes in. Which of the following experiments can he complete to figure it out?
- (A) Plant seeds in each type of soil.
 - (B) Pour 200 mL of water into each soil to see how much water is retained.
 - (C) Compare the color of the soil to a color chart
 - (D) Wet the soil and feel the texture.
- 1181.** The main research method in psychology is
- (A) Experiment
 - (B) Simulation
 - (C) Inductive
 - (D) Rational
- 1182.** What is enhanced by manipulating and controlling variables in experimental research?
- (A) The complexity of the research
 - (B) The duration of the study
 - (C) The reliability and validity of the findings
 - (D) The number of participants required
- 1183.** The main types of experiment in psychology
- (A) Laboratory Experiment, Field Experiment
 - (B) Experiment with the camera of sensory deprivation
 - (C) Observational and mathematical
 - (D) Open and closed
- 1184.** Who conducted what is believed to be the first psychology experiment in a laboratory when he measured how long it took for people to respond to a sound and how long it took them to be consciously aware of it?
- (A) Hall
 - (B) Wundt
 - (C) Titchener
 - (D) James
- 1185.** One group of subjects was given an herbal supplement and another group was given a placebo. After one year, the number of illnesses each group had was compared.
- (A) Observational Study
 - (B) Experiment
- 1186.** Controlled group condition is applied in [2011-DECEMBER]
- (A) Survey Research
 - (B) Historical Research

- (C) Experimental Research
(D) Descriptive Research
- 1187.** In a new experiment, a counselor educator wants to ferret out the effects of more than one IV. She will use a ____ design.
(A) Factorial
(B) Solomon four-group
- 1188.** In this type of Experimental Research, the researcher often does not have complete control over the environment and the treatment but can purposely assign participants to a control group and an experimental group.
(A) Pre-Experimental Design
(B) Quasi-Experimental Design
(C) True-Experimental Design
(D) None of above
- 1189.** In order for the professor of counselor education to conduct an experiment regarding his hypothesis, he will need a(n) ____ and a(n) ____
(A) Biofeedback group; systematic desensitization group
(B) Control group; systematic desensitization group
(C) Control group; experimental group
(D) Control group with at least 60 subjects; experimental group with at least 60 subjects
- 1190.** A research design that establishes a relationship between the cause and effect of a situation.
(A) Descriptive research design
(B) Experimental research design
(C) Correlational research design
(D) None of above
- 1191.** When we do studies outside of the laboratory, in the “real world”
(A) True Experiment
(B) Focus Group
(C) Unstructured Interview
(D) Field Experiment
- 1192.** What is a key benefit of the experimental research design in terms of variables and bias?
(A) It allows for a larger sample size
(B) It enables researchers to control extraneous variables and minimize bias
(C) It simplifies the data collection process
(D) It guarantees the replication of results
- 1193.** An experiment involving an independent variable that is environmental in nature and outside of the control of the researcher
(A) Field experiment
(B) Natural experiment
(C) True experiment
(D) Correlational experiment
- 1194.** Order effect can occur. Chances of demand characteristics are increased.
(A) Weakness of Independent Measures Design
(B) Weakness of Repeated Measures Design
(C) Weakness of Matched-Pair Design
(D) None of above
- 1195.** Counterbalance: Each condition is tested first in equal amounts. So half the participants first experience condition A and then condition B, while the other half of participants first experience condition B and then condition A.
(A) Solution to Independent Measures Design
(B) Solution to Repeated Measures Design
(C) Solution to Matched-Pair Design
(D) None of above
- 1196.** Experimental Analysis enables us to discern lawful relationships between antecedents and consequents involved in
(A) Habit.
(B) Behavior.
(C) Attitude.
(D) Experience.

- 1197.** What refers specifically to which conditions of the experiment participants are arranged into and will take part in
- (A) Methodology
 - (B) Experimental design
 - (C) Hypothesis
 - (D) Sampling
- 1198.** What is a type of research where research is done in a controlled environment?
- (A) Classroom
 - (B) Field
 - (C) Laboratory
 - (D) Library
 - (E) Not Given
- 1199.** A situation where participants' performance improves because they experience the experimental task more than once.
- (A) Fatigue effect
 - (B) Practice effect
- 1200.** This kind of research controls only some variables of the phenomenon under investigation and is therefore not entirely experimental.
- (A) Quasi-experimental research
 - (B) Deductive investigation
 - (C) Inductive investigation
 - (D) Hypothetical inductive research
- 1201.** The group that does not receive the independent variable/receives a placebo is known as the ____
- (A) Experiment Group
 - (B) Dependent Group
 - (C) Independent Group
 - (D) Control Group
- 1202.** What is an experiment used for in scientific research?
- (A) To collect data and test hypotheses
 - (B) To prove theories without evidence
 - (C) To make random observations
 - (D) To avoid making measurements
- 1203.** Independent groups designs are when
- (A) Participants only complete one condition of the experiment
 - (B) All participants complete all conditions of the experiment
 - (C) No participants complete all conditions of the experiment so it is repeated
 - (D) Participants are matched on characteristics such as race and only take part in one condition
- 1204.** What is definition that more closely relates to Experimental research strategy?
- (A) Establish the existence of a cause-and-effect relationship between two variables.
 - (B) Establish the existence of a cause-and-effect relationship between two experiments
 - (C) Establish the laws of nature through a clear definition and experimental procedure
 - (D) Provides evidence for a research question
- 1205.** Experiment emphasize parsimony, which means
- (A) Interpreting the results in the simplest way
 - (B) Interpreting the results in the most complex manner
 - (C) Interpreting the results using a correlation coefficient
 - (D) Interpreting the results using a clinical interview

1.2.9 Descriptive Research

1. It is a type of research according to approach that raises questions based on ongoing events (present). Its purpose is to observe, describe and document aspect of a situation as it natu-

rally occurs

- (A) QUALITATIVE RESEARCH
- (B) QUANTITATIVE RESEARCH
- (C) EXPERIMENTAL RESEARCH

- (D) DESCRIPTIVE RESEARCH
2. A company wants to know about the type of consumers in terms of demographic factors like age, income, occupation, gender who are using its brand in a particular market. What kind of research the company should consider doing?
(A) Exploratory research
(B) Problem research
(C) Descriptive Research
(D) Basic Research
 3. Which method would be optimal for investigating the following question about behavioral processes? "Do troops of baboons display territoriality ___ that is, do they mark off an area as their own and defend it from intrusion by other baboons?"
(A) Case study
(B) Experimentation
(C) Controlled observation
(D) Naturalistic observation
 4. Which is not considered a descriptive research?
(A) Randomized controlled trial
(B) Surveillance
 5. What is a form of descriptive research methodology that allows us to gather large amounts of information quickly and at very little cost? It is also great for sensitive information.
(A) Naturalistic observation
(B) Case study
(C) Survey
(D) Experiment
 6. A school wants to understand the relationship between student attendance and grades. Which design should they use?
(A) Experimental
(B) Correlational
(C) Longitudinal
(D) Case study
 7. What research method did Jane Goodall use?
(A) Experimental study
(B) Survey method
(C) Case study
(D) Naturalistic observation
 8. All of the following are types of descriptive studies except?
(A) Case Study
(B) Observation
(C) Experiment
(D) Survey
 9. Psychologists can use ___ to establish relationships between variables but struggle to establish cause and effect.
(A) Correlational studies
(B) Laboratory experiments
(C) Aptitude tests
(D) Social experiments
 10. The type of research that describes the state of affairs as it exists at the present circumstances is
(A) Analytical research
(B) Descriptive research
(C) Basic research
(D) Applied research
 11. There are various types of research designed to obtain different types of information. What type of research is used to define problems and suggest hypotheses?
(A) Descriptive Research
(B) Primary research
(C) Secondary research
(D) Causal research
 12. Which method is best for estimating prevalence of a behavior at a single point in time?
(A) Cross-sectional sampling snapshot
(B) Longitudinal repeated measures
(C) Laboratory randomized experiment
(D) Content analysis time series

13. Which scientific method can be used to study the effects of environmental racism?
(A) Randomized controlled trials
(B) Longitudinal studies
(C) Double-blind experiments
(D) Cross-sectional surveys
14. For descriptive research, which tools are mentioned for gathering data?
(A) Questionnaires, tests, checklists, and many others.
(B) Only interviews and observations.
(C) Surveys and experiments only.
(D) Graphs and statistical software only.
15. Measuring the Gadgets Usage of Children at Home during COVID-19 Community Quarantine
Quantitative Research Design: ____
(A) Descriptive or Survey
(B) Experimental
(C) Historical
(D) Case Study
16. What is the goal of descriptive research inquiry?
(A) To predict outcomes
(B) To explore concepts
(C) To describe phenomena in detail
(D) To test hypotheses
17. Descriptive research is a type of marketing research that is used by businesses when they need to
(A) Make predictions of the business's future sales.
(B) Decide which direction to take in a given situation.
(C) Try several theories to see what solution would work best.
(D) Obtain specific data related to the business's situation
18. In a ____, psychologists organize individuals into groups on the basis of age, then the groups are randomly sampled, and the individuals are surveyed, tested, or observed simultaneously.
(A) Qualitative study
(B) Cross-sectional study
(C) Quantitative study
(D) Longitudinal study
19. Descriptive research provides an accurate portrayal of a class or a particular individual situation or group.
(A) True
(B) False
20. Which of the following is a characteristic of a descriptive research study?
(A) It establishes a cause-and-effect relationship
(B) It manipulates variables
(C) It systematically describes phenomena without intervening
(D) It tests a hypothesis
21. A study to draw the features of a particular individual's situation or a group perfectly is known as
(A) Formulative research
(B) Agnostic research
(C) Descriptive research
(D) Hypothesis testing research
22. What type of research method is used to examine the relationship between two variables without manipulating either variable?
(A) Correlation
(B) Experiment
(C) Observation
(D) Longitudinal study
23. Descriptive research is used to:
(A) Test hypothesis
(B) Describe characteristics
(C) Prove theories
(D) Compare results

24. When American Airlines asked how many first-class passengers would purchase in-flight Internet service at \$25, they were conducting — research.
- (A) Causal
 - (B) Exploratory
 - (C) Secondary
 - (D) Ethnographic
 - (E) Descriptive
25. In — study, a cross section of a community is studied at a particular period of time.
- (A) Cross-sectional study
 - (B) Correlation study
26. It describes systematically a situation or area of interest factually and accurately
- (A) Descriptive method
 - (B) Historical method
 - (C) Development method
 - (D) Case and field method
27. Which type of quantitative research design is best used when the main objective of the study is just to observe and report a certain phenomenon as it is happening?
- (A) Descriptive Research
 - (B) Experimental Research
 - (C) Correlational Research
 - (D) Causal-Comparative Research
28. A professor finds that people who are obese have higher cholesterol levels than those who are not obese.
- (A) Observational Study
 - (B) Experiment
29. What is the central aim of the study regarding the integration of PBL in Eastern Pangasinan senior high schools?
- (A) To mandate PBL immediately without investigation.
 - (B) To investigate the current implementation and impact of PBL in that specific region.
 - (C) To prove that PBL cannot work in the Philippines.
 - (D) To compare science scores only within a single classroom.
30. Raises questions based on ongoing events (present). Its purpose is to observe, describe and document aspect of a situation as it naturally occurs and sometimes to serve as a starting point for hypothesis generation or theory development.
- (A) HISTORICAL RESEARCH
 - (B) EXPERIMENTAL RESEARCH
 - (C) DESCRIPTIVE RESEARCH
 - (D) EXPLORATORY RESEARCH
31. Research that involves observation to describe behavior
- (A) Descriptive research
 - (B) Analytical research
 - (C) Experimental research
 - (D) None of above
32. Which type of investigation does not have a hypothesis?
- (A) Descriptive.
 - (B) Comparative.
 - (C) Experimental.
 - (D) None of the above.
33. What is the type of research that identifies the characteristics of an observed phenomenon and collects more information?
- (A) Survey Research
 - (B) Descriptive research
 - (C) Correlative research
 - (D) Ethnographic research
34. Luisa is an educational researcher. She surveys everyone in the district to obtain their opinions about after-school enrichment programs. What type of research is best illustrated by Luisa's efforts?
- (A) Descriptive research
 - (B) Theoretical research
 - (C) Experimental research
 - (D) Correlational research

35. True of Descriptive Study designs:
(A) Useful in Hypothesis generation
(B) Ideal for testing hypothesis
(C) Experimental Research.
(D) None of the above.
36. This design aims to describe the present situation in order to gain information about a phenomenon.
(A) Sequential
(B) Cross-sectional
(C) Experimental
(D) Descriptive
37. Study design capable of addressing questions about natural history or prognosis and causation
(A) Cohort studies
(B) Randomized Controlled Trials
38. What is the main characteristic of nonexperimental research?
(A) Manipulation of variables
(B) Random assignment
(C) Observation without intervention
(D) Use of control groups
39. — is a type of research method that is used when one wants to get information on the current status of a person or an object.
(A) Diagnostic research design
(B) Observation research design
(C) Descriptive research design
(D) None of the above
40. What research method involves data collection about a group over a number of years to assess change?
(A) Longitudinal Study
(B) Case Study
(C) Experiment
(D) Cross-Sectional Study
41. A study about the culture of an ethnic group in a certain area.
(A) Exploratory Research.
(B) Descriptive Research.
42. In this type of research, the researcher must take particular care not to intervene in the observed object or phenomenon, as its behaviour may change if an external factor is involved.
(A) Exploratory research
(B) Descriptive research
(C) Explanatory research
(D) Correlational research
43. — is research undertaken to collect data to examine the characteristics of consumers and/or markets.
(A) Descriptive research
(B) Exploratory research
(C) Conclusive research
(D) Causal research
44. Which of the following is a descriptive quantitative research question?
(A) Is there a relationship between social media use and academic performance?
(B) What is the average age of first-year university students?
(C) How does the average salary of men differ from women in the tech industry?
(D) What are the factors that influence customer satisfaction with a new product?
45. What is a cross-sectional study in communication research?
(A) A study that focuses on a single point in time
(B) A study conducted over an extended period to observe changes over time
(C) A study that examines historical documents
(D) A study involving statistical analysis
46. A method of testing where experimenters study people of different age groups rather than follow a person or group over an extended period of time
(A) Cross-sectional method

- (B) Longitudinal method
(C) Double Blind Study
(D) Naturalistic Observation
47. A descriptive design requires a clear specification of the who, what, when, where, why, and way) of the research.
(A) True
(B) False
48. Causal-comparative studies are classified under
(A) Historical research.
(B) Developmental research.
(C) Experimental research.
(D) Descriptive research.
49. If a researcher was interested in determining the characteristics of a particular segment of the population, the researcher would use:
(A) Exploratory research
(B) Causal research
(C) Descriptive research
(D) None of the above
50. Which of the following systematically discovers relations and interaction among variables in real life situations such as school, factory, community etc?
(A) Field study.
(B) Survey study.
(C) Field experiments.
(D) Ex-post factor study.
51. Cross-sectional and longitudinal designs are types of ____
(A) Causal research
(B) Exploratory research
(C) Descriptive research
(D) None of the above
52. A research method that follows the same group of people over time.
(A) Cross-sectional study
(B) Longitudinal study
- (C) Cohort
(D) Natural selection
53. This is the most used method of investigation in educational research. Useful in obtaining the prevailing status or condition of the problem
(A) Descriptive design
(B) Experimental design
(C) Correlational research design
(D) None of above
54. Structured observation is appropriate in case of:
(A) Analytical studies
(B) Descriptive studies
(C) Fundamental studies
(D) Experimental studies
55. Which of the following types of research would be best suited for understanding the attitudes of consumers who buy a particular brand of soft drink?
(A) Internal research
(B) Descriptive research
(C) Causal research
(D) Exploratory research
(E) Demographic research
56. Study design capable of identifying possible causal factors
(A) Cohort study
(B) Cross sectional study
57. Type of research to define existing condition of a variable
(A) Descriptive Research
(B) Experimental Research
(C) Predictive Research
(D) Exploratory Research
58. The goal of the research ____ is to describe the characteristics of something such as understanding the attitudes of consumers who purchase a particular brand of soft drink or identifying demand such as how many first class

- passengers would purchase ultra-high speed Wi-Fi service for \$25.
- (A) Internal
 - (B) Exploration
 - (C) Descriptive
 - (D) Causal
59. The goal of ___ research is to describe things, such as the market potential for a product or the demographics and attitudes of consumers who buy the product.
- (A) Exploratory
 - (B) Statistical
 - (C) Causal
 - (D) Analytic
 - (E) Descriptive
60. What kind of research question is this: How often do Hanoi university students read books in English each week?
- (A) Descriptive
 - (B) Comparative
 - (C) Relationship
 - (D) None of above
61. Understanding how satisfied customers are with a product or service and areas for improvement.
- (A) Customer Satisfaction Research
 - (B) Advertising Research
62. Basic type of question which enable the researcher to describe the characteristics of the variables of interest in a situation is?
- (A) Exploratory
 - (B) Descriptive
 - (C) Causal
 - (D) None of above
63. Which 1960s book highlighted the damage inflicted upon avian species by industrial pesticide like DDT?
- (A) Silent Spring
 - (B) The Spring is Silent Today
 - (C) The Missing Birds
 - (D) Silent Birds
64. It is used to describe what is in existence in respect to conditions or variables that are found in a given situation.
- (A) Diagnostic research design
 - (B) Observation research design
 - (C) Descriptive research design
 - (D) None of the above
65. Cross-sectional study observes different groups in the population
- (A) TRUE
 - (B) FALSE
66. Type of study less able to prove causation as they provide no direct evidence on the time sequence of events
- (A) Cross-sectional
 - (B) Retrospective cohort
67. Prevalence, dimensions or characteristics
- (A) Identification
 - (B) Description
 - (C) Exploration
 - (D) Prediction and control
 - (E) Explanation
68. Includes surveys and fact-finding inquiries of different kinds. It tries to discover answers to the questions who, what, when, and sometimes how. Here the researcher attempts to describe or define a subject, often by creating a profile of a group of problems, people, or events.
- (A) Applied research
 - (B) Fundamental research
 - (C) Futuristic research
 - (D) Descriptive research
 - (E) Explanatory research
69. Correlational study describes the relationship between two variables.
- (A) True
 - (B) False

70. How can nonexperimental designs inform policy decisions?
- (A) By proving causality
 - (B) By describing trends and relationships
 - (C) By manipulating variables
 - (D) By using control groups
71. Which of the following is an example of descriptive research?
- (A) Finding reasons for unemployment
 - (B) Surveying consumer preferences
 - (C) Testing a new hypothesis
 - (D) Developing a new theory
72. Used to investigate the direction and magnitude of relationships among variables
- (A) Descriptive-correlational
 - (B) Descriptive-evaluative
 - (C) Descriptive comparative
 - (D) Descriptive documentary
73. This research design is used when the researcher's concern is to understand the nature, characteristics, components, or aspects of a situation or phenomenon.
- (A) Ethnographic research
 - (B) Evaluation research
 - (C) Causal research
 - (D) Descriptive research
74. — describes the present state of affairs as it exists without having any control over variables.
- (A) Analytical research
 - (B) Descriptive research
 - (C) Distinctive research
 - (D) Applied research
75. The use of surveys, interviews, or observations to identify people's opinions and attitudes is best described as:
- (A) Descriptive research.
 - (B) Correlational research.
 - (C) Experimental research.
 - (D) Longitudinal research.
76. Which of the following research methods is being described? observes and records behavior
- (A) Descriptive method
 - (B) Correlational method
 - (C) Experimental method
 - (D) None of above
77. What is the process involved in descriptive research?
- (A) Investigation and generalizations of the events of the past.
 - (B) Description recording analysis and interpretation of the present condition.
 - (C) Deliberate manipulation.
 - (D) All of the above.
78. Type of descriptive design that is used to gather information from groups of people by selecting and studying samples chosen from a population.
- (A) Survey
 - (B) Correlational
 - (C) After the fact
 - (D) Comparative
79. What are the two basic types of studies that are categorized as descriptive research?
- (A) Focus groups and case analysis
 - (B) Longitudinal studies and case analysis
 - (C) Focus groups and cross-sectional studies
 - (D) Longitudinal studies and cross-sectional studies
80. A coffee shop wants to know the preferences and buying habits of its regular customers. The owner conducts a survey asking about their favorite drinks, how often they visit, and their level of satisfaction. What type of research design is used in this study?
- (A) Exploratory
 - (B) Descriptive
 - (C) Causal
 - (D) Correlational

81. Descriptive research aims to:
- (A) Explain cause-and-effect
 - (B) Describe characteristics of a population or phenomenon
 - (C) Test interventions
 - (D) None of above
82. A type of research that fills in the details and gaps regarding a particular idea, with the intent to expand understanding.
- (A) Explorative Research
 - (B) Descriptive Research
 - (C) Explanatory Research
 - (D) Qualitative Research
83. Sir Mike wants to know the students' CBL Program satisfaction level. He prepared a checklist questionnaire to gather their satisfaction level.
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
84. Which of the following is NOT a characteristic of a cross-sectional research design?
- (A) Data is collected from a single sample at one point in time.
 - (B) The sample is typically representative of the population of interest.
 - (C) The design is relatively inexpensive and easy to conduct.
 - (D) The design can be used to establish cause-and-effect relationships.
85. What is the primary goal of descriptive research in marketing?
- (A) To explore new ideas
 - (B) To describe characteristics or functions
 - (C) To test variables
 - (D) To manipulate factors
86. The research is directed toward studying "what" and how many of this "what".
- (A) Action Research
 - (B) Longitudinal Research
 - (C) Explanatory Research
 - (D) Descriptive Research
87. A method of testing a group of participants over an extended period of time
- (A) A single blind study
 - (B) A double blind study
 - (C) The longitudinal method
 - (D) The cross-sectional method
88. Identify the term: These studies describe things and include surveys, questionnaires, and observational studies, but do not provide evidence about whether a strategy, program, or intervention is effective.
- (A) Descriptive research studies
 - (B) Experimental research studies
 - (C) Correlational research studies
 - (D) Meta-analytic research studies
89. Beth Williams works for a marketing research company in Chicago. Her current research involves finding the market potential for a client's new line of sports apparel. Given her objective, which of the following types of research is the most suitable for Beth?
- (A) Causal research
 - (B) Constructive research
 - (C) Statistical research
 - (D) Descriptive research
 - (E) Exploratory research
90. Seeks to describe the current status of an identified variable. This type of research is designed to provide systematic information about a phenomenon
- (A) Descriptive Research
 - (B) Non-Experimental Research
 - (C) Comparative Research
 - (D) Correlational Research
91. Which research approach aims to describe characteristics of a population or phenomenon?
- (A) Exploratory

- (B) Descriptive
(C) Correlation
(D) Experimental
92. The main objective of ____ Study is to acquire Knowledge
(A) Exploratory
(B) Descriptive
(C) Diagnostic
(D) Descriptive and Diagnostic
93. What type of descriptive research study measures a situation at only one point in time?
(A) Cross-sectional studies
(B) Longitudinal studies
(C) Point in Time studies
(D) One Point in Time studies
94. Descriptive research is the type of research that-
(A) Is made for performing the basic or pure research; it's a theoretical research
(B) Is intended for finding some solution to the problem considered
(C) Includes fact-finding inquiries and surveys
(D) Uses available information as the bases to make the further critical evaluation
95. Non-experimental that shows an image or picture of an individual or group.
(A) Descriptive
(B) Correlative
(C) Comparative
(D) None of above
96. Descriptive research describes the characteristics of the population or the phenomenon studied.
(A) True
(B) False
97. Which of the following is an example of a correlation (relational)?
(A) All WNBA players are women, and Cheryl Stoops is a WNBA player, therefore Cheryl Stoops must be a woman.
(B) Classes with elementary PE specialists tend to have higher levels of active learning times (ALT) in their classes than non PE specialists.
(C) School A has an elementary PE specialist.
(D) School B has classroom teachers teach PE.
98. Three descriptive methods of psychological research.
(A) Experiments, correlations, case studies
(B) Dependent variable, case studies, inferential statistics
(C) Naturalistic observation, experiments, case study
(D) Case studies, naturalistic observation, surveys
99. "a research question that asks about the presence of behaviour, how frequently it is exhibited, or whether there is a relationship between different behaviours" This is a ____
(A) Descriptive research question
(B) Predictive research question
(C) Causal research question
(D) None of above
100. Involves making a judgement of worth or value
(A) Descriptive-correlational
(B) Descriptive-evaluative
(C) Descriptive comparative
(D) Descriptive documentary
101. Cross-sectional studies where researchers test and compare people of various ages are flawed because they not only compare people of different ages, they also compare what?
(A) People with higher education to lower education
(B) People from large families to people from small families

- (C) People from different locations
 - (D) All answers are correct
 - (E) People from different eras
- 102.** A case study is an example of which type of research design?
- (A) Experimental
 - (B) Descriptive
 - (C) Quasi-experimental
 - (D) Correlational
- 103.** The goal of science that involves the accurate portrayal of a certain phenomenon is known as:
- (A) Control
 - (B) Explanation
 - (C) Description
 - (D) Evaluation
- 104.** According to research concepts, Descriptive research is numerically orientated, and often involves statistical analysis.
- (A) True
 - (B) False
- 105.** It describes a topic of interest or event, it used detailed descriptions of what the researcher does.
- (A) Correlational Research
 - (B) Explanatory Research
 - (C) Descriptive Research
 - (D) Action Research
- 106.** What is the purpose of conducted Descriptive Research?
- (A) Present facts concerning the nature and status of anything
 - (B) Do experiments
 - (C) To report findings
 - (D) None of the above
- 107.** Which observation in a forest involves an interaction between two groups of living organisms?
- (A) Termites live in a decaying log
 - (B) Plants provide food for wildlife
 - (C) A snake suns itself on a rock
 - (D) Trees grow next to a creek
- 108.** Mostly observation, environment not disturbed, and variables are not manipulated
- (A) Humanistic research
 - (B) Naturalistic research
 - (C) Optical research
 - (D) None of above
- 109.** It aims at defining or giving a verbal portrayal or picture of a person, thing, event, group, situation, etc.
- (A) Descriptive research
 - (B) Correlational research
 - (C) Explanatory research
 - (D) Action research
- 110.** What type of quantitative research aims to describe characteristics of a population?
- (A) Experimental
 - (B) Correlational
 - (C) Descriptive
 - (D) Causal-comparative
- 111.** Which of the following is an example of a non-experimental study?
- (A) Randomized controlled trial
 - (B) Survey research
 - (C) Field experiment
 - (D) Laboratory experiment
- 112.** Choose all of the descriptive research methods.
- (A) Case study.
 - (B) Observations.
 - (C) Survey.
 - (D) All of the above.
- 113.** Identify this type of lead: "The sun was setting and the sky was painted with hues of orange and red, casting a warm glow over the quiet streets and its road signs, beckoning motorists to slow down and take notice."

- (A) Punch lead
(B) Descriptive lead
(C) Direct address lead
(D) Contrast lead
(E) Question lead
- 114.** Grace is conducting a study on age-related memory changes. She wants to know: At what age do the largest impairments in memory typically appear?
(A) 65
(B) 70
(C) 75
(D) 85
- 115.** The major problem with ____ research is that you have no control of variables and the behavior may be a fluke occurrence.
(A) Correlational
(B) Experimental
(C) Descriptive
(D) Inferential
- 116.** The goal of which type of research design is to describe the variables, not examine relationships among the variables?
(A) Descriptive research
(B) Correlational research
(C) Quasi-experimental research
(D) Experimental research
- 117.** Study is to learn who, what, when, where & how of a topic.
(A) Descriptive research design
(B) Exploratory research design
(C) Conclusive research design
(D) None of above
- 118.** This type of quantitative research seeks to describe the current status of an identified variable.
(A) Descriptive
(B) Correlational
(C) Quasi-experimental
(D) True experimental
- 119.** A kind of Quantitative Research concerned with describing the nature, characteristics, and components of the population or a phenomenon.
(A) Descriptive Research
(B) Correlational Research
(C) Evaluation Research
(D) Survey Research
- 120.** In ____, a researcher makes no prediction and does not try to control any of the variables
(A) Sampling
(B) Descriptive designs
(C) Experiment
(D) Representative samples
- 121.** During a recent project, Ishaan conducted a study to understand consumer behavior. He focused on gathering data and statistics to present his findings. He emphasized that his approach was based on facts. What type of research did Ishaan conduct?
(A) Descriptive
(B) Applied
- 122.** Which research has the purpose to focus on 'how' and 'what' question?
(A) Nomothetic research
(B) Basic research
(C) Descriptive research
(D) None of the above
- 123.** Descriptive research usually includes:
(A) Observations and surveys
(B) Random sampling
(C) Controlled experiments
(D) Manipulation of variables
- 124.** Which design would you use to assess the attitudes of parents, teachers, and students toward a new disciplinary policy?
(A) Descriptive
(B) Correlational
(C) Experimental
(D) Causal-comparative

125. Which method involves the collection of data to provide an accurate description without manipulating variables?
- (A) Experimental Research
 - (B) Descriptive Research
 - (C) Quasi-Experimental Research
 - (D) Correlation Research
126. It describe nature, characteristic, and components of a phenomenon.
- (A) Correlational research
 - (B) Descriptive research
 - (C) Evaluation research
 - (D) Causal comparative research
127. In a — a researcher is solely interested in describing the situation or case under their research study.
- (A) Descriptive design,
 - (B) Experimental research design
 - (C) Correlational research design
 - (D) Diagnostic research design
 - (E) Explanatory research design
128. Renna wanted to find out the satisfaction level of her customers regarding her newly renovated restaurant. She asked her customers to answer a satisfaction survey. She, then, interviewed her customers and identified the common patterns of their responses.
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
129. Hey there! Aarav is conducting a survey in a district with 2500 samples to explore their socio-economic status. Which research design should he use?
- (A) Exciting Exploratory
 - (B) Extraordinary Experimental
 - (C) Dazzling Descriptive
 - (D) Daring Diagnosis
130. When the purpose of research is to describe the situation, events or phenomenon, it is a —
- (A) Exploratory
 - (B) Explanatory
 - (C) Descriptive
 - (D) Predictive
131. Which approach best fits a study emphasizing the quantity, form, subject, and age of citations rather than their content quality?
- (A) Interpretive qualitative approach
 - (B) Experimental causal approach
 - (C) Descriptive research method
 - (D) Ethnographic field approach
132. Research design that is used to describe a particular phenomenon by observing it as it occurs in nature
- (A) Case Study
 - (B) Descriptive
 - (C) Correlational
 - (D) Narrative
133. Descriptive Research aims at defining or giving a verbal portrayal or picture of a person, thing, event, group, situation, etc.
- (A) TRUE
 - (B) FALSE
 - (C) I DON'T KNOW
 - (D) None of above
134. What is the primary focus of descriptive research?
- (A) To describe characteristics of a population
 - (B) To establish cause and effect relationships
 - (C) To manipulate variables
 - (D) To test a hypothesis
135. Surveys are:
- (A) Fundamental Research
 - (B) Descriptive Research
 - (C) Applied Research
 - (D) None of above

- 136.** This method of research aims to accurately and systematically describe a population, situation or phenomenon. It can answer what, when, where and how questions but not why questions.
- (A) Descriptive Research
 - (B) Historical Research
 - (C) Explanatory Research
 - (D) Exploratory Research
- 137.** Which research method involves watching behavior in a natural setting?
- (A) Survey
 - (B) Case study
 - (C) Naturalistic observation
 - (D) Laboratory experiment
- 138.** Which of the following is an example of a specific research problem for descriptive research?
- (A) What is the mean performance of teachers in the city and province of Iloilo, Philippines?
 - (B) How do teachers feel about their profession?
 - (C) What are the challenges faced by teachers?
 - (D) Why do teachers choose their profession?
- 139.** The descriptive research acts opposite to
- (A) Qualitative research
 - (B) Analytical research
 - (C) Quantitative research
 - (D) Conceptual research
- 140.** Mr. Canuc would like to know further the type of social media used between the male and female SHS students of East Pagat National High School. What is the appropriate research design to be used in his study?
- (A) Quasi-Experimenta
 - (B) Correlational
 - (C) Experimental
 - (D) Descriptive
- 141.** It is a study that provide simple information about the frequency or amount of something.
- (A) Correlational studies
 - (B) Descriptive-survey research
 - (C) Causal-comparative research
 - (D) None of above
- 142.** This research design help provide answers to the questions of who, what when, where, and, how. It is used to describe characteristics, averages, and trends.
- (A) Correlational
 - (B) Causal
 - (C) Experimental
 - (D) Descriptive
- 143.** The disadvantage of this method of descriptive research is that it does not permit researchers to draw conclusions regarding cause-and-effect relationships
- (A) Correlational
 - (B) Experiments
 - (C) Case Study
 - (D) Survey
 - (E) Observational
- 144.** Hey there! Alisha, Kabir, and Aarush are on a mission to collect data from 2500 samples in a district to uncover their socio-economic status. Which research design should they use?
- (A) Exploratory
 - (B) Experimental
 - (C) Descriptive
 - (D) Diagnosis
- 145.** A descriptive studies characterizes questions except for
- (A) When
 - (B) Who
 - (C) Where
 - (D) How
- 146.** Which type of research question asks about characteristics or details?
- (A) Descriptive.

- (B) Comparative.
 - (C) Relational.
 - (D) Causal.
 - (E) Experimental.
- 147.** Data will be collected from 2500 samples from a district to know their socio-economic status. What research design is applicable?
- (A) Exploratory
 - (B) Experimental
 - (C) Descriptive
 - (D) Diagnosis
- 148.** The study aims to "determine how PBL is implemented, perceived, and sustained" within the K-12 curriculum context. This phrasing suggests the researchers are primarily interested in the:
- (A) Specific financial costs of implementation.
 - (B) Comprehensive operational details and effectiveness of PBL in practice.
 - (C) Historical origins of the K-12 curriculum.
 - (D) Political opinions of local administrators.
- 149.** Determine if people who take vitamin C every day are less likely to get colds.
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
- 150.** Descriptive research's objective is to ____
- (A) Describe
 - (B) Explore
 - (C) Test
 - (D) None of above
- 151.** Marketers need to know more about the demographics of their target market. The most appropriate research design for them would be
- (A) Conclusive research.
 - (B) Descriptive research.
 - (C) Exploratory research.
 - (D) Causal research.
- 152.** A descriptive research question aims to:
- (A) Identify cause-and-effect relationships
 - (B) Describe characteristics of a population or phenomenon
 - (C) Compare two or more groups
 - (D) Test statistical differences
- 153.** Which of the following is NOT a con of non-experimental designs?
- (A) Low reliability, generalizability to broader population, and validity
 - (B) Data interpretations can be unclear
 - (C) Useful for descriptions, hypothesis generation, examining rare phenomena
 - (D) Not as useful for hypothesis/theory testing
- 154.** Dessa wanted to find out the satisfaction level of her customers regarding her newly renovated restaurant. She asked her customers to answer a satisfaction survey. She, then, interviewed her customers and identified the common patterns of their responses.
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) None of above
- 155.** This type of research seeks to describe a situation, problem or phenomenon in a systematic, factual, accurate and objective manner.
- (A) Descriptive research
 - (B) Explanatory Research
 - (C) Correlational or Associational Research
 - (D) Exploratory Research
- 156.** Which non-experimental research studies the medical and lifestyle histories of the people in comparative groups to learn what factors may be associated with the disease or condition.
- (A) Descriptive
 - (B) Retrospective

- (C) Longitudinal
(D) None of above
157. Cross-sectional studies-measure units from a sample of the population at many points in time
(A) True
(B) False
(C) All the above
(D) None of the above
158. Fieldwork refers to research conducted in a(n) ____ environment.
(A) Controlled
(B) Artificial
(C) Natural
(D) Indoor
159. This study looks backwards and examines exposures to suspected risk or protection factors in relation to an outcome that is established at the start of the study.
(A) Cross-sectional
(B) Retrospective
(C) Longitudinal
(D) None of above
160. Observational research allows a researcher to
(A) Make statements about causality
(B) Make predictions about one variable based on knowledge of another variable
(C) Provide a description of a phenomenon
(D) Randomly assign participants to conditions of an experiment
161. Research design is used to study or estimate the proportion of people in a particular population who hold certain specific attitudes.
(A) Exploratory research design.
(B) Conclusive research design.
(C) Descriptive research design.
(D) Diagnostic research design.
162. Descriptive research seeks to describe systematically, factually, accurately, and objectively a situation, problem, or phenomenon.
(A) True
(B) False
163. Which purpose of research is focused on describing the characteristics of a phenomenon?
(A) Exploratory
(B) Descriptive
(C) Explanatory
(D) Applied
(E) Fundamental
164. Is a type of research that describes a population, situation, or phenomenon that is being studied.
(A) Exploratory Research
(B) Descriptive Research
(C) Correlational Research
(D) Explanatory Research
(E) Predictive Research
165. The research topic "The factors affecting the bad sleeping habits of teenagers" on which of the following research design?
(A) Descriptive
(B) Relational
(C) Causal / Experimental
(D) Survey
166. A research design that presents facts concerning the nature and status of anything.
(A) Quasi Experimental Research
(B) Comparative Research
(C) Descriptive Research
(D) True experimental Research
167. Johnny is conducting a case study on a student who has water allergy. He would like to look into his life and his struggles.
(A) Descriptive
(B) Correlational
(C) Experimental
(D) None of above

- 168.** Descriptive research primarily involves
- (A) Observing phenomena without attempts to influence
 - (B) Manipulating variables to establish causality
 - (C) Solving targeted practical problems in context
 - (D) Inferring associations without direct causation
- 169.** Case studies, observation, self-report
- (A) Variables
 - (B) Operationalization
 - (C) Descriptive research
 - (D) Analytical research
- 170.** A research design used to explain a certain phenomenon.
- (A) Experimental
 - (B) Quasi-Experimental
 - (C) Correlational
 - (D) Descriptive
- 171.** What type of research question asks, "What are the most important features customers look for in smartphones?"
- (A) Causal
 - (B) Descriptive
 - (C) Correlational
 - (D) Comparative
- 172.** Which of these is an example of a cohort study?-(cohort grouped together for a period or time)
- (A) Survey on consumer satisfaction
 - (B) CDaCI study (child development after cochlear implants)
 - (C) Case study on stuttering
 - (D) Cross-sectional comparison of age groups
- 173.** Descriptive research answers which questions?
- (A) Why only
 - (B) How, when, where, who
 - (C) Only what caused the effect
 - (D) None of these
- 174.** Descriptive research in quantitative research is used to:
- (A) Explore relationships between variables
 - (B) Describe characteristics of a population
 - (C) Test hypotheses
 - (D) Determine cause and effect
- 175.** Used to compare and contrast representative samples from two or more groups of subjects in relation to certain designated variables that occur in normal conditions
- (A) Descriptive survey
 - (B) Descriptive-nominative survey
 - (C) Descriptive documentary
 - (D) Descriptive comparative
- 176.** Impacts of remote learning on the performance of senior high school students
- (A) DESCRIPTIVE
 - (B) EXPERIMENTAL
 - (C) SURVEY
 - (D) None of above
- 177.** The aim of this research type is to explain and interpret, the current status of people, settings, conditions or events.
- (A) Descriptive
 - (B) Experimental
 - (C) Correlational
 - (D) None of above
- 178.** The surveys and fact-finding investigations of distinct types come under
- (A) Analytical Research
 - (B) DESCRIPTIVE RESEARCH
 - (C) Applied Research
 - (D) Fundamental Research
- 179.** Michael hands out a survey to find out the average age and schooling level of his class. What type of research is this?
- (A) HISTORICAL

- (B) CAUSE-AND-EFFECT
(C) QUASI-EXPERIMENTAL
(D) DESCRIPTIVE
- 180.** Descriptive studies are conducted to:
- (A) Answer in quantitative form who, what, when, where, and how questions
(B) Specify the causality in the problem
(C) Describe previous findings in similar problems
(D) None of above
- 181.** Which research method assesses several variables on a single occasion?
- (A) Correlational (cross-sectional) research
(B) Longitudinal research
(C) Experimental research
(D) Archival research
- 182.** The primary objective of this research is to define the characteristics of a particular phenomenon without necessarily investigating the causes that produce it.
- (A) Explanatory research
(B) Descriptive research
(C) Exploratory research
(D) Correlational research
- 183.** To observe and report on a certain phenomenon
- (A) Correlation
(B) Ex post facto
(C) Descriptive
(D) Quasi-Experimental
- 184.** A non-experimental inquiry is also called as —
- (A) Clinical Trial
(B) Observational Study
(C) Comparative study
(D) Epidemiology research
- 185.** A non-experimental study design that follows a group of people and then looks at how events differ among people within the group.
- this type of study is useful for trying to ascertain whether exposure is likely to cause specified events.
- (A) Randomized controlled trial
(B) Controlled clinical trial
(C) Cohort study
(D) Case control study
(E) Case series
- 186.** When a property developer conducts a survey research to obtain feedback about the design and pricing of the properties, it is an example of:
- (A) Exploratory research.
(B) Observational research.
(C) Secondary data research.
(D) Descriptive research.
- 187.** A market analyst would like to do market research to determine the top choice of products of their potential clients. Which quantitative research design he/she must use?
- (A) Correlational
(B) Descriptive
(C) Experimental
(D) Quasi-Experimental
- 188.** What is a type of research design?
- (A) ANOVA
(B) Chi-Square
(C) Quartile Deviation
(D) Descriptive
- 189.** Which level of inquiry is represented by asking, "What are testosterone levels among patients with condition X?"
- (A) Descriptive factor naming level
(B) Comparative relationship level
(C) Explanatory causal level
(D) Evaluative policy level
(E) Predictive modeling level
- 190.** Descriptive Research has two major types
- (A) Observation method and decisional method

- (B) Observation method and survey method
- (C) Survey method and theoretical method
- (D) None of above
- 191.** Theresa gave the survey questionnaire to the participants to find out the average and schooling level of a certain level. What type of quantitative research is Theresa conducting?
- (A) Case Study
- (B) Descriptive Research
- (C) Historical Research
- (D) Experimental Research
- 192.** Using medical records to examine age differences in blood pressure is ____ research.
- (A) Archival
- (B) Experimental
- (C) Survey
- (D) Case study
- 193.** The benefit of this descriptive research is that it allows researchers to view naturally occurring behaviors without controlling the situation.
- (A) Natural observation
- (B) Survey
- (C) Case Study
- (D) Correlation
- 194.** What type of research design is commonly used in descriptive research?
- (A) Experimental design
- (B) Correlational design
- (C) Survey research or descriptive design
- (D) Qualitative research design
- 195.** Descriptive research is mainly concerned with:
- (A) Finding relationships
- (B) Explaining causes
- (C) Portraying accurate profiles
- (D) Manipulating variables
- 196.** This type of quantitative research describes the nature, characteristics and components of the population or phenomenon and the frequency it occurs in the said population.
- (A) Evaluation
- (B) Experimental
- (C) Descriptive
- (D) Correlational
- 197.** Which of the following best describes a descriptive research title?
- (A) A title that provides a general overview of the research topic
- (B) A title that outlines the methodology used in the study
- (C) A title that summarizes the main findings of the research
- (D) A title that poses a question to the reader
- 198.** This type of study is carried out over a long period. It measures and observes the variables of interest without changing existing conditions.
- (A) Survey
- (B) Simulations
- (C) Observational Study
- (D) None of above
- 199.** Researchers are interested in studying the relationship between poor prenatal nutrition and early cognitive development. Because of ethical concerns, which research method would be most appropriate for researchers to use?
- (A) Survey
- (B) Case study
- (C) Experimentation
- (D) Correlational
- (E) Naturalistic observation
- 200.** Uncontrollable environmental factors can dramatically affect this type of research.
- (A) Experiment
- (B) Naturalistic Observation
- (C) Survey
- (D) Case Study

201. Which of the following research methods is being described? examples are case studies, surveys, naturalistic observations
- (A) Descriptive method
 - (B) Correlational method
 - (C) Experimental method
 - (D) None of above
202. This classification of research attempts to describe systematically a situation, problem, phenomena, service or program, or provides information about, say, living condition of a community, or describe attitudes towards issue.
- (A) Experimental research
 - (B) Correlational research
 - (C) Quasi-Experimental research
 - (D) Descriptive research
203. How can survey data be used in nonexperimental research?
- (A) To manipulate variables
 - (B) To establish causality
 - (C) To describe or correlate variables
 - (D) To assign participants randomly
204. Study design suited to address questions about the prevalence of a disease or risk factor
- (A) Cross-sectional study
 - (B) Cohort study
205. This is often used in descriptive research.
- (A) Quantitative research
 - (B) Qualitative research
 - (C) Experimental research
 - (D) Non experimental research
206. Descriptive studies done repeatedly in intervals is useful in:
- (A) Analyzing disease trends and patterns
 - (B) Budgetary planning
207. Used when data cannot be obtained through questionnaires or observation.
- (A) Descriptive survey
 - (B) Descriptive-nominative survey
 - (C) Descriptive documentary
 - (D) Descriptive comparative
208. Descriptive research objectives focus on:
- (A) Explaining the characteristics of a phenomenon
 - (B) Establishing cause and effect
 - (C) Developing a new theory
 - (D) Testing a hypothesis
209. The research design which looks into a large group of people composed of individuals with varied characteristics is referred to as ____
- (A) Descriptive design
 - (B) Cross-sectional design
 - (C) Exploratory design
 - (D) Cohort design
210. What is a common method used in descriptive research?
- (A) Random assignment
 - (B) Interviews
 - (C) Manipulation
 - (D) Control groups
211. Aarav is conducting a study on consumer behavior and learns that Descriptive Research has two major types.
- (A) Observation method and decisional method
 - (B) Observation method and survey method
 - (C) Survey method and theoretical method
 - (D) None of above
212. Correlation study is a type of?
- (A) Exploratory study
 - (B) Descriptive study
 - (C) Experimental study.
 - (D) None

213. Which of the following marketing research designs is often referred to as statistical research:
- (A) Causal research
 - (B) Numerical research
 - (C) Descriptive research
 - (D) Exploratory research
214. This may also called as DESCRIPTIVE RESEARCH DESIGN.
- (A) Experimental Research Design
 - (B) Non-experimental Research Design
215. Which of the following is NOT a method used in descriptive research?
- (A) Questionnaires
 - (B) Interviews
 - (C) Experimental manipulation
 - (D) Normative standards (based on test performance)
216. What is defined as a detailed explanation of features, characteristics of subject matter, something seen / heard / experienced?
- (A) Descriptions
 - (B) Decision making
 - (C) Explanation
 - (D) Predictions
217. Descriptive research can be either qualitative or ____
- (A) Relational
 - (B) Non-relational
 - (C) Sequential
 - (D) Quantitative
218. A city planner wants to know the average number of vehicles parked in the downtown parking garage during business hours. What type of research study is described?
- (A) Experimental Research Study
 - (B) Observational Research Study
 - (C) All the above
 - (D) None of the above
219. Which research design aims to provide detailed facts and profiles?
- (A) Descriptive
 - (B) Exploratory
 - (C) Explanatory
 - (D) Longitudinal
 - (E) Qualitative
220. Which type of research is most suitable for describing the characteristics of a group of consumers, such as their age and preferences?
- (A) Exploratory research
 - (B) Descriptive research
 - (C) Causal research
 - (D) Primary research

1.2.10 Historical Research

1. Who said: "Historians only reflect the history of their time and from his time:"
- (A) Positivism
 - (B) Historicism
 - (C) Hist. Materialism
 - (D) French School of the Annales
2. Which historical period changed education towards vocational and technical skills?
- (A) Ancient Greece
 - (B) Industrial Revolution
 - (C) Medieval Period
 - (D) Renaissance
3. Which historical figure is known for his evolutionary theories?
- (A) Charles Darwin
 - (B) . Skinner
 - (C) Ivan Pavlov
 - (D) John Watson
4. A researcher studying the history of medical education finds a manuscript that purports to be from the 14th century. Before he uses the

- source, he goes to three other experts who help him identify whether the manuscript is authentic or not. His authentication of the object is referred to as
- (A) Internal criticism.
 - (B) Positive criticism.
 - (C) External criticism.
 - (D) Secondary criticism.
5. 'Internal criticism' is a required step in
- (A) Philosophical Research.
 - (B) Historical Research.
 - (C) Descriptive Research.
 - (D) Experimental Research.
6. — is an approach to correlational data in which the researcher collects data through historical records and other primary sources.
- (A) Survey Method
 - (B) Archival Research
 - (C) Naturalistic Observation
 - (D) Trend Analysis
7. Identifying, locating, evaluating, and synthesizing data or evidence from past to confirm or reject a hypothesis
- (A) Historical design
 - (B) Phenomenological
 - (C) Case study
 - (D) Research design
8. In historical research, a primary source —
- (A) Consists of firsthand accounts by witnesses to events.
 - (B) Can consist of sources that include original maps, diaries, transcripts of the minutes of a meeting, and photographs.
 - (C) Both A and B.
 - (D) None of the above.
9. Which historiographical school opened up to other social sciences such as Anthropology and Sociology?
- (A) Annales School
 - (B) Marxist School
 - (C) Psychoanalytic School
 - (D) Positivist School
10. Taylor went and visited Intramuros to document the site and learn the experiences of Jose Rizal while staying there. What type of Qualitative Study is done?
- (A) Phenomenology
 - (B) Historical Analysis
 - (C) Case Study
 - (D) Ethnography
11. A method used in qualitative research to analyze historical events is:
- (A) Grounded theory
 - (B) Historical research
 - (C) Experimental research
 - (D) Quantitative analysis
12. This research involves the study of past events to examine the patterns and learn from these.
- (A) Historical Research
 - (B) Correlational Research
 - (C) Exploratory Research
 - (D) None of above
13. In Qualitative studies, the systematic collection and analysis of materials relating to the past is known as:
- (A) Ethnographical research
 - (B) Historical research
 - (C) Phenomenological research
 - (D) None of above
14. The roots of modern historiography are found in the ancient — historical writing
- (A) Indian
 - (B) German
 - (C) Italian
 - (D) Greek
15. Which of the following methods provides information about past trends?
- (A) Historical
 - (B) Correlational

- (C) Experimental
(D) Descriptive
16. The operation of finding the process of formation and development of an object belongs to which method?
(A) Historical method.
(B) Theoretical analysis and synthesis method.
(C) Classification and systematization method.
(D) Hypothesis method.
17. A type of research that deals with the examination of primary documents to connect the past to the present.
(A) Case study
(B) Content analysis
(C) Ethnography
(D) Historical analysis
18. The following is a step in the process of historical research?
(A) Preparing a report or narrative exposition.
(B) Data synthesis.
(C) Data collection and/or literature review.
(D) All of the above.
19. Historical research in qualitative studies aims to:
(A) Develop a new hypothesis
(B) Test previous findings
(C) Understand past events and their impact
(D) Quantify past data
20. This type of research according to approach where the researchers investigate question based events by utilizing procedures to determine the accuracy of facts about the events that already happened.
(A) Experimental Research
(B) Descriptive Research
(C) Historical Research
(D) Exploratory Research.
21. Historical sources are used to uncover the codes by which people understand, represent, and shape their world, as well as to find data that represents that world. Which of the following is an example of a historical source?
(A) A scientific article about climate change projections for 2100
(B) A medieval manuscript detailing the daily life of monks in the 12th century
(C) A fantasy novel with a made-up world
(D) A modern painting inspired by ancient mythology
22. In historical research secondary sources are —
(A) Generally considered more useful than primary sources.
(B) Generally considered less useful than primary sources.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
23. The steps of historical research method are
(A) To identify the problem.
(B) To collect the data.
(C) To criticise the data.
(D) All the above.
24. What is a major part of the report writing in historical research?
(A) Hypothesis testing
(B) Chronology and background of historical topics
(C) Primary data analysis only
(D) Survey results
25. You learn about old events and civilizations.
(A) History
(B) Science
(C) Geography
(D) Portuguese
26. In India, for which achievement is the Gupta Golden Age best known?
(A) Adoption of the printing press

- (B) Invention of the iron foot stirrup
(C) Use of gunpowder
(D) Development of the concept of zero
27. Historiography is formed from Greek words, namely *historia* and *grafien*, *grafien* means —
(A) History
(B) Writing
(C) Decoration
(D) Art
28. What discipline of science first used ethnography as a research methodology?
(A) Psychology
(B) Anthropology
(C) Biology
(D) Organizational Behavior
29. The process of dealing with concerns over the authenticity of a source is referred to as
(A) External criticism.
(B) Secondary criticism.
(C) Internal criticism.
(D) Sourcing.
30. It focuses on past events.
(A) Historical
(B) Narrative
(C) Case Study
(D) None of above
31. What is the method of research using past records or data sets to answer various research questions, or to search for interesting patterns or relationships?
(A) Archival research
(B) Cross-sectional research
(C) Experimental research
(D) None of above
32. In the 1820s, newspapers in the US first conducted what type of research activity?
(A) Market segmentation
(B) A/B testing
(C) Focus groups
(D) Field experiments
(E) Straw polls
33. T/F: Documents and remains in historical research are SECONDARY SOURCES
(A) True
(B) False
34. Which research method studies past events and trends?
(A) Historical Research
(B) Experimental Research
(C) Descriptive Research
(D) Correlational Research
35. Developed the first research laboratory for systematic study of Psychology.
(A) Aristotle
(B) Freud
(C) Descartes
(D) Wundt
36. What is the difference between scholarly history and popular history?
(A) Scholarly history is critically reviewed by experts and other historians before publication.
(B) Scholarly historians never appear on television or web series while popular historians often do.
(C) Scholarly historians never work on popular history projects like websites or movies and tv shows.
(D) Popular history is always inaccurate and biased while scholarly history is neither.
37. Years ago, people invented and begun to use this. Its adoption marked the beginning of recorded history.
(A) Art
(B) Writing
(C) Tools
(D) Filing

38. The practice of writing history is known as ____
(A) Linguistics
(B) Historiography
(C) Epigraphy
(D) Numismatism
39. What methodologies must historians use to better understand the past?
(A) Only qualitative analysis
(B) Only oral history
(C) Evolving methodologies, including quantitative analysis and oral history
(D) Traditional storytelling methods
40. This is called how history is written.
(A) Linguistics
(B) Pre-History
(C) History
(D) Historiography
41. Consider the following I-Lettering style II-Type of Paper III-Author's style of writing IV-Manufacturing date V-Stamp of Authority-Which among the above are used by Experts to examine the authenticity of a historical document?
(A) I, II & III
(B) I, II & IV
(C) All
(D) None
42. The writing of critical historical narrative is known as ____
(A) Historian.
(B) Archaeology
(C) Archival Science
(D) Historiography
43. Bloch and Braudel are two representatives of:
(A) Historicism
(B) Positivism
(C) French School of the Annales
(D) Historical Materialism
44. Historians believe that historical events are the result of both societal forces and individual decisions.
(A) True
(B) False
45. For items 37-39, identify the qualitative research designs that may correspond in the given statements in each item. Choose your answers in the box provided (case study; ethnography; historical study; phenomenology). The researcher wants to study the rise and fall of the twenty year reign of former President Ferdinand E. Marcos.
(A) Case study
(B) Ethnography
(C) Historical study
(D) Phenomenology
46. Historiography in cultural mapping refers to:
(A) Conducting festive events in local towns
(B) Memorizing dates of significant occasions
(C) Recording legends and folktales of origin
(D) Critically analyzing narrative accounts
47. If the title of the research is "Corazon Aquino, the Life and Contribution to the Philippines". What type of research can describes the title?
(A) Grounded Theory
(B) Case Study
(C) Ethnography
(D) Historical
48. Which Greek philosopher used the term 'History' for the first time?
(A) Nostrodom
(B) Hippocrates
(C) Herodotus
(D) Empedocles
49. What is Historical Research?
(A) Is the collecting and evaluating data and using the information found to relate past and present events.

- (B) Is concerned with the manipulation of conditions to investigate cause-effect relationships.
- (C) Generally used to describe a phenomenon.
- (D) Explore associations between two or more variables, without any attempts to influence them.
50. Complete the following sentence with the correct word: Historiography is the study of how history has been and is written. It focuses on the changing ___ of past events in the works of individual historians.
- (A) Sources
- (B) Facts
- (C) Interpretations
- (D) None of above
51. Whose is this idea: "The mankind moves in three different levels: long, medium and short duration"
- (A) Positivism
- (B) Historical Materialism
- (C) Historicism
- (D) French School of the Annales
52. The basic research material in historical researches is
- (A) Documents and Relics.
- (B) Official records and institutional records.
- (C) Memories and graphs.
- (D) Journal and periodicals.
53. To which are the concepts of internal external criticisms associated?
- (A) Descriptive research.
- (B) Literary research.
- (C) Validity of experimental designs of research.
- (D) Historical research.
54. It is a qualitative research in which data related to the past events are systematically collected and evaluated to describe potential causes, effects, or trends related to those events.
- (A) Historical Research
- (B) Discourse Analysis
- (C) Biography
- (D) Narrative Report
55. How can a student determine the credibility of a historical source?
- (A) By checking if the source is entertaining.
- (B) By determining the author's qualifications and the source's publication date.
- (C) By seeing if the source agrees with what they think.
- (D) By checking if the source is a primary source only.
56. Which study involves the identification, location, evaluation, and synthesis of data from past events?
- (A) Phenomenological study
- (B) Case study
- (C) Historical study
- (D) Ethnographic study
57. It is designed to facilitate a deeper understanding of historical processes and is not merely an attempt to fill gaps in our factual knowledge
- (A) The methodological study
- (B) The descriptive study
- (C) The historical study
- (D) The explanatory study
58. Books and records are the primary sources of data in: [2005-DECEMBER]
- (A) Historical research
- (B) Participatory research
- (C) Clinical research
- (D) Laboratory research
59. History changes depending on when the history was written.
- (A) False
- (B) True

60. Researchers studying historical artifacts primarily gain knowledge through-
- (A) Reading contemporary news articles
 - (B) Designing artifacts digitally
 - (C) Examining colonial technology
 - (D) Excavating archaeological sites
61. Which feature is used to chronologically track events of World War II?
- (A) Glossary
 - (B) Sidebar
 - (C) Timeline
 - (D) Diagram
62. What historical event is considered the starting point for global warming?
- (A) President Barack Obama's presidency
 - (B) The Paris Climate Agreement
 - (C) The Industrial Revolution
 - (D) President Donald Trump's presidency
63. For local history writing to have lasting significance, it must be:
- (A) Written in an emotional and subjective style
 - (B) Written in an entertaining and casual tone
 - (C) Written in an informal and flexible format
 - (D) Written in a professional and rigorous way
64. What is the main characteristic of historical research?
- (A) It is primarily used to study social phenomenon
 - (B) It is self-evaluative
 - (C) It involves the use of numeric data
 - (D) It involves the study of past events or phenomena
65. A researcher seeks to discover the events that transpired behind the assassination of Antonio Luna in Cavite in 1899 and discuss the implication of these events in history.
- (A) POSTMODERN
 - (B) CASE STUDY
 - (C) DISCOURSE ANALYSIS
 - (D) ETHNOGRAPHIC
 - (E) HISTORICAL
66. These foundations show the chronological development of curriculum, mostly shown using a timeline.
- (A) Philosophical Foundations
 - (B) Historical Foundations
67. Which type of research reconstructs or explains events of the past based on data, such as why Filipino elites collaborated with Americans during the U.S. regime?
- (A) Historical Research
 - (B) Experimental Research
 - (C) Descriptive Research
 - (D) Action Research
68. Reconstruction of this body part was written about in ancient India and the procedure is still used today.
- (A) Ears
 - (B) Lips
 - (C) Chin
 - (D) Nose
69. Which of the following title(s) of Historical Research is appropriate?
- (A) A study of Basic Education
 - (B) A Study of Values imbibed in Ramayana
 - (C) A study of School Curriculum implemented during Mughal Period
 - (D) None of these
70. Which historical "school" of psychology, developed by Wundt and his student, Titchener, focused on fundamental components of the conscious experience?
- (A) Humanism
 - (B) Behaviorism
 - (C) Structuralism
 - (D) Functionalism

71. Analyzing tsunami data helps to understand the causes and effects of tsunamis. It also helps to determine where future tsunamis are likely to occur. — data are compiled from past tsunamis.
(A) Monitoring
(B) Historical
72. It is the re-interpretation of an historical account.
(A) Anachronism
(B) Bias
(C) Historical Revisionism
(D) Ambivalence
73. In order to study scientifically the historical background of the events to know its bearing on present conditions is called
(A) Experimental Research.
(B) Philosophical Research.
(C) Action Research.
(D) Historical Research.
74. An issue with oral history is that it is difficult to detach bias, or truthfulness within an individual's story/narrative.
(A) True
(B) False
75. The research which is exploring new facts through the study of the past is called
(A) Philosophical research
(B) Historical research
(C) Content analysis
(D) Mythological research
76. Multiple Accounts and Perspectives
(A) Help us get an accurate picture of the past
(B) Are original documents and objects created at the time of study.
(C) Identify and answer questions about the origins of the source.
(D) Locate events and sources in time and space.
77. What type of information is of interest to sociologists using the Historical Method?
(A) Economic forecasts
(B) Information from past materials
(C) Genetic research
(D) Space exploration data
78. What type of research best describes the title "Corazon Aquino, the Life and Contribution to the Philippines"?
(A) Grounded Theory
(B) Case Study
(C) Historical
(D) Ethnography
79. History can be told by only sifting thru evidence and facts
(A) True
(B) False
80. Following Chandragupta Maurya's death, his grandson — brought the Mauryan empire to its greatest heights.
(A) Imhotep
(B) Seleucus
(C) Chandra Gupta I
(D) Asoka
81. A research method which examines past events
(A) Applied Research
(B) Basic Research
(C) Historical Research
(D) Descriptive Research
82. What type of data is it when you learn about the number of visitors to a Rani park Byculla in 2001?
(A) Current
(B) Historical
83. Which early method best represents the origins of marketing research focused on public opinion?
(A) Neuroscience lab experiments

- (B) Straw polls in local communities
 - (C) Blockchain-based transaction logs
 - (D) Programmatic ad attribution models
84. A study of the past with the help of written records and artifacts
- (A) Government
 - (B) Economics
 - (C) Culture
 - (D) History
85. Which historical perspective would ask the question "What are the components of behavior?"
- (A) Structuralism
 - (B) Functionalism
 - (C) Gestalt
 - (D) Introspection
86. During a history class, Thomas & Mikey were discussing about ancient civilizations. Thomas mentioned that the people of Mohenjo Daro were advanced compared to other civilizations during their time. Mikey was curious and asked, 'Which feature of Mohenjo Daro supports your statement, Thomas?'
- (A) They had high walls around the city
 - (B) They had dirt roads to move carts on
 - (C) They had homes made of mud and bricks
 - (D) They had sewer systems for toilets
87. A strong historical account is expected to be:
- (A) A fictional piece with creative details
 - (B) A verified work inspired from earlier cultural sources
 - (C) An original work based on careful research
 - (D) A revised work using old accounts into modern version
88. A person who studies the past is a:
- (A) Historian
 - (B) Scientist
 - (C) Astrologist
 - (D) Astronomer
89. These are written records of past happenings and events.
- (A) Historical Data
 - (B) Analytical Data
 - (C) Descriptive Data
 - (D) Critical Data
90. It is the examination of varied sources of data to make you understand the connection of past events to the present time.
- (A) Grounded Theory
 - (B) Historical Analysis
 - (C) Case Study
 - (D) None of above
91. Operations Research came into existence as a result of research on military operations during ____
- (A) World War I
 - (B) World War II
92. Proof used to support a historical claim
- (A) Historical fact
 - (B) Historical argument
 - (C) Evidence
 - (D) None of above
93. Historical Research relies on the use and analysis of "sources". Which of the following is an example of Historical Research?
- (A) Conducting surveys to understand current customer preferences
 - (B) Experimenting in a lab to test a new chemical reaction
 - (C) Analyzing letters and official records from the 1800s to write about colonial history
 - (D) Writing a science fiction story based on imagined technologies
94. Who initiated first empirical research in population study?
- (A) Sir William Petty
 - (B) John Graunt
 - (C) Gregory King
 - (D) Edmund Halley

95. Record of important events and an explanation of their causes and significance
(A) History
(B) Primary Source
(C) Chronology
(D) Artifact
96. What was the ancient Indian city of Nalanda known for?
(A) Capital of the Gupta Empire
(B) Religious pilgrimage
(C) Trade and commerce
(D) Center of learning
97. Provide historical evidence means:
(A) Find the cause of a historical event
(B) Select a quote for the document to support
(C) Identify and explain a historical event or fact that supports your statement
(D) Identify a claim in the reading
98. Leopold Von Ranke of Berlin University spoke about the critical method of historical research. He put emphasis on the utmost importance of information gathered through original documents. He also stated that all types of documents associated with a historical event need to be examined with greatest care. He believed that with this method it was possible to reach the historical truth.
(A) True
(B) False
99. What are the limitations of historical research?
(A) Generalizability and sample size
(B) Time covered and type of record
(C) Use of qualitative data only
(D) Quick data collection
100. He believes that there is standard history because all the narratives are based on different interpretations
(A) Fernand Braudel
(B) Michel Foucault
(C) Thucydides
(D) Friedrich Hegel
101. The writing of history based on critical examination is known as
(A) Archeology
(B) Historiography
(C) Analysis of lettering
(D) None of above
102. In history, what is the process of exploring the answers to questions about a certain time and place called?
(A) Inquiry
(B) Bias
(C) Secondary source
(D) Supporting question
103. Traditional historiographical features
(A) Mythology and imagination
(B) Palacecentric
(C) Objective
(D) Subjective
(E) Not chronological
104. Which research design concerned with the identification, location, evaluation, and synthesis or data from past events?
(A) Case Study
(B) Phenomenological
(C) Ethnography
(D) Historical
105. What do you do in the fourth step of historical research?
(A) Identify and use a variety of sources to gather information:
(B) Pause and ensure the data collected is related and reliable to your research.
(C) The researcher must look for trends and patterns worth answering
(D) None of above

- 106.** In evaluating historical research sources, external criticism ____
(A) Can involve the use of carbon dating and handwriting experts.
(B) Helps determine the validity, trustworthiness or authenticity of a source.
(C) Can involve use of historical linguists' knowledgeable with the writing style of the period.
(D) All of the above.
- 107.** We can learn about the climate of different periods throughout history by studying what aspect of the bubbles trapped in ice core samples?
(A) The temperature of the air inside the bubbles.
(B) The average volume of the bubbles.
(C) The levels of different gases in the bubbles.
(D) The average pressure of the air inside the bubbles.
- 108.** Understanding a topic's development over time and its influence or impact in history
(A) Historical Context
(B) Historical Perspective
(C) Chronology
(D) Credibility
- 109.** What can researchers learn about using the Historical Method?
(A) Future technologies
(B) Current political systems
(C) Events from the recent past or long ago
(D) Modern art trends
- 110.** Which of the following is an example of historical materials?
(A) A 1901 government-issued census of the Philippine population.
(B) A 2023 academic paper analyzing the causes of the Philippine-American War.
(C) A modern historical novel about the Philippine Revolution.
(D) A documentary about the Marcos regime produced in 2018.
- 111.** The geographic, social, political, religious, intellectual, technological, and economic settings in which events take place
(A) Historical Context
(B) Historical Perspective
(C) Objectivity
(D) Periodization
- 112.** What qualitative study does the following research title belong? "Telephones from the Nuclear Era to Digital Age"
(A) Case study
(B) Ethnography
(C) Historical study
(D) Phenomenology
- 113.** The process of determining the reliability or accuracy of the information contained in the sources collected is known as ____
(A) Vagueness.
(B) Presentism.
(C) External criticism.
(D) Internal criticism.
- 114.** It is the study of past events that makes us understand the present situation, and to enable us to predict future events.
(A) History
(B) Psychology
(C) Anthropology
(D) Sociology
- 115.** What is one of the purposes of analyzing facts associated with past events in historical research?
(A) To make historical events more complex
(B) To predict sports outcomes only
(C) To help explain present state of affairs
(D) To disregard past performance
- 116.** The type of research that involves patterns from the past to predict future trends is known as
(A) Historical research
(B) Descriptive research
(C) Secondary data
(D) Primary data

117. What is historical context?
- (A) Context clues
 - (B) Guessing about what happened in the past
 - (C) The moods, attitudes and conditions that existed in a certain time.
 - (D) History
118. A historian needs to evaluate a primary source to decide if it has a trustworthy point of view.
- (A) TRUE
 - (B) FALSE
119. Which social scientist would be most interested in your great-aunt's diary?
- (A) Economist
 - (B) Sociologist
 - (C) Historian
 - (D) None of above
120. The Gupta culture made significant contributions, one of the discoveries is ____
- (A) Concept of zero
 - (B) Invention of irrigation
 - (C) Creation of the wheel
 - (D) Idea of an arch or column
121. Historical research involves:
- (A) Analyzing past events to understand the present
 - (B) Testing new theories
 - (C) Quantitative data collection
 - (D) Developing future predictions
122. Which of the following is NOT a material that can be examined using the Historical Method?
- (A) Toys
 - (B) Clothing
 - (C) Scientific data
 - (D) Diaries
123. Your teacher requires you to study the influence of Noli Me Tangere to the lives of the Filipinos during the Spanish regime. The research you are doing is ____
- (A) Case study
 - (B) Historical Analysis
 - (C) Ethnography
 - (D) Grounded theory
124. When might a diary often be a credible source?
- (A) When looking for personal viewpoints about historical events
 - (B) When finding statistics about historical events
 - (C) When examining government trends on foreign powers
 - (D) When supporting scientific data
125. Research that is done to understand an event from the past is known as
- (A) Historical research
 - (B) Experimental research
 - (C) Replication
 - (D) Archival research
126. Who specializes in researching, analyzing, recording, and interpreting historical events through various sources such as government records, periodicals, photographs, interviews, and unpublished manuscripts?
- (A) Archivist
 - (B) Curator
 - (C) Historian
 - (D) Archaeologist
127. What does the Historical Method examine?
- (A) Future predictions
 - (B) Materials from the past
 - (C) Current events
 - (D) Scientific experiments
128. All good historians are capable of producing history that is completely free and separate from their own political, cultural, religious, racial, gender, philosophical, national and personal beliefs.
- (A) True
 - (B) False

129. A qualitative method where there is an examining of past events to draw conclusions and make predictions about the future.
(A) Case Study
(B) Ethnology
(C) Historical Analysis
(D) Grounded Theory
130. — founded 'Bharat Itihas Samshodhak Mandal' in Pune, on 7th July 1910 to facilitate historical research.
(A) Rajawade
(B) Justice Mahadev Govind Ranade
(C) Anant Sadashiv Altekar
(D) None of above
131. Historical research primarily deals with:
(A) Predicting future trends
(B) Understanding past events and their causes
(C) Conducting experiments
(D) Analyzing current data
132. — research involves studying, understanding and interpreting past experiences or events to help in determining what to do in the present and future.
(A) Descriptive
(B) Historical
(C) Correlational
(D) None of above
133. Modern historiography is based on —
(A) Observation
(B) Story telling method
(C) Scientific principle
(D) Option B and C
134. This can be achieved by creating events that did not happen, altering events that did happen, or omitting events altogether.
(A) Distorting History
(B) Ambivalence
(C) Historical Criticism
(D) Bias
135. Historical research is interpretative
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
136. Concern with the identification, location, evaluation, and synthesis of data from the past
(A) Historical studies
(B) Grounded theory studies
(C) Case studies
(D) Phenomenological studies
137. What is the significance of using both primary and secondary sources in historical research?
(A) Primary sources provide entertainment, while secondary sources provide analysis.
(B) Primary sources offer firsthand accounts, while secondary sources provide context and interpretation.
(C) Secondary sources are always more reliable than primary sources.
(D) Primary sources are unnecessary if secondary sources are available.
138. Historians who study the same historical topic will always come to the same conclusion about the event.
(A) TRUE
(B) FALSE
139. This lead to the historical research to focus in detail on several aspects of women's life such as their employment, role in trade union, institutions working for their cause, their family life etc
(A) Class theory
(B) Dialectics
(C) Annales school
(D) Feminist historiography
140. Books and records are the primary sources of data in:
(A) Clinical research
(B) Historical research

- (C) Laboratory research
(D) Participatory research
- 141.** One of the goals of historical research is to:
- (A) Develop new theories
(B) Understand past events
(C) Test existing theories
(D) Quantify data
- 142.** How did Indians advance the study of mathematics?
- (A) They introduced the concept of imaginary numbers.
(B) They invented geometry.
(C) They ended the use of calculus.
(D) They introduced the concept of zero.
- 143.** A qualitative research design in which data related to past events is systematically collected and evaluated to describe potential causes, effects, or trends related to those events is known as
- (A) Ethnographic
(B) Historical
(C) Action theory
(D) Grounded theory
- 144.** Kelly decides to research her psychology project by going through old newspaper articles, magazines, and even journals of the individuals involved. What is the term for this?
- (A) Archival analysis
(B) Documentarian research
(C) Historical balance
(D) Incidental conclusions
- 145.** Integrated History with other disciplines such as sociology, economics, geography, social psychology:
- (A) Historical Materialism
(B) Historicism
(C) French School of the Annales
(D) Positivism
- 146.** Historical Method of research includes
- (A) A scientific method of inquiry.
(B) Identification and limitation of the problem.
(C) Effect of certain past studies.
(D) All of the above.
- 147.** Historical perspective of psychology that focused only on identifying the different components/parts of our conscious experience
- (A) Functionalism
(B) Structuralism
- 148.** What is the primary goal of historical research?
- (A) To test hypotheses using numerical data
(B) To analyze documents and artifacts to gain insight into the past
(C) To develop a theory of social phenomenon
(D) To explore the subject's thoughts and feelings
- 149.** Ms. Mateo, a History teacher considers the element of time in arranging content of her lessons in World History. What way of establishing sequence is given emphasis by Ms. Mateo?
- (A) Simple to complex
(B) Part to whole
(C) Concrete to abstract
(D) Chronological
- 150.** The research which is exploring new facts by using the study of past event is called
- (A) Philosophical research.
(B) Action research.
(C) Historical research.
(D) Normative research.
- 151.** During a history class, the teacher explained that ___ research are based on past events.
- (A) Scientific research
(B) Historic research

152. Process of dividing the past into distinct, descriptively named blocks of time for the purpose of the study of history
(A) Chronology
(B) Periodization
(C) Credibility
(D) Objectivity
153. Which of the following refers to the systematic collection and objective evaluation of data related to past occurrence in order to test the hypothesis concerning?
(A) Ethnography
(B) Case study
(C) Phenomenology
(D) Historical research
154. This historian used external text criticism, internal text criticism, and the concept of anachronism to prove the Donation of Constantine was fake
(A) Machiavelli
(B) Giambattista Vico
(C) Leonardo Bruni
(D) Lorenzo Valla
155. "History on the Implementation of K to 12 Curriculum of Department of Education in the Philippines" is a kind of:
(A) Library research
(B) Laboratory research
(C) Basic research
(D) Field research
156. The Historical method is related with
(A) The history oriented researches only.
(B) The researches of history and Archaeology.
(C) The historical researches conducted in all the disciplines.
(D) None of the above is correct.
157. Historians studying the same topic will always come to the same conclusion.
(A) True
(B) False
158. A civilization that was discovered in 1922. People in this civilization used irrigation
(A) ARYAN
(B) DELTA
(C) HARAPPAN
(D) EGYPTIAN
159. The purpose of this study is to describe and examine events of the past to understand the present and anticipate potential further effects.
(A) Cultural Research
(B) Historical Research
(C) Phenomenology
(D) Experimental Research
160. Analyzing archival records to understand development of public health nursing best matches which qualitative method?
(A) Phenomenology interview
(B) Ethnographic immersion
(C) Grounded theory analysis
(D) Historical research
161. A historiographical school of thought represents a group of historians who share a common interpretation or perspective about events in the past.
(A) True
(B) False
162. There can be multiple perspectives or historical narratives that contest one another.
(A) True
(B) False
163. In historical research, data synthesis usually does not include ____
(A) Defining and interpreting key words, phrases and terms.
(B) Chronologically ordering events.
(C) Differentiating between how people should behave and how they did behave.
(D) Inferring causation based on simple correlation.

164. What research design should be used if you want to learn from the past to see if their practices before are applicable to the present?
- (A) Narrative research
 - (B) Historical research
 - (C) Phenomenology
 - (D) Grounded theory
165. This type of Qualitative Study connects and reconnects the events of the past to the events of the present.
- (A) Phenomenology
 - (B) Ethnography
 - (C) Case Study
 - (D) Historical Analysis
166. The research which is exploring new facts through the study of the past is called [2009-DECEMBER]
- (A) Philosophical research
 - (B) Historical research
 - (C) Mythological research
 - (D) Content analysis
167. These are real events that can be verified through historical documents and research.
- (A) Legend
 - (B) Myths
 - (C) Historical facts
 - (D) Folklore
168. Historians write with their own agenda in mind.
- (A) True
 - (B) False
169. Identify the French historian who rejected the practice of arranging historical events in a chronological order and gave importance to explaining the transitions in history as the archaeology of knowledge
- (A) Micheal Foucault
 - (B) Voltaire
 - (C) Simone de Beauvoir
 - (D) Leopold Con Ranke
170. The "identification of when and where an event took place" is known as ____
- (A) Corroboration.
 - (B) Negative criticism.
 - (C) Contextualization.
 - (D) Sourcing.
171. External and internal criticism of data is a standard measure engaged for validation of data in
- (A) Historical Research
 - (B) Philosophical Research
 - (C) Descriptive Research
 - (D) Experimental Research
172. What qualitative research design tells you the right research method to determine the reasons for changes or permanence of things in a physical world in a certain period?
- (A) Case study
 - (B) Ethnography
 - (C) Historical study
 - (D) Phenomenology
173. Historical research is conducted for which of the following reasons?
- (A) To identify the relationship that the past has to the present.
 - (B) To evaluate and record accomplishments of individuals or entities.
 - (C) To uncover the unknown.
 - (D) All of the above.
174. Historical research has nothing to do with
- (A) Collecting source material.
 - (B) Internal and external criticism of source material.
 - (C) Formulating hypothesis to explain events and conditions.
 - (D) Testing hypothesis statistically to draw inferences.

175. What is sidebar history?
- (A) Failing to properly validate the sources uses in historical writing
 - (B) Only using secondary sources for research
 - (C) Leaving certain groups of people out of history altogether
 - (D) Leaving certain groups out of the main historical narrative and putting them in the “side” of textbooks or other sources as a sidebar.
176. The factual aims are most important in-
- (A) Philosophical researches.
 - (B) Theoretical researches.
 - (C) Behavioral researches.
 - (D) Historical researches.
177. A scholar who writes critical historical narrative is known as ____
- (A) Archaeologist
 - (B) Historian
 - (C) Social scientist
 - (D) Language expert
178. The focus of this kind of qualitative research is understanding the past and its connection to the present time.
- (A) Grounded theory
 - (B) Historical Analysis
 - (C) Content and Discourse Analysis
 - (D) Case study
179. The process of systematically examining an account of what has happened in the past.
- (A) Historical method
 - (B) Historical sources
 - (C) Historical criticism
 - (D) Historical research
180. When a researcher checks the genuineness and authenticity of the source material, it is known as
- (A) Internal consistency.
 - (B) Concurrent validity.
 - (C) External validity.
 - (D) External criticism.
181. Is a historians perspective/narrative impacted by their religious beliefs?
- (A) Yes
 - (B) No
 - (C) Depends on the belief.
 - (D) None of above
182. A firsthand account of an event that is considered to be the most valid and reliable type of historical source
- (A) Source
 - (B) Primary Source
 - (C) Secondary Source
 - (D) Tertiary Source

1.2.11 Comparative Research

1. To identify similarities and differences between units at all levels
- (A) Policy-oriented Research
 - (B) Descriptive Research
 - (C) Comparative Research
 - (D) Explanatory Research
2. Nishka, Devansh, and Melia are studying the air pollution levels in different cities around the world for their geography project. They are trying to understand if air pollution is distributed evenly worldwide. What do you think?
- (A) Yes, it is evenly distributed
 - (B) No, it varies from country to country
 - (C) No, it only affects certain regions
 - (D) No, it depends on the season
3. In what research design can this research question be found: “Is there a difference in the weekly photo uploads on Facebook between MHPNHS male and female students?”
- (A) Correlational Study

- (B) Survey Research
 - (C) Comparative Study
 - (D) Evaluative Study
4. Comparative research questions:
- (A) Look at differences between groups
 - (B) Only describe a situation
 - (C) Study cause and effect
 - (D) Avoid measurable data
5. Researchers whose questions explore understanding social variation over time and place are likely to use which research method?
- (A) Demographic analysis
 - (B) Comparative-historical perspective
 - (C) Extended cases
 - (D) Ethnography
6. What is the main focus of comparative research?
- (A) To study social phenomenon
 - (B) To solve practical problems
 - (C) To develop or refine theory models
 - (D) To compare different cultures, societies, or groups
7. Which research type involves comparison without manipulation?
- (A) Correlational
 - (B) Causal-comparative
 - (C) Descriptive
 - (D) Experimental
8. In this type of research investigators attempt to determine the cause or consequences of differences that already exist between or among groups of individuals
- (A) NONEXPERIMENTAL RESEARCH
 - (B) DESCRIPTIVE RESEARCH
 - (C) CORRELATIONAL RESEARCH
 - (D) CAUSAL-COMPARATIVE RESEARCH
9. Which of the following questions reflects a comparative/evolutionary perspective?
- (A) What are the patterns of mating behavior in humans?
 - (B) How do reproductive behaviors change during the life span?
 - (C) What hormonal treatments can alleviate sexual problems?
 - (D) How are hormones involved in mating in different species of mammals?
10. Research that compares multiple segments of the population at the same time is known as —
- (A) Archival research
 - (B) Cross-sectional research
 - (C) Longitudinal research
 - (D) Comparative research
11. The difference of the points of view of the author I and author II regarding school bullying.
- (A) Elementary Reading
 - (B) Systematic Skimming
 - (C) Analytic Reading
 - (D) Comparative Reading
12. Non-experimental that tells the differences or similarities among individuals, groups, occurrences, and others.
- (A) Descriptive
 - (B) Correlative
 - (C) Comparative
 - (D) None of above
13. Cross cultural studies are an example of:
- (A) Case study design
 - (B) Comparative design
 - (C) Experimental design
 - (D) Longitudinal design
14. How so we create meaningful comparisons in cross-cultural research?
- (A) Power
 - (B) Universals
 - (C) Equivalent
 - (D) Variations

15. What lesson can be learned from the example of the dress code argument?
(A) Uniforms are necessary in all professions
(B) Similarities in one aspect mean similarities in all aspects
(C) Students and surgeons should dress alike
(D) Comparisons must consider the purpose and context of each subject
16. You compare customer satisfaction scores between two product versions released last quarter. Which use applies?
(A) Performance metrics for staff
(B) Policy evaluation compliance
(C) Market analysis of segments
(D) Comparative studies across groups
17. A marketing manager asks: "How does the type of advertisement affect buying behavior between males and females?" What type of research question is this?
(A) Comparative
(B) Causal
(C) Descriptive
(D) Exploratory
18. Estimate, measure, or note the similarity or dissimilarity between.
(A) ATTRIBUTION
(B) COHERENCE
(C) COMPARE
(D) CONTRAST
19. The type of scientific Investigation concerned with collecting and comparing data is called ____
(A) Selective Investigations
(B) Comparative Investigations
(C) Experimental Investigations
(D) None of above
20. It investigates possible cause-and-effect relationships by observing some existing consequence and looking back through the data for plausible causal factors.
(A) True experimental method
(B) Historical method
(C) Causal-comparative method
(D) Quasi-experimental method
21. IQ Scores of Public and Private High School Students
(A) Survey Research Design
(B) Experimental Research Design
(C) Correlational Research Design
(D) Comparative Research Design
22. "XYZ brand was facing a problem with their jeans pants and lots of after sale complains and dropping of sales. The brand decided to buy samples of jeans pants from leading brands in the market to compare and check the differences and find the problem in their own jeans" This technique in market research called ____
(A) Observation
(B) Focus groups
(C) Studying samples
(D) Like-to-like comparison
23. Which of the following designs is characterized by the researchers' inability to actually manipulate an independent variable even though they are often interested in a causal relationship?
(A) Descriptive
(B) Correlational
(C) Experimental
(D) Causal-comparative
24. Comparative pedagogy
(A) Performance of prognostic studies
(B) Basic categories of pedagogy
(C) Explores the development of education and upbringing in different countries
(D) Part of pedagogy about the basis of physical knowledge
25. What may happen when different comparison groups experience a different history event?
(A) History effect.
(B) Group effect.
(C) Selection effect.
(D) Selection-history effect.

26. What type of study means comparison of likeness and differences among phenomena to find out factors which seem to accompany or contribute to the occurrence of certain events?
- (A) A co relational study.
 - (B) An experimental study.
 - (C) An ex post-facto study.
 - (D) A causal comparative study.
27. A marketer compares how Baby Boomers and Gen Z perceive luxury brands. What kind of research question is this?
- (A) Descriptive
 - (B) Causal
 - (C) Correlational
 - (D) Comparative
28. Compare air pollution levels in urban vs. rural areas globally.
- (A) Rural areas have higher air pollution levels than urban areas globally.
 - (B) Urban areas have lower air pollution levels than rural areas globally.
 - (C) Air pollution levels are the same in urban and rural areas globally.
 - (D) Urban areas have higher air pollution levels than rural areas globally.
29. What kind of question is: "What is the difference in product preference between urban and rural consumers?"
- (A) Correlational
 - (B) Descriptive
 - (C) Comparative
 - (D) Exploratory
30. What type of research question compares two or more groups?
- (A) Comparative.
 - (B) Descriptive.
 - (C) Relational.
 - (D) Causal.
 - (E) Theoretical.
31. The research is to identify similarities and differences between units or subjects at all levels
- (A) Policy-oriented Research
 - (B) Descriptive Research
 - (C) Comparative Research
 - (D) Explanatory Research
32. Why causal comparative research is not considered a kind of experimental research
- (A) It studies cause effect relationship between the variables
 - (B) It is just a correlation type of study
 - (C) Its method is comparative and analytic
 - (D) It neither controls extraneous variables nor does it manipulate independent variables
33. It involves comparing and contrasting two or more samples of study subjects on one or more variables, often at a single point of time.
- (A) Comparative
 - (B) Normative
 - (C) Evaluative
 - (D) Ex-Post Facto
34. When is it best to select cultures that are different to each other for cross-cultural research?
- (A) Trying to find variations
 - (B) Trying to find universals
 - (C) Both for variations and universals
 - (D) It depends on context
35. Comparative analysis
- (A) To show or illustrate something clearly
 - (B) A significant difference or contrast
 - (C) Positive views or judgments
 - (D) Analysis that compares different items or groups
 - (E) -
36. What research design refers to comparing differences in certain characteristics according to the variable being considered?
- (A) Pre-experimental
 - (B) Correlational Study
 - (C) Comparative Study
 - (D) True Experimental

37. The achievement and nutritional intake of teacher education students who reside at home and boarding houses is:
- (A) A subject of study comparing living arrangements.
 - (B) A measure of classroom attendance only.
 - (C) Unrelated to their living situation.
 - (D) Focused solely on extracurricular activities.
38. A company wants to compare customer satisfaction between those who received free shipping and those who did not. What type of research is this?
- (A) Descriptive
 - (B) Comparative
 - (C) Exploratory
 - (D) Correlational
39. Which of the following is a comparative quantitative research question?
- (A) What is the average income of families in different cities?
 - (B) Is there a difference in the effectiveness of two different teaching methods?
 - (C) What are the factors that influence the decision to purchase a new car?
 - (D) How does the relationship between social media use and academic performance vary between different age groups?
40. An investigator wants to study the effect of gender on attitude towards internal evaluation by using two groups of students. The nature of this study would be:
- (A) Descriptive survey study
 - (B) Experimental study
 - (C) Causal comparative
 - (D) Corelational study
41. A researcher investigates how nationalism influences interstate disputes by comparing the Russia-Ukraine conflict and Azerbaijan-Armenia conflict. The study uses process tracing to identify causal mechanisms linking national identity to policy choices.
- (A) A Comparative Case Study
 - (B) Large-N Study
 - (C) Experimental Design
 - (D) Discourse Analysis
42. What is the 'Most Different Systems Design'?
- A comparative method that examines cases that are very different except for the outcome of interest.
- (A) A comparative method that examines cases that are very different except for the outcome of interest.
 - (B) A method that compares similar cases with different outcomes.
 - (C) A statistical analysis of identical systems.
 - (D) A design used only in experimental physics.
43. Is a type of quantitative research question that is used to gather information about the differences between two or more research subjects across different variables?
- (A) Comparative Research Question
 - (B) Contrast Research Question
 - (C) Compare and Contrast Research Question
 - (D) None of above
44. A researcher compares U.S. and Chinese responses to climate change agreements. They argue that institutional design explains why democracies commit more credibly to environmental treaties. They choose cases that are similar in power but different in regime type. What comparative design logic is being used?
- (A) Natural Experiments
 - (B) Most Similar Systems Design
 - (C) Most Different Systems Design
 - (D) Field Experiments
45. Comparative design examines patterns of similarities and differences across a moderate number of cases. The typical comparative study has anywhere from a handful to fifty or more cases.

- (A) True
- (B) False

46. To look at the difference between two things

- (A) Compare
- (B) Contrast
- (C) Locate
- (D) Plagiarism

1.2.12 Survey Research

1. Which research method is fast and cheap, but has self-reporting problems?
 - (A) Archival research
 - (B) Survey
 - (C) Naturalistic observation
 - (D) True experiment
2. Survey research is concerned primarily with:
 - (A) Explaining phenomena
 - (B) Determining relationships among variables
 - (C) Reporting existing conditions
 - (D) Statistical inference
3. During a class project, Liam wanted to gather opinions from his classmates about their favorite study methods. He decided to ask them a series of questions. A method of collecting data or information from a group of people, usually through a set of questions is called?
 - (A) Survey
 - (B) Q & A Portion
 - (C) Live Discussion
 - (D) None of above
4. A research programme which involves mailing out a questionnaire on behalf of several companies is an example of
 - (A) Qualitative research
 - (B) An omnibus survey
 - (C) Secondary research
 - (D) Primary research
5. Describe a method used to evaluate the impact of a natural disaster.
 - (A) Analyze weather patterns before the disaster.
 - (B) Conduct a public opinion poll on disaster preparedness.
 - (C) Conduct a damage assessment survey.
 - (D) Review historical data on similar disasters.
6. Used to determine opinions, ideas, preferences of respondents about a particular topic
 - (A) Longitudinal
 - (B) Survey
 - (C) Correlational
 - (D) Cross-sectional
7. Survey results are based on larger sample sizes that are representatives of the population.
 - (A) True
 - (B) False
8. You are designing a mobile app and want to know how many users prefer dark mode. What method should you use?
 - (A) Case Study
 - (B) Survey
 - (C) Observation
 - (D) Interview
9. You want to find out student opinions on the location for the prom. What should you use?
 - (A) A survey.
 - (B) An observational study.
 - (C) An experiment.
 - (D) A simulation
10. The Gallup Poll is which way to gather information
 - (A) Case Study
 - (B) Survey

11. Where was the survey research conducted?
- (A) By phone
 - (B) Face-to-face on busy street corners
 - (C) Mail
 - (D) Via the Internet
 - (E) All above
12. Which of the following types of general surveys measure the same group of respondents overtime but not necessarily on the same variables?
- (A) Periodic surveys
 - (B) Panel surveys
 - (C) Shared surveys
 - (D) Parallel surveys
 - (E) Regular surveys
13. Francesca wants to know if her classmates prefer pineapple on their pizza. What research method should Francesca use?
- (A) Case study
 - (B) Longitudinal study
 - (C) Experiment
 - (D) Survey
14. Of the following, which research method would be most appropriate for investigating the relationship between political party membership and attitude toward the death penalty?
- (A) Controlled experiment
 - (B) Naturalistic observation
 - (C) Test
 - (D) Survey
15. A researcher wants to collect data from a large group of people quickly and inexpensively. Which research method should they use?
- (A) Survey
 - (B) Naturalistic Observation
 - (C) Case Study
 - (D) Experimental Method
16. A sample (or samples) drawn from the relevant population and studied once. that describe characteristics of that population at one time, but cannot give any insight as to causes of population characteristics.
- (A) Structured surveys
 - (B) Domain assumptions
 - (C) Economic determinism
 - (D) Cross-sectional surveys
17. Surveys are a form of questioning that is more rigid than interviews and that involve larger groups of people.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
18. A Survey Research where information is collected from the same subjects over a period of time, sometimes lasting many years.
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Causal-Comparative Research
 - (D) Experimental Research
19. The technique of research where a researcher or investigator studies the whole population with respect to certain sociological and psychological variables is known as
- (A) Ex-Post facto study.
 - (B) Field experiment.
 - (C) Survey Research.
 - (D) Field study.
20. How are called procedures in quantitative research in which person administers a survey or questionnaire to a small group of people to identify trends in attitudes, opinions and behaviors?
- (A) Survey designs
 - (B) Ethnographic designs
 - (C) Correlational designs
 - (D) Basic studies
21. Items used in survey research can include:
- (A) Test questions
 - (B) Questions of belief
 - (C) Factual questions
 - (D) All of the above

22. What is the main purpose of the survey method in research?
- (A) To collect data on attitudes and opinions from large numbers of people
 - (B) To conduct experiments in controlled environments
 - (C) To observe behaviors in natural settings
 - (D) To analyze historical documents
23. What can be seen as an advantage and a disadvantage of Surveys in research
- (A) The large amount of data generated
 - (B) The costs associated
 - (C) The time it takes to complete
 - (D) The reliability of the data
24. Expand NSS
- (A) National Service Sector
 - (B) National Statistical Survey
 - (C) National Sample Survey
 - (D) None of these
25. Carol wants to develop a survey to see if a recent promotional campaign that gave away a sample of the product would persuade people to buy the product. What is Carol involved in?
- (A) Product marketing
 - (B) Advertising research
 - (C) Sales forecasting
 - (D) Market analysis
26. Research method where questions are asked to subjects who report their own answers
- (A) Case study
 - (B) Experiment
 - (C) Survey
 - (D) Naturalistic observation
27. Which survey uses GIS for oil and Natural Gas
- (A) Land survey
 - (B) Index survey
 - (C) Exploration survey
 - (D) None of the above
28. A type of Quantitative Research that used to gather information from groups of people by selecting and studying samples chosen from population.
- (A) Descriptive Research
 - (B) Correlational Research
 - (C) Evaluation Research
 - (D) Survey Research
29. Which survey research method would have the maximum outreach in the public?
- (A) Interview
 - (B) Telephone calls
 - (C) Questionnaire
 - (D) All of these
30. All of the following are common survey methods EXCEPT
- (A) Mail
 - (B) Telephone
 - (C) Lie-detector tests
 - (D) Online
31. Survey is both intensive and ____
- (A) Accurate.
 - (B) Extensive.
 - (C) Wide.
 - (D) Deep.
32. What is the most frequently used method of collecting primary data?
- (A) Focus group
 - (B) Observation
 - (C) Experiment
 - (D) Survey
33. One of the guidelines when making survey questions is to create questions that are easy to tabulate or analyse.
- (A) True
 - (B) False
34. A quantitative type of research usually will mostly use ____ method to collect data.
- (A) Site digging

- (B) Interview
(C) Survey
(D) Literature study
35. A ____ is an observational research method in which data is gathered for the same subjects repeatedly over a period of time. These research projects can extend over years or even decades.
(A) Global survey
(B) Regional survey
(C) Subjective survey
(D) Longitudinal survey
36. That which is studied in a survey is called the "unit of analysis."
(A) True
(B) False
37. A ____ is when people are asked to respond to a series of questions about a particular subject.
(A) Sample
(B) Survey
(C) Hypothesis
(D) Target population
38. "Measure the direction or intensity of an audience's feeling or attitude towards something". This is referring to
(A) Open-ended items
(B) Scaled items
39. Faisal calls people and asks them a specified list of questions concerning their opinions of how irritating telemarketers can be. What kind of research is Faisal conducting?
(A) Case Study
(B) Controlled Experiment
(C) Natural Observation
(D) Survey
40. Which type of survey method involves giving the instrument to those present (e.g. in a classroom)?
(A) Mail survey
(B) Group-administered questionnaire
(C) Household drop-off survey
(D) Electronic survey
41. A survey is useful when a sociologist wants to study a large number of people
(A) True
(B) False
42. Which of the following is a data collection tool in quantitative research?
(A) Surveys
(B) Narrative Interviews
(C) Observational Notes
(D) Focus Group Discussions
43. What specific type of quantitative research will you be using to know more about your market?
(A) Survey
(B) Cross-sectional survey
(C) Longitudinal survey
(D) Correlational research
44. Which method is most suitable when you need rapid completion from a large sample at low cost?
(A) Face-to-face depth interviews
(B) Online self-administered surveys
(C) Postal mail-out surveys
(D) Live telephone interviews
45. In a survey, 60% of people preferred apples over oranges. If 300 people were surveyed, how many preferred apples?
(A) 250
(B) 50
(C) 180
(D) 100
46. Which of the following type of survey collects data from 7th, 8th, 9th, and 10th grade students at the same time?
(A) Sample
(B) Developmental
(C) Cross-sectional
(D) Longitudinal

47. What is the main purpose of a survey in marketing research?
- (A) To confuse customers
 - (B) To guess customer opinions
 - (C) To gather data from a target audience
 - (D) To advertise products
48. A research method in which people respond to questions.
- (A) Crime
 - (B) Norms
 - (C) Sanctions
 - (D) Survey
49. In a recent survey, TechNews asked young people to ___ how they will talk to each other in 30 years' time.
- (A) Predict
 - (B) Expect
 - (C) Check
 - (D) None of above
50. This research method is a technique for ascertaining the self-reported attitudes or behaviors of a particular group, usually by questioning a representative, random sample of the group.
- (A) Survey
 - (B) Observational
 - (C) Correlational
 - (D) Experiments
 - (E) Case Study
51. If 800 people are mailed a survey and 230 of them return it to the researcher, the survey is said to have a response rate of:
- (A) 230
 - (B) 800
 - (C) 3.48
 - (D) 28.75 %
52. Which approach involves collecting survey data through the internet?
- (A) Telephone survey
 - (B) Web survey
 - (C) Face-to-face survey
 - (D) Mail survey
53. You design a short questionnaire that asks students about their attendance and grades in biology class.
- (A) Observational
 - (B) Experimental
 - (C) Survey
 - (D) None of above
54. A Survey is
- (A) A set of questionnaires
 - (B) A Research Strategy
 - (C) An experiment
 - (D) A schedule of interviews
55. What is the purpose of a validity check in survey research?
- (A) To analyze data
 - (B) To ensure that the survey measures what it intends to measure
 - (C) To manipulate variables
 - (D) To conduct a literature review
56. Survey research collects data related to
- (A) Opinions, Personality and social facts
 - (B) Opinions, professions and attitudes
 - (C) Opinions, attitudes and social facts
 - (D) None of these
57. The method of distributing a questionnaire to respondents and requesting its completion and return via postal mail is known as
- (A) Interview
 - (B) Observation
 - (C) Mail Survey
 - (D) Panel
58. Which primary data collection method involves asking respondents to select answers from a predetermined set of options?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Experiments

59. The data collection method used to learn information from large group of people is called —
(A) Observation
(B) Survey
(C) Interview
(D) None of above
60. Which systematic method would be most effective for a project needing a detailed understanding of housing conditions across multiple community neighborhoods?
(A) Focus Group Discussion
(B) Case Study
(C) Survey Research
(D) Social Network Analysis
61. Which of the following is necessary for Personal Interview in survey research?
(A) Accessibility of the respondent.
(B) Cognition.
(C) Motivation of the respondent.
(D) All of these.
62. An investigation of the opinions or experience of a group of people, based on a series of questions.
(A) Statistics
(B) Survey
(C) Histogram
(D) Data
63. List the strengths of Surveys.
(A) Strengths of surveys include the ability to collect data from large samples quickly and cost-effectively.
(B) Surveys are only useful for collecting qualitative data from small groups.
(C) Surveys are the most expensive and slowest method of data collection.
(D) Surveys always guarantee accurate and unbiased responses.
64. It intends to provide a numeric description of trends, attitudes, or opinions of a population by studying a sample of that population.
(A) Evaluative Study
(B) Case Study
(C) Tracer Study
(D) Survey Research
65. True or False: Surveys may consist of interviews, questionnaires, or a combination of both
(A) True
(B) False
66. This type of research uses interview, questionnaires, and sampling to get a sense of behavior with intense precision.
(A) Survey Research
(B) Phenomenology
(C) Historical Research
(D) Causal-Comparative
67. Janine conducted a study to find out the socioeconomic profile of the students in ADI.
(A) Case Study
(B) Content Analysis
(C) Experimental
(D) Historical
(E) Survey
68. Questionnaires and interviews to collect data
(A) Secondary analysis
(B) Survey
(C) Experiment
(D) None of above
69. One of the most critical stages in the survey research process is
(A) Questionnaire design.
(B) Research design.
(C) Interview design.
(D) Survey design.
70. The disadvantage of this method of descriptive research is questions must be asked “just right” to get reliable answers and a considerable amount of honesty and trust is given in the answers.
(A) Survey
(B) Observational

- (C) Correlational
(D) Experiments
(E) Case Study
71. What is the purpose of a structured survey question?
(A) To pose difficult questions
(B) To allow for open-ended responses
(C) To provide limited response options
(D) To address complex content
72. Which of the following survey research methods is the most expensive?
(A) Telephone interview.
(B) Mail survey.
(C) Door-to-door personal interview.
(D) Mall intercept personal interview.
73. It is a method of Quantitative Research which is carried by a yes or no question.
(A) Method
(B) Survey
(C) Research
(D) Experiment
74. It is a data collection method involving questionnaires or interviews to gather information from respondents.
(A) Questionnaire
(B) Survey
(C) Sampling
(D) Research
75. A method of gathering information from a representative sample of participants/groups. Information is collected by means of standardized procedures so that every individual is asked the same questions in more or less the same way.
(A) Focus group
(B) Survey
(C) Interview
(D) None of above
76. A set of questions posed to a group of people to determine how that group thinks.
(A) Observation
(B) Interview
(C) Focus Group
(D) Survey
77. A questionnaire given to a sample of population to fill it up.
(A) Survey
(B) Observational study
(C) Experiment
(D) None of above
78. What is a method researchers use to gather information from many people about a particular subject?
(A) Case study
(B) Survey
(C) Replication
(D) Correlation
79. What is the purpose of a survey?
(A) To analyze data
(B) To collect and record information on a particular topic
(C) To create a hypothesis
(D) To conduct an experiment
80. This is important because both assumptions and limitations affect the inferences you can draw from your study. One of the more common assumptions made in survey research is the assumption of ___ and ___ responses.
(A) Actual and truthful
(B) Sincere and truthful
(C) Honesty and truthful
(D) Honesty and sincere
81. For this research one has to conduct a questionnaire, analyze findings and then conclude.
(A) Analytical
(B) Experimental
(C) Persuasive
(D) Survey

82. A series of questions about a particular subject
(A) Survey
(B) Control group
(C) Hypothesis
(D) Correlation
83. The important characteristics of the survey method is
(A) It is capable for collecting data from a large group (population) simultaneously.
(B) Here the work is being carried out on pre-determined problem.
(C) The aims of this method are fixed and specific.
(D) All of the above statements are correct.
84. Ms. Rachel is confident that the jacket she owns is grey. Ms. Colleen tells her it is for sure brown. Ms. Rachel sends out a questionnaire with a photo of the jacket asking if it is brown or grey. 100% of the applicants say gray. What type of research is this?
(A) Experiment
(B) Survey
(C) Natural Observation
(D) Laboratory Observation
85. Non-experimental that describes the behavior, preferences, opinions, views, stand, or attitudes of a huge amount of people.
(A) Descriptive
(B) Survey
(C) Ex Post Facto
(D) None of above
86. Survey is only for quantitative study.
(A) True
(B) False
87. Market researchers would use the Likert rating scale when designing questions to measure consumer
(A) Feelings and knowledge
(B) Level of agreement
(C) Specific beliefs
(D) Level of intuitiveness
88. What is a "survey" in the context of psychological research?
(A) A detailed examination of a single subject
(B) A method of gathering data from a large group of people
(C) A statistical analysis technique
(D) A type of experimental design
89. What role can a large business house play in agricultural development as a social responsibility?
(A) Promoting deforestation
(B) Conducting surveys on climate and soil conditions
(C) Providing full-time employment to urban labor force
(D) Supporting industrial growth in urban areas
90. Faulty Survey Questions have ____ in the questions.
(A) Bias
(B) Accurate Information
(C) Data
(D) Statistics
91. A method of collecting information about a certain group of people by asking a question or set of questions
(A) Population
(B) Data
(C) Census
(D) Survey
92. Which studies involve the collection of data from a sample at one point in time?
(A) Cross-sectional study
(B) Longitudinal study
(C) Experimental study
(D) None

93. Leyte Normal University wants to know if its students prefer online learning or modular learning. What research method should LNU use?
- (A) Case study
 - (B) Experiment
 - (C) Longitudinal study
 - (D) Survey
94. Survey is always a ____ study
- (A) Laboratory.
 - (B) Field.
 - (C) Class room.
 - (D) Office.
95. We use a survey to collect ____
- (A) Information
 - (B) Pictures
 - (C) Bars
 - (D) None of above
96. In terms of cost-effectiveness, online surveys typically offer:
- (A) Lower per-response cost, automated data capture
 - (B) Variable per-response cost, telephone charges
 - (C) Higher per-response cost, manual transcription
 - (D) Equal per-response cost, extensive travel needs
97. This technique gathers self-reported attitudes or behaviors of people by questioning them randomly and representatively.
- (A) Experiment
 - (B) Case Study
 - (C) Survey
 - (D) Exploratory study
98. Which data collection tool is commonly used in quantitative research to gather large-scale information efficiently?
- (A) Surveys
 - (B) Case Studies
 - (C) Focus Groups
 - (D) Field Notes
99. Survey study aims at
- (A) Knowing facts about the existing situation
 - (B) Comparing the present status with the standard norms
 - (C) Criticizing the existing situation
 - (D) Identifying the means of improving the existing situation
100. The government of India conducts census after every 10 years. The method of research used in this process is
- (A) Case study
 - (B) Developmental
 - (C) Survey
 - (D) Experimental
101. This is the most elementary tool for all sorts of quantitative research techniques.
- (A) Casual-comparative
 - (B) Survey research
 - (C) Descriptive research
 - (D) None of above
102. The advantage of ____ is that they create an immense amount of data that can be gathered quickly and inexpensively.
- (A) Surveys
 - (B) Observations
 - (C) Correlations
 - (D) Experiments
 - (E) Case Studies
103. What is INCLUDED in the Survey Elements under the “Choice” category
- (A) Singleline Text
 - (B) Email
 - (C) Rating
 - (D) Website

- 104.** Research Methods: Name a down side (or drawback) of SURVEYS
- (A) They are expensive
 - (B) Surveys are always conducted in person.
 - (C) They can't be applied to the general population
 - (D) It's easy for people to give false information
- 105.** The chief merit of survey is
- (A) Adaptability.
 - (B) Connectivity.
 - (C) Versatility.
 - (D) Sensibility.
- 106.** Trend studies, cohort studies and panel studies are also longitudinal survey designs.
- (A) T
 - (B) F
- 107.** An employer wants to gen an overall opinion about a new model of a car, what research method should be used to get the result he wants?
- (A) Case Study
 - (B) Survey
 - (C) Naturalistic Observation
 - (D) Cross-Sectional Study
- 108.** Questionnaires and interviews are two methods researchers use to conduct surveys and gather information.
- (A) TRUE
 - (B) False; participants
 - (C) False; sources of funding
 - (D) None of above
- 109.** A ____ survey is one that encompasses errors caused by the design of the survey and its questions.
- (A) Good
 - (B) Biased
 - (C) Fun
 - (D) School
- 110.** Josh asked the same set of questions to a his geometry class to find out how many like football.
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Survey
- 111.** The disadvantage of this method of descriptive research is that the data is limited to only answering the question(s) asked. These limitations lead to biases, ambiguous conclusions, and low participation rates among research populations.
- (A) Survey
 - (B) Observational
 - (C) Correlational
 - (D) Experiments
 - (E) Case Study
- 112.** Which research design is focused on gathering information about self-reported perceptions or attitudes through questionnaires?
- (A) Survey method
 - (B) Correlational study
 - (C) Naturalistic observation
 - (D) Case study
- 113.** A method of collecting data by asking questions to a sample group ____
- (A) Focused Group
 - (B) Focused Market
 - (C) Exam
 - (D) Survey
- 114.** Example for fact finding study is
- (A) Pure Research.
 - (B) Survey.
 - (C) Action Research.
 - (D) Long term Research.
- 115.** A(n) ____ is a list of questions developed by a researcher that can be administered in paper form.
- (A) Archive

- (B) Case Study
(C) Naturalistic observation
(D) Survey
116. What type of survey method allows the respondents to select their preferred response method?
(A) Electronic survey
(B) Group-administered questionnaire
(C) Dual-media survey
(D) Household drop-off survey
117. A disadvantage of this descriptive method is that only 50% of the people asked to participate, actually do.
(A) Naturalistic observation
(B) Survey
(C) Case study
(D) Correlation
118. Collected data through a series of questions often on a scale, easily given to many participants, fast way to collect descriptive data
(A) Surveying
(B) Sampling
(C) Operant conditioning
(D) None of above
119. What is the primary goal of survey research in communication studies?
(A) To establish causation
(B) To analyze media content
(C) To collect data from a large number of people
(D) To conduct experiments
120. What is the first step in survey research?
(A) Selecting the sample
(B) Choosing the mode of data collection
(C) Identifying the target population
(D) Defining the problem
121. This research method allows participants to self report their answers.
(A) Experiment
(B) Naturalistic Observation
(C) Survey
(D) Case Study
122. In longitudinal surveys, data collection is done at different points of time to observe the changes.
(A) True
(B) False
123. What research strategy is used by a company who sends a satisfaction questionnaire to its current customers at the end of the year.
(A) Observation
(B) Content analysis
(C) Survey
(D) Experiment
124. A researcher stops people at the mall and asks them questions about their attitudes toward gun control. Which research technique is being used?
(A) Survey
(B) Case study
(C) Naturalistic observation
(D) Experiment
125. How can surveys provide a comprehensive picture of customer preferences?
(A) By collecting and analyzing data from questionnaires.
(B) By observing customer behavior in stores.
(C) By conducting focus groups.
(D) By providing product samples.
126. A survey shows that 70% of people prefer coffee over tea. If 200 people were surveyed, how many prefer coffee?
(A) 180
(B) 140
(C) 100
(D) 50

- 127.** What type of primary research would be best for a large company to send out to its target market to gain information about a marketing research study they are conducting?
- (A) Focus Group
 - (B) Experiment
 - (C) Observation
 - (D) Survey
- 128.** Cross sectional survey
- (A) Involves data collection at two or several points in time [years]
 - (B) Involves data collection at two or several points in few hours
 - (C) Involves the use of the different participants over time
 - (D) Involves data collection from selected participants at a single point in time
- 129.** This methodology involves researchers selecting a sample of respondents from a population and administering a standardized set of questions.
- (A) Surveys
 - (B) Focus groups
 - (C) Mystery shopping
 - (D) Secondary research
- 130.** A research technique for acquiring data about the attitudes or behaviors of a group of people, usually by asking questions of a representative, random sample
- (A) Survey
 - (B) Target population
 - (C) Bias
 - (D) Volunteer bias
- 131.** Nick stood outside a movie theater and asked many of the patrons if they thought the movie they saw was good. What data collection method was used?
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
- 132.** What is the primary strength of survey research?
- (A) Internal validity
 - (B) Inexpensive
 - (C) External validity
 - (D) Does not require quantitative skills to analyze the data
- 133.** Survey research is cross-sectional and therefore:
- (A) High in replicability but low in internal validity
 - (B) High in internal validity but low in reliability
 - (C) High in ecological validity but low in external validity
 - (D) None of the above
- 134.** Which survey design deals with collecting data on past events.
- (A) Cohort survey
 - (B) Panel survey
 - (C) Cross-sectional survey
 - (D) Retrospective survey
- 135.** What type of study is described? A gym asks its customers if they would prefer the gym to open earlier in the morning.
- (A) Experiment
 - (B) Observational Study
 - (C) Sample Survey
 - (D) None of above
- 136.** What method uses questionnaires and interviews to gather data?
- (A) Case study
 - (B) Laboratory experiment
 - (C) Survey method
 - (D) Observation
- 137.** What is the quickest way to conduct psychological research and gather a lot of data?
- (A) Longitudinal Study
 - (B) Case Study
 - (C) Survey
 - (D) Interview

138. ____ are good because researchers can get a lot of information from a lot of people in a short amount of time.
- (A) Experiments
 - (B) Correlation Studies
 - (C) Surveys
 - (D) Case Studies
139. A "representative" sample is essential for a?
- (A) Case Study
 - (B) Experiment
 - (C) Observation
 - (D) Survey
140. In the context of a Survey Research, the following steps are taken in a certain order: Sampling Inference Data analysis Data collection Which of the following is the right order of these steps?
- (A) 1, 4, 3, 2.
 - (B) 2, 3, 1, 4.
 - (C) 4, 1, 2, 3.
 - (D) 3, 2, 4, 1.
141. Which type of research is approached through the methods of personal interviews, mailed questionnaires and personal discussions besides indirect oral investigation?
- (A) Observation.
 - (B) Survey Research.
 - (C) Case Study.
 - (D) Field Study.
142. The most obvious advantages that Internet-based survey research offers over mail and personal interviewing approaches are high speed and low costs.
- (A) TRUE
 - (B) FALSE
143. A random selection of people are called every morning for a week to determine if television shows are too violent.
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
144. Which survey mode is currently the dominant method for quantitative research?
- (A) Face-to-face mall intercepts
 - (B) Postal mail questionnaires
 - (C) Telephone interviewer surveys
 - (D) Online self-administered surveys
145. Choose the correct definition of each type of quantitative research.3-Surveys
- (A) Investigates relationships between variables without the researcher controlling them.
 - (B) It is defined as a research method used for collecting data from a pre-defined group of respondents
 - (C) It's usually based on one or more theories.
 - (D) It's used by researchers to conclude the cause-effect equation between two or more variables.
146. Survey Method of research can be classified into
- (A) Descriptive and Analytical.
 - (B) Descriptive, Analytical and Social survey.
 - (C) Descriptive, Analytical, Social and School Survey.
 - (D) None of the above.
147. Having university students fill out a Google Form that asks them different questions on their opinions of the dining services on campus.
- (A) Food Research
 - (B) Descriptive Research
 - (C) Quasi-Experimental Research
 - (D) Survey Research
148. Which survey method offers the least control over the respondent's environment?
- (A) In-home in-person interviews
 - (B) Online self-completion surveys
 - (C) Laboratory-based interviews
 - (D) Supervised computer labs

149. The advantage of this descriptive method of research is that it creates an immense amount of data to be gathered quickly and inexpensively.
- (A) Survey
 - (B) Observational
 - (C) Correlational
 - (D) Experiments
 - (E) Case Study
150. Which of the following is NOT a characteristic of a good survey?
- (A) Standardized
 - (B) Reliable
 - (C) Valid
 - (D) Biased
151. What was the purpose of this survey?
- (A) To see how many consumers bought brand X.
 - (B) To compare different Brands of cereals
 - (C) To see how many consumers eat Brand X on a regular basis
 - (D) To see consumer opinions about Brand X
152. When research questions center on patterns of behavior among large groups, what research method is usually best?
- (A) A survey
 - (B) In-depth interviews
 - (C) Ethnographic observation
 - (D) A social experiment
153. To determine how to vote on a bill, a senator calls random constituents to ask their opinion.
- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
154. A type of research technique that gathers information from people directly through the use of interviews or questionnaires
- (A) Observation
 - (B) Survey method
 - (C) Experimental
 - (D) Point of sale data
155. What type of technique obtains self-reported attitudes or behaviors of a group usually by questioning a representative, random sample?
- (A) Case Study
 - (B) Survey
 - (C) Correlational Study
 - (D) Naturalistic Observation
156. To collect information from the population or a sample of population
- (A) Policy-oriented Research
 - (B) Descriptive Research
 - (C) Survey Research
 - (D) Explanatory Research
157. A survey asking multiple age groups their opinion at one point is longitudinal.
- (A) True
 - (B) False
158. A teacher asks all her students five questions about their study habits.
- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
159. What is the aim of Survey Research?
- (A) Describing the current status of a phenomenon, a group or an institution.
 - (B) Comparing the current status of these with some available standards and making suggestions for improving the status.
 - (C) Studying a small sample and drawing inferences about the larger population.
 - (D) All of the above.
160. An online survey is a tool or a computer application that can be used to ____?
- (A) Gather data

- (B) Gather data over the internet
 - (C) Gather data about education
 - (D) Gather data using paper and pen
- 161.** Estimate the number of students in your school who play video games more than 10 hours per week.
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
- 162.** Research methods: Name the key benefits of SURVEYS
- (A) The questions are always easy and fair
 - (B) They are usually cheap and it's easier to get lots of participants
 - (C) You can get really deep information from a specific person or group
 - (D) People like them more and making them is more interesting than conducting research
- 163.** What type of survey collects data at one point in time from a sample selected to represent a larger population?
- (A) Trend studies
 - (B) Cohort studies
 - (C) Cross-sectional survey
 - (D) Panel studies
- 164.** Survey research is ___ method of collecting primary research.
- (A) The most unreliable
 - (B) The most reliable
 - (C) The most common
 - (D) The least common
- 165.** When choosing a survey distribution method, the following should be considered except ___
- (A) Sensitivity of the study topic
 - (B) Survey length
 - (C) When results are needed
 - (D) All of these should be considered
- 166.** Why is it important to define your goal before writing survey questions?
- (A) To make the survey look professional
 - (B) To keep questions focused and relevant
 - (C) To add more questions
 - (D) To impress competitors
- 167.** What research design gathers quantitative or numeric description of trends, attitudes or opinions of a population?
- (A) Survey Research Design
 - (B) Correlational Research Design
 - (C) Ex-Post Facto Research Design
 - (D) Quasi-Experimental Research Design
- 168.** A researcher using the epidemiological model would be most likely to use which of the following research techniques?
- (A) A survey
 - (B) The intuitive approach
 - (C) A case study
 - (D) An experiment
- 169.** A potential flaw in survey research where participants answer in ways they believe will be viewed favorably is:
- (A) Self-report bias
 - (B) Sampling bias
 - (C) Social desirability bias
 - (D) Hindsight bias
- 170.** Political polls taken before major elections are examples of which research method?
- (A) Survey
 - (B) Case study
 - (C) Correlational
 - (D) Experimental
- 171.** A large-scale, structured research instrument, usually in the form of a questionnaire delivered either face-to-face with respondents or completed by respondents in the absence of the researcher.
- (A) Structured interview
 - (B) Social survey
 - (C) Questionnaire
 - (D) None of above

172. Surveys may make use of questionnaires, phone calls, interviews etc ____
(A) TRUE
(B) FALSE
173. Which of the following are types of Survey Research Methods?
(A) Interviews
(B) Questionnaires
(C) Telephone surveys
(D) All of the above
174. Which research method allows customers to choose answers?
(A) Focus group
(B) Observation
(C) Experiment
(D) Survey
175. Which method is best for generating quantifiable data across a large sample?
(A) Ethnography
(B) Experimental observation
(C) Survey research
(D) Narrative analysis
176. Students prefer English over Math
(A) Naturalistic observation
(B) Case study
(C) Survey
(D) Experimental Method
177. A researcher interested in investigating the attitudes or opinions of a large sample of people is most likely to use which research method?
(A) Survey
(B) Experiment
(C) Correlation
(D) Case study
178. Which of the following is most important when conducting survey research?
(A) Choosing a representative sample
(B) Choosing a large sample
(C) Choosing a biased sample
(D) Choosing a sample whose answers will likely support your hypothesis
179. A sampling of information, often compiled by asking people questions or interviewing them.
(A) Survey
(B) Sample
(C) Overview
(D) Critique
180. Survey research, though used to obtain many kinds of information in a variety of situations, is best suited for gathering ____ information.
(A) Preference
(B) Descriptive
(C) Attitudinal
(D) Personal
181. In Mrs. Riley's class, students fill out a questionnaire about their home life, parents' careers, college interest, how many siblings, etc. What kind of research is being done?
(A) Correlation study
(B) Case study
(C) Survey
(D) Double blind procedure
182. Asking individuals a fixed set of questions is called a what?
(A) Case Study
(B) Survey
(C) Observation
(D) Introspective Analysis
183. What type of survey question allow respondents to write in their own answers
(A) Open-ended questions
(B) Close-ended questions
184. An official count or survey of an entire population, typically recording various details of individuals.
(A) Census

- (B) Observational study
(C) Survey
(D) Experiment
- 185.** In conducting survey research studies, what tool is often used to collect data on participant attitudes?
(A) Rating Scale
(B) Grading Scale
(C) Weighted Scale
(D) None of above
- 186.** Pierce calls people and asks them a specified list of questions concerning their opinions of how irritating telemarketers can be. What kind of research is Pierce conducting?
(A) Naturalistic observation
(B) Survey
(C) Case study
(D) Experiment
- 187.** Which type of survey method is a fast and inexpensive way of data collection from respondents living in far away places.
(A) Telephonic survey
(B) Personal Survey
(C) Online Survey
(D) None of above
- 188.** What is NOT part of the Survey Elements under the "Location" category
(A) Map
(B) Address
(C) Location List
(D) Direction
- 189.** The European Union launched a survey across all EU countries in 2001. Every other year, a representative sample of each country is being interviewed on various topics about social issues. The interviewed sample changes for every round, i.e., not the same respondents are interviewed each time. This survey is a:
(A) Cross-sectional design
(B) Panel design
(C) Quasi-panel design
(D) Case study design
- 190.** Survey design is:
(A) To test the impact of a treatment (or an intervention) on an outcome, controlling for all other factors that might influence that come.
(B) Provides a quantitative or numeric description of trends, attitudes, or opinions of a population by studying a sample of that population.
(C) Investigators identify a sample and generalize to a population.
(D) None of above
- 191.** Which of these methods would collect data from a very large sample? The census is an example of this method
(A) Survey
(B) Short answer response
(C) Questionnaire
(D) Speeches
- 192.** How many total people took the survey?
(A) 50
(B) 100
(C) 150
(D) 200
- 193.** Identify whether the given example is a survey or an experiment: identifying the different perspectives of local folks about urban legends
(A) SURVEY
(B) EXPERIMENT
- 194.** THE INVESTIGATION OF THE SURVEY IS AN INVESTIGATION METHOD
(A) QUANTITATIVE.
(B) QUALITATIVE.
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 195.** In ____, questions must be asked "just right" to get reliable answers, and the researcher may doubt the veracity of the answers.
(A) Surveys
(B) Observations

- (C) Correlations
 - (D) Experiments
 - (E) Case Studies
- 196.** Which of the following study does not need hypotheses
- (A) Survey study.
 - (B) Normative study.
 - (C) Experimental study.
 - (D) Historical study.
- 197.** A mainstream method of data collection in which the research asks a specific set of questions of a number of members of the target population:
- (A) Structured interview
 - (B) Survey
 - (C) Participant observation
 - (D) Focus group
- 198.** What type of data does survey research primarily focus on?
- (A) Categorical data
 - (B) Quantitative data
 - (C) Ordinal data
 - (D) Qualitative data
- 199.** Strength of survey research, which refers to the good representation of a large group of people.
- (A) Versatility
 - (B) Generality
 - (C) Efficiency
 - (D) Confidentiality
- 200.** How does a survey differ from a poll?
- (A) A survey has a single question, while a poll has multiple questions
 - (B) A survey is always conducted online, while a poll is not
 - (C) A survey includes multiple questions in various formats, while a poll is a single, multiple-choice question
 - (D) A survey is anonymous, while a poll is not
- 201.** In the survey methods diagram, CATI refers to:
- (A) Centralized automated tabulation index
 - (B) Continuous assessment testing interface
 - (C) Customer analytics trend integration
 - (D) Computer-assisted telephone interviewing Edit
- 202.** Data may be gathered through surveys.
- (A) True
 - (B) False
- 203.** Changing the wording of a question in a survey can significantly influence responses.
- (A) True
 - (B) False
- 204.** Which of the following makes a survey effective?
- (A) Long and detailed questions
 - (B) Clear, concise, and unbiased wording
 - (C) Using only yes/no questions
 - (D) Asking unrelated questions
- 205.** Andy is asking questions via email to a young group of people to collect information about a new product. What method is Andy using?
- (A) Target marketing
 - (B) Media research
 - (C) Survey
 - (D) Focus group
- 206.** What is Google Forms used for?
- (A) Creating databases
 - (B) Conducting online searches
 - (C) Creating and customizing surveys
 - (D) Filtering search results
- 207.** Which of the following is a survey question about favorite animals?
- (A) What is your shoe size?
 - (B) How old are you?
 - (C) What is your favorite animal?
 - (D) Do you like pizza?

208. Collecting data by having people answer a series of questions is called
(A) Unobtrusive measures
(B) Participant observation
(C) Survey
(D) Ethnography
209. A Likert scale is often used in:
(A) Experiments
(B) Interviews
(C) Surveys
(D) Focus groups
210. Generally involves a large audience to collect a large amount of data. name it
(A) Survey research
(B) Applied research
(C) Casual research
(D) None of these
211. Which of the following methods would be useful if you wanted to find out the political view of 1000 people
(A) Interview
(B) Case study
(C) Survey
(D) Field research
212. What is a common advantage of using written surveys in research?
(A) Ability to explain the survey to participants
(B) Inclusion of respondents who do not read or write
(C) Modification of questions during the survey
(D) Greater privacy for respondents
213. The purpose of conducting a survey is to obtain reliable ____
(A) Information
(B) Questions
(C) Tasks
(D) Impulses
(E) Motivation
214. Questionnaire is widely used tool in which type of research:
(A) Case study research
(B) Historical research
(C) Experimental research
(D) Survey research
215. Which is an ADVANTAGE of giving a printed survey?
(A) Information can be hard to analyze
(B) Questions skipped can lead to data error
(C) Can collect data from a large number of people
(D) Respondents may not feel comfortable being honest
216. A method of gathering information from a large group of people by asking them a series of questions about a specific topic is called ____
(A) Surveys
(B) Experiments
(C) Observations
(D) Interviews
217. The survey method is different from case studies because:
(A) Many people are included in the sample.

(B) A representative sample is used.
(C) Self-reported attitudes and behaviors are ascertained.
(D) All of the answers are true.
218. Survey research is used to supply the information to assess influence of program in school.
(A) T
(B) F
219. Surveys, which are used to collect firsthand data, have many advantages. One advantage is that ____
(A) Those who respond to mailed or online surveys exactly represent the overall population
(B) Respondents can be relied on to respond openly and truthfully to anonymous surveys

- (C) Data can be gathered economically and efficiently
(D) Return rates for online and mailed surveys are typically over 90 percent
- 220.** Survey research is often used to assess
(A) Thoughts
(B) Opinions
(C) Feelings
(D) All above
- 221.** All are DISADVANTAGES of online survey, EXCEPT one.
(A) The respondents have nobody to ask for clarification.
(B) The respondents of this method are only those who have internet access.
(C) The respondents may not feel encourage to provide the answers.
(D) The distribution is quicker, and response time is faster.
- 222.** Which of the following is an advantage of gathering data with surveys?
(A) They tell what people actually do.
(B) They provide information about beliefs and attitudes.
(C) They uncover patterns of ideas from open-ended conversations.
(D) People are likely to say what the researcher wants to hear.
- 223.** In this type of study, people are asked to respond to a series of questions about a particular subject ____
(A) Survey
(B) Sample
(C) Single Blind Study
(D) Experiment
- 224.** What type of data does a survey questionnaire usually collect?
(A) Qualitative data
(B) In-depth interview responses
(C) Quantitative data
(D) Focus group insights
- 225.** What is used to avoid the effect of acquiescence?
(A) Double-barreled questions
(B) Back translation
(C) Vague quantifiers
(D) Reverse-scaled items
- 226.** Which of the following is an advantage of using surveys in research?
(A) They provide in-depth, detailed information
(B) They are effective for large sample sizes
(C) They require extensive training to administer
(D) They are always qualitative
- 227.** What research method is popular because it is comparatively inexpensive and well-suited to study large numbers of people?
(A) Participant observation
(B) Surveys
(C) Interviews
(D) Content analysis
- 228.** What is the fastest and most cost-effective form of primary source research?
(A) Focus group
(B) Observation
(C) Experiment
(D) Survey
- 229.** Tell whether the statement is True or False
SURVEYS CAN ALSO BE CONDUCTED TO DETERMINE RESPONDENTS' LIFESTYLES. IT CAN BE USED TO IDENTIFY AN AUDIENCE, CONSTITUENCY, TARGET MARKET, AND SO ON.
(A) True
(B) False
- 230.** Bank of America sends out customer surveys to all of its customers asking them about the services that they would be interested in. What type of research is happening?
(A) Market research (Market Intelligence)

- (B) Product research
 - (C) Advertising research
 - (D) Sales research
231. Which research method would be most appropriate for investigating the relationship between the religious beliefs of Americans and their attitudes toward abortion?
- (A) Survey
 - (B) Naturalistic observation
 - (C) Case study
 - (D) Experiment
232. How can language surveys be used in the field of education?
- (A) To assess language proficiency among students
 - (B) To evaluate language teaching methods
 - (C) To identify language learning needs
 - (D) All of the above
233. Which method of survey research would be most effective to know about the popularity of a new Social media app?
- (A) Telephone survey
 - (B) Personal interview
 - (C) Questionnaire survey
 - (D) None of these
234. Which instrument is central to the survey method shown?
- (A) Ethnographic diaries and memos
 - (B) Structured questionnaires with fixed items
 - (C) Unscripted focus group discussions
 - (D) Participant observation field notes
235. A disadvantage of ___ is that the data is limited to only answering the question(s) asked. These limitations lead to biases, ambiguous conclusions, and low participation rates among research populations.
- (A) Surveys
 - (B) Observations
 - (C) Correlations
 - (D) Experiments
 - (E) Case Studies
236. What is a key characteristic of survey research, as mentioned in Nelson (chp. 6)?
- (A) In-depth evaluation of individuals
 - (B) Manipulation of variables
 - (C) Obtaining responses through a series of questions
 - (D) Longitudinal observation of groups
237. Which type of question should be avoided in survey development due to its potential to bias results by suggesting a preferred response?
- (A) Open-ended questions
 - (B) Funnel approach questions
 - (C) Leading questions
 - (D) Overall measures
238. The fourth step of survey research involves which of the following activities?
- (A) Data collection
 - (B) Data analysis
 - (C) Survey design
 - (D) Report writing Edit
239. Surveys on the basis of subject matter are of two types (1) Social survey and (2) ___
- (A) Intensive Survey.
 - (B) Extensive Survey.
 - (C) Economic Survey.
 - (D) Deep survey.
240. Why is it a problem for a survey question to be double barreled?
- (A) Because respondents are forced into one answer when there may be more than response that represent their opinion
 - (B) Because respondents are forced into more than one answer when there may be only one response that represents their opinion
 - (C) Because it repeats the same word more than once making it confusing
 - (D) Because the question simply repeats another question but worded in a different way

241. Surveys can only be specific and limited and cannot have more global widespread goals.
(A) TRUE
(B) FALSE
242. Co relational study is an example of
(A) Experimental study.
(B) Longitudinal study.
(C) Descriptive survey study.
(D) Casual comparative study.
243. Survey research is based on quanlitative re-search.
(A) T
(B) F
244. Tell whether the statement is True or False
IN DOING A SURVEY YOU ARE TAKING THE RISKS, YOU WOULDN'T KNOW WHAT WILL BE THE OUTCOME OF THE RESEARCH STUDY.
(A) True
(B) False
245. This research method is ideal for studying large numbers of people.
(A) Experiment
(B) Interview
(C) Survey
(D) None of above
246. What is the method called when collecting data by questioning a large group of randomly selected individuals about their opinions or beliefs?
(A) Interview
(B) Questionnaire
(C) Survey
(D) Poll
247. What research method is cheap and easy to make, and can yield data on a broad range of topics, but can have problems like bias questions or dishonest responses?
(A) Survey
(B) Poll
(C) Case Study
(D) Demographic information
248. A method for collecting data from a group of people, often using questionnaires, is called:
(A) Interview
(B) Survey
(C) Observation
(D) Experiment
249. A student wants to know the most liked professor at her college. Which type of study would be the most practical to obtain this information?
(A) A simulation
(B) An experiment
(C) A survey
(D) An observation
250. A primary research technique in which information is gathered through questionnaires
(A) Experimental method
(B) Survey method
(C) Observation method
(D) Focus group method
251. Mr. S. has 120 students total. Mr. S. wants to know how students feel about the interest in the class so far. Which research method would most effectively investigate the question?
(A) Naturalistic observation
(B) Survey
(C) Experimental study
(D) Case Study
252. Jerry, a sociologist, is researching the correlation between a person's driving habits & the length of their daily commute. He decides to send a written form to 200 randomly-chosen drivers, asking a variety of questions related to both variables. This method of research is called ____
(A) Case Study
(B) Socialization
(C) Survey
(D) Sociology Edit

253. Which option below refers to the use of questionnaires, directly asking customers or potential consumers about their opinions and preferences?
- (A) Focus group
 - (B) Interviews
 - (C) Academic journals
 - (D) Surveys
254. A journalist wants to increase the readership of the school paper. He designs a set of questions that will discern the types of articles most students are interested in reading.
- (A) Observational
 - (B) Experimental
 - (C) Survey
 - (D) None of above
255. Which research form often uses a questionnaire as a data collection tool?
- (A) Survey research
 - (B) Case study
 - (C) Action research
 - (D) Exemplary research
256. What is Survey method?
- (A) Laboratory Experiments.
 - (B) Field Experiments.
 - (C) Historical Researches.
 - (D) Field Studies.
257. What is a survey?
- (A) A type of music
 - (B) A type of game
 - (C) A way to ask people questions
 - (D) None of above
258. Which of the following is an example of a cross-sectional survey?
- (A) An attitude scale is given to samples of 8-, 10-, and 12-year-olds.
 - (B) An opinionnaire is mailed to the same sample of graduates every year.
 - (C) A group of gifted children is assessed every other year until adulthood.
 - (D) None of the above.
259. It is considered as, a very popular means of social inquiry.
- (A) Interview
 - (B) Survey
 - (C) Questions
 - (D) Observational
260. A survey of 1,000 people was done by the New York Times. 80% of the people did not know the name of their representative in Congress. How many of the 1,000 people knew the name of the Congressman?
- (A) 200
 - (B) 400
 - (C) 600
 - (D) 800
261. The basis of classification of the survey method is
- (A) The source of data collection.
 - (B) Nature of variable.
 - (C) Measurable class or group.
 - (D) All of the above.
262. Which primary data collection method involves collecting data through online forms or questionnaires?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Experiments
263. If the purpose of research is to discover the relative incidence, distribution and inter-relationship of sociological and psychological variables it is called
- (A) Experimental research.
 - (B) Survey research.
 - (C) Ex post-facto research.
 - (D) Field experiment.

- 264.** A marketing-research method that involves asking consumers questions in order to learn their opinions and the reasons behind those opinions
- (A) Survey
 - (B) Secondary data
 - (C) Sample
 - (D) Questionnaire
- 265.** Which of the following is a method of data collection?
- (A) Hypothesis formulation
 - (B) Survey
 - (C) Conclusion drawing
 - (D) Risk assessment
- 266.** Which design is best for identifying trends in a population?
- (A) Case study
 - (B) Survey
 - (C) Experimental
 - (D) Longitudinal
- 267.** ____ involves gathering primary data by asking people questions about their knowledge, attitudes, preferences, or buying behavior. It is the most widely used method for primary data collection.
- (A) Experimental research
 - (B) Causal research
 - (C) Ethnographic research
 - (D) Survey research
 - (E) Exploratory research
- 268.** What is done with the data in the fifth step of survey research?
- (A) The data is collected
 - (B) The data is analyzed
 - (C) The data is discarded
 - (D) The data is ignored Edit
- 269.** The easiest way to gather information from many people is to conduct a ____ Unfortunately, this type of study isn't always reliable because people are not always truthful.
- (A) Naturalistic observation
 - (B) Case study
 - (C) Survey
 - (D) Random sample
- 270.** Which of these is not a way to conduct a survey?
- (A) Sending emails with questions
 - (B) Asking people in person
 - (C) Using a magic wand
 - (D) Making phone calls with questions
- 271.** Of the following, all are examples of difficulties faced by survey researchers as noted in your text EXCEPT
- (A) Surveys aren't often used in educational research
 - (B) Development of a questionnaire is difficult.
 - (C) Response rates are often low.
 - (D) People don't like to complete surveys.
- 272.** Which scenario best illustrates attitude and behavior surveys in quantitative research?
- (A) Measuring frequency of usage
 - (B) Estimating quarterly profits
 - (C) Calculating loan amortization
 - (D) Auditing warehouse inventory
- 273.** Organized study in which a researcher asks questions of a number of people
- (A) Data Mining
 - (B) Focus Group
 - (C) Secret Shopper
 - (D) Interview
 - (E) Survey
- 274.** You want to compare user satisfaction between two different app versions. What method is best?
- (A) Case study
 - (B) Observation
 - (C) Survey
 - (D) Focus group

275. Provides a limited amount of information from a large group of people and are useful when you want to learn what a larger population thinks. This statement provides which type of primary research?
- (A) Survey
 - (B) Interview
 - (C) Observation
 - (D) Analysis
276. A social survey provides more large-scale standardized data than a questionnaire.
- (A) True
 - (B) False
277. Which one of the following is not a characteristic of survey method?
- (A) Gathering data from a large population.
 - (B) Generally follow cross-sectional approach.
 - (C) Involves defined problem.
 - (D) Focuses on individual differences.
278. Closed-ended questions are used in:
- (A) Interviews
 - (B) Case studies
 - (C) Surveys
 - (D) Ethnographies
279. What is a key benefit of using surveys?
- (A) Manipulating participants easily
 - (B) Full lab control
 - (C) Quickly gathering data from many participants
 - (D) Providing physiological measurements
280. In this survey mode questionnaires traditionally are mailed to potential study participants who complete and return them by mail.
- (A) Personal interview
 - (B) Self-administered interview
 - (C) All survey
 - (D) Telephone interviewing
 - (E) Mail survey
281. Are surveys qualitative or quantitative research?
- (A) Quantitative
 - (B) Qualitative
 - (C) Either
 - (D) None of above
282. This is a descriptive technique used to obtain the self-reported attitudes or behaviors of a particular group.
- (A) Survey
 - (B) Case study
 - (C) Naturalistic observation
 - (D) None of above
283. What type of research method relies on self reporting attitudes or behaviors of a particular group of people?
- (A) Random sampling
 - (B) Wording effects
 - (C) Case studies
 - (D) Survey
284. What is the purpose of survey research?
- (A) To form general ideas about research questions
 - (B) To collect information from a few individuals
 - (C) To gather unbiased representation of population interest
 - (D) To influence attitudes and behaviors
285. These research methods rely on a sampling of many people to respond to the same questions as sources of information.
- (A) Interviews and transcripts
 - (B) Polls and surveys
 - (C) Data and databases
 - (D) None of above
286. You are asked to review a survey paper. In which of the following dimensions you are not expecting the paper to be particularly strong? Tick one.
- (A) Originality

- (B) Significance
 - (C) Rigor
 - (D) None of above
- 287.** People respond to a series of questions about a particular subject.
- (A) Naturalistic Observation Method
 - (B) Laboratory-Observation Method
 - (C) Survey Method
 - (D) Experimental Method
- 288.** What is the disadvantage of survey method?
- (A) Capable of collecting data from a large number of respondents
 - (B) A broad range of data can be collected
 - (C) Potential for interviewee bias
 - (D) Relatively easy to administer
- 289.** What compares multiple segments of a population at a single time?
- (A) Cross-sectional research
 - (B) Archival research
 - (C) Deductive reasoning
 - (D) None of above
- 290.** What type of research is being done when we obtain large samples of abilities, beliefs or behaviors through written or interview questions?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Survey
 - (D) None of above
- 291.** Which of the following is a research method that allows a researcher to get information about a large number of subjects relatively inexpensively and easily?
- (A) Naturalistic observation
 - (B) Case study
 - (C) Laboratory observation
 - (D) Survey
- 292.** Which of the following is used to assess people's knowledge, beliefs, preferences, and satisfaction and to measure these magnitudes in the general population?
- (A) Observational research
 - (B) Descriptive research
 - (C) Quantitative research
 - (D) Survey research
 - (E) Experimental research
- 293.** Which of these should be avoided in good survey design?
- (A) Neutral wording
 - (B) Double-barreled questions
 - (C) Short questions
 - (D) Clear instructions
- 294.** When people are asked to respond to a series of questions about a particular subject, they are taking part in a
- (A) Sample
 - (B) Target population
 - (C) Experiment
 - (D) Survey
- 295.** A schedule is a device used in collecting field data when ____ method is applied
- (A) Observation
 - (B) Survey
 - (C) Questionnaire
 - (D) Interview
- 296.** Which primary data collection method involves collecting data through written questionnaires sent to respondents?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Experiments
- 297.** Social desirability bias may lead participants to falsely report their actions.
- (A) Experiment
 - (B) Naturalistic Observation
 - (C) Survey
 - (D) Case Study

- 298.** A Survey Research where information is collected from a sample in just single point in time
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Causal-Comparative Research
 - (D) Experimental Research
- 299.** Which research method requires careful attention to word selection?
- (A) Randomized controlled trial
 - (B) Observational study
 - (C) Clinical trial
 - (D) Survey
- 300.** Which research method would help researchers gather information from a large amount of people in a short amount of time?
- (A) Survey
 - (B) Experiment
- 301.** Questionnaire-based method of research that can produce both qualitative and quantitative information depending on how they are structured and analyzed.
- (A) Interview
 - (B) Reflective journal log
 - (C) Social survey
 - (D) Ethnography
- 302.** Dr Seo Jun collected the data by using questionnaire. He is doing a/an ____
- (A) Interview
 - (B) Survey
- 303.** What type of research method is good at generating data about an entire population?
- (A) In-depth interviews
 - (B) Participant observation
 - (C) Surveys
 - (D) Experiments
- 304.** Ana is writing her thesis on the relationship of the types of leadership styles and organizational success. Using a questionnaire, she interviews her participants who are in the top-level managerial positions. Which data collection method is Ana doing?
- (A) Naturalistic research
 - (B) Observational method
 - (C) Survey method
 - (D) Archival research
- 305.** What is a social desirability bias in survey research?
- (A) It is when interviewers lead respondents into the desired response.
 - (B) It is when the correct response is the most popular one.
 - (C) It is when respondents spin the truth in order to portray themselves in a socially desirable manner.
 - (D) It is when the correct response is the least popular one.
- 306.** A key limitation of surveys in behavioral research is most often
- (A) Lack of any defined sampling frame
 - (B) High costs from specialized equipment
 - (C) Inability to measure heart activity
 - (D) Social desirability bias in responses
- 307.** Research method in which information is obtained by asking many individuals a fixed set of questions.
- (A) Survey
 - (B) Case study
 - (C) Experiment
 - (D) Observation
 - (E) Introspection
- 308.** Which scientific method is being described below: ask people to respond to in depth questions to report the behavior
- (A) Theory
 - (B) Case study
 - (C) Survey
 - (D) Replication

- 309.** A customer survey that asks, "How satisfied are you with our recent service interaction?" is most likely a measure of:
- (A) Net Promoter Score (NPS)
 - (B) Customer Satisfaction Score (CSAT)
 - (C) Customer loyalty
 - (D) Service quality
- 310.** How many main types of questions are there in survey research
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 311.** Which activity involves making a survey in your community, family, and friends to determine common issues or problems?
- (A) Conducting a survey to identify common problems
 - (B) Organizing a community event
 - (C) Starting a fundraising campaign
 - (D) Hosting a family reunion
- 312.** Surveys and Polls are:
- (A) Methods of collecting data from a group of people
 - (B) Types of scientific experiments
 - (C) Forms of physical exercise
 - (D) Styles of writing
- 313.** Which of the following is required in creating an online survey using Google Forms?
- (A) Facebook account
 - (B) Google account
 - (C) Google Drive
 - (D) Yahoo Email
- 314.** Which of these is an advantage of surveys?
- (A) You can reach a large number of people
 - (B) You get in depth data
 - (C) You are guaranteed a large response rate
 - (D) Everyone loves a survey
- 315.** It is used to gather information from groups of people by selecting and studying samples chosen from a population.
- (A) Survey
 - (B) Correlational
 - (C) After the fact
 - (D) Normative
- 316.** The most practical way to gather data on attitudes, beliefs, and experiences of large numbers of people
- (A) Cross-sectional studies
 - (B) Longitudinal studies
 - (C) Surveys
 - (D) Case study
- 317.** What are two methods of surveying?
- (A) Tests and interviews
 - (B) Experiments and questionnaires
 - (C) Interviews and questionnaires
 - (D) Case studies and experiments
- 318.** What is the purpose of a survey instrument?
- (A) To present the context of the study
 - (B) To provide recommendations for future studies
 - (C) To summarize the research findings
 - (D) To list planned questions used to measure attitudes and opinions
- 319.** A faulty survey question will try to ____
- (A) Get the most correct answer.
 - (B) Get the least accurate answer.
 - (C) Lead the person answering to one side or the other.
 - (D) Lead the person answering in the correct direction.
- 320.** Survey research studies ____
- (A) Events
 - (B) Processes
 - (C) Populations
 - (D) Circumstances

321. A(n) ____ is the collection of data by having people answer a series of questions
(A) Sample
(B) Population
(C) Survey
(D) Experiment
322. This is a planned set of questions to which individuals or groups of people respond.
(A) Survey
(B) Invoice
323. The interviews and questionnaires refer to the method of
(A) Observations
(B) Survey
(C) Samples
(D) Experiments
(E) Document analysis
324. One of the fastest ways to collect descriptive data is ____?
(A) Correlational Method
(B) Case Study
(C) Debriefing
(D) Survey Method Edit
325. Which type of information gathering is used to get peoples' opinions?
(A) Experiment
(B) Naturalistic Observation
(C) Participant Observation
(D) Survey
326. What should a researcher do after exploring existing literature for a survey questionnaire?
(A) Create a list of open-ended questions
(B) Predetermine the indicators or items
(C) Analyze recurring themes from interviews
(D) Focus on qualitative data
327. What happens if a survey is too long?
(A) Respondents may skip questions
(B) Respondents may drop out early
(C) Data quality decreases
(D) All of the above
328. Which approach relies on standardized instruments to collect quantifiable responses from many participants?
(A) Surveys and questionnaires
(B) Ethnographic field immersion
(C) Case study interviews
(D) Unstructured participant observation
329. Cross-sectional surveys are more practical for SHS research projects than longitudinal ones because:
(A) They are less time-consuming and easier to administer.
(B) They provide more detailed data over time.
(C) They eliminate all forms of bias.
(D) They require repeated measurements on the same subjects.
330. The purpose of surveys and questionnaires in data collection methods is to:
(A) Gather qualitative data
(B) Collect quantitative data
(C) Obtain both qualitative and quantitative data
(D) None of the above
331. What is the final step in the process of survey research?
(A) Data Collection
(B) Data Analysis
(C) Report Writing
(D) Survey Design Edit
332. The most common and easiest type of Quantitative Study is
(A) Correlational
(B) Descriptive
(C) Experimental
(D) Survey

333. The most frequently used primary research method is
- (A) Survey
 - (B) Interview
 - (C) Focus group
 - (D) Experiments
334. A way to gather information from people using a carefully planned set of questions is called a
- (A) Experiment
 - (B) Observation
 - (C) Survey
 - (D) Focus Group
335. Which survey mode best supports rapid data collection at low cost?
- (A) Postal surveys with mailed forms
 - (B) Face-to-face interviews on the street
 - (C) Home or workplace in-person visits
 - (D) Online surveys using digital platforms

1.2.13 Case Study Research

1. This research method is a descriptive technique in which one individual or group is studied in depth since it is a unique or rare situation.
 - (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
2. A way to deepen a study on an individual or group is?
 - (A) Case study
 - (B) Survey
 - (C) Random sampling
 - (D) Wording effects
3. What is a research type that studies a person, a program or event in a defined time frame?
 - (A) Phenomenological
 - (B) Ethnographic
 - (C) Case Study
 - (D) Policy Analysis
4. The reasons for the excessive absences of a Grade 11 student.
 - (A) Grounded Theory
 - (B) Historical Study
 - (C) Case Study
 - (D) Ethnography
5. Another strength of a case study..
 - (A) It often has practical applications
 - (B) It is time consuming
 - (C) The data is easy to analyse
 - (D) They can prove the hypothesis
6. In descriptive research, what is a case study likely to involve?
 - (A) A survey of a large population
 - (B) Observing a basketball team practice and play games for a prolonged time
 - (C) Conducting experiments in a laboratory
 - (D) Analyzing economic data
7. Who are the main initial contributors to case study research as a methodology?
 - (A) Yin & Stake
 - (B) Einstein & Yin
 - (C) Creswell & Lichtman
 - (D) Curie & Yin
8. Sigmund Freud developed his theory of human personality by conducting in-depth interviews over an extended period of time with a few clients. This type of research approach is known as a(n): ____
 - (A) Case study
 - (B) Observation
 - (C) Experiment
 - (D) Survey

9. Which kind of study provides vicarious experience of have been in that particular situation?
- (A) Qualitative study
 - (B) Ethnographic study
 - (C) Phenomenological study
 - (D) Case study
10. This kind of Qualitative Research involves a long-time study of a particular person in psychology and education. It seeks to find answers to why such a thing occurs to the subject.
- (A) Content Analysis
 - (B) Case Study
 - (C) Ethnography
 - (D) Historical Research
11. Studying a particular business' strategy is an example of which Qualitative Research Design?
- (A) Phenomenology
 - (B) Grounded Theory
 - (C) Case Study
 - (D) Narrative
12. Match each type of research report with the corresponding type of qualitative research. Answer options may be used more than once or not at all. Holistic narrative that triangulates data and places study into meaningful context.
- (A) Phenomenology
 - (B) Ethnography
 - (C) Narrative Inquiry
 - (D) Case Study
 - (E) Grounded Theory
13. Researchers who study single individuals in depth in order to uncover general principles of thinking and behavior are using which research method?
- (A) Experimentation
 - (B) Correlational study
 - (C) Naturalistic observation
 - (D) Case study
14. What is the primary goal of researchers in an intrinsic case study?
- (A) To understand a larger context such as culture
 - (B) To discover answers to general questions in their field
 - (C) To understand the particular entity being studied
 - (D) To gain insights into individual behaviors and motivations
15. A form of qualitative research that is focused on providing a detailed account of one or more cases
- (A) Ethnography
 - (B) Phenomenology
 - (C) Case Study
 - (D) Historical Research
16. Which of the following is not a type of case study by disciplinary orientation?
- (A) Ethnographic case study
 - (B) Historical case study
 - (C) Interpretive case studies
 - (D) Sociological case study
17. The advantage of this descriptive method of research is that it yields a great deal of detailed descriptive information and they are very useful in forming a hypothesis
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
18. Which method provides the most detailed insight into the researched subject?
- (A) Survey.
 - (B) Documents.
 - (C) Case study.
 - (D) None of these. Edit

19. The focus of a case study can be:
- (A) A place
 - (B) A person
 - (C) An event
 - (D) All of the above
20. A further weakness of a case study..
- (A) They often use a range of data
 - (B) There is inter-rater reliability
 - (C) It is rare or unusual
 - (D) It is difficult to generalise the findings
21. A case study can only use qualitative data
- (A) -True
 - (B) -False
22. The researcher focuses on one issue or concern but selects multiple case studies to illustrate different perspectives of the issue.
- (A) What is Instrumental Case Study?
 - (B) What is Collective Case Study?
 - (C) What is Intrinsic Case Study?
 - (D) None of above
23. Case study
- (A) A method of statistical analysis involving large data sets.
 - (B) A research method involving an up-close, in-depth, and detailed examination of a particular case.
 - (C) A technique for conducting surveys and interviews.
 - (D) A form of experimental research that manipulates variables.
24. Multiple Choice: Read each question carefully and choose the BEST answer. An in-depth investigation of a single organization or program is known as:
- (A) Phenomenology
 - (B) Case Study
 - (C) Ethnography
 - (D) Narrative Research
25. Case study narrative reports include a ____
- (A) Discussion of themes issues, and implications.
 - (B) Description of invariant structures.
 - (C) Discussion of evolving stories and relationships.
 - (D) Description of cultural theme contexts.
26. A case study is best defined as:
- (A) A method that collects data from multiple participants at one point in time.
 - (B) A research method focusing on one individual, family, or institution.
 - (C) A technique used to gather quantitative data.
 - (D) A general survey of a large population.
27. Name the method or an approach of exploring the life of a social unit
- (A) Preliminary study
 - (B) Case study
 - (C) Secondary study
 - (D) None of these
28. True/False:A researcher engaged in a case study is not concerned with generalizability of results.
- (A) True
 - (B) False
29. Which qualitative research design is most suitable for exploring a single unique instance?
- (A) Survey
 - (B) Focus group
 - (C) Ethnography
 - (D) Case study
30. Case study examines:
- (A) A large population
 - (B) A single unit in depth
 - (C) Numerical patterns
 - (D) Laboratory results
31. What is a strength case study research?:
- (A) A high external validity

- (B) Random assignment to treatment and control groups
(C) Contextual and process-level understanding
(D) Crossnational large-n studies.
32. The study on Genie, a 20 month old girl that was locked in a small room until the age of 13, is an example of what type of observation?
(A) Naturalistic observation
(B) Case study
(C) Longitudinal study
(D) Experimental study
33. Which one of the following qualities is shared by both single-case experimental design and case studies?
(A) Rich data
(B) Systematic manipulation of the independent variable(s)
(C) Ease of generalizing findings to the general population
(D) Can involve only one participant
34. In qualitative research, what is a case study?
(A) A method for testing theories
(B) An investigation of a single entity or phenomenon
(C) A way to collect quantitative data
(D) A technique for hypothesis testing
35. An in-depth description of a single person, family, social group, or social setting.
(A) Observation
(B) Cross-sectional study
(C) Case Study
(D) Sampling
36. The questions that a case study answers are:
(A) What and where
(B) How and who
(C) Why and how
(D) When and why
37. A true case study cannot use quantitative data.
(A) True
(B) False
38. An intensive investigation of a slow learner undertaken in a research project by a teacher can be termed as
(A) Action research
(B) Survey
(C) Case study
(D) Ethnography
39. The Phineas Gage incident is the basis of a psychological
(A) Myth
(B) Metastudy
(C) Observational technique
(D) Case study
40. A researcher is interested with the life of Noel, who has bright green skin. What type of case study is this?
(A) Single/Instrumental case study
(B) Collective/Multiple case study
(C) Intrinsic case study
(D) Idiosyncratic case study
41. Studies a person, place, or event in a defined time frame (Leedy & Omrod, 2001)-comprehensive, in-depth examination of a specific individual, group, or institution
(A) Case-study
(B) Historical research
(C) Phenomenological
(D) Ethnographic research
42. Samuel and Priya are conducting a detailed study of a single case in their research project. Which qualitative research tradition are they primarily using?
(A) Biographical / Narrative
(B) Phenomenology
(C) Grounded Theory
(D) Case Study

43. One limitation of the Case-Study Method is that it may focus on ____ circumstances or events.
- (A) Replicable
 - (B) Isolated
 - (C) Common
 - (D) Frequent
44. This research method is a descriptive technique in which one individual or group is studied in depth in the hope of revealing universal principles
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
45. Which research method allows a researcher to study one individual in great depth to reveal universal principles?
- (A) Naturalistic observation
 - (B) Case study
 - (C) Experiment
 - (D) Meta-analysis
46. What is the purpose of conducting case studies in business anthropology?
- (A) To analyze financial performance of organizations
 - (B) To examine cultural and social dynamics of specific organizations, projects, or business practices
 - (C) To develop new technological solutions for businesses
 - (D) To study consumer behavior in isolated markets
47. It described as the investigation and analysis of a single or collective case.
- (A) Narrative Inquiry
 - (B) Ethnography
 - (C) Grounded Theory
 - (D) Case Study
48. Case Studies are:
- (A) Detailed analyses of specific instances or events
 - (B) Mathematical equations
 - (C) Random surveys
 - (D) Short stories
49. Which comes first among the steps of the case study?
- (A) Development of adjustments and remedial
 - (B) Collection of data
 - (C) Follow-up
 - (D) Application of adjustments and remedial
50. Why might a researcher choose a case study design?
- (A) To generalize findings
 - (B) To manipulate variables
 - (C) To explore a unique case in depth
 - (D) To use random sampling
51. Is it still a case study when more than one case is included in the same study?
- (A) Yes
 - (B) No
52. How do we define a case-study?
- (A) A waste of time
 - (B) An in-depth investigation of an individual or a group
 - (C) A longitudinal observation of an individual or a group
 - (D) A detailed interview with an individual or a group
53. The disadvantage of this method of descriptive research is that the research may not be a representative sample of the general population and doesn't yield reliable conclusions about behavior.
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments

54. Impact of the implementation of COVID-19 health protocols in all establishments on Consumer Behavior.
- (A) Case study
 - (B) Ethnography
 - (C) Grounded theory
 - (D) Phenomenology
 - (E) Narrative
55. What type of techniques focuses on one individual or group in depth in hopes of revealing universal principles?
- (A) Case Study
 - (B) Longitudinal Study
 - (C) Correlational Study
 - (D) Naturalistic Observation
56. A case study can be a program, an institution, an organization or a community.
- (A) True
 - (B) False
57. What is an in-depth investigation of an individual subject.
- (A) Case Study
 - (B) Control Group
 - (C) Response Set
 - (D) Standard Deviation
58. ____ is an in-depth study of single case, a social unit or situation.
- (A) Diagnostic Research
 - (B) Trend Study
 - (C) Panel Study
 - (D) Case Study
59. Intensive study of a single group, incident, or community
- (A) Field Research
 - (B) Participant Observation
 - (C) Case Study
 - (D) Interview
60. A little girl at the local elementary school is writing symphonies for full orchestra at age 7. You're curious to know about the child's personality and other psychological qualities. Which type of study would you conduct?
- (A) Survey
 - (B) Naturalistic observation
 - (C) Case study
 - (D) Experiment
61. Case studies can be qualitative or quantitative, or both.
- (A) True
 - (B) False
62. What research methodology is an empirical inquiry about a contemporary phenomenon, set within its real-world context.
- (A) Narrative
 - (B) Ethnography
 - (C) Case Study
 - (D) Phenomenology
63. Researchers are often unable to control extraneous variables, when they use the case study method. This lesser degree of control makes it difficult to use the case study method to
- (A) Draw cause-effect conclusions behaviour.
 - (B) Develop predictions of behaviour.
 - (C) Consider alternative theoretical explanation of behaviour.
 - (D) Develop descriptions of behaviour
64. A famous case study where the subject suffered a traumatic brain injury when an iron rod went through their skull and they lived. After the accident and after surgery, they found that the subject's personality changed and they became more impulsive.
- (A) Hellen Keller
 - (B) Phineas Gage
 - (C) Genie
 - (D) .

65. A 'Case study' is:
- (A) A detailed analysis of a person, group, event, or situation over a period of time.
 - (B) A type of multiple-choice question.
 - (C) A mathematical formula.
 - (D) A fictional story.
66. The case study is the study of a
- (A) Single group.
 - (B) Single individual.
 - (C) Single community or family.
 - (D) Single unit done intensively to bring out the processes and dynamics underlying its problems and functioning.
67. Which research would be ideal for the following question? How does James live with general anxiety disorder?
- (A) Case Study
 - (B) Naturalistic Observation
 - (C) Correlation
 - (D) None of above
68. What does a case study usually focus on?
- (A) Thousands of participants
 - (B) Statistical data
 - (C) One person, group, or event
 - (D) Generalized patterns
69. To understand the unusual behavior of an adult client, a clinical psychologist carefully investigates the client's current life situation and his physical, social-cultural, and educational history. Which research method has the psychologist used?
- (A) Survey
 - (B) Case study
 - (C) Experimentation
 - (D) Naturalistic observation
 - (E) Correlation
70. Research Methods: Name a down side (or drawback) of CASE STUDIES
- (A) It's easy for people to give false information
 - (B) You don't get the chance to clarify
 - (C) Too unscientific to give accurate information
 - (D) You can't really apply the results to the general population
71. A study involving identifying an appropriate control group, comparable to the case group in most respects, in order to provide a reasonable estimate of the baseline or expected exposure.
- (A) Case-control
 - (B) Clinical trial
72. Which of the following refers to a detailed study of a specific subject such as person, group, place, event and phenomenon?
- (A) Case Study
 - (B) Ethnography
 - (C) Grounded Theory
 - (D) Phenomenology
73. The main disadvantage of using a case study approach is
- (A) Difficulties with generalising the information
 - (B) Expense
 - (C) Difficulties with gathering information
 - (D) None of above
74. It studies intensively the background, current status and environmental interactions of a given social unit.
- (A) Descriptive method
 - (B) Historical method
 - (C) Development method
 - (D) Case and field method
75. A ___ is an intensive, qualitative study of a person or group.
- (A) Survey
 - (B) Interview
 - (C) Case study
 - (D) Questionnaire

76. Case studies are of somewhat limited value because
- (A) The findings might not apply to other cases
 - (B) They can cost too much money
 - (C) They can provide information about brain structure but not brain function
 - (D) They may take too long to complete
77. What is another term for the use of case study in teaching?
- (A) Problem-based learning
 - (B) Narrative teaching
 - (C) Case method
 - (D) Experiential learning
78. Which research method involves studying a single individual or group in depth?
- (A) Correlation
 - (B) Case study
 - (C) Observation
 - (D) Field experiment
79. A(n) ____ can be defined as a study design in which a psychologist, often a therapist, observes one person over a long period of time.
- (A) Survey
 - (B) Case study
 - (C) Interview
 - (D) Naturalistic observation
80. Which qualitative research takes place in the field of social care, nursing, psychology, rehabilitation centers, education, and the like?
- (A) Case Study
 - (B) Ethnography
 - (C) Phenomenology
 - (D) Historical Analysis
81. Case study is
- (A) The small group of participants, out of the total number available, that a researcher studies
 - (B) Describes the direction and strength of the relationship between two sets of variables
 - (C) Research method that involves an intensive investigation of one or more participants
 - (D) Numerical methods used to determine whether research data support a hypothesis or whether results were due to chance
82. What are the stages of the typical case study method?
- (A) Define and Design, Prepare, Collect and Analyze, Analyze and Conclude
 - (B) Define and Design, Prepare, Collect and Analyze, Collect information
 - (C) Introduction, Prepare, Collect and Analyze, Collect information
 - (D) None of above
83. Which scientific method is being described below: a descriptive technique in which one individual or group is studied in depth in the hope of revealing universal principles
- (A) Theory
 - (B) Case study
 - (C) Operational definition
 - (D) Replication
84. This is an observation technique in which one person is studied in depth.
- (A) Survey
 - (B) Case Study
 - (C) Exploratory study
 - (D) Experiment
85. In depth examination of a single (atypical) person or group (ex. rare disorder, case of N.A.)
- (A) Case studies
 - (B) Observational research
 - (C) Self-report methods
 - (D) None of above
86. Findings cannot be generalized because one person or a small group of people is unlikely to be representative.
- (A) Weakness of Correlations
 - (B) Weakness of Case Study

- (C) Weakness of Longitudinal Study
(D) None of above
87. What research method studies a specific event in detail?
(A) Experimental
(B) Historical
(C) Correlational
(D) Case Study
88. What is the primary weakness of case study research?
(A) It lacks detail.
(B) It is typically not generalizable.
(C) It is too nuanced.
(D) It is atheoretical.
89. True/False: Case studies are susceptible to researcher bias.
(A) True
(B) False
90. Case studies can be used to make universal claims about populations.
(A) True
(B) False
91. Which research method involves an in-depth study of a single unit, such as an individual, one group, or one organization?
(A) Ethnography
(B) Case Study
(C) Naturalistic Observation
(D) Content Analysis
92. It is a long time study of person, group, organization or situation and an empirical inquiry that investigates a contemporary phenomenon within its real life context
(A) Ethnography
(B) Case study
(C) Phenomenology
(D) Historical Analysis
93. In depth study of a single person or group revealing some general principle
(A) Naturalistic observation
(B) Cross-Sectional
(C) Control group
(D) Case study
94. Which type of research involves detailed information and is often used in exploratory research?
(A) Survey
(B) Case study
(C) Experiment
(D) Action research
95. True or False: Most sociologists do use case studies as a primary research method.
(A) False
(B) True
96. Case study method is used when:
(A) Large sample required
(B) In-depth analysis needed
(C) Only secondary data is required
(D) Hypothesis testing
97. Which of the research design matches the description: "Design that focuses on observing just one or a few individuals"
(A) Case study
(B) Experiment
(C) Quasi-experiment
(D) Correlational study
98. This kind of research studies a particular person, group, or situation for a long period of time.
(A) Grounded theory
(B) Historical Analysis
(C) Content and Discourse Analysis
(D) Case study
99. Case study originated from ____?
(A) Sociology
(B) Multiple disciplines

- (C) Anthropology
 - (D) Philosophy
 - (E) Human storytelling and education
- 100.** What kind of research methodology focuses on intensive analyses of a single individual?
- (A) Surveys
 - (B) Case studies
 - (C) Correlational studies
 - (D) Naturalistic observations
- 101.** Jean Piaget's intensive observations and analyses of his three children formed the basis of his theories of childhood development. This is an example of which method of research?
- (A) Naturalistic observation
 - (B) Correlational
 - (C) Psychometric
 - (D) Case study
- 102.** This type of research can be conducted if the conditions are not able to be replicated.
- (A) Experiment
 - (B) Naturalistic Observation
 - (C) Survey
 - (D) Case Study
- 103.** A researcher is concerned with the daily functioning of employed people with Capgras syndrome. He chooses 3 cases and interviews them, their close ones and their medical professionals. He then compares cases to each other. What type of case study is this?
- (A) Single/Instrumental case study
 - (B) Collective/Multiple case study
 - (C) Intrinsic case study
 - (D) Idiosyncratic case study
- 104.** In instrumental case studies, some cases would do a better job than others. What would a not so "typical" case, help researchers with?
- (A) Illustrating matters we may overlook in typical cases
 - (B) Illustrating the variety of observations possible from a particular case
 - (C) Eliminating the researchers pre conceived biases
 - (D) Eliminating the need to generalise once the study is complete
- 105.** A 'Case' in research refers to:
- (A) A specific instance or example being studied
 - (B) A type of research method
 - (C) A hypothesis being tested
 - (D) A statistical analysis technique
- 106.** What is a key factor about a Case Study?
- (A) Subject to opinion
 - (B) Studies multiple people
 - (C) They can be replicated
 - (D) They can't be replicated
- 107.** Case Studies provide the most thorough investigation into a person or small group of people
- (A) True
 - (B) False
- 108.** Detailed examination of individual or small groups, large amount of data collected on one person or group, useful when investigating unique cases
- (A) Clinical observation
 - (B) Experimental research
 - (C) Case study
 - (D) None of above
- 109.** What is the definition of a Case Study in political science?
- (A) In-depth analysis of a single case (e.g., a country, organization, or event) to explore complex issues in context.
 - (B) A statistical analysis of multiple cases to find general patterns.
 - (C) A theoretical discussion without reference to real-world examples.
 - (D) A summary of political theories from different scholars.

- 110.** It is done when a researcher would want to know the deeper details about a certain situation, event, activity, process, and even a group of individuals.
- (A) Phenomenology
 - (B) Case study
 - (C) Historical approach
 - (D) Qualitative Inquiry
- 111.** A comprehensive, complete, detailed, and in-depth study and analysis of an individual, institution, group, or community.
- (A) Survey
 - (B) Case Study
 - (C) Content Analysis
 - (D) None of the above
- 112.** Most useful for describing the potential effectiveness of new interventions, for describing the effectiveness of interventions on unusual diagnoses, and for describing unusual responses (either good or bad) to interventions
- (A) Case series
 - (B) Case Control
- 113.** A person displays a set of rare behaviors that psychologists had not known about previously, because nobody had ever shown them before. The best strategy to investigate the nature of those behaviors is
- (A) An experiment
 - (B) A survey
 - (C) A case study
 - (D) Cross sectional study
- 114.** A detailed study of one particular group.
- (A) Case study
 - (B) Experiment
 - (C) Ethnography
 - (D) None of above
- 115.** Which of the following is not true of a case study?
- (A) They are highly controlled in order to avoid researcher bias.
 - (B) They are usually longitudinal.
 - (C) They make use of method triangulation.
 - (D) None of above
- 116.** Research method that involves an intensive investigation of one or more participants
- (A) Naturalistic Observation
 - (B) Case Study
 - (C) Surveys
 - (D) Longitudinal Study
 - (E) Cross-Sectional Studies
- 117.** Which research design aims to describe a case through an in-depth examination of a person or an institution?
- (A) Historical research
 - (B) Narrative research
 - (C) Phenomenology
 - (D) Case study
- 118.** In this section, conjoined twins, Krista and Tatiana, were described as being potential participants in a case study. In what other circumstances would you think that this particular research approach would be especially helpful and why?
- (A) In studying rare medical conditions
 - (B) In analyzing common cold symptoms
 - (C) In researching everyday dietary habits
 - (D) In exploring popular travel destinations
- 119.** The purpose of this type of research is to describe in-depth experience of one person, family, group, community or institution.
- (A) Ethnography
 - (B) Historical Research
 - (C) Case Study
 - (D) Phenomenology
- 120.** Which one of the following could be helpful for minimizing the bias in this case study?
- (A) Response analysis survey.
 - (B) Pretest Interview.
 - (C) Focus group.
 - (D) Cognitive research.

121. Types of case studies are not distinguished by
- (A) Intent
 - (B) Function
 - (C) Disciplinary orientation
 - (D) Finance
122. For items 37-39, identify the qualitative research designs that may correspond in the given statements in each item. Choose your answers in the box provided (case study; ethnography; historical study; phenomenology). The researcher wants to study the learning styles of a student with dyslexia.
- (A) Case study
 - (B) Ethnography
 - (C) Historical study
 - (D) Phenomenology
123. A 'Comparative case study' is:
- (A) A study comparing two or more cases to identify similarities and differences.
 - (B) A study focusing on a single case in depth.
 - (C) A study based on quantitative data only.
 - (D) A study that ignores context.
124. A researcher is looking into ways to create interventions for violent or hostile behavior among young children.
- (A) POSTMODERN
 - (B) CASE STUDY
 - (C) DISCOURSE ANALYSIS
 - (D) ETHNOGRAPHIC
 - (E) HISTORICAL
125. A non-experimental technique in which one individual or group is studied in depth in the hope of revealing universal principles.
- (A) Peer review
 - (B) Case study
 - (C) Focus group
 - (D) Naturalistic observation
126. Causal case studies are:
- (A) Studies that explore the cause-and-effect relationship between variables.
 - (B) Studies that describe phenomena without determining cause.
 - (C) Studies that focus on statistical analysis only.
 - (D) Studies that only use qualitative data.
127. How many steps are there in the case study process?
- (A) 5
 - (B) 4
 - (C) 6
 - (D) 3
128. A type of research method that involves using multiple methods to gather lots of data on a small group or individual.
- (A) True experiment
 - (B) Field experiment
 - (C) Case study
 - (D) Quasi-experiment
129. What is an observational research study focusing on one or a few people called?
- (A) Clinical or case study
 - (B) Control group
 - (C) Double-blind study
 - (D) None of above
130. A ____ is a descriptive technique in which one individual or group is studied in-depth in the hope of revealing universal principles.
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
131. Identify what type of Qualitative Research is the topic: Battered Husbands: a new form of slavery?
- (A) Phenomenological
 - (B) Ground theory

- (C) Ethnography
 - (D) Case Study
 - (E) Biography
- 132.** It is an exploration of a “bounded system” over time through detailed, in-depth data collection involving multiple sources of information rich in interesting stories.
- (A) Ethnography
 - (B) Phenomenology
 - (C) Grounded Theory
 - (D) Case Study
- 133.** Descriptive research where one person or group is studied in depth; ex. Genie
- (A) Naturalistic observation
 - (B) Experiment
 - (C) Correlational study
 - (D) Case study
- 134.** Analysis of series of people with the disease
- (A) Randomized controlled trial
 - (B) Controlled clinical trial
 - (C) Cohort study
 - (D) Case control study
 - (E) Case series
- 135.** The Phineas Gage Story of a man who survived even after a spike driven through his head represents a(n)
- (A) Experiment
 - (B) Naturalistic observation study
 - (C) Case study
 - (D) Survey study
- 136.** The advantage of this descriptive method of research is that it gives a great deal of detailed descriptive information about a rare or uncommon issue or event.
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
- 137.** An in-depth investigation of an individual or group
- (A) Correlation
 - (B) Personality tests
 - (C) Aptitude
 - (D) Case study
- 138.** This type of case study is used to explore situations in which the intervention being evaluated has no clear, single set of outcomes.
- (A) Explanatory
 - (B) Instrumental
 - (C) Exploratory
 - (D) Intrinsic
- 139.** Under this method (Case Study) The approach happens to be (—) and not (—). Every possible effort is made to collect information concerning all aspects of life.
- (A) Quantitative-qualitative
 - (B) Qualitative-quantitative
 - (C) Primary data-secondary data
 - (D) Secondary data-primary data
- 140.** What are the typical characteristics of the subject in a case study?
- (A) Historical events or periods being examined briefly
 - (B) Typically in a extreme or unique psychological circumstance that differentiates them for the general public
 - (C) Fictional characters or scenarios being analyzed
 - (D) Animals, plants, or minerals being studied superficially
- 141.** Which method is used in the research for understanding the empirical situation of institutional arrangement related to data analytics implementation for tax administration?
- (A) Survey method
 - (B) Observational method
 - (C) Case study interpretive method
 - (D) Experimental method

- 142.** Which of the following procedures is not typical of school applications of the case study method?
- (A) Interviews with parents
 - (B) Interviews with the individual being studied
 - (C) Observations of the individual in a variety of situations
 - (D) Collecting data from a large number of subjects
- 143.** Subnational case study research refers to:
- (A) A study focusing on national-level phenomena only.
 - (B) A study examining specific regions or areas within a country.
 - (C) A study comparing different countries globally.
 - (D) A study limited to urban areas only.
- 144.** Which of the following key characteristics refers to analyze and write about an individual life using a time sequence of events?
- (A) Chronology of the Experiences
 - (B) Individual Experiences
 - (C) Collecting individual stories
 - (D) None of above
- 145.** It is a detailed study of a specific subject, such as a person, group, place, event, organization, or phenomenon.
- (A) Historical Analysis
 - (B) Case Study
 - (C) Phenomenology
 - (D) None of above
- 146.** Mark is studying a rare psychological condition and conducts an in-depth analysis of one individual over several months. He gathers detailed information about their thoughts, feelings, and behaviors. What type of research design is Mark utilizing?
- (A) Correlation
 - (B) Case Study
 - (C) Experiment
 - (D) None of above
- 147.** Conclusions and findings of which type of the following research kinds cannot be generalized to other situations?
- (A) Conclusive research
 - (B) Prescriptive research
 - (C) Descriptive research
 - (D) Case-study research
- 148.** What is the "case study" method of research?
- (A) Measures learning ability
 - (B) People respond to a series of questions
 - (C) In-depth investigation of an individual or a small group
 - (D) Proportional representation of a subgroup
- 149.** This design assumes that what is being studied is atypical of a certain type and therefore can provide insight into the events and situations prevalent in a group from where it has been drawn.
- (A) Observation
 - (B) Social survey
 - (C) Focus Group Discussion
 - (D) Case study
- 150.** In which method does a researcher use observation, interviews, and writings (such as letters) of a pre-selected individual or a few individuals?
- (A) Correlational
 - (B) Case study
 - (C) Naturalistic observation
 - (D) Survey
- 151.** What is a clinical or case study?
- (A) A study that involves observing people in their natural environment
 - (B) A study that involves analyzing data from multiple sources
 - (C) A study that involves examining a specific individual or group in depth
 - (D) A study that involves conducting experiments in a controlled setting

- 152.** In what type of study does a researcher study an individual subject in depth?
- (A) Naturalistic observation
 - (B) Laboratory observation
 - (C) Case study
 - (D) Survey
- 153.** What research method involves an intensive investigation of one or more participants?
- (A) Naturalistic Observation
 - (B) Case Study
 - (C) Experiment
 - (D) Cross-Sectional Study
- 154.** A way to study a group of people or one person is called what?
- (A) Random shaping
 - (B) Experimental research
 - (C) Naturalistic observation
 - (D) Case study
- 155.** Which of these describes a case study?
- (A) In depth investigation
 - (B) Qualitative data
 - (C) A large sample
 - (D) Generalisable
- 156.** Arrange the following steps of conducting case study in a correct order: I. Describing, analyzing and reporting the case II. Defining the case III. Selecting the case IV. Collecting data
- (A) IV, I, II, III
 - (B) III, IV, II, I
 - (C) II, IV, III, I
 - (D) II, III, IV, I
- 157.** What is a case study?
- (A) A self reporting of a particular group
 - (B) Study of an individual group
 - (C) Recording the behavior in natural environments
 - (D) Getting evidence from the random public
- 158.** Descriptive research where one person or group is studied in depth; baby Albert
- (A) Naturalistic observation
 - (B) Experiment
 - (C) Correlational study
 - (D) Case study
- 159.** A case study is a:
- (A) Survey
 - (B) Statistical analysis
 - (C) In-depth investigation
 - (D) Literature review
- 160.** A researcher is concerned with how a kindergarten teacher deals with her Tourette's syndrome. She sets up multiple interviews with her. What type of case study is this?
- (A) Single/Instrumental case study
 - (B) Collective/Multiple case study
 - (C) Intrinsic case study
 - (D) Idiosyncratic case study
- 161.** Case study is best to research
- (A) Historical events
 - (B) Contemporary events
 - (C) Future events
 - (D) None of above
- 162.** Which research design involves a comprehensive and extensive examination of a particular individual, group, or situation over some time?
- (A) Case Study
 - (B) Phenomenological
 - (C) Ethnography
 - (D) Historical Analysis
- 163.** True/False: Case studies are useful to investigate phenomena that could not be studied otherwise.
- (A) True
 - (B) False

164. In which research method do we study one exceptional individual in depth and try to carefully draw conclusions about others based on the evidence?
- (A) Naturalistic observation
 - (B) Hindsight bias
 - (C) Experimentation
 - (D) Case study
165. Unique case orientation means ____
- (A) That reality is socially constructed.
 - (B) The researcher assumes each case is special and unique.
 - (C) That results converge on the same conclusion.
 - (D) None of above
166. This research method is a descriptive technique in which one individual or group is studied in depth but does not necessarily represent a whole population
- (A) Case Study
 - (B) Survey
 - (C) Observational
 - (D) Correlational
 - (E) Experiments
167. Choose a statement that refers to a CASE STUDY research.
- (A) Involves the in-depth study and detailed description of a single or limited number of groups
 - (B) Research based on describing the past.
 - (C) Where practitioners in their workplace, whether they be teachers, nurses, doctors, managers, etc., engage in research in order
 - (D) Examines the relationship between two variables.
168. An individual suffered a major traumatic brain injury after getting in a bad accident at work. If a psychologist wants to know the effects of the trauma, what method would be best?
- (A) Naturalistic observation
 - (B) Case study
 - (C) Experimental research
 - (D) Survey
169. What do you call to any unit of analysis, including individuals, organizations, events, or actions?
- (A) People
 - (B) Organization
 - (C) Individuals
 - (D) Case
170. A descriptive research technique that allows researchers to study an individual in depth is called the ____ method.
- (A) Observation
 - (B) Interview
 - (C) Survey
 - (D) Case Study
171. Which observational research method involves conducting in-depth investigations of individuals or small groups?
- (A) Case study
 - (B) Longitudinal study
 - (C) Cross-sectional study
 - (D) Testing
172. It is used for a research approach with specific boundaries and can be both qualitative and quantitative. In addition, it is an entity studied as a single unit, and it has clear confines and a specific focus and is bound to context.
- (A) Case Study
 - (B) Ethnography
 - (C) Biographical Study
 - (D) Phenomenology
 - (E) Grounded Theory
173. What can researchers identify through case studies in business anthropology?
- (A) Best practices, challenges, and lessons learned
 - (B) Financial trends in global markets
 - (C) Technological advancements in business
 - (D) Marketing strategies for specific products

174. Which research method is best suited for collecting detailed information about individuals' experiences?
- (A) Experimental research
 - (B) Case study
 - (C) Survey research
 - (D) Quasi-experimental
175. What is one advantage of a case study?
- (A) Sometimes relies only on self-report data, which can be misleading
 - (B) Doesn't allow conclusions about cause-and-effect relationships
 - (C) Provides a good way to generate hypotheses
 - (D) Can be subjective and thus may yield biased results Edit
176. When are case studies the preferred method?
- (A) When 'how' and 'why' questions are being asked
 - (B) When the investigator has little control over events
 - (C) When the investigator has control over the environment
 - (D) When the focus is on a contemporary phenomenon within a real life context.
 - (E) When 'what' and 'who' questions are being asked
177. Is an in-depth investigation of a particular individual, group, organization, or event. It involves a detailed examination of a specific case within its real-life context, aiming to understand the complexities, dynamics, and interrelationships among various factors.
- (A) Grounded theory
 - (B) Case-study
 - (C) Historical design
 - (D) Phenomenological
178. Case-study collects the data from the following sources
- (A) From individual.
 - (B) From Anecdotal records.
 - (C) From Government documents.
 - (D) From all of the above.
179. What is a downside about case studies?
- (A) Difficult to generalize results to the larger population
 - (B) High cost
 - (C) Easy to replicate
 - (D) Unbiased results
180. What design makes an individual distinct from the others
- (A) Case study
 - (B) Ethnography
 - (C) Historical
 - (D) Phenomenology
181. A ____ is an in-depth investigation of an individual or small group
- (A) Experiment
 - (B) Double Blind Study
 - (C) Single Blind Study
 - (D) Case Study
182. What do case studies allow for?
- (A) Brief summaries of theoretical concepts
 - (B) Statistical analysis of data
 - (C) Predicting future trends
 - (D) Allows for a lot of insight into a case.
183. The disadvantage of this descriptive research method is that single cases can be very misleading or not generalizable to an entire population.
- (A) Natural observation
 - (B) Survey
 - (C) Case study
 - (D) Correlation
184. What is the type of research design that seeks to provide causal explanations, such as describing the process by which a particular innovation had a particular effect on participants in a specific setting?
- (A) Narrative design
 - (B) Phenomenological design
 - (C) Ethnographic design
 - (D) Case study design

- 185.** What does Case Study research require to ensure triangulation and develop a complete, in-depth picture of the bounded case?
- (A) Extensive, in-depth interviews
 - (B) Participant observation and field notes
 - (C) Multiple forms of data collection (interviews, reports, observations)
 - (D) Emphasis on emergent theoretical categories
- 186.** Can give a unique insight into an individual who may have experienced unusual or difficult circumstances.
- (A) Strength of Correlations
 - (B) Strength of Case Study
 - (C) Strength of Longitudinal Study
 - (D) None of above
- 187.** This term suggests that researchers have a genuine interest in the case and should use this approach when the intent is to better understand the case. The case itself is of interest.
- (A) Descriptive
 - (B) Exploratory
 - (C) Intrinsic
 - (D) Instrumental
- 188.** Usually represents a particular example from a particular time and place
- (A) Ethnography
 - (B) Longitudinal study
 - (C) Experiment
 - (D) Case Study
- 189.** It is used to gather in-depth and detailed information about a subject, which could be any entity, organization, event or something larger like a country.
- (A) Case study
 - (B) Grounded theory study
 - (C) Ethnography
 - (D) None of above
- 190.** What is the key focus of a collective case study?
- (A) Understanding a specific entity
 - (B) Investigating a phenomenon of interest
 - (C) Gathering data from multiple instrumental cases
 - (D) Examining the behaviors and motivations of an individual
- 191.** The first case study of HM dealt with
- (A) Personality changes
 - (B) Severing his corpus callosum
 - (C) Damage to Broca's and Wernicke's areas
 - (D) Removal of his hippocampus and struggles with long term memory.
- 192.** What is an observation technique in which one person is studied in depth in the hope of revealing universal principles?
- (A) Placebo effect
 - (B) Double-blind procedure
 - (C) Operational definition
 - (D) Case Study
- 193.** A strength of a case study is that..
- (A) It is often subjective
 - (B) It allows us to study areas that are usually unethical
 - (C) They are unethical
 - (D) They have demand characteristics
- 194.** What is the main focus of case study research?
- (A) To monitor the effects of remedial action
 - (B) To solve practical problems
 - (C) To develop or refine theory models
 - (D) To study specific individuals, groups, or events
- 195.** Dr. Mingus keeps a very detailed record of a series of interviews with an individual who is suffering from a rare brain disorder. This is an example of which research method?
- (A) Experiment
 - (B) Correlational
 - (C) Case study
 - (D) Naturalistic observation

- 196.** A researcher has formulated specific research questions about one school's high absenteeism among its freshman student population. The researcher plans to conduct in-depth analyses of this population using multiple sources of data. Which theoretical framework is this researcher using?
- (A) Case study
 - (B) Grounded theory
 - (C) Phenomenology
 - (D) Narrative inquiry
- 197.** This method investigates one individual, small group or community.
- (A) Observation
 - (B) Survey
 - (C) Case Study
 - (D) Experiment
- 198.** Research methods: Name a key benefit of CASE STUDIES
- (A) They provide a quick overview of a topic.
 - (B) They are always based on large sample sizes which improves the accuracy of results
 - (C) They offer in-depth insights into complex issues for a specific person or group
 - (D) They eliminate the need for data collection.
- 199.** If someone does an intense investigation of a topic or person to gather information, that is called a?
- (A) Experiment
 - (B) Survey
 - (C) Case Study
 - (D) Observation
- 200.** Which of the following strategies increases the generalizability of a single case study?
- (A) Take the results back to the participant and ask him/her if it reflects their understanding of the study.
 - (B) Providing rich data about the context of the study
 - (C) Having several researchers interpret the data.
 - (D) None of above
- 201.** It is an investigation of a particular person, group, or situation for a long period of time.
- (A) Grounded theory
 - (B) Content and Discourse Analysis
 - (C) Historical Analysis
 - (D) Case study
- 202.** What is a benefit of using a case study as a research method?
- (A) It ensures integrity of the results.
 - (B) It can be applied to a wide population.
 - (C) It allows for a deep analysis of a topic
 - (D) It is an efficient way to conduct research.
- 203.** What does a life history study portray in narrative research?
- (A) An individual's entire life.
 - (B) Personal reflections on events and their causes.
 - (C) An individual's experiences in single or multiple episodes.
 - (D) The experiences of another person's life.
- 204.** Which statement distinguishes descriptive research via case study?
- (A) Observes a large population in natural settings
 - (B) Applies randomized treatment assignment
 - (C) Uses a representative survey sample only
 - (D) Examines one or a small group intensively
- 205.** Which person do we often refer to as the example of using case studies?
- (A) John Locke
 - (B) Phineas Gage
 - (C) Francis Bacon
 - (D) Sigmund Freud

206. A type of research in which one individual or group is studied in depth.
- (A) Naturalistic observation
 - (B) Case study
 - (C) Survey
 - (D) Experiment
207. If the focus of the case study is a person, we should state why this person is relevant to the study and consider his or her contextual conditions.
- (A) -True
 - (B) -False
208. Phineas Gage had a lead pipe go through his brain. What is this an example of?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Wording effect
 - (D) Random sampling
209. After a detailed study of a gun shot wound victim, a psychologist concludes that the brain region destroyed is likely to be important for memory functions. Which type of research did the psychologist use?
- (A) A case study
 - (B) A survey
 - (C) Correlation
 - (D) Experimentation
210. Karina spent a year observing Winter, a girl who suffers from sleep paralysis, to document the whys and hows of her condition. What type of Qualitative Study is done?
- (A) Phenomenology
 - (B) Historical Analysis
 - (C) Case Study
 - (D) Ethnography
211. What is a case study in communication research?
- (A) A study involving statistical analysis
 - (B) A study involving multiple variables
 - (C) A study of a single individual, organization, or event
 - (D) A study involving content analysis
212. A descriptive technique in which one individual or group is studied in depth
- (A) Alternative hypothesis (H_a)
 - (B) Case Study
 - (C) Secondary Data
 - (D) Expert
213. When conducting case study research, what distinguishes the scope of a study as all-inclusive?
- (A) Gathering data only at a particular
 - (B) Examining a specific entity
 - (C) Exploring broad cultural trends
 - (D) Attempting to gather data from as many sources as possible
214. The advantage of a(n) ____ is that it yields a great deal of detailed descriptive information.
- (A) Case Study.
 - (B) Survey.
 - (C) Observation.
 - (D) Correlation.
215. An in-depth, qualitative study of a particular group or case, that provides great detail, can be collected in a cost-effective manner, but can be time-consuming, difficult to generalize and requires higher skill levels.
- (A) Case study
 - (B) Content analysis
 - (C) Control group
 - (D) Covert observation
216. What is the primary purpose of a case study in research?
- (A) To validate existing theories without modification
 - (B) To entertain the audience with narratives
 - (C) To analyze a specific instance in depth
 - (D) To collect large amounts of quantitative data

- 217.** What research method would be best for someone wanting to get detailed information about a small group of children with ADHD?
- (A) Longitudinal Study
 - (B) Case Study
 - (C) Survey
 - (D) Cross-Sectional Study
- 218.** Point out some advantages of case study.
- (A) Provides detailed information.
 - (B) Prove conceptual validity.
 - (C) A and B
 - (D) None of above
- 219.** An individual with an exceptional memory is identified. She is capable of recalling major events, the weather, and what she did on any given date. What research design should be employed?
- (A) Survey
 - (B) Interview
 - (C) Case Study
 - (D) Naturalistic Observation
- 220.** What does a case study report?
- (A) The historical background of a subject
 - (B) The status of an individual or community at one moment or over a period of time
 - (C) The financial aspects of a company
 - (D) The theoretical concepts in a field of study
- 221.** What is crucial in case study reports to make sure that readers get a vicarious experience?
- (A) Dissemination
 - (B) Generalization
 - (C) Interpretive commentary
 - (D) A rich, thick description
- 222.** A documented study on a particular person, group or institution is known as?
- (A) Ethnography
 - (B) Historical Research
 - (C) Case Study
 - (D) Discourse analysis
- 223.** Synesthesia is a phenomenon that has been estimated to occur in only a few people in a million. Because of its rarity, which is the most likely method researchers will use to study it?
- (A) Naturalistic observation.
 - (B) Correlational research.
 - (C) Survey research.
 - (D) Case study.
- 224.** Comprehensive, in-depth examination of a specific individual, group, or institution
- (A) Phenomenological
 - (B) Historical design
 - (C) Case-study
 - (D) Non of the above
- 225.** In-depth investigations into individuals or small groups of people. Data gathered using a variety of data collection methods and triangulated.
- (A) Correlations
 - (B) Case Study
 - (C) Longitudinal Study
 - (D) None of above
- 226.** Which research design provides an in-depth look at one test subject? The subject can be a person or family, business or organization, or a town or city.
- (A) Phenomenological Research
 - (B) Ethnographic Research
 - (C) Content Analysis
 - (D) Case Study
- 227.** An in-depth study of a single person or group to reveal some universal principle
- (A) Variables
 - (B) Random sample
 - (C) Naturalistic observation
 - (D) Case study

228. A student is investigating how toddlers interact with each other at preschool. What research methods would be most appropriate in conducting this research?
- (A) Questionnaires and interviews
 - (B) Interviews and case studies
 - (C) Questionnaires and observations
 - (D) Case studies and observations
229. The report of the first cases of men in NYC with an unknown disease would most likely be which type?
- (A) Case-Series
 - (B) Longitudinal
 - (C) Crossover
 - (D) Cohort
230. Scientists are cautious about making generalizations from case studies because
- (A) Such observations occur in a controlled laboratory setting
 - (B) Case studies cannot always be replicated
 - (C) Case studies do not include information from other sources
 - (D) All of the above
231. Under the spectrum of a ____ case study, the researcher concentrates on an issue or concern and as a next step chooses a bounded case study to depict the case.
- (A) Longitudinal
 - (B) Attitudinal
 - (C) Single instrumental
 - (D) Random
232. Our Case Study about Battling for the Big Trees of Clayoquot Sound took place in which Canadian location
- (A) Niagara
 - (B) Montreal
 - (C) Vancouver, British Columbia
 - (D) Quebec
233. When analysing Case Studies, ____ requires analysing a specific aspect of the case.
- (A) Holistic Analysis
 - (B) Embedded Analysis
- Explanation:** Type of Analysis Holistic Analysis requires analysing the entire case Embedded Analysis requires analysing a specific aspect of the case
234. Case studies, in their true essence, explore and investigate contemporary real-life phenomenon through detailed ____ analysis of a limited number of events or conditions, and their relationships.
- (A) Thematic
 - (B) Compounding
 - (C) Contextual
 - (D) None of all
235. It is used for a research approach with specific boundaries and can be both qualitative and quantitative.
- (A) Ethnography
 - (B) Phenomenology
 - (C) Case study
 - (D) Grounded theory
236. Which of the following is a criteria of good case study?
- (A) Validity of the data.
 - (B) Continuity of the data.
 - (C) Completeness of the data.
 - (D) All of the above.
237. Which research study cannot be applied to the entire population?
- (A) Survey
 - (B) Experiment
 - (C) Case study
 - (D) Longitudinal study
238. The intrinsic case study focuses on the case itself due to the fact that the case presents an unusual or unique situation. Such a situation may be to study a customer who is unique or evaluating a marketing programme.
- (A) Extrinsic
 - (B) Multiple
 - (C) Single

- (D) Intrinsic
 - (E) Extensive
- 239.** "Case study is an example of data collection method in action research." Is this true or false?
- (A) True
 - (B) False
- 240.** What is the primary objective of a case study research design?
- (A) To generalize findings to a larger population
 - (B) To investigate a specific phenomenon in-depth
 - (C) To establish cause-and-effect relationships
 - (D) To conduct a cross-sectional analysis
- 241.** This research design presents a detailed analysis of a specific issue using a specific case or multiple cases within the bounded system. The researcher chooses a specific case to study.
- (A) Ethnography
 - (B) Phenomenology
 - (C) Case Study
 - (D) Grounded Theory
- 242.** What kind of qualitative method is used to study an organization or entity?
- (A) Ethnographic research
 - (B) Discussion groups
 - (C) Case Study
 - (D) Survey Research
- 243.** In a collective case study or ____ case study the issue to be investigated is selected but the researcher chooses a number of case studies to depict the issue. Such an action helps to investigate different aspects of the issue under investigation.
- (A) Attitudinal
 - (B) Random
 - (C) Multiple
 - (D) Experimental
- 244.** Which data collection tool refers to an in-depth description of a process, experience, or structure at a single institution?
- (A) Narratives
 - (B) Case studies
- 245.** What is the defining characteristic of a case study?
- (A) It focuses on the stories told by one or two people.
 - (B) It examines a defined 'bounded system,' which may be an individual, a program, an organization, or a specific event.
 - (C) It shifts the focus to the shared experience of a common phenomenon.
 - (D) It strives to explain how or why a social action or process occurs.
- 246.** The research design that examines one person or a small # of people in-depth, often over an extended time period
- (A) Statistics
 - (B) Case study
 - (C) Rods
 - (D) Fovea
- 247.** ____ research is a qualitative approach in which the investigator explores a bounded system or multiple bounded systems over time, through detailed, in-depth data collection involving multiple sources of information.
- (A) Case Studies
 - (B) Grounded Theory
 - (C) Ethnography
 - (D) IPA
- 248.** What is the defining aspect of a case study?
- (A) Increased Generalisation
 - (B) Increased depth
 - (C) Increased breadth
 - (D) Increased quality
- 249.** What is one of the main limitations of a case study?
- (A) Large sample size
 - (B) Generalizability

- (C) Use of primary data only
(D) Quick data collection
- 250.** Which of the following involves the studying of multiple cases in one research study?
(A) Intrinsic case study.
(B) Single case study.
(C) Instrumental case study.
(D) Collective case study.
- 251.** In presenting the details of a case of an obese patient with borderline personality disorder who underwent bariatric surgery, the appropriate research design to use is
(A) Case study
(B) Case series
- 252.** In studying the Cuban Missile Crisis, a researcher uses archival documents, leader correspondence, and decision memos to reconstruct the sequence of choices and perceptions that prevented nuclear war. This study most clearly reflects which research design feature?
(A) Process tracing within a single-case study to uncover causal mechanisms
(B) Crossnational correlation
(C) Experimental design
(D) Hypothesis testing
- 253.** In a case study, what is emphasized in the gathering of data?
(A) Manipulation of variables
(B) Use of multiple sources of evidence
(C) Experimental settings
(D) Statistical analysis
- 254.** In instrumental case study research, what do researchers aim to represent?
(A) A larger cultural context
(B) A specific phenomenon of interest
(C) The behaviors of an individual case
(D) General answers to field-specific questions
- 255.** The disadvantage of this descriptive research method is that single cases can be very misleading.
(A) Natural observation
(B) Survey
(C) Case study
(D) Correlation
- 256.** Which data collection method involves detailed examination of a single subject or group?
(A) Surveys
(B) Case Study
(C) Correlational Studies
(D) Experimental Method
- 257.** A descriptive technique in which one individual or group is studied in depth in the hope of revealing universal principles:
(A) Replication
(B) Naturalistic observation
(C) Survey
(D) Case study
- 258.** Which qualitative strategy provides an in-depth look at one test subject?
(A) Grounded Theory
(B) Triangulation
(C) Case Study
(D) Ethnographic Studies
- 259.** Which of the following is an advantage of case studies?
(A) Case studies yield a great deal of data about a particular individual, which can be useful in forming hypotheses.
(B) Case studies offer researchers the opportunity to draw conclusions about cause and effect relationships.
(C) Case studies prevent the presence of an observer altering the person's behavior.
(D) Case studies enable an immense amount of information to be gathered quickly and inexpensively.

- 260.** Method of intense study of just one individual:
- (A) Naturalistic Observation
 - (B) Experimental Study
 - (C) Case Study
 - (D) Survey
- 261.** Which type of qualitative research report involves a detailed study of a specific individual, group, event, or situation?
- (A) Ethnographic report
 - (B) Case study
 - (C) Phenomenological research
 - (D) Longitudinal study
- 262.** What is the main difference between case study and ethnography?
- (A) Case study focuses on an individual or group, while ethnography studies cultural patterns.
 - (B) Case study is qualitative, while ethnography is quantitative.
 - (C) Case study always involves surveys.
 - (D) Ethnography requires numerical data.
- 263.** Which method involves a deep dive into ongoing research and collecting data?
- (A) Focus Group
 - (B) Text Analysis
 - (C) Case Study
 - (D) Survey Research
- 264.** What is the term for a detailed, in-depth study of an individual, including their psychological attributes and history?
- (A) Interview
 - (B) Psychological Test
 - (C) Case Study
 - (D) Self-Report
- 265.** Observing and studying one person or group over a period of time is called a(n) ____ This type of study is not always the best choice to draw conclusions, as it is not representative of the larger population.
- (A) Case study
 - (B) Double-blind study
 - (C) Single-blind study
 - (D) Cross-sectional method
- 266.** Which of the following kinds of qualitative research focuses on an individual and his/her uniqueness?
- (A) Phenomenology
 - (B) Ethnography
 - (C) Case Study
 - (D) Content & Discourse Analysis
- 267.** Which of the following research is a case study you have learned?
- (A) Harlow
 - (B) Ainsworth
 - (C) Baddeley and Hitch
 - (D) HM
- 268.** According to P. T. Young, a comprehensive study of a social unit be that a person, a group, a social institution, a district or a community is called a
- (A) Class study.
 - (B) Cultural study.
 - (C) Group Study.
 - (D) Case study.
- 269.** Which qualitative design focuses on deep exploration of one unit-like a person or organization?
- (A) Phenomenology
 - (B) Ethnography
 - (C) Case study
 - (D) Survey
- 270.** A characteristic of the case study is:
- (A) The in-depth study of social groups.
 - (B) The relevance of analyzing processes rather than single pieces of data
 - (C) The creation of stories about the people under study
 - (D) The proposal of studies to take place in the classroom

271. A way to study an individual or a group is an example of ____?
(A) Naturalistic observation
(B) Case study
(C) Survey
(D) Random Sampling
272. Would a case study be qualitative or quantitative research?
(A) Quantitative
(B) Qualitative
(C) Either
(D) None of above
273. A team of researchers studied a nomadic tribe in North Asia for 18 months. They were careful to limit their interaction with the tribe members, and observed from afar. What type of research is this?
(A) Case study
(B) Participant Observation
(C) Program Evaluation
(D) Demographic Information Edit
274. Researchers conduct in-depth investigations of individuals or small groups.
(A) Testing Method
(B) Case-Study Method
(C) Longitudinal Method
(D) Cross-Sectional Method
275. An individual with an exceptional memory is identified. She is capable of recalling major events, the weather, and what she did on any given date. What research method is being used if a psychologist conducts an in-depth investigation of this individual including questionnaires, brain scans, and memory tests?
(A) Survey
(B) Interview
(C) Case Study
(D) Naturalistic Observation
276. An in-depth investigation of an individual or group is called a ____
(A) Survey
(B) Target group
(C) Case study
(D) Research practice
277. The major limitation of case studies is ____
(A) The superficial nature of the information collected in this approach
(B) The lack of control that the researcher has in this approach
(C) The inability to generalize the findings from this approach to the larger population
(D) The absence of inter-rater reliability
278. An intensive investigation of one or more participants is a
(A) Case study
(B) Naturalistic observation
(C) Survey
(D) Experiment
279. Avani is conducting research to understand the deeper details about a certain situation, event, activity, process, and even a group of individuals.
(A) Phenomenology
(B) Case study
(C) Historical approach
(D) Qualitative Inquiry Edit

1.3 Research Process

1.3.1 Research Process

1. What is the process of finding solutions to a problem after a thorough study and analysis of the situational factors?
(A) Research
(B) Problem-Solving
2. Ashley has decided she would like to become a mortician. What is the first step she should

- take to understand how she can accomplish this goal?
- (A) Gain a certification
 - (B) Research the necessary education and skill requirements
 - (C) Apply to an educational institution
 - (D) Apply to jobs
3. The following information are found in the background of the study, EXCEPT
- (A) Global perspective
 - (B) Philippine perspective
 - (C) Local perspective
 - (D) Perceived outcomes of the study
4. Bob read about growing plants in water. He wanted to know how plants could grow without soil.
- (A) Recognize the problem
 - (B) Form a hypothesis
 - (C) Test hypothesis with an experiment
 - (D) Analyze data
 - (E) Draw conclusions
5. What step in the research process would involve reviewing/reading my resources and writing down facts/details?
- (A) Generating a list of topics
 - (B) Read and take notes
 - (C) Citing references
 - (D) Create a research question?
6. What role does reasoning play in evaluating the strength of evidence in a scientific investigation?
- (A) Reasoning has no impact on evaluating evidence in a scientific investigation
 - (B) Reasoning is only important in non-scientific investigations
 - (C) The strength of evidence in a scientific investigation is determined by intuition, not reasoning
 - (D) Reasoning is essential for evaluating the strength of evidence in a scientific investigation.
7. T/F: You can generally rely on reference sources to write a research paper.
- (A) True; especially if the paper is explanatory in nature.
 - (B) False; these sources help you to gather basic information on your topic so that you will be better prepared to do more focused research.
8. You derive your research topic from your research questions.
- (A) TRUE
 - (B) FALSE
9. Which of the following is not to be done when conducting a review of related literature
- (A) Doing computer-aided search
 - (B) Listing the bibliographic information
 - (C) Performing an experiment
 - (D) Paraphrasing
10. Asking questions that will help remove uncertainty to gain additional details.
- (A) Ignoring the uncertainty
 - (B) Avoiding the question
 - (C) Asking clarifying questions
 - (D) Making assumptions
11. What is a financial drawback of natural experiments?
- (A) Lower costs due to controlled environments
 - (B) Higher costs associated with data collection, observation, and analysis
 - (C) No costs since they use natural occurrences
 - (D) Fixed costs regardless of the experiment's scale
12. What is the function of "Claiming centrality"?
- (A) Relate this study to associated research.
 - (B) Demonstrate the need for this study by pointing out unanswered questions.
 - (C) Show how the study contributes to an important area of research.
 - (D) Point out flaws or limitations of previous research.

13. A literature review is a(n) ____ of a body (or bodies) of literature that pertains to a specific question
(A) Assessment
(B) Collection
14. After a research instrument is selected, the next step in the marketing research process is to ____
(A) Select a sampling method
(B) Interpret the research findings
(C) Implement the research plan
(D) Evaluate alternatives
(E) Select a research approach
15. It is the foundation of solid research
(A) Review of related literature
(B) Statement of the problem
(C) Significance of the study
(D) Conclusion and Recommendation
16. Pre-search is
(A) Googling a topic and seeing how much information about it exists
(B) Getting an overview of your topic before you dive into researching it
(C) Writing a bibliography recording all your sources
(D) Developing a detailed outline so you know what information you'll need
17. In the context of the research process, the term "feed forward" implies:
(A) Reflecting on past findings
(B) Moving backward in the process
(C) Progressing step by step using previous input
(D) Ignoring the literature review
18. What comes after your observation?
(A) Experiment?
(B) Research?
(C) Hypothesis?
(D) Questions?
19. What step in The Scientific Method involves defining what we already know or stating any background information?
(A) Analyze Data
(B) Research
(C) Recognize The Problem
(D) Hypothesis
20. Which of the following statement is correct in writing a research plan?
(A) WRITE THE RESEARCH PLAN AT THE END OF THE DATA ANALYSIS.
(B) WRITE THE RESEARCH PLAN WHILE CONDUCTING EXPERIMENTS.
(C) WRITE THE RESEARCH PLAN AFTER CONDUCTING THE WHOLE RESEARCH
(D) WRITE THE RESEARCH PLAN BEFORE CONDUCTING THE WHOLE RESEARCH.
21. What does replication in scientific procedures involve?
(A) Repeating a study to see if the results are the same
(B) Changing the variables in a study
(C) Ignoring previous results
(D) Creating a new hypothesis
22. In the scientific method, what precedes the formation of the hypothesis?
(A) Analysis of results
(B) Experimentation
(C) Observation
(D) A prediction
23. Things that need to be formulated in developing a research plan, except?
(A) Data source
(B) Research approach
(C) Research topic
(D) Sampling Techniques
24. Match the following statements to their most applicable phase within the action research (AR) cycle. "Let's implement this kind of intervention".

- (A) Plan.
 - (B) Act.
 - (C) Observe.
 - (D) Reflect.
25. When conducting international research, the environment prevailing in the countries, cultural units, or international markets that are being researched, influences the way the six steps of the marketing research process should be performed.
- (A) TRUE
 - (B) FALSE
26. Which PLC practice supports continuous improvement across terms?
- (A) Private note-taking with no sharing
 - (B) Unstructured chats without defined goals
 - (C) One-time lecture from an external expert
 - (D) Cyclical inquiry and action research cycles
27. The researcher passed her colloquium and she is about to start gathering the needed information and data through questionnaire. What phase of research process involves the data gathering?
- (A) Analytical Phase
 - (B) Conceptual Phase
 - (C) Empirical Phase
 - (D) Dissemination Phase
28. The research problem and literature review guide the research questions and purpose which then drive the methods and design of the study.
- (A) True
 - (B) False
29. The step by step instructions of how to test your hypothesis is called?
- (A) Story
 - (B) Question
 - (C) Problem
 - (D) Procedures
30. If an experiment's results do not support the hypothesis, a scientist should:
- (A) Change the results to match the hypothesis
 - (B) Disregard the experiment and start over
 - (C) Modify the hypothesis and repeat the experiment
 - (D) Stop researching the topic
31. Which among the followings is the correct sequence of process in action Research?
- (A) ACT-> PLAN-> OBSERVE-> REFLECT
 - (B) PLAN-> ACT-> OBSERVE-> REFLECT
 - (C) OBSERVE-> REFLECT-> PLAN-> ACT
 - (D) REFLECT-> ACT-> OBSERVE-> PLAN
 - (E) All of the above
32. In a research proposal, what section would you include to justify the need for your study?
- (A) Methodology
 - (B) Literature review
 - (C) Results
 - (D) Limitations
33. How does the "feasibility" of a research problem impact the research process?
- (A) It has no impact on the research process.
 - (B) It determines whether the research can be conducted within the available resources and time.
 - (C) It ensures the research will be unethical.
 - (D) It guarantees the research will be unsuccessful.
34. In a literature review, identifying the theoretical foundation is important because it:
- (A) Provides a rationale for data analysis
 - (B) Helps frame the research questions and interpretation of results
 - (C) Describes the research methodology
 - (D) Outlines the sampling strategy

35. A research proposal is best described as a
- (A) Framework for data collection and analysis
 - (B) Argument for the merit of the study
 - (C) Description of how the researcher plans to maintain an ethical perspective during the study
 - (D) Description of the research process for a research project
36. What is the first step in writing a Research Simulation Task (RST)?
- (A) Understand the Prompt
 - (B) Conduct Background Research
 - (C) Draft an Outline
 - (D) Review Existing Literature
37. What is recommended for taking notes on research articles?
- (A) Only highlighting important text
 - (B) Relying on memory
 - (C) Using file cards or a word processing program
 - (D) Copying entire articles
38. To test a hypothesis, scientists must ____
- (A) Not reason deductively
 - (B) Accurately predict the outcome of tests
 - (C) Ignore test implications of the hypothesis
 - (D) Derive a test implication from the hypothesis
39. The sequential operations in scientific research are [2013-DECEMBER]
- (A) Co-variation, Elimination of Spurious Relations, Generalisation, Theorisation
 - (B) Generalisation, Co-variation, Theorisation, Elimination of Spurious Relations
 - (C) Theorisation, Generalisation, Elimination of Spurious Relations, Co-variation
 - (D) Elimination of Spurious Relations, Theorisation, Generalisation, Co-variation.
40. This can be made precise, accurate and dependable only if what are to be achieved are clearly stated and feasible.
- (A) Key answer
 - (B) Trial and error
 - (C) Assessment
 - (D) Evaluation
41. When a person undertakes a research work, then the review of the related study is important because
- (A) It helps to understand the gap between past and present.
 - (B) It avoids repetition or duplications.
 - (C) It helps the researcher not to draw illogical conclusions.
 - (D) All of the above.
42. Which of the following best describes sub-problems in a research proposal?
- (A) Minor problems that do not need to be solved to answer the main problem
 - (B) Major questions that are addressed after the main problem is solved
 - (C) Smaller, researchable units that lead to solving the principal problem
 - (D) Personal opinions or thoughts about the study's subject
43. The question "What needs to change in the theory or explanation? Is an example of what phase of the action research cycle.
- (A) Plan.
 - (B) Act.
 - (C) Reflect.
 - (D) Observe.
44. What is the purpose of good research?
- (A) To answer the most important question
 - (B) To make the conclusion right away
 - (C) To make a good hypothesis and come to a conclusion
 - (D) To show that you researched, therefore making your information automatically true

45. What is the question that defines the process, methods or techniques for doing the research?
- (A) How
 - (B) What
 - (C) When
 - (D) Where
 - (E) Not Given
46. Consider the following Quantitative Research study abstract and match the statements to their most applicable place within the research idea process. Variations of online student engagement from different undergraduate backgrounds.
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypothesis
47. It is a part of the research that expresses the context of the problem that will support the validity and rationale of the study.
- (A) Research title
 - (B) Research topic
 - (C) Background of the study
 - (D) Research problem
48. What does it mean to operationalize a research question?
- (A) Operationalizing is finding out how research subjects will behave under test conditions
 - (B) Operationalizing is testing the research question to find out if it will work.
 - (C) Operationalizing is determining the operations and techniques to be used to assess a research question's key concepts.
 - (D) Operationalizing is making agreements with publishers to produce copies of research study results.
49. The purpose of the significance of the study in research is.
- (A) To describe the background and context of the study
 - (B) To identify the research questions and objectives
 - (C) To define the scope and delimitations of the study
 - (D) To explain who will benefit from the study findings
50. Ways that scientific investigations can be retested are:
- (A) Measurement and control
 - (B) Repetition and replication
 - (C) Defining a problem and hypothesizing
 - (D) Concluding and analyzing
51. Using the Law of Syllogism, which of the following completes the statement to form a valid conclusion? If it is snowing heavily, then school will be canceled. If school is canceled, the big test will not be given today. It is snowing heavily, therefore
- (A) Look out for the snowplows while driving to school.
 - (B) The big test will not be given today.
 - (C) The roads will be hard to drive on.
 - (D) You should call the school to see if school is canceled.
52. From the area of interest, major concepts encountered must also be listed. They are called variables. From those variables, the researcher must choose what he wants to operationalize, and that will become his topic. See example of the process indicated in the table below. Independent variable/s must come first before dependent variable/s.
- (A) Identifying Topic
 - (B) Review of Literature
 - (C) Developing a Framework
 - (D) Developing Title
53. A type of problem which there is an immediate solution.
- (A) INTUITION
 - (B) NON-ROUTINE PROBLEM

- (C) PROOF
(D) ROUTINE PROBLEM
54. During this step of the scientific method, a scientist would gather background information.
(A) Hypothesis
(B) Research
(C) Observation
(D) Experiment
55. What is an example of Initial Observations and Asking Questions?
(A) Noticing grass is larger in some areas than others and asking "Why?"
(B) Supposing that it grows more in some areas because of nitrogen levels
(C) Choosing similar plots. Exposing one group of plots to nitrogen and not exposing the other group.
(D) Analyzing the results to see that grass in the experimental group grew more.
56. A good research proposal includes:
(A) Problem statement, objectives, methodology, expected outcomes
(B) Results and discussion only
(C) Bibliography only
(D) Data coding
57. A marine biologist wonders if ocean pollution affects fish behavior. What would be the best way to gather background information?
(A) Interview fishermen and collect fish behavior reports
(B) Rely on personal observations
(C) Read scientific studies and previous research on ocean pollution
(D) Guess how pollution affects fish
58. Once a psychologist has conducted a study, the findings may lead them to create new questions about the ____
(A) Environment
(B) Behavior
(C) Both A and B
(D) None of the above
59. How can we choose a topic for a report?
(A) Avoid too broad or trivial topics.
(B) Away from the controversial topics
(C) Narrow down your report topic
(D) All above are correct
60. Which is the correct first step in writing the background of the study?
(A) Summarize the current research base
(B) Describe the field to be researched
(C) Explain your hypothesis testing
(D) State your research conclusion
61. For very specific research that might only attract a narrow breadth of audience, which of the following might be the best options to get critical feedback?
(A) Submit your work for publication at a journal that attracts a wide audience, such as Psychological Science.
(B) Submit your work to a specialized conference.
(C) Submit your work to a general conference.
(D) Submit your work to an undergraduate conference with a wide audience.
62. Communicates a researcher's plan for a study.refers to..
(A) A research
(B) A research proposal
(C) A proposal
(D) A research report
63. True or False-The first step in the Scientific Method is to form a hypothesis
(A) True
(B) False
64. When reviewing literature, a researcher notices two studies with opposite conclusions. The best approach is to:
(A) Exclude both studies
(B) Discuss both viewpoints and analyze the differences

- (C) Select the one that aligns with their hypothesis
(D) Ignore the conflicting study
65. Step 3 to conduct a Literature Review.
(A) Critically evaluate and select the literature.
(B) Write a literature review.
(C) Locate literature.
(D) Organize the literature.
(E) Identify key terms.
66. What does view of related research and literature not do?
(A) Provide the researcher with sufficient useful knowledge.
(B) Help the researcher in identifying needed problems of research.
(C) Make the researcher competent and perfect in doing research.
(D) Make the researcher aware of the pitfalls that plagued his predecessors.
67. Which subtopic involves gathering information and understanding the problem?
(A) Data analysis
(B) Problem analysis
(C) Solution implementation
(D) Problem identification
68. True or False: The six steps of the scientific method are question, research, hypothesis, experiment/data collection, analyze data, and conclusion
(A) True
(B) False
69. Identify whether the statement is true or falseA well-designed research problem constitutes a well-designed measurement process. The process of measurement is a fundamental aspect of any research.
(A) True
(B) False
70. One step that is not included in planning a research study is:
(A) Identifying a researchable problem.
(B) Statement of the research question.
(C) A review of current research.
(D) Conducting a meta-analysis of the research.
71. Alice soaked six different kinds of seeds in water for 24 hours. Then she planted the seeds in soil at a depth of 1 cm. She used the same amount of water, light, and heat for each kind of seed.
(A) Recognize the problem
(B) Form a hypothesis
(C) Test hypothesis with an experiment
(D) Analyze data
(E) Draw conclusions
72. The literature review should occur:
(A) Early in the research process
(B) Shortly before the analysis of the problem
(C) Near the end of the research process
(D) In the middle of the data collection and collation
73. In a thesis, why is it essential to align your research questions with your objectives?
(A) To reduce the word count
(B) To ensure that the research remains focused and that findings directly address the questions posed
(C) To simplify the literature review
(D) To present background information
74. What is the purpose of validation and verification in the research process?
(A) To avoid the need for replication and focus on assumptions.
(B) To validate claims and enhance the reliability of scientific knowledge.
(C) To confirm results without considering credibility
(D) To provide foundational knowledge about the problem area

75. The literature review contains the explanation of relevant concepts and related studies.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
76. Why should you have a research plan?
- (A) Because your teacher said so
 - (B) It will help you focus and complete your project
 - (C) You don't need a research plan
 - (D) None of above
77. Which would not typically be part of a debriefing?
- (A) Informing participants of the aim of the investigation
 - (B) Informing participants of the right to withdraw data
 - (C) Thanking participants for their involvement
 - (D) Allocating participants to different conditions Edit
78. The process of objectively investigating and collecting information regarding a particular subject is called the ____
- (A) Research process
 - (B) Analysis phase
 - (C) Documentation stage
 - (D) Evaluation cycle
79. Fill in the missing words about the number of research questions: "The issue is not the number of research questions, but what is needed (in terms of ____, analysis, time and effort) to answer a given research question."
- (A) Methodology
 - (B) Data
 - (C) Content
 - (D) None of above
80. Writing academic papers requires deliberate, thorough and careful thought. Therefore, what should one do to achieve a well-crafted academic essay
- (A) One must depend on his/her own opinions alone.
 - (B) One must not consult the Internet for unsure sources.
 - (C) One must conduct a research on the topic at hand.
 - (D) One must depend highly on the Internet for easy information access.
81. A standardized word used in libraries and databases to categorize and organize materials by topic is called a:
- (A) Keyword
 - (B) Subject Heading
 - (C) Index Term
 - (D) Catalog Entry
82. Which of the following is a key consideration when evaluating the feasibility of a research problem?
- (A) The problem is highly complex and requires specialized expertise.
 - (B) The problem can be addressed through existing research methods and techniques.
 - (C) The problem requires significant financial resources to investigate
 - (D) The problem is highly abstract and lacks clear definitions
83. The steps in conducting research are patterned.
- (A) True
 - (B) False
84. What is the significance of aligning recommendations with the study's research questions and objectives?
- (A) It adds unnecessary complexity to the recommendations
 - (B) It ensures a narrow focus on a single aspect of the study
 - (C) It provides a clear and logical connection between findings and suggestions
 - (D) It contradicts the theoretical framework

85. After a scientific experiment is performed, data is recorded, and conclusions are drawn, what should be done next?
- (A) Share your research with other scientists
 - (B) Keep your research a secret
 - (C) Destroy all evidence of your experiment
 - (D) None of above
86. The step that involves defining the research problem belongs to which component?
- (A) Research methodology design
 - (B) Market segmentation
 - (C) Advertising objectives
 - (D) None of these
87. Which of the following is NOT a way to organize the literature review?
- (A) Chronological
 - (B) Thematic
 - (C) Methodological
 - (D) Enigmatic
88. Which of the following helps refine a research problem?
- (A) Literature review
 - (B) Data analysis
 - (C) Hypothesis testing
 - (D) Report writing
89. When doing a literature review, you should always keep in mind your purpose and research questions.
- (A) True
 - (B) False
90. Conduct your investigation or intervention. This could be a needs assessment or an exploratory and descriptive study of the different people and positions in the researcher's system. An action might also be to conduct an experiment,
- (A) Plan
 - (B) Act
 - (C) Observe
 - (D) Reflect
91. Are the specific procedures involved in the research process
- (A) Data collection, data analysis, and report writing.
 - (B) Intervention studies or group comparison studies.
 - (C) Administer a survey or questionnaire to a small group of people.
 - (D) None of above
92. Vanya is planning to conduct a research study on community health. The feasibility of this research study should be considered in light of:
- (A) Cost and time required to conduct the study
 - (B) Access to gatekeepers and respondents
 - (C) Potential ethical concerns
 - (D) All of the above
93. These questions are used to evaluate the ____
- (A) Introduction
 - (B) Literature Review
 - (C) Methodology
 - (D) Results
 - (E) Discussion/Conclusion
94. The purpose of the rationale is to ____
- (A) Explain the background scientific theory behind the experiment.
 - (B) Communicate the purpose or reasons behind your experiment.
 - (C) Describe the step-by-step instructions of the investigation.
 - (D) Communicate your results.
95. In which step do you compare the ideas and select the best approach?
- (A) Ask
 - (B) Imagine
 - (C) Planning
 - (D) Create

96. Which section of a research report typically includes a description of the participants?
- (A) Introduction
 - (B) Summary of previous research
 - (C) Research procedures
 - (D) Results and discussion
97. Which word means the statement of opinion on a topic or what the writer is arguing for or against?
- (A) Evidence
 - (B) Topic
 - (C) Claim
 - (D) Issue
98. Begins with a general idea and then gives facts to lead to specific conclusions.
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Abductive reasoning
 - (D) Analogical reasoning
99. What activity occurs during Step 2 of the Scientific Method?
- (A) Stating the problem
 - (B) Formulating the hypothesis
 - (C) Designing the experiment
 - (D) Conducting the experiment
100. When researching post secondary education which of the following is NOT a good thing to look up
- (A) Cost of tuition
 - (B) If the college offers a degree in your field
 - (C) Average class size
 - (D) Their mascot
101. What does 'reasonable argument' mean?
- (A) A strong statement
 - (B) A written response to a claim
 - (C) An explanation that connects your evidence back to the claim
 - (D) An opinion you believe in
102. What does the term "reliability" refer to in communication research?
- (A) The extent to which a study can be replicated with similar results
 - (B) The accuracy of measuring what is intended to be measured
 - (C) The manipulation of variables
 - (D) The selection of a representative sample
103. Which criterion directly assesses feasibility when judging a research question?
- (A) Interest to the wider community
 - (B) Alignment with policy implications
 - (C) Availability of time and resources
 - (D) Novelty compared to past studies
 - (E) Complexity beyond simple answers
104. Sampling, instruments, and data analysis are interrelated in producing valid and reliable research findings because:
- (A) They collectively ensure the accuracy and trustworthiness of research results.
 - (B) They are independent processes that do not affect each other.
 - (C) Only data analysis impacts the validity of research findings.
 - (D) Sampling is the only factor that determines research reliability.
105. It is described as one of the difficulties you may be confronted with as an investigator when you do fieldwork by anthropologists:
- (A) Laziness of the anthropologist
 - (B) Physical barriers
 - (C) Mosquitos and heat
 - (D) A different reality than expected
106. Which of the following should not be a consideration in writing a proposal?
- (A) Understanding the problem situation.
 - (B) The appearance/form of the proposal.
 - (C) Responding to every element exactly as specified by the client.
 - (D) Knowing as much as possible about the proposal recipients.

107. Our ___ into the causes of road rage experienced by people mowing their own lawns revealed that pollen is a factor.
- (A) Culmination
 - (B) Factor
 - (C) Theory
 - (D) Inquiry
108. In the marketing research process, data preparation and analysis comes immediately after ___ and before ___
- (A) Problem definition; research design
 - (B) Research design; fieldwork
 - (C) Fieldwork; research design
 - (D) Fieldwork; report preparation and presentation
 - (E) Problem definition; report preparation
109. After identifying the topic, the researcher must answer the following: 1. What do I know about the topic? 2. What should I know about the topic? 3. What do previous studies say about the topic?
- (A) Identifying Topic
 - (B) Review of Literature
 - (C) Developing a Framework
 - (D) Developing Title
110. All research process starts with
- (A) Hypothesis
 - (B) Experiments to test hypothesis
 - (C) Observation
 - (D) All of these
111. The importance of literature review in defining research problem is to:
- (A) Identify gaps in existing studies
 - (B) Skip existing research
 - (C) Save time
 - (D) Avoid reading
112. It establishes the scope, context and significance of the research to be conducted. This also states the purpose why the study will be conducted.
- (A) Introduction
 - (B) Review of Related Literature
 - (C) Methodology
 - (D) Results and Recommendations
113. Why is it important to choose a research project carefully?
- (A) To avoid research altogether
 - (B) To ensure it can be completed in the given timeframe
 - (C) To impress colleagues
 - (D) To avoid competing with other researchers
114. How do scientists come up with scientific investigations?
- (A) Make hypotheses
 - (B) Make observations about the natural world
 - (C) Make predictions about the natural world
 - (D) Make guesses and test to see if they are correct
115. The following are categorized under research foundations, EXCEPT one:
- (A) Research problem and purpose
 - (B) Graphs, diagrams and results
 - (C) Specific questions to be addressed
 - (D) Conceptual framework
116. Which of the following is true of the purpose of the study?
- (A) It is optional in educational research.
 - (B) It may be as brief as one sentence or as long as a couple of paragraphs.
 - (C) It is written as a question.
 - (D) It is limited to a one-sentence statement.
117. What is not an outcome of a scientific research?
- (A) Theory
 - (B) Practice
 - (C) Policy
 - (D) Literature Review

118. An internship that includes both data collection and data analysis primarily supports which phase of research?
- (A) Planning
 - (B) Literature review
 - (C) Execution
 - (D) Conclusion
119. In which stage of the research model might you discover that the question you are interested in answering has already been addressed?
- (A) Formulating a hypothesis
 - (B) Reviewing the literature
 - (C) Analyzing the results
 - (D) Choosing a research method
120. Your goal at this stage is to explain the current state of scholarship in the field and answer the question, "Why is this general research area important?"
- (A) Establishing a Research Territory
 - (B) Establishing a Niche
 - (C) Occupying the Niche
 - (D) None of the above
121. If you want to understand the major perspectives on your research topic, which part of the research process should you focus on?
- (A) Topic Selection
 - (B) Research Question Development
 - (C) Preliminary Research
 - (D) Source Identification
122. In what phase of the cycle of action research would you collect and interpret data?
- (A) Plan
 - (B) Act
 - (C) Observe
 - (D) Reflect
123. How should a survey instrument be prepared?
- (A) By not clarifying research questions
 - (B) By not doing any preliminary research
 - (C) By not piloting the instrument
 - (D) By revising when necessary
124. Which of the following is NOT a key step in the Literature Discovery process?
- (A) Defining the research question
 - (B) Developing a research hypothesis
 - (C) Identifying relevant databases and search engines
 - (D) Conducting searches and retrieving articles
125. Before preparing your conceptual framework, which of the following should be considered:
- (A) The researcher must have a topic in mind.
 - (B) The researcher must have conducted a survey.
 - (C) The researcher should consider the respondents of the study.
 - (D) The researcher should consider the implication of the study.
126. What is the first thing you should do before starting to collect data?
- (A) Decide what the purpose of the data collection is.
 - (B) Write your questions.
 - (C) Collect personal information about respondents.
 - (D) Contact potential participants.
127. Which of the following criteria SHOULD be considered for a good basic research?
- (A) Cost
 - (B) Accessibility
 - (C) Clearly-defined goals
 - (D) Questionable validity and reliability of research methods
128. What should you do before you start taking notes from a source?
- (A) Get out a fresh sheet of paper
 - (B) Ask a teacher for help
 - (C) Read the source carefully to make sure it meets your research needs

- (D) Stretch and make yourself a cup of hot co-coa
- 129.** Which among the basic stages of academic writing according to Hiemstra and Brier (1994) do these steps belong: finding ideas, conceptualizing, reviewing relevant literature, brainstorming, having preliminary analysis of prospective periodicals and understanding their stylistic requirements and expectations, determining target readers, and the goal of the written works.
- (A) Pre-writing
(B) Text Development
(C) Revisions
(D) Planning
- 130.** What does it mean to 'evolve strategies for solving' in the context of research?
- (A) To choose random solutions
(B) To develop a systematic approach to address the research problem
(C) To abandon the research problem
(D) To delay decision-making
- 131.** The final step of the research process is to ____
- (A) Collect data
(B) Analyse data
(C) Interpreted the findings
(D) Disseminate the findings
- 132.** What does it mean for research to be cyclical?
- (A) Research starts with a problem and ends with a solution, repeating the cycle.
(B) Research is conducted only once and does not repeat.
(C) Research focuses solely on historical data.
(D) Research avoids drawing conclusions and recommendations.
- 133.** Sequence of steps in scientific method is
- (A) Experiment-observation-theory-hypotheses-established of law.
(B) Observation-Experiments-theory-hypotheses-establishment of law.
(C) Hypotheses-theory-observation-Experiments-established of law.
(D) Observation-hypotheses-experiments-theory-establishment of law.
- 134.** A schematic diagram or illustration, usually accompanies the conceptual framework depicting what the concept of the study is all about. It is a diagrammatic presentation of the study which is the result of a clear understanding of the conceptual framework. The most common types of paradigms used are the IPO approach, the IV-DV approach, and the flow chart system.
- (A) CONCEPTUAL FRAMEWORK
(B) THEORETICAL FRAMEWORK
(C) Research paradigm
(D) Research diagram
- 135.** The following are the step by step procedure in making Scientific method that John Dewey had proposed. Arrange this steps in the order.
i. Determine the Hypothesis
ii. Formulate conclusion
iii. Identify and define problem
iv. Apply conclusions to the original hypothesis
v. Collect and analyze data
- (A) I, ii, iii, iv, v
(B) Iii, ii, i, v, iv
(C) Iii, i, v, ii, iv
(D) I, v, iv, iii, ii
- 136.** What is not the advantage of writing while researching?
- (A) Still remember the detail.
(B) Useful while waiting for the result.
(C) Less pressure to write all at once.
(D) Forget everything.
- 137.** Why does a researcher conduct a literature review?
- (A) To familiarize themselves with the field
(B) They are required to by other researchers
(C) They are paid to review it
(D) To reproduce existing research

138. These are the added suggestions that the researcher wants people to follow when performing future studies.
- (A) Conclusions
 - (B) Recommendations
 - (C) Statement of the Problem
 - (D) Abstract
139. Why do researchers have to replicate their studies?
- (A) To make sure the researchers know what they are doing
 - (B) To show other researches how the study was done
 - (C) They don't have to replicate their studies
 - (D) To make sure their results are accurate
140. Which of the following is practiced in a brainstorming situation?
- (A) Suggestions must have merit
 - (B) Only good ideas are allowed
 - (C) No objections to ideas
 - (D) Opinions must meet counter opinions
141. Preparing a written purpose statement is helpful because it defines the focus of the report and ____
- (A) Determines the scope of the budget
 - (B) Provides a detailed schedule
 - (C) Provides a standard that keeps the project on target
 - (D) Details the important deadlines
142. The general steps used when conducting an experiment.
- (A) Observation
 - (B) Variable
 - (C) Hypothesis
 - (D) Scientific method
143. You are given a project and a team by your teacher. It is near to dateline and everyone manage to complete the tasks given by the group leader. Your team manage to create the building blocks in time.
- (A) Forming
 - (B) Storming
 - (C) Norming
 - (D) Performing
144. The practitioner is the one who poses the problem, develops the instruments, collects and analyzes the data, and presents the findings.
- (A) True
 - (B) False Edit
145. Within the scientific method, in order for a theory to prevail it must:
- (A) Be the most popular theory.
 - (B) Provide falsification of other competing theories.
 - (C) Be supported by evidence.
 - (D) Not be based on hunches.
146. What does it mean for research to be systematic? Fill in the blank: Systematic research involves interrelated steps or procedures a researcher has to observe in solving a problem. It originates with a problem, followed by the gathering of data in a logical and orderly manner guided by a reasonable guess or hypothesis, and ends with a ____ based on observable facts or data.
- (A) Conclusion
 - (B) Experiment
 - (C) Questionnaire
 - (D) Prediction
147. Based on previously conducted studies directly related to the paper.
- (A) RELATED CONCEPTS
 - (B) RELATED STUDIES
 - (C) All the above
 - (D) None of the above
148. Which of the following is a step involved in psychological research?
- (A) Conducting surveys
 - (B) Collecting and analyzing data
 - (C) Drawing logical conclusions
 - (D) All of the above

149. A researcher wants to avoid duplicating an earlier study unknowingly. What practice directly helps with this?
- (A) Skipping older sources to save time
 - (B) Conducting a pilot without reading prior work
 - (C) Systematically scanning existing studies
 - (D) Relying only on expert interviews
150. Before drafting an APA-style paper, what is the most effective initial action?
- (A) Compose the discussion first
 - (B) Plan the paper with an outline
 - (C) Collect figures after writing
 - (D) Draft the abstract immediately
 - (E) Format references before reading
151. The following words are used in research title to show goal and result EXCEPT: effect, impact, correlation, skill
- (A) Effect
 - (B) Impact
 - (C) Correlation
 - (D) Skill
152. Which criterion ensures that a research problem can be realistically studied given time, resources, and access?
- (A) Clarity
 - (B) Significance
 - (C) Feasibility
 - (D) Ethical acceptability
 - (E) Reliability
153. It is the main cause of semantic noise.
- (A) Jeeps beeping
 - (B) Constructing building
 - (C) Using excessive technical jargon
 - (D) People talking too loud
154. What is the final stage in conducting a research study?
- (A) Developing a thesis statement
 - (B) Gathering information
 - (C) Publishing your work
 - (D) Citing sources
155. Teachers doing action research should:
- (A) Explore the situation first.
 - (B) Act first.
 - (C) Immediately act on the situation
 - (D) Suggest solutions first.
156. Why must the researcher be careful in stating the recommendations?
- (A) Because they may appear as the importance of the study
 - (B) Because they may be a threat to validity
 - (C) Because there may be an error in the hypothesis
 - (D) Because they may be a threat to the sampling procedure
157. The scientific method always proves a hypothesis to be correct.
- (A) TRUE
 - (B) FALSE
158. A literature review is:
- (A) A summary and evaluation of existing research on a particular topic
 - (B) A list of books and articles without analysis
 - (C) An opinion piece about a topic
 - (D) A fictional story based on research
159. The proposal should start with ____
- (A) An overview of the main area under study
 - (B) The proposed structure of the report
 - (C) Sampling technique
 - (D) A time frame of the proposed research
160. In a group project, Liam, Aria, and David are discussing the tasks they need to complete. Which term describes a task that is closely connected or appropriate to what they are currently working on?
- (A) Relevant
 - (B) Extraneous
 - (C) Purpose
 - (D) Abstract

- 161.** The fourth step of the scientific method; the researcher tries to make connections after conducting an experiment
- (A) Observation/form a question
 - (B) Form a hypothesis
 - (C) Test hypothesis
 - (D) Analyze the results
 - (E) Draw a conclusion
- 162.** Literature reviews support the research by:
- (A) Giving the reader more detailed information about the topic.
 - (B) Including sources that were used in the research.
 - (C) Providing background and supportive material for research.
 - (D) Supporting the work of other researchers.
- 163.** Objectives of research are formulated after
- (A) Selection of topic
 - (B) Defining research problem
 - (C) Review of literature
 - (D) Formulation of hypothesis
- 164.** "Briefing" the participants would most likely mean —
- (A) Giving participants information about the study before it begins
 - (B) Giving participants information about the study after it begins
 - (C) Putting participants into the the most appropriate conditions
 - (D) Ensuring there is no physical harm done
- 165.** Attempting to find alternative solutions to the problem is not a part of the research procedure.
- (A) True
 - (B) False
- 166.** How can a sociologist's values influence the research process?
- (A) By causing non-response in survey research
 - (B) By leading to non-random sampling techniques
 - (C) By affecting the choice of research topic and the interpretation of data
 - (D) By introducing coding errors in questionnaire surveys
- 167.** How can a "gap" in the literature be described?
- (A) A disagreement between two studies
 - (B) A research area that lacks sufficient exploration
 - (C) A section where most studies agree on outcomes
 - (D) A broad topic without enough specific studies
- 168.** This refers to a method of identifying a given term and making its meaning clearer.
- (A) Definition
 - (B) Example
 - (C) Explication
 - (D) Clarification
- 169.** Choose the correct word to complete the sentence: The scientist conducted a thorough — to gather data for the study.
- (A) Analysis
 - (B) Hypothesis
 - (C) Research
 - (D) Experiment
- 170.** What do scientist do with study to prove the findings to be reliable?
- (A) Operational Definitions
 - (B) Hypothesis
 - (C) Theory
 - (D) Replicate
- 171.** Which part of a research proposal explains who will benefit from the study?
- (A) Methodology
 - (B) Significance of the Study
 - (C) Statement of the Problem
 - (D) Scope

172. This document provides an overview of the project, and helps funding agencies eliminate proposals that are likely to be disapproved.
- (A) Research Paper
 - (B) Concept Paper
 - (C) Position Paper
 - (D) Term Paper
173. What is the purpose of a literature review in a science investigation?
- (A) To summarize the findings of previous experiments
 - (B) To identify gaps in current knowledge
 - (C) To provide background information on the topic
 - (D) All of the above
174. Guidelines in selecting research problem wherein researcher must know the method he will used
- (A) Requires expertise
 - (B) Requires original, critical, reflective thinking
 - (C) Must be within the competence of the researcher to tackle
 - (D) None of above
175. True or False: The literature review helps researchers gain a broad understanding of work previously conducted on the topic at hand and enables them to position their own research to build on prior knowledge.
- (A) True
 - (B) False
176. Confirmatory Scientific Method (Deductive) follows the following order —
- (A) Theory, hypothesis, data, description
 - (B) Observations, description, theory, prediction or hypothesis
177. A method of drawing conclusions by going from the specific to the general statements is —
- (A) Deductive reasoning
 - (B) Inductive Reasoning
178. On the basis of which the tasks of the research are determined, the experimental technique is thought out:
- (A) A literary review on the topic of research
 - (B) The choice of the object of research
 - (C) Conclusions for the technological part
 - (D) Selection of technological mode
 - (E) Choice of analytical methods
179. In addition to expressing a research study's objective, a research purpose statement also helps researchers —
- (A) Challenge other researchers
 - (B) State the research outcome
 - (C) Communicate with other researchers
 - (D) None of above
180. Which step is being described? 1. Gather all of my materials. 2. Fill the pot with soil and 10 grass seeds. 3. Fill the plastic bottle with soil and 10 grass seeds. 4. Fill the milk carton with soil and 10 grass seeds. 5. Place in window. 6. Monitor plant growth every Tuesday and gather data on the growth of the grass seeds.
- (A) Ask a question
 - (B) Form a hypothesis
 - (C) Analyze data
 - (D) Experiment plan
181. What step of the research process follows after identifying and formulating the problem?
- (A) Design the sample and method of data collection
 - (B) Collect the data
 - (C) Interpret, discuss, and present the findings
 - (D) Determining the research design
182. Multiple Choice: Read each question carefully and choose the BEST answer. The Significance of the Study should explain: I. How the study contributes to knowledge II. How participants may benefit III. How policies or practices may improve IV. How professionals may use the findings

- (A) I only
 - (B) I and II only
 - (C) I, II, and III only
 - (D) I, II, III, and IV
- 183.** The developed methodology should correspond to the modern level of science and technology and those conditions:
- (A) In which the research is being carried out
 - (B) In which the thesis is performed
 - (C) In which the course work is performed
 - (D) In which, UNIRS is performed
 - (E) In which the SRSP is performed
- 184.** Using literature reviews on the same research topic will help:
- (A) Completely change the research results.
 - (B) Enhance the overview capability and save researchers' time.
 - (C) Reduce the conclusions of the research.
 - (D) None of the above statements are reasonable.
- 185.** Jose saw bats catching insects after dark. He asked, "How do bats find the insects in the dark?" What step of the scientific method is this?
- (A) Question
 - (B) Hypothesis
 - (C) Experiment
 - (D) Conclusion
- 186.** Each research work on any problem begins with:
- (A) Search for scientific and technical information;
 - (B) Registration of the results of research work;
 - (C) Calculating the effectiveness of research results;
 - (D) Preparation for the experiment, its implementation;
 - (E) Mathematical planning of the experiment;
- 187.** It contains the global scenario relative to one's study.
- (A) Background of the study
 - (B) Research Questions
 - (C) Scope and Delimitation of the study
 - (D) None of above
- 188.** Which of the following is the last step of the research process?
- (A) Identifying a topic
 - (B) Reviewing Related Literature
 - (C) Preparing a scientific report
 - (D) Disseminating findings through presentations
- 189.** The research process is important for:
- (A) Providing a systematic, planned, and consistent approach within all the aspects of the research project
 - (B) Discovering global trends and sharing information.
 - (C) Creating good relations with consumers
 - (D) Improving the company's marketing strategy
- 190.** When testing a nursing theory by considering its concrete patient-care steps, the reasoning proceeds in which direction?
- (A) From partial data to best explanations
 - (B) From specific instances to general principles
 - (C) From general principles to specific applications
 - (D) From habits to non-evidence-based practices
- 191.** What subsection of a research primarily deals with the selection of variables that the study will focus on?
- (A) Introduction
 - (B) Definition of Terms
 - (C) Scope and Delimitation
 - (D) Statement of the Problem

- 192.** What is the term for repeating an experiment using different samples to determine the research's reliability?
- (A) Replicate
 - (B) Duplicate
 - (C) Reiterate
 - (D) Reproduce
- 193.** A research recommendation is most effective when it:
- (A) Includes complex theoretical details
 - (B) Aligns with research objectives and findings
 - (C) Suggests solutions unrelated to the study
 - (D) Avoids practical applications
- 194.** Researchers have defined the marketing problem. What is the next step in the marketing research process?
- (A) Recommend a solution.
 - (B) Collect the data.
 - (C) Interpret the data.
 - (D) Design the study.
- 195.** After conducting a series of interviews for her research project, Emma is now ready to wrap up her work. What is the final step in the research process?
- (A) Analyze data
 - (B) Conduct interviews
 - (C) Synthesize findings
 - (D) Data collection
- 196.** "Social Science research begins and ends with observation" ____ stated by
- (A) . Young
 - (B) Sidney Webb
 - (C) Kaplan
 - (D) Rose
- 197.** Which of the following should you think about when preparing your research?
- (A) Sample frame and Samples are not available
 - (B) Disregard the ethical issues
 - (C) Topics that are not interesting and irrelevant
 - (D) Consider the time frame
- 198.** The quality of a research study is primarily assessed on:
- (A) The place of publication.
 - (B) The ways in which the recommendations are implemented
 - (C) The rigor with which it was conducted
 - (D) The number of times it is replicated.
- 199.** ____ is conceptualized as consisting of six steps which include problem definition, developing an approach to the problem, research design formulation, field work, data preparation and analysis, and report generation and presentation.
- (A) The marketing research process
 - (B) Marketing information systems
 - (C) Marketing research problem
 - (D) A decision support system
- 200.** What is the term used to describe the general area you wish to investigate in research?
- (A) Research hypothesis
 - (B) Research theme
 - (C) Research method
 - (D) Research conclusion
- 201.** Author and title searches are appropriate only if ____
- (A) Early stages of research-before writers have begun narrowing their insights.
 - (B) Support claims made in argument, to help explain an idea, or even to help explain the history or significance of some topic.
 - (C) You are seeking out a particular source or author by name.
 - (D) You have generated a list of possible words and phrases related to your topic.
- 202.** Research Procedure is a step-by-step presentation of the different stages of the research.
- (A) TRUE
 - (B) FALSE

- 203.** A rationale is a justification of the reason of undertaking a research project
(A) True
(B) False
- 204.** We do this step in the scientific method so that we reduce errors and get more accurate data.
(A) Repeat Experiment
(B) Analyze Data
(C) Hypothesis
(D) Recognize the Problem
- 205.** What is the purpose of the research process?
(A) To create fictional stories
(B) To explore and find new or additional information about a certain topic
(C) To publish books
(D) To entertain an audience
- 206.** What is the part on writing a research to show the benefits of doing the study?
(A) Problem statement
(B) Research objective
(C) Definition of terms
(D) Significance of research
- 207.** Most studies/theories cannot be taken as fact until they have been ____
(A) Verified
(B) Validated
(C) Checked on
(D) Replicated
- 208.** Defining a research problem helps in:
(A) Determining the direction of research
(B) Collecting data randomly
(C) Avoiding literature review
(D) None of the above
- 209.** Why would you do pre-search?
(A) To evaluate possible research topics
(B) To judge the credibility of sources
(C) To provide a list of sources used
(D) To organize your notes
- 210.** What must research tasks be?
(A) Logically connected to the problem
(B) Random
(C) Repetitive
(D) Unrelated
(E) Optional
- 211.** A scientist is planning to carry out an experiment on the effect of heat on the function of a certain enzyme. Which would not be an appropriate first step?
(A) A-doing research in a library
(B) B-having discussions with other scientists
(C) C-completing a data table of expected results
(D) D-using what is already known about the enzyme
- 212.** It communicates a researcher's plan for a study. It prepared before a study begins.
(A) Article Research Report
(B) Research report
(C) Thesis
(D) Research Proposal
- 213.** One of the hindrances to scientific inquiry which pertains to accepting without question, an opinion about a certain subject which is given by someone who is considered an authority on the subject.
(A) Authority
(B) Tradition
(C) Inaccurate observation
(D) Illogical Reasoning
- 214.** The act of establishing the soundness of an idea or theory
(A) Validation
(B) Replicated
(C) Constructs
(D) Hypothesis

- 215.** Research activities include the following factors:
- (A) Research subject; Research purpose; Research method; Research product; Scientific value of research results.
 - (B) Research subject; Research method; Research scope; Researcher; Research time.
 - (C) Research object; Research scope; Research method; Research results.
 - (D) Research purpose; Research objective; Research object; Research time; Research scope.
- 216.** Which is NOT a recommended way to limit a research topic?
- (A) By geographical area
 - (B) By population group
 - (C) By time frame
 - (D) By ignoring available literature
- 217.** You were tasked by your local health officer to conduct a survey of 3 barangays about HIV. To conduct your survey, you will need:
- (A) A clear purpose
 - (B) A questionnaire on Dengue
- 218.** Which of the following the second step in Marketing Research Process?
- (A) Collect primary data
 - (B) Plan the research design
 - (C) Prepare and present the report
 - (D) Specify sampling procedures
 - (E) Identify and formulate the problem
- 219.** Once you have completed ____ research, your objective becomes learning as much as you can about your topic so that you can provide the best possible answer to your research question.
- (A) Preliminary
 - (B) Primary
 - (C) Secondary
 - (D) Qualitative
- 220.** A study is considered a success if it can be
- (A) Observed
 - (B) Written about
 - (C) Replicated
 - (D) Pictured
- 221.** The final step in the research process is analyzing your data.
- (A) TRUE
 - (B) FALSE
- 222.** Before beginning a marketing research study, managers and researchers must agree that
- (A) The decision problem will be strategy-oriented.
 - (B) Managers will have the final say over results.
 - (C) A focus group will be conducted.
 - (D) The benefits outweigh the costs.
- 223.** Refine, refute hypothesis based on observation is part of which step of the scientific method?
- (A) 3rd, Evaluating the research hypothesis
 - (B) 3rd, Formulating the research hypothesis
 - (C) 5th, Observation
 - (D) 5th, Evaluating research hypothesis
- 224.** It explains the topic, the problem, and why the research is important.
- (A) Title
 - (B) Introduction
 - (C) Research
 - (D) None of above
- 225.** This part of the research includes all information which would focus attention on the importance and validity of the problem.
- (A) Background of the Study
 - (B) Statement of the Problem
 - (C) Significance of the Study
 - (D) Definition of terms
- 226.** You are about to do a literature search, what would be the first stage?

- (A) Do a literature search online
 - (B) Read introductory textbooks
 - (C) Order some inter-library loans
 - (D) Ask your lecturer for some articles
- 227.** This is the time of thinking about the topic, reviewing the literature, generating hypothesis, developing framework, and formulating objectives.
- (A) CONCEPTUALIZATION PHASE
 - (B) DESIGN PHASE
 - (C) EMPIRICAL PHASE
 - (D) ANALYTICAL PHASE
 - (E) DISSEMINATION PHASE
- 228.** Which part of the research describes how data was analyzed?
- (A) Methodology
 - (B) Introduction
 - (C) Results
 - (D) Discussion
- 229.** How can you ensure an email interview is effective?
- (A) Skip follow-up questions
 - (B) Avoid setting deadlines
 - (C) Pilot test your questions
 - (D) Use only yes/no questions
- 230.** The scientific method in psychology involves forming theories, generating hypotheses, testing them, and revising based on findings, ensuring a systematic approach to understanding ____
- (A) Behavior
 - (B) Weather
 - (C) Mathematics
 - (D) Architecture
- 231.** One question you should ask yourself when you collect research is What does the receiver need to know about this topic?
- (A) True
 - (B) False
- 232.** Justification in a research proposal explains:
- (A) Why the study is needed and its benefits
 - (B) The exact number of participants
 - (C) The layout of tables
 - (D) The statistical formulas used
- 233.** Turnaround time refers to:
- (A) The time to print the article
 - (B) Time taken by a journal to review and respond to submission
 - (C) Conference registration
 - (D) Travel period
- 234.** The idea that the more times a research finding is shown with different sets of people, the more confidence we can place in the finding and in generalizing beyond the original participants is known as ____
- (A) Data triangulation.
 - (B) Methods generalization.
 - (C) Naturalistic generalization.
 - (D) Replication logic.
- 235.** Which of the following is NOT a typical error in writing a literature review?
- (A) Overusing direct quotes
 - (B) Critically analyzing the sources
 - (C) Including irrelevant sources
 - (D) Failing to organize the review clearly
- 236.** Resources which are surveyed and their quality and quantity have been determined for utilisation are:-
- (A) Potential resource
 - (B) Individual resource
 - (C) Developed resource
 - (D) Stock
- 237.** It is the main organizing principle guiding the analysis of the paper.
- (A) RESEARCH
 - (B) PROBLEM STATEMENT
 - (C) SCOPE
 - (D) THEORY

238. Why is inductive reasoning important in the early stages of scientific research?
- (A) It allows for the testing of specific predictions
 - (B) It helps in forming general theories from specific observations
 - (C) It is used to apply known theories to new situations
 - (D) It provides a way to prove mathematical theorems
239. The teacher's research activity is formed in the following logical connection:
- (A) Reflection-scientific research-practice-reflection
 - (B) Reflection-practice-scientific research-reflection
 - (C) Scientific research-reflection-practice-reflection
 - (D) Practice-reflection-research-reflection
240. What should the team do immediately after individual research is completed?
- (A) Conduct a group presentation for the class
 - (B) Evaluate individual performances
 - (C) Come together in your teams and propose solutions to the original question
 - (D) Submit individual reports
241. In the research model, collecting the data is necessary before ____
- (A) Formulate hypothesis
 - (B) Analyzing the results
 - (C) Defining the problem
 - (D) Reviewing the literature
242. The first step of the scientific method is called?
- (A) Question
 - (B) Hypothesis
 - (C) Experiment
 - (D) Conclusion
243. By the third week of the project, the group was starting to gel; the members shared a common understanding of who was supposed to do what, who could be counted on to keep up with their responsibilities, and how each person's contribution fit in with the group's goals. The group had developed a
- (A) Shared mental model.
 - (B) Primed goal orientation.
 - (C) Transportational memory
 - (D) Attributional framework.
244. Which step in the scientific method comes after writing the hypothesis?
- (A) Test hypothesis
 - (B) Ask Questions
 - (C) Draw Conclusions
 - (D) Share Results
245. How does a clear research title benefit the research process?
- (A) It increases the chances of publication
 - (B) It helps in organizing the research methodology
 - (C) It allows for more extensive data collection
 - (D) It provides clarity and focus for the research
246. Developing a research proposal will save the researcher time in the long run.
- (A) TRUE
 - (B) FALSE
247. Consider the following Qualitative Research study abstract and match the statements to their most applicable place within the research idea process. Adolescent substance abuse
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
248. What is included in the research process?

- (A) Brainstorm, question, research, results analyse, conclusion
(B) Plan, diary, IRP
(C) Planning, conducting and interpreting research
(D) Introduction, literature review, results, analysis
- 249.** The essence of the scientific process is
(A) Carefully controlled observations that eliminate investigator bias.
(B) The construction of deductively valid theories
(C) The continuous interplay between theory and data.
(D) The particular methods and techniques that each science uses.
- 250.** A good review of literature should:
(A) Only include books
(B) Be brief and general
(C) Show gaps in existing research
(D) Avoid scholarly articles
- 251.** After you have gathered information and answered the questions on your note cards, the last step before writing your report is to
(A) Choose a good topic
(B) Check your sources
(C) Review reliable Internet sites
(D) Develop an outline.
- 252.** Affect virtually all research projects, as well as most things in life
(A) Scope
(B) Delimitations
(C) Limitations
(D) None of above
- 253.** What is the first question that we should ask in following a research process?
(A) What is the problem?
(B) What evidence is already presented?
(C) How are we going to look for an answer to questions being studied?
(D) Where will the study be shown?
- 254.** Part of the research work, which provides the main tasks facing the industry or field of science in which the researcher is engaged, that is substantiated the need for this research work?
(A) Introduction
(B) Conclusion
(C) Experiment
(D) Annotation
(E) Research
- 255.** Which term means a statement that something is the case, often disputed?
(A) Argument
(B) Claim
(C) Reason
(D) Evidence
- 256.** What is the first stage of a systematic review?
(A) Assess the relevance of each study to the research question(s).
(B) Define the purpose and scope of the review
(C) Appraise the quality of studies from the previous step
(D) Survey all of the literature contained within a single library
- 257.** The first step in designing service marketing research is defining problem and research objectives.
(A) True
(B) False
- 258.** How does a scientist ensure the reliability of their research findings?
(A) By conducting multiple trials
(B) By using advanced technology
(C) By collaborating with other scientists
(D) By publishing in reputable journals

259. THE RESEARCH PLAN INCLUDES

- (A) CLEAR IDENTIFICATION OF THE PROBLEM.
- (B) RESEARCH QUESTIONS.
- (C) THE RESULTS OF THE INVESTIGATION.
- (D) Only (A) & (B).

260. It is the process of reaching a conclusion by applying general assumptions, procedures, or principles.

- (A) Inductive Reasoning
- (B) Deductive Reasoning
- (C) None of the choices mentioned
- (D) Teaching

261. What is often the first step in scientific inquiry

- (A) Developing a hypothesis
- (B) Posing a question
- (C) Designing an experiment
- (D) Collecting data

262. During the selection process, the researcher can look at the ____ If these resources like money, time, accommodation and transport are available to the selection place, then the selection of the problem is easy.

- (A) Resources Availability
- (B) Area Culture
- (C) Feasibility
- (D) Data Availability

263. What does "review of literature" involve?

- (A) Publishing results
- (B) Reading old books
- (C) Studying previous research
- (D) Writing a diary

264. Fill in the steps of the scientific method: 1) ____ 2) formulate hypothesis 3) ____ 4) ____ 5) make conclusions 6) confirm or disconfirm hypothesis

- (A) Establish method
- (B) Data collection

(C) Analyze findings

(D) Assemble a team

(E) Identify the problem

265. Steps

- (A) Input ____ > Process ____ > Output
- (B) Input ____ > Output ____ > Process
- (C) Output ____ > Process ____ > Input
- (D) None of above

266. Describe how the data were summarized and analyzed

- (A) In the Materials and Methods
- (B) In the Introduction
- (C) In the Results
- (D) In the Conclusion
- (E) In the Acknowledgments

267. Where should the record of actions be documented when conducting research?

- (A) Appendix
- (B) Project plan
- (C) Bibliography
- (D) Research diary

268. What comes first when doing research?

- (A) Review literature
- (B) Write a research report
- (C) Design a test
- (D) Collect data

269. What should you do once you are satisfied that you have identified all the issues that will appear in your paper?

- (A) Begin writing the conclusion of your paper
- (B) Determine what kind of organization will be most effective for your argument
- (C) Start gathering evidence to support your argument
- (D) Choose a title for your paper

270. What should you identify first when starting a research project?

- (A) The abstract of related articles

- (B) The limitations and recommendations
(C) A topic that is of interest to you
(D) The Methods, Results, and Discussion sections
- 271.** The process in which other professionals read and critically evaluate a researcher's materials before they are published.
(A) Institutional review
(B) Peer review
(C) Scientific Process
(D) Inquiry
- 272.** The fifth phase of research occurs when researchers re-think the topic of inquiry as a result of the systematic processes associated with conceptualization, planning and designing, using methodology, and analyzing/interpreting data.
(A) Conceptualization.
(B) Re-conceptualization.
(C) Analyzing and Interpreting.
(D) None of the above.
- 273.** The main challenge of conceptual research is:
(A) Developing new concepts
(B) Collecting data
(C) Testing hypotheses
(D) Validating findings
- 274.** When starting research, the process of moving from a 'Broad Area' to a 'Specific Topic' is meant to do what?
(A) Make the topic more complex
(B) Ensure the topic is popular
(C) Narrow and focus the study
(D) Find more collaborators
- 275.** If experimental results do not support a hypothesis, the scientist should modify the hypothesis and test again.
(A) TRUE
(B) FALSE
- 276.** Which of the following is not a step in the exploratory research process?
(A) Formulating research questions
(B) Collecting data
(C) Testing hypotheses
(D) Analyzing data
- 277.** In what part of the research work does the author need to show the views of other authors (researchers) who have studied this or that issue of a given problem or a given direction:
(A) Literature review
(B) The technological part
(C) The economic part
(D) Conclusion
(E) Experiment
- 278.** In single-case research, "baseline" refers to —
(A) The time during which a treatment condition is administered.
(B) The rate of response established prior to the experimental intervention.
(C) The end point of the treatment condition.
(D) The beginning point of the treatment condition.
- 279.** Which step of the scientific method is a summary of the results of the experiment?
(A) Conducting the Experiment
(B) Analyzing the Results
(C) Making Conclusions
(D) None of the above
- 280.** What should you do if you find a paper or book that already did what you were planning to do?
(A) Panic!.
(B) Have a cup of tea.
(C) Read it attentively and decide whether you can do what they did better or choose another topic.
(D) Complain to your advisor.

281. "The Research Process" is primarily concerned with ____
(A) Data Collection
(B) Hypothesis Testing
(C) Problem Identification
(D) Data Analysis
282. A good research always begins with:
(A) An original idea.
(B) Preparation of plan and design for study.
(C) Study of relevant research methodology.
(D) Review of literature.
283. Why is feedback important in the research process?
(A) It shortens the research report
(B) It replaces analysis
(C) It helps improve quality and accuracy
(D) It allows skipping hypothesis testing
284. Which of the following factors should be considered when determining if research is practicable?
(A) The resources and time available
(B) The fame of the researcher
(C) The complexity of the methodology
(D) The number of collaborators
285. Which of the following is one of the techniques that can help you develop an idea or topic for your research?
(A) Brainstorming
(B) Gossiping
(C) Manipulating
(D) Reading
286. Which of the following orders is the recommended one in the module for the development of a research idea?
(A) Research topic, research purpose, research question, hypothesis (for quantitative research, and research problem
(B) Research topic, hypothesis (for quantitative research), research problem, research questions, and research purpose
(C) Research topic, research problem, research purpose, research question, and hypothesis (for quantitative research)
(D) None of above
287. Why is reviewing literature important in research?
(A) It serves as a conclusion
(B) It replaces the research findings
(C) It provides all the answers
(D) It justifies the need for the research
288. Why is a questioning stance a central part of academic culture, according to Brick, Herke and Wong (2016)?
(A) Because students are assessed on their ability to adopt a questioning stance
(B) Because students need to analyze the reliability of sources
(C) Because it is a form of independent learning
(D) Because argument and debate advance knowledge
289. Facts, documentation or testimony used to strengthen a claim and support an argument
(A) Evidence
(B) Argument
(C) Claim
(D) Counterclaim
290. Which step in the Big 6 Process requires the researcher to fully understand what is being asked of them in the assignment?
(A) Information Seeking Strategies
(B) Task Definition
(C) Use of Information
(D) Location and Access
291. Research replicates to arrive at valid and conclusive results.
(A) YES
(B) NO

- 292.** Which is helpful to researcher to find a gap to do project
- (A) Objective of study
 - (B) Review of literature
 - (C) Expert opinion
 - (D) None of the above
- 293.** The research process is:
- (A) Random
 - (B) Systematic
 - (C) Emotional
 - (D) Unpredictable
- 294.** Why is reflecting on the research process important?
- (A) It shows you are finished
 - (B) It helps improve future research
 - (C) It is optional
 - (D) It means you don't need to follow up
- 295.** Background information is collected from:
- (A) Similar relevant research
 - (B) Future relevant research
 - (C) Different, irrelevant investigations
 - (D) Minor investigations
- 296.** How do you conduct a literature review?
- (A) Conduct interviews with experts
 - (B) Focus solely on recent publications
 - (C) Define your research question, search for literature, analyze findings, and write your review.
 - (D) Summarize findings without analysis
- 297.** Which part of the research plan include a brief synopsis of the background that supports your research problem and explain why this research is important and if applicable, explain any societal impact of your research?
- (A) Methodology
 - (B) Data Analysis
 - (C) Rationale
 - (D) Risk and Safety
- 298.** How does a literature review bring clarity and focus to a research problem?
- (A) By identifying gaps in existing research
 - (B) By collecting data
 - (C) By formulating a hypothesis
 - (D) By writing the conclusion
- 299.** What is the importance of narrowing down a research question?
- (A) To make the research more manageable
 - (B) To increase the number of sources
 - (C) To make it more complex
 - (D) To avoid answering it
- 300.** What is the first thing you should think about when starting research?
- (A) What interests you
 - (B) How long it will take
 - (C) What your friends think
 - (D) Where to eat lunch
- 301.** Annotated bibliographies have many traits, including a reference list of article summaries and which of the following?
- (A) Being working documents that can be used to help write a literature review
 - (B) Being shared and utilized by other researchers to aid in building their own
 - (C) Following specific rules for organization published by the American Psychological Association
 - (D) Being published often in journals
- 302.** Which section would best explain the sampling technique used?
- (A) Introduction
 - (B) Methodology
 - (C) Results
 - (D) Discussion
- 303.** A generalization that makes sense of observations by using logical reasoning
- (A) Bias
 - (B) Repeated trial
 - (C) Replication
 - (D) Scientific explanation

- 304.** Which of the following is not one of the six general steps to apply the scientific method?
- (A) Identify a problem
 - (B) Select an authority figure
 - (C) Conduct the study
 - (D) Develop a research plan
- 305.** Which step of the scientific method does not have its own section in a lab report?
- (A) Observation
 - (B) Ask a Question
 - (C) Analyze the Results
 - (D) Conclusions
- 306.** Asking things like "What is the issue we need to solve?", or "What are my criteria/constraints?" — would be which step?
- (A) Design a solution.
 - (B) Generate Concepts.
 - (C) Define Problem.
 - (D) None of the above.
- 307.** What is the function of the literature review?
- (A) To provide reliable research findings
 - (B) To Identify Research Problems
 - (C) To provide theoretical background of the study
 - (D) To demonstrate that you can use the internet
- 308.** The purpose of literature review is to provide conclusion for our findings
- (A) TRUE
 - (B) FALSE
- 309.** A panel of scientists who review the science on climate change and make recommendations.
- (A) EPA
 - (B) USFWS
 - (C) IPCC
 - (D) IGPOCC
- 310.** In order to find out which towel brand holds the most water, we should do an ____
- (A) Hypothesis
 - (B) Investigation
 - (C) Science project
 - (D) Conclusion
- 311.** Who is typically responsible for guiding the research process in a scientific study?
- (A) Researcher
 - (B) Research Adviser
 - (C) Research Assistant
 - (D) Research Coordinator
- 312.** Which is NOT a step in the Action Research Cycle?
- (A) Plan
 - (B) Act
 - (C) Reflect
 - (D) Distract
- 313.** Which of the following comes after literature review in an empirical study?
- (A) Back ground
 - (B) Discussion
 - (C) Methodology
 - (D) Analysis
- 314.** When you tell what you think is going to happen in the future. You are making a(an)
- (A) Inference
 - (B) Prediction
 - (C) Testable question
 - (D) Conclusion
- 315.** Why is replication important in research?
- (A) It makes the research more expensive
 - (B) It strengthens the research
 - (C) It reduces the need for new studies
 - (D) It complicates the research process
- 316.** During which stage are methodological considerations usually delayed?
- (A) Data analysis

- (B) Literature review
 - (C) Question development
 - (D) Hypothesis formulation
317. Reviewers often judge a researchers ability to conduct a study
- (A) Through decorative printing.
 - (B) By the language used.
 - (C) By quality of the proposal.
 - (D) By quantity of the proposal.
318. Consider the following Quantitative Research study abstract and match the statements to their most applicable place within the research idea process. Analyzing student submissions and access to determine any significant differences with pre-and post-tests.
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypothesis
319. These refers to a systematized knowledge of inquiry by defining and redefining problems, formulating hypothesis, or suggested solutions: collecting, organizing and evaluating data; making deductions and reaching conclusions; and at last carefully testing the conclusions to determine whether they fit the formulating hypothesis.
- (A) Research.
 - (B) Research Abstract.
 - (C) Research Methodology.
 - (D) Research Hypotheses.
320. In which section of a research proposal would you outline your sampling methods?
- (A) Literature Review
 - (B) Methodology
 - (C) Conclusion
 - (D) Results
321. Write T if the statement is true, and F if it is false. Brainstorming is an activity to generate research ideas.
- (A) True
 - (B) False
322. "A systematic step-by-step Procedure following logical process of reasoning" called
- (A) Experiment
 - (B) Observation
 - (C) Deduction
 - (D) Scientific method
323. To read critically means:
- (A) Taking an opposing point of view to the ideas and opinions expressed
 - (B) Evaluating what you read in terms of your own research questions
 - (C) Skimming through the material because most of it is just padding
 - (D) Being negative about something before you read it
324. The purposes of the literature review are all, except?
- (A) Copy pasting
 - (B) Discovering
 - (C) Synthesizing
 - (D) Identifying
325. Aarav is conducting research for his thesis and needs to find reliable sources. Which of the following might be considered a type of periodical that he might consider in his literature search?
- (A) Novels
 - (B) Peer-reviewed scholarly journal
 - (C) Facebook page
 - (D) My personal blog
326. Why is it essential to align research questions with objectives?
- (A) To ensure the study addresses its intended purpose
 - (B) To make the paper longer
 - (C) To confuse readers
 - (D) To reduce costs

- 327.** Reorganise the following in an appropriate sequence: (i) Analysis and interpretation of data (ii) Preparation of Research Report (iii) Identification and selection of a problem (iv) Formulation of a research design (v) Collection of data
(A) (iii), (iv), (i), (ii) and (v)
(B) (iii), (iv), (i), (v) and (ii)
(C) (iii), (v), (iv), (i) and (ii)
(D) (iii), (iv), (v), (i) and (ii)
- 328.** Write T if the statement is true, and F if it is false. The background of the study includes historical or contextual information.
(A) True
(B) False
- 329.** Research is systematic, because it follows certain steps such as
(A) Understanding the nature of problem
(B) Reviewing literature to understand
(C) Collecting data in an organized and controlled manner
(D) All of the above
- 330.** What is the importance of conducting a review of related literature?
(A) To help in your general studying
(B) To find out what is already known about your area of interest
- 331.** Research Problem & Hypothesis-Which of the following helps in defining a research problem?
(A) Reviewing literature
(B) Conducting pilot studies
(C) Discussing with experts
(D) All of these
- 332.** In the methodology section of the research, which question is answered?
(A) What is the purpose of the study?
(B) What methods were used to collect and analyze data?
(C) What conclusions were drawn?
(D) What recommendations were made?
- 333.** The methodology has to align with the research question(s) and aim(s).
(A) True
(B) False
- 334.** A critical literature review involves:
(A) Evaluating and synthesizing previous research
(B) Listing all books read
(C) Copying references
(D) Avoiding critical analysis
- 335.** Reviewing your interests is a good step to take when you are?
(A) Analyzing the audience
(B) Analyzing the communicative situation
(C) Choosing a topic
(D) Organizing the speech
- 336.** Which step of the Scientific Method is the most important?
(A) Collecting the data
(B) Drawing conclusions
(C) Designing the experiment
(D) Conducting the experiment
- 337.** These gaps are best identified in the review of related literature.
(A) Theoretical recommendations
(B) Methodological recommendations
(C) Practical recommendations Edit
(D) None of above
- 338.** According to the text, what is the purpose of making a preliminary outline before conducting research for a paper?
(A) To limit the scope of free speech
(B) To provide direction and help organize thoughts on the subject
(C) To redefine the concept of a studio
(D) To create a judgment-free space

- 339.** What is a key meaning of developing a research plan?
- (A) Foreseeing difficulties and advantages
 - (B) Making it easier to assign tasks to investigators
 - (C) Identifying the study design
 - (D) Making data analysis easier
 - (E) Sampling conveniently
- 340.** Research starts with a problem and ends with the problem.
- (A) Logical
 - (B) Empirical
 - (C) Cyclical
 - (D) Analytical
- 341.** Phase of the research process that covers the characteristics of the consumer about which we will know what to ask and how to interpret the data.
- (A) Design.
 - (B) Approach.
 - (C) Analysis.
 - (D) Problem.
- 342.** What step in the research process comes after finding sources?
- (A) Reflecting on your work
 - (B) Doing the research
 - (C) Identifying the audience
 - (D) Choosing a topic
- 343.** Which of the following is considered a legitimate source of research questions?
- (A) Literature review and existing gaps
 - (B) Trends in social media
 - (C) Personal opinions of researchers
 - (D) Randomly generated topics
- 344.** Final acceptance is granted:
- (A) After payment only
 - (B) When reviewer rejects
 - (C) After peer-review and successful revision
 - (D) On the same day as submission
- 345.** The research procedure also traces the data collection, the data processing, analysis, and interpretation.
- (A) TRUE
 - (B) FALSE
- 346.** What does research begin and end with?
- (A) A question
 - (B) A method and a finding
 - (C) An observation and a result
 - (D) A hypothesis and a theory
- 347.** It lays the foundation of the study and gives picture on the urgency of the scenario that leads to the conduct of an Action Research.
- (A) Context and Rationale
 - (B) Action Research Methods
 - (C) Action Research Questions
 - (D) Action Plan
- 348.** What does consistently relevant information mean?
- (A) Information that is always available
 - (B) Information related to the topic and research question
 - (C) Information that is easy to find
 - (D) Information from friends
- 349.** When searching for literature, what should you create to help with your research?
- (A) A list of favorite movies
 - (B) A list of keywords related to your research question
 - (C) A list of personal experiences
 - (D) A list of favorite songs
- 350.** The research paper must not be stocked and just gathering dust in a library. It must be published. The findings of the study must be disseminated by communicating it or publishing it in order to be utilized.
- (A) CONCEPTUALIZATION PHASE
 - (B) DESIGN PHASE
 - (C) EMPIRICAL PHASE
 - (D) ANALYTICAL PHASE
 - (E) DISSEMINATION PHASE

351. My dog likes to play fetch. My neighbor's dog also likes to play fetch. Maybe all dogs like to play fetch.
- (A) Inductive
 - (B) Abductive
 - (C) Deductive
 - (D) None of above
352. Based on the situation, complete the process of communication. Click the picture for the process. What is letter B (Message)? Your teacher posted a homework via Schoology. You read his instructions on how to do it. After a while, you were able to answer all the homework and submit it.
- (A) The student
 - (B) Answer
 - (C) Homework
 - (D) The teacher Edit
353. Uncontrolled addition of technical features to a system:
- (A) Scope creep.
 - (B) Constraints.
 - (C) Interruptions.
 - (D) Feature creep.
354. The purpose of the literature review carried out is EXCEPT
- (A) Identify the relevance of the problem being studied
 - (B) Develop variable definitions
 - (C) To duplicate past studies
 - (D) To determine what has been known from previous studies
355. Which of the following is NOT a valid critique/analysis question?
- (A) What are the strengths and weaknesses of the methodology?
 - (B) Is the article scholarly or generalizable?
 - (C) How much does the author make from this study?
 - (D) Is there any missing information?
356. Who among the following is credited with action research?
- (A) Parsons.
 - (B) Mannheim.
 - (C) John Dewey.
 - (D) Durkheim.
357. Katrina wants to understand the perspective of people who don't enjoy eating pancit canton. However, she has trouble figuring out why the study should be done in the first place. Which part of her introduction does she need to work on?
- (A) The research gap
 - (B) The significance of the study
 - (C) The scope and limitations
 - (D) The background of the study
358. Which of the following is not relevant to analysis of the research problem?
- (A) Isolating the variables that are involved in the problem and clarifying their relationships.
 - (B) Accumulating the facts that might be related to the problem.
 - (C) Attending seminars on research methodology.
 - (D) Proposing various relevant explanations (hypothesis) for the cause of the difficulty.
359. When it comes to steps in Problem Solving, which of the following would be similar in research when you implement the planned study?
- (A) Theorize about facts and possible relationships
 - (B) Gather, analyze relevant information
 - (C) Report findings
 - (D) Determine information needs
360. What term describes the process of sending research reports to other scientists to ensure the research was conducted properly?
- (A) Peer review
 - (B) Validity
 - (C) Shareability
 - (D) Crowd sourcing

361. "Review research literature" belongs to stage:
(A) 1
(B) 3
(C) 5
(D) 7 Edit
362. True or false After conducting an experiment, you should share your results.
(A) True
(B) False
(C) All the above
(D) None of the above
363. What does scientific inquiry begin with?
(A) A hypothesis
(B) A question
(C) An observation
(D) A fact
364. What is the significance of ensuring data availability before finalizing a research topic?
(A) It helps in writing the introduction
(B) It is critical for conducting the research
(C) It makes the research more interesting
(D) It reduces the time needed for research
365. It defines the geographic boundaries and certain demographic characteristics of the study.
(A) Setting of the Problem
(B) Literature Review
(C) Objective of the Study
(D) Research's Purpose
366. The third step of the scientific method; the researcher tries to find out why a phenomenon occurs by completing an experiment
(A) Observation/form a question
(B) Form a hypothesis
(C) Test hypothesis
(D) Analyze the results
(E) Draw a conclusion
367. If you find two additional sources to match what your first source said, you have just ____ your sources.
(A) Satired
(B) Triangulated
(C) Plagiarized
(D) Paraphrased
368. What is the process of solving problem through researching and probing?
(A) Inquiry
(B) Investigation
(C) Immersion
(D) Research
369. At the end of the literature review, at development of research work, it is necessary:
(A) Make a short conclusion
(B) Make an economic calculation
(C) Make a technological calculation
(D) Make the choice of equipment
(E) Provide a list of references
370. Discuss the role of literature reviews in research.
(A) Literature reviews are only used to showcase the author's knowledge
(B) Literature reviews only provide summaries of existing work
(C) Literature reviews are not necessary in research
(D) Literature reviews help researchers identify gaps in knowledge, establish context, build a theoretical foundation, avoid duplicating work, and contribute to the existing knowledge.
371. Which phase of the research process involves communicating the results to others through presentation or publication?
(A) Communication Phase
(B) Analysis Phase
(C) Data Collection Phase
(D) Planning Phase

372. Which sequence represents the correct steps of research?
- (A) Selection of topic, review of literature, data collection, interpretation
 - (B) Review of literature, selection of topic, data collection, interpretation
 - (C) Selection of topic, data collection, review of literature, interpretation
 - (D) Selection of topic, review of literature, interpretation, data collection
373. For which role in a research study is special research preparation necessary?
- (A) Identifier of researchable problems
 - (B) Evaluator of research findings
 - (C) Patient advocate during studies
 - (D) Principal investigator for study
374. If there is already a clear framework to be followed in the study, it is now the time to come up with the title and to formulate the research objectives.
- (A) Identifying Topic
 - (B) Review of Literature
 - (C) Developing a Framework
 - (D) Developing Title
375. While searching for information about solar panels, you find two sources: (1) a YouTube video by a solar company, and (2) a government brochure from SEDA Malaysia. What should your group do?
- (A) Use the YouTube video only
 - (B) Use both but verify their accuracy
 - (C) Use none because both are online
 - (D) Use the YouTube video because it's more fun
376. Comprehensive research requires a researcher to examine and analyze all — or angles before making a generalization or conclusion.
- (A) Aspects
 - (B) Colors
 - (C) Numbers
 - (D) Distances
377. The following are suggested strategies in strengthening research dynamics in an institution towards building a research-driven culture, except:
- (A) Conducting a seminar with parents and teachers based on research findings.
 - (B) Sharing of research findings with your principal only.
378. Arguments consisting of multiple claims formed to build premises that lead to a major thesis.
- (A) Complex argument:
 - (B) Evidence:
 - (C) Inductive argument:
 - (D) Major claim:
379. A research project can involve both problem identification and problem-solving research
- (A) True
 - (B) False
380. Reflection by action researchers
- (A) Is particularly important at the start of an action research project.
 - (B) Occurs primarily during data analysis and interpretation.
 - (C) Involves pondering the meaning, value, and impact of one's actions.
 - (D) Requires dialogue with the research participants.
381. After formulating a research question and organizing your ideas, the next step would be to:
- (A) Begin writing your paper
 - (B) Write your Works Cited page
 - (C) Write a thesis statement
 - (D) Ask to change your topic
382. Which best describes "Feasibility" in selecting a research problem?
- (A) Being relevant to current issues
 - (B) Having the resources and practicality to conduct the study
 - (C) Being new or original
 - (D) Being ethically sound

- 383.** THE PRINCIPAL INVESTIGATOR IS IN CHARGE OF
- (A) ORGANIZE DATA ON A COMPUTER.
 - (B) GATHER INFORMATION.
 - (C) BRING THE COFFE.
 - (D) ALL ASPECTS OF THE INVESTIGATION.
- 384.** It is the context of the research problem that leads to the necessity of conducting a study about the topic.
- (A) Background of the Problem
 - (B) Statement of the Problem
 - (C) Research Objectives
 - (D) Research Hypothesis
- 385.** The four stages of Research Method are Observation, —, Testing and Prediction
- (A) Simulation
 - (B) Experiment
 - (C) Hypothesis
 - (D) Analytics
- 386.** When you are ready to begin your search, you should generate a list of — associated with your topic.
- (A) Keywords
 - (B) Facts
 - (C) Questions
 - (D) Concerns
- 387.** In order to replicate an experiment one must:
- (A) Use control groups and experimental groups
 - (B) Use statistics to determine the effect of chance
 - (C) Control for the effects of extraneous variables
 - (D) Repeat the experiment using either identical or improved research methods
- 388.** According to the module, the flowchart of the development of a research idea goes in which of the following order?
- (A) Research topic, research purpose, research question, hypothesis (for quantitative research, and research problem
 - (B) Research topic, hypothesis (for quantitative research), research problem, research questions, and research purpose
 - (C) Research topic, research problem, research purpose, research question, and hypothesis (for quantitative research)
 - (D) None of above
- 389.** What is the relationship between a research question and research objectives?
- (A) Objectives are broader than the question
 - (B) Objectives are specific steps to answer the question
 - (C) Objectives are unrelated to the question
 - (D) Objectives are the same as the question
- 390.** In writing a literature review, researchers should avoid:
- (A) Summarizing every source in detail
 - (B) Paraphrasing and integrating sources
 - (C) Identifying the contributions of each source
 - (D) Critically analyzing the sources
- 391.** To which aspect are related questioning assumptions under-lying the problem?
- (A) Defining the problem.
 - (B) Identifying the problem.
 - (C) Analyzing the problem.
 - (D) Stating the problem.
- 392.** What does T indicate in the PICOT framework?
- (A) Time
 - (B) Treatment
 - (C) Threshold
 - (D) Trend
- 393.** If a scientist wants others to verify their findings, they should:
- (A) Keep their data private
 - (B) Publish their research for peer review
 - (C) Only share their successful experiments
 - (D) Ignore outside feedback

- 394.** Arrange the following in proper sequence: I. Collection II. Interpretation III. Organization IV. Analysis
(A) I-II-III-IV
(B) I-III-II-IV
(C) I-III-IV-II
(D) I-IV-III-II
- 395.** For the researcher, the next logical step after identifying the gaps in the literature, reviewing the implications of the study, and reiterating the limitations of the study is to suggest future courses of action. The researcher must STOP at simply identifying what is missing in the study.
(A) True
(B) False
- 396.** The student-researcher must read literature related to the problem he or she is studying.
(A) True
(B) False
- 397.** How can I communicate my research?
(A) Initiate
(B) Select
(C) Present
(D) Locate
- 398.** Who will be the subject of the research study as signaled by this title? Perceptions of ABIS G11 Students in Using Online Game Applications for Class Performance Task
(A) ABIS Students
(B) ABIS-SHS Students
(C) ABIS G11 Students
(D) ABIS-SHS Department
- 399.** When analyzing the data after the experiment, you do not need to critique your methods to see if something you may have done, or failed to do, influenced the results.
(A) True
(B) False
- 400.** Which of the following is NOT a boundaries or restrictions that can affect the flow of conducting the research study?
(A) Literature review
(B) Scope
(C) Limitation
(D) Delimitation
- 401.** The first step in a research process is referred to as
(A) Writing statement of the problem
(B) Making an outline
(C) Defining your topic
(D) Revising the paper
- 402.** The act of seeking information by questioning is called:
(A) Inquiry
(B) Reading
(C) Searching
(D) Writing
- 403.** When a researcher critiques a study in the literature review, they are:
(A) Only summarizing its content
(B) Evaluating its strengths, weaknesses, and relevance
(C) Describing its methodology in detail
(D) Ignoring its limitations
- 404.** This is what we do before your hypothesis so that you don't make a "dumb" guess
(A) Experiment
(B) Conclusion
(C) Research
(D) Wild guess
- 405.** What should be done after completing the research?
(A) Forget about the topic
(B) Submit without reviewing
(C) Reflect on the process and the results
(D) Ask someone else to finish it

- 406.** Which of the following are NOT examples of research limitations?
- (A) The sampling technique used
 - (B) Access to the population of interest
 - (C) The researcher's poor analysis skills
 - (D) The study's coverage of possible contributory factors
- 407.** Which of the following best describes the research process according to Leedy and Ormrod (2019)?
- (A) A random collection of facts and opinions about a topic.
 - (B) A process of gathering information to support pre-existing beliefs.
 - (C) The systematic process of collecting, analyzing, and interpreting data to enhance understanding of a phenomenon.
 - (D) A subjective interpretation of events based on personal experience
- 408.** Lisa is taking notes while researching the environment. She recorded her notes as shown in the chart. Which question can Lisa ask to further understand the two lists she created?
- (A) What are the different types of pollution that impact local environments?
 - (B) What type of pollution will block sunlight for plants?
 - (C) Does exhaust from vehicles cause pollution?
 - (D) How do factories affect the environment?
- 409.** What is one common recommendation that researchers often make?
- (A) Ignoring further research areas
 - (B) Leaving problems unaddressed
 - (C) Addressing methodological issues
 - (D) Avoiding actions based on research findings
- 410.** What did the author(s) do to answer the research question?
- (A) Methods
 - (B) Results
 - (C) Discussion
 - (D) Introduction
- 411.** What is the primary purpose of using a sequential set of steps in research?
- (A) To ensure rigorous and reliable studies
 - (B) To replace ethical review processes
 - (C) To reduce the need for data collection
 - (D) To speed up publication timelines
- 412.** Persons who conduct the research
- (A) Study subject or participant
 - (B) Informants
 - (C) Researchers or investigators
 - (D) Study site
- 413.** What is the main purpose of related studies in research?
- (A) Help the researcher understand his topic better.
 - (B) Find better Love
 - (C) Help us overcome Problems
 - (D) None of the above
- 414.** What is the primary purpose of research communication?
- (A) To showcase the researcher's expertise
 - (B) To secure funding for future projects
 - (C) To disseminate research findings and contribute to knowledge advancement
 - (D) To gain recognition and awards
- 415.** What is a set of facts, statistics, examples, or other information explaining why the premise is true?
- (A) Claim
 - (B) Evidence
 - (C) Heuristic
 - (D) Premise
- 416.** Which step is being described? "Does the type of container affect the growth of seeds?"
- (A) Form a hypothesis
 - (B) Ask a question
 - (C) Draw a conclusion
 - (D) Analyze results(data)

- 417.** The first step is to pick out the key terms from your problem statement and research questions.
- (A) Identifying your key concepts
 - (B) Evaluating and explaining relevant theories
 - (C) Showing how your research fits into existing research
 - (D) None of above
- 418.** What are the criteria for a proposed topic to develop into a research project?
- (A) The topic and research idea are based on personal experience regarding practical issues reported in the media.
 - (B) The research topic has theoretical and scientific foundations about an unknown issue that needs to be known and is feasible.
 - (C) The research topic clearly expresses the research objectives.
 - (D) The research topic is feasible.
- 419.** Locating facts about a topic using books, the internet or database sources
- (A) Nonfiction
 - (B) Source
 - (C) Works cited
 - (D) Research
- 420.** When all else fails in your research project:
- (A) Give up; it wasn't meant to be.
 - (B) Cry to your mommy.
 - (C) Consult a research librarian.
 - (D) Throw your laptop out the nearest window.
 - (E) All of these are good choices.
- 421.** What is the primary use of the research process?
- (A) To entertain
 - (B) To explore and find new information
 - (C) To sell products
 - (D) To create art
- 422.** The research process that is covered by the literature review is
- (A) Review concepts and theories
 - (B) Review previous research findings
 - (C) Both are correct
 - (D) Both are wrong
- 423.** In Planning the study, which of the options does not belong
- (A) Doing a literature review
 - (B) Identifying the research problem
 - (C) Selecting and gaining entree into research sites
 - (D) Recommendation
- 424.** Which one of the following is the usual sequence of scientific enquiry?
- (A) Observation-Verification-Hypothesizing-Theorizing
 - (B) Experimentation-Observation-Verification-Hypothesizing
 - (C) Observation-Hypothesizing-Experimentation-Theorizing
 - (D) Theorizing-Observation-Experimentation-Hypothesizing
- 425.** Which of the following is NOT a step in researching a project?
- (A) Identify a topic
 - (B) Write questions
 - (C) Evaluate your sources
 - (D) Plagiarize your resources
- 426.** Some problems take little time for its solution while others take more time. So, it depends on the time in which we have to complete his research work.
- (A) Personal Inclination
 - (B) Data Availability
 - (C) Area Culture
 - (D) Timelines of the Problem
- 427.** Research is a(n) ____ this means that you may have to repeat steps over more than once when you run into snags.
- (A) Endless maze

- (B) Cycle
(C) Always linear
(D) Always the same
- 428.** Define the Problem, Conduct Background Research, State a Hypothesis, Develop a Research Plan, Collect Data, Analyze Data, Draw Conclusions, and Make Recommendations are the steps in
(A) Marketing Research Process
(B) Primary Data
(C) Secondary Data
(D) Experiments
- 429.** Which of the below is NOT one of the five stages of research?
(A) Fieldwork
(B) Operationalisation
(C) Hippopotamus
(D) Processing of Results
- 430.** Conceptual research often begins with:
(A) A literature review
(B) Data collection
(C) Hypothesis testing
(D) An experiment
- 431.** ____ initially involves systematic observation, moving to interconnecting ideas coherently and without internal contradictions (creating a scientific model), which is then tested by further observations.
(A) A hypothesis
(B) The scientific method
(C) A theory
(D) A positivist approach
- 432.** Which sequence best represents the overall flow of a quantitative study?
(A) Select sample → choose design → analyze findings
(B) Communicate conclusions → collect data → select design
(C) Review literature → communicate findings → state problem
(D) Define purpose → review literature → formulate hypotheses
- 433.** All sociological research begins with a question.
(A) True
(B) False
- 434.** Nurses display this role when collect/aggregate clinical data and show patterns across patients that serve to create new knowledge or can be interpreted within the context of existing nursing knowledge.
(A) Data Gatherer
(B) Information User
(C) Knowledge User
(D) Knowledge Builder
- 435.** In the market research process, 'problem identification' is followed by ____
(A) Data Collection
(B) Take Action
(C) Analysis
(D) Research plan
- 436.** You are asked to review a theoretical research paper. In which of the following quality dimensions you expect the paper to be particularly strong? Tick one.
(A) Significance
(B) Originality
(C) Rigor
(D) None of above
- 437.** What is the importance of logical examination in research?
(A) It avoids unnecessary duplication.
(B) It ensures valid conclusions are drawn.
(C) It focuses on direct experience.
(D) It emphasizes sponsorship and cooperation.
- 438.** If have good research skills, then when you're doing research you should feel a bit like you are:
(A) Solving a mystery

- (B) Designing puzzle
 - (C) Digging in the ground to retrieve something
 - (D) Classifying books in research library
- 439.** It provides details to the reader on what and how the study will contribute and who will benefit from it.
- (A) Statement of the Problem
 - (B) Background of the Study
 - (C) Conclusions
 - (D) Significance of the Study
- 440.** Aside from repeating a scientific experiment, what else must a scientist do to increase the accuracy of the results?
- (A) Change the hypothesis
 - (B) Share data with other scientists for them to repeat or replicate
 - (C) Analyze the data faster
 - (D) Keep the data for themselves
- 441.** Research process
- (A) The process of objectively investigating and collecting information regarding a particular subject
 - (B) A method of gathering opinions from a group of people
 - (C) A technique for analyzing data without any bias
 - (D) A way to summarize existing knowledge on a topic
- 442.** Which of the following is NOT a phase of research?
- (A) Marketing
 - (B) Planning
 - (C) Procrastination
 - (D) Development
- 443.** Next we need to define our concepts.
- (A) True
 - (B) False
- 444.** What does it mean when research is described as replicable?
- (A) The results are always the same
 - (B) The procedure is precisely recorded so others can repeat the process
 - (C) The research is published in multiple journals
 - (D) The research can be done without any equipment
- 445.** The ___ is the organized way scientists answer questions and solve problems.
- (A) Scientific method
 - (B) Scientific explanation
 - (C) Scientific notation
 - (D) Scientific guesses
- 446.** Follows an approach "top-down" or from "general to specific". Name it?
- (A) Induction approach
 - (B) Deduction approach
 - (C) Presumed reality
 - (D) Alternative variable
- 447.** Which sequence correctly emphasizes moving from planning to execution?
- (A) Data processing → hypothesis formulation → literature review
 - (B) Formulating variables → data collection → literature review
 - (C) Selecting design → respondent selection → data collection
 - (D) Respondent selection → conceptualisation → selecting design
- 448.** How does a researcher identify the boundaries of their research area in quantitative research?
- (A) Through knowledge of related research
 - (B) By conducting pilot studies
 - (C) By analyzing preliminary data
 - (D) By consulting with experts
- 449.** Which among the following steps in writing a research report should be prepared first?
- (A) Conduct research and take note.

- (B) Make a plan.
(C) Choose a topic.
(D) Reread the report.
- 450.** In what section of a research proposal would you outline your data collection techniques?
(A) Introduction
(B) Methodology
(C) Literature Review
(D) Discussion
- 451.** Survey instruments should be aligned to research questions.
(A) True
(B) False
(C) All the above
(D) None of the above
- 452.** All of the following are steps in the scientific method EXCEPT
(A) Drawing conclusions
(B) Developing a hypothesis
(C) Ignoring contradictory evidence
(D) Gathering evidence
- 453.** Define: Research Proposal
(A) A Research Proposal is a detailed plan that outlines the objectives, methodology, and significance of a research project.
(B) A Research Proposal is a summary of previously published research articles.
(C) A Research Proposal is a list of references used in a research paper.
(D) A Research Proposal is a schedule of research project deadlines.
- 454.** What is the purpose of a literature review in educational research?
(A) To gather new primary data
(B) To summarize existing research and identify gaps
(C) To generate interview questions
(D) To publish new research findings
- 455.** The research process is best described as a
(A) Method to select a frame of reference
(B) Set of rules that govern the selection of subjects
(C) Series of steps completed in a logical order
(D) Criteria for selection of a research topic
- 456.** A preceptor who invites learners to participate in unit-based research and audits is primarily supporting:
(A) Theory-only learning
(B) Evidence-based practice and scholarly engagement
(C) Reduction in clinical hours
(D) Limitation of scope
- 457.** ALL ARE INCLUDED IN CHAPTER 1 EXCEPT
(A) Introduction / B.O.G
(B) Literature review
(C) Significance of the study
(D) Research instrument
(E) Research and Interview Questions
- 458.** To read critically means:
(A) Taking an opposing point of view to the ideas and opinions expressed
(B) Evaluating what you read in terms of your own research questions
(C) Skimming through the material because most of it is just padding
(D) Being negative about something before you read it
- 459.** An action researcher develops an action research attitude when they consider areas of possible improvement, unique tactics to attempt, and ____
(A) Potential consequences
(B) Unrelated questions
- 460.** After the problem is defined and information gathered, you
(A) Try to quantify the problem
(B) Identify various solutions

- (C) Make your decisions
 - (D) Reach a consensus
- 461.** Why is an extensive literature review important before conducting quantitative research?
- (A) To determine the feasibility of the study.
 - (B) To identify potential research participants.
 - (C) To gain an understanding of the current state of knowledge.
 - (D) To develop a research design.
- 462.** A Research Report is a formal statement of —
- (A) Data Editing.
 - (B) Research Process.
 - (C) Data collection.
 - (D) Research Problem.
- 463.** Which of the following is not a common research process problem?
- (A) Politically motivated research
 - (B) Database strip-mining
 - (C) Unresearchable questions
 - (D) Pilot testing
- 464.** What is the 4th step of the scientific method?
- (A) Collecting but not analyzing data
 - (B) Collecting and analyzing data
 - (C) Formulating a general hypothesis
 - (D) Evaluating research hypothesis
- 465.** It sets out the stages through which an action moves from initiation to conclusion.
- (A) Process framework
 - (B) Concept framework
 - (C) Content framework
 - (D) None of above
- 466.** Is there a conceptual context for enhancing understanding of problem?
- (A) Clinical Issues
 - (B) Ethnic Issues
 - (C) Methodologic issues
 - (D) Theoretic Issues
- 467.** The town of Clarksville is reviewing options for energy with the goal of reducing their production of greenhouse gases. Increased use of which energy source would reduce the town's greenhouse gas production?
- (A) Coal
 - (B) Natural gas
 - (C) Petroleum fuel
 - (D) Sunlight
- 468.** Which of the following sequence of activities represents the process of research?
- (A) Identification of Problem, Formulation of Hypothesis, Testing of Hypothesis, Conclusion, Data Collection
 - (B) Identification of Problem, Formulation of Hypothesis, Data Collection, Data Analysis, Conclusion
 - (C) Identification of Problem, Data Analysis, Conclusion, Data Collection
 - (D) Identification of Problem, Data Analysis, Formulation of Hypothesis, Conclusion, Data Collection
- 469.** The feedback process in research is in which direction?
- (A) Hypothesis to literature review
 - (B) Data collection to hypothesis
 - (C) Interpretation to problem definition
 - (D) Reporting to problem definition
- 470.** In the action research cycle, which step comes directly after planning?
- (A) Reviewing literature
 - (B) Sharing implications
 - (C) Writing conclusions
 - (D) Designing instruments
 - (E) Acting on the plan
- 471.** Other than extensive literature review, research proposal must provide persuasive evidence that there is a need to conduct the study.
- (A) True
 - (B) False
 - (C) Unsure
 - (D) None of above

472. The advantage of the Survey of Related literature is
- (A) It is like a back-bone of the research.
 - (B) It helps in formulating objectives and hypotheses of the research.
 - (C) It helps in preparation of research design.
 - (D) All of the above are true.
473. In research, the problem definition of research is a critical step, as it designates the areas of research and data types that will be required
- (A) True
 - (B) False
474. Imagine you're a detective like Zoe, David, or Isla, diving into the mysteries of science or any subject. What's the very first step you'd take on this thrilling adventure?
- (A) Making a hypothesis
 - (B) Collecting data
 - (C) Making an observation
 - (D) Drawing a conclusion
475. What is the primary reason for conducting a literature review in quantitative research?
- (A) To provide perspective and context for the study
 - (B) To replicate previous studies
 - (C) To gather data
 - (D) To formulate a research question
476. Requiring students to criticize or judge information taught ____
- (A) Cognitive memory question
 - (B) Convergent thinking question
 - (C) Divergent thinking
 - (D) Evaluative thinking
477. Why are procedures important in science?
- (A) They allow a different researcher to repeat the experiment
 - (B) The scientist can trouble shoot problems
 - (C) They are part of a legal lab notebook
 - (D) All the above
478. To read the literature critically means:
- (A) To suggest the previous research was always poorly conducted.
 - (B) Skimming through the material because most of it is just padding.
 - (C) Evaluating what you read in terms of your own research questions.
 - (D) Being negative about something before you read it.
479. What is meant by generalizations in research?
- (A) Making claims based on personal opinions
 - (B) Applying findings from a sample to a larger population
 - (C) Ignoring specific data points
 - (D) Repeating the research process
480. Reviewing existing books and reports to identify gaps is called:
- (A) Brainstorming
 - (B) Literature Search
 - (C) Consultation from Experts
 - (D) Scope
481. Marketing researchers will interpret, formulate and report the results of marketing research analysis to the organization's management. referring to?
- (A) Step 6: Prepare and Present Research Results
 - (B) Step 5: Prepare and Analyze Data
 - (C) Step 3: Formulating the Form of the Study
 - (D) Step 1: Defining the Problem
482. What is the first step in the research process, where the researcher identifies topics of interest and justifies the need for study?
- (A) Idea-Generating Phase
 - (B) Data Collection Phase
 - (C) Analysis Phase
 - (D) Reporting Phase

- 483.** How you prove that the other person is wrong and you are right. In other words, how you disprove the counterclaim.
- (A) Claim
 - (B) Evidence
 - (C) Counterclaim
 - (D) Rebuttal
- 484.** Your research method should be explained before you present your results.
- (A) True
 - (B) False
 - (C) It depends on the kind of research method used
 - (D) It depends on how creative I am
- 485.** What type of relationship exists between the steps in the research process (step 1 to 7)?
- (A) Random
 - (B) Independent
 - (C) Cyclical
 - (D) Sequential and dependent
- 486.** How can reviewing existing literature help in topic selection?
- (A) It only adds unnecessary work to the research process.
 - (B) It helps you identify gaps and trends in previous research.
 - (C) It guarantees your research will be completely original.
 - (D) It restricts your research to existing ideas
- 487.** An orderly, systematic approach to problem solving is called the:
- (A) Experiment..
 - (B) Science procedure.
 - (C) Scientific method.
 - (D) Hypothesis.
- 488.** What is the element that has to be considered when thinking about the research setting?
- (A) The purpose of the research
 - (B) The time of the research
 - (C) The resources available for the research
 - (D) None of above
- 489.** This refers to the person who conducts the research:
- (A) Scientist
 - (B) Investigator
 - (C) Subject
 - (D) Locale
- 490.** Which of these contains steps in the right order?
- (A) Ask a question, state your hypothesis, research, experiment, analyze, make a conclusion
 - (B) State your hypothesis, ask a question, research, experiment, analyze, make a conclusion
 - (C) Ask a question, research, state your hypothesis, experiment, analyze, make a conclusion
 - (D) State your hypothesis, ask a question, research, make a conclusion, experiment, analyze
- 491.** Background/preliminary research helps in defining a research topic by:
- (A) Providing context and understanding of existing knowledge
 - (B) Eliminating the need for further research
 - (C) Guaranteeing immediate results
 - (D) Ensuring the topic is always unique
- 492.** Why do researchers need to review existing studies first?
- (A) To get more sample formats
 - (B) To check gaps and refine their topic
 - (C) To read long articles online
 - (D) To make their paper look longer
- 493.** Multiple Choice: Read each question carefully and choose the BEST answer. Which sequence shows a logical flow in the background of the study? I. Academic performance is influenced by various factors. II. One factor is motivation. III. Research shows motivated students perform better. IV. This study aims to examine motivation among students.

- (A) I, II, III, IV
(B) II, I, III, IV
(C) I, III, II, IV
(D) III, I, II, IV
- 494.** The ____ Process is used to explore and find new or more information about a specific topic.
(A) Research
(B) Writing
(C) Evaluation
(D) Learning
- 495.** Things that are accepted as true, or at least plausible, by researchers and peers who will read your dissertation or thesis
(A) Assumptions
(B) Inference
(C) Hypotheses
(D) None of above
- 496.** The research cycle includes both inductive and deductive research.
(A) True
(B) False
- 497.** Which of the following is not a characteristic feature of research process?
(A) Critical analysis.
(B) Uncontrolled conditions.
(C) Systematic endeavor.
(D) Empirical approach.
- 498.** A process that includes looking for patterns and making conjectures is called ____
(A) Inductive Reasoning
(B) Deductive Reasoning
(C) Conjecture
(D) Conditional Statement
- 499.** A systematic inquiry means ____
(A) To keep asking questions
(B) To understand the problem before implementing a solution
(C) To be critical
(D) To find the best solution
- 500.** It is the step-by-step and systematic process of doing the research. This section also includes the materials used, with the right measurements and appropriate equipment.
(A) Subject of the Study
(B) Procedure
(C) Statistical treatment
(D) Introduction
- 501.** What must a scientist do if his experiments show that his hypothesis was wrong?
(A) The science instructor.
(B) He must reconsider his hypothesis and change it
(C) Hypothesis
(D) None of above
- 502.** At the planning stage, an author should do the following EXCEPT for ____
(A) Choosing a topic
(B) Writing the first draft
(C) Generating ideas
(D) Creating an outline
- 503.** For which of the 4 critical thinking strategies would you think critically to evaluate the validity, reliability, bias or other characteristics of the author, speaker, or source of information.
(A) Text coding
(B) Clarified thinking
(C) Examining arguments
(D) Cultivating habits of mind
- 504.** Facts, data, or quotes that you provide to prove your argument
(A) Claim
(B) Argument
(C) Evidence
(D) Counter-Claim
- 505.** Research is a cyclical process.
(A) True
(B) False

- 506.** A recommendation like “Conduct a similar study in another school setting” suggests:
(A) A practical solution for stakeholders
(B) The need for validation of findings
(C) An error in methodology
(D) A flaw in the study objectives
- 507.** What is the primary goal of identifying gap areas in literature?
(A) To summarize previous findings
(B) To replicate existing studies
(C) To develop new research questions and hypotheses
(D) To avoid conducting further research
- 508.** What is the last step in Ethnography research process?
(A) Write the Report Consistent with Your Design
(B) Write the Report Which no Consistent with Your Design
(C) Analyze and Interpret Data within a Design
(D) None of above
- 509.** True or False: Scientists always follow the same steps when researching a problem.
(A) True
(B) False
- 510.** When a researcher is engaged in research in a subjective manner, the result will be
(A) Inadequate formulation of objectives.
(B) Inadequate collection of data.
(C) Inadequate selection of apparatus.
(D) All of the above.
- 511.** Which of the following is the basic purpose of pretest interview in this case study?
(A) To develop the questionnaire.
(B) To use agency representative.
(C) To identify the potential problem.
(D) To know the sample size.
- 512.** Research is a process of investigation.
(A) True
(B) False
(C) Unsure
(D) None of above
- 513.** Which of the following is a step in the business research process?
(A) Ignoring data
(B) Gathering information
(C) Making assumptions
(D) Avoiding analysis
- 514.** For what purpose is a preliminary bibliographic search carried out during the design of an investigation?
(A) To have a clear idea of the problem, the variables, and the methodology used by other authors
(B) To avoid defining the research problem
(C) To replace fieldwork with secondary sources
(D) To ensure the study has no literature review
- 515.** What step does every scientific experiment begin with?
(A) Hypothesis
(B) Question/problem
(C) Procedures
(D) Conclusion
- 516.** Why do you need to review the existing literature?
(A) To make sure you have a long list of references
(B) Because without it, you could never reach the required word-count
(C) To help in your general studying
(D) To find out what is already known about your area of interest
- 517.** The step in writing a research report wherein you formulate questions related to the topic.
(A) Writing a thesis statement

- (B) Making reference cards
 - (C) Planning the research
 - (D) Choosing a topic
- 518.** What is the first step in the market research process?
- (A) Defining the problem and choosing research objectives
 - (B) Gathering data
 - (C) Analyzing data
 - (D) Reporting findings
- 519.** It documents exactly what you did on your research paper and when you did it.
- (A) Project Data Logbook
 - (B) School diary
 - (C) Personal journal
 - (D) None of the above
- 520.** What are the steps in conducting research?
- (A) Topic, Review, Formulate, Design methods, collect data, interpret, communicate findings
 - (B) Collect data, Analyze data, Report findings
 - (C) Identify problem, Collect data, Report findings
 - (D) Identify problem, Review literature, Report findings
- 521.** No research problem means no research questions.
- (A) TRUE
 - (B) FALSE
- 522.** Some people consider research as a movement
- (A) From the data collection to analysis of data.
 - (B) From the beginning to the end.
 - (C) From the problem to the analysis.
 - (D) From the known to the unknown.
- 523.** What is the importance of including the research adviser in a scientific study?
- (A) To increase the number of authors
 - (B) To provide additional expertise and oversight
 - (C) To ensure the study is published
 - (D) To attract more funding
- 524.** What is a pilot study?
- (A) A study of an individual or group over a long period of time
 - (B) A small scale study done prior to the actual study
 - (C) Data collected in the numeric form
 - (D) Data collected the written / descriptive form
- 525.** Reasons in conducting research. Who will benefit, how will they benefit.
- (A) Introduction
 - (B) Statement of the Problem
 - (C) Hypothesis
 - (D) Significance of the Study
- 526.** A scholarly research step that entails identifying and studying all existing studies on a topic to create a basis for new research
- (A) Field research
 - (B) Literature review
 - (C) Meta-analysis
 - (D) None of above
- 527.** When a new marketing research project is planned, the process to carry out this research consists of:
- (A) Problem statement, objectives, and scope.
 - (B) Research purpose and research objectives, and estimating the value of information.
 - (C) Organizational purpose, research users, and marketing objectives.
 - (D) Research question, hypothesis, and scope.
- 528.** The primary purpose for reviewing relevant literature is to —
- (A) Select the research design
 - (B) Interpret previous research findings

- (C) Develop conceptual and operational definitions of variables
- (D) Support information on the existing knowledge based on an identified problem
- 529.** The first step for conducting correlational research is ____
- (A) To determine if a correlation study best addresses the research problem
- (B) To collect data and monitor potential threats
- (C) To analyze the data and represents the results
- (D) To identify two or more measures for each individuals in the study
- 530.** What are the benefits of cross-referencing information from various sources?
- (A) Cross-referencing information is time-consuming and inefficient
- (B) Combining data from different sources can lead to confusion
- (C) Relying on a single source is more reliable than cross-referencing
- (D) The benefits include verifying accuracy, filling gaps, gaining different perspectives, and ensuring comprehensive understanding.
- 531.** Reviewing the existing literature is necessary because:
- (A) It helps identify gaps in current knowledge
- (B) It guarantees publication of your research
- (C) It eliminates the need for data collection
- (D) It ensures your research will be successful
- 532.** In a marketing research report, what section explains why the study matters and how it can benefit businesses and academics?
- (A) Scope
- (B) Significance of the Study
- (C) Research Objectives
- (D) Research Questions
- 533.** The government conducted a research study to ____ the impact of advertising on children.
- (A) Embrace
- (B) Enforce
- (C) Assess
- (D) Advance
- 534.** Which of the tasks below might be conducted by the researcher during the "problem definition," the "development of an approach to the problem," or the "research design formulation" steps of the marketing research process?
- (A) Analysis of secondary data
- (B) Interviews with industry experts
- (C) Qualitative research
- (D) All of the above
- 535.** Selection of appropriate method of data collection is based on:
- (A) Nature, object and scope of study
- (B) Availability of funds
- (C) Time Factor
- (D) All of these
- 536.** How can peer feedback enhance writing abilities?
- (A) Peer feedback enhances writing abilities by providing diverse perspectives, identifying areas for improvement, and encouraging revisions.
- (B) Peer feedback does not encourage any changes to the original work.
- (C) Peer feedback only confuses writers with too many opinions.
- (D) Peer feedback is primarily focused on grammar corrections.
- 537.** The process of making clear how your evidence supports your claim
- (A) Reasoning
- (B) Evidence
- (C) Scientific argument
- (D) Claim

538. Activities involved in gathering information for developing a curriculum are called ____
- (A) Teaching evaluation
 - (B) Material analysis
 - (C) Material evaluation
 - (D) Need analysis
539. We review the relevant literature to know:
- (A) What is already known about the topic
 - (B) What concepts and theories have been applied to the topic
 - (C) Who are the key contributors to the topic
 - (D) All of the above
540. What do you call to the process of steps used to collect and analyze information of a topic or issue?
- (A) Research
 - (B) Basic research
 - (C) Descriptive
 - (D) Qualitative
541. Which of the following is the first step of empirical study?
- (A) Identification and definition of the study
 - (B) Review of related literature
 - (C) Formulation of objective
 - (D) Formulation of hypothesis
542. The “working title” is used to:
- (A) Finalize the research title early
 - (B) Keep the focus of the study during research
 - (C) Replace the thesis statement
 - (D) None of above
543. What should be done in a way that may be repeated by others?
- (A) Data collection
 - (B) Procedure
 - (C) Conclusion
 - (D) Hypothesis
544. Which of the following orders is recommended in the flowchart of the development of a research idea?
- (A) Research topic, research problem, research purpose, research question, hypothesis
 - (B) Research topic, research purpose, research problem, research question, hypothesis
 - (C) Research topic, research problem, research purpose, hypothesis, research question
 - (D) Research topic, hypothesis, research problem, research question, research purpose
545. It is a process of critically analyzing different works from academic books, journals, theses, dissertations, and other scholarly works.
- (A) Research Report
 - (B) Review of Related Literature
 - (C) Abstract
 - (D) Background/Introduction
546. Research process and scientific thinking are
- (A) Unrelated process.
 - (B) Process of enquiring new knowledge with different emphasis.
 - (C) Synonymous.
 - (D) Similar in some situations and dissimilar in others.
547. How does classifying data help in forming scientific hypotheses?
- (A) It provides a structured way to identify patterns
 - (B) It eliminates the need for further experiments
 - (C) It guarantees the hypothesis is correct
 - (D) It reduces the amount of data needed
548. Which of the following should a researcher consider when selecting literature for review?
- (A) Author’s credentials and credibility
 - (B) How many times the article has been cited
 - (C) Relevance to the research topic
 - (D) All of the above

- 549.** Check all the steps in the Scientific Method.
- (A) Discuss?.
 - (B) Experiment?.
 - (C) Methods and materials?.
 - (D) All of the above.
- 550.** What is a scientific investigation?
- (A) A scientific investigation is a statement about what will happen under certain conditions.
 - (B) A scientific investigation is a systematic process to answer questions and test hypotheses.
 - (C) A scientific investigation is a summary of the results and how they relate to the hypothesis.
 - (D) None of the above
- 551.** The issue to be argued; the proposition; the topic of debate
- (A) Warrant
 - (B) Resolution
 - (C) Impact
 - (D) Procedures
- 552.** Fundamental component of research foundation that aims to fill this "knowledge gap". It is also referred to as rationale.
- (A) Research problem
 - (B) Purpose
 - (C) Specific questions to be addressed
 - (D) Conceptual framework
- 553.** What is one reason to evaluate existing research findings?
- (A) To increase funding for new projects
 - (B) To replicate results or change an aspect of previous research
 - (C) To publish more papers
 - (D) To gain personal recognition
- 554.** Which of the following is a reputable source for identifying research problems in education?
- (A) Personal blogs and social media posts
 - (B) Unpublished manuscripts and conference presentations
 - (C) Peer-reviewed academic journals and books
 - (D) Wikipedia and other online encyclopedias
- 555.** Develop a timeline for a six-month research project on teacher-student interactions.
- (A) Conduct all research within the first month
 - (B) Split the research into equal phases: literature review, data collection, analysis, and report writing
 - (C) Submit the final paper after the first week
 - (D) Focus only on the data collection phase
- 556.** What differentiates the research proposal from research Reports?
- (A) Is generated at the same time
 - (B) Is generated before a study begins
 - (C) Is prepared after a study has been completed
 - (D) All of the above
- 557.** What rule is best when choosing your research topic?
- (A) Choose something that everyone has written about that way you know there will be information
 - (B) Choose a topic that is broad so you won't run out of things to talk about
 - (C) Most of your ideas are bad ones so just go with the first one
 - (D) Choose a narrow topic that you can explore in detail and may be original to you
- 558.** What is the heart of your research?
- (A) Statistics you apply
 - (B) Thought process behind the study
- 559.** You are working on a project with your group in college. You are not happy with how it is going. You have some suggestions for the group and now feel brave enough to speak up.

- (A) Forming
 - (B) Storming
 - (C) Norming
 - (D) Performing
- 560.** The cyclical process of data collection and analysis is called ____ process.
- (A) Deductive
 - (B) Iterative
 - (C) Coding
 - (D) None of above
- 561.** What is the basis of the Scientific Method?
- (A) To test hypotheses in conditions that are conducive to its success.
 - (B) To formulate a research problem and disprove the hypothesis.
 - (C) To formulate a research problem, test the hypothesis in carefully controlled conditions that challenge the hypothesis.
 - (D) To test hypotheses and if they are disproved, they should be abandoned completely.
- 562.** It is in the ____ that researchers keep track of any and all changes, additions, or modifications to the data collection plan and the overall research design, including data collection and analysis methods and processes
- (A) Fieldwork Research Journal
 - (B) Fieldwork and Data Collection Memos
 - (C) Research Log
 - (D) Contact Summary Forms
- 563.** Published information in a particular subject area is discussed in?
- (A) Journals
 - (B) Research proposal
 - (C) Literature review
 - (D) Bioethics
- 564.** After completing the whole research, it is time that you present and inform the result of your study. What phase on research process is it?
- (A) Analytical Phase
 - (B) Conceptual Phase
 - (C) Dissemination Phase
 - (D) Empirical Phase
- 565.** If a student's support is highly relevant to the research question, what does this mean?
- (A) The support matches the research question very well
 - (B) The support is only a little related
 - (C) The support is unrelated
 - (D) The support is not related at all
- 566.** What is the term for finding facts about your topic from books, articles, and websites?
- (A) Research
 - (B) Editing
 - (C) Publishing
 - (D) Summarizing
- 567.** What does the term 'pilot study' mean in research instrument development?
- (A) Initial test of the instrument
 - (B) Final evaluation of the instrument
 - (C) Data analysis phase
 - (D) Participant recruitment phase
- 568.** What type of process research is?
- (A) A process to make new medicines.
 - (B) A process to create theories.
 - (C) A process to invent the machines.
 - (D) A process to discover the truth.
- 569.** To decide whether a source has correct and helpful info. for your research topic
- (A) Citation
 - (B) Claim
 - (C) Evaluate
 - (D) Inquire
- 570.** There are 5 steps in the Internet Research Process. Which is Step 1?
- (A) Set a goal
 - (B) Take notes
 - (C) Choose the best sources
 - (D) Choose keywords

571. The RRL should primarily focus on:
- (A) Studies directly related to the research problem
 - (B) Any topic of interest
 - (C) Unrelated fields
 - (D) Fictional stories
572. Which step is NOT part of the scientific method?
- (A) Observation
 - (B) Hypothesis
 - (C) Experiment
 - (D) Memorization Edit
573. Why is the literature review considered an “environment” around all research steps?
- (A) It limits the research topic
 - (B) It occurs only in the beginning
 - (C) It influences all stages of research
 - (D) It is optional
574. Which of the following tasks requires strategic thinking in plant systems?
- (A) Research the impact of various insects on woodlot management
 - (B) Recall the definition of an arborist
 - (C) List the steps to operate a lawn maintenance service
 - (D) Name a career related to vegetable production
575. It is used to test the theory about a topic of interest.
- (A) Deductive reasoning
 - (B) Inductive reasoning
 - (C) Hypotheses
 - (D) None of above
576. If the hypothesis in an experiment is wrong, what step does a scientist have to go back to in the Scientific Method?
- (A) Define the problem
 - (B) Gather information
 - (C) Develop a hypothesis
 - (D) Test the hypothesis
577. When should the literature review be conducted in the research process?
- (A) After data analysis
 - (B) Before hypothesis formulation
 - (C) At the end of the report
 - (D) Throughout the research process
578. Explain the importance of replication in research.
- (A) Replication helps verify the reliability of research findings.
 - (B) Replication is not necessary in research.
 - (C) Replication decreases the credibility of research.
 - (D) Replication is only important in theoretical research.
579. You are preparing to write a research paper. Which of the following best describes a structured approach to starting your research?
- (A) Select a topic, develop a research question, conduct preliminary research, and identify credible sources
 - (B) Write your conclusion first, then find sources
 - (C) Only use websites for information
 - (D) Skip preliminary research and go straight to writing
580. An important step before writing a literature review is:
- (A) Developing research hypotheses
 - (B) Conducting experiments
 - (C) Reviewing and analyzing relevant literature systematically
 - (D) Collecting raw data from the field
581. What is a potential disadvantage of using purchased research material?
- (A) It is always free.
 - (B) It is always easy to access.
 - (C) It can be expensive.
 - (D) It is always outdated.

582. Which step of the research process that concerned with the people who will read the report?
- (A) Identify and formulate the problem
 - (B) Design the sample and method of data collection
 - (C) Determine the research design
 - (D) Interpret, discuss, and present the findings
583. The second step of the scientific method is to develop a ____, which is an idea that explains the observations of a natural process such as those we examine in geoscience.
- (A) Data set
 - (B) Theory
 - (C) Test
 - (D) Hypothesis
584. If you were conducting a survey, in what order would you perform the following tasks?
A) analysis; B) observation; C) sample; D) statistic
- (A) B A C D
 - (B) C B D A
 - (C) C B A D
 - (D) A C B D
585. Generalization can ____ a study.
- (A) Shorten
 - (B) Strengthen
 - (C) Lengthen
 - (D) Weaken
586. What is the main purpose of conducting a literature review in IT research?
- (A) To summarize the key findings of previous studies
 - (B) To identify research gaps and establish the theoretical foundation
 - (C) To validate the research hypothesis
 - (D) To collect primary data for the research study
587. ____ is a process of applying the step by step procedure of solving problems or cases towards finding answers and solutions.
- (A) Information
 - (B) Immersion
 - (C) Inquiries
 - (D) Investigation
588. To position your work, you must understand where your work lies on the dimensions that are appropriate to your discipline: theoretical or applied, study or case study, and so on.
- (A) True
 - (B) False
589. A statement of the problem may be included in writing a research proposal.
- (A) TRUE
 - (B) FALSE
590. When complex problems occur, it is best:
- (A) To take them as is and look at the end goal
 - (B) To take them as is without looking at the end goal
 - (C) To break them down into benchmarks to monitor along the way to the goal
 - (D) To only find an alternative and choose a strategy
591. Why is the arrow from 'Modify theory' back to 'Generate hypothesis' important in the scientific cycle?
- (A) It shows that failed hypotheses must be retested with the exact same methodology
 - (B) It demonstrates that science is a self-correcting cycle that refines theories over time
 - (C) It indicates that scientists should keep testing until they get the results they want
 - (D) It proves that all theories eventually become facts through repeated testing
592. Addressing a research question
- (A) Study (investigation)
 - (B) Study subject or participant
 - (C) Informants
 - (D) Researchers or investigators

593. Where do you provide a step-by-step account of what the researcher and participants did during the research study?
- (A) Procedure.
 - (B) Design.
 - (C) Introduction.
 - (D) Abstract.
594. A teacher gives the task: "Investigate the sum of consecutive numbers." A student notices $2+3+4=9$ and $4+5+6=15$. Which phase is this?
- (A) Conjecturing
 - (B) Generalizing
 - (C) Justifying conjectures
 - (D) Problem posing
595. To say that the evidence presented relates to the topic in an appropriate way, you would say the evidence is
- (A) Useless
 - (B) Important
 - (C) Insignificant
 - (D) Relevant
596. Providing proof that standards are being achieved.
- (A) National Standards
 - (B) Accommodations
 - (C) Accountability
 - (D) Achievement Gap
597. What does the scientific method of research include?
- (A) Observing results, forming a theory, conducting experiments, and analyzing data.
 - (B) Making predictions, conducting surveys, analyzing data, and drawing conclusions.
 - (C) Collecting data, forming a hypothesis, conducting interviews, and drawing conclusions.
 - (D) Proposing hypotheses, conducting research, and creating or modifying theories based on results
598. What is the first phase of research process?
- (A) PLANNING
 - (B) IMPLEMENTATION
 - (C) EVALUATION
 - (D) PROPOSAL
599. A list of the steps anyone could follow to conduct an experiment.
- (A) Observations
 - (B) Question/problem
 - (C) Materials
 - (D) Procedures/method
600. Keyword searches are most helpful after ____
- (A) Early stages of research-before writers have begun narrowing their insights.
 - (B) Support claims made in argument, to help explain an idea, or even to help explain the history or significance of some topic.
 - (C) You are seeking out a particular source or author by name.
 - (D) You have generated a list of possible words and phrases related to your topic.
601. Exploratory Scientific Method (Inductive) follows the following order ____
- (A) Theory, hypothesis, data, description
 - (B) Observations, description, theory, prediction or hypothesis
602. Which term describes the process of using evidence and reasoning to support or refute a claim?
- (A) Argumentation
 - (B) Persuasion
 - (C) Explanation
 - (D) Description
603. The loss of subjects from a study over time is called:
- (A) Control
 - (B) Crossover
 - (C) Attrition
 - (D) None of above

- 604.** A direct claim should begin with:
- (A) Apology
 - (B) Background story
 - (C) Emotional language
 - (D) Clear purpose
- 605.** The process of building scientific arguments starts from?
- (A) Observing and capturing scientific events.
 - (B) Detecting contradictions in scientific papers.
 - (C) Self-formulating appropriate hypotheses.
 - (D) Proposing scientific hypotheses.
- 606.** Why is it important for scientists to be able to replicate the results of a study?
- (A) To confirm the finding of the original study
 - (B) To choose a random sample
 - (C) To establish proper procedures
 - (D) To form a hypothesis that can be tested
- 607.** What is the role of methodology in research?
- (A) Guiding the research process
 - (B) Writing conclusions
 - (C) Teaching students
 - (D) Collecting grades
 - (E) Memorizing terms
- 608.** Which statement, from the list below, does NOT fit with the other listed statements?
- (A) The researcher can interact with participants
 - (B) The researcher can ask questions based on participants' responses
 - (C) The researcher tests hypothesis
 - (D) The researcher discusses questions with participants in small groups.
- 609.** Which step comes last in writing the research background?
- (A) Describe the field
 - (B) Summarize the current research base
 - (C) Describe "hot topics"
 - (D) Explain your hypothesis testing
- 610.** What does implementing the research plan involve?
- (A) Analyzing the collected data
 - (B) Conducting the research according to the outlined methodology
 - (C) Reporting findings to stakeholders
 - (D) Defining the research objectives
- 611.** When you notice something interesting or curious about the world around you.
- (A) Hypothesize
 - (B) Observe
 - (C) Record Data
 - (D) Experiment
- 612.** A male, 50-year-old teacher with a Master's degree reports having no training in PBL. This specific data set will be used by the researchers to:
- (A) Immediately exclude the teacher from the study.
 - (B) Help build the demographic profile required by Research Question 1.
 - (C) Falsify the main comparative hypothesis immediately.
 - (D) Prove that PBL cannot be integrated in that school.
- 613.** The final step in the problem-solving model is to
- (A) Take action
 - (B) Evaluate alternatives and select the best option
 - (C) Evaluate the action
 - (D) Identify various solutions
- 614.** The process of drawing of inferences or conclusions from known or assumed facts. (a)
- (A) Seasoning
 - (B) Reasoning
 - (C) Incoming
 - (D) Outgoing

- 615.** A detailed account of the research process, including the methodology, sample, and research subjects
- (A) References
 - (B) Table of Contents
 - (C) Account of Investigation
 - (D) Findings
- 616.** What is the biggest pitfall that most students deal with during the research process?
- (A) Getting stuck in a loop of constantly looking for more sources
 - (B) Not finding any sources for research
 - (C) Completing the research process too quickly
 - (D) Ignoring the research process
- 617.** Which of the following is a primary step in conducting research?
- (A) Choosing a research topic
 - (B) Writing the conclusion
 - (C) Publishing the results
 - (D) Citing sources
- 618.** Which term is an appropriate academic synonym for "examine"?
- (A) Review
 - (B) Check out
 - (C) Investigate
 - (D) Look at
- 619.** Which section most directly affects the validity of the study?
- (A) Introduction
 - (B) Methodology
 - (C) Results
 - (D) Discussion
- 620.** Summarizing the current research base helps to:
- (A) Identify gaps in existing studies
 - (B) Repeat previous research exactly
- 621.** A summary and evaluation of previously published research studies and relevant works that are related to the topic of the current study, providing a foundation for the research and highlighting existing knowledge in the field.
- (A) Significance of the Study
 - (B) Review of Related Literature
 - (C) Conceptual Framework
 - (D) Scope and Limitations
- 622.** The following are methods used to test hypotheses except:
- (A) Traditional (computed value) method
 - (B) P-value method
 - (C) Confidence interval method
 - (D) Survey method
- 623.** Which of the following practical issues should a sociologist consider before doing research?
- (A) Cost of research
 - (B) Time required to do research
 - (C) The availability of the information
 - (D) All of the above
- 624.** Practice-oriented research began to emerge, and research-oriented journals started publication in several countries
- (A) 1850s
 - (B) 1950s
 - (C) 1960s
 - (D) None of above
- 625.** Research writing follows a systematic process.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
- 626.** You do a Google search to find out what other people know about your question
- (A) Experimenting
 - (B) Poll the audience
 - (C) Hypothesis
 - (D) Background knowledge

- 627.** Organise the following steps of intervention research in a sequence 1. Identification of objectives 2. Problem formulation 3. Selection of single subject design 4. Intervention strategies 5. Pre-intervention assessment 6. Assessment of intervention effects 7. Drawing of conclusions
- (A) 2, 1, 3, 5, 4, 6, 7
(B) 1, 2, 3, 4, 5, 6, 7
(C) 3, 1, 2, 4, 5, 6, 7
(D) 3, 2, 1, 5, 4, 6, 7
- 628.** In the formulation of recommendations, why is it important to acknowledge any limitations or constraints?
- (A) To undermine the credibility of the study
(B) To demonstrate transparency and humility
(C) To avoid offering any suggestions
(D) To ignore potential areas for future research
- 629.** The factors and variables not to be included in the investigation.
- (A) Scope
(B) Delimitations
(C) Scope and delimitations
(D) None of above
- 630.** A marketing research project that has a poorly defined problem statement is most likely to result in:
- (A) Clear, actionable insights.
(B) Valid and reliable data.
(C) Wasted resources and irrelevant findings.
(D) A low-cost research process.
- 631.** A review of the literature prior to formulating research questions allows the researcher to do which of the following?
- (A) To become familiar with prior research on the phenomenon of interest
(B) To identify potential methodological problems in the research area
(C) To develop a list of pertinent problems relative to the phenomenon of interest
(D) All of the above
- 632.** A research with deductive reasoning
- (A) Starts with a theory and then tests it
(B) Starts with observations and then forms a theory
(C) Starts with a hypothesis and then proves it wrong
(D) Starts with a conclusion and then finds evidence
- 633.** A review of the literature can BEST be defined as a ____
- (A) List of at least 20 journal articles.
(B) Discussion of the appropriate methodology for conducting a study.
(C) Systematic identification and analysis of information related to the research problem.
(D) List of the five most important articles written on the topic.
- 634.** Why is collaboration important in academic research?
- (A) It limits the perspectives of authors.
(B) It broadens perspectives and enhances reviews.
(C) It simplifies writing processes.
(D) It discourages comprehensive work.
- 635.** It originates with a problem, followed by the gathering of data in a logical and orderly manner guided by a reasonable guess or hypothesis and ends with a conclusion based on observable facts or data.
- (A) Interpreting
(B) Controlled
(C) Rigorous
(D) Systematic
(E) Objective
- 636.** What should be considered when choosing a research project?
- (A) The duration of previous studies

- (B) The researcher's personal interest and practicality
 - (C) The cost of literature sources
 - (D) The complexity of data analysis tools
- 637.** Involves identifying, locating, assessing, and analyzing the information you need to support your research question, and then developing and expressing your ideas.
- (A) Research
 - (B) Research process
 - (C) Survey
 - (D) Data gathering
- 638.** What do you do after you come up with your hypothesis?
- (A) Conclude
 - (B) Test your hypothesis
 - (C) Do a victory dance
 - (D) Tell your teacher
- 639.** When starting literature review what is the first step?
- (A) Identifying the research question
 - (B) Finding articles
 - (C) Planning the study
 - (D) Finding websites
- 640.** What are the commonly used ways to clarify unclear terms in a research question?
- (A) Constitutive definitions and definitions by example
 - (B) Constitutive definitions and operational definitions
 - (C) Researcher-created definitions, definitions by example, and operational definitions
 - (D) Constitutive definitions, definitions by example, and operational definitions
- 641.** During preliminary research, which of the following is NOT a recommended activity?
- (A) Gain background knowledge
 - (B) Identify key terminology
 - (C) Discover major perspectives on your topic
 - (D) Write your final report
- 642.** Line experiment on conformity
- (A) Harry Harlow
 - (B) Stanley Milgram
 - (C) Philip Zimbardo
 - (D) Solomon Asch
- 643.** Which of the following steps comes after data collection in case study?
- (A) Analysis and interpretation
 - (B) Testing hypothesis
 - (C) Tabulating data
 - (D) Administering tools
- 644.** The researcher ____ the product to validators before try out it to the students
- (A) Validates
 - (B) Sends
 - (C) Makes
 - (D) Reads
- 645.** Which of the sets of activities best indicate the cyclic nature of action research strategy?
- (A) Reflect, Observe, Plan, Act
 - (B) Observe, Act, Reflect, Plan
 - (C) Act, Plan, Observe, Reflect
 - (D) Plan, Act, Observe, Reflect
- 646.** What are some strategies for narrowing down a research topic?
- (A) Ignoring the audience
 - (B) Avoiding preliminary research
 - (C) Guessing randomly
 - (D) Brainstorming, conducting preliminary research, defining the scope, and considering the audience
- 647.** A team of scientists publishes their experiment results. Why is this important?
- (A) So others can test and verify their findings
 - (B) To prove they were correct
 - (C) To keep their work secret
 - (D) To avoid peer review

- 648.** Who benefits from the findings of the study, as stated in the significance of the study?
- (A) Only the researcher's peers
 - (B) People or institutions involved in the field, such as students, educators, or the community
 - (C) Only the institution sponsoring the research
 - (D) No one, since it's a purely theoretical study
- 649.** When I look for and collect data for FLAWS in my design, I am at this step:
- (A) Design a solution.
 - (B) Build/Test prototype.
 - (C) Evaluate solution.
 - (D) None of the above.
- 650.** When planning to do social research, it is better to:
- (A) Approach the topic with an open mind
 - (B) Do a pilot study before getting stuck into it
 - (C) Be familiar with the literature on the topic
 - (D) Forget about theory because this is a very practical undertaking
- 651.** ILSOPA/ Research Process
- (A) Initiate, Locate, Select, Organize, Present, Assess
 - (B) Initiate, Locate, Sort, Organize, Present, Assess
 - (C) Initiate, Locate, Select, Organize, Produce, Assess
 - (D) Initiate, Locate, Select, Organize, Present, Assimilate
- 652.** Your purpose in doing RRL is
- (A) Dual
 - (B) Plural
 - (C) Specific
 - (D) Singular
- 653.** In which step of the scientific method do scientists TEST to see if their hypothesis was right?
- (A) Making an Observation
 - (B) Making a Hypothesis
 - (C) Conducting an Experiment
 - (D) Drawing Conclusions
- 654.** If your research is based on the effects of a particular drug on patients with diabetes, your research implications could highlight how administering that drug does or does not help the patients and further suggest measures for regulating that drug.
- (A) True
 - (B) False
- 655.** Which one of these is a good research report to write about?
- (A) Poptarts
 - (B) Popcorn
 - (C) The Civil War
 - (D) Slivers
- 656.** By paying attention to the key points mentioned, the subject should be chosen correctly. The problem chosen should engross the researcher and hold a ___ position in their mind so that they can resolve all of the problems involved with the research study.
- (A) Individual
 - (B) Positive
 - (C) Prominent
 - (D) Distinct
- 657.** Which phase of the action research cycle determines who does what and when?
- (A) Plan
 - (B) Act
 - (C) Observe
 - (D) Reflect
- 658.** Which pair of actions is central to the research process?
- (A) Forecasting and fundraising activities
 - (B) Summarizing and advertising findings

- (C) Gathering and interpreting information
 - (D) Guessing and persuading audiences
- 659.** When should you update or revise your digital notecards during your research process?
- (A) Only after you complete your final presentation
 - (B) At the beginning of your research before gathering evidence
 - (C) After gathering evidence and refining your research question, to ensure they support your narrative
 - (D) Once you have created them, they should never be changed
- 660.** If a researcher finds unexpected themes in interview data, what should they do?
- (A) Ignore them
 - (B) Consider revising research questions
 - (C) Delete them from analysis
 - (D) Redo the entire study
- 661.** Choosing a relevant, significant, and interesting research topic is important because:
- (A) It increases the likelihood of meaningful and impactful research outcomes.
 - (B) It guarantees immediate publication of the research.
 - (C) It ensures the research will be easy to complete.
 - (D) It eliminates the need for further study.
- 662.** Which step comes immediately after conducting a literature review in the Scientific Method?
- (A) Disseminate findings
 - (B) Collect data
 - (C) Form a hypothesis; give operational definitions to variables
 - (D) Analyze data
- 663.** When doing a literature review, you should always organize and summarize everything you have in writing.
- (A) True
 - (B) False
- 664.** Statistical methods involved in carrying out a study include planning, designing, collecting data, analyzing, drawing meaningful interpretation and reporting of the research findings.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
- 665.** What is the main challenge in ensuring research quality?
- (A) Funding the research
 - (B) Selecting a research topic
 - (C) Maintaining methodological consistency
 - (D) Publishing the research findings
- 666.** What is the primary purpose of a literature review in research?
- (A) To summarize every single study ever conducted on your topic
 - (B) To demonstrate your ability to find academic source
 - (C) To situate your study within the existing body of knowledge and show how it contributes to the ongoing scholarly conversation
 - (D) To prove that your research topic is completely original.
- 667.** One of the aims of the scientific method in research is to:
- (A) Confirm triangulation
 - (B) Introduce new variables
 - (C) Improve data interpretation
 - (D) Eliminate spurious relations
- 668.** If a research starts with a problem and ends with a problem, it is ____
- (A) Empirical
 - (B) Logical
 - (C) Cyclical
 - (D) Critical

669. Choosing a topic is
(A) Aimed and disdainful process
(B) Deliberate and strategic process
(C) Time consuming but hopeful process
(D) Tedious and self tiring process
670. A well-supported scientific explanation based on extensive evidence is known as a scientific ____
(A) Hypothesis
(B) Explanation
(C) Theory
(D) Law
671. Each note card should have a heading that
(A) Briefly tells you what kind of information is on the card
(B) Tells you the nickname of the source from which it came
(C) Tells you what paragraph you'll use it in when you write the essay
(D) Tells you one fact or idea from your research
672. In the deductive research process, what is the first element that researchers must establish to guide the development of hypotheses and research questions?
(A) Theory
(B) Variable
(C) Hypothesis
(D) Question
673. Which of the following is the second step of empirical study in quality of life?
(A) Formulation of hypothesis
(B) Formulation of objective
(C) Review of related literature and theoretical framework
(D) Identification of the problem
674. A set of techniques for acquiring new knowledge, investigating questions of interest, and modifying or correcting previous knowledge.
(A) Survey
(B) Scientific process
(C) Inquiry
(D) Evaluation
675. A research can be divided into ____ large parts
(A) 2
(B) 3
(C) 4
(D) 5
676. What do you call to the selection and annotation of available documents (both published and unpublished), which contain information, ideas, data and evidence related to the topic that a person proposes to research on.
(A) Background of the Study
(B) Title
(C) RRL
(D) Significance of the study
677. A careful way of looking for something
(A) Hypothesis
(B) Inquiry
(C) Investigation
(D) Evidence
678. What is the role of a research proposal in the research process?
(A) To submit research findings to reputable journals or conferences
(B) To obtain informed consent from participants
(C) To cultivate a culture of inquiry, innovation, and continuous improvement
(D) To outline the plan and rationale for the research study
679. Which of the following would most improve this literature review?
(A) Replacing old studies with newer ones
(B) Adding more citations from different countries
(C) Identifying gaps in current findings and linking them to the proposed research question
(D) Including a personal opinion about social media use

680. Replication of studies is essential for verifying findings and building confidence in ____ theories.
- (A) Psychological
 - (B) Economic
 - (C) Political
 - (D) Mathematical
681. Content includes not only facts but also concepts and values, no topic must be extensively discussed at the expense of other topic.
- (A) Significance
 - (B) Relevance
 - (C) Balance
 - (D) Self-sufficiency
682. Which activity would be an appropriate first step when designing an experiment?
- (A) A-reporting a conclusion based on multiple experimental traits
 - (B) B-researching the problem, using information from a variety of sources
 - (C) C-creating a data table to organize experimental observations
 - (D) D-repeating the experiment with a different hypothesis
683. In the process of conducting research "Formulation of Hypothesis" is followed by
- (A) Analysis of Data
 - (B) Collection of Data
 - (C) Statement of Objectives
 - (D) Selection of Research Tools
684. In which of these problems, is the actual message lost in the abundance of transmitted information?
- (A) Selecting Perception
 - (B) Filtering
 - (C) Over Communication
 - (D) Under Communication
685. The published articles in an academic field
- (A) Sample
 - (B) Literature
 - (C) Hypothesis
 - (D) Measure
686. After choosing a topic to investigate and writing a testable question, it is important to find out as much ____ as you can about your topic, so that you can make a good hypothesis
- (A) Question
 - (B) Information
 - (C) Hypothesis
 - (D) Problem
687. When conducting action research, after identifying and diagnosing a problem that is important to you, the next step is to:
- (A) Use the results of the study to generate additional research.
 - (B) Implement the findings to solve or improve a local problem.
 - (C) Systematically plan and conduct a research study.
 - (D) Generalize the findings to other action research settings.
688. The review committee assesses:
- (A) Quality, originality, and feasibility of research proposal
 - (B) Researcher's handwriting
 - (C) Funding amount only
 - (D) None
689. Match the following statements to their most applicable phase within the action research (AR) cycle. "We are currently collecting test scores for the course of the intervention."
- (A) Plan.
 - (B) Act.
 - (C) Observe.
 - (D) Reflect.
690. Which of these is the correct order for steps of scientific research?
- (A) Hypothesisquestionexperimentresults-theoryconclusion
 - (B) Questionexperimenttheoryhypothesisresultsconclusion

- (C) Question hypothesis experiment results conclusion theory
(D) Theory question hypothesis experiment conclusion results
691. A Table of Specifications is developed after the test is written.
(A) FACT
(B) BLUFF
692. What is the primary goal of a Review of Related Literature in research?
(A) Summarize and synthesize evidence
(B) List every source ever published
(C) Replace original data collection
(D) Promote the author's perspective
693. Which is the first step in the ethnographic research?
(A) Be clear about the purpose of the research.
(B) Decide on the site and the sample for the study
(C) Begin data collection
(D) Analyze and interpret the data and write an ethnographic account of your experience
694. "The goal of this study was to examine the influence of uncertainty on emotional distress and recovery following myocardial infarction (MI)." This sentence could best be described as a:
(A) Problem statement
(B) Statement of purpose
(C) Research question
(D) None of above
695. What is the first step in approaching your chosen research topic?
(A) Review related literature
(B) Understand what the topic is about
(C) Select a research problem statement
(D) Identify ethical issues
696. The last step in the scientific method is formulating the hypothesis.
- (A) True
(B) False
(C) All the above
(D) None of the above
697. What is a literature review in the context of the scientific method?
(A) A summary of one's own opinions on a topic.
(B) A thorough search through previously published studies relevant to a particular topic.
(C) A list of books and articles one intends to read.
(D) A peer review of a scientific article before publication.
698. Which is a key part of writing a review of related literature?
(A) Organizing studies by theme or concept
(B) Writing personal stories
(C) Avoiding research terms
(D) Mixing unrelated topics
699. Which is the order of the research process?
(A) Collect data; analyze the problem; design the research; evaluation of the plan; define the sample
(B) Define the problem; design the research; collect data; analyze data; make recommendations for a plan of action; evaluation of plan
(C) Analyze data; act on the plan; design the research; evaluation of the plan
(D) Act; analyze; evaluation; define; plan
700. Since the delimitation parameters are within the researcher's control, readers need to know why they were set, — alternative options were available, and why these alternatives were rejected.
(A) What
(B) When
(C) How
(D) Which

- 701.** A good literature review consists of ____
(A) Simply summarizing sources
(B) Only citing references that support your argument.
(C) Defining the need for your research problem
(D) None of the above
- 702.** Why is it important to define the problem in the marketing research process?
(A) It helps in identifying the right research methods
(B) It helps in increasing the sales of the company
(C) It helps in reducing the production cost
(D) It helps in hiring the right employees
- 703.** A Gantt chart is used to:
(A) Plan research activities
(B) Identify the type of study design
(C) Estimate the budget
(D) Present research results
(E) List the tasks to be done
- 704.** What is the purpose of the project plan when conducting the Independent Research Project?
(A) To provide a summary and record of the problems encountered in the research process
(B) To provide an initial summary and outline of the complete research process
(C) To provide context to the research and document the values, attitudes and feelings of the researcher
(D) To detail the findings of research and trends within the data
- 705.** T/F: Significance of the study is presented in either inductive or deductive perspective.
(A) True
(B) False
- 706.** A field study begins with:
(A) A hypothesis
(B) Data collection
(C) Analysis
(D) Report writing
- 707.** Once you've figured out what problem you want to tackle, you need to ____
(A) Do your research
(B) Design your solution
(C) Build a prototype
(D) Test your solution Edit
- 708.** The research is a process.
(A) Never ending
(B) Cyclic
(C) Difficult
(D) Academic
- 709.** It gives strong justification for selecting such research problem in his/her capacity as researcher.
(A) Background of the Study
(B) Definition of Terms
(C) Research Title
(D) Statement of the Problem
- 710.** First step in measurement is
(A) Decision of what to measure
(B) Decision of how to measure
(C) Marking of the test
(D) None of above
- 711.** What is one of the suggested steps before writing the review of related literature?
(A) Start writing without gathering sources
(B) Avoid citing previous research
(C) Use only one source for the review
(D) Make an outline of topics and subtopics
- 712.** Which of the following cognitive tendencies is most closely related to the problem of experimenter bias?
(A) The availability heuristic
(B) Functional fixedness
(C) The representative heuristic
(D) Confirmation bias

713. What does determining specific information needs involve?
- (A) Identifying the target market
 - (B) Establishing a budget for the research
 - (C) Selecting the research team
 - (D) Outlining the types of data required to address the research problem
714. Which is the scientific method in order of how to apply to psychology?
- (A) Test hypothesis, formulate question, form hypothesis, draw conclusion, report results
 - (B) Formulate question, form hypothesis, test hypothesis, draw conclusion, report results
 - (C) Draw conclusion, formulate question, form hypothesis, test hypothesis, report results
 - (D) Formulate question, form hypothesis, test hypothesis, draw conclusions
715. My chocolate candy bar was missing from my room and my little brother had chocolate all around his mouth. I think he ate my chocolate. This is an example of ____
- (A) A prediction
 - (B) A classification
 - (C) An inference
 - (D) A qualitative observation
716. What does it mean that scientific knowledge must be critical?
- (A) The researcher must constantly evaluate the design, process, and results of the investigation
 - (B) The researcher must reject prior theories outright
 - (C) The researcher should avoid revising methods once a study begins
 - (D) The researcher must focus only on positive findings
717. How is called a written summary of journal articles, books that describe the past and current state of information on the topic of research study?
- (A) Quantitative studies
 - (B) Literature review
 - (C) Correlational studies
 - (D) Qualitative studies
718. What should be planned in the second step of survey research?
- (A) Research design
 - (B) Data collection methods
 - (C) Sampling strategy
 - (D) Data analysis techniques Edit
719. Which of the following occurs in the early stages of a research project?
- (A) Creating an appendix
 - (B) Conducting a literature review
 - (C) Presenting primary data in tables
 - (D) Comparing key primary research findings
720. The main purpose of finalization of research topics and sub-topics is
- (A) Collection of Literature
 - (B) Collection of Questions
 - (C) Collection of Statistics
 - (D) Collection of Responses
721. This should present the reason for choosing the topic and conducting the study?
- (A) Rationale
 - (B) Locale
 - (C) Statement of Hypothesis
 - (D) Significance of the Study
722. This section may contain some empirical observations and the need to explore the problem and some other relevant conditions.
- (A) Background of the Study
 - (B) Introduction
723. What is the last part of a research process?
- (A) Research Problem
 - (B) Review of Related Literature
 - (C) Collecting & Analyzing Data
 - (D) Interpret & Report

724. What does the term "reproducibility" in research refer to?
- (A) The ability to replicate study results using the same methods
 - (B) The ease of publishing results
 - (C) The uniqueness of a study
 - (D) The speed of conducting research
725. In addition to providing all background material needed for your research, what is another function of the background chapters?
- (A) Provide a stepping-off point for your research
 - (B) Meet the word limit requirement for the diploma work
 - (C) Improve my reading and summarizing skills
 - (D) Make me an expert in my field
726. TRUE OR FALSE: The title "Online Classroom and Learner Aptitude of SHS Teachers" is a research title.
- (A) TRUE
 - (B) FALSE
727. This portion of the research shows the contributions of the study either to a body of scientific knowledge, to practitioners in the area of the research or any other groups which will benefit to the results of the study. What part of Chapter 1 is it?
- (A) Definition of Terms
 - (B) Significance of the Study
 - (C) Table of Contents
 - (D) Acknowledgement
728. What role does the literature review play in the introduction of a research study?
- (A) It helps identify research gaps and supports the problem statement
 - (B) It presents the data collected in the study
 - (C) It is only used for referencing
 - (D) It summarizes the conclusions of the study
729. A key characteristic of past research that guides researchers in new research questions is that:
- (A) Extensive research conclusively and definitively answers research questions
 - (B) Studies typically generate more research questions than they answer
730. The research process begins with a very broad idea of a topic
- (A) TRUE
 - (B) FALSE
731. What is the role of a literature review in a research project?
- (A) To summarize the research findings
 - (B) To provide a comprehensive overview of existing research
 - (C) To list all the sources used
 - (D) To describe the research methodology
732. All of the people that you met in town are very strange. You conclude that everyone in town is very strange.
- (A) Inductive
 - (B) Deductive
733. Which of these is a valid reason for choosing a research topic?
- (A) It has no existing literature
 - (B) The topic is common
 - (C) It is easy to research
 - (D) It interests the researcher
734. What is the main tip for writing a great survey or poll?
- (A) Ask for two things at once
 - (B) Keep questions different from each other
 - (C) Let most questions be optional to answer
 - (D) Do a test drive
735. In his/her teaching, Teacher D moves from particular instances to tentative generalizations that are Subjected to further verification. Teacher D engages himself/herself in:
- (A) Intuition

- (B) Inductive logic
(C) Deductive logic
(D) Philosophical analysis
- 736.** Which of the following does NOT describe Review of Related Literature?
(A) Establishes the importance of a topic
(B) Predicts the possible outcome of a study
(C) Proves researcher's familiarity with significant and/or up-to-date research relevant to the topic
(D) Justifies the researcher's choice of research question, theoretical or conceptual framework, and method
- 737.** Which process cycles through plan, act, observe, reflect?
(A) Literature review
(B) Case study
(C) Survey design
(D) Action research
(E) Interview method
- 738.** I got 50 water drops on my dime so I think that I can get 70 on my nickel. This is an example of ____
(A) A qualitative observation
(B) An inference
(C) Classification
(D) Prediction
- 739.** Every research proposal, regardless of length should include two basic sections. These are:
(A) Research question and research methodology
(B) Research proposal and bibliography
(C) Research method and schedule
(D) Research question and bibliography
- 740.** The review of the related study is important while undertaking a research because
(A) It avoids repetition or duplication.
(B) It helps in understanding the gaps.
(C) It helps the researcher not to draw illogical conclusions.
(D) All of above.
- 741.** Research methods can be selected by a researcher prior to formulating the research objectives
(A) True
(B) False
- 742.** What is the first phase in the research process for a quantitative study?
(A) The empirical phase
(B) The conceptual phase
(C) The design phase
(D) The analytic phase
- 743.** First step in the traditional process of scientific research.
(A) Observation
(B) Formulating Hypothesis
(C) Research Question
(D) Evaluation
- 744.** What is the question that defines the time frame for doing the research?
(A) When
(B) Where
(C) Who
(D) Why
(E) Not Given
- 745.** How does a research adviser contribute to the success of a scientific study?
(A) By providing financial support
(B) By offering expertise and guidance
(C) By conducting all experiments
(D) By writing the final report
- 746.** What is a systematic method call for identifying, evaluating and synthesising the existing works produced by other researchers?
(A) Report
(B) Research
(C) Review of Related Literature
(D) Reference Materials Edit

747. While planning a report, "Make a list of all the potential topics or sections of the report" is enrolled as:
- (A) Define the audience
 - (B) Define the problem and the purpose of the report
 - (C) Determine the ideas to include
 - (D) Collect the information
748. Some academicians are staunch supporters of things like a 20 participant per question. Well if your survey has 30 questions, that means that you'll need at least 600 respondents! In this situation, what kind of steps are you going to use?
- (A) Clean dataset
 - (B) Validity
 - (C) Pilot Test
 - (D) 5-points
749. The Research Topic is ____
- (A) Narrow the purpose into specific questions that the researcher
 - (B) Addressed the purpose of the study
 - (C) A subject or issue that a researcher is interested in when conducting research
 - (D) None of above
750. Which of the following is not included in the background of the study?
- (A) The problem
 - (B) Review of Related Literature used as evidences
 - (C) The results of the study
 - (D) Research gap
751. True or False-The steps of the Scientific Method do not need to be completed in order.
- (A) True
 - (B) False
752. What is the second term in action research?
- (A) Execution planning
 - (B) Evaluation
 - (C) Problem identification
 - (D) Hypothesis building
753. State clearly the general contribution/s of the present study to various groups (students, teachers, administrators, parents, community, etc.)
- (A) Scope and Delimitation
 - (B) Background of the Study
 - (C) Statement of the Problem
 - (D) Significance of the Study
754. This helps to determine whether the topic is worth studying, and it provides insight into ways in which the researcher can limit the scope to a needed area of inquiry.
- (A) Abstract
 - (B) Methodology
 - (C) Results
 - (D) Literature review
755. The scientific method is made up of several:
- (A) Stones
 - (B) Experiments
 - (C) Problems
 - (D) Steps
756. Which step of the design process would you determine if the product solved the problem?
- (A) Define the Problem
 - (B) Design Solution
 - (C) Present Solution
 - (D) Experiment
757. It highlights the aims and objectives of the systematic investigation as well as the problem which the systematic investigation sets out to solve.
- (A) Discussion
 - (B) Review of Literature
 - (C) Introduction/ Rationale
 - (D) Conclusion
758. Which section of a research report includes a description of how the study was done?
- (A) Research procedures

- (B) Results and discussion
(C) Purpose of current research
(D) Conclusion
- 759.** The analysis of data should follow the sequence of the statement of the problem because:
- (A) It ensures that the findings address the research objectives accurately.
(B) It makes the data collection process faster.
(C) It allows for more complex statistical analysis.
(D) It reduces the need for a literature review.
- 760.** Psychologists do not fully accept the results of their own or other people's studies until the results have been replicated
- (A) True
(B) False
- 761.** Data acquisition and exploration step comes after:
- (A) Modeling
(B) Evaluation
(C) Problem Scoping
(D) None of these
- 762.** The "Who does what, when" chart is created in the ___ phase of the action research cycle.
- (A) Observe.
(B) Act.
(C) Plan.
(D) Reflect.
- 763.** Which of the following steps of the scientific method is exemplified by the researcher reviewing the literature and focusing on a specific problem that has yet to be resolved?
- (A) Identify a topic
(B) Analyze the collected information
(C) Describe the procedure to collect information
(D) State the results of the data analysis
- 764.** Rearrange the following steps: A. Method B. Research Question C. Strategy
- (A) A-B-C
(B) B-C-A
(C) C-A-B
(D) C-B-A
- 765.** What is the role of "critical analysis" in reviewing existing research?
- (A) To accept all research findings without questioning them.
(B) To identify strengths, weaknesses, and gaps in the literature.
(C) To avoid forming any opinions about the research.
(D) To focus solely on the positive aspects of the research.
- 766.** If an experiment's conclusion is different from the expected outcome, what should the scientist do?
- (A) Assume the experiment was wrong
(B) Reanalyze data and check for errors
(C) Never conduct the experiment again
(D) Ignore the findings
- 767.** Directions: Perform the following task. Referring to your background of the study and research problem, which of the following is the next step in designing your quantitative research?
- (A) List your research questions.
(B) Write your conclusion.
(C) Collect your data.
(D) Analyze your results.
- 768.** What is the significance of the background and significance of the research?
- (A) Helps collect and understand information
(B) Is irrelevant to the study
(C) Is only for academic purposes
(D) Is a waste of time
- 769.** In research, which part do the data evidence belong to in the structure of a proof?

- (A) Argument
 - (B) Evidence
 - (C) Method
 - (D) Point
770. Once the paper is approved by the panel of examiners during the proposal or oral defense, it is now the time for data gathering and collection.
- (A) CONCEPTUALIZATION PHASE
 - (B) DESIGN PHASE
 - (C) EMPIRICAL PHASE
 - (D) ANALYTICAL PHASE
 - (E) DISSEMINATION PHASE
771. Characteristics of a Good Literature Review are
- (A) Simply summarizes sources
 - (B) Only citing references that agree with your argument.
 - (C) Define the need for your research problem
 - (D) None of the above
772. It is a series of steps designed to help you solve problems and answer questions.
- (A) Scientific Research
 - (B) Scientific Notation
 - (C) Scientific Attitude
 - (D) Scientific Method
773. Select the correct answer in each item by encircling the letter of your choice. Which of the following best describes the purpose of research?
- (A) To work independently.
 - (B) To improve reading.
 - (C) To have knowledge.
 - (D) To gather and interpret data.
774. Academic research involves ____
- (A) Formulating questions about the topic of research
 - (B) Carefully collecting information using established methodologies and techniques
 - (C) Properly citing and reference your sources to avoid plagiarism
 - (D) All answers are correct.
775. Which of the following is usually a special one-time operation that must be completed over a limited time period?
- (A) Batch.
 - (B) Patch.
 - (C) Project.
 - (D) Word.
776. Which of the following is NOT one of the general scientific research steps?
- (A) Forming a research question
 - (B) Testing a hypothesis
 - (C) Basing conclusions on personal opinions
 - (D) Analyzing the results of a test
777. According to Vu Cao Dam, how many steps does the research process of a scientific topic consist of?
- (A) 4
 - (B) 5
 - (C) 6
 - (D) 7
778. Before you begin collecting data, you need to consider things EXCEPT:
- (A) Aim
 - (B) Type of Data
 - (C) Procedures
 - (D) Analyzing results
779. Because of the number of things that can go wrong in research there is a need for
- (A) Flexibility and perseverance
 - (B) Sympathetic supervisors
 - (C) An emergency source of finance
 - (D) Wisdom to know the right time to quit
780. Why is reviewing the literature important in psychological research?
- (A) It helps to ignore previous studies

- (B) It provides a basis for forming a hypothesis
(C) It allows for random guessing
(D) It is unnecessary for research
- 781.** Which of the following is the initial step when reviewing literature for a research project?
(A) Analyzing sources thoroughly
(B) Writing the research objectives
(C) Identifying search terms and keywords
(D) Summarizing key findings
- 782.** What is the primary purpose of creating a research plan?
(A) To conduct planned research
(B) To observe audience behavior
(C) To define the purpose of the research
(D) To define the demographics of the audience
- 783.** A ____ is a document proposing a research project, generally in the sciences or academia, and generally constitutes a request for sponsorship of that research.
(A) Hypothesis
(B) Sampling
(C) Research Proposal
(D) Research Design
- 784.** A researcher designs an experiment to test how variables interact to influence job-seeking behaviours. The main purpose of the study was:
(A) Description
(B) Prediction
(C) Exploration
(D) Explanation
- 785.** What ensures research validity?
(A) Clear methodology
(B) Intuition
(C) Speed
(D) Volume
(E) Authority
- 786.** Recommendations should be addressed to:
(A) The sample respondents
(B) Relevant stakeholders based on research implications
(C) Peer reviewers of the study
(D) Theoretical experts in the field
- 787.** In the context of research, what does the term 'literature review' refer to?
(A) A summary of your research findings
(B) A detailed analysis of a single source
(C) An overview of existing research on a topic
(D) A list of all sources cited
- 788.** After formulating the research problem the researcher has to undertake an extensive
(A) Field study.
(B) Population study.
(C) Data collection work.
(D) Literature survey.
- 789.** Using deductive reasoning, what can you conclude from the following statements? If Johnny has fifty dollars, then Johnny will buy the new FIFA game. Johnny has fifty dollars.
(A) Johnny will invest in the stock market
(B) Johnny will buy the new Mario Kart game
(C) Johnny will buy the new FIFA game
(D) The new FIFA game is awesome
- 790.** This includes purpose and reason behind the conduct of the study.
(A) Assumption of the Study
(B) Scope and Delimitation
(C) Significance of the Study
(D) Background of the Study
- 791.** What does it mean when a study is "replicated"?
(A) The study is published in a journal
(B) The study is repeated to verify results
(C) The study is conducted with a new hypothesis
(D) The study is conducted with a different sample

792. The content of the communication.
- (A) Referent
 - (B) Sender
 - (C) Message
 - (D) Channels
793. The literature review is necessary for writing a research proposal.
- (A) TRUE
 - (B) FALSE
794. What is a major purpose of a research critique?
- (A) To summarize the main features of a study
 - (B) To identify areas of adequacy and inadequacy in a study so that conclusions can be drawn about the quality of the study's evidence
 - (C) To encourage researchers to continue their line of inquiry
 - (D) To identify and expose mistakes of a study
795. This is the step of the scientific method where you decide what you are testing
- (A) Observation
 - (B) Question
 - (C) Experiment
 - (D) Hypothesis
796. Weighs the strengths and weaknesses of the source to gauge its relevance and usefulness with advancing your thesis.
- (A) Evaluative
 - (B) Informative
 - (C) Indicative
 - (D) Summative
797. What is the stage during which the problem is 'investigated in all directions', as per Wallas?
- (A) Verification
 - (B) Illumination
 - (C) Incubation
 - (D) Preparation
798. When searching for a specific topic, the topic should be divided into ____
- (A) Smaller subtopics
 - (B) Pictures
 - (C) Large sentences
 - (D) None of above
799. The Review of Related Literature and Studies are arranged in a ____ approach.
- (A) General
 - (B) Specific
 - (C) Thematic
 - (D) Event-based
800. A literature review organized chronologically would most likely be structured by which feature?
- (A) Theoretical frameworks used
 - (B) Publication dates and periods
 - (C) Methods and instruments
 - (D) Regions and populations studied
801. The company will need to research the idea from a legal and business standpoint.
- (A) Make a Prototype
 - (B) Document It
 - (C) Research It
 - (D) File a Patent
802. In order to pursue the research, which of the following is priorly required?
- (A) Developing a research design
 - (B) Formulating a research question
 - (C) Deciding about the data analysis procedure
 - (D) Formulating a research hypothesis
803. Having a good rapport to established with the researchers, and between the researchers and the employees in the organization, can enabling the full cooperation in the project or research.
- (A) True
 - (B) False

- 804.** What is the role of researchers in ensuring the accuracy of a scientific study?
- (A) Providing financial support
 - (B) Conducting thorough experiments and analysis
 - (C) Writing the research title
 - (D) Submitting the study for publication
- 805.** Gracie is assigned a science project. Where should she begin her research?
- (A) A science website for kids.
 - (B) A television show.
- 806.** How can a qualitative researcher determine if their initial "hunch" or "premonition" about a phenomenon is worth investigating further?
- (A) By ignoring their hunch and focusing on quantitative data.
 - (B) By conducting a preliminary exploration of the phenomenon through observations, interviews, or document analysis.
 - (C) By assuming that their hunch is always accurate.
 - (D) By relying on the opinions of friends and family.
- 807.** Before a proposal is approved, it should be:
- (A) Skimmed quickly
 - (B) Reviewed and possibly revised for clarity and feasibility
 - (C) Decorated
 - (D) Ignored
- 808.** It shapes the justification of the research problems in order to provide the legal basis of defining their parameters.
- (A) Conceptual framework
 - (B) Theoretical framework
 - (C) Significance of the Study
 - (D) None of above
- 809.** It expounds on the study's probable impact to education, science, technology, on-going researchers and etc.
- (A) Assumptions
 - (B) Conceptual Framework
 - (C) Research Locale
 - (D) Significance of the Study
- 810.** After appraisal, what decision must be made regarding a study?
- (A) Whether the title is engaging
 - (B) If it has colorful figures
 - (C) Whether it matches personal beliefs
 - (D) Applicability to your practice
- 811.** What is the main benefit of having a research adviser in a scientific study?
- (A) Increased publication chances
 - (B) Improved research quality
 - (C) Faster research process
 - (D) More funding opportunities
- 812.** A good literature review should be all EXCEPT:
- (A) Relevant to the topic
 - (B) Based on credible sources
 - (C) Excessively numerous without evaluation
 - (D) Objective and unbiased
- 813.** Although retaining reliable research evidence that will generate valid conclusions is a difficult challenge, success is MORE PROBABLE because psychologists ____
- (A) Test hypotheses that are known to be true
 - (B) Interpret evidence subjectively
 - (C) Follow the Scientific Method
 - (D) None of above
- 814.** Check list to frame the research title is covered in ____ framework.
- (A) SMART
 - (B) ART
 - (C) SWOT
 - (D) SWOC

- 815.** How many sources should you review for your background (literature review) chapter?
- (A) 5 is enough.
 - (B) 10 is OK.
 - (C) As many as my team members think is enough.
 - (D) As many as is necessary to provide sufficient background for my research.
- 816.** What is a potential issue if a researcher does not review the literature properly?
- (A) They may save time and money
 - (B) They may unintentionally redo research
 - (C) They may find new research areas
 - (D) They may improve their research skills
- 817.** A series of steps designed to help you solve problems and answer questions
- (A) Scientific method
 - (B) Observation
 - (C) Hypothesis
 - (D) Experiment
- 818.** Steps you follow to conduct an experiment
- (A) Conclusion
 - (B) Procedures
 - (C) Experiment
 - (D) Data
- 819.** The process of identifying theories relevant to a research problem is typically part of:
- (A) Conceptual framework development
 - (B) Methodology section
 - (C) Data collection
 - (D) Statistical analysis
- 820.** Without research questions, your RRL structure can appear in a form called
- (A) Narrative
 - (B) Statistical
 - (C) Outline
 - (D) Tabular
- 821.** Which is the primary purpose of reviewing related literature?
- (A) To provide background and context for the study
 - (B) To make the paper longer
 - (C) To replace data collection
 - (D) To avoid writing a conclusion
- 822.** Which words should you look up in a dictionary?
- (A) Every word that you're not sure you can pronounce
 - (B) Every word you don't know
 - (C) Any word that you don't know that seems important to your research topic
 - (D) Any word that has three syllables or more
- 823.** A research critique can best be defined as an.
- (A) Appraisal of a study's strengths and weaknesses
 - (B) Conclusion about the utilization potential of a study's findings
 - (C) Criticism of a study's flaws
 - (D) Summary of a study's key points
- 824.** What is not the goal of a literature review?
- (A) Help create a space for research.
 - (B) Provide background information for understanding an article.
 - (C) Display a deep understanding of the research participants.
 - (D) Identify holes in the literature which call for further research.
- 825.** Which of the following is TRUE concerning the research process?
- (A) There may be some shifting back and forth between the steps of the research process
 - (B) The most important step in the research process is to identify the study hypothesis
 - (C) The steps in the research process are never carried out in an orderly fashion
 - (D) The steps of the research process always proceed in the same way in each study

- 826.** You notice that Mr. McGill has John Mayer's music playing when you walk into class 5 days in a row and conclude that Mr. McGill's favorite artist is John Mayer. This is an example of ____
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Constructing a theory
 - (D) Making an observation
- 827.** The first guideline in formulating quantitative research problem and research questions, which means, open to empirical investigation.
- (A) Attainable
 - (B) Realistic
 - (C) Researchable
 - (D) Specific
- 828.** Before choosing a position or side, you should
- (A) Develop a thesis
 - (B) Write the introduction
 - (C) Consider all the evidence
 - (D) None of above
- 829.** What is the step 1 in Ethnography research process?
- (A) Identify Intent and the Type of Design and Relate Intent to Your Research Problem
 - (B) Write the Report Consistent with Your Design
 - (C) Analyze and Interpret Data within a Design
 - (D) None of above
- 830.** News changes quickly-sometimes before a paper can even be published! This drawback is called
- (A) Journalism
 - (B) Mass communication
 - (C) Shelf life
 - (D) Medium
- 831.** Scientific inquiry usually begins by:
- (A) Forming a hypothesis
 - (B) Running an experiment
 - (C) Constructing a theory
 - (D) Making an observation
- 832.** A good qualitative problem statement
- (A) Defines the independent and dependent variables.
 - (B) Conveys a sense of emerging design.
 - (C) Specifies a research hypothesis to be tested.
 - (D) Specifies the relationship between variables that the researcher expects to find.
- 833.** Why is it important to consider the "accessibility of participants and data" when evaluating a research problem?
- (A) To ensure the research can be conducted without any contact with participants.
 - (B) To assess the feasibility of gathering the required information for the study.
 - (C) To guarantee the researcher will have no difficulty collecting the necessary data.
 - (D) To make the research process more time-consuming.
- 834.** Why might the order of steps in the scientific method change?
- (A) To make it more interesting
 - (B) To fit a specific schedule
 - (C) Because more questions arise from collected data
 - (D) To confuse the researcher
- 835.** Used to explore and find new or additional information about a certain topic
- (A) Interpreting Information
 - (B) Government Agencies
 - (C) Bibliography
 - (D) Research Process
- 836.** The first step in conducting a survey is:
- (A) Defining the objectives
 - (B) Collecting data
 - (C) Analyzing results
 - (D) Presenting findings

837. If you identify an issue, collect data, analyze it, and develop and implement a plan this is known as:

- (A) Action research
- (B) Scientific method
- (C) Self-efficacy
- (D) Pedagogical knowledge

838. Field work is the stage number ____ when we use surveys in a research

- (A) 2
- (B) 3
- (C) 4
- (D) 5

839. This part of research includes information

which would focus attention on the IMPORTANCE and VALIDITY OF THE PROBLEM. It is the general orientation to the problem area.

- (A) Introduction
- (B) Background of the Study
- (C) Scope and Limitation
- (D) Significance of the Study

840. What is the first step in experimental research?

- (A) Creating an experiment
- (B) Formulating a hypothesis
- (C) Identifying a research problem
- (D) Testing hypothesis

1.3.2 Steps of Research

1. In the 'Navigating the Research Journey' flowchart, what is the step that occurs immediately after 'Design methodology'?

- (A) Data collection
- (B) Data analysis
- (C) Interpretation
- (D) Literature review

2. Research must observe a step-by-step process.

- (A) True
- (B) False

3. Which step is taken after we identify a problem to study?

- (A) Analyze the data
- (B) Locate resources
- (C) Conduct data collection
- (D) Develop an action plan

4. Research Step #2: Organizing means ____

- (A) Collecting information
- (B) Showing how information connects
- (C) Creating a format to show research
- (D) Putting information in order (like an outline)

5. In research, what is the significance of planning and scheduling?

- (A) To confuse the research team
- (B) To allocate resources and time effectively
- (C) To ignore deadlines
- (D) To prioritize unimportant tasks

6. Which of the following lists the five distinct steps involved in the scientific method used in research?

- (A) Observation, Hypothesis, Experiment, Analysis, Conclusion
- (B) Introduction, Literature Review, Data Collection, Results, Discussion
- (C) Planning, Execution, Reporting, Reviewing, Publishing
- (D) Questioning, Surveying, Interviewing, Summarizing, Presenting

7. A series of steps used by scientists to solve a problem or answer a question.

- (A) Scientific method
- (B) Recipe
- (C) Data collection
- (D) Metric system

8. "Should I change my method of teaching?" is a question posed by a teacher carrying out Action Research. The teacher is in the ____ step of action Research.
- (A) Problem Identification
 - (B) Plan of action
 - (C) Reflect
 - (D) Observation
9. What is an action plan in research?
- (A) A way to summarise findings
 - (B) A detailed timeline and steps to complete research
 - (C) A conclusion
 - (D) A list of books
10. What is the fourth step in the research process, following the procedures/design phase?
- (A) Data-Collection Phase
 - (B) Problem Identification
 - (C) Literature Review
 - (D) Data Analysis
11. What activity occurs during Step 6 of the Scientific Method?
- (A) Collecting the data
 - (B) Drawing conclusions
 - (C) Writing the research report
 - (D) Conducting the experiment
12. In conducting research, put the following steps in the order they should be completed: A) literature review B) methods C) conclusion D) analysis E) problem statement F) data
- (A) A-F
 - (B) B, C, E, F, A, D
 - (C) E, A, B, F, D, C
 - (D) F-A
 - (E) A, E, F, B, D, C
13. The fifth step in the research process is ____
- (A) Organize and write
 - (B) Read and take notes
 - (C) Identify relevant sources
 - (D) Cite your references
14. What is the last stage of the scientific process
- (A) Hypothesis
 - (B) Pose question
 - (C) Share findings
 - (D) Test hypothesis
15. Steps in doing a research can be a ____ process.
- (A) Linear
 - (B) Circular
 - (C) Cyclical
 - (D) Random
16. In which step of the cycle would you work out where the data will come from or how you will collect it?
- (A) Data
 - (B) Analysis
 - (C) Plan
 - (D) Problem
17. Dr. Marsh did an exploratory study on a topic that he thought was very interesting. He spent hours and hours collecting data and analyzing the data, but when he tried to interpret the data he didn't get anywhere-nothing made sense. Which of the following steps in the research process do you think that Dr. Marsh skipped?
- (A) Informing others
 - (B) Designing the study
 - (C) Background research
 - (D) Selecting a topic
18. The ____ step in the research model is to share the results.
- (A) First
 - (B) Second
 - (C) Next to last
 - (D) Last
19. Can you skip a step in the market research process?
- (A) Yes; who cares just wing it right?
 - (B) No; every step is vital for beneficial answers

20. Marcella is an action researcher concerned with the effects of feedback on science concept learning. She has identified a problem important to her, that is, whether feedback hinders inquiry, and she has systematically planned a study to address the problem. The next step for Marcella is to:
- (A) Diagnose the problem.
 - (B) Conduct the study.
 - (C) Implement the findings.
 - (D) Generate additional questions.
21. Which of the following is/are step/steps of Research plan?
- (A) Objectives of the study.
 - (B) Review of literature.
 - (C) Research hypothesis.
 - (D) All of these.
22. The marketing manager needs to know the cost of the research project before approving it. During which of the following stages of the marketing research process would such a consideration most likely take place?
- (A) Step 1-defining the problem
 - (B) Step 1-creating decision alternatives
 - (C) Step 1-drafting the research objectives
 - (D) Step 2-develop the research plan
 - (E) Step 3-information collection
23. Identify the correct sequence of research steps: [2013-SEPTEMBER]
- (A) Selection of topic, review of literature, data collection, interpretation of findings
 - (B) Review of literature, selection of topic, data collection, interpretation of findings
 - (C) Selection of topic, data collection, review of literature, interpretation of findings
 - (D) Selection of topic, review of literature, interpretation of findings, data collection
24. Jonathan's data showed that household cockroaches moved away from raw cucumber slices. What step of the scientific method is this?
- (A) Questions/problem
 - (B) Hypothesis
 - (C) Experiment
 - (D) Conclusion
25. A set of step by step instructions.
- (A) Hypothesis
 - (B) Inquiry
 - (C) Design process
 - (D) Procedure
26. Generally the steps of scientific method are also the steps of
- (A) Research.
 - (B) Human life.
 - (C) Literary collection.
 - (D) None of the above.
27. Which step of the scientific method involves using your 5 senses?
- (A) Making an Observation
 - (B) Creating a Hypothesis
 - (C) Drawing Conclusions
 - (D) Analyzing Data
28. Select the correct order for these steps: (a) Test the theory; (b) Research knowledge base/Internet; (c) Identify the problem; (d) Document findings.
- (A) A, b, c, d
 - (B) C, b, a, d
 - (C) D, a, c, b
 - (D) D, c, b, a
29. "Collection, organization of data" belongs to step:
- (A) 2
 - (B) 3
 - (C) 4
 - (D) 5
30. Match five steps in the UNEC project with their appropriate explanation: Look at what is different in the foreign culture compared to your own
- (A) Understand your culture

- (B) Identify differences
 - (C) Empathize
 - (D) Use Cross-cultural skills
 - (E) ReflectTagsMatching
31. What is the very last thing you should do in the research process?
- (A) Choose a topic
 - (B) Do the research
 - (C) Find Sources
 - (D) Reflect on your work
32. Identify the correct sequence of research steps:
- (A) Selection of topic, review of literature, data collection, interpretation of findings
 - (B) Review of literature, selection of topic, data collection, interpretation of findings
- (C) Selection of topic, data collection, review of literature, interpretation of findings
 - (D) Selection of topic, review of literature, interpretation of findings, data collection
33. Using the action research model, which step should be performed after the problem has already been identified?
- (A) Collection and organization of data
 - (B) Reflection
34. What activity occurs during Step 4 of the Scientific Method?
- (A) Collecting the data
 - (B) Drawing conclusions
 - (C) Designing the experiment
 - (D) Conducting the experiment

1.3.3 Identification of Research Problem

1. What is the first step in the research model?
 - (A) Reviewing the literature
 - (B) Sharing the results
 - (C) Beginning the case study
 - (D) Choosing the subject matter
2. All of the following are the sources of quantitative research problem, EXCEPT?
 - (A) Agencies of the government
 - (B) Review of related literature
 - (C) Economic issues in society
 - (D) Others experience
3. Which are the three steps that researchers need to undergo to recognize a problem?
 - (A) Find a source of gap, actions that did not occur, understanding gap
 - (B) What was expected to happen, which were the result expectations that were not met, lack of feedback
 - (C) Something must be expected to happen, feedback on what happened must be received, expectations and feedback must be compared
 - (D) Prepare information, analyze the situation, understand problem
4. The part of research where the problem is identified:
 - (A) Methodology
 - (B) Introduction
 - (C) Results
 - (D) Abstract
5. The research purpose:
 - (A) Describe your target customers and clients.
 - (B) Establish competitive advantages.
 - (C) Specify the problem or opportunity to be explored.
 - (D) Is a possible answer to a research question.
6. Danny wants to test the effects of temperature on number of cricket chirps per minute. What is the problem Danny is testing?
 - (A) What is the effect of different temperatures on number of cricket chirps per minute?
 - (B) What is the effect of cricket chirps on temperature?
 - (C) How many chirps do crickets chirp a minute?

- (D) None of above
7. Why is identifying a problem statement crucial in research?
- (A) It simplifies the research process
 - (B) It determines the focus and direction of the research
 - (C) It is not necessary
 - (D) It avoids any hypothesis formulation
8. In addition, within research-based text such as doctoral thesis, a literature review identifies a research gap and articulates how a particular research addresses this gap. What is the meaning of research gap?
- (A) Under-researched areas
 - (B) Unexplored areas
 - (C) Explored Areas
 - (D) Researched Areas
9. Which of the following is a key step in the psychological scientific method?
- (A) Ignoring previous research
 - (B) Identifying and describing the problem
 - (C) Making assumptions without evidence
 - (D) Skipping data analysis
10. In the research model, specifying what it is that you want to learn about a topic happens during the stage of ____
- (A) Defining the problem
 - (B) Reviewing the literature
 - (C) Sharing the results
 - (D) Unobtrusive measures
11. What is the role of "personal experiences" in identifying potential research problems?
- (A) Personal experiences should be disregarded as they are irrelevant to research.
 - (B) Personal experiences can provide valuable insights and observations that lead to research questions.
 - (C) Personal experiences are the only source of valid research problems.
 - (D) Personal experiences always bias the research findings.
12. The first step in implementing a marketing research study is to
- (A) Develop a data-collection procedure.
 - (B) Analyze the situation.
 - (C) Define the problem.
 - (D) Develop an MkIS.
13. What is an indicator that a research topic may be too broad?
- (A) Receiving negative feedback
 - (B) Lacking interest in the topic
 - (C) Finding too many ideas
 - (D) Having too few ideas
14. Area of concern when there is a gap in knowledge that requires a solution
- (A) Field Note
 - (B) Research problem
 - (C) Reliability
 - (D) Research Significance
15. Feasibility is also an important factor for the selection of the research problem. The credentials, preparation, and experience of the researcher should be sufficient for the issue.
- (A) Resources Availability
 - (B) Urgency
 - (C) Area Culture
 - (D) Feasibility
16. A business located near a fault line is likely to identify ____ as a risk.
- (A) Theft
 - (B) Earthquake
 - (C) Labor relations
 - (D) Competitors
17. The research problem and research purpose are the same.
- (A) True
 - (B) False

18. What is the first step in the research procedures?
- (A) Set limits to the problem.
 - (B) Identify the problem to be solved
 - (C) Draw on current knowledge.
 - (D) None of above
19. What is an illustration in the context of defining a research problem?
- (A) A visual representation of data
 - (B) An example to clarify the problem
 - (C) A hypothesis
 - (D) A conclusion
20. What is a key consideration when assessing the feasibility of a research topic?
- (A) Access to participants and resources
 - (B) Existing literature on the topic
 - (C) Theoretical frameworks available
 - (D) Personal interests of the researcher
21. When American Airlines decided to review new ideas aimed at first-class passengers on very long flights, like an ultra high-speed Wi-Fi service and 124 channels of high-definition satellite cable TV, their first step in the marketing research process was to ____
- (A) Develop the research plan
 - (B) Define the problem and research objectives
 - (C) Collect the information
 - (D) Analyze the information
 - (E) Make the decision
22. The determination of the topic can be considered based on which of the following bases:
- (A) Personal viewpoint
 - (B) Free time
 - (C) Needs of others
 - (D) Whether the topic has scientific significance or not
23. The literature review helps researchers to:
- (A) Reinvent previous research
 - (B) Identify gaps and refine the research problem
 - (C) Avoid data collection
 - (D) Eliminate the need for hypotheses
24. Which is not an appropriate tool for identifying the problem for research?
- (A) Gap analysis
 - (B) Critical thinking
 - (C) Prediction
 - (D) None of above
25. The statement of an research problem or objective is often the ____ of the market research process.
- (A) Hardest
 - (B) Easiest
 - (C) Shortest
 - (D) Longest
26. The literature review usually identifies a gap in the field or a line of enquiry for your own research.
- (A) True
 - (B) False
27. Which of the following is NOT a source of research problem?
- (A) Literature review
 - (B) Personal opinions
 - (C) Personal experience
 - (D) Academic journals
28. Is this a good academic research topic? "What is the role of advertising in the world?"
- (A) No. It is too broad.
 - (B) No It is too narrow
 - (C) Yes. It is a good research topic.
 - (D) No. It is leading.
29. What helps most in identification of the research problem?
- (A) Review of related literature.
 - (B) Researcher's own experience.
 - (C) Discussion with the supervisor.
 - (D) All of the above.

30. A good research problem is measurable by using research instruments, apparatus or equipment, as well as statistical tools to arrive at scientific and meaningful results.
(A) True
(B) False
31. Find a definition of research problem:
(A) The broad subject matter addressed by the study
(B) A general educational issue, concern, or controversy addressed in research that narrows the topic
(C) The major intent or objective of the study used to address the problem.
(D) Planning a study, investigators should anticipate the time required for data collection and data analysis
32. Why is generating research ideas considered the initial stage of a research project?
(A) It sets the foundation for the entire research process.
(B) It determines the research methodology to be used.
(C) It helps to identify the research gaps in the field.
(D) It defines the research objectives and hypotheses.
33. Research problem is selected from the stand point of: [2008-JUNE]
(A) Researcher's interest
(B) Financial support
(C) Social relevance
(D) Availability of relevant literature
34. A scientist observes that some plants in her garden grow taller than others, even though they receive the same amount of water. What should be her first step in the scientific method?
(A) Conduct an experiment
(B) Form a hypothesis
(C) Identify the problem/question
(D) Draw a conclusion
35. The first step in preparing a report is to conduct research.
(A) True
(B) FALSE
36. The first step in selecting a research topic is:
(A) Formulating a thesis statement
(B) Brainstorming for ideas
(C) Writing the conclusion
(D) Conducting experiments
37. Which of the following aspects is not important when selecting a research problem?
(A) Minimum budget
(B) Issue which is relevant
(C) Impactful issue in the field
(D) Manageable within period of study
38. Before considering what literature to use in a project, first
(A) Make a good introduction
(B) Identify a topic to study
(C) Go to the library and look for samples of thesis book
(D) Consider your worldview
39. There are guidelines in choosing a research topic. Which of the following is considered irrelevant?
(A) Availability of the researchers
(B) Limitations on the subject
(C) Personal resources
(D) Interest in the subject
40. Hey students! Can you help Sairya and Amelia figure out the first step in the research process?
(A) Writing the conclusion
(B) Identifying a topic
(C) Citing sources
(D) Organizing information
41. It helps clearly identify the purpose of the research project you propose.
(A) Statement of the Problem

- (B) Significance of the Study
(C) Scope and Delimitations
(D) Research Objectives
42. What is the purpose of a statement of problem in research?
(A) To make the scope of the study unclear
(B) To avoid stating the key variables
(C) To clearly identify the problem being studied
(D) To confuse the readers
43. The problem selected must have
(A) Speed
(B) Facts
(C) Values
(D) Novelty
44. Choosing a topic that you can relate with will certainly make your research project ___ challenging.
(A) Less
(B) More
(C) Equally
(D) Extremely
45. Anika is starting her research project for her thesis. She knows that she needs to follow a structured process to ensure her research is effective. What is the first stage of the research process?
(A) Collect and analyze the data
(B) Develop and implement the research plan
(C) Report the findings
(D) Define the research problem
46. A research problem is:
(A) An opinion
(B) An unanswered question
(C) A known fact
(D) Always complex
47. Problem definition is the most important step in the marketing research project.
(A) True
(B) False
48. Experimental process for Introduction
(A) What is the problem?
(B) What did I do in a nutshell?
(C) How did I solve the problem?
(D) What does it mean?
(E) What did I find out?
49. Which of the following is the first process in doing research?
(A) Data Analysis
(B) Problem
(C) Research design
(D) Sampling
50. The shortcomings or the Limitations due to which the research will be conducted is known as ___?
(A) Objective
(B) Gap
(C) Rationale
(D) Aim
51. Research Problems could be in following forms, except ___
(A) Issue
(B) Gap
(C) Contradiction
(D) Difficulties
(E) Influence
52. This is a guideline in selecting research problem to avoid blaming others.
(A) Must be chosen by researcher himself
(B) Must be within the interest of researcher
(C) Must be within the specialization of researcher
(D) None of above
53. Problem identification research provides information about the marketing environment and helps diagnose a problem.
(A) TRUE
(B) FALSE

54. What is a scientific problem?
- (A) A question requiring research
 - (B) A solved task
 - (C) A known fact
 - (D) A rule
 - (E) An example
55. What is often the first step that co-workers should take when trying to solve a problem?
- (A) Identify the conflict/problem
 - (B) Select a mediator
 - (C) Develop an attitude
 - (D) Reach an agreement
56. Each step in the research proposal builds on
- (A) Authors critique.
 - (B) Problem statement.
 - (C) Peer critics.
 - (D) References.
57. Sources of researchable problems can include:
- (A) Researcher's own experiences as educators
 - (B) Practical issues that require solutions
 - (C) Theory and past research
 - (D) All of the above
58. Which of the following is an example of a research problem statement?
- (A) The purpose of this study is to examine the effect of sleep deprivation on memory recall.
 - (B) I think students need more sleep.
 - (C) People should sleep early.
 - (D) None of above
59. Which of the following examples describes a research problem that is not solvable?
- (A) A problem related to the price of products in a marketplace.
 - (B) A problem related to the existence of God in this universe.
 - (C) A problem related to global climate change
 - (D) A problem related to improving primary education
60. What initiates the process of research?
- (A) Problem
 - (B) Significance of the study
 - (C) Purpose
 - (D) Hypothesis
61. What is a key characteristic of a research problem?
- (A) Easy to solve
 - (B) Relevant to the researcher's profession
 - (C) Popular topic
 - (D) Large participant group
62. This is a situation or a condition that requires a solution.
- (A) Conclusion
 - (B) Data
 - (C) Experiment
 - (D) Problem
63. What should a good research problem be based on?
- (A) Past experiences
 - (B) Current problems and needs
 - (C) Personal interests
 - (D) Random topics
64. What is the first step in identifying a research topic in qualitative research?
- (A) Engaging with the research community
 - (B) Framing the research questions
 - (C) Exploring areas of personal and professional interest
 - (D) Reviewing existing literature
65. Which of the following is the first step in undertaking a marketing research problem?
- (A) Define the problem
 - (B) Solve the problem
 - (C) Collect problem-specific data

- (D) Analyze the situation
(E) Define a sample
66. The meaning and existence of the issue are both critical factors when considering a research problem. If the issue is important, the researcher is more likely to choose it.
(A) Researcher Knowledge
(B) Relative Importance
(C) Resources Availability
(D) Data Availability
67. When narrowing down a broad research topic, which factor should be considered?
(A) Popularity of the topic
(B) Availability of relevant information
(C) Random preference
(D) Only personal interest
68. Which of the following is NOT a criterion for assessing the significance of a research problem in a discipline?
(A) It benefits social actors
(B) It improves current practices.
(C) It increases the researcher's economic income.
(D) It promotes the development or testing of theories.
69. Information obtained from the DM, industry experts, and secondary data may not be sufficient to define the research problem.
(A) TRUE
(B) FALSE
70. What is a research phenomenon in the context of this lesson?
(A) A topic that needs further investigation
(B) A well-known concept in research
(C) A widely accepted theory
(D) A solved problem
71. The following are criteria of a research problem, except:
(A) Feasibility
(B) Researchability
(C) Interest
(D) Availability
72. What is the purpose of using a literature gap in research?
(A) To validate the researcher's personal experiences
(B) To summarize existing knowledge
(C) To identify areas that require further investigation
(D) To entertain the audience with stories
73. What is the reason for consulting handbooks, yearbooks, encyclopedias, or reviews in the initial stages of identifying a research topic?
(A) They are readily available.
(B) They provide an overview of the issues related to a topic.
(C) They are primary sources.
(D) They avoid reporting statistical data to interpret the results more readily.
74. Identify what chapter of a research study the given element belongs. STATEMENT OF THE PROBLEM
(A) Chapter 1
(B) Chapter 2
(C) Chapter 3
(D) Chapter 4
(E) Chapter 5
75. Which paragraph would explain where your research questions come from and the problem you intend to investigate?
(A) Literature Review
(B) Context
(C) Research Focus
(D) Implications
76. What are some common challenges in problem identification?
(A) Lack of information, unclear objectives, conflicting perspectives
(B) Too much information, clear objectives, aligned perspectives

- (C) Insufficient information, defined objectives, harmonious perspectives
(D) Abundance of information, vague objectives, consistent perspectives
77. Why is it important to evaluate a research problem before proceeding with the study?
(A) To waste time and resources on an unsuitable problem.
(B) To ensure the problem is significant, researchable, and feasible.
(C) To discourage the researcher from pursuing the study.
(D) To avoid making any contribution to knowledge.
78. What is a research problem?
(A) A question that a researcher seeks to answer
(B) A hypothesis to be tested
(C) A method of data collection
(D) A conclusion of the study
79. What is the first step in developing a research question?
(A) Identifying a broad area of interest
(B) Writing the introduction
(C) Conducting experiments
(D) Listing references
80. Which of the following is a sign of a good research topic?
(A) Creating confusion to readers.
(B) Translating into irrelevant research value.
(C) Demonstrating the usefulness of the study.
(D) Displaying irrelevance of the research paper.
81. The first step in solving a problem is ____
(A) Think of ways to solve
(B) Identify the problem
(C) Study solutions
(D) None of above
82. What is the first thing to do when doing research?
(A) Research
(B) Define the problem
(C) Create a title
(D) Make a work plan
83. The initial and one of the most significant steps in conducting the research process is ____
(A) Stating the research purpose
(B) Defining the research variables
(C) Identifying the research problem
(D) Determining the feasibility of the study
84. An educational issue within a broad topic area is known as the "research"
(A) Purpose
(B) Problem
(C) Question
(D) Hypothesis
85. What should researchers focus on after reviewing the literature?
(A) Consulting theoretical frameworks
(B) Identifying a broad area of interest
(C) Engaging with the research community
(D) Focusing on a specific phenomenon or problem
86. What is the first step in choosing a research project?
(A) Identifying a problem or issue
(B) Presenting findings
(C) Writing a literature review
(D) Conducting fieldwork
87. What is the first step of scientific methodology?
(A) Interpretation and Drawing Conclusions
(B) Observation and Analysis of Data
(C) Initial Observations and Asking Questions
(D) Experiment

88. A research problem is best described as:
- (A) A solved issue in literature
 - (B) A statement about an area of concern
 - (C) A confirmed theory
 - (D) A widely accepted belief
89. What is the first step in identifying research questions?
- (A) Conducting a thorough review of existing literature
 - (B) Determining the appropriate research design
 - (C) Defining the research problem or questions
 - (D) Choosing suitable data collection methods
90. A good research problem is
- (A) It can be tested through data collection and analysis
 - (B) It covers a wide range of issues
 - (C) Based on unsolved issues
 - (D) It can be generalised by different researchers
91. What is a researchable topic?
- (A) A topic that is interesting
 - (B) A topic with participants willing to serve and resources available
 - (C) A topic with a clear research question
 - (D) A topic that is easy to research
92. The first phase of research which involves forming an idea about what needs to be studied.
- (A) Conceptualization.
 - (B) Planning and Designing.
 - (C) Analyzing and Interpreting.
 - (D) None of the above.
93. A researcher in social planning gathers relevant facts to address a community issue. This activity most closely relates to which stage?
- (A) Identifying and articulating the problem
 - (B) Finalizing publication formatting
 - (C) Selecting random sampling frames
 - (D) Negotiating intellectual property
94. Abdelgafur, et al. (2020) discussed that a good topic should have the following characteristics except ____
- (A) Personal
 - (B) Manageable
 - (C) Researchable
 - (D) Interesting
95. Why is it important for a research problem to be time-bound?
- (A) Because a time frame is required in every activity; the shorter completion of the activity, the better.
 - (B) Because it makes the research more expensive.
 - (C) Because it allows for unlimited resources to be used.
 - (D) Because it ensures the research problem is vague and unclear.
96. The first step in researching history is to
- (A) Draw a conclusion
 - (B) Find a primary source
 - (C) Choose a topic
 - (D) Read an encyclopedia
97. The first step in the process is to identify the problem or formulate a research questions.
- (A) Identifying the problem
 - (B) Deciding the method of research
 - (C) Writing a report
 - (D) None of above
98. What does the “research gap” refer to in an academic article?
- (A) A section that provides the author’s personal views
 - (B) A conclusion to the study’s findings
 - (C) An area of research that has not been fully explored
 - (D) A tool or app to collect data

99. A research problem is characterized by
(A) Description of a relationship between variables
(B) Description of the aim of a study
(C) A question
(D) Description of a gap in knowledge
100. In using the scientific method to gather information, the researcher begins by
(A) Reviewing the literature on the problem
(B) Defining the problem
(C) Stating the hypothesis
(D) Disclosing the assumptions underlying the problem
101. Which source of research problems involves conclusions arising from professional challenges?
(A) Professional Trends
(B) Public Research
(C) Professional Experience
(D) Existing Theory
102. What is a research gap?
(A) A question that has already been answered once before
(B) A question that has never been answered before
(C) A question that has already been answered twice before
(D) A question that has already been answered several times before
103. What is step one of the Marketing Research process?
(A) Collect Data
(B) Define Problem
(C) Design Project
(D) Analyze Data
104. Why is it necessary to define the research problem?
(A) To ensure clarity and focus
(B) To collect data
(C) To analyse results
(D) To write the conclusion
105. How can literature survey help in the research process?
(A) By avoiding reading any previous work
(B) By narrowing down the research problem
(C) By not generating new ideas
(D) By not placing the research in the current context
106. What is the potential consequence of a poorly worded research problem statement?
(A) It ensures a clear understanding of the topic
(B) It may result in unnecessary reading and writing
(C) It can lead to a focused study
(D) It simplifies the research process
107. In the context of Psychological Research, what is the first step in the Scientific Method?
(A) Testing and/or Collecting Data
(B) Asking a question(s)
(C) Analyzing the data
(D) Interpreting the results
108. Which of the following is a good source of research problems?
(A) Friends
(B) Family members
(C) Politicians
(D) Real life experiences
109. The first step of research is: [2006-DECEMBER]
(A) Selecting a problem
(B) Searching a problem
(C) Finding a problem
(D) Identifying a problem
110. Below are some statements that can help you indicate the gap in the research, except ____
(A) “ ____ has been/has not been ____ (studied/reported/elucidated)”
(B) “ ____ the key question is/remains ____ “
(C) “ ____ it is important to address ____ “
(D) “This paper investigates ____ “

111. What may influence a researcher's choice of research topic and the questions they ask?
- (A) The impact of the work on people
 - (B) The success in bringing about change
 - (C) The researcher's values and beliefs
 - (D) The benefits to society
112. Research problem explains the Data Collection Techniques: Participant Observation, In-depth Interview, and Focus Group Discussion, and the possible output of the study could be included.
- (A) TRUE
 - (B) FALSE
113. You start planning a proposal by
- (A) Determining the factors.
 - (B) Determining the solutions.
 - (C) Scheduling the study.
 - (D) Stating the problem.
114. When searching for information, you must first ____
- (A) Decide on a topic
 - (B) Analyzing the results
 - (C) Organizing the work
 - (D) None of above
115. A good research topic should be:
- (A) Vague
 - (B) Broad
 - (C) Feasible
 - (D) Impossible
116. Is a statement about an area of concern, a condition to be improved, a difficulty to be eliminated, or a gap that exists in scholarly literature, in theory, or in practice that points to the need for meaningful understanding and deliberate investigation.
- (A) A research problem
 - (B) A research method
 - (C) A research question
 - (D) A research idea
117. What is typically the first stage in action research?
- (A) Identifying the problem
 - (B) Implementing the plan
 - (C) Collecting the data
 - (D) Reflecting on outcomes
 - (E) Writing the conclusions
118. What is the significance of public research in identifying research problems?
- (A) It avoids reading professional journals.
 - (B) It provides an overview of important studies conducted in a topic area.
 - (C) It focuses solely on experimental research.
 - (D) It eliminates the need for professional trends.
119. A question which requires a solution is ____
- (A) Observation
 - (B) Problem
 - (C) Data
 - (D) Experiment
120. It is what the researchers aim to answer later on as they go through the research endeavor
- (A) Research Problem
 - (B) Research Proposal
 - (C) Research Topic
 - (D) Research Title
121. When should you state your topic idea as a question in the research process?
- (A) During the evaluation of research findings.
 - (B) During the identification and development of your topic.
 - (C) After finding background information.
 - (D) After citing sources in your research paper.
122. It is the first step of doing research
- (A) Research title
 - (B) Observation
 - (C) Research problem
 - (D) Questions

123. "Problem-Identification" research is concerned with ____
- (A) Investigating and searching for what may be the problem facing or will face the brand
 - (B) Investigating and searching for optional solutions for a current defined problem
 - (C) Investigating the new problematic customer trends
 - (D) Investigating the new problematic market trends
124. What should you consider when choosing a research topic?
- (A) Length of the paper and personal interest
 - (B) Random selection without any thought
 - (C) Choosing a topic that is too broad
 - (D) Ignoring current issues
125. Most of the beginners in research suffer from
- (A) Problem blindness.
 - (B) Too many problems.
 - (C) Lack of training to tend a problem.
 - (D) None of these.
126. A good research problem should be novel. What does the highlighted word mean?
- (A) A good research problem should be something that is new.
 - (B) A good research problem should draw attention and interest from the other people.
 - (C) A good research problem should be useful and beneficial to its target population.
 - (D) A good research problem should improve the current state of existing technology.
127. The research problem
- (A) Is related to a concept or phenomenon needs to be understood because little research has been done on it.
 - (B) Involve the forms of data collection, analysis and interpretation that researcher propose for their studies.
 - (C) Is a strategy of inquiry in which the researcher derives a general, abstract theory of a process, action, or interaction grounded in the views of participants.
 - (D) None of above
128. To identify the focus of the study, research must identify ____ first.
- (A) Sample/Population.
 - (B) Title.
 - (C) Research Gap.
 - (D) Research Questions.
129. A question that asks what needs to be done to solve a problem:
- (A) Research objective
 - (B) Research problem
 - (C) Marketing research
 - (D) Relevant variables
130. Before beginning research
- (A) Get the opinions of your peers
 - (B) Make sure the topic is not too broad
 - (C) Make sure the topic has never been researched before
 - (D) Write your bibliography
131. All experiments begin with a ____
- (A) Problem or a question
 - (B) Conclusion
 - (C) Hypothesis
 - (D) Result
132. Existing social philosophies and generalizations may be of great help to design a research problem. In relation to this, which of the following is the most efficient way to determine a research gap based on the theories?
- (A) Immersing oneself in a community
 - (B) Interviewing at least a person
 - (C) Reading relevant literature and studies
 - (D) Synthesizing ideas from a day to day experience
133. How should you start a research project?
- (A) Read an overview of your topic and the subject area
 - (B) Ask your teacher how many sources you'll need

- (C) Take and organize notes
(D) Choose a topic that's neither too broad or too narrow
- 134.** Which statement best describes a research problem?
(A) It should only focus on theoretical aspects.
(B) It should add to existing knowledge in a meaningful way.
(C) It should be unrelated to previous research.
(D) It should be simple and straightforward.
- 135.** A qualitative research problem statement
(A) Specifies the research methods to be utilized
(B) Specifies a research hypothesis
(C) Expresses a relationship between variables
(D) Conveys a sense of emerging design
- 136.** To understand the background of a marketing research problem, the researcher must understand the client's firm and industry.
(A) TRUE
(B) FALSE
- 137.** The no. 1 stage in designing experimental research.
(A) Hypotheses
(B) Determining variables
(C) Problem/topic
(D) Experiment
- 138.** Lack of previous research studies on the topic which has allowed for further analysis
(A) Issues
(B) Insufficient
(C) Lack
(D) Limitations
