- 139.** Sub-fields must be listed which refer to those professional or major subjects. The researcher must then choose his area of interest from those sub-fields.
(A) Identifying Topic
(B) Review of Literature
(C) Developing a Framework
(D) Developing Title
- 140.** How can a researcher balance the need for a "feasible" research problem with the desire to address a complex issue?
(A) By choosing a complex issue and ignoring any feasibility limitations.
(B) By narrowing the scope of the research problem to a manageable aspect of the complex issue.
(C) By avoiding complex issues altogether and focusing on simple topics.
(D) By assuming that all complex issues are automatically feasible to research.
- 141.** How can a researcher ensure that their research problem addresses a genuine "gap" in the existing knowledge?
(A) By ignoring previous research and relying on personal opinions.
(B) By conducting a superficial review of only a few related articles.
(C) By critically analyzing the literature to identify inconsistencies, contradictions, or unanswered questions.
(D) By assuming that any research problem they come up with is automatically a gap in knowledge.
- 142.** Recommendations from theses, dissertations, and research journals can be used as sources of research problems.
(A) True
(B) False
- 143.** Booth et al. (2003) argue that a topic too broad can be identified by:
(A) Its excessive use of qualitative data
(B) Being unsummarizable in four or five words
(C) Its lack of empirical backing
(D) Its unclear objectives

- 144.** Considerations to measure the researchability of research problems are listed below, except —
(A) Time, Resources and skills
(B) Research Consultant
(C) Accessed to people & sites
(D) Novelty
(E) Contribution to knowledge and practice
- 145.** Match the statement with the correct term. The educational issue/problem within a broad topic area.
(A) Topic
(B) Problem
(C) Purpose
(D) Question
(E) Hypotheses
- 146. PURPOSE OF THE STUDY**
(A) THE PROBLEM AND ITS BACKGROUND
(B) REVIEW OF RELATED LITERATURE
(C) RESEARCH METHODOLOGY
(D) None of the above
- 147.** Research typically begins when a scholar identifies a situation that needs resolution. Which statement best captures this starting point?
(A) A perceived need for practical resolution

(B) An interest in testing advanced mathematics
(C) A requirement to replicate classic experiments
(D) A mandate to follow historical chronologies
- 148.** A specific issue or knowledge gap that a study seeks to solve is called:
(A) Scope
(B) Research Problem
(C) Literature Search
(D) Feasibility
- 149.** A research problem is feasible only when [2007-JUNE]
(A) It has utility and relevance
(B) It is researchable
(C) It is new and adds something to knowledge
(D) All the above
- 150.** What should the researcher do before defining a research problem?
(A) Should devote sufficient time to review the research already undertaken.
(B) Should collect data and analyze.
(C) Should prepare a research design.
(D) Should prepare a sample report.
- 151.** This step is about identifying what to study about.
(A) Conduct the research
(B) Write a draft
(C) Finalize the research
(D) Choose a topic
- 152.** Involves series of refinement processes that begin with identification of problem area and terminate one or more testable & answerable question.
(A) Problem initiating
(B) Problem statement
(C) Null hypothesis
(D) Defining & identifying problem
- 153.** The first step in identifying a research problem is:
(A) Data collection
(B) Literature review
(C) Formulating a hypothesis
(D) Selecting a statistical tool
- 154.** What does the term 'magnitude' refer to in the context of selecting a research problem?
(A) The complexity of the research question
(B) The number of sources available
(C) The scope and manageability of the topic
(D) The importance of the topic

155. What is the first and most important step in the research process?
- (A) Analyzing data
 - (B) Writing the research paper
 - (C) Identifying a research problem
 - (D) Conducting experiments
156. Which of these topics would make for the best news article:
- (A) Asking two friends about the lunch room food
 - (B) Complaining about how many hours we spend at school
 - (C) Researching why school lunch is the way it is, and finding out the costs to feed 1100 students
 - (D) Summarizing a news event that already happened and everybody already knows about
157. If the management decision problem is: "Should a new product be introduced?" determining consumer preferences and purchase intentions for the proposed new product is the most appropriate marketing research problem?
- (A) True
 - (B) False
158. The background of the study should:
- (A) Be a random collection of facts
 - (B) Provide context and relevance of the research problem
 - (C) Replace the methodology section
 - (D) Contain only statistical tables
159. How one can select a new problem of research from the researches which have been already completed?
- (A) By collecting comprehensive information from the research worker who have completed the research.
 - (B) By collecting information from the research supervisor.
 - (C) By searching the literature in the library.
 - (D) None of the above is correct.
160. Which of the following is NOT one of the five factors to determine whether a problem is researchable?
- (A) The problem is existing in the locality or country but no known solution to the problem
 - (B) The solution can be answered by using statistical methods and techniques
 - (C) The problem is already solved
 - (D) There are probable solutions but they are not yet tested
161. What is the primary purpose of identifying sources of research ideas?
- (A) To narrow down the scope of a research project.
 - (B) To generate a list of potential research topics.
 - (C) To determine the feasibility of a research project.
 - (D) To identify the most relevant theories for the research.
162. A good research problem should be interesting, meaning it should be;
- (A) A good research problem should be something that is new.
 - (B) A good research problem should draw attention and interest from the other people.
 - (C) A good research problem should be useful and beneficial to its target population.
 - (D) A good research problem should improve the current state of existing technology.
163. A local McDonald's franchise observes a decrease in their drive-through sales during the lunch hours (12-2pm).
- (A) Define the problem
 - (B) Apply results
 - (C) Obtain data
 - (D) Analyze data
164. A research problem is visible only when
- (A) The problem is researchable.
 - (B) Problem is new and it adds something new to the existing knowledge.

- (C) The problem has utility and relevance in the real world.
(D) All of the above.
- 165.** A research problem should be based on:
(A) Speculation
(B) Personal opinions
(C) Empirical evidence
(D) Assumptions only
- 166.** What is the first step in conducting research?
(A) Analyze Data
(B) Review the literature
(C) Design research
(D) Define research problem
- 167.** Which source of research problems is based on one's own life events?
(A) Practical Experience
(B) Personal Experience
(C) National Concerns
(D) Literature Search
- 168.** What does a statement of the problem provide?
(A) A detailed methodology
(B) A list of all sources used
(C) A summary of the findings
(D) The issue being addressed
- 169.** The purpose of interviewing experts is to help define the marketing research problem rather than to develop a conclusive solution.
(A) True
(B) False
- 170.** Which of the following indicates the first step of action research procedure?
(A) Review research literature
(B) Modify or redefine the initial statement of the problem
(C) Identify, evaluate, and formulate a problem
(D) Specify the research design
- 171.** Search, accumulation and processing of scientific, technical and patent information is not possible without:
(A) Choosing the goal, direction and topic of research work
(B) Registration of the results of research work
(C) Drawing up a program to optimize the factors under study
(D) Mathematical processing of research results
(E) Calculating the effectiveness of research results, scientific and technical products
- 172.** Your academic research and writing process should begin with (choose the MOST correct):
(A) Finding a journal article which is easy to read and understand
(B) Identifying the three main points of your essay
(C) Identifying an issue or problem which is open to dispute
(D) Identifying a belief or opinion of your own which you know you can prove
- 173.** Maya presented an idea for recycling empty water bottles to her principal. What would be the first step in developing her idea?
(A) Communicating the results of her research
(B) Developing a prototype
(C) Identifying the specific problem she wanted to solve
(D) None of above
- 174.** Researchers often derive their problem from the ____
(A) Hypothesis
(B) Qualitative analysis
(C) Thesis Statement
(D) Literature review

175. When choosing the problem to be studied, the researcher needs to emphasize the following things EXCEPT
- (A) Do the same research with others in the near future
 - (B) Whether or not research is done
 - (C) Avoid research related to political contradictions
 - (D) Feasible and reasonable
176. What is the primary purpose of stating a research problem?
- (A) To confuse the reader with complex terminology.
 - (B) To clearly articulate the issue that the research aims to address.
 - (C) To provide a definitive solution to the problem.
 - (D) To avoid conducting any actual research.
177. What is a research topic?
- (A) An issue that a researcher is interested in
 - (B) A random subject chosen by anyone
 - (C) A topic that has no relevance
 - (D) A topic that is too broad
178. ___ is undertaken to help identify problems that are perhaps not apparent on the surface and yet exist or are likely to arise in the future.
- (A) Problem identification research
 - (B) Segmentation research
 - (C) Problem solving research
 - (D) Marketing information systems
179. What criterion on the selection of research problem concerns on the “when” question?
- (A) Availability of the participants
 - (B) Costs and returns
 - (C) Hazards and handicaps
 - (D) Time factor
180. One of the main reasons for doing a research proposal is
- (A) To start the final report early
 - (B) To allow the client to choose the proper research design
 - (C) To present the problem and its importance to the researcher
 - (D) To force the client to accept the project.
181. Which of the following is NOT a step in identifying a research topic?
- (A) Reviewing existing literature
 - (B) Conducting quantitative analysis
 - (C) Consulting theoretical frameworks
 - (D) Engaging with the research community
182. What characteristic should a good research problem have?
- (A) It should be subjective.
 - (B) It should be empirical and verifiable
 - (C) It should be based on opinions.
 - (D) It should be purely theoretical
183. What is a crucial step in conducting effective research?
- (A) Skipping the literature review
 - (B) Identifying and defining the research problem
 - (C) Ignoring conflicting data
 - (D) Relying solely on internet sources
184. Once the main problem has been stated, the following questions should be answered by the researcher: Is the problem statement clear?
- (A) TRUE
 - (B) FALSE
185. Avani, Shaan, and Myra are planning a fun research project. What is the first step they should take?
- (A) Collect and analyze the data
 - (B) Develop and implement the research plan
 - (C) Report the findings
 - (D) Define the research problem

- 186.** Which is NOT a source of research problems?
- (A) Brainstorming
 - (B) Literature Search
 - (C) Feasibility
 - (D) Intuition
- 187.** The Scientific Method (First step)
- (A) Ask a Question
 - (B) Research
 - (C) Experiment
 - (D) Hypothesis
- 188.** What gap does the study aim to address?
- (A) Lack of science teachers in Pangasinan
 - (B) Local research on PBL integration in Eastern Pangasinan
 - (C) Absence of laboratory facilities nationwide
 - (D) Poor student attendance
- 189.** All of the following are possible sources of research topic EXCEPT?
- (A) Books
 - (B) Gossips
 - (C) Official gazette
 - (D) World wide web
- 190.** While Selecting a problem, problem which is ___ is no taken
- (A) Very Common
 - (B) Overdone
 - (C) Easy one
 - (D) Rare
- 191.** What characteristic of a research problem indicates that it is original and will make a significant contribution to the field of study?
- (A) Relevance: The problem is relevant to everyday life.
 - (B) Feasibility: The problem is feasible to investigate with available resources
 - (C) Familiarity: The problem is familiar and has been studied previously.
 - (D) Novelty: The problem is new and offers a fresh and unique perspective.
- 192.** Current and past researches can be used as sources of research problems because:
- (A) They help identify gaps and unresolved issues in existing knowledge.
 - (B) They always provide solutions to all research questions.
 - (C) They discourage new research topics from being explored.
 - (D) They only focus on outdated information.
- 193.** Imagine you're on a quest for knowledge! What's the first thing you need to do when you want to research something, just like Colin, Alexa, and Skye?
- (A) Identify the topic.
 - (B) Call your friends.
 - (C) Read every book in the library.
 - (D) None of the above
- 194.** How can a research problem be identified?
- (A) By not discussing with experts
 - (B) By guessing randomly
 - (C) By avoiding literature review
 - (D) By reviewing literature, observing real-world phenomena, discussing with experts, and identifying gaps in existing knowledge.
- 195.** While defining the research problem, the researcher is not required to state
- (A) The scope of the problem.
 - (B) The questions to be answered so as to make the problem clearer and more understandable.
 - (C) The special terms used in the title mean.
 - (D) Personal and special interests the researcher has in the problem.
- 196.** Among the following, which of the qualities does not pertain to the research problem?
- (A) Feasible
 - (B) Synchronous
 - (C) Ethical
 - (D) Potential value

- 197.** Tasks involved in defining the research problem include:
- (A) Discussions with decision makers
 - (B) Qualitative research
 - (C) Both A and B
 - (D) Neither A nor B
- 198.** General subject area chosen or assigned for research
- (A) Topic
 - (B) Transition words
 - (C) Keyword
 - (D) Accurate
- 199.** Which of the following is NOT a criterion for the selection of a research problem?
- (A) Novelty and avoidance of unnecessary duplication
 - (B) Availability of data and choice of method
 - (C) Ignoring the importance of the study to its field
 - (D) Cost and returns
- 200.** The first step in research is usually:
- (A) Hypothesis testing
 - (B) Identifying the research problem
 - (C) Data analysis
 - (D) Report writing
- 201.** The following are criteria for research problem selection except ____
- (A) Newness of the topic
 - (B) Availability of resources
 - (C) Peers' preferences
 - (D) Qualification of the researcher
- 202.** Which of the following would make a good PROBLEM?
- (A) How many students in our science class have blue eyes?
 - (B) 15 students have blue eyes.
 - (C) Every dog in the whole universe has blue eyes.
 - (D) None of above
- 203.** What does description of the research problem NOT include?
- (A) Assumptions underlying it.
 - (B) Theories on which it is based.
 - (C) Background of the study.
 - (D) Review of research done.
- 204.** What is a characteristic of a good research problem statement?
- (A) It is vague and open to interpretation
 - (B) It is clear and researchable
 - (C) It is lengthy and detailed
 - (D) It addresses multiple problems at once
- 205.** All of the following are guidelines in choosing a Research TOPIC except
- (A) Interest in the subject matter
 - (B) Controversial Topic
 - (C) Timeliness and relevant of the topic
 - (D) Availability of information
- 206.** If the desired data is available to the researcher, then the problem would be selected.
- (A) Data Availability
 - (B) Urgency
 - (C) Area Culture
 - (D) Feasibility
- 207.** Step 1 of Scientific Inquiry is
- (A) Identify the Problem
 - (B) Research
 - (C) Hypothesis
 - (D) Test Hypothesis (DATA)
- 208.** What is a common mistake in choosing a research problem?
- (A) Making the research problem too simple
 - (B) Choosing a problem that is of no value
 - (C) Avoiding duplication of work
 - (D) Making the problem specification clear

- 209.** What is the first thing you need to do when you want to research something?
- (A) Identify the topic.
 - (B) Call your friends.
 - (C) Read every book in the library.
 - (D) None of above
- 210.** What is the first step in formulating a focused research question about a social issue?
- (A) Collecting data from various sources
 - (B) Identifying the social issue and its significance
 - (C) Writing a conclusion based on existing research
 - (D) Selecting a random topic of interest
- 211.** Fundamental component of research foundation that involves identifying specific issue, difficulty, contradiction, or gap. It is also referred to as title.
- (A) Research problem
 - (B) Purpose
 - (C) Specific questions to be addressed
 - (D) Conceptual framework
- 212.** What is meant by 'deficiency in the evidence'?
- (A) Presenting reasons for the importance of studying the issue or concern
 - (B) Suggestions from other researchers that the problem needs to be studied.
 - (C) The past literature or practical experiences of the researchers does not adequately address the research problem
 - (D) An educational issue, concern, or controversy that the researcher investigates.
- 213.** The marketing research process begins by —
- (A) Developing a research plan
 - (B) Defining the problem, the decision alternatives, and research objectives
 - (C) Analyzing the internal environment
 - (D) Reading marketing research journals
 - (E) Contacting a professional research consultant
- 214.** What is the first stage of the research process?
- (A) Collect and analyze the data
 - (B) Develop and implement the research plan
 - (C) Report the findings
 - (D) Define the research problem
- 215.** Which step in quantitative research comes first when structuring a study?
- (A) Analyze statistical outputs
 - (B) Collect and code data
 - (C) State the research problem
 - (D) Select research design
- 216.** What is problem?
- (A) The uncontrolled situation
 - (B) Gap between actual and desired situation
 - (C) Highly correlated with hypothesis
 - (D) None of the above
- 217.** Which one of the following steps in the research process is true to be most critical for setting the direction of all phases of the research project?
- (A) Data collection and analysis
 - (B) Report writing
 - (C) Determining information types and sources
 - (D) Defining the problem
- 218.** How does a qualitative researcher typically begin their inquiry?
- (A) By formulating a specific hypothesis to be tested.
 - (B) By identifying a broad area of interest and narrowing it down.
 - (C) By conducting a statistical analysis of quantitative data.
 - (D) By ignoring any personal experiences or observations.
- 219.** When selecting a research problem, one should consider:
- (A) Its significance, feasibility, and researchability

- (B) Only its popularity
(C) Whether it is easy to solve
(D) The availability of immediate solutions
- 220.** Which of the following is commonly found in problem statements of research studies?
(A) A brief history of the issue at hand
(B) A recent increase in the issue
(C) Dissatisfaction with the current knowledge
(D) An identification of a specific set of factors
(E) All answers are correct
- 221.** The first step when you want to research a topic is to ____
(A) Head straight to Wikipedia to get a general knowledge of the topic.
(B) Check out a book about the topic
(C) Ask yourself what you already know-this helps you narrow your research's focus.
(D) Ask for help from an adult
- 222.** A company wants to know if their current sales strategy is effective. Ashley's task is to evaluate this using past sales data. What is the first question she should clarify before starting her data analysis?
(A) How much time should be allocated to this task?
(B) What data visualization tools will be used?
(C) What specific problem does the company want to solve with this analysis?
(D) Which machine learning model should be used?
- 223.** Following the steps in action research, what should be the initial step?
(A) Identify a problem area
(B) Triangulating data
- 224.** A good research problem should provide a good value for money, time, resources, and manpower while conducting the study. It simply means that a research problem should be;
(A) Cost-effective
(B) Innovative
(C) Interesting
(D) Practical
- 225.** Is a specific issue, difficulty, contradiction, or gap in knowledge that you will aim to address in your research.
(A) Personal Inclination
(B) Research problem
(C) Resources Availability
(D) Research question
- 226.** These are the common mistakes in choosing a research topic, EXCEPT
(A) Topic is too difficult
(B) Topic is too broad
(C) Sticking with the last topic that comes into mind
(D) Inadequate literature on the topic
- 227.** Which example illustrates locating a problem for a practical concern?
(A) Memorizing constitutional dates
(B) Tracing poetry metaphors across eras
(C) Cataloging ancient coins by weight
(D) Finding a workable solution to an issue
- 228.** List the four (4) steps in developing a research problem as mentioned in the passage:
(A) 1. Choose a broad topic2. Do a preliminary research3. Define the problem4. Refine the question
(B) 1. Select a supervisor2. Write a proposal3. Collect data4. Analyze results
(C) 1. Choose a research method2. Gather resources3. Conduct interviews4. Present findings
(D) 1. Identify variables2. Formulate a hypothesis3. Test the hypothesis4. Draw conclusions
- 229.** Write T if the statement is true, and F if it is false.Literature search is a source of research problems.
(A) True
(B) False

- 230.** What is the role of keywords in understanding a research topic?
(A) They clarify the main focus of the research
(B) They help in writing the conclusion
(C) They are irrelevant to the research process
(D) They are used to measure concepts
- 231.** What should be your first step when choosing a research topic?
(A) Ask your friends or parents for ideas for your topic
(B) Choose the first topic that you think of
(C) Brainstorm ideas that are interesting to you and that are related to your assignment
(D) Do a Google search
- 232.** As a marketing manager at a startup, what do you think is the most difficult step in the marketing research process?
(A) Defining the problem you want to solve
(B) Analyzing the results of your research
(C) Applying the results to your marketing strategy
(D) Obtaining data relevant to your problem
- 233.** The researcher must outline the field of his study. As the term implies, the field of study in Criminological Research is Criminology.
(A) Identifying Topic
(B) Review of Literature
(C) Developing a Framework
(D) Developing Title
- 234.** Defining a research problem properly is a
(A) Not mandatory
(B) Important to a person
(C) Structured design
(D) Pre requisite for any study.
- 235.** What is the first step in the process of SoTL research?
(A) Conducting experiments
(B) Reviewing literature
(C) Identifying the research question
(D) Collecting data
- 236.** The problem of research should fulfil the requirements below, except ____
(A) It should be not too broad or general
(B) It hasn't been answered by previous research
(C) It mustn't need empirical study
(D) It should be in the form of question that needs to be answered
- 237.** What problem is given focus by research studies which show low rate of work absorption among technical/vocational graduates?
(A) Highly protected formal sector
(B) Training-job mismatch
(C) Too long vocational courses
(D) Penalized informal sector
- 238.** What is the first step in writing your research problem statement?
(A) Consult with your adviser
(B) Identify ethical issues
(C) Review related literature
(D) Select your research topic
- 239.** The first step in the research process begins with generating research ideas for research problems and synthesis.
(A) Collecting data
(B) Drawing conclusion and recommendations
(C) Establishing research problems and synthesis
(D) Formulating research designs and methodology
- 240.** The success of any marketing research study depends most directly on
(A) Having enough money
(B) Hiring the right researchers
(C) Finding the best customers
(D) Defining the problem correctly

241. The most important factor in selecting a research issue is the researcher's ____
- (A) Practicality
 - (B) Knowledge
 - (C) Urgency
 - (D) Personal Inclination
242. What is the first step in designing a research project?
- (A) Collecting random data.
 - (B) Identifying a research problem.
 - (C) Skipping literature review.
 - (D) Writing a long report.
243. A research problem is feasible only when:
- (A) It is researchable
 - (B) It has utility and relevance
 - (C) It is new and adds something to knowledge
 - (D) All the above
244. What qualities should a good research topic have?
- (A) Clarity, relevance, and simplicity
 - (B) Complexity and ambiguity
 - (C) Irrelevance and broadness
 - (D) Obsolete and outdated
245. Any question that needs answering, represents situation in need of solution, improvement, change or modifications.
- (A) Narrowing topics
 - (B) Problem
 - (C) Questions
 - (D) Topic
246. A research problem should be:
- (A) Vague and broad
 - (B) Specific and researchable
 - (C) Based on assumptions only
 - (D) Without any theoretical foundation
247. The question that needs to be solved in the process of scientific research is ____
- (A) Problem
 - (B) Subject
 - (C) Object
 - (D) Hypothesis
 - (E) Goal
248. If you are asked to choose a topic of your research what guidelines should you avoid?
- (A) Highly Technical Subjects
 - (B) Latest issue and problem
 - (C) Respondents are present and accessible
 - (D) Interesting topics
249. Which of the following is not an element of Research Problem?
- (A) Aim or purpose of the problem for investigation
 - (B) The subject matter or topic to be investigated
 - (C) The place or locale where the research is to be conducted
 - (D) None of the above
250. Among the stages of the teacher's research activity is:
- (A) Problem identification
 - (B) Immediate grading without analysis
 - (C) Budget allocation
 - (D) Extracurricular scheduling
251. What role do social trends play in identifying research problems?
- (A) They focus only on historical research.
 - (B) They provide insights into social, political, and economic concerns.
 - (C) They eliminate the need for funding priorities.
 - (D) They focus solely on professional experience.
252. Which of the following is NOT a characteristic of a good research problem?
- (A) Feasibility
 - (B) Clarity
 - (C) Subjectivity
 - (D) Novelty

- 253.** Why might a research problem that is personally interesting to the researcher NOT be suitable for investigation?
- (A) Because personal interest always biases the research findings.
 - (B) Because it might lack significance, feasibility, or researchability.
 - (C) Because interesting research problems are always too difficult to investigate.
 - (D) Because researchers should only investigate topics they find boring.
- 254.** First step of research elements are
- (A) Research proposal
 - (B) Research design
 - (C) Research problem
 - (D) Research analysis
- 255.** What is a common mistake made when developing a research topic?
- (A) Generating too many ideas
 - (B) Identifying a good research topic
 - (C) Having a strong interest in the topic
 - (D) Failure to generate ideas
- 256.** A statement of the research problem differs from research questions or hypotheses in that a statement of the problem:
- (A) Involves general presentation of ideas.
 - (B) Involves specific presentation of ideas.
 - (C) States operational definitions of variables, but not cause and effect.
 - (D) None of above
- 257.** Which of the following is true about a good research problem?
- (A) It should be too broad to allow for multiple interpretations.
 - (B) It should be clear, focused, and researchable.
 - (C) It should address issues outside the scope of the study.
 - (D) It should not be feasible within the given resources.
- 258.** This is basic difficulty, the issue, the area of concern, the circumstance which exist, then, how they ought to be.
- (A) Statement of the Problem
 - (B) Background of the Study
 - (C) Scope and Limitation
 - (D) Significance of the Study
- 259.** Area of concern when there is a gap in knowledge that requires a solution; defined by what you do not know or understand about your practical problem
- (A) Practical problem
 - (B) Research problem
 - (C) Pure research
 - (D) None of above
- 260.** An area of research to be concerned
- (A) Research Problem
 - (B) Research methodology
 - (C) Research review
 - (D) Research gaps
- 261.** Engineers plan on developing a new drill for use on oil rigs. What should the engineers do first in order to develop the new drill?
- (A) Conduct research on features for a new drill
 - (B) Determine the materials needed to build the new drill
 - (C) Build a prototype of the new drill
 - (D) None of above
- 262.** A nurse preceptor observes that many clients are being admitted in the ward for the post-operative infections. She suggested to the students that they do a research on this topic. What research activity is this?
- (A) Sharing research results with colleagues
 - (B) Data collection
 - (C) Developing guidelines for patient care
 - (D) Identifying clinical problem
- 263.** The area in which you are interested
- (A) Focus of inquiry

- (B) Research question
 - (C) Research object
 - (D) Hypothesis
264. Which of the following best defines a research problem in nursing research?
- (A) A theoretical explanation for an observed event
 - (B) A prediction of outcomes between two variables
 - (C) A gap in knowledge requiring systematic investigation
 - (D) None of the above
265. The planning process is: Identify a problem or issue and select a focus, on what you want to investigate.
- (A) True
 - (B) False
266. How could a researcher determine if a research problem, which appears original, is truly unique and hasn't been investigated before?
- (A) Rely on their own intuition and assumptions.
 - (B) Conduct a thorough review of existing literature using various databases and search strategies.
 - (C) Ask a colleague for their opinion.
 - (D) Assume that if they haven't heard of it, it must be original.
267. In quantitative research, the research problem section is used to guide or direct the types of questions or hypothesis asked in a study
- (A) True
 - (B) False
268. How can stakeholders be involved in problem identification?
- (A) Through interviews, surveys, focus groups, and brainstorming sessions
 - (B) Using a crystal ball
 - (C) By reading tea leaves
 - (D) Through interpretive dance
269. A situation which is challenging and requires reflective thinking
- (A) Research problem
 - (B) Research title
 - (C) Research methods
 - (D) Literature review
270. What is the first step of the Scientific Method according to the diagram?
- (A) Conduct a literature review
 - (B) Identify a problem or ask a question
 - (C) Choose a research design or method
 - (D) Analyze data
271. The overall aim of the study, as stated in the Statement of the Problem, is to investigate the "integration" of PBL. In this context, "integration" likely means:
- (A) The merging or incorporation of PBL into existing science teaching practices.
 - (B) The removal of all traditional methods entirely.
272. What is not essential about a research problem?
- (A) It should lead to new knowledge.
 - (B) It should be amenable to research.
 - (C) It should be significant.
 - (D) It should lead to theory building.
273. What does the "identification" part of a research claim refer to?
- (A) Giving your name
 - (B) Giving your license number
 - (C) Telling the reader what your sources are
 - (D) Telling the reader the topic you will be exploring
274. The selection is often influenced by ____ The problem's practical usefulness is the primary reason for a researcher's participation.
- (A) Timelines of the Problem
 - (B) Practicality
 - (C) Urgency
 - (D) Feasibility

- 275.** What is an example of a research project that responds to the need and problem of food insecurity and poverty alleviation?
- (A) Utilization and Commercialization of Burger from Offal of Boneless Milkfish and Canned Tuna.
 - (B) Development of a Mobile Game for Language Learning.
 - (C) Study on the Effects of Social Media on Teenagers.
 - (D) Analysis of Urban Traffic Patterns in Metro Cities.
- 276.** What is the first step in the IRR process?
- (A) Identifying a problem or issue
 - (B) Presenting findings
 - (C) Conducting individual research
 - (D) Writing the report
- 277.** The research problem determines.
- (A) What methodology will be used
 - (B) How good your research skills are
 - (C) The amount of support you will get to your teacher
 - (D) How the report will be.
- 278.** When identifying gaps in the literature, a researcher is looking for:
- (A) Areas that have been thoroughly covered by previous studies
 - (B) Topics that have limited or no research available
 - (C) Theories that are universally accepted
 - (D) Studies with high citation counts
- 279.** Engineers have been asked to develop a plan to reduce the effects of hurricanes on a coastal community. Which is the first step engineers should take when developing a plan to reduce the effects of a natural hazard?
- (A) Identify the need
 - (B) Propose a solution
 - (C) Evaluate the solution
 - (D) Determine the criteria and constraints
- 280.** What did Marx (1997) mean when he suggested that "intellectual puzzles and contradictions" can be possible source of research questions?
- (A) The researcher may feel there is a contradiction in the literature, presenting a "puzzle" to be solved
 - (B) Unless you can find a logical contradiction, you have no basis for conducting research
- 281.** Which strategy can help narrow down a broad research topic?
- (A) Choosing a random subject
 - (B) Ignoring previous studies
 - (C) Selecting multiple geographic locations
 - (D) Focusing on a specific time period
- 282.** What role does research play in problem identification?
- (A) Research has no impact on problem identification
 - (B) Research only adds to the confusion in problem identification
 - (C) Research helps in identifying the root causes of the problem.
 - (D) Problem identification can be done without any research
- 283.** Sin Qua Non of good research is
- (A) A set of well documented hypothesis
 - (B) A good research supervisor
 - (C) Adequate library facilities
 - (D) A good research problem
- 284.** An existing problem in your classroom can be considered as a research problem.
- (A) True
 - (B) False
- 285.** In what situations might a researcher need to prioritize "feasibility" over "significance" when choosing a research problem?
- (A) When the researcher has unlimited time and resources.

- (B) When the significant research problem requires resources or expertise beyond the researcher's reach.
(C) When the researcher is not interested in the significant research problem.
(D) When the feasible research problem is more complex than the significant one.
- 286.** Which of the following is the most reliable source of research topic idea?
(A) Review of Literature
(B) Wikipedia
(C) Folklores
(D) Blogs
- 287.** The phrase "The problem seems to be ____" is reflective of which phase of Deweyan process of inquiry?
(A) The location and definition of the problem.
(B) Hypothesis of possible solution.
(C) Reasoning out of the bearings of the bearings of the suggestion.
(D) None of the above.
- 288.** A research problem must be relevant to current issues.
(A) True
(B) False
- 289.** Identifying what information is needed to make a decision about the potential of the business is what step in the market research process?
(A) 2
(B) 4
(C) 1
(D) 3

1.3.4 Formulation of Research Problem

- 1.** Statements that are too broad to be accurate
(A) Vague language
(B) Overgeneralizations
(C) Opinion
(D) Irrelevant evidence
- 2.** R.K. Merton identifies principal components in problem formulation. Which question is one of them?
(A) What one wants to know
(B) How to design laboratory equipment
(C) Who will grade the assignment
(D) When holidays are scheduled
- 3.** Statement of the Problem Describes the specific issue that the research project aims to address.
(A) True
(B) False
(C) All the above
(D) None of the above
- 4.** Research questions are inseparable from the research problem.
(A) TRUE
(B) FALSE
- 5.** Criteria of a research problem where "the problem can be completed within the time frame allotted."
(A) Methodical
(B) Time-bound
(C) Measurable
(D) Specific
- 6.** What are the key components of developing a research question?
(A) Choosing a research method, collecting data, and analyzing results
(B) Conducting a literature review, brainstorming ideas, and writing a hypothesis
(C) Identifying the research topic, narrowing down the problem, and formulating a clear and specific question
(D) Selecting a research team, creating a budget, and setting a timeline

7. HOW MANY WAYS TO FORMULATE THE RESEARCH PROBLEM
- (A) 5
 - (B) 6
 - (C) 7
 - (D) 4
8. Which of the following sections in a research proposal justifies the need for the study?
- (A) Methodology
 - (B) Literature Review
 - (C) Problem Statement
 - (D) Hypothesis
9. One of the components of a research question that provides enough specifics that one's audience can easily understand its purpose without needing additional explanation.
- (A) Complex
 - (B) Clear
 - (C) Arguable
 - (D) Concise
10. This part of the research stated the area of concerns, issues that wanted to address and the problems need to be solved.
- (A) Significance of the Study
 - (B) Definition of Terms
 - (C) Theoretical Framework
 - (D) Statement of the Problem
11. In formulating a research problem, which of the following should a teacher not do?
- (A) Use quotations in the lead sentence
 - (B) Stay away from idiomatic expressions or trite phrases
12. Part of the research paper that clearly introduces the sets of problems or questions intended to be solved by the study
- (A) Scope and Delimitation
 - (B) Statement of the Problem
 - (C) Conceptual Framework
 - (D) Research Design
13. What are the potential challenges of relying solely on personal experiences and intuitions when formulating a qualitative research problem?
- (A) The research problem may lack generalizability or relevance to a wider audience.
 - (B) The research problem will automatically be significant and feasible.
 - (C) The research process will be more objective and unbiased.
 - (D) The research findings will be more accurate and reliable.
14. Developing a researchable question would not involve
- (A) Considering the time and resources available to you
 - (B) Bearing in mind your technical expertise in the area of research
 - (C) Assessing the work involved
 - (D) Deciding what statistical software to use
15. Which of the following should be formulated first before conducting the research
- (A) Objectives of the study
 - (B) Statement of the problems
 - (C) Conceptual framework
 - (D) Review of related literature
16. Which is not a characteristic of a good problem statement?
- (A) Clear and focused
 - (B) Broad and general
 - (C) Specific and measurable
 - (D) Relevant to the field
17. A well-defined problem in scientific research should be:
- (A) Broad and vague
 - (B) Specific and measurable
 - (C) Based on personal opinions
 - (D) Unrelated to previous studies
18. How does talking to a plant affect a plant's growth height?
- (A) Scientific question
 - (B) Not scientific question

19. The first step in research is identifying a topic, conceptualizing a research topic would include
- (A) Title of research
 - (B) Finding a focus
 - (C) Where to start
 - (D) Discuss with fellow researchers
20. Write T if the statement is true, and F if it is false. The statement of the problem must be clear and focused.
- (A) True
 - (B) False
21. A researcher must have a clear idea with regards to what it is that s/he wants to find out about and not what s/he thinks s/he must find.
- (A) True
 - (B) False
22. What is the significance of narrowing down a research topic?
- (A) To increase the length of the research
 - (B) To ensure it is manageable and specific
 - (C) To make it more complex
 - (D) To make it more popular
23. If you have a specific idea about what is to be researched you should.
- (A) Write research proposal
 - (B) Formulate research objectives
 - (C) Talk to your supervisor
 - (D) Follow the steps in writing the research problem
24. When a project is started, a person should be very clear with
- (A) Problem Reasons
 - (B) Problem Solutions
 - (C) Problem Statement
 - (D) All of the above
25. Delimitation of a problem means
- (A) Why of research.
 - (B) How many of research.
 - (C) Drawing a boundary round it.
 - (D) What of research.
26. According to Kerlinger, what is a problem in research?
- (A) A statement of fact
 - (B) A hypothesis to be tested.
 - (C) An interrogative sentence or statement that asks what relation exists between two or more variables
 - (D) A list of research objectives.
27. When reviewing existing literature in an introduction, the goal is to primarily:
- (A) Replicate every prior method verbatim
 - (B) Map what is known and locate gaps
 - (C) Summarize only recent popular studies
 - (D) Avoid criticism of methodological flaws
28. What should be considered when formulating a good research problem?
- (A) The research problem should be complex and abstract.
 - (B) It should be too broad for easy analysis.
 - (C) It should be specific, researchable, and feasible.
 - (D) It should be focused solely on personal opinions.
29. Why is it important to narrow down a research topic?
- (A) To focus the study and ensure a clear research question.
 - (B) To keep the study broad and unfocused.
 - (C) To waste time and resources on irrelevant information.
 - (D) To make the research more confusing and difficult to understand.
30. In the formulation of the research problem, Anika needs to give a ____
- (A) Index
 - (B) Bibliography
 - (C) Title
 - (D) Hypothesis

31. What should you do after identifying your research question and reviewing the literature?
- (A) Write a book
 - (B) Revise your question
 - (C) Conduct a survey
 - (D) Publish your findings
32. What is the purpose of identifying gaps in existing literature?
- (A) To confirm existing theories
 - (B) To explore under-researched areas
 - (C) To increase the number of studies
 - (D) To replicate previous research
33. It is a concise description of the problem or issues a research seeks to address.
- (A) Introduction
 - (B) Statement of the Problem
 - (C) Methodology
 - (D) Abstract
34. Isabella is planning to conduct a research study on the effects of sleep on student performance. Why is it important for her to clearly formulate an aim or hypothesis before conducting her research?
- (A) Helps provide direction and focus for the study.
 - (B) Ensures the research is systematic and avoids bias.
 - (C) A well-defined hypothesis allows for testing and verification.
 - (D) None of above
35. How should the literature review lead into the statement of the study's purpose?
- (A) By summarizing the key findings of previous studies.
 - (B) By identifying the research gaps.
 - (C) By presenting the research questions.
 - (D) By discussing the limitations of previous studies.
36. Choose the option that correctly lists the elements of a problem statement in research.
- (A) Definition and delimitation of the problem; research questions; objectives; justification
 - (B) Literature review; sampling; data analysis; conclusions
 - (C) Title; abstract; keywords; references
 - (D) Population; instrument; procedure; annexes
37. TECHNIQUE INVOLVED IN DEFINING A PROBLEM
- (A) Statement of the problem in a general way
 - (B) Understanding the nature of the problem
 - (C) Surveying the available literature
 - (D) All of the above
38. Step 2: "statement of the problem"
- (A) Deficiencies in the evidence
 - (B) Relating the discussion to audiences
 - (C) Topic
 - (D) Justification for the research problem
 - (E) Research problem
39. An explanation in research that describes the issue that is in need of study
- (A) Objectives
 - (B) Statement and Significance of the Problem
 - (C) Scope and Delimitations
 - (D) Benefit and Beneficiaries
40. What are the potential consequences of formulating a research problem that is too narrow in scope?
- (A) The research will have broad applicability and generalizability.
 - (B) The research findings may be trivial or lack significance in the broader context.
 - (C) The research will be too complex to conduct.
 - (D) The research will automatically be unethical.

41. What should be included in the background of the study?
- (A) Detailed methods of analysis and data collection
 - (B) The rationale for conducting the research and the development of the problem
 - (C) The results of similar research studies
 - (D) A summary of the conclusion of the study
42. FORMULATION OF RESEARCH HYPOTHESIS
- (A) THE PROBLEM AND ITS BACKGROUND
 - (B) REVIEW OF RELATED LITERATURE
 - (C) RESEARCH METHODOLOGY
 - (D) None of the above
43. The research process begins with:
- (A) Data collection
 - (B) Problem formulation
 - (C) Hypothesis testing
 - (D) Report writing
44. What role does "related literature" play in formulating a research problem?
- (A) It should be ignored completely.
 - (B) It helps identify existing knowledge gaps and potential research avenues.
 - (C) It hinders the development of original research ideas.
 - (D) It is only relevant for quantitative research.
45. Which of the following is NOT a reasonable approach to developing a correlational research problem?
- (A) Correlating two variables for which you've found some relationship discussed in the literature.
 - (B) Replicating the relationship found between two variables in a different population.
 - (C) Correlating 12 variables that make up a data set a colleague gave you.
 - (D) Attempting to understand the extent to which two variables discussed in the literature are related.
46. The first step in problem formulation is:
- (A) Hypothesis testing
 - (B) Literature review
 - (C) Defining the problem
 - (D) Data analysis
47. What makes the literature review critical in shaping the research question of a proposal?
- (A) It provides a narrative of unrelated studies
 - (B) It identifies gaps in the existing knowledge that the research will address
 - (C) It outlines the research results
 - (D) It simplifies the introduction
48. What is typically stated in the general research problem?
- (A) The specific data collection methods used.
 - (B) The overall direction and focus of the research.
 - (C) The limitations of the study.
 - (D) The conclusions drawn from the study.
49. This articulates the problem to be addressed and indicates the need for a study through the development of an argument.
- (A) Nursing Problem
 - (B) Problem Statement
 - (C) Nursing Practice
 - (D) Nursing Science
50. What is a common problem with the research question, "How has the internet affected the world?"
- (A) It is too narrow.
 - (B) It is too specific.
 - (C) It is too vague and broad.
 - (D) It is not researchable.

51. Which of the following best describes the process of defining the research problem?
- (A) Identifying the hypothesis that will be tested during the research
 - (B) Formulating questions that clarify the purpose of the study and guide the research process
 - (C) Choosing the methods for data collection and analysis
 - (D) Selecting a sample group for the study
52. Defined as an area of concern, a gap in the existing knowledge, or a deviation in the norm or standard that points to the need for further understanding and investigation.
- (A) Introduction
 - (B) Significance of the Study
 - (C) Statement of the Problem
 - (D) Conclusion
53. In soft sciences, framing the originating question includes anticipating what?
- (A) Guaranteed causal mechanisms
 - (B) Single universally true outcome
 - (C) Exact experimental apparatus
 - (D) Possible answers to the question
54. What is the significance of formulating a clear research problem?
- (A) To confuse the readers
 - (B) To make the research paper look lengthy
 - (C) To guide the research process and provide a clear focus
 - (D) To avoid conducting experiments
55. A formal statement of the research question or "purpose of research study" generally ____
- (A) Is made prior to the literature review.
 - (B) Is made after the literature review.
 - (C) Will help guide the research process.
 - (D) B and c.
56. What will you establish when you consider the who, what, when, where, how and why?
- (A) Relevance
 - (B) Clarity of Purpose
 - (C) Originality
 - (D) Feasibility
57. Which of the following is a primary source for developing a research question?
- (A) Journal articles
 - (B) Textbooks
 - (C) Encyclopedias
 - (D) Newspaper editorials
58. These are the interrogative statement that the researcher wishes to seek the answer.
- (A) Conceptual Framework
 - (B) Statement of Hypothesis
 - (C) Significance of the Study
 - (D) Statement of the problem
59. Which of the following titles best reflects clarity in a social science research study?
- (A) Study of Behavior in People
 - (B) An Investigation into Adolescent Social Media Use and Its Impact on Self-Esteem
 - (C) Research on Human Life
 - (D) A Survey
60. The culmination of the process of formulating the problems and/or opportunities is to establish the primary and secondary data.
- (A) True
 - (B) False
61. The qualities of a good research problem are (1) validity, (2) reliability, (3) usability.
- (A) TRUE
 - (B) FALSE
62. How can a student make a vague topic like "student stress" more researchable?
- (A) Add real-life stories to the paper
 - (B) Focus on a group or cause of stress
 - (C) Interview only top students
 - (D) Choose a more emotional topic

63. What is the purpose of a literature review in developing a research question?
- (A) To find gaps in existing research
 - (B) To prove a hypothesis
 - (C) To collect primary data
 - (D) To write a conclusion
64. The research problem should be measured using well-defined instruments or statistical methods.
- (A) Specific
 - (B) Measurable
 - (C) Achievable
 - (D) Realistic
65. The following are the elements in the problem statement
- (A) The problem itself, The method used to solve the problem, The purpose, objectives and scope obtained
 - (B) The problem itself, The method used to solve the problem,
 - (C) Methods used to solve problems, Purpose, objectives and scope obtained
 - (D) Purpose, objectives and scope obtained
66. A good research problem should be practical, meaning it should be;
- (A) A good research problem should be something that is new.
 - (B) A good research problem should draw attention and interest from the other people.
 - (C) A good research problem should be useful and beneficial to its target population.
 - (D) A good research problem should improve the current state of existing technology.
67. Reviewing previous research helps in:
- (A) Avoiding data analysis
 - (B) Finalizing the report
 - (C) Formulating hypothesis
 - (D) Ignoring the environment
68. Which of the following is a primary step in developing research skills?
- (A) Identifying a research question
 - (B) Writing a conclusion
 - (C) Publishing your findings
 - (D) Skipping the planning phase
69. What is the next step in narrowing down the research focus?
- (A) Conducting a literature review
 - (B) Forming a hypothesis
 - (C) Delimiting or narrowing the topic to a specific one
 - (D) Choosing a research methodology
70. Once the problem is understood and the circumstances driving the project initiation are clear, it is time to write the problem statement.
- (A) Stating the Problem
 - (B) Purpose
 - (C) Defining the Problem
 - (D) Writing the Problem Statement
71. Which helps to formulate clear research questions and objectives?
- (A) Methodological considerations
 - (B) Interdisciplinary perspectives
 - (C) Ethical values
 - (D) Narrowing the topic
72. What helps when developing a research question?
- (A) Knowledge of the subject area
 - (B) Specific guidelines in the other book
 - (C) A big budget
 - (D) Formulating objectives
73. What is the importance of performing a literature review in scholarly inquiry?
- (A) It helps to replicate ideas from other studies.
 - (B) It allows you to clarify and further revise your research question.
 - (C) It is not necessary for SoTL work.
 - (D) It only involves reading articles from journals.

74. It is used in research work as a claim that outlines the problem addressed by a study.
- (A) Analysis
 - (B) Conceptual Framework
 - (C) Review of Related Literature
 - (D) Statement Problem
75. Of all the steps in the research process, the one that typically takes the most time is
- (A) Data collection
 - (B) Formulating the problem
 - (C) Selecting a research method
 - (D) Developing a hypothesis
76. Which among the processes below did you do when you wrote your statement of the problem?
- (A) Identifying the topic
 - (B) Delineating the research problem
 - (C) Analyzing and validating data
 - (D) Preparing a scientific report
77. The clarity of how research questions are stated leads to agreement of meaning for the readers of your study.
- (A) True
 - (B) False
78. Which of the following provides a concise description of an issue to be addressed or a condition to be improved upon?
- (A) General problem
 - (B) Research problem
 - (C) Statement of the problem
 - (D) Relevance of the study
79. Imagine you are interested in the effects of social media. Using the structured approach described, which step would help you narrow your topic to something researchable?
- (A) Source Identification
 - (B) Topic Selection
 - (C) Preliminary Research
 - (D) Research Question Development
80. Which step involves formulating one or more AIMS or hypotheses in the Psychological Scientific Method?
- (A) Testing and/or Collecting Data
 - (B) Analyzing the data
 - (C) Formulating one or more AIMS or hypotheses
 - (D) Interpreting the results
81. Why is it important to clearly state the problem in a research proposal?
- (A) It helps ensure the research is relevant and focused
 - (B) It lengthens the research paper
 - (C) It prevents the need for any revisions
 - (D) It provides a clear roadmap for the data collection process
82. Choose the best answer. A literature review is —
- (A) Done after you have decided on your research question
 - (B) Assist in the formulation of your research objectives and research questions
 - (C) Is the last thing to write in your research report
 - (D) Not part of the research proposal
83. Which of the following is an initial mandatory requirement for pursuing research? [2016-JULY]
- (A) Developing a research design
 - (B) Formulating a research question
 - (C) Deciding about the data analysis procedure
 - (D) Formulating a research hypothesis
84. You should always try to narrow your paper topic as specifically as you possibly can.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above

85. Which research title is most appropriate for a study about teachers' coping strategies?
- (A) Teachers and Stress
 - (B) Coping Mechanisms of Public High School Teachers in City X
 - (C) Teacher Problems
 - (D) Stress in Schools
86. What is the purpose of a statement of the problem in a research proposal?
- (A) To describe the history of the research topic
 - (B) To clearly articulate the main issue to be investigated
 - (C) To outline the methods used in the research
 - (D) To define the expected outcomes of the study
87. The first step of the scientific method; a researcher notices a phenomenon and wonders why it occurs
- (A) Observation/form a question
 - (B) Form a hypothesis
 - (C) Test hypothesis
 - (D) Analyze the results
 - (E) Draw a conclusion
88. A ____ is a concise description of the issue that needs to be addressed by the researcher.
- (A) Scope and Delimitation
 - (B) Introduction
 - (C) Statement of the Problem
 - (D) Hypothesis
89. What does the level of expertise refer to in selecting a research problem?
- (A) The number of sources needed
 - (B) The knowledge required to conduct the research
 - (C) The amount of time available for research
 - (D) The complexity of the research topic
90. Converting a questions into a researchable problem is called ____
- (A) Problem Solving
 - (B) Problem Formulation
91. Refining the research question involves:
- (A) Narrowing and clarifying the focus of the research topic.
 - (B) Expanding the research topic to cover more areas.
 - (C) Ignoring the specifics of the research topic.
 - (D) Choosing a random topic for research.
92. The fundamental weakness in the research process is ____
- (A) Incorrectly defining the research question
 - (B) Identifying a flawed sampling frame
 - (C) . misdefining the target population
 - (D) Skipping the exploratory phase
93. Third step in problem formulation is
- (A) Statement of the problem
 - (B) Understanding the nature of the problem
 - (C) Survey the available literature
 - (D) Discussion
94. Which of the following cannot be considered an important aspect for NOT addressing the problem? If the study:
- (A) Extends past research or examines the topic more thoroughly
 - (B) Informs practice
 - (C) Does not contribute to knowledge and practice
 - (D) None of above
95. Research questions come from ____
- (A) Personal experiences
 - (B) Prior Research
 - (C) Theory
 - (D) All of the Above
96. A statement of need should ____
- (A) Answer the what

- (B) Answer the why
 - (C) Answer the how
 - (D) Show learning
97. What is a way to narrow down the scope of your research?
- (A) Only use 1 source
 - (B) Choose a really hard to research topic
 - (C) Make your topic a research question
 - (D) Choose a boring topic
98. After identifying your topic, you should ____
- (A) Identify a testable hypothesis
 - (B) Collect data
 - (C) Ask friends and family members for their opinions on the topic
 - (D) Read and evaluate past research on the topic
99. Which of the following is not a criterion for the statement of a good research problem?
- (A) Expression of relationship between/among variables.
 - (B) Clarity and unambiguousness.
 - (C) Possibility of empirical testing.
 - (D) Possibility of use of statistical analysis.
100. Which best describes a problem statement?
- (A) It explains the research gap or issue to be addressed
 - (B) It lists the expenses for the project
 - (C) It narrates personal experiences
 - (D) It summarizes the findings
101. While every step in a marketing research project is important, problem definition formulation is the most important step
- (A) True
 - (B) False
102. Which of the following is not an element of a well framed research statement?
- (A) Variables
 - (B) Population
 - (C) Setting
 - (D) Tools of the study
103. The most essential step in the research process that determines every step that follows is to
- (A) Decide whether qualitative or quantitative methods are to be used
 - (B) Review the literature in order to acquaint oneself with comprehensive knowledge
 - (C) Have a clear idea about the methods of analysing data and drafting a plan to achieve it
 - (D) Formulation of the problem with its objectives, hypotheses, variables and limitations
104. What is the initial step in the process of systematic inquiry according to Nelson (chp. 6)?
- (A) Conducting a literature search
 - (B) Identifying participants
 - (C) Turning a problem into a research question
 - (D) Gathering original evidence
105. Before you form a hypothesis, you need to ____
- (A) Perform calculations
 - (B) Do research
 - (C) Write a procedure
 - (D) All of these choices are correct.
106. What are the three steps recommended by Booth, Colomb, & Williams (2003) in order to figure out the "So what" of your research?
- (A) Name your topic, add a question, motivate your question.
 - (B) Name your topic, motivate your question, add a question.
 - (C) Motivate your topic, name your question, add a question.
 - (D) Name your question, add a topic, motivate your topic.
107. What is an important aspect to consider when formulating a research title?
- (A) It should include the author's name
 - (B) It should be relevant to the research question

- (C) It should reflect the research methodology
(D) It should be catchy and memorable
- 108.** The meaning of the definition of a problem is
(A) To define the complex words in the problem and suggest their meaning in the light of the problem.
(B) To limit the problem in words.
(C) To present the definition of different authors related to problem.
(D) None of the above.
- 109.** What is the problem (question)?
(A) Final step or process explaining if the hypothesis was correct
(B) Should be "testable" and aims for answers to verify or explain a theory
(C) Something that doesn't change
(D) Gather information to help make a hypothesis
- 110.** Which of the following is required for the research problem: Effects of Parenting Style and Children Study Habits?
(A) One general research question and two specific research questions
(B) A list of parenting styles only
(C) A summary of children's study habits only
(D) A literature review on parenting
- 111.** Research Process & Methodology-The first step in the research process is:
(A) Data analysis
(B) Formulating a research problem
(C) Report writing
(D) Sampling
- 112.** The second step in the research process is —
(A) Create a research question
(B) Generate a list of topics
(C) Identify relevant sources
(D) Reading and taking notes
- 113.** How can a research question be refined?
(A) By conducting preliminary research
(B) By writing the conclusion first
(C) By ignoring existing research
(D) By choosing a random topic
- 114.** The scope and delimitations of a thesis, dissertation, or research paper define the topic and boundaries of the ___ to be investigated.
(A) Research title
(B) Research problem
(C) Research question
(D) Problem statement
- 115.** Which of the following would be the first step when personally investigating evidence for a specific nursing care problem
(A) Search for possible evidence
(B) Ask answerable clinical questions
(C) Assess effectiveness of decision
(D) Assemble available evidence
- 116.** True or False: Shade A if the statement is TRUE; Shade B if the statement is FALSE. The statement of the problem includes research questions and provides direction for the study.
(A) True
(B) False
- 117.** Articulates nature, context and significance of problem. Well-structured formulation of what is problematic, needs fixing, what is poorly understood.
(A) Research Problems
(B) Problem Statement
(C) Research Questions
(D) Objectives
- 118.** You are able to answer the research questions within the restrictions of the research project is the characteristics of the following good problem statement criteria?
(A) Relevant
(B) Interesting
(C) Feasible
(D) None of above

- 119.** Formulation of a research problem depends on a. What is the objective behind the reader's choice? b. What are the specific questions? c. What is the conceptual model? d. What negative factors to research upon? e. Reasons for unlimiting the study? f. Construction of hypothesis
- (A) A, c, e, f
(B) B, c, d, e
(C) A, b, c, f
(D) C, d, e, f
- 120.** When should you start working on the motivation of your research?
- (A) As soon as you have a topic/research question
(B) Any time really
(C) Before your defense
(D) After you finish writing the thesis
(E) When your teacher tells you to
- 121.** How can a researcher utilize existing research to develop a new research problem?
- (A) By replicating a previous study exactly without any modifications.
(B) By adapting and modifying existing research methods or questions.
(C) By dismissing all previous research as irrelevant.
(D) By fabricating data to support a new research problem.
- 122.** It means that another researcher can confirm or falsify the result of the research.
- (A) The research problem is interesting.
(B) The research problem is relevant.
(C) The research problem is focused.
(D) The research problem is plausible.
(E) The research problem is verifiable.
- 123.** What question did the civil engineers most likely ask when they were designing the blueprints to build the seawall in the picture below?
- (A) What beach are we building the seawall on?
(B) How many sand castle were built on the beach last week?
(C) How high should we make the sea wall to stop erosion?
(D) How often does it rain at this location?
- 124.** A research aim is a ____ statement
- (A) General
(B) Specific
(C) Precise
(D) Unclear
- 125.** What should you do after identifying your research theme?
- (A) Write a general question
(B) Identify several more specific research questions
(C) Start collecting data
(D) Review the literature
- 126.** What is the essential question that the lesson aims to explore regarding rainforests?
- (A) What are the different species of animals living in the rainforest?
(B) How should the resources of rainforests be used and preserved?
(C) How can we increase agricultural land in the rainforest?
(D) What are the economic benefits of deforestation?
- 127.** Among the choices, which is the least step in the formulation of a research.
- (A) Identifying the gap
(B) Data collection
(C) Hypothesis
(D) Literature review
- 128.** The problem statement is
- (A) Background of the study
(B) The verbalization and articulation as well as the analysis of the "question" in which the researcher wants the research to answer.
(C) Description of the issues
(D) Analysis of the question

- 129.** This is the focus of the study which presents the researcher's intention or subject of inquiry.
- (A) Theoretical Framework
 - (B) Methods
 - (C) Statement of the Problem
 - (D) Conceptual Framework
- 130.** Choose why rationale/justification is required in the research background.
- (A) To let the readers pay attention to your topic or the issue you want to study or address
 - (B) To make the readers less aware about your topic
 - (C) To show the broad view on the topic
 - (D) None of above
- 131.** The researcher has to identify what specific questions need to be answered. Formulation of research objectives and specification of variables happen on this stage.
- (A) Finalize Facts
 - (B) Filter Facts
 - (C) Find Facts
 - (D) Focus Facts
- 132.** An INTERSTING research problem will help:
- (A) Narrow the scope of research
 - (B) Motivate the author(s)
 - (C) Save the time
 - (D) Limit the number of data collection methods
- 133.** Which technique is involved in defining a research problem?
- (A) Literature review
 - (B) Hypothesis testing
 - (C) Data collection
 - (D) Problem formulation
- 134.** Why is it that students are advised to have a narrow and simple topic instead of a broad one?
- (A) A narrow topic will lead you to summarize your research.
 - (B) A narrow topic will confuse the readers about the research.
 - (C) A narrow topic will give the readers a clear idea on your research.
 - (D) A narrow topic will only lead to more revisions and expenses on your research.
- 135.** What is the first step when a researcher wants to conduct a study in psychology?
- (A) To formulate a hypothesis
 - (B) To collect the data
 - (C) Define and describe the issue to be studied: research question
 - (D) Choose an appropriate research method
- 136.** Why might a novice researcher struggle to formulate a feasible research problem?
- (A) They have too much experience in research.
 - (B) They may have a general idea but lack the skills to articulate it into a researchable question.
 - (C) All research problems are inherently feasible.
 - (D) Research problems are not required for conducting research.
- 137.** What is the importance of a good research topic?
- (A) It simplifies the research process
 - (B) It ensures publication in journals
 - (C) It guarantees funding
 - (D) It provides a clear focus for the study
- 138.** In order to obtain an accurate research, we must define the research topic.
- (A) True
 - (B) False
- 139.** What is the first step in conducting research in a teaching-learning context?
- (A) Analyzing data
 - (B) Reviewing existing literature
 - (C) Defining the research question
 - (D) Conducting interviews

- 140.** How does a well-defined problem statement contribute to the quality of a research proposal?
- (A) It provides an exhaustive review of literature
 - (B) It narrows down the scope and focus of the research
 - (C) It includes results from pilot studies
 - (D) It presents the background information of the researcher
- 141.** The formulation a research problem is the most ____ part of the research journey because the quality and relevance of the project entirely depends upon it.
- (A) Repetitive
 - (B) Trivial
 - (C) Important
 - (D) Motivating
- 142.** Which of the following is the most important quality of a research topic?
- (A) The topic is broad
 - (B) The topic is clear
 - (C) The topic is complicated
 - (D) The topic is vague
- 143.** Which aspect can help narrow down a research topic?
- (A) Choosing a broader audience
 - (B) Focusing on a specific relationship
 - (C) Selecting multiple variables
 - (D) Ignoring previous research
- 144.** An adequate statement of the research problem is one of the most important parts of the research. After reviewing the literatures and finding out blankspot or blindspot, research problems arise. After discovering the knowledge gap which is either blankspot or blindspot, the framework will then be conceptualized.
- (A) Formulating Objectives
 - (B) Formulating Research Problems
 - (C) Generating Hypothesis
 - (D) None of above
- 145.** Multiple Choice: Read each question carefully and choose the BEST answer. Which statement best represents a research problem?
- (A) Students submit assignments late.
 - (B) This study examines factors affecting late submission of assignments among Grade 12 students.
 - (C) Teachers dislike late submissions.
 - (D) Late submission is common in schools.
- 146.** Explaining why your work is important should:
- (A) Address unanswered questions in the field
 - (B) Be kept secret until the conclusion
 - (C) Avoid showing significance
 - (D) Focus only on personal benefit
- 147.** The Statement of the problem should follow the abbreviation SMART. What's the meaning of SMART?
- (A) Scalable, Manageable, Achievable, Researchable and Time Bound
 - (B) Specific, Measurable, Attainable, Researchable and Time Bound
 - (C) Specific, Manageable, Attainable, Researchable and Time Bound
 - (D) Scalable, Measurable, Achievable, Researchable and Time Bound
- 148.** The researcher should keep a precaution while he is defining a problem
- (A) He should not have used the words having more than one meaning.
 - (B) He should forecast the results on its basis.
 - (C) He should precise its nature.
 - (D) All of the above.
- 149.** Which of these steps comes first in the Social and Cultural Research process?
- (A) Check the final product
 - (B) Apply the research methods ethically
 - (C) Develop a focus question or hypothesis
 - (D) Design the research

- 150.** What is one consideration in formulating a research problem?
- (A) The popularity of the topic
 - (B) Support of the academic community
 - (C) The number of researchers involved
 - (D) The length of the research paper
- 151.** First real specific step in methodology
- (A) Study design
 - (B) Data collection
 - (C) Idea
 - (D) Formulating question
- 152.** In research writing, which of the following must be clear and unequivocal?
- (A) Objectives of the study
 - (B) Problem statement
 - (C) Significance of the study
 - (D) Scope and limitation
- 153.** The necessity of defining a problem arises from:
- (A) The need for clarity and focus
 - (B) Time constraints
 - (C) Random selection
 - (D) Hypothesis formulation
- 154.** Which should come first?
- (A) Deciding on a research design
 - (B) Formulating a research question
- 155.** An introduction answers question about the problem, one of these is.
- (A) What is the methodology?.
 - (B) Why is it a problem?.
 - (C) What are the conclusions?.
 - (D) What are the recommendations?.
- 156.** The statement of the research problem should be:
- (A) Broad and vague
 - (B) Clear and specific
 - (C) Ambiguous
 - (D) Complex
- 157.** What should researchers do after identifying a broad area of interest?
- (A) Engage with the community
 - (B) Narrow the focus to a specific topic
 - (C) Conduct a survey
 - (D) Write a literature review
- 158.** During which stage would you: Write a problem statement focused on a specific need or goal.
- (A) Prototype
 - (B) Define
 - (C) Ideate
 - (D) Empathize
- 159.** What is the second step in the research process, where the researcher refines general ideas, identifies variables, and formulates hypotheses?
- (A) Problem-Definition Phase
 - (B) Data Collection Phase
 - (C) Analysis Phase
 - (D) Reporting Phase
- 160.** Which of the following is used in research work as a claim that outlines the problem addressed by a study?
- (A) Conclusions
 - (B) Recommendations
 - (C) Statement of the Problem
 - (D) Summary of Findings
- 161.** What is the first step in formulating a research topic?
- (A) Narrowing down the research question
 - (B) Collecting data from the field
 - (C) Conducting a literature review
 - (D) Identify a broad area of interest or a general problem
- 162.** In writing the statement of the problem, make sure to summarize the whole research study.
- (A) True
 - (B) False

- 163.** “This study aims to know the role of language on developing the confidence of teenagers of Sta. Maria Sta. Ana Pampanga — “ is an example of what?
- (A) Scope and Delimitation
 - (B) Assumptions of the Study
 - (C) Statement of the Problem
 - (D) Review of Related Literature
- 164.** Once the main problem has been stated, the following questions should be answered by the researcher: Does it provide adequate focus and direction for research?
- (A) TRUE
 - (B) FALSE
- 165.** Psychologists begin their studies by framing research questions.
- (A) True
 - (B) False; participants
 - (C) False; sources of funding
 - (D) None of above
- 166.** General problem followed by specific questions
- (A) Introduction
 - (B) Statement of the Problem
 - (C) Hypothesis
 - (D) Significance of the Study
- 167.** The main purpose of the RRL is to:
- (A) Provide context and justify the research problem
 - (B) Replace the background of the study
 - (C) Serve as the conclusion
 - (D) Avoid citing other works
- 168.** Which practice aligns with rigorous problem formulation before data collection?
- (A) Clarifying what and why questions
 - (B) Skipping conceptual definitions
 - (C) Deferring purpose until analysis
 - (D) Assuming solutions are obvious
- 169.** A claim that outlines the problem addressed by a study
- (A) Statement of the Problem
 - (B) Background of the Study
 - (C) Significance of the Study
 - (D) Scope and Delimitation of the Study
- 170.** Which of the following could make a research topic unmanageable?
- (A) Being too broad
 - (B) Being focused
 - (C) Having adequate references
 - (D) None of above
- 171.** Which part of the scientific method is being represented? I am wondering if gummy worms expand quicker in water, milk, juice, or vinegar.
- (A) Ask a question
 - (B) Research
 - (C) Reporting data
 - (D) Completing the experiment
- 172.** Which of the following is NOT a criterion for a good statement of the problem?
- (A) Clarity
 - (B) Focus
 - (C) Lengthiness
 - (D) Relevance
- 173.** The first step in formulating a problem is
- (A) Statement of the Problem
 - (B) Gathering of Data
 - (C) Measurement
 - (D) Survey
- 174.** A concise declaration of the research issue.
- (A) Problem statement
 - (B) Hypothesis
 - (C) Literature review
 - (D) Data analysis
- 175.** Mrs. Brown asks her class to consider the problem of pollution contaminating the local

waterways. What is the first step to solving this problem?

- (A) Test the water to measure success
- (B) Determine the source contamination
- (C) Reduce contributing pollution sources
- (D) Treat the waterway to restore its health

176. What part of the Introduction states what the researcher wants to find out?

- (A) Review of literature
- (B) Statement of the problem

(C) Data analysis

(D) Conclusion

177. Define or explain the term: Statement of the Problem.

- (A) A clear and concise description of the issue to be addressed in a research study.
- (B) A summary of the research findings.
- (C) A list of references used in the research.
- (D) A detailed explanation of the research methodology.

1.3.5 Research Questions

1. In the example 'How accurately can ensemble learning methods predict PM2.5 levels in urban areas?', what is this an example of?

- (A) A Hypothesis
- (B) An Objective
- (C) A Broad Area
- (D) A Research Question

2. What is the primary purpose of a research question in a research paper?

- (A) To guide the research process
- (B) To provide a summary of findings
- (C) To list all sources used
- (D) To present the conclusion

3. Which term describes a question that drives the investigation and is central to the topic being studied?

- (A) Primary source
- (B) Secondary source
- (C) Compelling question
- (D) Supporting question

4. What characteristic should a well-defined research question have in Ethan's science project?

- (A) It should be based on personal interest
- (B) It should be vague and broad
- (C) It should be specific and measurable
- (D) It should be irrelevant to the field

5. Which of the following is not a characteristic of a good research question?

- (A) It is specific and focused.
- (B) It is answerable through empirical investigation.
- (C) It is broad and vague.
- (D) It is relevant to the field of study.

6. Significance of the study. This is one component of a research question that is narrow enough to be answered thoroughly in the space the writing task allows.

- (A) Clear
- (B) Complex
- (C) Focused
- (D) Content-driven

7. Research questions are built on ____, or ideas on behavior

- (A) Constructs
- (B) Questions
- (C) Methods
- (D) Ethics

8. What is the first step of the scientific research process?

- (A) Form a hypothesis
- (B) Develop a research question
- (C) Draw conclusions
- (D) Analyze results Edit

9. If you ask a question that's already been answered a thousand times before, you're only doing research that someone else has already done. Ask a question with an original slant to it. Which of these questions is a GOOD question?
- (A) What are the advantages and disadvantages of cell phone use in schools?
 - (B) How does restricting cell phone use in school affect student social interaction?
10. A good research question must be:
- (A) Unmeasurable
 - (B) Broad and open-ended
 - (C) Focused, researchable, and relevant
 - (D) Based on personal beliefs
11. It provides a focus for investigation.
- (A) Background of the Study
 - (B) Research Objectives
 - (C) Hypothesis
 - (D) Research Question
12. What does RQ stand for?
- (A) Reader's Quote
 - (B) Research Question
 - (C) Reader's Question
 - (D) Research Quote
13. A well-defined research question should:
- (A) Be answerable with available data
 - (B) Be based only on assumptions
 - (C) Ignore previous research findings
 - (D) Be as broad as possible
14. The research question
- (A) Had better be general.
 - (B) Cannot be modified during literature review.
 - (C) Is not necessary when you begin the research.
 - (D) Will guide the literature search.
15. The name given to a question that queries a relationship between independent and dependent variables.
- (A) Rationale
 - (B) Inquiry Question
 - (C) Research Question
 - (D) Multiple Choice Question
16. This type of Sub-Question asked the characteristics of the research participant or respondents.
- (A) Profiling question
 - (B) Main question
 - (C) Research problem
 - (D) Sub-question
17. The use of all WH questions are acceptable in formulating research questions.
- (A) TRUE
 - (B) FALSE
18. You are studying world festivals. You have to report on one festival and how it started. Which research question will be most useful?
- (A) What are the main festivals in Asia?
 - (B) What are the origins of the Chinese New Year celebration?
 - (C) What do families do to Celebrate Chinese New Year?
 - (D) When is Chinese New Year? Edit
19. Research questions are crucial because they will.
- (A) Guide your decisions about what data to collect and from where.
 - (B) Help you to decide which research area interests you.
 - (C) Ensure that your findings have external validity.
 - (D) Prevent you from thinking about research strategies.
20. A feasible research question:
- (A) Can be answered with available time and resources
 - (B) Must be extremely complicated
 - (C) Should require three years to answer
 - (D) Is always based on interviews

21. Which statement is expressing a scientific perspective?
- (A) How expensive is it to clean up the chemical pollution?
 - (B) Which is more important, people's wants or wildlife's needs?
 - (C) Are laws and regulations in place that prevent dumping?
 - (D) What is causing this algae to form on the lake?
22. A good ____ details the problem statement
- (A) Research statement
 - (B) Research question
 - (C) Research problem
 - (D) Hypothesis
23. Rate the following quantitative research question: How many Grade-7 students are enrolled in blended learning this School Year? Rate it as Feasible, Clear, Significant, and Ethical.
- (A) Feasible, Clear, Significant, and Ethical
 - (B) Not Feasible, Not Clear, Not Significant, and Not Ethical
 - (C) Feasible, Not Clear, Not Significant, and Not Ethical
 - (D) Not Feasible, Clear, Significant, and Ethical
24. What are the criteria for evaluating research questions?
- (A) Clear, Researchable, Connect with established theory
 - (B) Too narrow, Too complex, Not relevant
 - (C) Unclear, Unresearchable, Disconnected from theory
 - (D) Broad, Vague, Simple
25. Which of the following is the first step in planning data collection?
- (A) Choosing a statistical tool
 - (B) Identifying research questions
 - (C) Writing the conclusion
 - (D) Conducting interviews
26. Research Question 2 seeks to measure the "extent" to which PBL is integrated. This means the study is trying to find out:
- (A) Whether PBL exists at all in the schools.
 - (B) The degree or level of adoption of PBL across specific practices.
 - (C) The exact number of minutes spent on PBL daily.
 - (D) Only if learning resources are available.
27. A good research question is:
- (A) Feasible, clear, significant and hypothetical
 - (B) Feasible, clear, significant, and ethical
 - (C) Clear, significant, and ethical
 - (D) Feasible, clear, and ethical
28. Research questions must always be broad to ensure comprehensive coverage.
- (A) True
 - (B) False
29. A key characteristic of research questions, which separates them from research problems, is the ____ nature of research questions, subject, and scope.
- (A) Broad.
 - (B) Specific.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
30. Which of the following is NOT a criterion for constructing effective research questions?
- (A) Integration of theoretical insights
 - (B) Consideration of implications and limitations
 - (C) Use of leading questions
 - (D) Knowledge of relevant literature
31. Which of the following questions is too broad for effective research?
- (A) What are the effects of global warming?
 - (B) How does global warming affect polar bears in the Arctic?
 - (C) What is the impact of global warming on agriculture in California?

- (D) How do renewable energy sources reduce global warming?
32. Why is it important to have a clear research question?
- (A) The research process can be guided without a clear research question
- (B) Having a clear research question helps to focus the research process, guide the selection of appropriate methods, and ensure that the research is relevant and meaningful.
- (C) All the above
- (D) None of the above
33. This type of Research Question and part of Statement of the Problem contains all the necessary and vital parts of the study: topic (variables and their relationship or phenomenon), participants, research locale and duration/time.
- (A) Profiling question
- (B) Main question
- (C) Research problem
- (D) Sub-question
34. Which of the following research questions is the most open-ended and suitable for deep analysis?
- (A) What percentage of students graduate from high school in the U.S.?
- (B) How has the increase in technology use impacted students' attention spans in the classroom?
- (C) Is remote learning better than traditional learning?
- (D) How many hours do students spend on homework each night?
35. Why is it important to have a focused research question?
- (A) It makes the report longer
- (B) It helps in organizing the report
- (C) It allows for random data collection
- (D) It is not important
36. For qualitative research questions, the overarching question you explore in the research study is the ____
- (A) Issue sub-questions
- (B) Central questions
- (C) Procedural sub-questions
- (D) None of the above. tagsResearch Questions in Qualitative Research
37. What is the most important question in research according to the text?
- (A) How to design user-friendly vending machines?
- (B) How to reduce harmonics in electric power supply?
- (C) What is the research question?
- (D) How to improve the mileage of a passenger car?
38. According to Alvesson and Sandberg (2013), research questions are meant to:
- (A) Tame curiosity and direct research
- (B) Eliminate theoretical frameworks
- (C) Focus solely on the data collection process
- (D) Create confusion about the research topic
39. Written below are true about the steps in writing a good research question EXCEPT:
- (A) Specify your specific concern or issue.
- (B) Ensure that the question is answerable.
- (C) A learning process that motivates you to obtain knowledge or information.
- (D) Decide what you want to know about the specific concern into a question.
40. Which type of research question focuses on explaining the "why" behind observed phenomena?
- (A) Normative
- (B) Explanatory
- (C) Descriptive
- (D) Comparative

41. True or False: Once a research question is written, it can be changed.
(A) True
(B) False
(C) All the above
(D) None of the above
42. A good research question is one that ____
(A) Will hold your interest.
(B) Can be debated.
(C) Has lots of information.
(D) All of the Above
43. Which type of research question focuses on 'why' something happens?
(A) Comparative
(B) Correlational
(C) Descriptive
(D) Causal
44. Which is an example of an effective research question?
(A) Which video game has sold the most copies?
(B) Which video game is more violent: Call of Duty or Resident Evil?
(C) Which type of video game do young children like the most?
(D) What effect does video game violence have on children?
45. Which of the following is NOT an essential characteristic of a researchable question?
(A) The question is answerable by some sort of data that can be collected.
(B) Answering the question provides a positive outcome to the society.
(C) The question is comprehensive.
(D) The question is interesting.
46. What is the main challenge in formulating research questions from classroom experiences?
(A) Finding enough data
(B) Reducing interesting observations to a clear and articulate question
(C) Getting approval from colleagues
(D) Ensuring student participation
47. What is the first thing to do after you receive a research paper assignment?
(A) Think of a research question.
(B) Make an outline.
(C) Write the thesis statement.
(D) None of above
48. What is the importance of a clear research question in a systematic review?
(A) To guide the search strategy and selection of studies
(B) To define the scope and focus of the review
(C) To ensure the review is relevant and meaningful
(D) All of the above
49. What I know about research question is that it is:
(A) A specific question that guides a research study.
(B) A random topic chosen without purpose.
(C) An answer to a research problem.
(D) A summary of research findings.
50. The value of data analysis results is determined by their connection with your
(A) Research method
(B) Research title
(C) Research design
(D) Research questions
51. What is the main difference between a topic and a research question?
(A) A topic is shorter than a question
(B) A topic is the general subject; a question is specific
(C) A topic is only for the title
(D) A question must be in the conclusion

52. The following are characteristics of a good research question except
(A) Ambiguous
(B) Clear
(C) Concise
(D) Focused
53. Why is the following research question weak? "How does reading impact learning?"
(A) It is too narrow.
(B) It is not clear or focused.
(C) It is too specific.
(D) It cannot be researched.
54. Which of the following is a characteristic of well-written research questions?
(A) They use yes/no formats
(B) They are vague
(C) They are measurable and specific
(D) They avoid variables
55. Your direction in your RRL is given by your research
(A) Data
(B) Design
(C) Problem
(D) Question
56. Max is doing a research project to determine the effects of a new bus station on the quality of air in the city. Below are a list of questions Max has created to ask. Choose the BEST question Max should ask.
(A) Does the bus station have trash cans and recycling bins?
(B) How much smoke will the buses create?
(C) Do a lot of people work at the bus station?
(D) None of above
57. Which of the following questions is unbiased?
(A) Have you tried those nasty new flavors of Lays potato chips?
(B) Do you think the government should be able to spy on all of your private text messages?
(C) What was the score of the football game last Friday?
(D) Do you think our awesome principal is a great leader for our school?
58. What is the purpose of crafting a research question?
(A) To confuse the researchers
(B) To limit the scope of the research
(C) To make the research process more complicated
(D) To define the focus and scope of the research, guide the research process, and provide a clear direction for the study.
59. Which of the following best describes the task: Write one general research question and two specific research questions for the research problem 'Organization's Leadership Practices and Employee's Job Satisfaction'?
(A) Formulating research questions based on a given research problem
(B) Analyzing employee satisfaction surveys
(C) Designing leadership training programs
(D) Evaluating organizational performance metrics
60. Is this Question testable or non-testable: Which color M&M taste better?
(A) Testable
(B) Non-testable
61. What is a critical component of a research proposal?
(A) A detailed budget plan
(B) Personal biographies of researchers
(C) A detailed description of research questions
(D) A list of potential sponsors
62. "What is the level of acceptance of the parents to the online teaching in the new normal of education for this academic year 2020-2021?" On this statement, how can the researcher called this statement?
(A) Research Topic

- (B) Research Problem
(C) Research Statement
(D) Research Phrase
63. What is the significance of a research question in a literature review?
(A) It helps to focus the review
(B) It is not relevant
(C) It summarizes the review
(D) It lists the sources
64. What type of research question fits qualitative methods best?
(A) How do students experience online learning?
(B) What percentage of students own a laptop?
(C) Is there a correlation between sleep and grades?
(D) How many hours do students study weekly?
(E) What is the average GPA in the group?
65. What is a 'Causal question'? A question that asks about the cause or effect of a particular variable or event.
(A) A question that asks about the cause or effect of a particular variable or event.
(B) A question that asks about the location of an event.
(C) A question that asks about the time of an event.
(D) A question that asks about the participants of an event.
66. The following are research questions, which among the questions are Not related to the possible topic?
(A) What is the level of effectiveness of the teachers' modular teaching strategy?
(B) How effective is the computer-based teaching delivery approach of the teachers?
(C) What are the effective methods in teaching to the new normal of education?
(D) What is the impression of the parents to the new normal in education?
67. Consider the following Qualitative Research study abstract and match the statements to their most applicable place within the research idea process. What factors influence the relationship between school-related alcohol use and student aggression?
(A) Topic
(B) Problem
(C) Purpose
(D) Question
68. What is the first step in a research study?
(A) Construct
(B) Research question
(C) Hypothesis
(D) Analysis
69. What is the main purpose of a research question in a research project?
(A) To summarize the research topic.
(B) To guide the direction of the research.
(C) To give a final conclusion.
(D) To help the reader understand the topic.
70. Which statement best describes a scientific question?
(A) It must be testable.
(B) It must be original.
(C) It must be based on a hypothesis.
(D) It must be supported by data.
71. These are the specific queries researchers want to answer in addressing the research problem.
(A) Statement of Problem
(B) Statement of Purpose
(C) Research Questions
(D) Aim
72. What is the key to a good question?
(A) It must be grammatically correct
(B) It must be very long
(C) It must be short
(D) It must be testable

73. Research question
- (A) Similar to a trivia question, based on history
 - (B) Guides your research by defining what you are seeking to answer
 - (C) A statement of fact that is provable by known science
 - (D) A summary of multiple articles about a specific subject
74. A strategy that answers the question who, what, when, where, why, and how.
- (A) FREEWRITING
 - (B) JOURNALIST'S QUESTIONS
 - (C) LOOPING
 - (D) None of the above
75. A clear research question should avoid yes/no answers. What is the primary reason for this guideline?
- (A) It reduces sample size requirements
 - (B) It encourages measurable nuance in outcomes
 - (C) It ensures faster data collection timelines
 - (D) It eliminates the need for literature review
 - (E) It guarantees causal inference conclusions
76. Which of the following would be the best revision of the research question, "Does exercise improve mental health?"
- (A) How much exercise do people need to improve mental health?
 - (B) In what ways does regular physical exercise impact mental health outcomes in adults aged 30-50?
 - (C) Is exercise good for mental health?
 - (D) What are the mental health benefits of exercise?
77. This refers to the issue you will investigate; it may be described in one or two sentences.
- (A) Research title
 - (B) Research question
 - (C) Literature review
 - (D) Investigative issue
78. JP read his classmate's research report earlier, and he could not understand what exactly he is specifically trying to solve or figure out in his study.
- (A) Format
 - (B) Source of Information
 - (C) Research Question
 - (D) Language Used
79. The research question must be ____
- (A) Feasible
 - (B) Interesting
 - (C) Ethical
 - (D) All of them
80. A good research question must be ____, meaning it is expressed in the lowest possible words. What is the term?
- (A) Complex
 - (B) Concise
 - (C) Focused
 - (D) Researchable
81. Match the statement with the correct term. Qualitative research-asks a question about some process, issue, or phenomenon to be explored.
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypotheses
82. Which of the following describes a predictive research question?
- (A) A research question that asks about the presence of behavior, how frequently it is exhibited, or whether there is a relationship between different behaviours
 - (B) A research question that asks if one behavior can be predicted from another behavior to allow predictions of future behaviour

- (C) A research question that asks what causes specific behaviors to occur
(D) None of above
83. In doing a research, first step is ask a research —
(A) Time
(B) Facts
(C) Question
(D) Present
84. Which of the following is NOT a characteristic of good research questions as described by Fraenkel and Wallen (2020)?
(A) Feasible
(B) Clear
(C) Expensive
(D) Ethical
85. Which of the following is the best scientific question?
(A) Why is the sky blue?
(B) What happens if I mix random chemicals?
(C) Does increasing fertilizer help tomato plants grow faster?
(D) Are aliens real?
86. Which are 2 research question forms?
(A) Main questions and hypothesis
(B) Central question and subquestions
(C) Super question and subquestions
(D) Main question and objective
87. The process of science always begins with a — (Research Methods and Statistics Part I)
(A) Hypothesis
(B) Theory
(C) Interview
(D) Question
88. How does implementing a four-day classes affect learners' productivity?
(A) Factor-Isolating question
(B) Factor-Relating question
(C) Situation-relating question
(D) Situation-producing question
89. Which of the following is not a function of clearly identified research questions?
(A) They guide your literature search
(B) They keep you focused throughout the data collection period
(C) They make the scope of your research as wide as possible
(D) They are linked together to help you construct a coherent argument
90. The research questions are an important component of writing a research proposal.
(A) TRUE
(B) FALSE
(C) All the above
(D) None of the above
91. What characteristic should a well-defined research question have?
(A) Complex and confusing
(B) Specific and measurable
(C) Vague and broad
(D) Unrelated to the field
92. The primary purpose of a research question is to:
(A) Guide the study's focus
(B) Serve as the final conclusion
(C) Replace the hypothesis entirely
(D) Avoid identifying variables
93. What is a common mistake when developing a research question?
(A) Being too specific
(B) Being too broad
(C) Using clear language
(D) Focusing on a single issue
94. What is the question around which the research is centered called?
(A) Research Hypothesis
(B) Research Objective

- (C) Research Question
(D) Research Methodology
95. Basic type of question which delineating one or more factors that are causing a problem is?
(A) Exploratory
(B) Descriptive
(C) Causal
(D) None of above
96. What is the starting point in doing research?
(A) Building a theory
(B) Making conclusions
(C) Proving a theory
(D) Raising questions
97. It is used to analyze and investigate a topic, it is written as a question and is inquisitive in nature
(A) Population.
(B) Sample.
(C) Research Question.
(D) Instrumentation.
98. In the pre-writing phase of a literature review, the PICO framework is primarily used to:
(A) Identify major themes within existing literature.
(B) Evaluate methodological quality of selected studies.
(C) Formulate a focused, answerable research question.
(D) Develop a reference list for the review.
(E) Determine inclusion and exclusion criteria for data analysis.
99. The work of scientists generally begins with
(A) Analyzing results
(B) Drawing conclusions
(C) Asking questions
(D) Testing a hypothesis
100. Which of the following is an example of a closed-ended research question?
(A) What is the impact of social media on teenagers?
(B) How many teenagers use social media daily?
(C) Why do teenagers use social media?
(D) What are teenagers' views on social media?
101. What is the role of research questions in a study?
(A) To generalize outcomes without testing
(B) To determine the participants' responses
(C) To frame and direct the research process
(D) To minimize data collection time
102. Is "a question that a research project sets out to answer".
(A) Research
(B) Research Question
(C) Research Problem
(D) Research Survey
103. George, Ava, and Emory are discussing about their science projects. Can you identify which question among the ones they discussed is an open-ended question?
(A) How much did the materials for George's science project cost?
(B) Who is in charge of the group project Ava is working on?
(C) Why were the materials for Emory's science project necessary?
(D) When was the decision made for Ava's group project?
104. In research, this will be your guide in identifying the specific contribution of your study question.
(A) Problem statement
(B) Hypothesis
(C) Research topic
(D) Research question
105. This type of Research Question and part of Statement of the Problem enlists all the questions that covers specialized area on our study hence making them specific

- (A) Profiling question
 - (B) Main question
 - (C) Research problem
 - (D) Sub-question
- 106.** Which of these research questions is the most specific and clear?
- (A) How does advertising affect consumer behavior?
 - (B) What is the relationship between social media advertising and purchasing behavior among teenagers in the U.S.?
 - (C) How does social media influence consumer habits?
 - (D) What are the effects of advertising on shopping trends?
- 107.** Answering ____ will help lead you to the answer of your research question. These questions require accurate answers.
- (A) Essential Questions.
 - (B) Guiding Questions.
 - (C) Supporting Questions.
 - (D) Crucial Questions.
- 108.** In the development of research questions, which of the following is considered a practical consideration?
- (A) The feasibility of collecting relevant data
 - (B) Consistency with ethical standards
 - (C) Integration with broader academic fields
 - (D) Theoretical alignment with empirical studies
- 109.** What is the term for a question that helps to support and build upon the main question being investigated?
- (A) Compelling question
 - (B) Supporting question
 - (C) Inquiry
 - (D) Bias
- 110.** What will all your research work respond to?
- (A) Hypothesis
 - (B) Library search
 - (C) Compilation of information
 - (D) Research question
- 111.** What is the BEST research question about the railroads and the region's economy?
- (A) Who invented the railroads?
 - (B) How long are the railroads in Missouri?
 - (C) How do the railroads impact the region's economy?
 - (D) Why do we have railroads?
- 112.** A research question must
- (A) Be answered in a single word
 - (B) Be really hard to find information about.
 - (C) Be something you know a lot about.
 - (D) Be something you can make a claim about.
- 113.** Which of the following is not a characteristic of a good research question in longitudinal research?
- (A) It is focused on studying changes over time
 - (B) It is grounded in existing literature
 - (C) It is testable
 - (D) It is narrow and specific
- 114.** If a researcher wants to know whether influencer marketing and brand loyalty are related, but not necessarily cause-and-effect, what type of question is this?
- (A) Correlational
 - (B) Exploratory
 - (C) Causal
 - (D) Comparative
- 115.** Research questions ask what general information is required with respect to the problem components.
- (A) TRUE
 - (B) FALSE
- 116.** Which of the following best describes a strong research question?
- (A) A very broad question that covers multiple topics

- (B) A question that is specific, clear, and researchable
(C) A vague question that allows for any answer
(D) A question with no connection to the evidence
- 117.** One of the following is NOT a characteristic of research questions for the draft
(A) They are specific
(B) They include the strategies to solve the problem
(C) They are unambiguous
(D) They include references to the theoretical framework
- 118.** The research question asks:
(A) What specific information is required to achieve the research purpose?
(B) What kind of consumers are required to achieve the research objective?
(C) What is the possible answer to a research objective?
(D) What is the best decision alternative?
- 119.** Which research question is BEST formulated?
(A) What are the effects of social media usage on study habits of Grade 12 students?
(B) Social media is bad for studying.
(C) Social media habits
(D) Why?
- 120.** What is the question that defines the purpose of doing the research?
(A) When
(B) Where
(C) Who
(D) Why
(E) Not Given
- 121.** Which of the following best describes the relationship between research questions and hypotheses?
(A) Research questions guide inquiry, hypotheses make predictions.
(B) Research questions replace hypotheses.
(C) Hypotheses are always optional.
(D) Research questions are always testable predictions.
(E) They are identical.
- 122.** Why is the question form often used in stating a quantitative research problem?
(A) To make the research process more difficult.
(B) To clearly and directly convey the research objective.
(C) To avoid answering the research question.
(D) To discourage the researcher from pursuing the study.
- 123.** What should a research question provide?
(A) Theoretical debate
(B) Concrete answers to research objectives
(C) Broad, open-ended discussions
(D) Multiple perspectives without a conclusion
- 124.** Which question is BEST to determine the effect of pollution in the river?
(A) Who is responsible for cleaning up all of the trash?
(B) How long has the trash been building up in the river?
(C) Are there any animals who have lost their lives after eating plastic?
(D) Did this build up over time or is there a landfill nearby that is dumping plastic?
- 125.** A research question
(A) Focuses your research
(B) Answers something you already know
(C) Isn't necessary for a research paper
(D) All of these
- 126.** Water pollution is a problem for plants and animals in Georgia. What question could a student ask to understand water pollution better?
(A) What will happen to the plants and animals in a lake if chemicals are dumped?

- (B) Can exhaust from a vehicle cause complications for the ecosystem?
(C) How does construction with building new neighborhoods affect plant and animal homes?
(D) None of above
- 127.** Your research questions are linked to your RRL (Review of Related Literature).
(A) TRUE
(B) FALSE
- 128.** The researchers know in advance what they are looking for. The research questions are well-defined for which the objective answers are sought. All aspects of the study are carefully designed before data are gathered.
(A) Clearly Defined Research Questions
(B) Future Outcomes
(C) Numerical Data
(D) Structured Research Instruments
- 129.** Which of the following best describes the development process for a research question?
(A) A broad question is made more specific as terms are more clearly defined.
(B) A broad question is made more specific in order to be more significant.
(C) A specific question is broadened as terms are more clearly defined.
(D) A specific question is broadened in order to be more significant.
- 130.** Which feature indicates a research question is too broad for effective study?
(A) States a predictive relationship clearly
(B) Uses established operational definitions
(C) Needs multiple distinct subfields to answer
(D) Includes a measurable dependent variable
(E) Specifies a narrow population subgroup
- 131.** A research question is important to guide research for a literature review.
(A) True
(B) False
- 132.** Explain the difference between descriptive and predictive questions in quantitative research.
(A) Descriptive questions focus on 'what is' while predictive questions focus on 'what will be'.
(B) Descriptive questions focus on 'what will be' while predictive questions focus on 'what is'.
(C) Descriptive questions and predictive questions are the same in quantitative research.
(D) Descriptive questions focus on 'how' while predictive questions focus on 'why'.
- 133.** Which of the following research questions is the strongest?
(A) What are the effects of climate change?
(B) How does climate change impact agriculture in developing countries?
(C) Is climate change real?
(D) Why is climate change a big deal?
- 134.** Students are trying to prove the claim that daily exercise helps people sleep better. Which research question would help them prove the claim?
(A) How is sleep affected by activity?
(B) How does exercise increase energy?
(C) How does exercise help build muscle?
(D) How many hours of sleep is best for students?
- 135.** Why is the following research question weak? "What are the benefits of recycling?"
(A) It is biased.
(B) It is too narrow.
(C) It is too broad and lacks focus.
(D) It is not researchable.
- 136.** A research question that is too narrow is one that
(A) Can be answered with a yes or no response.
(B) Can be answered with a quick search online.

- (C) Is not debatable.
(D) Is all of the above
- 137.** A researcher asks: “How do senior high school students adapt to modular learning?” This question is:
(A) Too broad
(B) Specific and researchable
(C) Unrelated to education
(D) A yes/no question
- 138.** If a research question is feasible it is ____?
(A) Helps society
(B) Practical
(C) Beneficial
(D) Relevant
- 139.** What is the role of a research question in the research process?
(A) To provide a focus and direction
(B) To list all possible outcomes
(C) To summarize the research
(D) To present the final results
- 140.** Which of the following is an example of a focused research question?
(A) What are the effects of social media?
(B) How does social media usage affect sleep patterns in teenagers?
(C) Why do people use social media?
(D) What is social media?
- 141.** What is the main reason for developing a good research question?
(A) To make sure that you get a good grade
(B) To give your paper focus
(C) To entertain Ms. Furuyama
(D) To make sure that no one else uses your idea
- 142.** What is the primary purpose of a research question in a study?
(A) To provide recommendations for future studies
(B) To guide the research process and analysis
(C) To summarize the research findings
(D) To list planned questions used to measure attitudes and opinions
- 143.** What is the primary driver of empirical research?
(A) Literature review
(B) Data analysis
(C) Research questions
(D) Hypotheses
- 144.** What is the significance of a well-crafted research question?
(A) It helps to focus the research and guide the research process.
(B) It is only important for academic purposes
(C) It confuses the research and makes it more difficult
(D) It has no significance in the research process
- 145.** How are research questions most often described?
(A) Arising within a laboratory setting
(B) Posed after important factors are identified
(C) May arise from our everyday life experiences
(D) Always answered if we follow a scientific method or inquiry
- 146.** Questions which present the specific components of the problem
(A) Theoretical framework
(B) Analytical model
(C) Research questions
(D) Hypothesis
- 147.** Poorly formulated research questions can lead to:
(A) Weak research design and irrelevant data
(B) Stronger conclusions

- (C) Easier hypothesis testing
(D) Better validity
- 148.** Types of quantitative research questions, refers to the nature and manner of connection between or among variables.
(A) Relation
(B) Descriptive
(C) Causal
(D) Dependent
- 149.** Which is the best research question?
(A) What are the things?
(B) What are the effects of online learning on Grade 11 students' study habits?
(C) How many students are enrolled?
(D) How to conduct research?
- 150.** What is a key characteristic of a well-formulated research question?
(A) It is broad and general.
(B) It is specific and focused.
(C) It is based on assumptions.
(D) It is easy to answer.
- 151.** Complete the strategy statement: Phrase questions ____
(A) Precisely
(B) Undecidedly
(C) Ambiguously
(D) Tentatively
- 152.** This is a type of question that is created prior to the research process. This is created to help both guide and focus one's research.
(A) Research
(B) Argumentative
(C) Claim
(D) Research Question
- 153.** A strong research question is important because it:
(A) Allows you to include any evidence you like
(B) Focuses your research and ensures each piece of evidence is relevant
(C) Makes your presentation longer
(D) Is only used to fill in a worksheet
- 154.** Ryan wants to test which cleats enable him to run the fastest. Which question is the proper scientific question?
(A) "Which cleats will help me run faster?"
(B) "Which brand of cleats will enable Ryan to run the fastest time in 100 meters?"
(C) "Do different brands of cleats affect running speed?"
(D) "Which brand of cleats helps Ryan run better?"
- 155.** A good research question does not ask "why". Instead, it is better to ask:
(A) What
(B) When
(C) Where
(D) How
- 156.** A good research question should be focused on a single topic or on several closely related ideas. Which of these questions is a GOOD question?
(A) Does medication help alleviate attention deficit hyperactivity disorder (ADHD) symptoms? And do kids need more exercise?
(B) How effective are the various types of medication in treating elementary students with ADHD?
(C) Either (A) or (B).
(D) Neither (A) nor (B).
- 157.** Which of the following quantitative research questions is superior?
(A) "What is the effect of participation in various extracurricular activities on academic performance?"
(B) What effect does playing high school football have on students' overall grade point average during the football season?
(C) Either (A) or (B).
(D) Neither (A) nor (B).

- 158.** Research questions should be:
- (A) Vague and general
 - (B) Clear, specific, and researchable
 - (C) Based on assumptions only
 - (D) Unrelated to the research problem
- 159.** Good research questions are innovative and relevant.
- (A) True
 - (B) False
- 160.** Which of these choices would make a good research question?
- (A) What breed of dog do I like most?
 - (B) What are all the breeds of dogs?
 - (C) What dog breed was used by Buddhist monks to guard their temples?
 - (D) What dog breeds make the best pets for families with small children?
- 161.** An answerable inquiry into a specific concern or issue
- (A) Research question
 - (B) Hypothesis
 - (C) Theory
 - (D) Method
- 162.** How to state research questions?
- (A) Identify the location of the study.
 - (B) Identify the theory involved.
 - (C) Identify the respondents.
 - (D) Identify the objectives.
- 163.** What distinguishes general research questions from specific research questions?
- (A) General questions are more complex
 - (B) General questions are broader in scope
 - (C) Specific questions are prespecified
 - (D) Specific questions are more theoretical
- 164.** A research question should be:
- (A) Based only on assumptions
 - (B) Focused and researchable
 - (C) Unstructured
 - (D) Only qualitative
- 165.** Only Qualitative research requires research questions.
- (A) True
 - (B) False
- 166.** A key characteristic of a research question is that it should be:
- (A) Ambiguous and open to interpretation
 - (B) Clear, focused, and researchable
 - (C) Broad and abstract
 - (D) Stated after data collection
- 167.** Research questions are comparable to a compass.
- (A) TRUE
 - (B) FALSE
- 168.** What is the primary purpose of a research question in academic writing?
- (A) To provide a summary of the research findings
 - (B) To guide the research process and focus the study
 - (C) To list all possible outcomes of the research
 - (D) To offer a detailed explanation of the research methodology
- 169.** How can a research question be made more specific?
- (A) By focusing on multiple aspects of the problem
 - (B) By broadening the scope of the topic
 - (C) By narrowing down the scope of the topic, adding specific variables or conditions, and focusing on a particular aspect of the problem.
 - (D) By including irrelevant variables or conditions
- 170.** This part of the research serves as a direction of the study.
- (A) Research title
 - (B) Justification
 - (C) Research question
 - (D) None of above

171. Which of the following is the most appropriate exploratory research question for this scenario?
- (A) Is social media harming young people?
 - (B) How do students aged 14-18 describe the influence of social media on their study habits and focus?
 - (C) How can schools stop students from using social media during study time?
 - (D) Why do students use TikTok so much?
172. Which research question demonstrates a good balance between focus and complexity?
- (A) What are the effects of playing video games?
 - (B) How does playing educational video games influence the development of problem-solving skills in middle school students?
 - (C) Do people like video games?
 - (D) How many hours a day do students spend playing video games?
173. A question that guides the research process.
- (A) A research question
 - (B) A statement of purpose
 - (C) A hypothesis
 - (D) Purpose question
174. What is a central question?
- (A) It narrows the focus of the study but leave open the questioning
 - (B) It defines what the research study hopes to learn.
 - (C) A broad question that asks for an exploration of the central phenomenon or concept in a study.
 - (D) A prediction the researcher makes about the expected relationships among variables
175. Which is one of the criteria making research questions strong?
- (A) Specific and Relevant
 - (B) Focused and Researchable
 - (C) Arguable and Simple
 - (D) None of above
176. Which type of research question asks about relationships between variables?
- (A) Descriptive
 - (B) Comparative
 - (C) Correlational
 - (D) Exploratory
177. Good research questions are
- (A) Clear, significant, and ethical.
 - (B) Feasible, clear, significant, and ethical.
 - (C) Feasible, clear, significant, and include an hypothesis.
 - (D) Feasible, clear, and ethical.
178. Which of the following research questions is likely too broad for an AP Seminar research project?
- (A) What are the causes of climate change?
 - (B) How does deforestation in the Amazon impact biodiversity in the region?
 - (C) What role do electric vehicles play in reducing urban air pollution?
 - (D) None of above
179. What is the Question in this Experiment?
- (A) Which type of fertilizer works the best?
 - (B) Plants grown with Fertilizer A will grow the fastest.
 - (C) The hypothesis was proven correct.
 - (D) Plant A grew the most, Plant B turned brown, and Plant C grew the least. Edit
180. Which of the following would be included in the project plan for an IRP?
- (A) A research question
 - (B) A record of the ongoing process
 - (C) A presentation on research findings
 - (D) A reflection on the proposed timeline
181. What is a research question in communication research?
- (A) A statement predicting a relationship between variables
 - (B) A factor that can change
 - (C) A specific question guiding the research study
 - (D) A constant

- 182.** Which of the following is a characteristic of a well-defined research question?
- (A) It is broad and general
 - (B) It is specific and focused
 - (C) It is based on assumptions
 - (D) It is subjective
- 183.** Which would be the best question to ask about the effects of this pollution on the environment?
- (A) What does the factory make?
 - (B) Have any plants died from being near the factory?
 - (C) How many smokestacks are at the factory?
 - (D) What kind of animals live near the factory?
- 184.** This means raising a question or set of questions about what captures one's interest or imagination.
- (A) Observation
 - (B) Research Question
 - (C) Formulating Hypothesis
 - (D) Experiments
- 185.** What is an example of a "too-specific" research question mentioned in the text?
- (A) Will students improve their understanding of computer programming if they use Alice?
 - (B) How does Alice impact teaching beginning programmers?
 - (C) What are the benefits of using Alice in programming classes?
 - (D) How can Alice be integrated into the curriculum?
- 186.** A research question becomes significant when ____
- (A) No harm is possible to be inflicted to participants
 - (B) It contributes to a bigger body of knowledge
 - (C) It does not take undue resources
 - (D) It uses simplest words for readers
- 187.** Research Question 2 has four sub-points (a-d). These points collectively aim to provide a detailed, multi-dimensional picture of what key factor in the study?
- (A) The demographic characteristics of the students.
 - (B) The various ways PBL is operationally defined and implemented in the classroom environment.
 - (C) The outcome of student engagement with SDGs.
 - (D) The global standards for science education.
- 188.** The perspective you take will dramatically change what kind of questions you ask.
- (A) True
 - (B) False
- 189.** A research question that asks "Is social media good?" is:
- (A) Focused and researchable
 - (B) Too broad and vague
 - (C) Specific and complex
 - (D) Scientifically sound
- 190.** What is a key characteristic of a research question that promotes critical thinking?
- (A) It can be answered with a simple fact.
 - (B) It leads to an in-depth analysis of a complex issue.
 - (C) It only requires a short, one-word answer.
 - (D) It is very broad, covering many topics at once.
- 191.** What is the significance of defining the research question?
- (A) It complicates the research process
 - (B) It is only necessary for qualitative research
 - (C) It provides direction for the investigation
 - (D) It is irrelevant to the study

- 192.** At the start of each Research project a researcher has to decide on:
- (A) How many participants include
 - (B) The journal report will be published in
 - (C) What research question will be answered
 - (D) How many books to order in the library.
- 193.** Which research question is too broad to guide a research project?
- (A) What are the effects of social media on teenagers?
 - (B) How does the use of Instagram affect self-esteem among teenage girls in urban schools?
 - (C) What are the positive and negative effects of Facebook on college students' academic performance?
 - (D) How has TikTok influenced the way Generation Z consumes news?
- 194.** A research question must be complex enough to:
- (A) Be answered with yes or no
 - (B) Require minimal thinking
 - (C) Be discussed in depth and supported with evidence
 - (D) Avoid any data collection
- 195.** Good research questions are often developed after:
- (A) Reviewing related literature
 - (B) Writing the conclusion
 - (C) Data collection
 - (D) Making a title
- 196.** A research question that is too narrow may result in more research than you need to understand the topic.
- (A) True
 - (B) False
- 197.** In order for a question to qualify as a research question, the researcher must be able to
- (A) Make observations and then analyze these to find an answer.
 - (B) Propose several answers to the question that are equally acceptable.
 - (C) Identify value statements in the question that reflect current societal norms.
 - (D) Develop metaphysical answers based on concise statements of belief.
- 198.** What type of researchable question is this? What is the relationship between age and job satisfaction among employees in the tech industry?
- (A) Factor Isolating Question
 - (B) Situation Producing Question
 - (C) Factor Relating Question
 - (D) Situation Relating Question
- 199.** Which of the following is an example of a causal research question?
- (A) What is the average age of smartphone users?
 - (B) How does email personalization affect click-through rate?
 - (C) What brands do millennials prefer?
 - (D) How many customers return within 30 days?
- 200.** A research question is considered ____ if it takes into account the amount of time, energy, money, respondents, and the current situation as a student-researcher.
- (A) Feasible
 - (B) Ambiguous
 - (C) Irrelevant
 - (D) Biased
- 201.** Which of the following is a good research question?
- (A) Is the "back to the basics" movement good for public schools?
 - (B) Are teachers underpaid?
 - (C) Does the cognitive approach to reading lead to higher achievement?
 - (D) How many students enroll in the Writing 4 course?

- 202.** Which of the following is an example of a well-structured research question?
- (A) Why is the sky blue?
 - (B) How does social media affect teenagers' communication skills?
 - (C) What is the best way to cook pasta?
 - (D) Is chocolate better than vanilla?
- 203.** Which of the following is NOT a step in developing a research question?
- (A) Identifying a broad topic
 - (B) Conducting a literature review
 - (C) Formulating a hypothesis
 - (D) Writing the conclusion
- 204.** Propose a research question based on the following research topic: "The impact of social media on adolescent self-esteem."
- (A) How many adolescents use social media daily?
 - (B) What are the effects of social media usage on adolescent self-esteem in high schools?
 - (C) What platforms are most popular among adolescents?
 - (D) How do schools integrate social media in teaching?
- 205.** Which of the following is an initial mandatory requirement to begin research?
- (A) Developing a research design
 - (B) Formulating a research question
 - (C) Deciding about the data analysis procedure
 - (D) Formulating a research hypothesis
- 206.** Which of the following makes research questions very crucial?
- (A) Guide your decisions about what data to collect and from where.
 - (B) Help you decide which research area interests you.
 - (C) Ensure that your findings have external validity.
 - (D) Prevent you from thinking about research strategies.
- 207.** Define the key term in the research question: What is the range and diversity of beliefs of UK primary school teachers of French in relation to the teaching of French to Year 6 children?
- (A) The range and diversity of beliefs
 - (B) UK primary school teachers of French
 - (C) Teaching of French to Year 6 children
 - (D) None of above
- 208.** What is the difference between a research question and a thesis statement?
- (A) A research question is a statement, a thesis is a question
 - (B) A research question guides the research, a thesis presents the main argument
 - (C) A research question is the conclusion, a thesis is the introduction
 - (D) There is no difference
- 209.** Why is it important to align the research question with the research problem?
- (A) To waste time and resources on irrelevant research
 - (B) To confuse the participants and make the study more challenging
 - (C) It is not important to align the research question with the research problem
 - (D) To ensure that the study addresses the specific issue at hand and generates relevant and meaningful results.
- 210.** Which of the following is an appropriate general research question for the research problem: The Relationship between Media Exposure and Health Anxiety?
- (A) What is the relationship between media exposure and health anxiety?
 - (B) How does media exposure affect physical fitness?
 - (C) What are the benefits of media exposure for mental health?
 - (D) How does health anxiety influence social media usage?

211. Which of the following is a key element in formulating a research question?
- (A) Ambiguity
 - (B) Clarity
 - (C) Complexity
 - (D) Length
 - (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypothesis
212. Which of the following is a characteristic of a good research question?
- (A) It is vague and broad
 - (B) It is specific and focused
 - (C) It is based on assumptions
 - (D) It is subjective
213. These are statements about research questions. Which statement is NOT correct?
- (A) An research question is usually easy to answer.
 - (B) An research question is an open ended question.
 - (C) The answers to an research question should come from many sources.
 - (D) A research question is the focus of your research.
214. Which of the following is an example of a research question?
- (A) What are the effects of climate change on agriculture?
 - (B) Climate change affects agriculture
 - (C) The effects of climate change
 - (D) Agriculture and climate
215. Which one aims at investigating specific aspects of the research problem?
- (A) RRL
 - (B) Introduction
 - (C) Research questions
 - (D) Methodology
216. Consider the following Quantitative Research study abstract and match the statements to their most applicable place within the research idea process. Is there any significant difference between information Science and Social Science students pre-and post-test?
217. Which of these research questions is the most focused?
- (A) What is climate change?
 - (B) How does sleep affect academic performance among college students?
 - (C) Why do people like music?
 - (D) What is education?
218. When formulating research questions, which approach is best to ensure clarity and focus?
- (A) Broad and open-ended
 - (B) Specific and measurable
 - (C) Vague and general
 - (D) Hypothetical
219. After you have chosen your topic, the next step in writing your report is to
- (A) Write a list of questions you want to answer.
 - (B) Check your sources.
 - (C) Review reliable Internet sites.
 - (D) Develop an outline.
220. What is the purpose of formulating research questions?
- (A) To confuse the researchers
 - (B) To define the scope and focus of the research, guide the research process, and provide a clear direction for the study.
 - (C) To waste time and resources
 - (D) To limit the scope of the research
221. The research question is "What is the effect of television viewing on Filipinos?". What might be the research topic
- (A) Effect of television
 - (B) Effect of Filipinos
 - (C) Television viewing
 - (D) Effect of Filipino viewing

222. Which of the following is not a characteristic of a good research question in exploratory research?
- (A) It is focused on generating new ideas or concepts
 - (B) It is grounded in existing literature
 - (C) It is specific and measurable
 - (D) It is open-ended
223. Is this a good research question?"Which national park is the best?"
- (A) Yes, it is just right!
 - (B) Yes, it is focused.
 - (C) No, because it is asking for an opinion.
 - (D) No, because it is boring.

1.3.6 Research Hypothesis

1. The position taken by the writer; what the writer is trying to prove
 - (A) Claim
 - (B) Rebuttal
 - (C) Counterargument
 - (D) Evidence
2. Choose the correct definition of the term:hypothesis
 - (A) A detailed examination of the elements or structure of something
 - (B) A statement or theory that is put forward as a premise to be maintained or proved
 - (C) A supposition or proposed explanation made on the basis of limited evidence as a starting point for further investigation
 - (D) A brief statement or account of the main points of something
3. A hypothesis must be conceptually clear, definite, and certain. Which problem does this attribute prevent?
 - (A) Excessive theoretical relevance
 - (B) Unnecessary empirical testing
 - (C) Vague or ambiguous statements
 - (D) Overreliance on statistics
4. Which step of the scientific method uses an "If ____ Then ____" statement to provide a possible answer to the question?
 - (A) Purpose
 - (B) Research
 - (C) Hypothesis
 - (D) Conclusion
5. A possible explanation for observations is ____
 - (A) Hypothesis
 - (B) Technology
 - (C) Volume
 - (D) Mass
6. What do you call an intellectual guess or tentative answer to a research question?
 - (A) Data
 - (B) Result
 - (C) Problem
 - (D) Hypothesis
7. Which one among the following statement is true in the context of the testing of hypotheses?
 - (A) It is only the alternative hypotheses that can be tested.
 - (B) It is only the null hypotheses that can be tested.
 - (C) Both the alternative and the null hypotheses can be tested.
 - (D) Both the alternative and the null hypotheses cannot be tested.
8. What is the procedure recommended for determining the appropriateness of hypotheses in a study?
 - (A) Ignoring hypotheses and focusing solely on research questions
 - (B) Developing hypotheses for all research questions
 - (C) Asking why predictions are made for each research question
 - (D) Referring to previous research for hypothesis formulation

9. Is a reverse statement of null hypothesis. It states the presence of a difference or relation; the inequality between groups of variables. It is a definite statement of the relationship or difference between two variables
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Hypothesis
 - (D) Hypothesis method
10. Which of the following terms is used to describe a proposition that asserts something about every member of a class?
- (A) Particular
 - (B) Affirmative
 - (C) Universal
 - (D) Negative
11. A hypothesis must contain:
- (A) Two or more variables
 - (B) Personal beliefs
 - (C) Opinions
 - (D) Complex mathematical expressions
12. If the assumed hypothesis is tested for rejection considering it to be true is called?
- (A) Null Hypothesis
 - (B) Statistical Hypothesis
 - (C) Simple Hypothesis
 - (D) Composite Hypothesis
13. Choose the term to match this definition: a supposition or proposed explanation made on the basis of limited evidence as a starting point for further investigation.
- (A) Analysis
 - (B) Summary
 - (C) Hypothesis
 - (D) Conclusion
14. What happens if a hypothesis is shown to be wrong in an experiment?
- (A) The experiment is considered a failure
 - (B) The experiment still contributes to knowledge
 - (C) The hypothesis is automatically correct
 - (D) The data is discarded
15. What is a prediction in scientific research?
- (A) A prediction is a statement about what will happen under certain conditions.
 - (B) A prediction is a guess about how something works.
 - (C) A prediction is a summary of the results of an experiment.
 - (D) A prediction is a detailed description of an experiment's procedure.
16. "Psychiatric patients' adherence to social rules is related to their violent behavior" is:
- (A) A null hypothesis
 - (B) Not a hypothesis as stated
 - (C) A nondirectional research hypothesis
 - (D) A directional research hypothesis
17. A testable prediction is called (a/an):
- (A) Operational definition
 - (B) Theory
 - (C) Replication
 - (D) Hypothesis
18. "an idea that proposes a tentative explanation about a phenomenon or a narrow set of phenomena observed in the natural world"
- (A) Conclusion
 - (B) Results
 - (C) Methodology
 - (D) Hypothesis
19. Definition: A proposed explanation based on limited evidence, serving as a starting point for further investigation.
- (A) Hypothesis
 - (B) Method
 - (C) Experiment
 - (D) Theory
20. The assumption that needs to be proven is ____ research.
- (A) Hypothesis

- (B) Base
 - (C) Object
 - (D) Topic
 - (E) Problem
21. Which hypothesis predicts that there is no relationship between the independent variables and dependent variable
- (A) Alternative hypothesis
 - (B) Null hypothesis
 - (C) Simple hypothesis
 - (D) Complex hypothesis
22. "Male and female students perform equally well in a numerical aptitude test." [2015-JUNE] This statement indicates a
- (A) Research hypothesis
 - (B) Null hypothesis
 - (C) Directional hypothesis
 - (D) Statistical hypothesis
23. Definition of Hypothesis
- (A) An educated guess
 - (B) An conclusion
 - (C) A paragraph
 - (D) An paper
24. Match the correct phrase to the following definition: A disagreement or a number of legitimate points of view must exist regarding the main point.
- (A) The claim must be arguable
 - (B) The argument must be rational
 - (C) The logic must be cohesive
 - (D) Credit must be given where credit is due
25. What is the role of physics teachers in understanding their subject matter?
- (A) Understanding the relationship between reading, writing, speaking, and listening
 - (B) Knowing the role of hypothesis generation and experimentation in scientific inquiry
 - (C) Conveying meaning through performance
 - (D) Interpreting past events using evidence
26. In Step 2 students are asked to form what?
- (A) A graph
 - (B) A hypothesis
 - (C) A question
 - (D) None of above
27. When is a hypothesis written?
- (A) Before you decide on a question
 - (B) After the experiment
 - (C) Before the experiment
 - (D) After the conclusion
28. The ____ is a trial answer to a problem based on evidence.
- (A) Hypothesis
 - (B) Experiment
 - (C) Methodology
 - (D) Sample
29. Hypotheses are
- (A) Predictions about what you expect to find when you analyze your research data.
 - (B) Statements of the constructs that will best describe your research data.
 - (C) Primarily useful when conducting a replication study.
 - (D) Most useful in applied research.
30. A company's marketers guess that if they invest in sales force training, sales will increase by 15%. This guess is called a(n)
- (A) Simulation.
 - (B) Hypothesis.
 - (C) Independent variable.
 - (D) Pilot study.
31. A good hypothesis is:
- (A) Testable and measurable
 - (B) Unverifiable
 - (C) Opinion-based
 - (D) None of above

32. The OPPOSITE side to the claim
(A) Opinion
(B) Fact
(C) Claim
(D) Counterclaim
33. Which step is not involved in developing a hypothesis?
(A) Do some preliminary research
(B) Write your literature review
(C) Refining of hypothesis
(D) Phrasing of hypothesis
34. How does a research question differ from a research hypothesis?
(A) A question is a statement, a hypothesis is a prediction
(B) A question is a prediction, a hypothesis is a statement
(C) There is no difference
(D) A question is the conclusion, a hypothesis is the introduction
35. A statement in favor of one side of an issue that is asserted to be true, although it is not proven to be is called a ____
(A) Claim
(B) Counterclaim
(C) Rebuttal
(D) Explanation
36. Maria is studying diabetes. She states "Drinking sugary sodas may contribute to obesity". Which steps of the scientific method is she using?
(A) Draw Conclusions
(B) Make a Prediction
(C) Ask a Question
(D) Form a Hypothesis
(E) Observation
37. The formulation of hypothesis should be based on theoretical frameworks
(A) TRUE
(B) FALSE
38. Which of the following is NOT a type of hypothesis?
(A) Alternative hypothesis
(B) Null hypothesis
(C) Historical hypothesis
(D) Directional hypothesis
39. An example of a simple proposition is:
(A) Cat
(B) Her cat is brown
(C) Is brown
(D) Her cat
40. In the statement "School uniforms improve focus because they reduce distractions," what is the author's reason?
(A) School uniforms
(B) Improving focus
(C) They reduce distractions
(D) The conclusion
41. Which example violates the criteria for hypothesis formulation?
(A) Group study contributes to higher achievement
(B) Hostility is inherently immoral behavior
(C) Achievement rises with collaborative practice
(D) More intelligent persons will be less hostile
42. Your educated guess is called?
(A) A theory
(B) A law
(C) A hypothesis
(D) A problem
43. The educated guess you make at the beginning of the scientific method is called the ____
(A) Variable
(B) Conclusion
(C) Hypothesis
(D) Procedure

44. What are the three elements that a hypothesis should contain?
- (A) The independent variable, the theoretical expectations, and the dependent variable
 - (B) The populations you wish to compare, the dependent variable, and the independent variable
 - (C) The operationalization of the variables, the populations you wish to compare, the size of the expected effect
 - (D) The populations you wish to compare, the dependent variable, and the type or direction of the effect
45. Which of the following best describes a hypothesis in scientific research?
- (A) A proven fact
 - (B) An educated guess
 - (C) A random assumption
 - (D) A philosophical theory
46. What type of reasoning is used when forming a hypothesis that best explains a set of data?
- (A) Inductive
 - (B) Deductive
 - (C) Abductive
 - (D) Analogical
47. Which attribute is most essential for a valid hypothesis?
- (A) Avoids any specific predictions
 - (B) Capable of empirical verification
 - (C) Uses ambiguous phrasing frequently
 - (D) Minimizes reference to theory
48. A theory is defined as a
- (A) Set of experiments conducted to confirm the results of a scientific study.
 - (B) Practice that appears to be and claims to be a science, even though it does not use the scientific method to come to conclusions.
 - (C) Specific, informed, and testable prediction of what kind of outcome should occur under a particular condition.
 - (D) Set of related assumptions from which testable predictions can be made.
49. Which step should come first when planning a quantitative study?
- (A) Reporting clinical implications
 - (B) Formulating a clear hypothesis
 - (C) Performing statistical analysis
 - (D) Implementing the intervention
50. ____ is a presumption or assumption about population/situation under study drawn by researcher himself
- (A) Research
 - (B) Hypothesis
51. This is a testable prediction, often implied by a theory.
- (A) Theory
 - (B) Hypothesis
 - (C) Variable
 - (D) Operational definition
52. What is the primary difference between a theory and a hypothesis in scientific research?
- (A) A theory is a specific testable prediction, while a hypothesis is a broad explanation
 - (B) A theory is a broad explanatory framework, while a hypothesis is a specific testable prediction
 - (C) A theory has been proven true, while a hypothesis is still being tested
 - (D) A theory comes from deductive reasoning, while a hypothesis comes from inductive reasoning
53. An inference or speculation that is indicative of the researcher's best estimation of the projected results of the research is the
- (A) Hypothesis
 - (B) Research Question
 - (C) Variable of interest
 - (D) Research design
54. Hypothesis is a:
- (A) Verified fact
 - (B) Tentative assumption
 - (C) Final truth
 - (D) Observation

55. After identifying the important variables and establishing the logical reasoning in theoretical framework, the next step in the research process is
- (A) To focus group discussions.
 - (B) To generate the hypothesis.
 - (C) To use experiments in an investigation.
 - (D) To conduct surveys.
56. What term is being used to describe a proposed explanation, assertion, or assumption about a population parameter or about the distribution of a random variable?
- (A) Statistic
 - (B) Decision
 - (C) Hypothesis
 - (D) Probability
57. What is a Hypothesis in Psychology
- (A) Randomly assigned group that does not receive treatment.
 - (B) A set of general procedures for gathering and interpreting data
 - (C) Precise, testable statement of what the researcher(s) predict will be the outcome of the study
 - (D) The tendency to believe, after learning an outcome, that one would have foreseen it
58. A hypothesis is described as tentative because:
- (A) It is always correct
 - (B) It is based on assumptions
 - (C) Its truth is not yet known
 - (D) It does not need testing
59. A. Directions: Choose the letter of the word defined in each item. It is a claim backed up by reasons that are supported by evidence.
- (A) Evidence
 - (B) Argument
 - (C) Validity
 - (D) Conclusion
60. This research term provides a tentative explanation or answer for a phenomenon under investigation.
- (A) Reliability
 - (B) Hypothesis
 - (C) Sampling
 - (D) Validity
61. A one-tailed hypothesis:
- (A) Always assumes equality between groups
 - (B) Is less specific than two-tailed
 - (C) Does not predict the direction of the outcome
 - (D) Predicts the direction of the outcome
62. A good hypothesis is a full ____
- (A) Sentence
 - (B) Paragraph
 - (C) Word
 - (D) None of above
63. Kevin said, "If I grow five seedlings in red light, I think the plants will grow faster than the five plants grown in white light."
- (A) Recognize the problem
 - (B) Form a hypothesis
 - (C) Test hypothesis with an experiment
 - (D) Analyze data
 - (E) Draw conclusions
64. "Ice will melt faster in salt water.", would make a good
- (A) Hypothesis
 - (B) Question
 - (C) Analysis
 - (D) Conclusion
65. These are how we can construct a good research hypothesis, EXCEPT?
- (A) Acceptable
 - (B) Logical
 - (C) Testable
 - (D) Refutable

66. For a certain area, over a five year period, data was collected on the human population as well as the population of birds. The data supports which of the following hypotheses?
- (A) Birds depend on humans to put bird food in feeders
 - (B) Humans often hunt animals that prey on birds
 - (C) Many humans enjoy observing the bird environment
 - (D) Building more houses for humans removes trees birds need
67. Which of the following statements sounds like a null hypothesis?
- (A) The coin is not fair.
 - (B) There is a correlation in the population.
 - (C) There is no difference between male and female incomes in the population.
 - (D) The defendant is guilty.
68. What does a hypothesis provide in a study?
- (A) A general statement about the research
 - (B) A specific, testable prediction
 - (C) A method for data collection
 - (D) A summary of the research findings
69. Expresses the way in which the value of a parameter may deviate from that specified in the null hypothesis, and is assumed true when the experimental evidence suggests that the null hypothesis is false.
- (A) Alternative hypothesis (H1)
 - (B) Null hypothesis (Ho)
 - (C) Type II error
 - (D) None of above
70. In terms of theory development, what is the role of hypotheses?
- (A) To generalize concepts
 - (B) To provide factual explanations
 - (C) To offer tentative explanations for testing
 - (D) To confirm findings
71. "There is no significant relationship between Health behavior and Academic performance" is an example of what kind of hypothesis?
- (A) Null Hypothesis
 - (B) Directional
 - (C) Non-Directional
 - (D) None of the above
72. A hypothesis in research is:
- (A) A proven fact
 - (B) A wild guess
 - (C) A testable statement that predicts an outcome
 - (D) A summary of the literature review
73. Possible answers to a research question is/are:
- (A) The research boundaries
 - (B) The hypotheses
 - (C) The research purpose
 - (D) Classifies research users
74. To give an argument means to offer a set of ____ in support of a(n) ____.
- (A) Examples / idea
 - (B) Ideas / example
 - (C) Contentions or reasons / conclusion
 - (D) Conclusions / idea
 - (E) ALL of these
75. A supposition, an idea or proposed explanation that is based on limited evidence as a starting point for further investigation.
- (A) Hypothesis
 - (B) Methodology
 - (C) Analysis
 - (D) Experiment
 - (E) Title
76. What is the proper hypothesis format?
- (A) "If ____ because ____ then"
 - (B) "If ____ than ____ because"
 - (C) "If ____ then ____ because"
 - (D) "If ____ because ____ than"

77. What is the purpose of generating a hypothesis in data analysis?
(A) To collect data
(B) To analyze data
(C) To establish a relationship between two statements
(D) To verify data
78. A hypothesis is also known as a what?
(A) Prediction
(B) A theory you don't test
79. No statistically significant relationship existing between the variables
(A) Alternative hypothesis
(B) Moderate variable
(C) Null hypothesis
(D) Dependent variable
80. This is an educated guess
(A) Hypothesis
(B) Principle
(C) Construct
(D) Survey
81. The second step of the scientific method; the researcher makes a prediction as to why a phenomenon occurs
(A) Observation/form a question
(B) Form a hypothesis
(C) Test hypothesis
(D) Analyze the results
(E) Draw a conclusion
82. What characteristic should a hypothesis possess?
(A) It should be broad and general
(B) It should be based on theoretical evidence
(C) It should be impossible to test
(D) It should be too specific to be useful
83. An educated guess about some phenomenon.
(A) Hypothesis
(B) Theory
(C) Law
(D) Variable
(E) Fact
84. When is it important to formulate hypotheses in a research project?
(A) When the researcher lacks theoretical explanations
(B) When the research design is qualitative rather than quantitative
(C) When the research questions are vague
(D) When there is a clear theoretical framework guiding the study
85. It is the possible answer to the research question, it must be consistent with the research problem and objectives, they are not always true although it can sometimes be rejected, it is exposed as a statement and variables are established. What part of the research project does this definition refer to?
(A) Hypothesis
(B) Justification
(C) Conclusion
(D) Introduction
86. It is a proposed explanation, assertion, or assumption about a population parameter or about the distribution of a random variable.
(A) Hypothesis
(B) Hypothesis testing
(C) Conclusion
(D) Proposition
87. "Age is related to risk of infection" is an example of what kind of hypothesis?
(A) Null Hypothesis
(B) Directional
(C) Non-Directional
(D) None of the above
88. A hypothesis in educational research need not be
(A) A compatible with well-attested theories and models.
(B) Logically consistent and pertinent to the question under consideration.

- (C) Capable of establishing generalizations that can be applied in many areas of education or other fields.
- (D) None of the above.
89. The statement “There number of computers delivered on a daily basis is not 20” is an example of what kind of hypothesis?
- (A) Null Hypothesis
- (B) Hypothesis Testing
- (C) Sample Hypothesis
- (D) Alternative Hypothesis
90. “Ice will melt faster in salt water than in fresh water.”, is an example of a(n)
- (A) Hypothesis
- (B) Question
- (C) Analysis
- (D) Conclusion
91. The two sets of hypotheses present specific predictive statements about relationships between variables (teaching method vs. engagement; teaching method vs. perception). These hypotheses transform which aspect of the research into testable propositions?
- (A) The teacher profile data (RQ1).
- (B) The descriptive scope of PBL implementation (RQ2).
- (C) The comparative aspects of the study’s overall aim.
- (D) The definitions of K-12 and PBL.
92. In hypothesis testing, rejecting the null hypothesis means:
- (A) There is sufficient evidence for the alternative hypothesis
- (B) The null hypothesis is proven true
- (C) The study is invalid
- (D) The research must stop
93. As a graduate student in psychology, you design a study on how lawbreakers who get away with their crimes react to news of others’ crimes. Your graduate adviser rejects your study because it is not _____. In other words, it cannot be evaluated through observation
- (A) Negotiable
- (B) Testable
- (C) Accurate
- (D) Parsimonious
94. Why is it important for a hypothesis to be grounded in theory or prior research?
- (A) It ensures the hypothesis is meaningful and testable.
- (B) It makes the study easier to plagiarize.
- (C) It prevents any testing.
- (D) It eliminates methodology.
- (E) It avoids variables.
95. An educated guess about what you think will happen in your experiment.
- (A) Data
- (B) Results
- (C) Conclusion
- (D) Hypothesis
96. A sentence that is either true or false.
- (A) Proposition
- (B) Atom
- (C) Truth Value
- (D) Compound
97. “Many nursing students are interested in obtaining advance degrees.” This sentence is:
- (A) Research hypothesis-directional
- (B) Research hypothesis-nondirectional
- (C) Null hypothesis
- (D) Not a testable hypothesis as stated
98. A tentative explanation or an answer to a question about variables, their relationships, and other facts involved in the research.
- (A) Background of the study
- (B) Conceptual Framework
- (C) Definition of Terms
- (D) Hypothesis

99. Hypotheses are derived from which of the following?
- (A) Epistemologies
 - (B) Hunches
 - (C) Theories
 - (D) Ontologies
100. Mr. Duffy teaches high-school ELLs and believes that he has a harder job than his colleagues who teach younger learners. This is because he believes that there is an optimal period for language acquisition, which ends at puberty. Mr. Duffy supports the:
- (A) Critical period hypothesis.
 - (B) The natural order hypothesis.
 - (C) Social interactionist theory.
 - (D) The acquisition-learning hypothesis.
101. If plants are exposed to sunlight, then they will grow taller. What part of the scientific method is this an example of?
- (A) Procedure
 - (B) Hypothesis
 - (C) Question
 - (D) Results
102. What should you do if you reject your hypothesis?
- (A) Stop the experiment
 - (B) Change the data
 - (C) Accept the hypothesis
 - (D) It is okay to reject your hypothesis
103. Identify the hypothesis and conclusion in the statement: 'If you stay up late, then you will be tired at school tomorrow.'
- (A) Hypothesis: you stay up late, Conclusion: you will be tired at school tomorrow.
 - (B) Hypothesis: you will be tired at school tomorrow, Conclusion: you stay up late.
 - (C) Hypothesis: you stay up late, Conclusion: you will be happy at school tomorrow.
 - (D) Hypothesis: you go to bed early, Conclusion: you will be tired at school tomorrow.
104. A scientist asked a question that was based on an observation. Which is the next step the scientist should take?
- (A) The scientist should form a hypothesis and design an experiment.
 - (B) The scientist should record and communicate his hypothesis and results.
 - (C) The scientist should draw conclusions based on the observation.
 - (D) The scientist should collect data and organize it into tables.
105. Hypothesis formulation is important because it:
- (A) Reduces data
 - (B) Defines the focus and purpose of research
 - (C) Removes assumptions
 - (D) Guarantees accurate findings
106. Which process of research formulation provides a basis for statistical testing enabling the researchers to draw conclusions?
- (A) Preparing a thesis
 - (B) Framing a research question
 - (C) Pointing out research objective
 - (D) Constructing a hypothesis in writing
107. What primary purpose does a hypothesis serve in investigation?
- (A) To summarize literature without testing
 - (B) To replace theory with speculation
 - (C) To finalize conclusions before analysis
 - (D) To examine explanations through collected data
108. A hypothesis should be written in which form to indicate variable relations clearly?
- (A) Interrogative clause linking phenomena
 - (B) Narrative paragraph describing context
 - (C) Imperative instruction listing steps
 - (D) Declarative sentence relating variables
109. The hypothesis that two groups are the same.
- (A) Alternative hypothesis

- (B) Experimental hypothesis
 - (C) Null hypothesis
 - (D) Statistical hypothesis
- 110.** The hypothesis that states there is a significant relationship between two variables
- (A) Research problem
 - (B) Alternative hypothesis (H_a)
 - (C) Construct validity
 - (D) Qualitative Research
- 111.** Hypothesis which explain relationship between two variables is
- (A) Causal
 - (B) Descriptive
- 112.** Predictions that involve variables and statistical tests.
- (A) Central and subquestions
 - (B) Riddle
 - (C) Objectives
 - (D) Hypothesis
- 113.** — are hypothetical statements denying what is explicitly indicated in the working hypothesis.
- (A) Null
 - (B) Casual
 - (C) Relational
 - (D) Complex
- 114.** A hypothesis should be:
- (A) Vague and general
 - (B) Testable and based on evidence
 - (C) Based on personal opinions
 - (D) Unrelated to research objectives
- 115.** What does hypothesis testing involve?
- (A) Confirming the hypothesis without data
 - (B) Evaluating whether the data supports the hypothesis
 - (C) Abandoning the hypothesis altogether
 - (D) Creating new hypotheses
- 116.** A hypothesis is defined as which of the following, as described in the worksheet?
- (A) A testable statement or prediction that can be investigated through experiments.
 - (B) A list of materials needed for an experiment.
 - (C) A summary of the results of an experiment.
 - (D) A detailed procedure for conducting an experiment.
- 117.** “Officers in my organization have higher than average level of commitment” Such a hypothesis is an example of —
- (A) Descriptive Hypothesis
 - (B) Directional Hypothesis
 - (C) Relational Hypothesis
 - (D) All of the above
- 118.** A research hypothesis must be:
- (A) Ambiguous and broad
 - (B) Testable and measurable
 - (C) Based on assumptions only
 - (D) Avoid variables
- 119.** A ‘Hypothesis’ in the context of research methods and design is defined as:
- (A) A tentative statement that can be tested by research.
 - (B) A summary of the research findings.
 - (C) A list of variables used in the study.
 - (D) A detailed explanation of the research methodology.
- 120.** James Cameron’s last three movies were successful. His next movie will be successful.
- (A) Inductive
 - (B) Deductive
- 121.** These are formulated to explain, predict, and understand phenomena and, in many cases, to challenge and extend existing knowledge within the limits of critical bounding assumptions. Its framework is the structure that can hold or support it in a research study.
- (A) Theory

- (B) Results
(C) Abstract
(D) Paradigm
- 122.** Which of the following is an example of a null hypothesis (H_0)?
(A) "There is no significant relationship between study time and test scores."
(B) "Increased study time improves test scores."
(C) "Students who study more will pass."
(D) "Test scores improve over time."
- 123.** A is a statement of expectation or prediction that will be tested by research.
(A) Research.
(B) Research Abstract.
(C) Research Methodology.
(D) Research Hypotheses.
- 124.** It is a testable proposition or predictive statement about the possible outcome of a scientific researched study.
(A) Statement of the Problem
(B) Research Objectives
(C) Hypothesis
(D) Research Question
- 125.** There is no significant difference on the average vertical strength (N) between the glass-impregnated concrete tiles and the commercial ceramic tiles.
(A) Null hypothesis
(B) Comparative hypothesis
(C) Alternative hypothesis
(D) Relational hypothesis
- 126.** Null and alternative hypotheses are statements about:
(A) Population parameters.
(B) Sample parameters.
(C) Sample statistics.
(D) It depends-sometimes population parameters and sometimes sample statistics.
- 127.** A tentative statement about the relationship between two or more variables.
(A) Hypothesis
(B) Research methods
(C) Theory
(D) Inferential statistics
- 128.** What is a hypothesis in the context of the scientific approach?
(A) A statement describing relationships among variables that is tentatively assumed to be true
(B) A conclusion derived from authority
(C) A generalization based on experience
(D) A philosophical principle of epistemology
- 129.** A hypothesis is a(n)
(A) Prediction
(B) Educated guess
(C) Proving answer
(D) Definition
- 130.** At its initial stage, a hypothesis can be which of the following?
(A) An imagined idea
(B) A tested conclusion
(C) A hunch or guess
(D) A definitive proof
- 131.** A — is a prediction of an outcome and the basis for experimentation.
(A) Conclusion
(B) Constant
(C) Hypothesis
(D) Variable
- 132.** How does the inclusion of hypotheses in a research proposal shape the research process?
(A) It confirms the research findings before data collection
(B) It directs the study by providing specific predictions to test
(C) It simplifies the review of literature
(D) It helps in concluding the research early

133. After forming a research question, a psychologist will form a theory, or educated guess.
- (A) True
 - (B) False; hypothesis
 - (C) False; constructs
 - (D) None of above
134. What can be defined as: a possible explanation for a set of observations, or an educated guess that must be "testable."
- (A) Scientific Theory
 - (B) Communicating
 - (C) Hypothesis
 - (D) Claim
135. When should you write a hypothesis?
- (A) After writing procedures
 - (B) After making observations and doing research on a question/problem
 - (C) After buying materials for an experiment
 - (D) At the very beginning of the experiment
136. A Hypothesis must be ____
- (A) Speedy.
 - (B) Specific.
 - (C) Slow.
 - (D) Diffuse.
137. Which hypothesis is more specific and testable?
- (A) Conceptual hypothesis
 - (B) Operational hypothesis
 - (C) Working hypothesis
 - (D) Non-directional hypothesis
138. The first step in hypothesis testing involves:
- (A) Stating the research hypothesis
 - (B) Conducting a survey
 - (C) Analyzing secondary data
 - (D) Writing recommendations
139. A/an ____ proposes a predicted answer to a research question.
- (A) Objective
 - (B) Hypothesis
 - (C) Analysis
 - (D) None of above
140. An educated guess or testable prediction is a
- (A) Theory
 - (B) Law
 - (C) Hypothesis
 - (D) Conclusion
141. Which of the following is an example of a statement reflecting probabilistic cause?
- (A) Students who study two hours a day will make good grades
 - (B) Students who study two hours a day are more likely to make good grades than students who do not study two hours each day
142. 'Falsifiable' in the context of research methods and design refers to:
- (A) A hypothesis or theory that can be proven false through evidence or experimentation.
 - (B) A hypothesis that is always true regardless of evidence.
 - (C) A theory that cannot be tested or measured.
 - (D) A method that guarantees correct results.
143. Which of the following is the FIRST step of a hypothesis test?
- (A) Check assumptions & conditions
 - (B) Find your test statistic
 - (C) State your conclusion
 - (D) State your null & alternative hypotheses
144. Inductive Reasoning-used to form hypotheses (explanations) based on a set of ____
- (A) Observations
 - (B) Assumptions
 - (C) Guesses
 - (D) Predictions
145. What is the role of a hypothesis in research?
- (A) It concludes the research

- (B) It is a testable guess or hunch
(C) It provides background information
(D) It summarizes the literature review
- 146.** Based on the theory of uncertainty in illness, we propose that those individuals with higher emotion focused coping will have more uncertainty. This is an example of which of the following:
(A) Research problem statement
(B) Research purpose
(C) A research hypothesis
(D) A research aim.
- 147.** Which of the following BEST described the purpose of hypothesis?
(A) It provides the investigator with a relational statement that is directly testable in a research study.
(B) It provides a final explanation of phenomena.
(C) It provides a non-direction to the research.
(D) It provides a framework for reporting.
- 148.** It is the educated guess
(A) Introduction
(B) Statement of the Problem
(C) Hypotheses
(D) Significance of the Study
- 149.** Hypotheses means
(A) Selection
(B) Analysis
(C) Assumption
(D) Interpretation
- 150.** The point of many statistics procedure is to test the viability of
(A) Null hypothesis
(B) Alternative hypothesis
(C) Experimental hypothesis
(D) Correlation hypothesis
- 151.** A proposed explanation made based on limited evidence as a starting point for further investigation is called a:
(A) Theory
(B) Hypothesis
(C) Conclusion
(D) Observation
- 152.** Which of the following best sums up the objective of hypothesis?
(A) It prevents the researcher from undertaking blind research.
(B) It lays down the rules for undertaking the research.
(C) It enables the researcher to draw conclusions.
(D) It places clear goals for the researcher.
- 153.** A statement that makes a specific prediction between one to two variables.
(A) Problem
(B) Hypotheses
(C) Gap in literature
(D) Proposition
- 154.** According to the scientific method, which is a characteristic of all hypotheses?
(A) They are true.
(B) They are testable.
(C) They are formulated only after completion of a study.
(D) They are vague.
- 155.** What is a null hypothesis in communication research?
(A) A hypothesis predicting a relationship between variables
(B) A hypothesis stating that there is no significant difference or effect
(C) A hypothesis tested in content analysis
(D) A hypothesis tested in experimental research
- 156.** "Hypertensive patients who undergo a biofeedback self-management training program will have lower blood pressure readings

- than patients who do not 3 months after the start of the program.” This sentence could best be described as a:
- (A) Hypothesis
 - (B) Research question
 - (C) Statement of purpose
 - (D) Problem statement
- 157.** How is a hypothesis different from a theory?
- (A) A theory has evidence to back it up and a hypothesis is an educated guess as to what is going to happen.
 - (B) They are both the same. They both are guesses as to what happens in the natural world.
 - (C) A theory is an opinion about how something works but a hypothesis has scientific evidence to support it.
 - (D) A hypothesis is used in science and a theory is used in society. Edit
- 158.** A formal statement state relationship between two or more than two variables in a specified population. The formal statement is called as:
- (A) Assumption
 - (B) Hypothesis
 - (C) Research question
 - (D) Research objectives
- 159.** A prediction that can be tested is a ____
- (A) Observation
 - (B) Control
 - (C) Hypothesis
 - (D) Inference
- 160.** Identify the incorrect statement:
- (A) A hypothesis is a basis for reasoning without any assumption of its truth.
 - (B) A hypothesis is made on the basis of limited evidence as a starting point for further investigations.
 - (C) Hypothesis is a proposed explanation for a phenomenon.
 - (D) Scientific hypothesis is a scientific theory.
- 161.** “There is no significant difference between the control group and experimental group in terms of their pretest scores.” What type of hypothesis is involved?
- (A) Alternative Hypothesis
 - (B) Null Hypothesis
 - (C) Either A or B.
 - (D) Neither A nor B. tagsHypotheses
- 162.** A hypothesis is rejected when:
- (A) P-value < significance level (α)
 - (B) P-value = 0
 - (C) P-value > 1
 - (D) P-value > significance level (α)
- 163.** A statement of the expected relationship between two or more variables is known as the:
- (A) Concept definition
 - (B) Hypothesis
 - (C) Problem statement
 - (D) Research question
- 164.** ”There is no relationship between higher motivation level and higher efficiency” is an example of which type of hypothesis?
- (A) Co relational.
 - (B) Research.
 - (C) Null.
 - (D) Alternative.
- 165.** Match the statement with the correct term.
A prediction or best guess of relation that exists among variables being investigated.
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypothesis
- 166.** A ____ is a statement or a prediction about the relationship of two or more variables.
- (A) Hypothesis
 - (B) Conclusion
 - (C) Theory
 - (D) Assumption

167. "If the forest is clear-cut (cutting down all the trees in an area of forest), then it will result in drier soils because there will not be any trees to protect the soil from sunlight" is an example of:
- (A) A theory
 - (B) A hypothesis
 - (C) An experimental question
 - (D) A conclusion
168. A ____ is an assumption about how two or more variables are related; it makes a conjectural statement about the relationship between those variables. In sociology, it will often predict how one form of human behavior influences another. In research, independent variables are the cause of the change.
- (A) Value judgement
 - (B) Hypothesis
 - (C) Validity
 - (D) Triangulation
169. What is the role of a hypothesis in communication research?
- (A) To summarize research findings
 - (B) To predict a relationship between variables
 - (C) To explain the research design
 - (D) To provide a literature review
170. This hypothesis describes what we want to establish or what we expect is true.
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Hypothesis Test
 - (D) Two-Way Table
171. Which of the following cannot be considered a quality of good hypothesis?
- (A) Clarity.
 - (B) Plausibility.
 - (C) Modifiability.
 - (D) Verifiability.
172. Prediction of how or more factors are likely to be related.
- (A) Validity
 - (B) Theory
 - (C) Hypothesis
 - (D) None of above
173. "If I adjust the instructional plan to address homework earlier in the class period, then students will be more engaged in the class."
- (A) Hypothesis of possible solution
 - (B) Data-collection/field work strategy
 - (C) Active experimental/observational testing of hypothesis
 - (D) None of above
174. What is the significance of developing a working hypothesis?
- (A) It helps in structuring the literature review
 - (B) It determines the research methodology
 - (C) It provides a testable statement based on existing literature
 - (D) It eliminates the need for data collection
175. Identify the incorrect statement: [2012-DECEMBER]
- (A) A hypothesis is made on the basis of limited evidence as a starting point for further investigations.
 - (B) A hypothesis is a basis for reasoning without any assumption of its truth.
 - (C) Hypothesis is a proposed explanation for a phenomenon.
 - (D) Scientific hypothesis is a scientific theory.
176. Identify the sentence that uses reasoning to support a claim:
- (A) The sky is blue because it reflects the ocean.
 - (B) The sky is blue because molecules in the air scatter blue light from the sun.
 - (C) The sky is blue because it is a primary color.
 - (D) The sky is blue because it is not red.

177. Role of hypothesis is very important before —
(A) Selection of problem
(B) Data collection
(C) Preparing research report
(D) Drawn Conclusion
178. The hypothesis "increasing temperature will decrease the solubility of gas in water" is:
(A) Directional hypothesis
(B) Null hypothesis
(C) Statistical hypothesis
(D) Qualitative hypothesis
179. The following are characteristics of hypothesis, EXCEPT.
(A) Logical
(B) Testable
(C) Represents a simple unit or subject of the problem
(D) Directly related to the research analysis and findings
180. Hypotheses are refined statements of the specific components of the problem
(A) True
(B) False
181. Conceptualising and hypothesising the research gap involves:
(A) Stating irrelevant issues
(B) Defining testable propositions
(C) Collecting random data
(D) Copying previous studies
182. A general statement or conclusion that is made without sufficient evidence
(A) Red Herring
(B) Hasty Generalization
(C) Slippery Slope
(D) None of above
183. At which stage of the research process do you create a statement that makes a prediction of the relationship between two or more observable attributes.
(A) Forming hypotheses.
(B) Formulating a research question.
(C) Analyzing the data.
(D) Collecting the data.
184. In science, an educated guess is called a/an
(A) Plenty of water.
(B) Hypothesis
(C) The science instructor.
(D) Wild guess
185. Deductive reasoning helps in
(A) Sample Selection.
(B) Hypothesis Generation.
(C) Problem Identification.
(D) None of the above.
186. Choose the correctly written hypothesis for "What is the effect of putting Pam Cooking Spray on the bottom of a sled?"
(A) I think the sled will slide faster.
(B) If I put Pam Cooking Spray on the bottom of my sled, then I will win the race."
(C) If I put Pam Cooking Spray on the bottom of my sled, then I will slide faster.
(D) None of above
187. A(n) — is a statement that attempts to explain why things are the way they are.
(A) Theory
(B) Principle
(C) Idea
(D) Plan
188. A hypothesis is a clear predictive statement, often an attempt to explain an experiment.
(A) True
(B) False
(C) All the above
(D) None of the above

- 189.** A ____ is a tentative conclusion or answer to a specific question raised at the beginning of the investigation. It is an educated guess about the answer to a specific question
- (A) Idea
 - (B) Fact
 - (C) Assumption
 - (D) Hypothesis
- 190.** How do you formulate a testable hypothesis?
- (A) A testable hypothesis is a specific, measurable prediction about the relationship between two or more variables.
 - (B) A testable hypothesis is an opinion or belief without evidence.
 - (C) A testable hypothesis cannot be measured or observed.
 - (D) A testable hypothesis is a vague statement about a single variable.
- 191.** A ____ is a statement about observable phenomena that may be judged as true or false.
- (A) Hypothesis
 - (B) Variable
 - (C) Concept
 - (D) Proposition
- 192.** A conjecture is
- (A) A concluding statement reached using inductive reasoning.
 - (B) Making a statement have the opposite meaning and truth value by using or changing the words no, not or never.
 - (C) The part of a conditional statement that follows then.
 - (D) A rule that is accepted as fact without being proven. It does not have a counterexample.
- 193.** A statement the author believes to be true
- (A) Infographic
 - (B) Relevant
 - (C) Claim
 - (D) Bias
- 194.** What happens when the results of an experiment support the hypothesis?
- (A) The hypothesis is ignored
 - (B) The hypothesis is modified
 - (C) The hypothesis is discarded
 - (D) The hypothesis is confirmed
- 195.** What two words should be in your hypothesis?
- (A) I think
 - (B) If ____ then ____
 - (C) It will
 - (D) No idea
- 196.** What is the purpose of a substantive hypothesis?
- (A) To propose a specific relationship between variables
 - (B) To describe the methodology of the study
 - (C) To guide the selection of research topics
 - (D) To represent the absence of an effect or difference
- 197.** What is an alternative hypothesis for Jacob's study where half of the participants are allowed to rehearse the word list before recall and the other half are not?
- (A) There will be no difference in recall between the two groups
 - (B) The group that rehearses will recall more words than the group that does not
 - (C) The group that does not rehearse will recall more words than the group that rehearses
 - (D) Both groups will recall the same number of words
- 198.** The goal of the pedagogical experiment is to confirm ____
- (A) Hypotheses
 - (B) Goal
 - (C) Topic
 - (D) Argument
 - (E) Proof

- 199.** Which statement aligns with the attribute of testability?
- (A) The possibility of actually testing can be approved
 - (B) Predictions should remain implicit for flexibility
 - (C) Verification must rely on anecdotal impressions
 - (D) Testing should be avoided to keep neutrality
- 200.** A Hypothesis from which no generalization can be made is
- (A) Descriptive Hypothesis.
 - (B) Barren Hypothesis.
 - (C) Null Hypothesis.
 - (D) Analytical Hypothesis.
- 201.** The hypothesis “As the cost of money (interest rate) increases, the amount of business investment decreases” is best classified as:
- (A) Correlational
 - (B) Descriptive
 - (C) Causal
 - (D) Null
- 202.** The position that you are trying to get your readers to accept. (Your Opinion on a topic)
- (A) Claim
 - (B) Topic
 - (C) Thesis
 - (D) Main Idea
- 203.** A researcher is asked to examine the effects of happiness on creative thought using an experiment. What would the hypothesis be for this study?
- (A) Happiness increases creative thinking.
 - (B) Creative thinking increases happiness.
 - (C) Happiness is associated with creative thinking.
 - (D) Creative thinking is associated with happiness.
- 204.** Which of the following serves as the primary foundation for developing and testing hypotheses and research questions in political science?
- (A) Intuition
 - (B) Statistics
 - (C) Theory
 - (D) None of the above
- 205.** By establishing a ____ of the relationship between variables under examination, researchers can form a specific hypothesis to drive a quantitative research study.
- (A) Prediction
 - (B) Generalization
- 206.** A(n) ____ predicts a relationship between or among variables.
- (A) Research design
 - (B) Literature review
 - (C) Hypothesis
 - (D) Aggregate
- 207.** Rohan is conducting a research study on the effects of social media on mental health. He is trying to formulate a hypothesis for his study. Hypothesis should be based on?
- (A) Research Problem
 - (B) Research Design
 - (C) Data Analysis
 - (D) All of the above
- 208.** The assumed relationship between the variables is called ____
- (A) Independent variable
 - (B) Dependent variable
 - (C) Hypothesis
 - (D) Control
- 209.** Often in the form of an if/then/because statement.
- (A) Structure of a hypothesis.
 - (B) A type of scientific law.
 - (C) A method of data collection.
 - (D) A conclusion drawn from observations.

- 210.** In science, a hypothesis must be
(A) Correct.
(B) Manipulated.
(C) Controlled.
(D) Testable.
- 211.** What you expect to find according to predictions from a theory is known as a(n) ____
(A) Research design
(B) Variable
(C) Hypothesis
(D) Analysis of documents
- 212.** A proposition which can be put to determine its validity is called
(A) Variable.
(B) Problem.
(C) Hypothesis.
(D) Error.
- 213.** Will your hypothesis always be correct? Why not?
(A) Yes, why not.
(B) Of course I'm always correct
(C) No, because we never know if our data will support our hypothesis
(D) No, the hypothesis is never correct
- 214.** A hypothesis that explains the relationship between variables using a theory is known as:
(A) Statistical hypothesis
(B) Working hypothesis
(C) Conceptual hypothesis
(D) Empirical hypothesis
- 215.** Which of the following alternatives specifically denote the criteria for evaluating a hypothesis in researches?
(A) Plausibility of explanation.
(B) Testability of explanation.
(C) Levels of explanation.
(D) All of the above.
- 216.** I hear barking in the backyard, and I don't own a dog. A neighbor's dog must have wandered into my yard.
(A) Deductive
(B) Inductive
(C) Abductive
(D) None of above
- 217.** A research hypothesis cannot take the following form
(A) Null form.
(B) Question form.
(C) Declarative form.
(D) Problem form.
- 218.** Tara is conducting a study on the effects of social media on teenagers. She believes that increased social media usage leads to higher levels of anxiety among teens. This belief is a presumption or assumption about the population under study drawn by Tara herself. What is this belief called?
(A) Research
(B) Hypothesis
- 219.** What are hypotheses derived from?
(A) Magic
(B) Personal beliefs
(C) Random guesses
(D) Theories
- 220.** Predictions about answers to research questions.
(A) Research Hypothesis
(B) Research Aims
(C) Research Statement
(D) Research Variables
- 221.** A statement of what the author wants to prove.
(A) CLAIM
(B) COUNTERCLAIM
(C) REASONS
(D) EVIDENCE

222. A prediction or proposed explanation that can be tested is called a(an):
(A) Observation
(B) Inference
(C) Hypothesis
(D) Theory
223. Propose a research hypothesis for a study on the effects of mobile learning on student performance.
(A) Mobile learning is common in schools
(B) Mobile learning positively affects student performance compared to traditional learning methods
(C) Students like using mobile devices
(D) Mobile learning does not improve outcomes
224. An operational hypothesis is a statement that describes
(A) The size of the study sample
(B) The variables (and how they are measured) used to address the research questions
(C) How the participants in the study will be recruited
(D) How the study will be statistically analysed.
225. In testing a Hypothesis the common error is
(A) Type I
(B) Type I and II
(C) Type II
(D) None of these
226. Null, alternative, and non-directional are forms of ____
(A) Research questions
(B) Objectives
(C) Hypothesis
(D) Central questions
227. "A person's income is related to his or her difficulty in accessing health care." This sentence is:
(A) Research hypothesis-directional
(B) Research hypothesis-nondirectional
(C) Null hypothesis
(D) Not a testable hypothesis as stated
228. A testable prediction:
(A) Theory
(B) Hypothesis
(C) Independent variable
(D) Operational definition
229. What does the term "Hypotheses" refer to in research terminology?
(A) The actual results of a study
(B) The expected result of a study
(C) A type of statistical test
(D) The process of collecting data
230. ____ is a statement of what will happen next in a sequence of events.
(A) Excerpt
(B) Prediction
(C) Summarize
(D) Justify
231. There will be no relationship between variable X and variable Y. What type of hypothesis is this?
(A) Directional hypothesis
(B) Non-directional hypothesis
(C) Null hypothesis
(D) None of above
232. Define: Hypothesis
(A) A Hypothesis is a testable statement or prediction about the relationship between two or more variables.
(B) A Hypothesis is a proven fact established after an experiment.
(C) A Hypothesis is a random guess with no scientific basis.
(D) A Hypothesis is a summary of the results of an experiment.
233. A research hypothesis must be ____ when subjected to the scientific method.

- (A) Intuitive
 - (B) Logical
 - (C) Testable
 - (D) Accurate
234. Which of the following statements reflects a testable hypothesis?
- (A) Ghosts influence human behavior.
 - (B) More sunlight leads to higher plant growth rates.
 - (C) Happiness improves with positive vibes.
 - (D) Dreams predict the future.
235. "There is no significant difference in systolic resting blood pressure before and after a dietary and exercise intervention." This is an example of a ____
- (A) Null hypothesis for a between measures design
 - (B) Alternative hypothesis for a between measures design
 - (C) Null hypothesis for a within measures design
 - (D) Alternative hypothesis for a within measures design
236. A statement that predicts how the change in one variable will cause a change in another variable
- (A) Proposition
 - (B) Hypothesis
 - (C) Dependent variable
 - (D) Independent variable
237. A concept that needs to be proven through a thorough study.
- (A) Hypothesis
 - (B) Effect
 - (C) Cause
 - (D) Relationship
238. There is no difference in the incidence of phlebitis around intravenous cannulae changed every 72 hours and those changed at 96 hours' is an example of a:
- (A) Null hypothesis
 - (B) Directional hypothesis
 - (C) Non-directional hypothesis
 - (D) Simple hypothesis
239. It is a tentative answer to a research question or problem that needs to be tested
- (A) Assumption
 - (B) Solution
 - (C) Hypothesis
 - (D) Objective
240. What do we call the prediction of how one or more factors are likely to be related?
- (A) Validity
 - (B) Theory
 - (C) Hypothesis
 - (D) None of above
241. A ____ is an educated guess based on our observations.
- (A) Inference
 - (B) Observation
 - (C) Hypothesis
 - (D) None of above
242. A statement which research sets out to prove or disprove
- (A) Conclusion
 - (B) Hypothesis
 - (C) Variable
 - (D) Instrument
243. Which question from the touch therapy study tests a relationship rather than naming a factor?
- (A) Therapy location within the hospital
 - (B) Significant effect differences between groups
 - (C) Seconds of stroking per session
 - (D) Extent of perceptible therapy effects
 - (E) How infants respond to gentle touch
244. A proposal intended to explain certain facts and observations
- (A) Affiliate

- (B) Hypothesis
 - (C) Hackneyed
 - (D) Haughty
- 245.** In quantitative research, the research hypothesis is alternative to the null hypothesis and states there IS a relationship between two or more variables.
- (A) True
 - (B) False
- 246.** Why is testing a hypothesis important in logistics research?
- (A) To confirm opinions
 - (B) To verify whether a proposed solution works
 - (C) To create more paperwork
 - (D) To avoid decision-making
- 247.** A proposed explanation based on limited evidence.
- (A) A research question
 - (B) A hypothesis
 - (C) Conclusive data
 - (D) A variable
- 248.** What do you call a tentative explanation for an observation, phenomenon, or scientific problem that can be tested by further investigation.
- (A) Alternative Hypothesis
 - (B) Hypothesis
 - (C) Null Hypothesis
 - (D) Sample Hypothesis
- 249.** Which of the following hypotheses would be most difficult to test experimentally?
- (A) People exposed to the color red will be more aggressive than those exposed to the color blue.
 - (B) Divorce makes children more independent.
 - (C) Exposure to violent TV increases aggression
 - (D) Studying leads to better grades
- 250.** Step 3 in research process is ____
- (A) Literature review
 - (B) Construct hypotheses
 - (C) Conduct a research study
 - (D) Collect relevant data
- 251.** The primary purpose of a research hypothesis is:
- (A) To generate random results
 - (B) To provide a testable prediction
 - (C) To increase the complexity of research
 - (D) To avoid defining relationships between variables
- 252.** Another word for an educated guess.
- (A) Construct
 - (B) Hypothesis
 - (C) Assumption
 - (D) Response
- 253.** A tentative explanation that can be tested is called:
- (A) Theory
 - (B) Hypothesis
 - (C) Law
 - (D) Conclusion
- 254.** What is a possible explanation that we may or may not agree with?
- (A) Grounded theory.
 - (B) The hypothesis.
 - (C) The research question.
 - (D) The objective
- 255.** It is a conjectural statement of the relation between two or more variables. It is a tentative or temporary answer to a research problem.
- (A) Background of the Problem
 - (B) Statement of the Problem
 - (C) Research Objectives
 - (D) Research Hypothesis

- 256.** What is a 'hypothesis' and how is it used in research?
- (A) A hypothesis is an untestable theory that cannot be proven.
 - (B) A hypothesis is a testable prediction used in research to guide experimentation and analysis.
 - (C) A hypothesis is a random guess made without any research.
 - (D) A hypothesis is a definitive conclusion drawn from data.
- 257.** Research Problem & Hypothesis-The importance of hypothesis formulation lies in:
- (A) Giving direction to the study
 - (B) Avoiding data collection
 - (C) Making conclusions without research
 - (D) None of these
- 258.** A hypothesis is a
- (A) Law
 - (B) Canon
 - (C) Postulate
 - (D) Supposition
- 259.** Position statement-an assertion of something as true, real, or factual.
- (A) Credible Source
 - (B) Evidence
 - (C) Reasoning
 - (D) Claim
- 260.** The conclusions to the background chapters should lead clearly to the research hypotheses or research questions that you pursue in your work.
- (A) True
 - (B) False
- 261.** Consider the following quantitative research study abstract and match the statements to their most applicable place within the research idea process. There will be no significant differences between the results of the two groups of students in terms of engagement.
- (A) Topic
 - (B) Problem
 - (C) Purpose
 - (D) Question
 - (E) Hypothesis
- 262.** Which of the following is an example of a properly stated hypothesis?
- (A) "I think plants grow."
 - (B) "If plants receive more sunlight, then they will grow taller."
 - (C) "Plants need water."
 - (D) "Sunlight is important."
- 263.** What type of reasoning progresses from general ideas to specific conclusions?
- (A) Critical reasoning
 - (B) Inductive reasoning
 - (C) Deductive reasoning
 - (D) Abstract reasoning
- 264.** What is an educated guess or prediction about what will happen in the research based on prior knowledge?
- (A) Conclusion
 - (B) Abstract
 - (C) Hypothesis
 - (D) Thesis
- 265.** Which hypothesis is formulated for empirical testing in research?
- (A) Working hypothesis
 - (B) Statistical hypothesis
 - (C) Declarative hypothesis
 - (D) Theoretical hypothesis
- 266.** An educated guess about the relationship between two variables
- (A) Variable
 - (B) Placebo effect
 - (C) Hypothesis
 - (D) Statistics

267. What is the role of a research hypothesis in guiding a study?
- (A) To offer a testable prediction that directs the research process
 - (B) To summarize the research findings at the end
 - (C) To provide a definitive conclusion before the research begins
 - (D) To entertain the audience with speculative ideas
268. It is a speculative statement of the relation between two or more variables. It is a tentative or temporary answer to a research problem.
- (A) Background of the Problem
 - (B) Statement of the Problem
 - (C) Research Objectives
 - (D) Research Hypothesis
269. If a researcher obtains positive results with respect to a hypothesis, he/she can state that the results ___ the hypothesis
- (A) Verify
 - (B) Confirm
 - (C) Prove
 - (D) Support
270. Cars causes more air pollution. what kind of statement is it?
- (A) Hypothesis
 - (B) Theory
 - (C) Operational definition
 - (D) Proposition
271. In the research process, what is the main goal of 'Hypothesis Testing'?
- (A) To choose a research topic
 - (B) To organize your collected data
 - (C) To validate or reject a research question
 - (D) To find a gap in the literature
272. Hypotheses are more essential in quantitative, not qualitative, studies.
- (A) TRUE
 - (B) FALSE
273. A statement that explains or makes generalizations about a set of facts or principles, usually forming a basis for possible experiments to confirm if it is true
- (A) Research question
 - (B) Conclusion
 - (C) Purpose
 - (D) Hypothesis
274. A thing that is accepted as true or as certain to happen, without proof is: ___
- (A) A construct
 - (B) A proposition
 - (C) A hypothesis
 - (D) An assumption
275. A hypothesis is never wrong.
- (A) True
 - (B) False
276. What should you watch out for when using deductive reasoning?
- (A) That generalizations are accurate
 - (B) That examples prove a rule
 - (C) That assumptions are true
 - (D) That specific observations lead to larger conclusions
277. A suitable hypothesis for a study on studies skills and academic performance might be:
- (A) There is a relationship between study skills and performance.
 - (B) Study skills enhance performance.
 - (C) Students with better study skills will have higher academic performance than those with poorer study skills.
 - (D) Study skills matter.
278. A characteristic of a good hypothesis is:
- (A) It is testable and falsifiable.
 - (B) It is vague and ambiguous.
 - (C) It cannot be proven wrong.
 - (D) It is based on personal beliefs.

279. A hypothesis can be described as
- (A) A hunch.
 - (B) A wild guess.
 - (C) A type of statement made by researchers when they are attempting to get funding for their research.
 - (D) A prediction of some sort regarding the possible outcomes of a study.
280. Which of the following is not an element of a well framed hypothesis?
- (A) Variables
 - (B) Level of significance
 - (C) Setting of the study
 - (D) Research instruments
281. A testable explanation to a problem that has not yet been tested.
- (A) Data
 - (B) Theory
 - (C) Hypothesis
 - (D) Fact
282. Hypothesis cannot be stated in
- (A) General terms.
 - (B) Directional terms.
 - (C) Declarations terms.
 - (D) Null and question form terms.
283. What is the term for an explanation using an integrated set of principles that organizes observations and predicts behaviors or events?
- (A) Theory
 - (B) Hypothesis
 - (C) Law
 - (D) Operational Definition
284. Testable questions have all of the following characteristics EXCEPT:
- (A) They are based on information or observation.
 - (B) They involve the development of experiment that will isolate specific variables and control what is being tested.
 - (C) They can produce measurable and comparable numerical results
 - (D) They always produce a clear answer once tested.
285. A research hypothesis is a statement about:
- (A) The theoretical relationship between two or more variables
 - (B) Assigning number values to objects
 - (C) The process of public verification
 - (D) Systematic observation
286. A directional hypothesis predicts:
- (A) There will be no relationship between variables
 - (B) The direction of the relationship between variables
 - (C) A correlation without specifying direction
 - (D) A random outcome
287. Which component transforms a general question into a focused study plan?
- (A) Background anecdotes without sources
 - (B) Hypotheses predicting variable relations
 - (C) Open-ended interviews with no protocol
 - (D) Random sampling without criteria
 - (E) Ethical consent forms alone
288. Which hypothesis is generally formulated to look for evidence to support a claim called a research hypothesis?
- (A) Statistical hypothesis
 - (B) Null hypothesis
 - (C) Alternative hypothesis
 - (D) None of above
289. A hypothesis that does not specify the expected direction is:
- (A) Directional
 - (B) Non-directional
 - (C) Working
 - (D) Action

- 290.** What are two steps of hypothesis testing?
- (A) Obtain the probability value.
 - (B) State the null and alternative hypotheses.
 - (C) Estimate the characteristics of population based on data.
 - (D) Only (A) & (B).
- 291.** It is a specific statement of prediction. It describes in concrete (rather than theoretical) terms what you expect will happen in your study.
- (A) Background of the Study
 - (B) Statement of the Problem
 - (C) Hypotheses of the Study
 - (D) Significance of the Study
- 292.** An educated guess about the results of an experiment is a ____
- (A) Conclusion
 - (B) Hypothesis
 - (C) Experimental Plan
 - (D) Materials List
- 293.** Scientific hypotheses are ____ and falsifiable.
- (A) Observable
 - (B) Original
 - (C) Provable
 - (D) Testable
- 294.** A testable prediction about the relationship between variables.
- (A) Hypothesis
 - (B) Theory
 - (C) Observation
 - (D) Law
- 295.** What is the primary function of a research hypothesis?
- (A) To entertain the audience
 - (B) To validate existing theories
 - (C) To provide a testable prediction
 - (D) To summarize the research findings
- 296.** “Older clients are at higher risk to Pneumonia” is an example of what kind of hypothesis?
- (A) Null Hypothesis
 - (B) Directional
 - (C) Non-Directional
 - (D) None of the above
- 297.** A research hypothesis means it ____
- (A) Clarifies the concepts used in the study
 - (B) Defines the theoretical framework for the study
 - (C) Identifies the source of the problem under study
 - (D) Predicts the expected results or outcomes of the study
- 298.** A testable prediction that drives research is known as a(n)
- (A) Theory.
 - (B) Hypothesis.
 - (C) Operational definition.
 - (D) Guess.
 - (E) Random sample.
- 299.** A hypothesis that states that there is no difference between two parameters
- (A) Null
 - (B) Alternative
 - (C) Type I error
 - (D) Type II error
- 300.** What type of hypothesis is testable through empirical investigation?
- (A) Substantive hypothesis
 - (B) Alternative hypothesis
 - (C) Null hypothesis
 - (D) Statistical hypothesis
- 301.** Hypotheses predicts how the world will behave if the theory is correct: true or false
- (A) False
 - (B) True

302. Most of the researchers conducting survey researches are interested in the formulation of the hypothesis which are-
- (A) Question-oriented in nature.
 - (B) Objective in nature.
 - (C) Null-oriented in nature.
 - (D) Empirical in nature.
303. What is a key feature of the scientific approach to research?
- (A) It focuses only on qualitative data
 - (B) It avoids any form of data collection
 - (C) It uses hypotheses to guide investigations
 - (D) It relies solely on personal experience
304. Which of the following is the true statement for the characteristics of an hypotheses
- (A) Hypotheses state relationship between variables.
 - (B) Hypotheses selected for research should be testable.
 - (C) Hypotheses would be limited in scope.
 - (D) All of the above.
305. An experiment is set up to confirm or refute some
- (A) Questions.
 - (B) Hypotheses.
 - (C) Enquiry.
 - (D) Events.
306. In the scientific method, a hypothesis is a(n)
- (A) Proposed explanation
 - (B) Final conclusion
 - (C) Irrelevant observation
 - (D) Testable prediction
307. What type of hypothesis states the expected direction of the relationship?
- (A) Null hypothesis
 - (B) Two-tailed hypothesis
 - (C) Directional hypothesis
 - (D) Statistical hypothesis
308. A possible explanation for a set of observations or answer to a scientific question is called a
- (A) Prediction
 - (B) Hypothesis
 - (C) Theory
 - (D) Law
309. A hypothesis introduces the researcher's thinking at the start of the study.
- (A) TRUE
 - (B) FALSE
310. In the context of research, what does the term 'hypothesis' refer to?
- (A) A statement that can be tested
 - (B) A summary of the research
 - (C) A list of references
 - (D) A conclusion
311. Which attribute is not a property of a scientific hypothesis?
- (A) Accuracy
 - (B) Variability
 - (C) Assumption
 - (D) Multidimensionality
312. It is a statement that introduces a research question and proposes an expected result.
- (A) Statement Problem
 - (B) Hypothesis
 - (C) Background of the Study
 - (D) Conceptual Framework
313. A hypothesis stating there is no significant relationship is:
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Directional Hypothesis
 - (D) Non-directional Hypothesis
314. What is a hypothesis?
- (A) An educated guess.
 - (B) An absolute solution.
 - (C) A random guess.
 - (D) An experiment.

- 315.** Write T if the statement is true, and F if it is false. A null hypothesis predicts a significant relationship between variables.
(A) True
(B) False
- 316.** A statement about what scientists think may happen
(A) Hypothesis
(B) Trials
(C) Student
(D) Power
- 317.** There are two types of Hypothesis-the Alternative and the
(A) Testable
(B) Operationalised
(C) Null
(D) Optional
- 318.** A tentative proposition subject to test is
(A) Variable
(B) Hypothesis
(C) Data
(D) Concept
- 319.** Which is true of a hypothesis?
(A) A hypothesis is the conclusion to the problem
(B) A hypothesis must be falsifiable
- 320.** Which of the following is a characteristic of a hypothesis?
(A) It must be testable
(B) It must be a proven fact
(C) It must be a random guess
(D) It must be unchangeable
- 321.** A hypothesis that cannot be tested is:
(A) Ideal for research
(B) Invalid for scientific inquiry
(C) Better than a research question
(D) Used for opinions only
- 322.** A hypothesis is defined as ____
(A) The operational definition of the results of the research.
(B) A tentative prediction of the results of the research.
(C) A qualitative research design.
(D) A quantitative study.
- 323.** What does a hypothesis usually predict?
(A) The weather forecast
(B) How one variable affects another
(C) The outcome of a sports game
(D) The result of a coin toss
- 324.** A researcher states, "If plants receive less sunlight, then their growth rate will slow down." What makes this a good hypothesis?
(A) It is a personal belief
(B) It is testable and measurable
(C) It is based on opinion
(D) It does not require experimentation
- 325.** What is the role of hypotheses in relation to research questions?
(A) Hypotheses predict the outcome of research questions
(B) Hypotheses replace research questions in all studies
(C) Hypotheses are irrelevant unless data analysis has begun
(D) Hypotheses only apply to quantitative studies
- 326.** These are presumed as true statements of facts related to the research problem.
(A) Assumptions
(B) Hypothesis
(C) Statement of the problem
(D) None of above
- 327.** A null hypothesis states that
(A) There is no effect or no difference.
(B) There is a negative difference.
(C) There is a positive correlation.
(D) There is a significant effect.

328. A hypothesis is not the research answer, but rather
(A) A theory to be tested
(B) A proposal to be tested and evaluated
(C) Imaginary terms or situations
(D) It is an assumption in a thesis
329. A testable prediction about a scientific investigation is a(n)
(A) Question
(B) Observation
(C) Hypothesis
(D) Experiment
330. In hypothesis testing, the hypothesis which is tentatively assumed to be true is called the
(A) Correct hypothesis
(B) Null hypothesis
(C) Alternative hypothesis
(D) Level of significance
331. Are usually general or broad statements regarding the relationship between, usually two, variables and are derived from more general theories.
(A) CONCEPTS
(B) OPERATIONALIZATION
(C) VARIABLES
(D) HYPOTHESIS
332. Which of the following is the researcher usually interested in supporting when he or she is engaging in hypothesis testing?
(A) The alternative hypothesis
(B) The null hypothesis
(C) Both the alternative and null hypothesis
(D) Neither the alternative or null hypothesis
333. The method of working multiple hypotheses refers to a technique for identifying rival explanations.
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
334. Susan said, "If I fertilize my geranium plants, they will blossom." What step of the scientific method is this?
(A) Question/problem
(B) Forming a hypothesis
(C) Testing the hypothesis with an experiment
(D) Draw conclusions
335. A hypothesis predicting the direction of a relationship is:
(A) Non-directional Hypothesis
(B) Complex Hypothesis
(C) Directional Hypothesis
(D) Simple Hypothesis
336. Research hypothesis is a
(A) Working solution.
(B) Knowledge proposal.
(C) Tested solution.
(D) Partial answers.
337. Hypothesis concerned with analytical variable is
(A) Casual Hypothesis.
(B) Analytical Hypothesis.
(C) Barren Hypothesis.
(D) Null Hypothesis.
338. Identify which of the following steps would not be included in hypothesis testing
(A) State the null and alternative hypotheses
(B) Set the significance level before the research study
(C) Eliminate all outliers
(D) Obtain the probability value using a computer program such as SPSS
(E) Compare the probability value to the significance level and make the statistical decision.
339. An unproved statement or proposition about a factor or phenomenon that is of interest to the researcher is called a(n) ____
(A) Theory

- (B) Hypothesis
 - (C) Model
 - (D) Experiment
 - (E) Relationship
- 340.** A statement of expectation or prediction that will be tested by research.
- (A) Term
 - (B) Research paper
 - (C) Research
 - (D) Hypothesis
- 341.** What is the name of the claim we are trying to find evidence against?
- (A) Null hypothesis
 - (B) Alternative hypothesis
 - (C) Margin of error
 - (D) Point estimate
- 342.** A hypothesis that does not specify the direction of the relationship is called:
- (A) Directional hypothesis
 - (B) Two-tailed hypothesis
 - (C) Null hypothesis
 - (D) Statistical hypothesis
- 343.** Statement predicting the direction of a relationship between variables.
- (A) Aim
 - (B) Hypothesis
 - (C) Directional Hypothesis
 - (D) Non-directional Hypothesis
 - (E) Null Hypothesis
- 344.** Define: Directional Hypothesis
- (A) A Directional Hypothesis predicts the specific direction of the relationship between variables.
 - (B) A Directional Hypothesis states that there is no relationship between variables.
 - (C) A Directional Hypothesis predicts only the existence of a relationship, not its direction.
 - (D) A Directional Hypothesis is unrelated to the prediction of variable relationships.
- 345.** Theories provide — linking potential causes to likely effects.
- (A) Questions
 - (B) Answers
 - (C) Explanations
 - (D) Hypotheses
- 346.** A hypothesis that contains “greater than” or “less than” is:
- (A) Two-tailed
 - (B) Null hypothesis
 - (C) One-tailed
 - (D) Non-directional
- 347.** What makes up a good hypothesis?
- (A) Something simple. one predictor variable and one outcome variable
 - (B) Specific. leaves no questions about the subject or variables
 - (C) Something you state ahead of time before the study begins
 - (D) Something complex. need to have multiple predictor and outcome variables to make sure you findings have external validity
- 348.** — is a tentative statement formulated for empirical testing.
- (A) Theory
 - (B) Hypothesis
 - (C) Proposition
 - (D) Research
- 349.** Identify the option that exemplifies a properly formulated hypothesis.
- (A) Education must promote social justice
 - (B) Students should be kinder to peers
 - (C) Grades depend on destiny and fortune
 - (D) Group study contributes to higher achievement
- 350.** An educated guess, the second step in the research process is —
- (A) Survey
 - (B) Case Study
 - (C) Hypothesis
 - (D) Hindsight Bias
 - (E) ESP

351. Statement predicting only that one variable will be related to the other, not the direction of the relationship.
(A) Aim
(B) Hypothesis
(C) Directional Hypothesis
(D) Non-directional Hypothesis
(E) Null Hypothesis
352. Which choice best describes the role of a hypothesis in research?
(A) A summary of existing literature
(B) A tentative explanation to be tested
(C) A list of respondents to contact
(D) A final verified conclusion
353. Which statement best captures the essence of a hypothesis in research?
(A) A verified law describing universal relations
(B) A conjectural statement relating variables tentatively
(C) A detailed method for collecting field data
(D) A normative claim about desirable social outcomes
354. Educated guess
(A) Validation
(B) Replicated
(C) Constructs
(D) Hypothesis
355. Two types of hypotheses are
(A) Up and down
(B) Left and right
(C) Correlational
(D) Directional and non-directional
356. Provide an example of an application of logic in a scientific context.
(A) The use of logic gates in computer hardware.
(B) The application of logic in artistic expression.
(C) The formulation of hypotheses in scientific research.
(D) The role of logic in historical analysis.
357. What does valid mean?
(A) The point of view of the author.
(B) Statement, reason or fact for/against a point.
(C) When an author takes a position or side on an issue or idea and states that idea as true.
(D) Acceptable due to its sound basis in reasoning
358. An explanation of phenomena that is tested and accepted is:
(A) Operational Definition
(B) Hypothesis
(C) Existing Theory
(D) Synthesis
359. A hypothesis stating that "there will be a difference in academic performance between male and female students" is:
(A) Directional
(B) Null
(C) Non-directional
(D) Statistical
360. "There is no relationship between women's participation in prenatal classes and the health outcomes of their infants." This sentence is:
(A) Research hypothesis-directional
(B) Research hypothesis-nondirectional
(C) Null hypothesis
(D) Not a testable hypothesis as stated
361. What is the purpose of a hypothesis in a quantitative study?
(A) It identifies the variables studied.
(B) It provides an educated guess about the relationship between variables studied.
(C) It offers a summary of a review of the literature on the topic studied.
(D) It is a description of the broad topic area studied.

- 362.** “statements in quantitative research in which the investigator makes a prediction or a conjecture about the outcome of a relationship among attributes or characteristics” is the definition of ____
- (A) Purpose Statement
 - (B) Hypotheses
 - (C) Research Questions
 - (D) Research Title
- 363.** A Hypothesis contributes to the development of ____
- (A) Theory.
 - (B) Concept.
 - (C) Generalization.
 - (D) Evolution.
- 364.** If I expose a plant to more carbon dioxide, it will grow faster.
- (A) Hypothesis
 - (B) Theory
 - (C) Law
 - (D) Belief
- 365.** Which of the following BEST describe the purpose of the hypothesis in research work?
- (A) It helps to integrate irrelevant research.
 - (B) It will answer the problem of the study.
 - (C) It helps the researcher in providing different directions in conducting a research.
 - (D) It enable the researcher to generalize their findings beyond the specific conditions.
- 366.** Another name for non-directional hypothesis
- (A) One-tailed hypothesis
 - (B) Two-tailed hypothesis
 - (C) Three-tailed hypothesis
 - (D) Four-tailed hypothesis
- 367.** Hypothesis relates ____
- (A) Constant to variables.
 - (B) Variables to constant.
 - (C) Variables to variables.
 - (D) Constant to constant.
- 368.** A statement to be tested is known as?
- (A) Hypothesis
 - (B) Qualitative variable
 - (C) Questionnaire
 - (D) Causation
- 369.** Which one of the following is not the definition of a hypothesis?
- (A) Any supposition which we make in order to endeavor to deduce conclusion.
 - (B) A tentative supposition which seems to explain the situation under observation.
 - (C) A tentative generalization the validity of which remains to be tested.
 - (D) All of the above.
- 370.** An assertion that a parameter in a statistical model takes a particular value, and is assumed true until experimental evidence suggest otherwise?
- (A) Alternative hypothesis (H1)
 - (B) Null hypothesis (Ho)
 - (C) Type 1 error
 - (D) None of above
- 371.** An effective hypothesis should include:
- (A) A clearly operationalised co-variable
 - (B) A clearly operationalised DV
 - (C) A clearly operationalised EV
 - (D) A clear aim Edit
- 372.** An effective Hypothesis must always be
- (A) Rejected
 - (B) Accepted
 - (C) Testable
 - (D) Short
- 373.** Reflects or emphasizes a difference or relationship between groups, and the direction of difference or relationship is specified
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Directional Alternative Hypothesis or One-Tailed Hypothesis
 - (D) Non-Directional Alternative Hypothesis or Two-Tailed Hypothesis

374. A statement made about a population for testing purpose is called?
(A) Statistic
(B) Hypothesis
(C) Level of Significance
(D) Test-Statistic
375. There will be a difference in final exam scores between students who doodle during class and students who do not doodle.
(A) Sample of an aim
(B) Sample of a directional hypothesis
(C) Sample of a non-directional hypothesis
(D) Sample of a null hypothesis
376. A testable statement predicting the relationship between variables is called:
(A) Hypothesis
(B) Theory
(C) Proposal
(D) Scope
377. Requiring remote work for all employees will increase productivity. Identify an assumption.
(A) All employees perform better remotely.
(B) Remote work is available for all employees.
(C) Productivity is low in the office.
(D) Productivity increases with flexibility.
378. A ____ challenges the assertion of a declarative hypothesis.
(A) Alternative Hypothesis
(B) Declarative Hypothesis
(C) Null Hypothesis
(D) Hypothesis in Question Form
379. Which of the following statement regarding hypotheses is correct
(A) Hypotheses should have unlimited scope.
(B) Hypotheses should not have relationship between variable.
(C) Hypotheses would be limited in scope.
(D) All of the above.
380. Which scientific method is being described below: a testable prediction
(A) Theory
(B) Hypothesis
(C) Operational definition
(D) Replication
381. If plants receive more water, the number of leaves will increase. This is an example of
(A) Testable Question
(B) Hypothesis
(C) Variables
(D) None of the above Edit
382. A tentative explanation of a phenomenon is called:
(A) Theory
(B) Hypothesis
(C) Data
(D) Conclusion
383. What does a hypothesis express when stated in the null form?
(A) The expected absence of a relationship between variable
(B) The expected magnitude of a relationship between variable
(C) The expected direction of a relationship between variables
(D) The expected existence of a relationship between variables
384. The nature of a hypothesis can be
(A) Conceptual.
(B) Declarative.
(C) Action-oriented.
(D) All the above.
385. A hypothesis which defines the population distribution is called?
(A) Null Hypothesis
(B) Statistical Hypothesis
(C) Simple Hypothesis
(D) Composite Hypothesis

386. Why should a hypothesis possess theoretical relevance?
- (A) To remove the need for empirical data
 - (B) To permit moral judgments about variables
 - (C) To avoid stating relations between variables
 - (D) To ensure it fits a body of theory
387. In scientific research, what is the primary purpose of forming an argument?
- (A) To persuade others without evidence
 - (B) To present a hypothesis based on evidence
 - (C) To create a debate among scientists
 - (D) To summarize previous research
388. After framing a research question, what is the recommended next step to strengthen the study focus?
- (A) Merge multiple topics for wider coverage
 - (B) Delay evaluation until data collection
 - (C) Revise variables into broader categories
 - (D) Replace quantitative methods with qualitative
 - (E) Create testable hypotheses from the question
389. A hypothesis that shows how a researcher is intellectual or committed to a particular outcome is called ____
- (A) Simple hypothesis
 - (B) Complex hypothesis
 - (C) Directional hypothesis
 - (D) Null hypothesis
390. A good hypothesis should be:
- (A) Testable and falsifiable
 - (B) Based on personal beliefs
 - (C) Impossible to prove wrong
 - (D) A vague statement
391. ____ can be true or false. (More than one answer)
- (A) Sentences
 - (B) Utterances
 - (C) Propositions
 - (D) References
392. The hypothesis that there is no significant difference between specified populations
- (A) Research Setting
 - (B) Null Hypothesis (H_0)
 - (C) Classroom Action Research
 - (D) Quantitative research
393. What is a statement or prediction about the relationship of two or more variables called?
- (A) Hypothesis
 - (B) Theory
 - (C) Observation
 - (D) Conclusion
394. What is a claim?
- (A) An idea or an assertion about your experiment
 - (B) Some evidence to support that claim
 - (C) A reason that explains why or how the data (or evidence) supported the claim
 - (D) None of above
395. ____ hypothesis: a statement predicting the direction of the relationship between variables, e.g. in an experiment whether the levels of the IV will produce an increase or decrease in the DV or in a correlation whether an increase in one variable will be ____ linked ____ to an increase or decrease in another variable.
- (A) Non directional/two tailed
 - (B) Null
 - (C) Directional/one tailed
 - (D) None of above
396. A student notices that apples vary in sweetness, and he wants to determine the cause. Which of the following should be done first when developing a scientific investigation based on this observation?
- (A) Perform an experiment.
 - (B) Form a hypothesis.

- (C) Write a conclusion.
(D) Construct a graph.
- 397.** Action research hypothesis is
(A) General in nature.
(B) Similar like in pure sciences.
(C) Written in two parts-one is goal put second is action part.
(D) A hypothesis in real sense.
- 398.** It is a verbal expression of a judgment. It is a statement in which something is either affirmed or denied.
(A) Proposition
(B) Sentence
(C) Judgment
(D) None of above
- 399.** Hypotheses are often formulated based on:
(A) Personal bias only
(B) Review of related literature and research questions
(C) Random guessing
(D) Unrelated studies
- 400.** A statement whose validity is tested on the basis of a sample is called?
(A) Null Hypothesis
(B) Statistical Hypothesis
(C) Simple Hypothesis
(D) Composite Hypothesis
- 401.** How does the text define a hypothesis?
(A) A theoretical framework for the study
(B) A tentative explanation for research findings
(C) An established scientific fact
(D) A predicted answer to a research question
- 402.** A hypothesis which develops while planning the research
(A) Null hypothesis
(B) Working hypothesis
(C) Relational hypothesis
(D) Discriptive hypothesis
- 403.** These are the assumptions or assertions in the research study.
(A) Hypotheses.
(B) Hypothesis.
(C) Inference.
(D) Statements of the Problem.
- 404.** Statistical Hypothesis is derived from
(A) Facts.
(B) Frame.
(C) Sample.
(D) Data.
- 405.** A statement that proposes a set of facts to be true; what the researchers want to prove or disprove
(A) Variable
(B) Citation
(C) Hypothesis
(D) Significant effect
- 406.** A hypothesis is ____
(A) A prediction
(B) An observation
(C) A question
(D) A summary of the experiment
- 407.** A possible explanation for an observation that can be tested by a scientific investigation is called what?
(A) Observation
(B) Theeory
(C) Hypothesis
(D) Scientific Law
- 408.** What hypothesis states equality or no difference, or no relationship/effect?
(A) Statistical hypothesis
(B) Null hypothesis
(C) Alternative hypothesis
(D) None of above

- 409.** In a scientific context, what is an argument's main function?
- (A) To challenge existing theories
 - (B) To provide evidence for a hypothesis
 - (C) To entertain the scientific community
 - (D) To summarize experimental procedures
- 410.** There are two types of hypothesis. These are (1) ___ hypothesis (H_0) and (2) ___ hypothesis (H_i).
- (A) Null; alternative
 - (B) Primary; secondary
 - (C) Positive; negative
 - (D) Direct; indirect
- 411.** It is a tentative answer that must be tested and revised based on the evidence derived from the research.
- (A) Statement of the Problem
 - (B) Scope
 - (C) Hypothesis
 - (D) Definition of Terms
- 412.** In the hypothesis: There IS no significant difference in self-concept between the groups exposed to values lessons and the group not to be exposed on the same. What are the two groups in the statement?
- (A) Students with self-concept and values
 - (B) Students with self-concept and values lesson
 - (C) Students exposed to values lessons and students without values lessons
 - (D) Students exposed to values lessons
- 413.** Hypotheses go beyond research questions because they are statements of relationships or propositions rather than merely questions to which answers are sought.
- (A) TRUE
 - (B) FALSE
- 414.** ___ is tentative assumption made in order to draw out and test its logical or empirical consequences
- (A) Observation
 - (B) Prediction
 - (C) Testing
 - (D) Hypothesis
- 415.** What is the term for the following definition? A tentative (i.e., not final and definite) and testable proposed explanation for an observable phenomenon.
- (A) Hypothesis
 - (B) Theory
 - (C) Law
 - (D) Inference
- 416.** "There is a significant difference in self-confidence levels before an after implementation of a confidence intervention strategy". This is an example of a ___
- (A) Null hypothesis
 - (B) Alternative Hypothesis
 - (C) Negative Hypothesis
 - (D) Positive hypothesis
- 417.** Hypothesis which states the absence of relationship between the independent and dependent variables.
- (A) Alternative
 - (B) Empirical
 - (C) Logical
 - (D) Null
- 418.** What do you call the preconceived idea assumed to be true and has to be tested for its truth or falsity?
- (A) T-Test
 - (B) Statistical Significance
 - (C) Type 1 Error
 - (D) Hypothesis
- 419.** Hypothesis is best defined as:
- (A) A guess
 - (B) A temporary explanation subject to testing
 - (C) A conclusion
 - (D) A proven fact

420. What is one of the benefits of having a hypothesis?
- (A) It provides clear direction and focus
 - (B) It makes the research more expensive
 - (C) It reduces the need for data collection
 - (D) It eliminates the need for a conclusion
421. According to the passage, what is the first step in writing a hypothesis?
- (A) Determine a specific variable to be tested.
 - (B) Write the conclusion of the experiment.
 - (C) Collect all the data before starting.
 - (D) Analyze the results of previous experiments.
422. A rule or statement which is based on inductive reasoning.
- (A) Reasoning
 - (B) Conjecture
423. A prediction of what will happen — if —, then — because —
- (A) Hypothesis
 - (B) Procedures
 - (C) Testable question
 - (D) Conclusion
424. Which statement expresses a relationship?
- (A) Mechanically ventilated patients with a symptom of dyspnea experience difficulties weaning
 - (B) High levels of fatigue and depression are experienced by family caretakers of Alzheimer's patients
 - (C) Infant mortality among children of low-income women is relatively high
 - (D) People who smoke have higher rates of absenteeism from work than people who do not smoke
425. A hypothesis that predicts no relationship between variables is called:
- (A) Alternative Hypothesis
 - (B) Null Hypothesis
 - (C) Statistical Hypothesis
 - (D) Research Hypothesis
426. It is considered as an intelligent guess or prediction, that gives directional to the researcher to answer the research question.
- (A) Hypothesis
 - (B) Theoretical Framework
 - (C) Conceptual Framework
 - (D) Definition of Terms
427. Another word for prediction or educated guess is: —
- (A) Hypothesis
 - (B) Conclusion
 - (C) Experiment
 - (D) Data Edit
428. A working hypothesis is
- (A) A scientific theory
 - (B) Not required to be tested
 - (C) A proven hypothesis for an argument
 - (D) A provisionally accepted hypothesis for further research
429. What is a one-tailed hypothesis in research?
- (A) It determines whether a population parameter is larger or smaller than a predefined value
 - (B) It determines the likelihood of a population parameter within certain bounds
 - (C) It predicts cause-and-effect relationships between variables
 - (D) It tests the relationship between dependent and independent variables
430. Evaluate the following hypothesis: If hand sanitizer is effective then it will inhibit bacterial growth.
- (A) Incorrect: Missing what condition is being tested.
 - (B) Incorrect: Missing what result is expected.
 - (C) Incorrect: Missing how the results will be measured.
 - (D) Correct: All parts of a scientific hypothesis are present.

431. Which hypothesis states there is no relationship between variables?
- (A) Alternative Hypothesis
 - (B) Research Hypothesis
 - (C) Null Hypothesis
 - (D) Theoretical Hypothesis
432. What is the appropriate step in the scientific method when a specific question is formed to be tested. It is sometimes called the subject of the study.
- (A) Hypothesis
 - (B) Observer bias
 - (C) Conclusions
 - (D) Replication
433. Generally the hypotheses can be classified into
- (A) Question form Hypothesis and Declarative Hypothesis.
 - (B) Directional Hypothesis and non-directional Hypothesis.
 - (C) Both (A) & (B).
 - (D) None of the above.
434. What is the purpose of formulating a hypothesis in the research process?
- (A) To finalize the report
 - (B) To randomly collect data
 - (C) To guide the direction of the study
 - (D) To publish the findings
435. It is considered as an intelligent guess or possible outcome of the present study.
- (A) Hypothesis
 - (B) Statement of the Problem
 - (C) Background of the Study
 - (D) Significance of the Study
436. Scientific questions have to be ____
- (A) Measurable
 - (B) Easy
 - (C) Interesting
 - (D) None of above
437. When a possible solution to the problem has been written in desired direction, this type of hypothesis is called
- (A) Futuristic hypotheses.
 - (B) Directional hypothesis.
 - (C) Declarative hypotheses.
 - (D) Nondirectional hypotheses.
438. Which of the following is an example of a directional hypothesis?
- (A) There will be a difference in memory between groups.
 - (B) Stress affects memory.
 - (C) High stress reduces memory performance.
 - (D) Stress and memory are related.
439. "Every time I go to sleep the sun goes down. Therefore, my sleeping causes the sun to set."
- (A) False dichotomy
 - (B) False causation
 - (C) Circular reasoning
 - (D) Guilt by association
440. A(n) ____ is a testable prediction that is arrived at logically from a(n) ____
- (A) Hypothesis; theory
 - (B) Theory; hypothesis
 - (C) Experiment; observation
 - (D) Theory; observation
441. The conclusion is the result of a hypothesis.
- (A) TRUE
 - (B) FALSE
442. Is a statement of equality between groups in an investigation. It also states the absence of difference or relation among variables.
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Hypothesis
 - (D) Hypothesis method

443. Students placed two identical cars on these wooden ramps. The students let the cars roll down the ramps. This experiment most likely tests the hypothesis that-
- (A) Ramps made of wood make cars roll faster.
 - (B) The height of the ramp affects the speed of the car.
 - (C) The speed of the car is determined by the tire size.
 - (D) Plastic cars travel faster than metal cars.
- Edit
444. "The amount of breakfast you have to eat will have no effect on your level of concentration in the morning". What type of hypothesis is this?
- (A) Null hypothesis
 - (B) Alternative hypothesis
 - (C) Directional hypothesis
 - (D) Non-directional hypothesis
- Edit
445. It has a symbol of (H_0). It has three stems such as: 1. no difference or no relationship 2. equal to ($x=y$) 3. dependent variable does not depend on the independent variable (y is independent of x)
- (A) Null Hypothesis
 - (B) Alternative Hypothesis
 - (C) Hypothesis
 - (D) Hypothesis method
446. True or false. A single or more conforming findings can prove a theory correct.
- (A) True
 - (B) False
447. These are concerned with gaps in the theoretical or conceptual framework of the study.
- (A) Theoretical recommendations
 - (B) Methodological recommendations
 - (C) Practical recommendations
 - (D) None of above
448. What is the primary function of a statistical hypothesis?
- (A) To propose a specific relationship between variables
 - (B) To provide a formal statement that can be tested using statistical methods
 - (C) To outline the methodology of the study
 - (D) To guide the selection of research topics
449. A hypothesis must be testable and based on prior research.
- (A) TRUE
 - (B) FALSE
450. A hypothesis developed for initial guidance and modified later is known as:
- (A) Statistical hypothesis
 - (B) Working hypothesis
 - (C) Alternative hypothesis
 - (D) Research hypothesis
451. What is a tentative explanation for what was observed?
- (A) Prediction
 - (B) Observation
 - (C) Hypothesis
 - (D) Theory
452. Testable predictions that follow logically from the theory / describes what is expected under certain circumstances/ bridge between theory and research
- (A) Psychology
 - (B) The scientific method
 - (C) Theory
 - (D) Hypothesis
 - (E) Research
453. In Science, an educated guess is called ____
- (A) Conclusion
 - (B) Observation
 - (C) Hypothesis
 - (D) Question
454. It is referred to as educated guess.
- (A) Data
 - (B) Hypothesis

- (C) Instrument
(D) Variable
- 455.** What is a research hypothesis
(A) A research hypothesis is a definitive conclusion drawn from data.
(B) A research hypothesis is a summary of previous research findings.
(C) A research hypothesis is an untestable opinion about a topic.
(D) A research hypothesis is a testable statement predicting the relationship between variables in a study.
- 456.** A testable prediction, often implied by a theory
(A) Null hypothesis
(B) Hypothesis
(C) Empirical evidence
(D) Reliability
- 457.** Students will be able to read a statement printed in the Comic Sans font faster than the same statement written in the Lucida Calligraphy font. This statement is a(n)
(A) Hypothesis
(B) Theory
(C) Replication
(D) Operational definition
(E) Correlation
- 458.** Reflects or emphasizes a difference or relationship between groups, and the direction of difference or relationship is not specified.
(A) Null Hypothesis
(B) Alternative Hypothesis
(C) Directional Alternative Hypothesis or One-Tailed Hypothesis
(D) Non-Directional Alternative Hypothesis or Two-Tailed Hypothesis
- 459.** What is the term for a testable prediction; often implied by a theory?
(A) Hunch
(B) Hypothesis
(C) Law
(D) Operational Definition
- 460.** What is the hypothesis in the experimental research example provided?
(A) Sleep deprivation has no effect on memory retention in college students.
(B) Sleep deprivation will improve memory retention in college students.
(C) Sleep-deprived students will perform worse on memory retention tests compared to well-rested students.
(D) Well-rested students will perform worse on memory retention tests compared to sleep-deprived students.
- 461.** What is the hypothesis?
(A) The part of the investigation where we plan how to keep researchers and the organisms we study free of harm.
(B) The part of the experiment that we manipulate or change.
(C) A statement of the aim of the experiment. What we hope to find out.
(D) When we make a prediction about what we think the results of an investigation will show.
- 462.** Which of the following is a proposition?
(A) Run!
(B) I am a strong and independent person.
(C) Could you please give me some money?
(D) All of the above
- 463.** A Hypothesis is a ____ about the relationship between variables.
(A) Testable prediction
(B) Random guess
(C) Unrelated statement
(D) Definitive conclusion
- 464.** An educated guess or a possible answer to a scientific question
(A) Hypothesis
(B) Independent variable
(C) Dependent variable
(D) Controlled experiment

465. Which of the following is tested for significance?
- (A) Null hypothesis
 - (B) Alternative hypothesis
 - (C) Alpha level
 - (D) Statistical power
466. Often phrased as an “If, Then” statement, this is an educated guess for a solution to a scientific problem.
- (A) Solution
 - (B) Hypothesis
 - (C) Answer
 - (D) Fact
467. A specific, testable prediction, narrower than a theory
- (A) Theory
 - (B) Hypothesis
 - (C) Critical thinking
 - (D) Psychological reasoning
468. A testable statement about the natural world that can be used to build more complex inferences and explanations. To be a hypothesis, a statement must contain a possible explanation.
- (A) Fact
 - (B) Theory
 - (C) Law
 - (D) Hypothesis
469. A researcher suspects that caffeine increases heart rate. Which of the following is a testable hypothesis?
- (A) “If caffeine is consumed, then heart rate will increase.”
 - (B) “Caffeine is bad for health.”
 - (C) “Coffee is better than tea.”
 - (D) “People like coffee more than tea.”
470. Research hypotheses are
- (A) Formulated prior to a review of the literature
 - (B) Statements of predicted relationships between variables
 - (C) Stated such that they can be confirmed or refuted
 - (D) B and c
471. Based on results reported in published articles, a researcher states that men will be less likely than women to read nutrition labels when making decisions about purchasing foods. What is this statement called?
- (A) Intuition
 - (B) Hypothesis
 - (C) Research plan
 - (D) Literature review
472. Which hypothesis is used when the researcher has no prior knowledge to predict the direction of a difference?
- (A) Directional
 - (B) Non-directional
 - (C) Alternative
 - (D) Working
473. Which question would be the best high-level question?
- (A) How many giraffes live in Africa?
 - (B) Who made the first microscope?
 - (C) How long did the dinosaurs live on Earth?
 - (D) Does the amount of salt in water affects its boiling point?
474. A hypothesis stating no effect or difference is called:
- (A) Alternative hypothesis
 - (B) Theory of relativity
 - (C) Experimental hypothesis
 - (D) Null hypothesis
475. Hypotheses are best described as
- (A) Confirmations
 - (B) Replications
 - (C) Assumptions
 - (D) Predictions

476. A working hypothesis is [2013-JUNE]
(A) A proven hypothesis for an argument.
(B) Not required to be tested.
(C) A provisionally accepted hypothesis for further research.
(D) A scientific theory.
477. A scientist finds that his data does not support his hypothesis. What should he do?
(A) Ignore the data and assume he was right
(B) Change the data to fit the hypothesis
(C) Modify the hypothesis and test again
(D) Avoid publishing the results
478. Which of the following statement reflect the basic advantage of hypothesis in educational research?
(A) Hypothesis has focus over the research.
(B) Hypothesis leads towards formulation of specific goals.
(C) Hypothesis avoids blank look towards research.
(D) All of the above.
479. Hypothesis must have ____
(A) Applicability
(B) Testability
480. Why must a hypothesis be testable?
(A) To ensure clarity in writing
(B) To allow for statistical analysis
(C) To make research longer
(D) To create confusion
481. A hypothesis is essential in research because it:
(A) Guarantees the study's results
(B) Helps the researcher guess outcomes
(C) Directs the research process and data collection
(D) Removes the need for literature review
482. The statement "Students who sleep 8 hours score higher in exams" is an example of:
(A) Null hypothesis
(B) Alternative hypothesis
(C) Research question
(D) Data analysis
483. What is the hypothesis of the following statement: "If Johnny is late to school, then his mom will have to drive him."
(A) His mom will have to drive him
(B) If Johnny is late to school
(C) Johnny is late to school
(D) Then his mom will have to drive him
484. A hypothesis is a prediction that is:
(A) Self-evident.
(B) Testable
(C) Founded in Semantics.
(D) Able to be replicated.
485. Which of the following statements is true about research hypotheses?
(A) They are always proven correct
(B) They are formulated after the research is completed
(C) They provide a tentative answer to the research question
(D) They do not need to be testable
486. What step in The Scientific Method involves writing an educated guess or a testable explanation?
(A) Analyze Data
(B) Research
(C) Recognize The Problem
(D) Hypothesis
487. Predicts the result of a theory
(A) Hypothesis
(B) Observation
(C) Scientific method
(D) Operational definition
488. Research Problem & Hypothesis-A research hypothesis is:
(A) A proven fact
(B) A tentative assumption to be tested

- (C) A conclusion
(D) None of these
- 489.** The “if” part of an if-then statement contains the ____
(A) Hypothesis
(B) Conclusion
- 490.** Which of the following components is essential in a hypothesis?
(A) Values
(B) Personal opinion
(C) Variables
(D) Research limitations
- 491.** “There is no significant difference in yo-yo test results for football and rugby players”. This is an example of ____?
(A) Null Hypothesis.
(B) Alternative hypothesis.
(C) Negative Hypothesis.
(D) Positive Hypothesis.
- 492.** This identifies what type of research it is going to be.
(A) Research questions/hypothesis
(B) Introduction
(C) Methods
(D) Review of Literature
- 493.** What is the role of evidence in developing an argument?
(A) To confuse the reader
(B) To support the claim
(C) To introduce a new topic
(D) To conclude the essay
- 494.** Which of the following is an example of an operational hypothesis?
(A) Stress reduces memory.
(B) High stress results in lower test scores on the memory recall test.
(C) Stress affects cognitive functions.
(D) Stress and memory are related.
- 495.** You decide what you think will happen
(A) Background knowledge
(B) Question
(C) Hypothesis
(D) Experimenting
- 496.** A written explanation of what you think will happen, an idea that is tested in an experiment, and may be proven to be true.
(A) Observation
(B) Variable
(C) Hypothesis
(D) Data
- 497.** A ____ leads to a ____
(A) Theory; hypothesis
(B) Hypothesis; theory
- 498.** A prediction or assumption about behavior that is tested through scientific research
(A) Sample
(B) Standard deviation
(C) Experiment
(D) Hypothesis
- 499.** Which of the following is not a role of hypothesis?
(A) Guides the direction of the study.
(B) Determine feasibility of conducting the study.
(C) Identifies relevant and irrelevant facts.
(D) Provides framework for organizing the conclusions.
- 500.** A possible explanation to a problem that has not yet been tested.
(A) Data
(B) Theory
(C) Hypothesis
(D) Fact
- 501.** Research hypothesis are ____
(A) Formulated prior to a review of the literature

- (B) Statement of predicted relationships between variables
(C) Stated such that they can be confirmed or refused.
(D) B and c
- 502.** Predictions that the researcher makes about what they will find.
(A) Aim
(B) Hypothesis
(C) Directional Hypothesis
(D) Non-directional Hypothesis
(E) Null Hypothesis
- 503.** In writing hypothesis, what word will you use if you want to see the similarity among the variables?
(A) Effect
(B) Impact
(C) Relationship
(D) Differences
- 504.** A hypothesis is a ____ prediction derived from a theory, guiding the research process.
(A) Testable
(B) Random
(C) Irrelevant
(D) Unmeasurable
- 505.** Statements or propositions that provide a possible answer to the research question
(A) Theoretical framework
(B) Analytical model
(C) Research questions
(D) Hypothesis
- 506.** Scott said, "If acid rain affects plants in a particular lake, it might affect small animals, such as crawfish, that live in the same water."
(A) Recognize the problem
(B) Form a hypothesis
(C) Test hypothesis with an experiment
(D) Analyze data
(E) Draw conclusions
- 507.** Which reasoning type is most likely to be used in scientific hypothesis formation?
(A) Deductive reasoning
(B) Inductive reasoning
(C) Abductive reasoning
(D) Emotional reasoning
- 508.** In research, a hypothesis is:
(A) A proven fact
(B) . A question to be answered
(C) . A prediction to be tested
(D) A variable
- 509.** A hypothesis that can be verified using observation and experiments is called:
(A) Null hypothesis
(B) Empirical hypothesis
(C) Logical hypothesis
(D) Conceptual hypothesis
- 510.** A hypothesis is a ____ that is a possible explanation or answer to a scientific question.
(A) Prediction
(B) Wild guess
(C) Question
(D) Conclusion
- 511.** Which reasoning method is more likely to be used in scientific hypothesis testing?
(A) Inductive reasoning
(B) Deductive reasoning
(C) Random guessing
(D) None of the above
- 512.** Which of the following statements best describes the relationship between a hypothesis and a theory?
(A) A theoretical prediction can be stated as a specific hypothesis.
(B) When a hypothesis has been proven it becomes a theory.
(C) Weak theories are hypotheses, and strong theories are scientific laws.
(D) "Theory" is another name for hypothesis.

513. Predicts the results of the experiment.
(A) Function of a hypothesis.
(B) A method of data collection.
(C) A type of scientific law.
(D) An observation made during the experiment.
514. How to generate a hypothesis?
(A) Inductive & deductive
(B) Insidious & incidentals
(C) Inductive & degenerative
(D) None of above
515. When a hypothesis is stated negatively it is called
(A) Relational hypothesis
(B) Situational hypothesis
(C) Null hypothesis
(D) Casual hypothesis
516. Which type of hypothesis specifies the direction of the relationship?
(A) Directional hypothesis.
(B) Null hypothesis.
(C) Non-directional hypothesis.
(D) Critical hypothesis.
(E) Descriptive hypothesis.
517. Which hypothesis is correctly written?
(A) I think I will do well on my test today, because I ate a good breakfast.
(B) If I eat a good breakfast, then I will do well on my test today.
(C) If I eat a good breakfast, then I will earn a passing grade on my test today.
(D) If I do well on my test today, I get to out to eat for breakfast.
518. Experiments are often used to test ____ - variables are manipulated and measured.
(A) Theories
(B) Behaviors
(C) Hypotheses
(D) Ideas
519. What should researchers do if their results contradict the hypothesis?
(A) Discard the results
(B) Assume the hypothesis is still correct
(C) Modify the hypothesis
(D) Ignore the hypothesis
520. A provisional theory to explain observed facts is known as
(A) Event.
(B) Theory.
(C) Hypothesis.
(D) Construct.
521. An educated or early guess of an issue in research is called a ____
(A) Hypertheses
(B) Hypotheses
(C) Hypoguess
(D) Hyperguess Edit
522. Statement stating that any difference or correlation in the results is due to chance.
(A) Aim
(B) Hypothesis
(C) Directional Hypothesis
(D) Non-directional Hypothesis
(E) Null Hypothesis
523. H1 is one of the Hypotheses in the thesis or research that shows the positive statement. What kind of hypothesis is H1?
(A) Positive Hypothesis
(B) Negative Hypothesis
(C) Null Hypothesis
(D) Alternative Hypothesis
524. A null hypothesis might state:
(A) There is a significant positive correlation between hours of study and grades.
(B) There is no difference in leadership scores between males and females in the sample.
(C) Leadership scores differ by gender.
(D) Leadership scores affect study habits.

525. The answer to which of the following questions describes the potential impact of your study?
- (A) Where do you think your study will make the most difference to current thinking?
 - (B) What methods have you used?
 - (C) What did you do very well in your study?
 - (D) How do you interpret your findings?
526. What is typically the first step in a quantitative research study?
- (A) Collect participant stories
 - (B) Choose a statistical method
 - (C) Formulate a clear, testable hypothesis
 - (D) Interpret the themes in the data
527. Which of the following is NOT a characteristic of a good hypothesis?
- (A) It is testable
 - (B) It is specific
 - (C) It is value-laden
 - (D) It states a relationship between variables
528. In a quantitative research, there is a hypothesis. The statements below is correct about hypothesis, except ____
- (A) It is focused statement which predicts an answer to research question
 - (B) It is based on the findings of previous research and perhaps the previous experience with the subject
 - (C) It is to test ultimate objective of inductive research
 - (D) Gives direction and focus to the research in formulating research method
529. A ____ Hypothesis is usually a hypothesis of "no difference."
- (A) Null
 - (B) Simple
 - (C) Complex
 - (D) Statistical
530. Fundamental basis of hypothesis is
- (A) The operational level.
 - (B) The conceptual level.
 - (C) Both of the above.
 - (D) None of the above.
531. It is a statistical method applied in making decisions using experimental data. Hypothesis testing is basically testing an assumption that we make about a population.
- (A) Conclusion
 - (B) Hypothesis testing
 - (C) Hypothesis
 - (D) Proposition
532. A proposed explanation for something
- (A) Focus group
 - (B) Internal data
 - (C) Hypothesis
 - (D) Marketing research
533. Which type of hypothesis typically represents the absence of an effect or difference?
- (A) Statistical hypothesis
 - (B) Null hypothesis
 - (C) Substantive hypothesis
 - (D) Alternative hypothesis
534. Formulating an hypothesis based on a theory is part of ____ reasoning.
- (A) Scientific
 - (B) Inductive
 - (C) Deductive
 - (D) Parsimony
535. Which of the following best defines a hypothesis
- (A) An explanation of a topic
 - (B) A set of rules of conduct to be followed in research
 - (C) A problem or statement to be investigated through research
 - (D) A process used to select individuals to participate in research

536. Which of the following is incorrect about formulating hypothesis?
- (A) There should always be an equal sign in the null hypothesis
 - (B) The null hypothesis usually corresponds to the assumption that no change occurs.
 - (C) The choice of the alternative hypothesis depends on the purpose of the test.
 - (D) The alternative hypothesis usually corresponds to the assumption that no change occurs.
537. A tentative, testable statement or prediction about what has been observed.
- (A) Pure research
 - (B) Hypothesis
 - (C) Chemistry
 - (D) Weight
538. How are hypotheses usually formatted?
- (A) "If, then" statements
 - (B) Imperative statements proposing a relationship between variables
 - (C) Exclamatory statements proposing a relationship between variables
 - (D) Interrogative questions proposing a relationship between variables
539. A possible answer to a scientific question
- (A) Independent variable
 - (B) Hypothesis
 - (C) Observation
 - (D) Scientific inquiry
540. Which statement describes the function of a research hypothesis?
- (A) It provides structure to the next stages or procedures of the study
 - (B) It provides a list of the terms used in the study
541. In this step of the Scientific Method an educated guess is needed before continuing through the steps.
- (A) Form a hypothesis
 - (B) Analyze Data
 - (C) Draw a conclusion
 - (D) Experiment plan
542. Statement or judgment that can be challenged
- (A) Argument
 - (B) Reasons
 - (C) Claims
 - (D) Conclusion
543. Stephen predicted that seeds would start to grow faster if an electric current traveled through the soil in which they were planted. What step of the scientific method is this?
- (A) Question/problem
 - (B) Form a hypothesis
 - (C) Testing the hypothesis with an experiment
 - (D) Draw a conclusion

1.3.7 Variables in Research

1. Anything that can vary and is feasible and ethical to measure:
 - (A) Variable
 - (B) Scatterplot
 - (C) Correlation
 - (D) Regression towards the mean
2. This is an extraneous variable which suggests that cues from the researcher can affect the final outcome
 - (A) Interviewer bias
 - (B) Social desirability bias
 - (C) Participant reactivity
 - (D) Investigator effects
3. Khaleel is testing how the use of stress balls during testing affects a student's test score. The students' average test scores who used the stress balls is the ____ variable.
 - (A) Dependent (measured)
 - (B) Constant (same)
 - (C) Independent (changes)

- (D) None of above
4. A researcher reviews data that shows that as ice cream sales increase, shark attacks also increase. The researcher notes that the increases happen between June and August. Which type of relationship between the variables is MOST likely?
- (A) Spurious relationship
(B) Relationship without covariation
(C) Idiographic causal relationship
(D) None of above
5. The abstract or theoretical meaning of a concept being studied (e.g. concept of caring)
- (A) Conceptual definition
(B) Operational definition
6. Why is it important to use reliable sources when defining independent and dependent variables in research studies?
- (A) It ensures that the definitions are standardized, allowing for replication and comparison across studies.
(B) It makes the research findings more entertaining for the audience.
(C) It guarantees that all variables are measured numerically, regardless of context.
(D) It allows researchers to disregard unnecessary details in their definitions.
7. Classify the variable as categorical or quantitative. Number of carts in an American household
- (A) Categorical
(B) Quantitative
8. An extraneous variable:
- (A) Is deliberately changed in an experiment
(B) Is an uncontrolled variable that could affect the DV
(C) Is measured in an experiment
(D) Occurs only in field studies
9. Socioeconomic status-poor, middle class, rich
- (A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
10. When IV and DVs are written in such a way that it is clear what is being measured
- (A) Stratified
(B) Datarized
(C) Operationalized
(D) Correlated
11. The independent variable is manipulated to observe its effect on the ___ variable, which is measured.
- (A) Dependent
(B) Independent
(C) Controlled
(D) Extraneous
12. Identify the explanatory variable in this scenario: The weeds in my garden are 2 inches taller today after the heavy rain we received last night.
- (A) Height of weeds
(B) Amount of rain
(C) Neither “height of weeds” or “amount of rain”
(D) Could be “height of weeds” or “amount of rain”
13. The change that is tested in an experiment.
- (A) Hypothesis
(B) Data
(C) Variable
(D) Observation
14. Josie was performing an experiment where she grew the same kind of tomatoes in the same soil and amount of water. She sat one in the sun and one in a closet for 14 days. What is the independent variable in Josie’s experiment?
- (A) Tomatoes
(B) Soil
(C) Sunlight
(D) Water Edit

15. Which of the following is a possible operational definition for "motivated to learn science?"
- (A) As reflected by achievement in science
 - (B) As shown by effort displayed in science class
 - (C) As measured by the "Science Interest" questionnaire
 - (D) As shown by completing science assignments in class
16. Client ranking of leisure activities from least(1) to most(5) preferred is an example of what variable?
- (A) Nominal
 - (B) Ratio
 - (C) Ordinal
 - (D) Dependent
17. The relationship between the extraneous variable and the research variable is called ____
- (A) Inferential relationship
 - (B) Interventional relationship
 - (C) Confound Relationship
 - (D) Complex Relationship
18. Anything in an experiment that can be changed.
- (A) Models
 - (B) Variables
 - (C) Explanation
 - (D) Qualitative data
19. Categorical variables are separated into ____
- (A) ____ ordinal and nominal.
 - (B) ____ discrete and continuous.
 - (C) ____ discrete and nominal.
 - (D) ____ ordinal and continuous.
20. How many independent variables can be tested in a controlled experiment?
- (A) One
 - (B) Two
 - (C) Three
 - (D) As many as possible
21. Which choice represents an example of a data issue that was caused by systematic error?
- (A) A patient arrives late to an appointment at the clinic
 - (B) A lab test ordered by the doctor is ultimately not needed
 - (C) A patient forgets to tell a clinician they have been fasting
 - (D) A POCT device in the clinic hasn't been calibrated in years
22. Which variable represents the outcome measured in an experiment?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Instrument variable
 - (D) Extraneous variable
23. In a study about whether exercise can help older people sleep better, the independent variable was elderly people and the dependent variable was:
- (A) The quality of sleep
 - (B) How many cookies they ate during the past week
 - (C) Whether or not they exercised
 - (D) Whether they turned eighty before the end of the experiment
24. The difference between control and intervening variables lies in the statement-
- (A) All are intervening except independent Variable and Dependent variables but out of these a few variables can be controlled which are called control variable.
 - (B) Conceptually no difference between two.
 - (C) Intervening variables are causing interference but control variable does not do so.
 - (D) Cannot say.
25. A dependent variable refers to ____
- (A) The experimental condition.
 - (B) A variable with a single value which remains constant in a particular context.

- (C) The variable being manipulated or varied in some way by the researcher.
(D) The variable which shows us the effect of the manipulation.
26. Determine whether the data related to the topic below is discrete or continuous: The speed of a car.
(A) Discrete
(B) Continuous
27. Do different types of music make a difference in test scores? Which are the constants?
(A) The type of music
(B) The volume of the music
(C) How well the student does on a test
(D) The type of test
28. The researcher wants to determine the relationship between Distance in watching television and the occurrence of eye problem. Which of the following is the Independent Variable?
(A) Distance in watching television
(B) Not determined
(C) Eye problem
(D) Genetics
29. Another term for a controlled variable is a:
(A) Independent variable
(B) Responding variable
(C) Observation
(D) Constant variable
30. What type of variable is a factor that could influence the results but is not the focus of the study?
(A) Control Variable
(B) Extraneous variables
(C) Dependent Variable
(D) Independent Variable
31. How many times the students appear in the research class is the example of ____
(A) Intensity.
(B) Space.
(C) Frequency.
(D) Direction.
32. When there are more variables studied it is
(A) Partial correlation.
(B) Simple correlation.
(C) Multiple correlation and partial correlation.
(D) Spurious correlation.
33. The theoretical framework discusses the inter-relationships among the ____
(A) Variables.
(B) Theory.
(C) Hypothesis.
(D) Concept.
34. A firm wants to assess whether its new advertisement impacts sales. Using the management problem identification step, which statement correctly assigns variables for this study?
(A) Sales are the independent variable; advertising is the dependent variable
(B) Both advertising and sales are independent variables
(C) Advertising is the independent variable; sales are the dependent variable
(D) Neither advertising nor sales are variables in this case
35. The variables will be shown by ____
(A) The axis
(B) The legend
(C) The scale
(D) The title
36. In an experiment, the factor that the researcher manipulates is called the:
(A) Dependent variable
(B) Control variable
(C) Confounding variable
(D) Independent variable

37. A variable that is presumed to cause a change in another variable is called a(n):
(A) Independent variable
(B) Categorical variable
(C) Dependent variable
(D) Intervening variable
38. Chase, Matti, and Grace are planning to grow plants for their school project. They understand that the amount of water, sunlight, and type of soil must be kept the same for all plants for the experiment to be fair. This is known as a (a). Can you help them identify what it is?
(A) Control group
(B) Quantitative
(C) Constant
(D) Law
39. Number of Pairs of Shoes You Own
(A) Categorical
(B) Quantitative
40. The stimulus or cause variable chosen by the researcher to determine the relationship of an observed phenomenon.
(A) Variable
(B) Dependent
(C) Constant
(D) Independent
41. This is a concept which can take on different quantitative value. As such, the concepts like weight, height, income are all examples ____
(A) DATA
(B) VARIABLES
(C) SCOPE
(D) DELIMITATION
42. "The independent variables are entered into the model in the order specified by the researcher based on theoretical grounds" this is ____
(A) Standard Multiple Regression
(B) Hierarchical Multiple Regression
43. A research team designed a demographic questionnaire to collect information about participants. Which of the following variables identified on the questionnaire provides an example of an ordinal scale variable?
(A) Rank in the military
(B) Age
(C) Weight
(D) Relationship Status
44. A type of variable that interferes between the independent and dependent variable.
(A) Dependent
(B) Independent
(C) Intervening
(D) Interdependent
45. Type of extraneous variable that changed in sync with the independent variable, making it difficult to discern which one is causing changes in the dependent variable
(A) Confounding variable
(B) Independent variable
(C) Dependent variable
(D) None of above
46. Which of the following is not a categorical or qualitative variable?
(A) Blood type
(B) Gender
(C) Height
(D) Civil status
47. What should you pay attention to if groups were involved in the research?
(A) The number of subjects
(B) The characteristics of the environment
(C) How the students were assigned to them
(D) The methodologies used
48. In a study investigating the effect of different fertilizer types on plant growth, the type of fertilizer used is the:
(A) Dependent variable
(B) Independent variable
(C) Control variable
(D) Extraneous variable

49. Identify the dependent variable by looking at the graph.
(A) Weeks
(B) Weekly Juice Data
(C) Cans Sold
(D) Indirect Relationship
50. A research team wanted to measure how smart Chris was. The researchers measured how many math questions Chris got correct on his final exam. This measurement constituted which of the following?
(A) Correlational variable
(B) Independent variable
(C) Operational definition
(D) Measure of central tendency
51. Which group contains the independent variable?
(A) Experimental Group
(B) Control Group
(C) Constants
(D) Participants
52. Find the DV: You experiment to see if the Fortune Teller fish reacts to different amounts of heat.
(A) Movement of Fish
(B) Amount of Heat
(C) Amount of Moisture
(D) Oil on Hand
53. The ___ of a variable tells what values that variable takes and how often it takes them
(A) Data
(B) Distribution
(C) Statistics
(D) Graph
54. The variable that responds to changes is the:
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) Extraneous variable
55. Research participants are randomly assigned to one of three groups. One group listens to a list of words, another group reads a list of words, and the third group hears and reads the words. The researcher then tests the participants' memories to see how many words the members of each group can recall. The way the words are presented is which type of variable?
(A) Confounding
(B) Dependent
(C) Independent
(D) Extraneous
(E) Control
56. Given the hypothesis "An organization's level of productivity is determined by the degree of academic training that each person has," identify the dependent variable.
(A) Level of productivity
(B) Degree of academic training
(C) Size of the organization
(D) Age of the person
57. The following methods are used to control confounding variables EXCEPT
(A) Homogeneity.
(B) Matching.
(C) Randomization.
(D) Manipulation.
(E) Statistical control.
58. Functional relationship-gender and life expectancy
(A) Cause-and-effect
(B) Associative
(C) Qualitative study of pattern
(D) None of above
59. Independent variables are also known as ___
(A) Predictors
(B) Outcomes
(C) Refractors
(D) Correlators
- Explanation:** A variable we consider a cause is Independent (Predictor) while a variable we consider an effect is Dependent (Outcome).

60. Angel wants to know if the type of soap has an effect on how clean her clothes get. What is the independent variable?
- (A) Type of soap
 - (B) How long the laundry takes
 - (C) Amount of soap
 - (D) How clean the clothes are
61. What would be an example of a controlled variable?
- (A) The amount of sunlight and water used on the flower
 - (B) The number of humming birds that visit the flower
 - (C) The color of the flower
 - (D) The same type of flower, and the same location of the flower
62. Extraneous variables are as significant as independent variables.
- (A) True
 - (B) False
63. Which of the following is NOT typically considered when collecting the dependent variable (DV) from participants in psych studies?
- (A) Favorite color
 - (B) Measures
 - (C) Research assistants / 'experimenters'
 - (D) Duration
 - (E) Location
64. A factor that simultaneously affects the cause and the effect in a causal relationship is a confounder.
- (A) True
 - (B) False
65. Which of the following is an example of a variable that is concrete and precisely defined?
- (A) College readiness
 - (B) Fatalities from a car accident
 - (C) Measuring length with a tape measure
 - (D) Job satisfaction
66. Independent Variable
- (A) Variable in an experiment that is manipulated by the experimenter.
 - (B) Variable in an experiment that represents the measurable response or behavior of the subjects in the experiment.
67. Criterion validity measures whether your measure (conceptualization of a given construct) effectively measures what you want it to measure.
- (A) True
 - (B) False
68. Research Problem: The researcher would like to know how too much exposure to gadgets affects the eye-sight of 15-year old students. Which of the following is the BEST dependent variable for this problem?
- (A) Age of Students
 - (B) Number of hours the eyes were exposed to gadgets
 - (C) Eye Grade After Excessive Exposure
 - (D) 15 year old student
69. A ___ refers to quantity whose value varies from one investigation to another.
- (A) Constant
 - (B) Variable
 - (C) Array
 - (D) None of these
70. Nationality-Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
71. In a research study, brand awareness and customer satisfaction are examples of types of
- (A) Demographics
 - (B) Marketing research
 - (C) Situation analysis
 - (D) Relevant variables

72. What is the primary purpose of using control variables in research?
- (A) To enhance the complexity of the research
 - (B) To reduce the cost of the study
 - (C) To eliminate bias and isolate the effect of the independent variable
 - (D) To increase the sample size
73. Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of cars in a circular car park.
- (A) Categorical
 - (B) Continuous numerical
 - (C) Discrete numerical
 - (D) None of above
74. The variable type of political regime (democracy, autocracy, hybrid) is measured at which level?
- (A) Nominal
 - (B) Ordinal
 - (C) Ratio
 - (D) Interval
75. SAT math score
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
76. What is "temperature in degrees Celsius" an example of?
- (A) Nominal
 - (B) Ordinal
 - (C) Discrete
 - (D) Continuous
77. What is a confounding variable?
- (A) A variable that is manipulated by the researcher to determine its effect on the dependent variable
 - (B) A variable that is not directly measured but can influence the relationship between the independent and dependent variables
 - (C) A group of participants who do not receive the experimental treatment
 - (D) A statistical measure of the strength and direction of the relationship between two variables
78. Behavioral Psychologists want to know if reinforcing comments will make people work harder on an assembly line. IV?
- (A) Assembly line
 - (B) Level of work effort
 - (C) Reinforcing comments
 - (D) Work attendance
79. Read each phrase then identify what variable is given. Temperature in degree Celsius
- (A) Continuous variable
 - (B) Discrete variable
80. It is characterized when the data can be accommodated in some order
- (A) Nominal Scale
 - (B) Interval Scale
 - (C) Ordinal Scale
 - (D) Reason Scale
81. A condition or characteristic that can take on different values or categories is called as:
- (A) Hypothesis
 - (B) Variable
 - (C) Assumption
 - (D) Objective
82. Operational definitions are
- (A) Theoretical
 - (B) Measurable
 - (C) Abstract
 - (D) Creative
83. The entity or element that is being studied in market research:
- (A) Unit of analysis
 - (B) Research objective
 - (C) Secondary data
 - (D) Primary data

84. The variable we are changing/investigating in an experiment is the:
(A) Dependent Variable
(B) Independent Variable
(C) Constant
(D) None of above
85. Dr.R hypothesized that students in a classroom seating 30 would get higher course grades than students seated in an auditorium seating 300. In the example,
(A) Dr.R has found a cause-effect relationship
(B) Dr.R has found a positive correlation between class size and grades
(C) The independent variable is the measurement of course grades
(D) Classroom size has been operationally defined
86. Which of the following independent variables cannot be manipulated in a research study?
(A) Gender;
(B) Ethnicity;
(C) Intelligence and other traits
(D) None in a research study of the above can be manipulated
87. An example of a quantitative discrete variable would be:
(A) ___ how many cars are in your neighborhood.
(B) ___ the weight of your family members.
(C) ___ the temperature in Monterrey.
(D) ___ the amount of liters of soda consumed in a family.
88. Tolman specified that the independent variables (stimuli) affect processes within the organism. These processes then control the occurrence of behavior (response). These internal processes are known as ___
(A) Operational variables
(B) Mental sets
(C) Cognitive variables
(D) Intervening variables
89. When doing an experiment, the factor that changes, is manipulated, or is altered is called:
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) None of the above
90. Which word means prejudice in favor of or against something or someone, usually in a way considered to be unfair?
(A) Bias
(B) Purpose
(C) Credible
(D) Relevant
91. The research term indicating that unknown variables may be influencing the relationship between the independent and dependent variable is known as ___
(A) Extraneous variable
(B) Internal variable
92. In an experiment, what factor do researchers manipulate in order to determine its effect?
(A) DV
(B) IV
(C) Hypothesis
(D) Correlation
93. A researcher wants to study whether discovery learning procedure has an impact on the motivation of students. In this situation, the variable motivation will be labelled as
(A) Intervening variable
(B) Independent variable
(C) Dependent variable
(D) Extraneous variable
94. Scenario: You want to test whether growth hormone helps to create bigger cows. What is the Independent Variable? (Remember: Independent Variables are what "I" change in the experiment.
(A) How much the cows weigh
(B) The amount of growth hormone
(C) How much the cows eat.
(D) None of above

95. A variable that is manipulated (cause)
(A) Independent variable (IV)
(B) Dependent variable (DV)
96. What variable in an experiment is the manipulated variable, or the variable that the scientists changes? For example: keep bread at room temp, and keep another one in the refrigerator-here you are changing the temps on purpose to see what happens.
(A) Operational Definition
(B) Control Variable
(C) Dependent Variable
(D) Independent Variable
97. In the scientific method the item that can be changed or controlled is called the ____
(A) Variable
(B) Conclusion
(C) Results
(D) Question
98. How can participant bias affect the outcome of a study?
(A) It can make others want to volunteer for the study
(B) It can invalidate it, if the volunteers hold bias that is counter to the opinions of those who are not part of the study, but are represented by it
(C) It can split the results in two
(D) It can prove it correct, because volunteer opinions accurately represent everyone in the population
99. Came from the word “vary, “ are elements, entities, or factors that can change.
(A) OPTIONS
(B) CHOICES
(C) VARIABLES
(D) SUB UNIT
100. An unanticipated outside factor that affects both variables of interest, often giving the false impression that changes in one variable causes changes in the other variable, when, in actuality, the outside factor causes changes in both variables. What is this called?
(A) Confounding variable
(B) Independent variable
(C) Dependent variable
(D) None of above
101. What variable manifest or show the effects of the treatment variables?
(A) Control
(B) Dependent
(C) Extraneous
(D) Independent
102. When scientist put things into categories or group together items that are alike in some ways
(A) Inferring
(B) Predicting
(C) Classifying
(D) Making models
103. It is the building blocks of quantitative methods; central concept in research
(A) Variables
(B) Numbers
(C) Letters
(D) Symbols
104. What is the role of the independent variable in an experiment?
(A) It is the variable that is measured to see the effect.
(B) It is the variable that is changed or controlled by the researcher.
(C) It is the variable that remains constant throughout the experiment.
(D) It is the variable that is not involved in the experiment.
105. These are the things that you measure, manipulate and control in statistics and research.
(A) Variables
(B) Respondents
(C) Research Framework

(D) Concept Map

Explanation: Variables are the things that you measure, manipulate, and control in statistics and research.

106. The type of variable that can contaminate the results of an experiment and may be an alternative to a casual relationship is known as a(n):

- (A) Predictor variable
- (B) Criterion variable
- (C) Extraneous variable
- (D) Antecedent variable

107. What variables do I need to measure to make sure that the major factors influence the outcomes and not the other factors?

- (A) Dependent variable
- (B) Independent variable
- (C) Control variable
- (D) Confounding variable tagsFamily of Variables in Educational Research

108. A location in memory used to store data that can be changed.

- (A) Constant.
- (B) Value.
- (C) Variable.
- (D) Iteration.

109. Weight in kg is a ____ variable?

- (A) Continuous Variable
- (B) Constant Variable
- (C) Dichotomous Variable
- (D) Polytomous Variable

110. A variable that changes as a result of the independent variable manipulation.

- (A) Dependent Variable
- (B) Extraneous Variable
- (C) Moderating Variable
- (D) Quantitative Variable

Explanation: The dependent variable is the variable that changes as a result of the independent variable manipulation. In this case, the dependent variable is the variable that is being measured or observed.

111. True or False. Weight is a quantitative variable.

- (A) True
- (B) False

112. The item that you manipulate in a psychological study is called the ____

- (A) Dependent Variable
- (B) Independent Variable
- (C) Control Group
- (D) Observation Method

113. This collectively refer to persons, places, things, or phenomena that you are trying to measure numerically.

- (A) Variables
- (B) Independent variables
- (C) Dependent variables
- (D) None of above

114. Which of the following statements are true?

I. All variable can be classified as quantitative or categorical variables.II. Categorical variables can be continuous variable.III. Quantitative variables can be discrete variables.

- (A) I only
- (B) Ii only
- (C) Iii only
- (D) I and iii
- (E) I and ii

115. Variable that the researcher controls in an experiment

- (A) Control variable
- (B) Independent variable
- (C) Dependent variable
- (D) Experimental variable

116. Which one of the following variables is controlled in experimental research?

- (A) Independent variables.
- (B) Dependent variables.
- (C) Extraneous variables.
- (D) Moderate variables.

117. You plan to test “chewing gum improves concentration.” What is the most appropriate independent variable?
- (A) Number of correct test answers
 - (B) Participants’ baseline attention span
 - (C) Teacher’s rating after the lesson
 - (D) Chewing gum versus not chewing gum
118. Weight, anxiety, and body temperature are classified as:
- (A) Variable
 - (B) Theory
 - (C) Perspective
 - (D) Paradigm
119. State the level of measurement for the variable; Number of As scored by a student in an examination
- (A) Nominal
 - (B) Ratio
 - (C) Interval
 - (D) Ordinal
120. Read the title and identify the INDEPENDENT variable. Research Title: Various Study Habits and their Effects on the Level of Performance in Management Subject
- (A) Management Subject
 - (B) Level of Performance in Management Subject
 - (C) Various Study Habits
 - (D) None of above
121. The variable that is being tested, counted, or measured is known as
- (A) Controlled Variable
 - (B) None of these
 - (C) Independent Variable
 - (D) Dependent Variable
122. In a test marketing study of a new type of instant tea, sales volume (as measured by dollar sales) is most likely to be a(n): Most likely to occur in test marketing studies of (n):
- (A) Random variable
 - (B) Independent variable.
 - (C) Control variable.
 - (D) Dependent variable.
123. It is the characteristic or attribute of a sample or population that changes or varies for different individuals or things.
- (A) Random Variable
 - (B) Variable
 - (C) Statistics
 - (D) Sample Space
124. What is the variable that is manipulated or changed in an experiment?
- (A) Independent
 - (B) Dependent
 - (C) Standard
 - (D) Operationalised
125. Control variable is a characteristic that is constant and unchanged during the research process.
- (A) True
 - (B) False
126. Mr. Stone wants to know which brand of paper towels is the strongest. In this experiment, what is the INDEPENDENT variable?
- (A) Strength
 - (B) Brand of paper towel
 - (C) Weight
 - (D) Environment
127. When one variable increases and another variable also increases, this relationship between the two variables is called ____
- (A) Negative correlation
 - (B) Oppositional relationship
 - (C) Positive correlation
 - (D) Follow-the-leader research
128. State the level of measurement for the variable below; Emory University wants to know which dormitories the students prefer. The administration counts the number of applications for each dorm. Administrators assign a

- rank to each dorm based on the number of applications received.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 129.** This type of variable can be measured numerically
- (A) Quantitative
 - (B) Qualitative
 - (C) Experimental
 - (D) Inquiry
- 130.** In the formulation of the experiment using mathematical methods, concepts are used and this is due to the fact that the theory of mathematical planning of the experiment is based on the cybernetic representation of the object of study:
- (A) Input and output parameters
 - (B) Variables and output parameters
 - (C) Constant and output parameters
 - (D) Basic and output parameters
 - (E) Free and output parameters
- 131.** Which of the following is an example of a measurement of concepts?
- (A) Literature review
 - (B) Research methodology
 - (C) Efficiency
 - (D) Research findings
- 132.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the daily pollution level in the Burnley Tunnel on the City Link Freeway.
- (A) Categorical
 - (B) Continuous numerical
 - (C) Discrete numerical
 - (D) None of above
- 133.** Which statement best describes a third variable in correlation research?
- (A) A factor manipulated to test causation
 - (B) A variable not part of the study that influences association
 - (C) A control used to eliminate measurement error
 - (D) A predictor that guarantees a linear relationship
- 134.** Which type of variable is affected by changes in another variable during a study?
- (A) Control Variable
 - (B) Mediating Variable
 - (C) Dependent Variable
 - (D) Independent Variable
- 135.** In social research, mediators are said to have easily changed traits/characteristics. Which example below is a mediator?
- (A) Gender
 - (B) Age
 - (C) Mood
 - (D) Ras
- 136.** If a researcher is studying different approaches to dieting to determine which is the most effective for weight loss, the experimenter's manipulation of dieting is the:
- (A) Control condition
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Placebo
- 137.** This type of variable cannot assume a numerical value but can be classified into two or more nonnumeric categories
- (A) Independent
 - (B) Dependent
 - (C) Qualitative
 - (D) Quantitative
- 138.** Which of the following is an example of a variable?
- (A) The number 5
 - (B) Age
 - (C) A fixed rule
 - (D) A constant temperature

- 139.** What is 'Experimenter Bias'?
- (A) When a researcher's expectations or preferences influence the outcome of a study.
 - (B) When participants are aware of the study's purpose and change their behavior.
 - (C) When the sample chosen does not represent the population.
 - (D) When the results are due to chance rather than the variables being studied.
- 140.** The dependent variable is the one that is deliberately changed in an experiment.
- (A) TRUE
 - (B) FALSE
- 141.** Which of the following answer choices is NOT an example of a variable?
- (A) 8
 - (B) X
 - (C) U
 - (D) N
- 142.** Below are available procedures to examine an instrument's reliability, EXCEPT ____
- (A) Test-retest reliability
 - (B) Alternative forms reliability
 - (C) Internal consistency reliability
 - (D) Alternate forms and test-retest reliability
 - (E) Interpersonal reliability
- 143.** The main aim of the scientific method in the research field is to ____
- (A) Improve data interpretation
 - (B) Confirm triangulation
 - (C) Introduce new variables
 - (D) Eliminate spurious relations
 - (E) Not aware of
- 144.** The variable that the researcher manipulates is called:
- (A) Dependent variable
 - (B) Independent variable
 - (C) Moderator variable
 - (D) Extraneous variable
- 145.** In research, all variables, except those that are tested/ experimented on, are kept constant.
- (A) Original work
 - (B) Objective
 - (C) Controlled
 - (D) Employs hypothesis
- 146.** In an experiment, a factor other than the factor being studied that might influence a study's results
- (A) Third variable
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Confounding variable
- 147.** Variables used to describe and measure factors considered causes or that influence the research problem are:
- (A) Dependent variables
 - (B) Independent variables
 - (C) Confounder variables
 - (D) Intermediate variables
 - (E) Neutral variables
- 148.** The comparison of on-the-job behavior before and after training programs can be classified as ____?
- (A) Measuring reaction
 - (B) Measuring learning
 - (C) Measuring behavior
 - (D) Measuring results
- 149.** We find a true zero in a/an
- (A) Rating Scale.
 - (B) Interval Scale.
 - (C) Ordinal Scale.
 - (D) Ratio Scale.
- 150.** In the scientific question "Does the colour of light used on plants affect how well they grow? "What is the independent variable?
- (A) How well plants grow
 - (B) Colour of light
 - (C) Type of plant that is used
 - (D) How often the plants are watered

- 151. Scientific Question:** Does playing video games improve reaction time? What is the dependent variable?
- (A) Playing video games
 - (B) Reaction time
 - (C) Type of video game
 - (D) None of above
- 152.** What do you call the variables that can potentially distort or influence the relationship between the IV and the DV, especially if these are not controlled or kept constant?
- (A) Moderating variables
 - (B) Confounding variables
 - (C) Mediating variables
 - (D) Influencing variables
- 153.** An experiment investigated whether close proximity to strangers increased heart rate. The DV would be:
- (A) Proximity of strangers
 - (B) The strangers
 - (C) Heart rate
 - (D) The participants Edit
- 154.** The variable affected by a treatment is called —
- (A) Independent variable
 - (B) Dependent variable
 - (C) Hypothesis
 - (D) None of above
- 155.** Students measured the temperature of the water at different depths in Lake Skywalker and found that the temperature varied. What was the dependent variable?
- (A) Time
 - (B) Temperature
 - (C) Student taking the measurement
 - (D) Water depth
- 156.** These are the central building blocks of quantitative studies:
- (A) Theory
 - (B) Paradigm
 - (C) Variable
 - (D) Research
- 157.** In qualitative research pain, quality of life, and resilience are abstract of particular aspects of human behavior and characteristics. It refers to
- (A) Variable
 - (B) Concepts or phenomena
 - (C) Description
 - (D) Theory
- 158.** What are characteristics that cannot be defined by a number, such as shape or color?
- (A) Descriptive statistics
 - (B) Inferential statistics
 - (C) Categorical variables
 - (D) Numerical variables
- 159.** Variable
- (A) Any factor that is capable of change
 - (B) The group that is treated in the same way as the experimental group except that the experimental treatment (the independent variable) is not applied
 - (C) The measure of a relationship between two variables or sets of data
 - (D) The listing and summarising of data in a practical, efficient way
- 160.** The — variable is the 'cause' and the — variable is the 'effect'.
- (A) Dependent, independent
 - (B) Independent, dependent
 - (C) Independent, controlled
 - (D) Dependent, controlled
- 161.** Data which can be categorised by name
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio

- 162.** If you were testing the time it took for objects of different sizes to reach the ground after being dropped from 30 feet in the air, which of these would be the DEPENDENT VARIABLE?
- (A) The time it takes for each object to hit the ground.
 - (B) The size of each object.
 - (C) The type of object you use.
 - (D) The height you drop the object from
- 163.** A professor of counselor education hypothesized that biofeedback training could reduce anxiety and improve the average score on written board exams. If this professor decides to conduct a formal experiment the IV will be the ___ and the DV will be the ___
- (A) Professor; anxiety level
 - (B) Anxiety level; board exam score
 - (C) Biofeedback; board exam score
 - (D) Board exam score; biofeedback
- 164.** Which type of variable is usually the outcome or effect being measured in a study?
- (A) Dependent variable
 - (B) Control variable
 - (C) Independent variable
 - (D) Extraneous variable
- 165.** The students concluded that the plants grown indoors grew faster because they received better quality light than the plants grown outdoors. Which is the most likely reason this conclusion may be flawed?
- (A) The students measured the plants at different times.
 - (B) The students should have grown different types of plants.
 - (C) The growth of the plants in each set was affected by more than one factor.
 - (D) The outdoor plants grew faster than the indoor plants.
- 166.** Explain the difference between independent and dependent variables in an experiment.
- (A) Independent variables are not important in an experiment
 - (B) Independent variables are manipulated by the experimenter, while dependent variables are the outcome or response that is measured.
 - (C) Independent variables are the outcome or response that is measured
 - (D) Dependent variables are manipulated by the experimenter
- 167.** Why are operational definitions important in a study?
- (A) They help in collecting data
 - (B) They allow replication by defining key variables
 - (C) They provide a conclusion
 - (D) They eliminate errors
- 168.** The variable that is changed on purpose to see its effects on something is called:
- (A) Interdependent Variable
 - (B) Controlled Variables
 - (C) Independent Variable
 - (D) Dependent Variable
- 169.** Word that means something is accurate (correct) based on truth, fact, or logic.
- (A) Valid
 - (B) Evidence
 - (C) Relevant
 - (D) Sufficient
- 170.** What variables might influence the outcomes but cannot or will not be measured?
- (A) Dependent variable
 - (B) Independent variable
 - (C) Control variable
 - (D) Confounding variable tagsFamily of Variables in Educational Research
- 171.** David is having a discussion with Anthony because he is saying that the flavor of ice cream affects how fast the ice cream melts. What is the independent variable in this example?
- (A) The flavor of the ice cream
 - (B) The time it takes to melt

- (C) The temperature of the environment
(D) The price of the ice cream
172. In an experiment, the ___ variable is tested by the researcher to observe its effect(s) on the ___ variable.
(A) Independent; dependent
(B) First; second
(C) Dependent; independent
(D) Research; results
173. A person's marital status, ethnicity, or grade in high school is an examples of a ___ variable, or a variable that identifies a person's membership in a category.
(A) Quantitative
(B) Qualitative
174. When organizing data, where do scientists put the independent variable in a data table?
(A) In the first column
(B) In the last column
(C) In the middle column
(D) In the second column
175. It concentrates on the specific variables and concepts focused on the study. It states which concept or variable are dependent and independent.
(A) Hypothesis
(B) Scope
(C) Conceptual Framework
(D) Theoretical Framework
176. Classify the variable as categorical or quantitative. Weight of an automobile
(A) Categorical
(B) Quantitative
177. In a study of how industry affects the environment, which of the following would be considered an external factor?
(A) Profits
(B) Water quality
(C) Products
(D) Labor costs
178. Dario wants to know the following: Does the distance a person kicks a soccer ball effect how well they will do on their math test. What is the dependent variable?
(A) How far they kick the soccer ball?
(B) Depends upon the person.
(C) How well they do on the math test.
(D) Type of soccer ball.
179. The independent variable is the ONE thing I am ___ to test your testable question.
(A) Changing
(B) Keeping the same
(C) Experimenting with
(D) Using as a constant
180. The presumed cause or direction of influence (of a dependent variable)
(A) Independent variable
(B) Dependent variable
181. Uncontrolled variable: a ___ variable that may not have been limited and eliminated in an experiment, which can affect the results. It may be a feature of the participants or the situation
(A) Confounding
(B) Independent
(C) Dependent
(D) None of above
182. The variable that is the result of the experiment is the
(A) Constant
(B) Independent variable
(C) Dependent variable
(D) Control
183. ___ Are used mainly to collect demographic and behavioral data when only two answers logically exist.
(A) Closed or structured questions
(B) Open or unstructured
(C) Dichotomous
(D) None of above

- 184.** The following statement is a hypothesis formed about marsh grass: If the amount of nitrogen marsh grass receives is increased, then the height of the grass will increase, because nitrogen is an essential nutrient needed for marsh grass to grow. What is the independent variable of the statement above?
- (A) Height of grass
 - (B) Amount of nitrogen
 - (C) Essential nutrient
 - (D) Amount of growth
- 185.** Women earn less than men is ____
- (A) Income wage gap
 - (B) Gender pay gap
 - (C) Salary wage gap
 - (D) All
- 186.** Example of non-numeric data is ____?
- (A) Employee address.
 - (B) Examination score.
 - (C) Bank balance.
 - (D) All of these.
- 187.** A variable that represents categories which can be ordered from highest to lowest.
- (A) Nominal
 - (B) Ratio
 - (C) Interval
 - (D) Ordinal
- 188.** An independent variable:
- (A) Influences the dependent variable
 - (B) Is affected by the dependent variable
 - (C) Always has only two categories
 - (D) Is also called a response variable
- 189.** A variable is anything that can be changed in an experiment that could affect the results of the investigation. Which variable is changed on purpose?
- (A) Independent (Manipulated) Variable
 - (B) Dependent (Responding) Variable
 - (C) Constant Variable
 - (D) Controlled Variable
- 190.** Determine the role taken by each variable in Quantitative research. Presume to cause changes to occur in another variable (Ex. Amount of studying affects tests scores)
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Mediating (intervening) Variable
 - (D) Moderator Variable
 - (E) Extraneous Variable
- 191.** A variable that is presumed to cause a change in another variable is called an
- (A) Categorical variable
 - (B) Dependent variable
 - (C) Independent variable
 - (D) Intervening variable
- 192.** When studying the effect of maternal alcohol use and disruptive behavior in children, the child's disruptive behavior is considered
- (A) The independent variable
 - (B) The dependent variable
 - (C) Unrelated to maternal alcohol use
 - (D) Qualitative data
- 193.** A measurement scale that in addition to being an interval scale, also has an absolute zero in the scale.
- (A) Nominal Scale
 - (B) Ordinal Scale
 - (C) Interval Scale
 - (D) Ratio Scale
- 194.** Find the IV: You experiment to discover if your pulse rate is affected by caffeine
- (A) Pulse rate
 - (B) Temperature of room
 - (C) Amount of caffeine
 - (D) Amount of exercise
- 195.** If students spend more time using TikTok, then they will read fewer books. Identify the independent variable.
- (A) Amount of time on TikTok
 - (B) Number of books read
 - (C) There isn't one.
 - (D) None of above

- 196.** During an experiment, if you purposely change the temperature to test a hypothesis, the temperature is called the ____
- (A) Variable
 - (B) Manipulated variable
 - (C) Responding variable
 - (D) Result
- 197.** To determine the effectiveness of a new pain reliever, a researcher divides a random sample of patients into two groups: one group is assigned to take the new drug and the second group takes a placebo. What is the dependent variable?
- (A) New pain reliever
 - (B) Whether the pain is relieved or not
 - (C) Placebo
 - (D) None of the above
- 198.** Process of grouping things based on their similarities.
- (A) Classification
 - (B) Binominal Nomenclature
 - (C) Genus
 - (D) Species
- 199.** A class is testing whether cold water or warm water dissolves sugar faster. What is the dependent variable?
- (A) The temperature of the water
 - (B) The amount of sugar used
 - (C) The time it takes for the sugar to dissolve
 - (D) The type of cup used
- 200.** In Quantitative Research, a ____ is the focus of the research. It consists of a collection of related conditions or characteristics.
- (A) Variable
 - (B) Constant
 - (C) Construct
 - (D) None of above
- 201.** Dependent Variable
- (A) Variable in an experiment that represents the measurable response or behavior of the subjects in the experiment.
 - (B) Variable in an experiment that is manipulated by the experimenter.
- 202.** How to make a concept measurable?
- (A) Change it into variable
 - (B) Change it into proposition
 - (C) Change it into construct
 - (D) None of these
- 203.** The one factor that a scientist changes during an experiment. (It affects the results of the experiment).
- (A) Controlled Variable
 - (B) Dependent Variable
 - (C) Independent Variable
 - (D) None of above
- 204.** How are changes in independent variables expected to affect dependent variables?
- (A) Changes in independent variables are not related to changes in dependent variables.
 - (B) Changes in independent variables are expected to be influenced by changes in the dependent variable.
 - (C) Changes in independent variables are hypothesized to cause changes in the dependent variable.
 - (D) Changes in independent variables are measured by the changes in the dependent variable.
- 205.** A scientist wants to see if watering a flower every day will result in better growth. What is the responding variable?
- (A) Amount of water
 - (B) Plant growth
 - (C) Temperature
 - (D) Ruler
- 206.** Turning research questions into measurable, testable propositions is called ____
- (A) Hindsight bias
 - (B) Randomizing

- (C) Operationalizing
(D) Sampling
- 207.** What is the thing you are measuring or recording in an experiment?
(A) Independent Variable
(B) Dependent Variable
(C) Control Group
(D) Constants
- 208.** How many independent and dependent variables are there in a One-Way ANOVA?
(A) 1 independent variable and 1 dependent variable
(B) 2 independent variables and 1 dependent variable
(C) 1 independent variable and 3 dependent variables
(D) 1 independent variable and 2 dependent variable
- 209.** In research, something that does not "vary" is known as
(A) Method.
(B) Constant.
(C) Control group.
(D) Variable.
- 210.** What type of variable is used in a test that provides a rating with a known distance and a true zero point?
(A) Ordinal
(B) Nominal
(C) Ratio
(D) Interval
- 211.** Data on some variables might contain a classification (e.g., defective or good, graduate or undergraduate, etc.) rather than numerical values. Such variables are referred to as ____
(A) Quantitative variables
(B) Quasi-quantitative
(C) Mixed-variables
(D) Qualitative variables
- 212.** What holds one item of data relevant to a record
(A) File
(B) Formula
(C) Field
(D) Figure
- 213.** The DV is the variable measured and is expected to cause change in the IV
(A) True
(B) False
- 214.** If it can be assumed they are present, but can't be seen or measured directly they are considered ____
(A) Constructs
(B) Hypothesis
(C) Analyse
(D) Measurable response
- 215.** Why is it unwise to conclude that if two variables are correlated, one must have caused the other?
(A) Variables can never be measured with complete accuracy.
(B) Any single variable is bound to have multiple causes.
(C) Some unmeasured third variable might actually be responsible for causing the changes seen in both of the other two variables.
(D) It is impossible to conclude that two variables are related unless one can measure them perfectly.
- 216.** What produces an unrepresentable sample?
(A) Sample bias
(B) Population
(C) Correlation studies
(D) Survey
- 217.** Responding variable
(A) Dependent
(B) Independent

- 218.** Observation or Inference: This puppy was abandoned
(A) Observation
(B) Inference
(A) Dependent variable
(B) Operational Definition
(C) Independent Variable
(D) Control Variable
- 219.** The experimental factor that describes the outcome is called the
(A) Independent variable
(B) Dependent variable
- 220.** An extra, unexpected variable that can lead to false conclusions.
(A) Confounding
(B) Independent
(C) Dependent
(D) Neutral
- 221.** Scientists studying two adjacent ecosystems observe different varieties of organisms in the two areas. Which of the following factors would contribute the least to the differing varieties of organisms in these two habitats.(If I looked at these, which would I not be able to truly tell the difference of?)
(A) Climate (Temperatures/ rainfall)
(B) Soil type (Sand/ dirt)
(C) Water resources (Ocean/ river/ pond/lake)
(D) Wind
- 222.** Which of the following is a quantitative variable?
(A) Marital Status
(B) Age
(C) Religion
(D) Gender
- 223.** In research, the presumed effect is the
(A) Site
(B) Subject
(C) Dependent Variable
(D) Independent Variable
- 224.** What variable in an experiment is measured? For example:measuring the amount of mold on bread
(A) Dependent variable
(B) Operational Definition
(C) Independent Variable
(D) Control Variable
- 225.** Participant variables could affect the ____
(A) Internal validity
(B) External validity
(C) Reliability
(D) Generalisability
- 226.** The variable manipulated by the researcher is the
(A) Dependent Variable
(B) Independent Variable
(C) Confounding Variable
(D) Correlational variable
- 227.** Marcos wants to know: Does the type of gasoline put in a car effect how fast the car can drive? What is the independent variable?
(A) Type of gasoline
(B) Which car the gas is put into
(C) How fast the car can drive
(D) How much gas is put into the car
- 228.** Which variable is manipulated in an experimental study?
(A) Dependent variable
(B) Independent variable
(C) Controlled variable
(D) Extraneous variable
- 229.** The variable, which under control or manipulation of the researcher or experimenter.
(A) Dependent
(B) Independent
(C) Extraneous
(D) Confounding
- 230.** Independent variable is the variable which can be manipulated by the-
(A) Researcher.
(B) Subject.
(C) Supervisor.
(D) All of the above.

- 231.** Generally variable are of-
- (A) Two types-Independent and dependent variable.
 - (B) Three types-Independent, dependent and intervening variables.
 - (C) Four types-Independent, dependent. Intervening and control variables.
 - (D) None of the above.
- 232.** A variable outside of what is being controlled in the experiment that has an unwanted effect on the results.
- (A) Independent variable
 - (B) Control variable
 - (C) Confounding variable
 - (D) Neutral Variable
- 233.** What term refers to the degree to which what we measure is free from random error?
- (A) Validity
 - (B) Dependence
 - (C) Construct
 - (D) Reliability
- 234.** In a research project investigating the impact of soil pH on plant growth, soil pH is the:
- (A) Dependent variable
 - (B) Independent variable
 - (C) Control variable
 - (D) Extraneous variable
- 235.** The variable that is being measured or observed is called the ____ Hint: this is the variable that is the data.
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) None of above
- 236.** FIND THE INDEPENDENT VARIABLE FOR THE QUESTION: Which brand of laundry detergent works better to remove grass stains?
- (A) Type of clothing
 - (B) Brand of detergent
 - (C) Cleanliness of clothes
 - (D) None of above
- 237.** Determine the role taken by each variable in Quantitative research. Comes in between other variables (Ex. Amount of studying leads to organization of knowledge in long-term memory which affects test scores)
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Mediating (intervening) Variable
 - (D) Moderator Variable
 - (E) Extraneous Variable
- 238.** An operationalised variable is one that is
- (A) Uncontrollable
 - (B) Predictable
 - (C) Measurable
 - (D) Correlational
- 239.** In a study to determine whether how long a student sleeps affects test scores, the independent variable is the ____ while the dependent variable is the ____
- (A) Length of time spent sleeping; test scores
 - (B) Test scores; length of time spent sleeping
 - (C) How well the student sleeps; test scores
 - (D) There are no independent or dependent variables.
- 240.** Mr. McNeice wanted to know if different types of music affected people's heart rates, so he played different music and checked their pulses. What is the dependent variable?
- (A) Type of music
 - (B) Heart rate
 - (C) How long they listen to music
 - (D) Mr. McNeice
- 241.** What is Operationalization?
- (A) Using multiple methods to validate results
 - (B) An element that can change or vary
 - (C) Defining variables in measurable terms
 - (D) A testable prediction about the relationship between variables

- 242.** A student predicts that students who study with music will score higher on tests than those who study in silence. What is the dependent variable?
- (A) Test scores
 - (B) Type of music
 - (C) Study time
 - (D) Classroom environment
- 243.** We wish to investigate the relationship between the time spent shopping and the number of items bought. The response variable (RV) is
- (A) The number of items bought
 - (B) The number of items at the shop
 - (C) The time spent shopping
 - (D) The time spent getting to the shops Edit
- 244.** The study intends to explore several variables regarding PBL integration. Which of the following is not listed as a specific variable the study aims to investigate within Eastern Pangasinan?
- (A) The perceptions of teachers and students regarding its use.
 - (B) The impact on student science learning outcomes.
 - (C) The specific financial cost of every single PBL project implemented in the last decade.
 - (D) The extent to which PBL is implemented.
- 245.** Outcome variables are ____?
- (A) Quantitative
 - (B) Qualitative
 - (C) Independent
 - (D) Dependent
- 246.** In a research study conducted by Aria, what is the variable that the researcher manipulates to observe its effect on the dependent variable?
- (A) Control variable
 - (B) Independent variable
 - (C) Extraneous variable
 - (D) Mediating variable
- 247.** Confounding variable
- (A) A variable that is manipulated in an experiment.
 - (B) An outside influence that changes the effect of a dependent and independent variable.
 - (C) A variable that remains constant throughout the experiment.
 - (D) A variable that is measured to assess the outcome of an experiment.
- 248.** The presumed cause of the research problem. The reason for change or difference in dependent variable
- (A) Independent variable
 - (B) Dependent variable
 - (C) Moderating variable
 - (D) Mediating variable/ intervening variable
 - (E) Control variable
- 249.** A test was administered to a group of students the morning after homecoming. Several of the students appeared tired and some were coughing and sneezing. These factors may result in what type of error:
- (A) Test administration
 - (B) Time-sampling error
 - (C) Quality of test items
 - (D) Test-taker variables
- 250.** Characteristic of interest about each element in a population
- (A) Variability
 - (B) Parameter
 - (C) Statistic
 - (D) Category
- 251.** A researcher defines "happiness" as a score of 80 or higher on a specific psychological scale. This is an example of:
- (A) A hypothesis
 - (B) An operational definition
 - (C) Hindsight bias
 - (D) A theory

252. Varies in degree or amount of phenomenon.
- (A) Categorical Variable
 - (B) Quantitative Variable
 - (C) Independent Variable
 - (D) Dependent Variable
 - (E) Mediating Variable
253. Which of the following statements is TRUE of an independent variable in a true experiment?
- (A) It is an attribute that is kept constant under all conditions.
 - (B) Its responses depend on the way in which the dependent variable is treated.
 - (C) It is the condition the researcher predicts will cause a particular outcome.
 - (D) It is the outcome, or response to the experimental manipulation.
254. Presumed to cause changes in another variable; causal variable
- (A) Categorical Variable
 - (B) Quantitative Variable
 - (C) Independent Variable
 - (D) Dependent Variable
 - (E) Mediating Variable
255. A variable that categorizes or describes an element of a population.
- (A) Qualitative Variable
 - (B) Quantitative Variable
 - (C) Parameter
 - (D) Sample
256. In an experiment, only change 1 variable (___ variable), make sure to keep all other variables controlled
- (A) Independent
 - (B) Constant
 - (C) Dependent
 - (D) None of above
257. A student wants to test the effects of different types of exercise on heart rate. What is the dependent variable?
- (A) Heart rate
 - (B) Type of exercise
 - (C) Amount of exercise
 - (D) Time of day exercise occurs Edit
258. A variable that is classified according to some attributes or categories.
- (A) Continuous Variable
 - (B) Discrete Variable
 - (C) Numerical-Valued or Quantitative Variable
 - (D) Categorical or Qualitative Variable
259. The faster you drive your car, the longer it will take to stop. What is the dependent variable?
- (A) The car
 - (B) The speed of the car
 - (C) The length of the car.
 - (D) Stopping distance of the car
260. This is a type of continuous quantitative variable that is an interval variable but with the added condition that zero (0) of the measurement is none of that variable
- (A) Ratio
 - (B) Discrete
 - (C) Continuous
 - (D) Interval
261. What is the term for a variable that is extraneous to the research question and interferes with the understanding of the relationship between the independent and dependent variables?
- (A) Confounding variable
 - (B) Blinding
 - (C) Matching
 - (D) Homogeneity
262. What variables or factors influence the outcomes?
- (A) Dependent variables
 - (B) Independent variables
 - (C) Control variables
 - (D) Confounding variables tagsFamily of Variables in Educational Research

263. A researcher is interested in the effects of a preschool program on later school performance. Because she is concerned that socioeconomic-status (SES) is a potential extraneous variable in her study, she picks children to study who are only from low SES homes. The control technique she used in this study was
- (A) Matching.
 - (B) Random assignment.
 - (C) Holding the extraneous variable constant.
 - (D) Statistically controlling the extraneous variable.
264. Any action that a researcher has taken in a study to minimize or eliminate the effects of extraneous variables.
- (A) Control
 - (B) Blind procedure
 - (C) Ethical consideration
 - (D) Generalizability
265. What is being manipulated
- (A) Independent variable
 - (B) Dependent variable
266. Variable that the researcher is measuring (e.g. final exam).
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Operationalization
 - (D) Validity
267. It is the variable that bears the effects or outcomes.
- (A) Independent variable
 - (B) Intervening variable
 - (C) Dependent variable
 - (D) None of the above
268. According to the passage, what does the type of variables in a study provide to the researcher?
- (A) The type of variables provides the paradigm (conceptual framework), which helps the researcher decide on the design of the study.
 - (B) The type of variables determines the sample size required for the study.
 - (C) The type of variables indicates the statistical software to be used.
 - (D) The type of variables specifies the funding sources for the research.
269. Factor that can be controlled, changed, or measured in an experiment.
- (A) Variables
 - (B) Introduction
 - (C) Statement of the problem
 - (D) Framework
270. It refers to the traits, attributes, or even symbols which measurements vary among the subjects or objects of study.
- (A) Research Problems
 - (B) Research Questions
 - (C) Research Variables
 - (D) Research Sources
271. Mrs. Chi is conducting an experiment to see if the amount of times goldfish are fed each day has an effect on the total body fat of the fish. Identify the independent variable.
- (A) Amount of body fat on the goldfish
 - (B) Amount of times the goldfish are fed
 - (C) Type of fish
 - (D) Type of food
272. Which pairing correctly matches variable types in experiments?
- (A) Independent: random noise; Dependent: control variable
 - (B) Independent: participant attribute; Dependent: confounder estimate
 - (C) Independent: manipulated factor; Dependent: measured outcome
 - (D) Independent: measured outcome; Dependent: manipulated factor

273. An observation of a dependent variable response prior to any attempt to change this response is known as the ____
- (A) Reverse.
 - (B) Baseline.
 - (C) Flat line.
 - (D) Variance.
274. Explanatory variable is also known as
- (A) Dependent variable.
 - (B) Independent variable.
 - (C) Internal variable.
 - (D) External variable.
275. Are used to describe characteristics of a population, group, or sample of the population.
- (A) DEMOGRAPHIC VARIABLES
 - (B) INDEPENDENT VARIABLES
 - (C) DEPENDENT VARIABLES
 - (D) ORDINAL VARIABLES
276. The blood pressure of a soldier is measured while he is resting. The soldier is then exposed to a stressful environment and his blood pressure is measured again. What is the INDEPENDENT variable?
- (A) Soldier
 - (B) Blood pressure
 - (C) Blood type
 - (D) Environment (resting or stressful)
277. Scenario: You want to test whether growth hormone helps to create bigger cows. What is the Dependent Variable? (Remember: Dependent Variables are what is being measured or observed.)
- (A) Growth Hormone
 - (B) How much the cows eat
 - (C) The weight of the cows
 - (D) None of above
278. Ms. S set up an experiment to see how the mass of a ball affects the distance it rolls off a ramp. Identify the INDEPENDENT variable.
- (A) Distance traveled by the ball
 - (B) Height of the ramp
 - (C) Mass of the ball
 - (D) Who set up the experiment (Ms. S, etc)
279. In measurements, the procedure for giving numbers is carried out on?
- (A) Time
 - (B) Subject
 - (C) Formula
 - (D) Attributes/variables (objects)
280. Which of the following would most likely result in a decrease in the population of insect-eating birds that build their nest on trees?
- (A) Overhunting of animals that prey on birds
 - (B) Observation of birds by scientist
 - (C) Introduction of a new type of insect
 - (D) Clearing of forests to build a highway
281. Favourite animal-Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
282. Which type of variable changes as a result of the experiment?
- (A) Dependent Variable
 - (B) Independent Variable
 - (C) Extraneous Variables
 - (D) Correlation
283. Identify the dependent variable: A study was done to find if different tire treads affect the braking distance of a car.
- (A) The car
 - (B) The distance the car took to brake
 - (C) The different tire treads
 - (D) The drive
284. Mrs. G set up an experiment to see how the type of ball affects the distance it rolls off a ramp. Identify the Independent Variable in this experiment.
- (A) Distance traveled by the ball

- (B) Height of the ramp
(C) The type of ball
(D) None of above
- 285.** A scientist wants to see if birds prefer different colours of lights at night. She sets a lamp with a red bulb in her garden for one week, yellow for another week, blue for another week. She counts how many birds come into her garden every night for all three weeks. Which is the dependent variable?
(A) The colour of the light bulbs.
(B) The number of birds which come into the garden. Edit
- 286.** Lemon trees receiving the most water produced the most lemons. What is the dependent variable (what is measured)?
(A) Amount of lemons
(B) Salt or fresh water
(C) Amount of water
(D) Type of citrus
- 287.** The ability to consistently repeat a measurement:
(A) Accuracy
(B) Precision
(C) Analysis
(D) Prediction
- 288.** The number of traditional birth attendants is what type of variable?
(A) Continuous quantitative variable
(B) Discrete quantitative variable
(C) Binary qualitative variable
(D) Ordinal qualitative variable
(E) Nominal qualitative variable
- 289.** The differences between the objects can be compared. The zero point is arbitrary
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 290.** Dr. Porter is studying the effectiveness of two intervention programs to improve the outcomes of children who have an intellectual disability. Which of the following groups of children should she include in her study?
(A) Children who have been diagnosed with language impairments
(B) Children who have been diagnosed with ADHD
(C) Children who have an IQ between 50-69
(D) Children who have an IQ between 100 and 125
(E) Children who get C's in class
- 291.** This type of data is where only separated, isolated, or opposite values can be achieved.
(A) Continuous
(B) Interval
(C) Discrete
(D) Ordinal
- 292.** What do you call the variables that you can organize in more than two categories that follow a particular order?
(A) Binary Variables
(B) Ordinal variables
(C) Nominal Variable
(D) Confounding Variable
Explanation: Ordinal variables are variables that can be organized into more than two categories and follow a particular order. They are the correct choice for this question.
- 293.** The variable which impacts the relationship between an independent variable and a dependent variable is known as
(A) Control variable
(B) Predictor variable
(C) Precedent variable
(D) Antecedent variable
- 294.** The experimental factor that is manipulated; the variable that is changed by the experimenter.
(A) Dependent variable
(B) Independent variable

- (C) Constant variable
(D) Insignificant variable
- 295.** A student wishes to test the hypothesis that adding antifreeze to water lowers the freezing point of the water. What would the independent variable be?
- (A) Amount of water put into the container
(B) Temperature at which the water/antifreeze mixture freezes
(C) Amount of antifreeze added to water
(D) Type of thermometer used to measure the freezing point
- 296.** Each question in a personal interview questionnaire will reveal:
- (A) The value of a variable
(B) A single corresponding value of a variable
(C) The value of a quantitative variable
(D) The value of a qualitative variable
- 297.** The variable in an experiment that is manipulated/changed by the researcher.
- (A) Independent variable
(B) Dependent variable
- 298.** Nick wanted to see how high an ice cube would float in different temperatures of water. Identify the DEPENDENT variable—Amount of water—Height of Ice cube—Temperature the ice cube was at its highest height—Temperature of the water—Size of the ice cube
- (A) Amount of water
(B) Height of Ice cube
(C) Temperature the ice cube was at its highest height
(D) Size of the ice cube
- 299.** Which typology reflects variables measured on categories without inherent order?
- (A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 300.** A variable represents ____
- (A) A letter
(B) An unknown number
(C) Something with an equal sign
(D) None of above
- 301.** Which of the following best describes a variable that can take any value within a given range, such as the exact height of a person or the precise amount of sugar in a solution?
- (A) Continuous numerical variable
(B) Discrete numerical variable
(C) Categorical variable
(D) Ordinal variable
- 302.** A ____ is any element or entity which can be measured for quantity or quality.
- (A) Discrete
(B) Variable
(C) Ratio variable
(D) Ordinal
- 303.** In an experiment to test the effects of hunger on aggressive behavior, aggressive behavior would be the
- (A) Placebo
(B) Control
(C) Dependent variable
(D) Independent variable
- 304.** In an experiment, the outcome that is measured; the variable that may change
- (A) Dependent variable
(B) Independent variable
(C) Third variable
(D) Confounding variable
- 305.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of advertisements in a time period over each of the free-to-air channels.
- (A) Categorical
(B) Continuous Numerical
(C) Discrete Numerical
(D) None of above

- 306.** What is a factor that can change in an experiment?
- (A) Claim
 - (B) Variable
 - (C) Scientific Inquiry
 - (D) Hypothesis
- 307.** In an experiment, the outcome to be measured.
- (A) Response variable
 - (B) Lurking variable
 - (C) Subjects
 - (D) Treatments
- 308.** Describes people by their personality traits, hobbies, interests, etc.
- (A) Demographic
 - (B) Psychographic
 - (C) Geographic
 - (D) Physiographic
- 309.** The height of bean plants depends on the amount of water they receive. What is the independent variable?
- (A) Height of plants
 - (B) Condition of soil
 - (C) Salt or fresh water
 - (D) Amount of water
- 310.** In a study of the effect of gender on career choice, the dependent variable is
- (A) Gender
 - (B) Blue-collar jobs
 - (C) Career choice
 - (D) White-collar jobs
- 311.** The variable kept the same throughout the experiment (will always be kept the same no matter how many times the experiment is done) ____
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) Bias experiment
- 312.** Anything that can change in an experiment is called ____
- (A) Conclusion
 - (B) Variable
 - (C) Experiment
 - (D) Hypothesis
- 313.** The Y axis is labeled with the
- (A) Control variable
 - (B) Independent variable
 - (C) Sample variable
 - (D) Dependent variable
- 314.** Allows the association between exposure and outcome to be examined within different strata of the confounding variable
- (A) Stratification
 - (B) Matching
- 315.** The dependent variable is the variable you:
- (A) Measure
 - (B) Change
 - (C) Keep the same
 - (D) All answers are correct
- 316.** Which would not be an effective way of operationalising aggression?
- (A) Number of punches thrown
 - (B) Number of expletives used
 - (C) Distance someone stood from someone else
 - (D) Facial expressions Edit
- 317.** How many variables should be changed at a time when conducting a single-case design?
- (A) 1.
 - (B) 3.
 - (C) 2.
 - (D) 4.
- 318.** In a study of the habitat of a population of raccoons, scientists found that the number of raccoons actually increased where people built houses. What might the scientists conclude from this observation?
- (A) The people brought many predators to the habitat

- (B) Building houses destroyed the raccoons' habitat
(C) Raccoons found more food living near people
(D) Raccoons lost their natural source of water
- 319.** A carefully worded statement of the specific variable-definitions & exact procedures used in a research experiment so that it can be perfectly replicated later is known as
(A) Replication
(B) Operational definition
(C) Hypothesis
(D) Standardization
- 320.** In research terminology the extraneous variable can be described as ____
(A) The outcome or changes brought by introduction of an independent variable
(B) The cause responsible for bringing about changes in the situation
(C) Linking the Independent and dependent variables
(D) Several factors operating in a real life situation which are not measured in the study that may affect changes in the dependent variable.
- 321.** In an experiment, the dependent variable is best described as the
(A) Outcome measured in response to manipulation
(B) Factor deliberately manipulated by the team
(C) Constant factor maintained to prevent confounding
(D) External influence that biases both variables
- 322.** In an experiment it is important to test ____ independent variable(s) in order to have a controlled experiment.
(A) 1
(B) 2
(C) 3
(D) 4
- 323.** The variable in an experiment that the researcher observes/measures for change.
(A) Independent variable
(B) Dependent variable
- 324.** What does a conceptual framework in research help to establish?
(A) The data collection and analysis methods
(B) The research problem and objectives
(C) The relationship between variables
(D) The interpretation of the result
- 325.** D.V.
(A) Independent Variable
(B) Dependent Variable
- 326.** Walker is testing which fertilizer will grow the tallest grass. The fertilizer used is the ____ variable.
(A) Constant
(B) Independent
(C) Dependent
(D) None of above
- 327.** The measurable factor in an experiment, also thought of as the "effect" is known as the:
(A) Controlled variable
(B) Independent Variable
(C) Constant
(D) Dependent Variable
- 328.** Population value is called ____
(A) Parameter
(B) Statistic
(C) Variable
(D) Sample
- 329.** When students are classified by their gender (male or female), it is an example of.
(A) Ranking the object
(B) One-way classification
(C) Two-way classification
(D) None of these

- 330.** Why is it important to consider population density when summarizing anthropogenic (human) processes in a community?
- (A) It helps determine the number of schools needed
 - (B) It influences the amount of waste generated per area
 - (C) It shows the average income of residents
 - (D) It predicts the number of parks required
- 331.** When operationalizing a concept, what must a researcher explicitly provide?
- (A) A list of unrelated theories
 - (B) Assumptions that measurement is unnecessary
 - (C) Only qualitative narratives without procedures
 - (D) Precise procedures for measuring the concept
- 332.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of text messages sent by an individual yesterday.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 333.** The Earth is unable to dispose of waste or take on new supplies and is considered a ____
- (A) Ecological Footprint
 - (B) Closed System
 - (C) Greenhouse
 - (D) Open System
- 334.** In a research project or study, the independent variable constitutes the ____ of the problem.
- (A) Effect
 - (B) Control
 - (C) Cause
 - (D) Outcome
- 335.** Reaction times will be quicker where participants drink tea compared with those who do not ____ the tea represents
- (A) The independent variable
 - (B) The dependent variable
 - (C) The confounding variable
 - (D) The extraneous variable
- 336.** Number of pages in a book-Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
- 337.** What is an independent variable?
- (A) A variable that is changed or controlled in a scientific experiment to test the effects on the dependent variable.
 - (B) A variable that depends on other factors in an experiment.
 - (C) A constant variable that does not change during the experiment.
 - (D) A variable that is not related to the experiment.
- 338.** The concrete observable events which represent the abstract concepts or constructs are called
- (A) Sample.
 - (B) Data.
 - (C) Variable.
 - (D) Proposition.
- 339.** Professor Saito is investigating whether online teaching compared to the standard classroom lectures affect intelligence scores. After selecting student participants and assigning half to an online course and half to a standard lecture course, he administers an exam to both groups. What is the independent variable in this research?
- (A) The length of the exam
 - (B) The type of course instruction
 - (C) The student participants
 - (D) Students' scores on the exam

- 340.** How many independent variables should be tested at a time in a scientific investigation?
- (A) None
 - (B) One
 - (C) Two
 - (D) Three
- 341.** Mr. McNiece wanted to see how different types of music affected students' pulse rates. She played different types of music: heavy metal, rap, R&B, alternative, pop, country, and classical music. Identify the independent variable.
- (A) Classical music resulted in the highest pulse rate
 - (B) High pulse rate
 - (C) Pulse rate
 - (D) Types of music
- 342.** Mr. McNiece wanted to see how different types of music affected students' pulse rates. She played different types of music: heavy metal, rap, R&B, alternative, pop, country, and classical music. What control variable should be considered when doing this experiment?
- (A) Types of music
 - (B) Use all dead people
 - (C) Using a different student for each music type
 - (D) Amount of time the music was played
- 343.** A determination of whether a test measures consistently from one time to another best describes which of the following?
- (A) Validity
 - (B) Reliability
 - (C) Test-Retest Reliability
 - (D) Criterion validity
- 344.** What is the questions the identifies the people who will take part in the research?
- (A) When
 - (B) Where
 - (C) Who
 - (D) Why
 - (E) Not Given
- 345.** Goals scored in a soccer match are a ____ variable
- (A) Discrete
 - (B) Continuous
 - (C) Ordinal
 - (D) Ratio
- 346.** Research question: does the distance a person kicks a soccer ball effect how well they will do on their math test. What is the dependent variable?
- (A) How far they kick the soccer ball
 - (B) Who the person is
 - (C) How well they do on the math test
 - (D) Type of soccer ball.
- 347.** Data obtained from counting
- (A) Dichotomic
 - (B) Discrete
 - (C) Continuous
 - (D) Polynomic
- 348.** Jonathan set up the same experiment to see how the mass of a ball affects the distance it rolls off a ramp. Identify the independent variable.
- (A) Distance traveled by the ball
 - (B) Height of the ramp
 - (C) Mass of the ball
 - (D) Who set up the experiment (Jonathan etc)
- 349.** An investigation found that more bushels of potatoes were produced when the soil was fertilized more. What is the dependent variable?
- (A) Amount of potatoes
 - (B) Amount of fertilizer Edit
- 350.** The time it takes to run a mile depends of the amount of exercise a person gets. The dependent variable is ____
- (A) Amount of exercise
 - (B) Time it takes to run mile
 - (C) Type of exercise
 - (D) None of above

351. Concepts that can vary or take on different values of a quantitative nature. They are the mortar and brick of scientific investigation.
- (A) CONCEPTS
 - (B) OPERATIONALIZATION
 - (C) VARIABLES
 - (D) HYPOTHESIS
352. A student plans to investigate the effects of practice on IQ test performance. Some participants are given two practice tests prior to the IQ test whereas others do the test beforehand. The dependent variable in this study is:
- (A) The participants
 - (B) The effects of practice
 - (C) IQ test performance before the study
 - (D) IQ test performance at the end of the study
353. Mr. Anady normally uses praise as a reward to train his dog. He wants to know the best way to train his dog, so he sets up an experiment using different typed of rewards and measures how well his dog responds to commands. What is his dependent variable?
- (A) Type of reward
 - (B) Praise
 - (C) Type of dog
 - (D) How well the dog follows commands
354. A variable can be defined as
- (A) Anything that changes, or differs, within or between individuals.
 - (B) The repetition of a study to confirm results.
 - (C) A specific, informed, and testable prediction of an outcome.
 - (D) A related assumption from which testable predictions can be made.
355. True relationship between independent and dependent variables, extent of the researcher to interfere with the normal flow of events.
- (A) Time Horizon.
 - (B) Study setting.
 - (C) Sampling Unit of Analysis.
 - (D) Control.
356. In creating our Specific or Sub-Questions, we used the factors or variables we laid out as foundations for our questions. In which variables does the Profiling Questions founded to?
- (A) Dependent variable
 - (B) Situational variable
 - (C) Participant variable
 - (D) Independent variable
357. In research, ___ are the cause of the change and the ___ is the effect, or thing that is changed.
- (A) Dependent variables, independent variables
 - (B) Independent variables, dependent variables
358. The variable that we purposely change is the ___
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control
 - (D) None of above
359. Scientific Question: Does being tardy impact test scores? What is the responding variable?
- (A) Test scores
 - (B) The time a student arrives to class
 - (C) Amount of time to complete test
 - (D) None of above
360. Which of the following is NOT a method to reduce bias in measurements?
- (A) Ignore known biases
 - (B) Correct for known biases
 - (C) Use a better measuring instrument
 - (D) Use multiple measurement techniques
361. These variables are designed to give the researcher an either/or response
- (A) DEPENDENT VARIABLE
 - (B) DICHOTOMOUS VARIABLE
 - (C) INDEPENDENT VARIABLE
 - (D) DEMOGRAPHIC VARIABLE

- 362.** What is the DEPENDENT variable in this experiment?"Do tall people jump further than short people?"
- (A) Height of the person
 - (B) Weight of the person
 - (C) How fast the person runs
 - (D) How far the person jumps
- 363.** Robert wanted to know if the type of phone you used gave you better or worse service. What is the independent variable.
- (A) Location of phone call
 - (B) Type of phone
 - (C) How good the service was
 - (D) None of above
- 364.** What is one extraneous variable that could influence Jacob's study where participants sit together in a cafe to recall a word list?
- (A) The type of word list used
 - (B) The number of participants
 - (C) The cafe environment
 - (D) The time of day
- 365.** What does the researcher manipulate in a laboratory or 'true' experiment?
- (A) The dependent variable
 - (B) The control group
 - (C) The independent variable
 - (D) The experimental group
- 366.** Which type of variable ranks categories but does not measure the exact difference between them?
- (A) Ordinal variable
 - (B) Nominal variable
 - (C) Interval variable
 - (D) Ratio variable
- 367.** When determining a cause-and-effect relationship between variables, what has to be present?
- (A) Changes in the independent variable caused by another independent variable
 - (B) Changes in the independent variable causing changes in the dependent variable
 - (C) Changes in the dependent variable caused by an extraneous variable
 - (D) None of above
- 368.** Total units under study means
- (A) Aggregate
 - (B) Population
- 369.** Situational variables are:
- (A) Variables that are controlled by the researcher.
 - (B) Influences that arise from the environment in which the study takes place.
 - (C) Characteristics inherent to the participants.
 - (D) Aspects that are irrelevant to the study.
- 370.** The qualitative or quantitative attribute of a variable or set of variables is termed as
- (A) Data.
 - (B) Information.
 - (C) Both of above.
 - (D) None of above.
- 371.** Which variable within an experiment is the one that needs to be controlled so that it doesn't accidentally affect the results?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Extraneous variable
 - (D) Confounding variable
- 372.** Sam wanted to know if the color of the chair you sat in when taking a test affected your test grade. What is the independent variable.
- (A) Color of chair
 - (B) Grade on test
 - (C) Age of students
 - (D) None of above
- 373.** Which step focuses on translating abstract ideas into measurable elements?
- (A) Formulation of research problem
 - (B) Conceptualisation and operationalisation
 - (C) Respondent selection
 - (D) Data processing

374. Something that can change
- (A) Variable
 - (B) Procedure
 - (C) Effect
 - (D) Participant
375. Define the term: Operationalization.
- (A) Operationalization is the process of defining how a concept will be measured and observed in a specific study.
 - (B) Operationalization is the process of collecting data from participants without any measurement.
 - (C) Operationalization is the act of forming a hypothesis without any plan for measurement.
 - (D) Operationalization is the process of analyzing results without defining variables.
376. Researchers want to know how happiness is impacted by the color of a room. Color of the room is
- (A) An independent variable
 - (B) A dependent variable
 - (C) A confounding variable
 - (D) Statistically significant
377. Operationalization is the process of defining variables into measurable factors.
- (A) True
 - (B) False
378. A characteristic or quality that takes on different values; that varies from one person to the next, one group to the next, one situation to the next
- (A) Variable
 - (B) Theory
 - (C) Concept
 - (D) None of above
379. A quantitative variable that can assume a countable number of values.
- (A) Nominal Variable
 - (B) Ordinal Variable
 - (C) Discrete Variable
 - (D) Continuous Variable
380. During the quarantine period, your mother planted tomato seedlings in pots. Now common understanding from science tells you that several factors are affecting the growth of tomatoes: sunlight, water, kind of soil, and nutrients in soil. How fast the tomato seedlings will grow and bear fruits will depend on these factors. What is the dependent variable?
- (A) SUNLIGHT
 - (B) WATER
 - (C) THE GROWTH OF TOMATOES
 - (D) KIND OF SOIL
381. In the hypothesis stated below, what is the independent variable? "Adolescents ages 13-16 that use Tretinoin for a period of 6 months will see a decrease the facial acne."
- (A) Adolescents ages 13-16
 - (B) Tretinoin
 - (C) Facial acne
 - (D) 6 month period
382. Mr. S. sets up an experiment to see how toy cars with different masses affects the distance they roll down a ramp. Identify the dependent variable.
- (A) Height of the ramp
 - (B) Distance traveled by the cars
 - (C) Mass of the car
 - (D) Number of cars
383. The input value, the event that has to happen first (cause), always graphed on the x-axis
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Function
 - (D) Relation
384. Which of the following statement describes an independent variable?
- (A) Known as predictor or explanatory variable
 - (B) Known as criterion or outcome variable

- (C) Variable which can be predicted and explained
(D) None of above
385. The variables manipulated by the researcher in an experiment is called the
(A) Response variable
(B) Independent variable
(C) Dependent variable
(D) Extraneous variable
386. Mr. S normally uses praise as a reward to train his dog. He wants to know the best way to train his dog, so he sets up an experiment to find out if there is a better way to get his dog to respond to commands. What is his independent variable?
(A) Type of reward
(B) Praise
(C) Type of dog
(D) Amount of time the dog follows commands
387. What type of variable in an experiment is an outcome that is measured to see if another variable may have caused it?
(A) Independent Variable
(B) Dependent Variable
(C) Confounding Variable
(D) Placebo
388. Variables such as soil and species diversity are not measures as a part of EIAs. True or false.
(A) True
(B) False
389. The ordinal scale rank orders variables, though the relative distance between the elements is not always equal. An example of this would be
(A) A horse categorized as a second-place winner in a race
(B) A temperature of 78 degrees Fahrenheit
390. This is variable chosen by the researcher to determine if it changes or modifies the relationships between the independent and dependent variables.
(A) Dependent Variable
(B) Extraneous Variable
(C) Moderating Variable
(D) Quantitative Variable
Explanation: The moderating variable is chosen by the researcher to determine if it modifies the relationships between the independent and dependent variables.
391. Age, ethnicity, gender, personality types (eg: introverts and extroverts) are examples of which variable?
(A) Independent variable
(B) Quasi-independent variable
(C) Dependent variable
(D) None of above
392. What is a dependent variable (DV) in research?
(A) The thing that is manipulated by the research team
(B) Something that is measured and depends on the independent variable
(C) Everything else in the study
(D) The predictor variable
393. When the dependent variable is not free from the influence of extraneous variable, the relationship is known as
(A) Interrogative
(B) Exceptional
(C) Confounded
(D) None of the above
394. The effect-what comes out of the function-what you measure
(A) Qualitative
(B) Quantitative
(C) Independent variable
(D) Dependent variable
(E) Interval

395. Categories have no implied rank or order. mutually exclusive categories. gender, disease states, and used to consider race as a nominal variable
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
396. A symbol used to represent an unknown
(A) Variable
(B) Evaluate
(C) Term
(D) Like Terms
397. Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of letters in different words on a page.
(A) Categorical
(B) Continuous Numerical
(C) Discrete Numerical
(D) None of above
398. Mrs. Ahlers set up an experiment to see how the mass of a ball affects the distance it rolls off a ramp. What is the dependent variable?
(A) Distance traveled by the ball
(B) Height of the ramp
(C) Mass of the ball
(D) Where the experiment took place.
399. The outcome in an experiment is known as _____
(A) The placebo
(B) The independent variable
(C) The dependent variable
(D) The hypothesis
400. Five students got a perfect score on their science tests
(A) Quantitative observation
(B) An observation
(C) Qualitative observation
(D) None of the answers
401. Characteristic that can change in value or magnitude under different conditions
(A) Variables
(B) Hypothesis
(C) Control
(D) None of above
402. What is the Independent Variable in this research question? "Are students aged 55 and older more likely to drop out of college than students of ages between 30 and 40?"
(A) Age
(B) Drop out rate;
(C) Students;
(D) College Edit
403. True or False. Height is a quantitative variable.
(A) True
(B) False
404. In an experiment testing whether plant growth is affected by soil type, which is the independent variable?
(A) Type of soil
(B) Amount of water
(C) Amount of sunlight
(D) Height of the plants
405. Research as shown to support that if students pay attention in class have higher test scores. What is the independent variable?
(A) Research
(B) Paying attention
(C) Test scores
(D) None of above
406. Which data type would be most appropriate for recording the names of students in a classroom?
(A) Ratio data
(B) Interval data
(C) Nominal data
(D) Quantitative data

- 407.** Extraneous variables are considered dangerous because they:
- (A) Improve validity
 - (B) May cause bias in results
 - (C) Can be controlled easily
 - (D) Are the focus of the study
- 408.** The variables in an experiment that stay the same are the:
- (A) IV
 - (B) DV
 - (C) Constants
 - (D) None of above
- 409.** What type of variable in an experiment might unintentionally impact the results and must be controlled for?
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Confounding Variable
 - (D) Placebo
- 410.** Rachel is interested in learning the effect of using a celebrity endorsement on sales. The presence or absence of a celebrity endorsement is the ___ variable.
- (A) Independent
 - (B) Dependent
 - (C) Mediating
 - (D) Criterion
- 411.** A person's opinion is acceptable and considered as an answer to the questions asked by the researcher.
- (A) True
 - (B) False
- 412.** The independent variable is the variable that you:
- (A) Measure
 - (B) Change
 - (C) Keep the same
 - (D) All answers are correct
- 413.** A variable acting as a bridge between independent and dependent variables is:
- (A) Moderating
 - (B) Control
 - (C) Confounding
 - (D) Mediating
- 414.** An operational definition specifies
- (A) The data analysis techniques to be used in the study
 - (B) The levels of measurement to be used in the study
 - (C) How a variable or concept will be defined and measured in the study
 - (D) How the outcome of the research objectives for the study will be measured
- 415.** Variables that the researcher measures as outcomes are called:
- (A) Independent variables
 - (B) Dependent variables
 - (C) Extraneous variables
 - (D) Moderator variables
- 416.** A ordinal scale where you have a set of hierarchically arranged statements so that a respondent who agrees with any specific statement in the list will also agree with all previous statements, or in other words, each statement subsumes the lower order statements best describes which of the following?
- (A) Thurstone scales
 - (B) Likert scales
 - (C) Guttman scales
 - (D) Interval scales
- 417.** Variable that an experimenter manipulates
- (A) Independent variable
 - (B) Operational Definition-
 - (C) Causation-
 - (D) Multiply Determined-
- 418.** What type of data would either True or False be?
- (A) String.

- (B) Character.
(C) Real.
(D) Boolean.
419. These are variables that can potentially distort the relationship between the IV and the DV.
(A) Confounding variables
(B) Confusing variables
(C) Constructing variables
(D) Extraneous variables
420. In an experiment, Dr. X defines success to be receiving 90% on a test. Dr. X has created a(n)
(A) Control variable.
(B) Placebo measure.
(C) Operational definition
(D) Informed consent.
421. Controlled variable
(A) Will be measured/observed during an experiment
(B) Will be changed during an experiment
(C) Will be kept constant during an experiment
(D) None of above
422. In a science experiment, what is the dependent variable?
(A) The thing that you change
(B) The thing that you measure
(C) The thing that you keep the same
(D) None of above
423. On a graph, which axis shows the DEPENDENT variable?
(A) X-axis
(B) Y-axis
(C) Neither
(D) It changes
424. One factor that is purposely changed to test a hypothesis
(A) Data
(B) Empirical evidence
(C) Independent variable
(D) Dependent variable
425. The collection of all individuals, items, or data under consideration in a statistical study.
(A) Constant
(B) Population
(C) Sample
(D) Variable
426. What is a controlled variable?
(A) A controlled variable is the main factor being tested.
(B) A controlled variable is a random factor in an experiment.
(C) A controlled variable is an outcome measured in the experiment.
(D) A controlled variable is a constant factor in an experiment, they do not change.
427. In an experiment studying the effect of caffeine on memory, memory is the:
(A) Dependent variable
(B) Confounding variable
(C) Independent variable
(D) Control variable
428. What the IV influences is measured and is referred to as the
(A) EV
(B) DV
(C) IP
(D) DP
429. An independent variable manipulated by the researcher.
(A) Measured Variable
(B) Control Variable
(C) Treatment Variable
(D) Moderating Variable
- tagsFamily of Variables in Educational Research

430. Taking a nap in the afternoon makes people more relaxed and less irritable for the rest of the day. What is the independent variable?
- (A) An afternoon nap
 - (B) How relaxed the person is
 - (C) How irritable the person is
 - (D) How much the person moved around
431. What is one way the social characteristics of a researcher can influence research findings?
- (A) By determining the sample size.
 - (B) By affecting the answers given by participants.
 - (C) By increasing the research budget.
 - (D) By ensuring the research is published.
432. Researchers want to know how happiness is impacted by the color of your socks. Color of socks would be the ____
- (A) Independent Variable
 - (B) Confounding Variable
 - (C) Dependent Variable
 - (D) Control Variable
433. State the level of measurement for the variable; Number of papaya fruits harvested on Tuesday
- (A) Interval
 - (B) Ratio
 - (C) Ordinal
 - (D) Nominal
434. Molly investigated if the age of students caused them to be better drivers. What is the independent variable?
- (A) Type of car
 - (B) Skill of driving
 - (C) Age of student
 - (D) None of above
435. Something that stays the same in an experiment
- (A) IV
 - (B) DV
 - (C) Control
 - (D) Constant
436. Students of different ages were given the same puzzle to assemble. The puzzle assembly time was measured. What is the independent variable?
- (A) Age of students
 - (B) Time to complete the puzzle
 - (C) Number of pieces in the puzzle
 - (D) Same testing environment
437. Dependent Variable is an attribute or characteristic influenced by the independent variable.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
438. A researcher did an investigation to see if corn seeds would sprout at different times depending on the temperature of the water in which they were placed. What is the independent variable?
- (A) How long to sprout
 - (B) Type of seed used
 - (C) Water temperature
 - (D) How much water used
439. What is the dependent variable on this graph?
- (A) Year
 - (B) Number of Visitors
 - (C) None of these
 - (D) None of above
440. Which variable is changed on purpose?
- (A) Independent Variable
 - (B) Continuous Variable
 - (C) Dependent Variable
 - (D) Discrete Variable
441. A manager of an insurance company finds that “fear appeals” in commercials are positively associated with consumers’ behavioral intentions to insure their house. This effect is particularly strong for people with a high

- inherent level of anxiety. How many variables are there in the case?
- (A) 3
 - (B) 4
 - (C) 5
 - (D) 6
- 442.** Variables that “stand between” the independent and dependent variables, and they show the effects of the independent variable on the dependent variable.
- (A) DEPENDENT VARIABLES
 - (B) INDEPENDENT VARIABLES
 - (C) VARIABLES
 - (D) INTERVENING OR MEDLING VARIABLES
- 443.** Define ‘variables’ in the context of research studies.
- (A) Variables are only qualitative traits that cannot be measured.
 - (B) Variables are the conclusions drawn from research studies.
 - (C) Variables are characteristics or quantities that can change and are measured in research studies.
 - (D) Variables are fixed constants that do not change in research studies.
- 444.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the star rating on a hotel or motel.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 445.** In an experiment on the bystander effect, the independent variable is:
- (A) The number of bystanders present
 - (B) The percentage of people who help
 - (C) The type of emergency
 - (D) The gender of the victim
- 446.** Research question: “Can caffeine improve exercise performance?” What is the dependent variable?
- (A) Caffeine
 - (B) Exercise Performance
 - (C) VO2 max
 - (D) Gender of participants
- 447.** The ____ is the independent variable.
- (A) Y
 - (B) X
 - (C) Both x and y
 - (D) None of the above
- 448.** In the scientific question “Does shoe design really affect an athlete’s jumping height?” What is the independent variable?
- (A) The person that is jumping
 - (B) The height they can jump
 - (C) The type of shoe they are wearing
 - (D) How the height they jump is measured
- 449.** A carefully worded statement of the exact procedures used in a research study:
- (A) Theory
 - (B) Hypothesis
 - (C) Independent variable
 - (D) Operational definition
- 450.** Research Problem: The researchers intend to find out how the different kind of sports student-athletes play help develop their critical thinking. Which of the following is the BEST independent variable for the problem?
- (A) Types of Sports
 - (B) Age of Student-Athletes
 - (C) Score on Critical Thinking Assessment
 - (D) The researchers
- 451.** A scientist hypothesizes the temperature at which an alligator’s egg is incubated will determine whether the alligator will be male or female. The independent variable is
- (A) The number of plants in the water
 - (B) The temperature
 - (C) The amount of salt in the water
 - (D) The gender of the baby alligators

452. Qualitative data is an ____
(A) Attribute
(B) Number
(C) Equation
(D) Formula
453. Learning disabilities in children and acts of school violence are both examples of complex ____ that can be examined by educational researchers.
(A) Validities
(B) Samples
(C) Constructs
(D) Populations
454. Does the size of a fish tank affect how large a fish will grow? What is the independent variable?
(A) How large the fish will grow
(B) The size of the fish tank
(D) Sample size
455. A teacher wanted to test whether or not giving students mints during a test would help them perform better. Each student was given exactly two mints. What is the dependent variable?
(A) The number of mints
(B) Whether or not students were given mints
(C) The test scores
(D) The teacher
456. What would the INDEPENDENT variable be in this experiment: Which plane would fly the furthest, a airplane made of plain paper or an airplane made of construction paper?
(A) The paper used
(B) The model of paper airplane
(C) The distance of each plane's flight
(D) How hard the plane is thrown
457. Which of the following does random allocation help to reduce?
(A) Participant variables
(B) Demand characteristics
(C) Confounding variables
(D) They are the hypotheses made by the researcher before the experiment.
458. What is the role of dependent variables in an experiment?
(A) They are the variables that the researcher manipulates.
(B) They are the constants that remain unchanged throughout the experiment.
(C) They are the outcomes or responses that are measured in an experiment.
(D) They are the hypotheses made by the researcher before the experiment.
459. It is the one that influences the dependent or outcome variable but was not separated from the independent variable.
(A) Confounding variable
(B) Placebo
(C) Double-blinding
(D) Treatment variable
460. Which of the following is not true about statistical control of confounding variables in an experiment?
(A) The confounding variable must be measurable.
(B) Statistical control of confounding variables occurs during data analysis
(C) Statistical control is not the only method to deal with confounding variables.
(D) You can only know what the confound is after data collection
461. A variable that could threaten the validity of your results in a quantitative study is ____
(A) Confounding
(B) Independent
(C) Confusing
(D) Dependent
462. A variable that takes only whole number as its score is known as
(A) Continuous variable
(B) Intervening variable
(C) Dependent variable
(D) Discrete variable

463. Variable that is measured after the manipulation (effect)
(A) Independent variable (IV)
(B) Dependent variable (DV)
(A) Controlled Variable
(B) Dependent Variable
(C) Independent Variable
(D) Extraneous Variable
464. The following phrases variables can be numerically counted: satisfaction, perception, belief.
(A) True
(B) False
(C) All the above
(D) None of the above
465. Which of the following statements below is an example of an operational definition for "employee satisfaction"?
(A) Employee satisfaction is the number of days per month that the employee shows up to work on time.
(B) Employees use the bathroom 3 or more times a day.
(C) Employees discuss popular culture movies and memes instead of working.
(D) Employee reference list, lists all the sources used in the research. Edit
466. Hey there! Sneha, Eshaan, and Krish are on a quest to uncover the mysterious relationship between the extraneous variable and the research variable. What do you call this intriguing connection?
(A) Inferential relationship
(B) Interventional relationship
(C) Confound Relationship
(D) Complex Relationship
467. What is the variables that are kept the same (constant) throughout the entire experiment.
(A) Scientific method
(B) Independent variable
(C) Dependent variable
(D) Controlled variable
468. The (a) is controlled by the experimenter, while the (b) represents the information collected and statistically analyzed by the experimenter.
(A) Controlled Variable
(B) Dependent Variable
(C) Independent Variable
(D) Extraneous Variable
469. In the hypothesis "there is a difference between elderly study participants with sedentary lifestyle and elderly study participants with active lifestyle in the elders' perceived level of self-efficacy," which is the independent variable?
(A) Age
(B) Type of lifestyle
(C) Perceived self-efficacy
(D) Elderly study participants
470. A student tested if giving dogs a different amount of toys would make their tails wag more in a 1 minute period. What is the independent variable?
(A) Dog
(B) Amount of toys
(C) Tail wags
(D) 1 minute
471. Pillbugs are placed in a container where they have a choice of a wet or a dry environment. Researchers record how much time was spent on each side. What is the INDEPENDENT variable?
(A) Environment (wet or dry)
(B) Type of pillbugs
(C) Time spent on each side
(D) Type of container
472. When twin/adoption studies are used as evidence for genes determining intelligence, what is a confounding variable?
(A) Their genes
(B) The environment
473. Read the title and identify the INDEPENDENT variable. Research Title: Use of Gardening Tools and Fertilizer: Their Effects on the Amount of Harvest
(A) Amount of Harvest

- (B) Use of Gardening Tools
 - (C) Use of Gardening Tools and Fertilizer
 - (D) None of above
474. A study was done to determine to figure out if HOW LONG YOU SLEEP affects your TEST SCORE. The DEPENDENT variable is ____
- (A) Test scores
 - (B) Place you sleep
 - (C) Hours of sleep
 - (D) None of above
475. Employees who exercise regularly tend to take fewer sick days. Which choice suggests correlation but not causation?
- (A) Exercising can improve immune function.
 - (B) Employees who exercise might already be healthier.
 - (C) Sick days impact productivity.
 - (D) Exercise programs increase motivation.
476. How does the amount of sunlight affect how many tulip flowers a plant grows? The sunlight is the ____
- (A) Independent variable
 - (B) Dependent variable
477. In a research study, researchers seek to measure the average hours of sleep for teenagers who use their phones before bed with no restrictions versus those who only use it for 15 minutes before bed. What is the independent variable?
- (A) Controlled phone usage before bed
 - (B) Amount of sleep
478. Classify this data variable: Highway Miles per Gallon (MPG's)
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
479. Changes in the ____ variable causes changes in the ____ variable.
- (A) Independent; dependent
 - (B) Dependent; independent
480. Classify this data variable: Popularity Rank
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
481. Variable that the researcher manipulates to see what effects it has on the dependent variable (e.g. doodle vs. non-doodling)
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Operationalization
 - (D) Validity
482. In Quantitative Research, a ____ is a condition or characteristic that can take on different values. Examples, aged, GPA, test scores, and gender.
- (A) Variable
 - (B) Constant
 - (C) Construct
 - (D) None of above
483. In research what are commonly variable called
- (A) Dependent
 - (B) Depend
 - (C) Independent
 - (D) Continuous
484. A researcher administers an antidepressant drug to a group of depressed patients and over a period of time they improve. The researcher claims that their improvement is due to the drug, even though she did not control for outside factors such as improved emotional support from friends, or natural improvement over time. This study lacks ____
- (A) Analogue validity
 - (B) Construct validity
 - (C) Internal validity
 - (D) External validity

485. Otherwise known as Stimulus variable
(A) Independent variable
(B) Intervening variable
(C) Dependent variable
(D) Moderator variable
486. Determine whether the data related to the topic below is discrete or continuous: The area of lots in a subdivision
(A) Discrete
(B) Continuous
487. The dependent variable is the cause and the independent variable is the effect.
(A) True
(B) False
(C) Maybe
(D) None of the above
488. The independent variable in a study is
(A) The variable that is manipulated by the researcher
(B) The outcome that is measured
(C) The variable that remains constant
(D) The variable that is observed but not changed
489. A variable that takes numerical values such as height is:
(A) Qualitative
(B) Quantitative
(C) Nominal
(D) None of these
490. Defining a variable or concept so that it can be measured
(A) Variables
(B) Operationalization
(C) Descriptive research
(D) Analytical research
491. State the level of measurement for the variable; Number of hours spent with their children in a day
(A) Nominal
(B) Ordinal
(C) Ratio
(D) Interval
492. A panel of investigators discovered that a researcher who completed a major study had unconsciously rated attractive females as better counselors. This is an example of
(A) The Halo effect
(B) Trend analysis
493. The variable that is manipulated is ____
(A) Dependent variable.
(B) Moderator variable.
(C) Mediating variable.
(D) Extraneous variable
(E) Independent variable.
494. Identify the independent variable in this research study: In school-age children with asthma, is anger a trigger for an asthmatic attack?
(A) School.
(B) Anger.
(C) Asthmatic attack.
(D) Children.
495. Which example best fits a quantitative variable in food research?
(A) Flavor category such as fruity
(B) Protein percentage in yogurt
(C) Gender of taste panelists
(D) Brand name of cereal product
496. Which analogy is an example of a cause and effect relationship?
(A) Rain: wet
(B) Sun: moon
(C) Cat: dog
(D) Book: read
497. How many independent variables are there in a causal-comparative study investigating the effect of gender on empathy?
(A) Two

- (B) One
(C) It depends on how many levels of empathy are studied.
(D) There are no independent variables.
- 498.** An experiment is performed to test the effect of the amount of force on the distance an object travels. A constant variable should be ____
(A) Amount of force
(B) Distance object travels
(C) Type of object
(D) None of above
- 499.** In a research project investigating the relationship between the number of hours of sunlight and plant growth, the dependent variable is:
(A) The number of hours of sunlight
(B) The type of plant
(C) The soil quality
(D) The plant growth
- 500.** In a biotic response experiment, two plants with the same mass are placed in identical pots. Both plants are given the same amount of water, soil, and sunlight. After one week, the test plant is given one tablespoon of liquid fertilizer. Two weeks later, the data shows the test plant has the greater mass. What is the independent variable in this biotic response?
(A) Amount of sunlight
(B) Soil temperature
(C) Liquid fertilizer
(D) Size of the pot
- 501.** Which of the following best describes consistency of measurement within a sampling method?
(A) Bias
(B) Integrity
(C) Reliability
(D) Validity
- 502.** Getting 8 hours of sleep each night will result in better mood. What is the dependent variable?
(A) The amount of sleep
(B) The comfort of the bed
(C) The temperature in the room
(D) The mood of the person after 8 hours of sleep
- 503.** The ____ is the thing you are manipulating or controlling to see the effects of during the experiment.
(A) Independent Variable
(B) Dependent Variable
(C) Control Group
(D) Experimental Group
- 504.** The variable that is being measured or observed is called the ____ Hint: this is the variable that is the result or effect
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) None of above
- 505.** It refers to a variable known as the outcome variable which is the result/effect of an intervention/treatment.
(A) Control
(B) Dependent
(C) Independent
(D) Intervening
- 506.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the favourite brand of chocolate of the teachers at your school.
(A) Categorical
(B) Continuous Numerical
(C) Discrete Numerical
(D) None of above
- 507.** Any factor, trait, or condition that can be manipulated, controlled for, or measured in an experiment.
(A) Population
(B) Methodology
(C) Sample
(D) Variable

- 508.** What is the term for a carefully worded statement of exact procedures used in a research study?
- (A) Variables
 - (B) Hypothesis
 - (C) Law
 - (D) Operational Definition
- 509.** What type of variable could distort a study's findings if uncontrolled?
- (A) Confounding
 - (B) Dependent
 - (C) Independent
 - (D) Mediating
- 510.** Which type of variable remains constant throughout a research study?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) Constant variable
- 511.** Factors which may affect the study's validity. A variable other than the independent variable that might skew the results.
- (A) Controls
 - (B) Participant Variables
 - (C) Situational Variables
 - (D) Standardized Procedures
 - (E) Uncontrolled Variables
- 512.** What kind of variable causes, influences, or affects outcomes?
- (A) Control
 - (B) Dependent
 - (C) Independent
 - (D) Mediating
- 513.** In research, it is believed to be something that pertains to a characteristic of a respondent that is intended to either be controlled or measured or both?
- (A) Attribute
 - (B) Value
 - (C) Topic
 - (D) Variable
- 514.** At the hospital of Hue University of Medicine and Pharmacy, patient age is what type of variable?
- (A) Discrete quantitative variable
 - (B) Continuous quantitative variable
 - (C) Quantitative variable
 - (D) Qualitative variable
 - (E) Nominal qualitative variable
- 515.** This variable type has a clear definition of zero.
- (A) Interval
 - (B) Nominal
 - (C) Ordinal
 - (D) Ratio
- 516.** By applying variable's scale of measurement, what type of variable is "Age"?
- (A) Nominal.
 - (B) Ordinal.
 - (C) Interval.
 - (D) Ratio.
- 517.** In the experiment Temperature Vs. Time of Day, what is the constant?
- (A) Temperature
 - (B) Time of Day
 - (C) The thermometer.
 - (D) None of above
- 518.** You are doing an experiment recording the growth of plants under different amounts of sunlight. What is the dependent variable?
- (A) The sunlight
 - (B) The growth
 - (C) The experiment
 - (D) The amounts of photons
- 519.** This variable is influenced by the independent variable.
- (A) Manipulated
 - (B) Extraneous
 - (C) Dependent
 - (D) All of these

- 520.** Justin wants to determine the effect of time spent on practising an instrument on one's ability to perform a piece. What is the independent variable?
- (A) Amount of time spent practising
 - (B) Person's ability to perform a piece
 - (C) The piece played
 - (D) The person playing the instrument
- 521.** Why is it essential to include operational definitions in a research proposal?
- (A) To limit the scope of the literature review
 - (B) To clarify key terms and variables so that they are measurable and understandable
 - (C) To extend the introduction
 - (D) To reduce the number of references needed
- 522.** Extraneous variables that become intertwined with the independent variable are known as ____
- (A) Moderating Variables
 - (B) Confounding Variables
 - (C) Intervening Variables
 - (D) None of above
- 523.** Who said "Variables may be defined as those attributes of objects, events, things and beings, which can be measured"?
- (A) Kerlinger
 - (B) Webster
 - (C) D'Amato
 - (D) Postman
- 524.** An experiment is being done to determine how light affects the growth of small zinnia plants. One plant is placed in full sunlight, the second in a shaded area, the third in an unlit closet. What is the independent variable in the experiment?
- (A) The amount of light
 - (B) The type of plants
 - (C) The type of soil
 - (D) The length of the experiment
- 525.** What is the definition of variables in quantitative research?
- (A) The process of examining subjective meanings
 - (B) The process of research that involves emerging questions and procedures
 - (C) The process of testing a hypothesis
 - (D) Can be measured, typically on instruments, so that numbered data can be analyzed using statistical procedures
- 526.** Marketers may want to use research to study the economy, a factor that is subject to change. In this context, the economy can be described as a(n)
- (A) Variable.
 - (B) Case study.
 - (C) Experiment.
 - (D) Hypothesis.
- 527.** In a study entitled effect of salt restricted diet on the blood pressure of hypertensive males, the dependent variable is
- (A) Salt restricted diet
 - (B) Blood pressure
 - (C) Hypertensive males
 - (D) Salt
- 528.** The variable that depends on other factors that are measured. These variables are expected to change as a result of an experimental manipulation of the independent variable or variables. It is the presumed effect.
- (A) Dependent Variable
 - (B) Mediating Variable
 - (C) Independent Variable
 - (D) None of above
- 529.** What is the independent variable in the sample behavioral ecological design table?
- (A) Water and air temperature
 - (B) Number of fish observed
 - (C) Type of aquatic plants
 - (D) Time of day

530. Which of the following is a common problem associated with poor conceptual definitions in research? (Podsakoff, MacKenzie, & Podsakoff (2016))
- (A) It increases statistical power in regression analyses
 - (B) It enhances construct validity by broadening definitions.
 - (C) It leads to construct proliferation and lack of discriminant validity.
 - (D) It ensures that related constructs remain distinct and well-defined.
531. A Continuous variable that has the property of interval variable and has a clear definition of zero indicating that there is none of that variable (height, weight) 0 means nothing
- (A) Interval variable
 - (B) Ratio Variable
532. What are the types of variables?
- (A) Independent variables.
 - (B) Controlled variables.
 - (C) Both of them.
 - (D) None of these.
533. The dependent variable in an experiment is expected to change:
- (A) Indirectly with the independent variable
 - (B) Due to the manipulation of the independent variable
 - (C) Only under experimental conditions
 - (D) Unrelated to the independent variable
534. The variable which become the primary interest to the researcher is called as?
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Mediating Variable
 - (D) Moderating Variable
535. Independent variable: the factor under investigation in an experiment which is ___ to create two or more conditions (levels) and is expected to be responsible for changes in the dependent variable.
- (A) Manipulated
 - (B) Observed
 - (C) Controlled
 - (D) Measured
536. Determine the role taken by each variable in Quantitative research. How relationship changes under different conditions (Ex. Relationships between studying and test scores changes according to the different levels of use of a drug such as Ritalin).
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Mediating (intervening) Variable
 - (D) Moderator Variable
 - (E) Extraneous Variable
537. Are coded with numbers so that they may be treated statistically.
- (A) Interval and likert scale
 - (B) Ordinal Scales
 - (C) Nominal variables
 - (D) Ration Scale
538. Classify the following variables as categorical, continuous numerical or discrete numerical data: marks awarded on a maths test.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
539. This is a factor other than the factor being studied that might influence a study's result (like being hungry in a study on grades)
- (A) Independent variable
 - (B) Confounding variable
 - (C) Dependent variable
 - (D) None of above
540. A variable that may influence the dependent variable but is not the focus of the study:
- (A) Independent variable
 - (B) Controlled variable
 - (C) Extraneous variable
 - (D) Confounding variable

541. Sarah wanted to find out if the size of a car tire made it a smoother ride over bumps. What is the independent variable?
- (A) Size of tire
 - (B) How smooth the ride was over bumps
 - (C) Type of car
 - (D) None of above
542. Which of the following variables is most likely to be used as quantitative?
- (A) ZIP code
 - (B) Google Drive capacity
 - (C) Country of birth
 - (D) Car manufacturer
543. Ideally, everything in the experimental situation except the ___ is held constant.
- (A) Hypothesis
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Placebo
544. How does the process of "operationally defining variables" contribute to a quantitative research study?
- (A) It makes the research more ambiguous and difficult to understand.
 - (B) It clarifies the meaning of the variables and how they will be measured, ensuring clarity and precision in the study.
 - (C) It avoids the need for data collection and analysis.
 - (D) It is only relevant for qualitative research.
545. Comes in between other variables; helps to delineate the process through which variables affect one another.
- (A) Categorical Variable
 - (B) Quantitative Variable
 - (C) Independent Variable
 - (D) Dependent Variable
 - (E) Mediating Variable
546. The following definition is most essential to obtain the desired data in a research study.
- (A) Dictionary
 - (B) Theoretical
 - (C) Conceptual
 - (D) Operational
547. Sometimes called an outcome variable
- (A) RATIO
 - (B) DEPENDENT VARIABLE
 - (C) INDEPENDENT VARIABLE
 - (D) INTERVAL VARIABLE
548. A scientist hypothesizes that "If the temperature of water increases, then the solubility of sugar will also increase." What is the independent variable?
- (A) Amount of sugar
 - (B) Temperature of water
 - (C) Time taken to dissolve
 - (D) Amount of water
549. The factor under investigation in an experiment, expected to be responsible for changes in the dependent variable, is known as the:
- (A) Dependent variable
 - (B) Control variable
 - (C) Independent variable
 - (D) Experimental condition
550. The number of words in a book chapter
- (A) Qualitative
 - (B) Quantitative
 - (C) Continuous
 - (D) Discrete
551. Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: An observational study links high education to better mental health but fails to account for income differences.
- (A) Attrition Bias
 - (B) Confounding
 - (C) Selection Bias
 - (D) Publication Bias
 - (E) Measurement Bias

552. Mr. Stone wants to know which brand of paper towels is the strongest. In this experiment, what is the most important CONTROL variable?
- (A) Strength
 - (B) Brand of paper towel
 - (C) Weight
 - (D) Environment
553. The variable being changed in experiments.
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Operational Variable
 - (D) Validity Variable
 - (E) Reliability Variable
554. The data show the growth of two bean plants over several weeks using four different fertilizers. The experimental data would be more valid if which of the following variables was included in the experiment?
- (A) A control without fertilizer was included for each plant.
 - (B) The plants were grown at variable temperatures.
 - (C) Only one plant was tested.
 - (D) A fifth fertilizer was tested.
555. In the notation '3 (quasi: gender) x 2 (between: escape) x 2 (between: empathy)', the number 3 refers to the levels of ____
- (A) Gender
 - (B) Escape
 - (C) Empathy
 - (D) Age
556. Define the term: Independent Variable.
- (A) An independent variable is the variable that is manipulated or changed in an experiment to observe its effect on the dependent variable.
 - (B) An independent variable is the outcome that is measured in an experiment.
 - (C) An independent variable is a constant factor that does not change during an experiment.
 - (D) An independent variable is the error that occurs during data collection.
557. Which is a main limitation of observations?
- (A) Susceptibility to biases
 - (B) Occurs in natural setting
 - (C) No control over variables
 - (D) Researcher can get immersed deeply into the studied phenomenon
558. Classify this data variable: City Miles per Gallon (MPG's)
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
559. Illuminate causes of phenomena; Causal
- (A) Functional Relationship
 - (B) Factorial Relationship
 - (C) Experimental Relationship
 - (D) Cause & Effect Relationship
560. State the variable in the problem.
- (A) Person who makes the fixed deposit.
 - (B) Number of years to save the money in the fixed deposit account.
 - (C) Location of bank.
 - (D) The date that Rafidah starts to deposit the money in the fixed deposit account.
561. What is a dependent variable (DV)?
- (A) The variable that is manipulated
 - (B) The variable that is measured
 - (C) A variable that is kept constant
 - (D) A variable that is not used in the experiment
562. Which component is not considered in determining the generation rate of solid waste in a typical city?
- (A) Residential
 - (B) Commercial
 - (C) Agricultural
 - (D) Demolition and construction waste

- 563.** In the scientific method this item remains the same through the entire experiment?
(A) Conclusion
(B) Results
(C) Constant
(D) Data
- 564.** Which variable is found on the y-axis?
(A) Independent
(B) Manipulated
(C) Dependent
(D) Input
- 565.** A cow is given a growth hormone and then compared to another cow that was not given a growth hormone. Both cows were weighed at 2 years. What is the INDEPENDENT variable?
(A) Amount of time
(B) Weight
(C) Growth hormone
(D) Type of cow
- 566.** What is the term for the following definition? The variable in an experiment that changes in response to the independent variable and, therefore, is also referred to as the responding variable.
(A) Dependent variable (DV)
(B) Independent variable (IV)
(C) Control variable
(D) Constant variable
- 567.** A ___ variable is one which the researcher holds constant during an experiment.
(A) Controlled
(B) Independent
(C) Dependent
(D) Variable-y
- 568.** The variable which influences other variable is known as ___
(A) Dependent Variable
(B) Independent Variable
(C) Moderating Variable
(D) Intervening Variable
- 569.** On a graph, which axis shows the INDEPENDENT variable?
(A) X-axis
(B) Y-axis
(C) Neither
(D) It changes
- 570.** When a respondent answers in a way that makes them look 'good', this is known as:
(A) Acquiescence bias
(B) Observer bias
(C) Social desirability bias
(D) Response bias Edit
- 571.** In an experiment to find out if taking ginseng increases IQ scores, the IQ scores would be
(A) Independent variable
(B) Control variable
(C) Extraneous variable
(D) Dependent variable
- 572.** What is the independent variable in the sample chemistry research design table?
(A) Cosmetics that contain straight dyes.
(B) Amount of light exposure.
(C) Temperature of the environment.
(D) Type of measuring instrument used.
- 573.** The height of students in OHS
(A) Qualitative
(B) Quantitative
(C) Continuous
(D) Discrete
- 574.** Variable that an experimenter measures to see whether the manipulation produces an effect
(A) Dependent variable
(B) Independent variable
(C) Lasting effects
(D) Control group

575. Find the IV: You experiment to see if a bouncy ball or a tennis ball bounces higher.
- (A) Type of ball
 - (B) Same drop height
 - (C) Height of bounce
 - (D) Same surface
576. WHICH ANSWER IS A CONTROL FOR THE QUESTION: Which brand of laundry detergent works better to remove grass stains?
- (A) Type of clothing
 - (B) Brand of detergent
 - (C) Cleanliness of clothes
 - (D) None of above
577. The number of homeruns the Braves had during the word series is an example of — data.
- (A) Discrete
 - (B) Continuous
578. Classify this data variable: Class
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
579. Eddie wants to know if switching his gaming platforms will help him have a better experience. Week 1 he plays on the PS4, week 2 he plays on the Xbox, and week 3 he plays on the Nintendo Switch. what is the dependent variable?
- (A) Nintendo Switch
 - (B) Eddie
 - (C) PS4
 - (D) Gaming Experience
 - (E) Xbox
580. In the context of marketing research, what does a conceptual framework typically show?
- (A) A list of hypotheses
 - (B) The timeline of a project
 - (C) Ethical concerns
 - (D) Relationships between variables
581. Temperature in Fahrenheit during this week
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
582. Researchers' expectations that influence the outcome of a study
- (A) Biased perspective
 - (B) Bias
 - (C) Experimenter bias
 - (D) None of above
583. In a marketing research study, the variable that the researcher manipulates is known as the:
- (A) Dependent Variable
 - (B) Control Variable
 - (C) Mediator Variable
 - (D) Independent Variable
584. This are the factors within an experiment that are kept the same for all groups or trials to reduce the influence of additional variables.
- (A) CONTROL
 - (B) CONSTANTS
 - (C) VARIABLE
 - (D) POPULATION
585. In experimental settings, the dependent variable is best described as the
- (A) Factor intentionally altered by researchers
 - (B) Baseline attribute used for matching
 - (C) Measure of some dimension of behavior
 - (D) Extraneous variable eliminated during design
586. The relationship between smoking cigarettes and living a shorter life is an example of a(n)
- (A) Independent variable
 - (B) Dependent variable
 - (C) Negative correlation
 - (D) Positive correlation

587. Classify. The numbers of cheeseburgers a fast-food restaurant serves each day
- (A) None of these
 - (B) Abstract
 - (C) Continuous
 - (D) Discrete
588. The variable that you believe is affected by changes.
- (A) Independent variable
 - (B) Dependent variable
 - (C) Measurable variable
 - (D) Sizable variable
589. Of the variables of interest in a research undertaking, the ____ variable(s) is (are) presumed to be cause of the ____ variable(s)
- (A) Independent, dependent
 - (B) Dependent, independent
 - (C) Discrete, continuous
 - (D) Dependent, interdependent
590. How can demand characteristics affect experimental research?
- (A) They ensure that participants are well-informed about the experiment.
 - (B) They reduce the cost of conducting the experiment.
 - (C) They may lead to participants altering their behavior, resulting in biased results.
 - (D) They increase the generalizability of the findings.
591. Research Question: Does the type of gasoline (regular vs premium) put in a car effect how fast the car can drive? What is the independent variable?
- (A) Type of gasoline (regular or premium)
 - (B) Which car the gas is put into
 - (C) The maximum speed of the car
 - (D) How much gas is put into the car
592. A group in the experiment that receives no experimental treatment.
- (A) Experimental group
 - (B) Treatment group
 - (C) Control group
 - (D) Sample group
593. State the level of measurement for the variable below; During a clinical interview, survivors of a tornado are asked to state “no” or “yes” to whether they have experienced specific symptoms of Post-Traumatic Stress Disorder (PTSD) in the past week. The number “0” is assigned to “no” and the number “1” is assigned to “yes”.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
594. Which of the following is the label for the independent variable.
- (A) Money Collected
 - (B) Raising Money
 - (C) Boxes Sold
 - (D) None of the above Edit
595. Classify as categorical, discrete or continuous. The time children spend brushing their teeth each day.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
596. Identify the kind of variable in this situation: length of time a football play lasts
- (A) Discrete
 - (B) Continuous
597. In a qualitative study entitled “Parental adaptation to childhood leukemia” which is the independent variable?
- (A) Childhood leukemia
 - (B) Parents
 - (C) There is no independent variable
 - (D) Adaptation

598. The extent to which the instrument measures what it purports to measure
- (A) @@ relevance
 - (B) @@ evaluation
 - (C) @@ assessment
 - (D) @@ reliability
 - (E) @@ validity
599. According to whom, "variable is a property that takes as different values"?
- (A) D'Amato
 - (B) Kerlinger
 - (C) Webster
 - (D) None of these
600. The population information is called parameter while the corresponding sample information is known as
- (A) Universe
 - (B) Statistics
 - (C) Inference
 - (D) Sampling design
601. "Married, single, divorced, and widowed" are values of a(n) ____
- (A) Nominal variable
 - (B) Ordinal variable
 - (C) Interval variable
 - (D) Ratio variable
602. The factor that you measure in an experiment is the
- (A) Control
 - (B) Independent Variable
 - (C) Constant
 - (D) Dependent Variable
603. What variable possess NO quantitative value?
- (A) Interval
 - (B) Nominal
 - (C) Ordinal
 - (D) Ratio
604. In a controlled experiment, the variable that is changed to test the hypothesis is called the-
- (A) Controlled Variable
 - (B) Responsive Variable
 - (C) Dependent Variable
 - (D) Independent Variable
605. Identify the VARIABILITY in the following question: What are the heights of the students at Clarke Middle School?
- (A) Heights
 - (B) Students
 - (C) Clarke Middle School
 - (D) Ages
606. Catherine is testing which soil will help grass grow the tallest. The height of the grown grass is the ____ variable.
- (A) Constant (stays the same)
 - (B) Independent (it's what you change)
 - (C) Dependent (it's what you measure)
 - (D) None of above
607. The experimental factor that is manipulated; the variable whose effect is being studied
- (A) Independent Variable
 - (B) Double-Blind Procedure
 - (C) Placebo Effect
 - (D) Hindsight Bias
608. Which of the following includes examples of quantitative variables?
- (A) Age, temperature, income, height
 - (B) Grade point average, anxiety level, reading performance
 - (C) Gender, religion, ethnic group
 - (D) Both a and b
609. What is an independent variable?
- (A) A variable that stays the same in an experiment
 - (B) The result of an experiment
 - (C) A variable that is changed by the scientist
 - (D) A variable that changes because of the experiment

- 610.** What is deliberately changed by the experimenter?
- (A) Independent variable
 - (B) The hypothesis
 - (C) Dependent variable
 - (D) The math department
- 611.** Read the title and identify the INDEPENDENT variable. Research Title: Types of Feeds and Salinity Level: Their Effects on the Growth of Tilapia in Fishponds
- (A) Types of Feeds
 - (B) Growth of Tilapia in Fishponds
 - (C) Types of Feeds and Salinity Level
 - (D) None of above
- 612.** The sample makeup (location, age, gender, etc.) will impact internal validity. What is this threat to internal validity called?
- (A) Selection
 - (B) Maturation
 - (C) Instrumentation
 - (D) Testing
- 613.** To minimize participants variables in independent design, researchers can ____
- (A) Counterbalance tasks given
 - (B) Perform double blind technique
 - (C) Deceive participants
 - (D) Randomly allocate participants
- 614.** A type of variable which can be manipulated by the researchers.
- (A) Dependent
 - (B) Independent
 - (C) Intervening
 - (D) Interdependent
- 615.** The IV is the variable being manipulated
- (A) True
 - (B) False
- 616.** Which of the following is NOT a common type of bias in research?
- (A) Selection bias
 - (B) Response bias
 - (C) Measurement bias
 - (D) Variance bias
- 617.** A student plants seeds at varying depths. She measures the growth of the plants over the next few weeks. What is the independent variable?
- (A) Student
 - (B) Planting depth
 - (C) Amount of water
 - (D) Growth
- 618.** The ____ variable is the 'effect' and the data that you record during the experiment.
- (A) Dependent
 - (B) Independent
 - (C) Controlled
 - (D) Manipulated
- 619.** What do we use to make a measurement?
- (A) Instrument
 - (B) Variable
 - (C) Data
 - (D) Unit
- 620.** Which term describes a variable that the researcher manipulates in an experiment?
- (A) Dependent Variable
 - (B) Control Variable
 - (C) Independent Variable
 - (D) Extraneous Variable
- 621.** A characteristic about each individual element of a population or sample.
- (A) Variable
 - (B) Statistic
 - (C) Sample
 - (D) Population
- 622.** It is defined as a group of people, animals, places, things, or ideas.
- (A) Statistic
 - (B) Parameter
 - (C) Sample
 - (D) Population

623. In an experiment, the factor that is being measured and that may change in response to manipulations of the independent variable
- (A) Variable
 - (B) Dependent variable
 - (C) Correlation
 - (D) Controlled experiment
624. Why is it important to use precise definitions for both independent and dependent variables (IV and DV) when designing a research study, and how does consulting scholarly literature help in this process?
- (A) It ensures clarity and improves the validity of the research.
 - (B) It provides random numbers for analysis.
 - (C) It allows for personal opinions to guide the study.
 - (D) It focuses only on the dependent variable.
625. A name that represents a value stored in the computer's memory
- (A) A variable.
 - (B) A string.
 - (C) An integer.
 - (D) A boolean.
626. Angelina set up an experiment to see how the mass of a ball affects the distance it rolls off a ramp. Identify the independent variable.
- (A) Distance traveled by the ball
 - (B) Height of the ramp
 - (C) Mass of the ball
 - (D) Who set up the experiment (Ms. S, etc)
627. The cause variable or the one that identifies forces or conditions that act on something else is known as
- (A) Dependent variable.
 - (B) Moderating variable.
 - (C) Categorical variable.
 - (D) Independent variable.
628. A ____ consists of all subjects (human or otherwise) that are being studied.
- (A) Population
 - (B) Sample
 - (C) Study
 - (D) Exam
629. How can you "operationalize" verbal aggression?
- (A) Yelling at someone
 - (B) Kicking someone
 - (C) The number of insulting comments per hour.
 - (D) Giving someone the silent treatment.
630. Variable that is MEASURED or OBSERVED; it DEPENDS on the independent variable.
- (A) Control Variable
 - (B) Variable
 - (C) Dependent Variable
 - (D) Independent Variable
631. The factor that does not change and remains constant in an experiment is the:
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) None of the above
632. Musicians use the same piano and the same song in a competition. The piano and song are examples of ____
- (A) Controls
 - (B) Precise Measurements
 - (C) Sample size
 - (D) None of above
633. A variable that influences the result of a study but is NOT MEASURED
- (A) Good Variables
 - (B) Control Variables
 - (C) Confounding Variables
 - (D) Natural Variables
634. Hey there! Let's play a quick game. Can you tell me if operationalization is the process of defining variables into measurable factors?

- (A) Yes, it is!
(B) No, it's not.
- 635.** A student is planning an experiment to find out how the height from which he drops a ball affects how high the ball bounces. What is the dependent variable?
(A) Diameter of the ball
(B) Force acting on the ball
(C) Height that the ball bounces
(D) Height from which the ball is dropped
- 636.** Ramone wants to know: does the distance a person kicks a soccer ball effect how well they will do on their math test. What is the dependent variable?
(A) How far they kick the soccer ball
(B) Who the person is
(C) How well they do on the math test
(D) Type of soccer ball.
- 637.** Which type of research variables can be manipulated or controlled by the researchers?
(A) Independent Variable
(B) Constant Variable
(C) Dependent Variable
(D) None of the above
- 638.** A(n) ____ variable depends on or is changed by another variable.
(A) Dependent
(B) Independent
(C) All the above
(D) None of the above
- 639.** The variable that is kept the same to make sure results are caused by the thing being tested
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) None of above
- 640.** Things that are kept the same to ensure experiment results are due to the independent variable and not external factors are called:
(A) Control Variables
(B) Control Groups
(C) Independent Variables
(D) Dependent Variables
- 641.** What is the term for the variable that is manipulated in an experiment to observe its effect on another variable?
(A) Confounding Variable
(B) Dependent Variable
(C) Independent Variable
(D) Control Variable
- 642.** What is a qualitative variable?
(A) Using pre-collected information
(B) An event that occurs as a result of several factors working in combination
(C) Focus on a single group, incident, or community
(D) Defined by membership in a category
(E) A statement of relationships among well-defined variables
- 643.** Designated by letter X. The behavior or attitude that is the subject of one's study.
(A) DEPENDENT VARIABLES
(B) INDEPENDENT VARIABLES
(C) VARIABLES
(D) HYPOTHESIS
- 644.** In a study analyzing the effect of music genres on concentration levels, music genres are the:
(A) Dependent variable
(B) Independent variable
(C) Control variable
(D) Extraneous variable
- 645.** In the hypothesis "Postmenopausal women who are employed full-time are less likely to practice breast self-examination than those who are not employed full-time," which is the outcome (dependent) variable?
(A) Menopausal status of the women
(B) Breast self-examination practice
(C) Employment status
(D) Gender

646. The second variable is called ____
(A) Independent
(B) Dependent
(C) Separate
(D) None of above
647. Type of places where information is gathered. (ex. Clinic, home, community setting)
(A) Dependent Variable
(B) Variable
(C) Setting
(D) Site
648. Type of Interaction when 2 Independent Variables tend to reverse each other's effects is ____
(A) Antagonistic Interactions
(B) Synergistic Interactions
(C) Ceiling Effect Interactions
(D) None of above
649. Which variable type is expressed in numbers and measures quantity or amount?
(A) Categorical variable describing qualities
(B) Quantitative variable measuring amount
(C) Nominal variable with unordered labels
(D) Ordinal variable with ranked categories
650. Define Dependent Variable (DV) in the context of experimental research.
(A) A dependent variable is the variable that is measured or observed to assess the effect of the independent variable.
(B) A dependent variable is the variable that is manipulated by the researcher.
(C) A dependent variable is the constant factor in an experiment.
(D) A dependent variable is the variable that is always kept the same in all groups.
651. Experiments lack internal validity when they fail to control for other factors, called ____ that might pose rival hypotheses for the results.
(A) Confounds
(B) Placebos
(C) Blinds
(D) Alternatives
652. The dependent variable is manipulated by the researcher.
(A) True
(B) False
653. A variable being tested and measured in scientific experiment. The respondent or the one that got affected (Effect)
(A) Dependent Variable (DV)
(B) Independent Variable (IV)
(C) Discrete Variable
(D) Continuous Variable
654. Graph of the growth of a plant for the next 30 days.
(A) Discrete
(B) Continuous
655. Operational Definitions are essential for clarity in research; these definitions specify how ____ are measured and assessed, ensuring replicability and validity in studies.
(A) Variables
(B) Hypotheses
(C) Samples
(D) Theories
656. The parts of an investigation that remain the same so that the dependent variable can be measured.
(A) Independent variable
(B) Dependent variable
(C) Hypothesis
(D) Control variable
657. The variable that is not manipulated is
(A) Problem statement.
(B) Dependent variable.
(C) Testability.
(D) Hypothesis.

658. Experiment constant = ____
(A) Controlled variable
(B) Independent variable
(C) Dependent variable
(D) None of above
659. In a study examining the correlation between the number of hours of exercise and weight loss, the dependent variable is:
(A) The number of hours of exercise
(B) The participants' weight
(C) The type of exercise
(D) The participants' age
660. The dependent variable is the one
(A) You measure.
(B) You change.
661. The words used in the research paper are defined according on how it is used in the study. How are the words in the study defined?
(A) Basically
(B) Conceptually
(C) Operationally
(D) Both Conceptually and Operationally
662. Which of the following is not a type of variable commonly used in positivist research?
(A) Independent variable
(B) Dependent variable
(C) Moderator variable
(D) Subjective variable
663. A variable which represents the cause is a
(A) Dependent Variable
(B) Independent Variable
664. Which type of data is this? Age of Grammy winners
(A) Quantitative
(B) Categorical
665. A variable is a quantity used only to qualify the nature of objects in research.
(A) True
(B) False
666. Psychologists study whether a young monkey will prefer to spend time with a pretend monkey made of wire that provides milk or a pretend monkey covered with cloth and no milk. DV?
(A) Wire Monkey
(B) Monkey that provides milk
(C) Cloth monkey
(D) Time spent with each monkey
667. What is a variable?
(A) The cause of a phenomenon
(B) The effect of a phenomenon
(C) Learning strategies
(D) Anything that may change or may be changed from one condition to another
668. What is the purpose of an intervening or mediating variable?
(A) To moderate the relationship between the independent and dependent variables
(B) To control for the influence of confounding variables
(C) To help explain the process by which an independent variable affects a dependent variable
(D) To predict an outcome in a survey study
669. What type of variable does the hypothesis predict will change?
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) Constant variable
670. What is the independent variable for the hypothesis: If ice melts in salt & fresh water, then it will melt faster in salt water.
(A) The amount of water
(B) The melt time
(C) The size of the ice cube
(D) The amount of salt

671. ____: a situation where participants performance decreases because they have experienced an experimental task more than once, ex. due to boredom or tiredness.
- (A) Boredom
 - (B) Fatigue Effects
 - (C) Independent Variable
 - (D) Alertness
672. On which axis would you place the independent variable?
- (A) X
 - (B) Y
 - (C) Z
 - (D) None of above
673. The opposite of a variable ____
- (A) A dependent variable.
 - (B) A data set.
 - (C) An extraneous variable.
 - (D) A constant.
674. The factor that is purposely changed
- (A) Hypothesis
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Controlled experiment
675. James is conducting an experiment to see how different amounts of sunlight affect plant growth. Which statement correctly identifies the independent variable (IV)?
- (A) Variable measured as the outcome
 - (B) Variable manipulated by the researcher
 - (C) Variable confounded by a third factor
 - (D) Variable assigned by random sampling
676. Constants are the factors within an experiment that are kept the same for all groups or trials in an attempt to reduce the influence of additional variables.
- (A) True
 - (B) False
677. The variable that is stable and unaffected by the other variables you are trying to measure. It refers to the condition of an experiment that is systematically manipulated by the investigator. It is the presumed cause.
- (A) Dependent Variable
 - (B) Mediating Variable
 - (C) Independent Variable
 - (D) None of above
678. In an experiment, the variable whose value depends on the independent variable.
- (A) Independent variable
 - (B) Dependent variable
679. What is Demand Characteristics?
- (A) Participants alter behavior to fit perceived study expectations.
 - (B) Participants give socially acceptable answers.
 - (C) Participants prefer extreme ends of a scale.
 - (D) Participants agree with statements regardless of content.
680. What is the Independent variable in this data table?
- (A) Type of Pizza
 - (B) # of Votes
 - (C) Pepperoni
 - (D) Veggie
681. What is the name of a variable that affects the dependent variable and results in invalid data?
- (A) Dependent variable
 - (B) Extraneous variable
 - (C) Confounding variable
 - (D) None of above
682. An object, event, idea, belief, time period, or any other type of category you are trying to measure
- (A) Limitation
 - (B) Citation
 - (C) Instrument
 - (D) Variable

- 683.** The DEPENDENT VARIABLE is the cause. Its value is dependent of other variables in your study. It can purposely changed or manipulated. This can determine the organization of levels for the experimental groups.
- (A) TRUE
 - (B) FALSE
- 684.** A 'Variable' in research methods and design is:
- (A) A factor or element that can change and be measured in a study
 - (B) A fixed value that does not change during research
 - (C) The main conclusion drawn from a study
 - (D) A tool used to collect data
- 685.** The independent variable (IV) is what is ____ by the research team.
- (A) Manipulated
 - (B) Measured
 - (C) Observed
 - (D) Recorded
- 686.** The dependent variable (DV) is ____ and depends on the independent variable (IV).
- (A) Measured
 - (B) Controlled
 - (C) Ignored
 - (D) Predicted
- 687.** Which is more important, validity or reliability?
- (A) Reliability
 - (B) They are equally important
 - (C) Validity
 - (D) It depends on the test in question
- 688.** How might a researcher measure the concept of "social class"?
- (A) By analyzing social media usage
 - (B) By income, education level, or job type
 - (C) By observing daily routines
 - (D) By studying historical events
- 689.** What is the part of the experiment that is left alone or "natural", and is used to compare back to?
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Control Group
 - (D) Experimental Group
- 690.** Which variable within an experiment is the one that is changed to see what effect is has?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Extraneous variable
 - (D) Confounding variable Edit
- 691.** The ____ is expected to change as the IV changes.
- (A) IV
 - (B) DV
 - (C) Controls
 - (D) Samples
- 692.** The interviewer can easily become an influencing variable in the research-this is known most commonly as
- (A) Interviewer Effect
 - (B) Interviewer Bias
 - (C) Interviewer interference
 - (D) Interviewer Influence
- 693.** "Among US men, 10% to 60% eat a sandwich at least once a day". This disparity may be due to an unclear ____
- (A) Operational Definition (OD)
 - (B) Official Designation (OD)
 - (C) Fractal Ungulate (FU)
 - (D) Original Design (OD)
- 694.** What is a factor that the experimenter has full control over and changes to see what happens?
- (A) Dependent Variable
 - (B) Independent Variable
 - (C) Control group
 - (D) Hypothesis

695. What is a variable that is unchanged or remains constant throughout an experiment?
- (A) Control Variable
 - (B) Dependent Variable
 - (C) Independent Variable
 - (D) All of the above
696. You are testing how the amount you water a plant affects its growth. What would be the INDEPENDENT VARIABLE in this experiment.
- (A) They type of pot you put the plants in.
 - (B) The amount you water each plant.
 - (C) The amount of sunlight the plants get.
 - (D) The amount the plant grows. Edit
697. The use of several measures of a construct is called:
- (A) Methods triangulation.
 - (B) Operationalism.
 - (C) Multiple operationalism.
 - (D) Multiple construct measurement.
698. In an experimental research, confounding variables are also known as
- (A) Independent variables
 - (B) Dependent variables
 - (C) Extraneous variables
 - (D) Infound variables
699. An Independent variable is the one that is changed in an experiment.
- (A) True
 - (B) False
700. What is a variable in communication research?
- (A) A constant
 - (B) A factor that can change
 - (C) A hypothesis
 - (D) A research question
701. A factor that changes in an experiment in order to test a hypothesis is ____
- (A) Variable
 - (B) Model
 - (C) Law
 - (D) Theory
702. The group about which you wish to draw conclusions or make generalizations.
- (A) Population
 - (B) Parameter
 - (C) Sample
 - (D) Statistic
703. This variable in an experiment is the one being deliberately changed by the scientist.
- (A) Dependent variable
 - (B) Independent variable
 - (C) Data
 - (D) Control group
704. Two groups of SHS students were sampled to participate in a Math-Music correlation study. One group was tested in the morning at the library. The other group was tested in the laboratory near the gym. What can be classified as an extraneous variable?
- (A) The venues of the exam
 - (B) The different SHS groups
 - (C) The study-music and Math
 - (D) None of the above
705. Level of measurement where there is logical ordering or categories.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
706. In the following statement, The effects of mastery and aptitude on learning and retention, retention is
- (A) An independent variable.
 - (B) A dependent variable.
 - (C) A variable, but it is impossible to tell if it is independent or dependent.
 - (D) None of the above.

- 707.** If I am interested in the effect of exercise on health, which of the following could I use for the operational definition of the DV?
- (A) The number of days each week that the participants go to the gym
 - (B) The age of the participants in the study
 - (C) The number of days the participants call in sick
 - (D) The people in the group that does not go to the gym
- 708.** Find the DV: You experiment to find out if you can blow bigger bubbles when it is hot outside or when it is cold outside.
- (A) Bubble blowing technique
 - (B) Type of bubble juice
 - (C) Size of bubbles
 - (D) Temperature
- 709.** Which statement best defines a variable in research?
- (A) Anything subject to change across cases
 - (B) A label assigned without measurement
 - (C) A fixed value used for comparison
 - (D) A constant measured once per study
- 710.** What are the examples of control variable?
- (A) Classroom instruction
 - (B) Classroom learning: one group receives standard lecture and one group receives discussion; researcher assigns students to groups and thus manipulates group membership
 - (C) Age of a child; performance on a test; attitudes assessed on a survey
 - (D) Often demographic variables such as age, gender, race
- 711.** Is an attribute or characteristic that stands between the dependent and independent variables and exercises an influence on the dependent variable apart from independent variable
- (A) Intervening Variable
 - (B) Confounding Variable
 - (C) Moderating Variable
 - (D) Control Variable
- 712.** Which variable stands between independent and dependent variables?
- (A) Confounding variable
 - (B) Control variable
 - (C) Intervening variable
 - (D) Nominal variable
- 713.** A collection, or set, of individuals or objects or events whose properties are to be analyzed.
- (A) Sample
 - (B) Variable
 - (C) Statistic
 - (D) Population
- 714.** The number of midwives at commune health stations is a discrete quantitative variable.
- (A) True
 - (B) False
- 715.** What is a Constant Variable?
- (A) A Dependent Variable
 - (B) Variable #3
 - (C) A Independent Variable
 - (D) The Variable that always stays the same
 - (E) The Item that causes change
- 716.** Why is it important to control variables in an experiment?
- (A) To make the experiment more interesting.
 - (B) To ensure that the results are due to the independent variable and not other factors.
 - (C) To confuse the participants in the experiment.
 - (D) To increase the cost of the experiment.
- 717.** Attributes of objects, events of things which can be measured are called
- (A) Data.
 - (B) Qualitative measure.
 - (C) Variables.
 - (D) None of the above.

718. In a study, the brand names of different smartphones are recorded. What type of variable is the brand name?
- (A) Quantitative
 - (B) Qualitative
 - (C) Continuous
 - (D) Discrete
719. In an experiment testing how plant water intake affects a plant's growth, what would be the independent variable?
- (A) Glucose production
 - (B) Plant growth
 - (C) Amount of water
 - (D) Sunlight
720. Operational definitions are written in terms that are...
- (A) Observable & measurable
 - (B) Valid
 - (C) Reliable
 - (D) Scientific Edit
721. This ___ is expected to change as the uncontrolled variable changes.
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Controls
 - (D) Samples
722. Will the type of soil affect how tall a tomato plant grows? What is the IV?
- (A) The type of soil is the independent variable (IV).
 - (B) The height of the tomato plant is the independent variable (IV).
 - (C) The amount of sunlight is the independent variable (IV).
 - (D) The frequency of watering is the independent variable (IV).
723. An inert substance used in controlled experiments to test the effectiveness of another substance
- (A) Ethics
 - (B) Variables
 - (C) Sample
 - (D) Placebo
724. Scenario: Mosquito repellent is sprayed on one arm but not the other, and we count the number of bites on each arm after two hours. What is the Independent Variable? (Remember: Independent variables are what "I" change.)
- (A) The number of mosquito bites.
 - (B) The type of mosquito repellent
 - (C) One arm has bug spray and the other does not.
 - (D) None of above
725. Total family members
- (A) Categorical
 - (B) Numerical
 - (C) Data that changes over time
 - (D) None of above
726. The steps or procedures an experimenter must use to MEASURE the variables in a study is called the ___
- (A) Hypothesis
 - (B) Double-blind study
 - (C) Operational definition
 - (D) Theory
727. The ___ is the one manipulated by the researcher.
- (A) DV
 - (B) Confounding Variable
 - (C) Controls
 - (D) IV
728. When experimenting with plants to see if they grow better with or without fertilizer, a scientist uses six bean plants and one type of fertilizer. What type of variable is the fertilizer?
- (A) Dependent
 - (B) Independent
 - (C) Control
 - (D) Compound

729. An experiment was designed to study the potential impact of alcohol consumption on emotional stability. A specification of the procedures used to measure emotional stability illustrates
- (A) The independent variable.
 - (B) The double-blind procedure.
 - (C) Random assignment.
 - (D) An operational definition.
730. Which variable is manipulated by the experimenter?
- (A) Independent variable
 - (B) Confounding variable
 - (C) Dependent variable
 - (D) Interdependent variable
731. Which of the following is an example of an intervening or mediating variable?
- (A) The loan repayment in the loan repayment example
 - (B) The farm production in the loan repayment example
 - (C) The study habits in the academic performance example
 - (D) The attitude towards payment in the loan repayment example
732. A controlled variable
- (A) The thing you change on purpose.
 - (B) Can be measured to test your hypothesis.
 - (C) Something in an experiment that can change but we keep the same.
 - (D) Is the thing that determines how the experiment is run, in control of the experiment.
733. "Empirically verifiable observation" is
- (A) Statement.
 - (B) Value.
 - (C) Fact.
 - (D) Theory.
734. A testable question should include what two things?
- (A) Inference and opinion
 - (B) Hypothesis and conclusion
 - (C) Independent variable and constants
 - (D) An independent variable and a dependent variable
735. Factor that you keep the same in an experiment
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Controlled Variable
 - (D) Operational Definition
736. The outcome of what is being measured is termed:
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Predictor variable
 - (D) None of above
737. What is the dependent variable on the graph (y-axis)?
- (A) Metro Bicycle Shop Weekly Sales
 - (B) Bicycles Sold
 - (C) Types of Bicycles
 - (D) None of above
738. A carefully worded statement of the exact procedures used in a research experiment is known as
- (A) Replication
 - (B) Operational definition
 - (C) Hypothesis
 - (D) Standardization
739. A type of quantitative variable which can take only exact value.
- (A) Discrete Variable
 - (B) Continuous Variable
 - (C) Variable
 - (D) None of above
740. What is a key benefit of controlling extraneous variables in psychological experiments?
- (A) It ensures the study has high ecological validity

- (B) It allows for more subjective interpretations of the results
- (C) It increases the likelihood that changes in the dependent variable are due to the independent variable
- (D) It reduces the sample size needed for the study
- 741.** Which of the following is an example of a continuous variable?
- (A) Gender: Male/ Female
- (B) Age: Younger than 40 years/above 40 years older
- (C) Educational level: low/medium/ high
- (D) Reaction time in Seconds
- 742.** What is a confounding variable in an experiment?
- (A) An outside factor that might affect the results of an experiment.
- (B) The main variable being tested.
- (C) The control group in the experiment.
- (D) The measurement tool used in the study.
- 743.** Find the Independent Variable: You experiment to see how the noise level in a room affects your ability to memorize random numbers and letters.
- (A) Ability to memorize
- (B) Noise level in room
- (C) Amount of sleep
- (D) Age of person
- 744.** Dependent variables are also known as ____
- (A) Predictors
- (B) Outcomes
- (C) Elicitors
- (D) Reactionaries
- 745.** The persons or animals whose behavior is systematically observed in a study.
- (A) Confounding of variables
- (B) Theory
- (C) Naturalistic observation
- (D) Participants
- 746.** Extraneous variable, which refer to the mood, emotions and intelligence of the subject.
- (A) Confounding
- (B) Situational
- (C) Nuisance
- (D) Participant
- 747.** The parameter is a number describing the:
- (A) Population
- (B) Sample
- (C) Survey
- (D) Percent
- 748.** Three redwood trees are kept at different humidity levels inside a greenhouse for 12 weeks. One tree is left outside in normal conditions. The heights of the trees are measured once a week. What is the independent variable?
- (A) Redwood trees
- (B) Humidity levels
- (C) Height of trees
- (D) The greenhouse
- 749.** Hair colour-Is it classified as numerical or categorical?
- (A) Numerical
- (B) Categorical
- 750.** In a lab setting, the researcher can control ____ which increases internal validity.
- (A) EVs (extraneous variables)
- (B) DVs (dependent variables)
- (C) IVs (independent variables)
- (D) CVs (controlled variables)
- 751.** Variable that the SCIENTIST CHANGES or TESTS.
- (A) Control Variable
- (B) Variable
- (C) Dependent Variable
- (D) Independent Variable

752. The variable that is being tested, counted, or measured and is responding to the independent variable is known as
- (A) Control
 - (B) Constant
 - (C) Independent Variable
 - (D) Dependent Variable
753. Mr. McNiece wanted to see how different types of music affected students' pulse rates. She played different types of music: heavy metal, rap, R&B, alternative, pop, country, and classical music. What constant should be considered when doing this experiment?
- (A) Types of music
 - (B) Use all dead people
 - (C) Using a different student for each music type
 - (D) Amount of time the music was played
754. In a true experiment we manipulate the ____ and we measure the ____
- (A) People / data
 - (B) Independent variable / dependent variable
 - (C) Population / control group
 - (D) Hypothesis / experimental group
755. Many experiments have titles in the format of "The effect of the ____ on the ____" Which of the following is correct?
- (A) Dependent variable; independent variable
 - (B) Independent variable; dependent variable
 - (C) Control variable; dependent variable
 - (D) Independent variable; control variable
756. How do different colored lights affect plant growth? What is the Independent Variable?
- (A) Blue Light
 - (B) Different Colored Lights
 - (C) Plant Growth
 - (D) Amount of Light
757. What is the description of what actions and operations will be used to measure the dependent variables and manipulate the independent variables?
- (A) Operational definition
 - (B) Hypothesis
 - (C) Theoretical framework
 - (D) Research methodology
758. Jessica wants to know if the size of a cookie dough ball will influence how long it takes to bake. What is the dependent variable?
- (A) Size of the cookie dough ball
 - (B) How long it takes to bake
 - (C) The temperature of the oven
 - (D) The type of cookie
759. What is a dependent variable in research?
- (A) The factor that is manipulated in an experiment
 - (B) The factor that is measured in an experiment
 - (C) The factor that remains constant in an experiment
 - (D) The factor that is unrelated to the experiment
760. A working definition of what a researcher is measuring
- (A) Adaptation
 - (B) Lens
 - (C) Dependent variable
 - (D) Operational definition
761. Sometimes called experimental or predictor variable
- (A) INDEPENDENT VARIABLE
 - (B) DEPENDENT VARIABLE
 - (C) INTERVAL VARIABLE
 - (D) DICHOTOMOUS VARIABLE
762. How does the value of a dependent variable change in an experiment?
- (A) It changes randomly
 - (B) It changes as a result of changes made to the independent variable

- (C) It does not change
(D) It changes due to external factors unrelated to the experiment
- 763.** The variable the researcher matches to eliminate it as an alternative explanation is called a(n) ____ variable
(A) Dependent.
(B) Independent.
(C) Partial.
(D) Matching.
- 764.** What is an independent variable (IV)?
(A) The change you make in an experiment
(B) The outcome of the change you make
(C) A constant factor
(D) An unchangeable element
- 765.** In an experiment, researchers manipulate one or more ____ and then determine whether this manipulation had an effect on the ____
(A) Independent variables; dependent variable
(B) Dependent variables; independent variable
(C) Correlations; association
(D) Personality characteristics; outcome
- 766.** What does conceptualization involve?
(A) Writing clear, concise definitions for key concepts
(B) Specifying the measures used for the key concepts
(C) Identifying which relationships are the most important
(D) None of above
- 767.** When the participants' expectations have an effect on the results of the study.
(A) Extraneous variable
(B) Sampling bias
(C) Participant variability
(D) Participant expectancy effect
- 768.** What are the examples of dependent variables in education?
(A) Number of students and teaching stuff
(B) Achievement scores on a test, the organizational climate of a junior high school, the leadership skills of principals
(C) Qualities of principals, professional preparation of teachers
(D) Level of general knowledge of the students, communication between teachers and students
- 769.** The variable that is changed or controlled in a scientific experiment to test the effects on the other variable
(A) Independent variable
(B) Dependent variable
(C) Extraneous variable
(D) None of above
- 770.** In the hypothesis is, "I think orange juice will stunt the growth of a plant." The dependent variable is
(A) The growth of the plant
(B) The plant without orange juice
(C) The location of the plant
(D) The amount of orange juice
- 771.** It gives meaning to a word depending on how it is used in the research.
(A) Conceptual Definition
(B) Operational Definition
(C) Expanded Definition
(D) General Definition
- 772.** Meanings attached to a concept create problems of measurements.
(A) Unambiguous.
(B) Dictionary.
(C) Vague.
(D) Clear.
- 773.** More complex than concept, mental representation from situation or behaviors, invented by researchers for specific purposes.
(A) Multi-sectoral Studies

- (B) Construct
 - (C) Variable
 - (D) Cause & Effects Relationship
774. Elements of behavior that exist but cannot be measured directly are called ____
- (A) Aptitudes
 - (B) Constructs
 - (C) Theories
 - (D) Bias
775. A survey asks participants to rate their satisfaction on a scale from 1 to 5. What type of variable is this?
- (A) Qualitative
 - (B) Quantitative
 - (C) Ordinal
 - (D) Nominal
776. In an experiment, this is measured. It is the one that could change based on what is manipulated.
- (A) Independent variable
 - (B) Dependent variable
777. What is the third variable problem?
- (A) When a measured variable influences both independent and dependent variables
 - (B) When an unmeasured variable influences both independent and dependent variables, leading to misleading conclusions
 - (C) When the dependent variable is not measured
 - (D) When the independent variable is manipulated
778. Participants' emotional state. This is a DV of which of the following Experiment
- (A) Canli
 - (B) Andrade
 - (C) Dement and Kleitman
 - (D) Schachter & Singer
779. Can have different values under different conditions or for different people
- (A) RATIO
 - (B) VARIABLE
 - (C) RESEARCH
 - (D) PROPORTION
780. A kind of independent variable chosen by the researcher to determine if it changes the relationship between the independent and dependent variable.
- (A) Intervening variable
 - (B) Control Variable
 - (C) Moderator variable
 - (D) None of the Above
781. What is the relationship between two or more variables; when two variables are correlated, one variable changes as the other does?
- (A) Correlation
 - (B) Cause-and-effect relationship
 - (C) Illusory correlation
 - (D) None of above
782. Control variables are kept constant throughout a study.
- (A) True
 - (B) False
783. Pick the reason that best explains the evidence: Claim: Too much junk food is bad for you. Evidence: Eating fast food once a week can increase your chance of heart disease by 20%.
- (A) Americans on average eat three times more sugar than is recommended.
 - (B) In the US, someone dies from heart disease every 36 seconds.
 - (C) Fast food, like other junk food, is high in sodium, saturated fat, and cholesterol.
 - (D) This means you shouldn't eat fast food.
784. Classify this data variable: Weight in Pounds
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal

785. A taxi company in Atlanta puts a new type of tire with a special tread on a random sample of 50 cars, and the regular type of tire on another random sample of 50 cars. What is the dependent (response) variable in this experimental research study?
- (A) Type of Tire
 - (B) Gas mileage
 - (C) Taxi company
 - (D) Type of Car
786. The independent variable is the
- (A) One you measure.
 - (B) One you change.
787. Researchers want to test the effect of caffeine on attention. What is caffeine in the experiment?
- (A) Independent Variable
 - (B) Dependant variable
 - (C) Confounding variable
 - (D) Third variable
788. Classify the variable as categorical or quantitative:GPA
- (A) Categorical
 - (B) Quantitative
789. In a study examining the relationship between exercise frequency and weight loss, exercise frequency is the:
- (A) Dependent variable
 - (B) Independent variable
 - (C) Control variable
 - (D) Extraneous variable
790. The best measuring tool for research is
- (A) Well-standardized.
 - (B) Highly reliable.
 - (C) Highly valid.
 - (D) Both sufficiently reliable and sufficiently valid.
791. They are the outcomes or results of the influence of the independent variable.
- (A) DEPENDENT VARIABLES
 - (B) INDEPENDENT VARIABLES
 - (C) VARIABLES
 - (D) INTERVENING OR MEDLING VARIABLES
792. For variables that are quantitative, measurements have what attached to them?
- (A) Units
 - (B) Labels
 - (C) Scores
 - (D) Graphs
793. A new type of gasoline gives off excessive amounts of smoke. What should be studied before this type of fuel can be determined to be safe for the environment?
- (A) The time it takes to produce the fuel
 - (B) The effect the smoke will have on the air quality
 - (C) The cost of producing the fuel
 - (D) If the fuel will be widely accepted by consumers
794. Mr. Conyers needs your help:He needs to find the constant variables for his experiment. He is trying to determine what shampoo leaves his beard the softest. Which variable would be a constant?
- (A) Type of Shampoo
 - (B) Softness of Mr. Conyer's beard
 - (C) Amount of Shampoo
 - (D) He doesn't need any constant variables
795. A marketing manager believes that limiting the availability of a product increases product desirability.What is the dependent variable here?
- (A) Marketing manager
 - (B) Limiting the availability of a product
 - (C) Increases
 - (D) Product desirability
796. A population element is referred to an individual member of a specific population.
- (A) True
 - (B) False

797. The variables that experimenters control during an experiment to determine their effect on the response variable.
- (A) SD
 - (B) P value
 - (C) Exploratory Factor Analysis
 - (D) Factor
798. A group of patients are randomly assigned to groups in which they receive different amounts of an experimental drug to treat anxiety. Anxiety levels are measured afterwards.
- (A) Anxiety levels are the dependent variable.
 - (B) Medication is the dependent variable.
 - (C) Anxiety is the independent variable
 - (D) None of the above statements are true.
799. The variable measured in an experiment is:
- (A) The independent variable
 - (B) A null hypothesis
 - (C) The dependent variable
 - (D) An alternative hypothesis
800. What is the dependent variable in experimental research?
- (A) The manipulated variable
 - (B) The outcome measured
 - (C) The control variable
 - (D) The random variable
801. The ___ is controlled by the experimenter, while the ___ represents the information collected and statistically analyzed by the experimenter.
- (A) Dependent variable; independent variable
 - (B) Independent variable; dependent variable
 - (C) Placebo effect; experimenter bias
 - (D) Experiment bias; placebo effect
802. A measurement scale that in addition to ordering scores from highest to lowest, establishes a uniform unit in the scale so that any distance between two consecutive scores is of equal magnitude.
- (A) Nominal Scale
 - (B) Ordinal Scale
 - (C) Interval Scale
 - (D) Ratio Scale
803. Maya designed an experiment to answer the following question: How does the amount of water given to a limabean seed affect how tall it grows? In this experiment, what variable should Maya CHANGE?
- (A) The amount of water
 - (B) The kind of plant
 - (C) The type of soil
 - (D) The amount of sunlight it gets Edit
804. A scientist wants to understand if stress can affect memory. She tests this hypothesis by observing teachers teaching students quietly, peacefully, gently and other teachers teaching by shouting and getting angry. The students are tested and the results show that the students with the calm teachers got better grades. Which is the dependent variable?
- (A) The grades the students got.
 - (B) The angry, shouting teachers. Edit
805. In an experiment, after completing conditioning once, an injection of a drug affecting neuro transmitter substance was given to the affecting neuro transmitter substance was given to the subject. Then, the subject was conditioned again. In this experiment, what were bio-chemical changes treated as?
- (A) Dependent variable
 - (B) Independent variable
 - (C) Control variable
 - (D) Intervening variable
806. In an experiment, the variable that changes in response to independent variable is known as
- (A) Independent variable
 - (B) Dependent variable
 - (C) Changing variable
 - (D) Control variable

- 807.** If a researcher studies fourth-grade students to determine the effects of rewarding good behavior on subsequent behavior, which of the following is least likely to be an extraneous variable?
- (A) Student grade level
 - (B) Student attitude
 - (C) Teacher characteristics
 - (D) Parent's parenting style
- 808.** Managers and researchers have decided to focus on customer-satisfaction levels in their marketing research study. They have determined the
- (A) Relevant variable.
 - (B) Unit of analysis.
 - (C) Situation analysis.
 - (D) Primary data.
- 809.** How do confounding variables affect a study?
- (A) They enhance the validity of the findings
 - (B) They obscure the true relationship between the independent and dependent variable
 - (C) They ensure random assignment
 - (D) They improve participant recruitment
- 810.** What is the purpose of a theoretical rationale in a research study?
- (A) To explain why the independent variable is expected to influence the dependent variable
 - (B) To introduce and define the key terms used in the study
 - (C) To provide a detailed review of the existing literature
 - (D) To present the results of the data analysis
- 811.** The most appropriate method to select a measuring tool (Test) is:
- (A) Characteristics of population
 - (B) Validity and reliability of test
 - (C) Researcher's area of Interest
 - (D) Purpose of the research
- 812.** A scale whose numbers serve only as labels or tags for identifying and classifying objects with a strict one-to-one correspondence between the numbers and the objects is called a(n) ____
- (A) Nominal scales
 - (B) Ratio scales
 - (C) Ordinal scales
 - (D) Interval scales
- 813.** A researcher conducted an experiment to see if increasing water consumption lessens the visible effects of rosacea, a common skin condition. The dependent variable in this experiment was
- (A) Rosacea.
 - (B) Increased water consumption.
 - (C) The amount of water consumed.
 - (D) The visible condition of the skin.
- 814.** Maika wants to do a research about reading. What could be a good independent variable?
- (A) Book genre (adventure, nonfiction, fantasy ____)
 - (B) Reading habits
 - (C) Reading comprehension
 - (D) Reading skills
- 815.** Number of Passengers
- (A) Categorical
 - (B) Quantitative
- 816.** This type of definition of terms in which the meaning of the concept or term as used in a particular study.
- (A) Conceptual
 - (B) Denotation
 - (C) Operational
 - (D) Substitution
- 817.** In the scientific question "Does the amount of fertiliser affect the height that a bean plant grows? "What is the independent variable?
- (A) Amount of fertiliser
 - (B) Height of the bean plant
 - (C) Amount of soil used
 - (D) How often the plant is watered

- 818.** This is known as the variable being tested or the responding variable.
(A) Control Variable
(B) Dependent Variable
(C) Independent Variable
(D) None of the above
- 819.** Identify the kind of variable in this situation: price of gasoline per gallon throughout American history
(A) Discrete
(B) Continuous
- 820.** Scientific Question: Does being tardy impact test scores? What is the manipulated variable?
(A) Test scores
(B) The time a student arrives to class
(C) Amount of time to complete test
(D) None of above
- 821.** The output parameter (Y) is an indicator that characterizes:
(A) The result of the process under study;
(B) Objectives of the process under study;
(C) Analytical, abstract, thematic;
(D) Relevance of the process under study;
(E) Final and initial conditions of the process under study;
- 822.** The variable that is measured. It goes on the y-axis.
(A) Independent Variable
(B) Dependent Variable
- 823.** A variable that is being manipulated in an experiment
(A) INDEPENDENT VARIABLE
(B) DICHOTOMOUS VARIABLE
(C) DEPENDENT VARIABLE
(D) ORDINAL VARIABLE
- 824.** Which of the following is an example of a situational variable?
(A) Age of participants
(B) Noise in the environment
(C) Gender of participants
(D) Intelligence of participants
- 825.** A variable that quantifies an element of a population.
(A) Qualitative Variable
(B) Quantitative Variable
(C) Sample
(D) Parameter
- 826.** A type of variable that has two or more categories which can be ranked.
(A) Interval.
(B) Nominal.
(C) Ordinal.
(D) Ratio.
- 827.** In a study analyzing the effect of various doses of a painkiller on pain reduction, the dependent variable is:
(A) The type of painkiller
(B) The participants' age
(C) The pain reduction
(D) The time of day
- 828.** Researchers want to see if color impacts choice. They put cans of soda out of the table for a group to take. Some cans are blue while others are red. However, the red cans were closer to the door through which people entered. This may have thrown off the study.
(A) Extraneous Variable
(B) Independent Variable
(C) Dependent Variable
(D) Modifying Variable
- 829.** In testing the effects of different kinds of light on plant growth, plant growth would be the ____
(A) Hypothesis
(B) Dependent variable
(C) Independent variable
(D) Control condition

- 830.** An operational definition
- (A) One that bears no relation to the underlying concept
 - (B) An abstract, theoretical definition of a concept
 - (C) A definition of a concept in terms of specific, empirical measures
 - (D) One that refers to opera singers and their work
- 831.** A variable that helps to explain the association between the conditions or treatments and the response, but is not the explanation that the study was designed to test.
- (A) Treatments
 - (B) Double blind
 - (C) Response variable
 - (D) Lurking variable
- 832.** Why research must be testable?
- (A) To conduct experiment
 - (B) To find out if the research is correct
 - (C) To determine the relationship of variables
 - (D) None of the choices is correct
- 833.** Variables measured on the nominal scale, such as gender and race, are also sometimes referred to as ____ variables.
- (A) Categorical
 - (B) Quantitative
 - (C) Ordinal
 - (D) Measurement
- 834.** A variable that is changed or controlled in a scientific experiment to test the effects on the DV. The problem (Cause)
- (A) Dependent Variable (DV)
 - (B) Independent Variable (IV)
 - (C) Discrete Variable
 - (D) Continuous Variable
- 835.** State the level of measurement for the variable below; Children in elementary school are evaluated and classified as non-readers (0), beginning readers (1), grade level readers (2), or advanced readers (3). The classification is done in order to place them in reading groups.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 836.** Operational Definition
- (A) Clear and detailed statements about how you will measure the data collected about the variables.
 - (B) The entire group of people or animals in which the researcher is interested.
 - (C) A sample that has characteristics that are similar to those in the population.
 - (D) A measure of the relationship between two variables.
- 837.** In a study of the effects of various brands of ice cream on weight gain, the type of ice cream consumed represents the
- (A) Dependent variable.
 - (B) Independent variable.
 - (C) Placebo.
 - (D) Control variable.
- 838.** Factors include those existing or occurring within the individual self or mind
- (A) Interpersonal
 - (B) Intrapersonal
 - (C) Community
 - (D) All of the above
- 839.** Any factor capable of change
- (A) Variable
 - (B) Sampling
 - (C) Correlation
 - (D) Experimental group
- 840.** The ONE thing you change in an experiment.
- (A) Constant variable
 - (B) Controlled variable
 - (C) Dependent variable
 - (D) Independent variable

- 841.** The dependent variable represents the ____
(A) Treatment
(B) Outcome
- 842.** What is the DEPENDENT variable in this experiment?"Does eating breakfast improve test score?"
(A) Eating breakfast or not
(B) The grade you got on the test
(C) What time you get up in the morning
(D) How tasty the breakfast is
- 843.** As one variable is manipulated, it directly brings about change in a second variable. What is the variable called that is being manipulated?
(A) Dependent variable
(B) Independent variable
(C) Extraneous variable
(D) Moderating variable
- 844.** Cultural beliefs and backgrounds, ethnicities and religion are examples of ____
(A) Demographics
(B) Physiological Needs
(C) Cognitive Abilities
(D) Prior Knowledge
(E) Motivation
- 845.** What is another term that refers to a confounding extraneous variable?
(A) First variable.
(B) Third variable.
(C) Last variable.
(D) Fourth variable.
- 846.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the arrival times of planes at JFK airport.
(A) Categorical
(B) Continuous numerical
(C) Discrete numerical
(D) None of above
- 847.** What term do researchers use to label the unobservable things they are interested in measuring? (Price, L. R. (2017) Chapter 1)
(A) Constructs
(B) Variables
(C) Traits
(D) Indicators
- 848.** Statement: How does the amount of light affect bacteria growth in a pond? Question: Determine the independent variable.
(A) Bacteria growth
(B) Human mouth
(C) Amount of light
(D) Bacteria
- 849.** The variable that is affected is ____
(A) Dependent variable.
(B) Moderator variable.
(C) Mediating variable.
(D) Extraneous variable
(E) Independent variable.
- 850.** Ms. Laiba has decided to use the test at the end of the textbook to measure the achievement levels of the students in her study. Which of the following BEST describes the chapter test?
(A) Variable.
(B) Definition.
(C) Construct.
(D) Operationalized variable.
- 851.** An experiment is said to be confounded when
(A) Undesirable variables are not kept out of the experiment
(B) Undesirable variables are kept out of the experiment
(C) Basic research is used in place of applied research
(D) The sample is random
- 852.** Stacy measured the speed of 5 birds that lived around her house. What is the Independent variable?

- (A) Type of Bird
 - (B) Speed of Bird
 - (C) Weather outside
 - (D) None of above
- 853.** The extent to which the participants' behavior reflects how they would behave in their everyday life.
- (A) External Validity
 - (B) Generalizability
 - (C) Ecological Validity
 - (D) Temporal Validity
- 854.** These variables can be ordered or ranked
- (A) INTERVAL VARIABLE
 - (B) ORDINAL VARIABLE
 - (C) DICHOTOMOUS VARIABLE
 - (D) INDEPENDENT
- 855.** All the things in an experiment that must be the same to make it fair are called
- (A) Away from all people.
 - (B) In a data tables, charts and graphs
 - (C) Controlled variables or constants
 - (D) The gender of the baby alligators
- 856.** Why do we want to test one variable at a time?
- (A) Because it is hard to setup a data table with more than one
 - (B) It keeps the experiment fair and you can see what caused the change
 - (C) It is what has always been done
 - (D) It makes the results better in an experiment
- 857.** Which type of data provides rank order information?
- (A) Ordinal
 - (B) Interval
 - (C) Ratio
 - (D) Nominal
- 858.** How can constructs be defined?
- (A) Using only qualitative data
 - (B) Using only quantitative data
 - (C) Using direct and indirect observables
 - (D) None of above
- 859.** When the variables increase together it is said to have
- (A) Positive correlation
 - (B) Negative correlation
- 860.** Which brand of paper towel will absorb the most liquid? What is the independent variable?
- (A) Brand of paper towel
 - (B) Amount of water absorbed
 - (C) All the above
 - (D) None of the above
- 861.** — are properties or characteristics of some event, object, person, place or thing that are measurable and can take on more than one value, or vary
- (A) Values
 - (B) Determinants
 - (C) Variables
 - (D) Sampling errors
- 862.** What is a variable in scientific research?
- (A) A variable is a statement about what will happen under certain conditions.
 - (B) A variable is any factor, trait, or condition that can exist in differing amounts or types.
 - (C) A variable is a systematic process to answer questions and test hypotheses.
 - (D) None of the above
- 863.** A student wants to test the hypothesis of "If salt is added to water then the boiling point of water will decrease." What is the dependent variable?
- (A) Amount of salt
 - (B) Boiling point
 - (C) Same amount of water
 - (D) None of above

- 864.** Which of the following variables are quantitative? A. type of car B. weekly wage C. plane fares D. petrol prices E. breed of dog
(A) A, B and C
(B) A, B, C and E
(C) B, C and D
(D) A, B, C and D
- 865.** A survey question about gender, to be answered with either "M" or "F," represents an
(A) Categorical variable
(B) Unknown variable
(C) Dependent variable
(D) Continuous variable
- 866.** Confounds are mostly dealt with after the experiment by using complex statistical techniques.
(A) F
(B) T
- 867.** Data obtained from measuring
(A) Dichotomic
(B) Discrete
(C) Continuous
(D) Polynomic
- 868.** If you were testing how well different dish soap cleaned grease, the independent (experimental) variable would be the:
(A) Dishes
(B) Water
(C) Dish Soap
(D) Types of Grease
- 869.** Katie is performing an experiment by giving 5 plants different amounts of water and seeing which one will grow the tallest. What is the Constant Variable? (Hint: The constant Variable will always stay the same.)
(A) Katie
(B) The amounts of water
(C) The type of plant
(D) How tall the plants grow
- 870.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the length of time spent doing this exercise.
(A) Categorical
(B) Continuous numerical
(C) Discrete numerical
(D) None of above
- 871.** How does watching TV during studying affect a student's test grades? Student's test grades is the ____ variable.
(A) Independent
(B) Dependent
(C) Control
(D) Constant
- 872.** The presumed effect of the research problem. Usually the problem itself or the elements that is being questioned
(A) Independent variable
(B) Dependent variable
(C) Moderating variable
(D) Mediating variable/ intervening variable
(E) Control variable
- 873.** What is the Levels of the independent variable is associated with?
(A) Conditions
(B) Treatment
(C) Treatment conditions
(D) Effects
- 874.** Earring length-Is it classified as numerical or categorical?
(A) Numerical
(B) Categorical
- 875.** A factor, other than the one being studied, that might influence a study's results:
(A) Independent variable
(B) Dependent variable
(C) Placebo
(D) Confounding variable

876. In conducting research, which of the variable is hold constant by the researcher?
- (A) Controlled Variable
 - (B) Dependent variable
 - (C) Independent Variable
 - (D) Manipulated Variable
877. In research terminology, what is a 'variable'?
- (A) A fixed element in a study
 - (B) A factor that can change
 - (C) A constant measurement
 - (D) An unchanging hypothesis
878. An experiment is performed on plants to see how different liquids affect plant growth. Each plant in the experiment is given a different liquid; water, apple juice, or milk. Each plant has the same amount of soil, sunlight, and listens to the same music. In this investigation, the independent variable is ____
- (A) The type of plant
 - (B) The amount of sunlight
 - (C) The type of music
 - (D) The type of liquid
879. Which of the following is a constant in the experiment?
- (A) Soil samples removed from cliff on different days
 - (B) Soil samples removed from cliff on the same day
 - (C) Soil samples not weighed
 - (D) Soil samples not dried
880. An experiment is performed to see if background music improves learning. Two groups study the same material, one while listening to music and another without music. The independent variable is
- (A) Learning
 - (B) Material studied
 - (C) Size of group
 - (D) Presence of music
881. This characteristic refers to how accurately the instrument measures the problem ____
- (A) Validity
 - (B) Reliability
 - (C) Credibility
 - (D) Systematic
882. The age of students in a university research study is classified as:
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
883. Tiffany was investing how fast it took Hayden to react to different sounds. Identify the independent variable.
- (A) How fast Hayden reacted
 - (B) Different sounds
 - (C) Types of music
 - (D) Hayden
884. A variable that controls the change of relationship between the IV and DV is known as ____
- (A) An extraneous variable
 - (B) A moderator variable
 - (C) A mediating variable
 - (D) None of above
885. Why is it problematic when researchers use "impromptu" scales?
- (A) They are always invalid
 - (B) They lack prior validation and reliability
 - (C) They are too long
 - (D) They are always biased
886. What is an independent variable in research?
- (A) A variable that is manipulated to observe its effect on the dependent variable
 - (B) A variable that remains constant throughout the experiment
 - (C) A variable that is measured to see the effect of changes
 - (D) A variable that is not related to the research

- 887.** In quantitative research weight, anxiety, and blood pressure are called
(A) Variable
(B) Concepts or phenomena
(C) Description
(D) Theory
- 888.** Defines concepts by describing how they will be measured. Working definitions or operational definition are other terms used to refer to this process.
(A) CONCEPTS
(B) OPERATIONALIZATION
(C) VARIABLES
(D) HYPOTHESIS
- 889.** A variable also known as categorical or classificatory variable; a variable that has a limited number of distinct values. A whole answer or number
(A) Dependent Variable (DV)
(B) Independent Variable (IV)
(C) Discrete Variable
(D) Continuous Variable
- 890.** What is the role of variables in experimental research?
(A) In a hypothesis in experimental research, an independent variable has an effect over a dependent variable.
(B) In a hypothesis in experimental research, there is no need to have variables.
(C) In a hypothesis in experimental research, there is a treatment or intervention, but not variables.
(D) None of above
- 891.** Does the amount of fertilizer affect the growth of plants? What is the independent variable?
(A) Amount of fertilizer
(B) Type of fertilizer
(C) Growth of plants
(D) Amount of plants
- 892.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the weights of packages sent by Australia Post on 20 December.
(A) Categorical
(B) Continuous numerical
(C) Discrete numerical
(D) None of above
- 893.** What is the INDEPENDENT variable (cause) in this experiment? "Which type of metal, copper or aluminum, conducts heat faster?"
(A) Size of metal
(B) Types of metal
(C) Time it takes to heat up
(D) Shape of the metal Edit
- 894.** When a extraneous variable systematically varies with the independent variable and influences the dependent variable, it is called:
(A) Another dependent variable.
(B) A confounding variable.
(C) A moderating variable.
(D) An unreliable variable.
- 895.** What is the dependent variable in the question below? Are children who learn to read before kindergarten more likely to attend college?
(A) When students learn to read
(B) Likelihood to attend college
(C) What students read
(D) None of above
- 896.** The factor that simultaneously affects both cause and effect in a causal relationship is the:
(A) Independent variable
(B) Dependent variable
(C) Confounder variable
(D) Intermediate variable
(E) Neutral variable
- 897.** What are characteristics that are defined by a number, such as age or weight?

- (A) Descriptive statistics
 - (B) Inferential statistics
 - (C) Categorical variables
 - (D) Numerical variables
- 898.** The part of the experiment that remains the same for the control and experimental group.
- (A) Constants
 - (B) Control
 - (C) Independent
 - (D) Dependent
- 899.** What is the purpose of a control variable?
- (A) To remove or control effects on the dependent variable
 - (B) To be manipulated by the researcher
 - (C) To strengthen the independent variable
 - (D) To influence the dependent variable
- 900.** What is another term for a test that measures reliability?
- (A) Subjective test
 - (B) Integrative test
 - (C) Test-retest test
 - (D) Holistic test
- 901.** Is something that is kept the same, remaining unchanged in an experiment.
- (A) Control
 - (B) Variable
 - (C) Data
 - (D) P, B, & J
- 902.** Controlling extraneous variables mean you must ____
- (A) Ensure that they are held constant across the two groups/conditions
 - (B) Manipulate the IV and measure the DV
 - (C) Select only people from a narrow target population
 - (D) Ensure that participants complete a task that is close to a real life experience
- 903.** Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: An investigator uses a physical-activity tracker that miscounts steps differently for men and women.
- (A) Confounding
 - (B) Measurement Bias
 - (C) Hawthorne Effect
 - (D) Attrition Bias
 - (E) Publication Bias
- 904.** Classify this data variable: Transmission
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
- 905.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the brands of cereals available at the supermarket.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 906.** Observation or Inference: The mini pig is happy.
- (A) Observation
 - (B) Inference
- 907.** Across individuals in a study population and across different observations, the values of variables usually are:
- (A) Different
 - (B) Not very different
 - (C) Different to a significant degree
 - (D) Absolutely identical
 - (E) Partly identical
- 908.** Ms. O'Brien wanted to see which brand of cola exploded the highest when she put a Mento in the bottle. What is the independent variable?
- (A) Ms. O'Brien

- (B) Mento
 - (C) Height of spray
 - (D) Types of colas
- 909.** Its one of the independent variables that is use for comparison, does not get any change, original or plain variable.
- (A) Constant
 - (B) Control
 - (C) Independent Variable
 - (D) Dependent Variable
- 910.** Two plants are grown using the same light and pots. One plant is given water that has been microwaved and the other plant is given regular tap water. Their height is measured after 2 weeks. What is the INDEPENDENT variable?
- (A) Height
 - (B) Type of water
 - (C) Light
 - (D) Pots
- 911.** Mrs. Cote wanted to know if the iPhone could stand up against being dropped from different heights. She dropped them from 3 heights and saw if they broke. What is the independent variable?
- (A) Drop height
 - (B) If they had a case on them or not
 - (C) If they broke
 - (D) None of above
- 912.** Which scenario illustrates a confounding variable?
- (A) Room humidity altering crispiness
 - (B) Ranking satisfaction levels from low to high
 - (C) Using post-hoc tests after ANOVA
 - (D) Calculating an overall acceptability index
- 913.** Mr. Pine, a botanist, is conducting an experiment to see if the type of fertilizer has an effect on the growth of a plant. He uses three (of the same type of) plants, two different fertilizers, equal light, and equal water. What type of variable is the fertilizer?
- (A) Dependent
 - (B) Independent
 - (C) Control
 - (D) Compound
- 914.** The variable that is manipulated in an experimenter is known as the ___ variable.
- (A) Dependent
 - (B) Trial
 - (C) Independent
 - (D) Constant
- 915.** The factor the researcher manipulates in a controlled experiment
- (A) Dependent variable
 - (B) Independent variable
 - (C) Confounding variable
 - (D) None of above
- 916.** What do we call the variable that is affected by the independent variable in an experiment?
- (A) Dependent variable
 - (B) Independent variable
 - (C) Random sample
 - (D) None of above
- 917.** In an experiment, a researcher manipulates one variable to observe its influence on another variable. The second variable, which is observed for any possible effect, is what type of variable?
- (A) Independent
 - (B) Dependent
 - (C) Control
 - (D) Hypothetical
- 918.** Researchers must control for confounding variables to ensure valid results.
- (A) True
 - (B) False

- 919.** The elaboration of the theoretical framework is recommended to be carried out based on structuring an index, summary, or outline that must always be linked to:
- (A) Research variables
 - (B) Bibliography only
 - (C) Conclusions of the study
 - (D) Sampling design
- 920.** A variable is
- (A) A letter that takes the place of a number
 - (B) Terms in an expression
 - (C) The answer to an equation
 - (D) The number in front of a letter
- 921.** This type of variable is intentionally kept the same for all tests and trials
- (A) Controlled variables
 - (B) Independent variables
 - (C) Dependent variables
 - (D) None of above
- 922.** The independent variable is the variable predicted.
- (A) FALSE
 - (B) TRUE
- 923.** Response variable or effect that is observed or measured to determine the effect of the independent variable.
- (A) Constant
 - (B) Independent
 - (C) Dependent
 - (D) Variable
- 924.** Any action that people can observe or measure
- (A) Behavior
 - (B) Psychology
 - (C) Sociology
 - (D) Cognition
- 925.** Variables which can assume values that manifest the concept of attributes
- (A) Continuous
 - (B) Discrete
 - (C) Qualitative
 - (D) Quantitative
- 926.** A(n) ____ is a factor thought to be significant for human behavior, which can vary (change) from one case to another
- (A) Operational definition
 - (B) Variable
 - (C) Hypothesis
 - (D) Research method
- 927.** What is "the number of pages in a book" an example of?
- (A) Nominal
 - (B) Ordinal
 - (C) Discrete
 - (D) Continuous
- 928.** What is the quantitative dependent variable in the sample chemistry research design table?
- (A) Number of dyes per product.
 - (B) Type of chemical used.
 - (C) Temperature of the room.
 - (D) Color of the product.
- 929.** The independent variable is the ONE thing you ____
- (A) Change
 - (B) Keep the same
 - (C) Experiment with
 - (D) Investigate
- 930.** The independent variable in an experiment is:
- (A) The effect of random chance on the results.
 - (B) The most important variable the experimenter could not control or take into account.
 - (C) The variable the experimenter manipulates in order to examine its effect on the dependent variable.
 - (D) The variable the experimenter measures in order to see if it was affected by the change in the dependent variable.

- 931.** What are the other names for dependent and independent variables?
- (A) Externous and control variables
 - (B) Continuous and descrete variables
 - (C) Causal and explanatory variables
 - (D) Cause and effect variables
 - (E) Not aware of
- 932.** Separating out the effects of particular factors so they do not influence/affect the results/outcome of the research
- (A) Controlling the factors
 - (B) Research question
 - (C) Measurement; measure
 - (D) Method, procedure, steps taken
- 933.** Data that can be classified or placed into group is known as
- (A) Anomalous
 - (B) Variables
 - (C) Categorical
 - (D) Graphical
- 934.** When experimenting with the growth of a plant, a scientist uses three (of the same type of) plants, two different fertilizers, equal light, and equal water. Equal light and equal water are what types of variable?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Constants
 - (D) None of above
- 935.** What type of variable in an experiment is actually manipulated to see if it has an effect on another variable?
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Confounding Variable
 - (D) Placebo
- 936.** In a controlled experiment, researchers manipulate one variable to observe its effect on another. Which term best describes the variable that is systematically measured to determine the outcome of this manipulation?
- (A) Dependent Variable (DV)
 - (B) Nominal Variable
 - (C) Predictor Variable
 - (D) Interval Variable
- 937.** The variable we measure to get our results the:
- (A) Dependent Variable
 - (B) Independent Variable
 - (C) Constant
 - (D) None of above
- 938.** Identify the highlighted word/s. "A study on customers' satisfaction based on the quality of food offered in a restaurant."
- (A) Dependent Variable
 - (B) Independent Variable
- 939.** How many independent variables should you have in an experiment?
- (A) Two
 - (B) As many as possible
 - (C) Four
 - (D) One
- 940.** If you get at least 6 hours of sleep, you will do better on tests than if you get less sleep. What is the dependent variable in this experiment?
- (A) Test Scores
 - (B) Amount of Sleep
 - (C) Amount of Coffee
 - (D) None of the Above
- 941.** A variable which is considered as a consequence of one variable.
- (A) INDEPENDENT VARIABLE
 - (B) DEPENDENT VARIABLE
 - (C) CONTROL VARIABLE
 - (D) EXTRANEIOUS
- 942.** Taking a word which is open to interpretation and making it measurable.
- (A) Operationalisation
 - (B) Questionnaire
 - (C) Structured interview
 - (D) Survey

- 943.** Classify the variable as categorical or quantitative. Number of "close friends" a person reports having
(A) Categorical
(B) Quantitative
- 944.** T8-If you get at least 6 hours of sleep, you will do better on tests than if you get less sleep. What is the independent variable in this experiment?
(A) Amount of Sleep
(B) Test Scores
(C) Amount of Coffee
(D) Type of Bed
- 945.** We wish to investigate the relationship between the number seeds planted in a garden and the number of fruit grown. The explanatory variable (EV) is
(A) The number of fruit grown
(B) The amount of soil in the garden
(C) The number of hours spent watering the plants
(D) The number of seeds planted
- 946.** Classify the variable as categorical or quantitative. Number of tattoos on a person
(A) Categorical
(B) Quantitative
- 947.** Which of the following best describes a manipulated variable?
(A) A variable that is measured as a result of the experiment
(B) A variable that is purposely changed or manipulated
(C) A variable that is kept constant
(D) A variable that is not recorded
- 948.** What defines research variables in measurable terms?
(A) Conceptual Definition
(B) Operational Definition
(C) Theoretical Framework
(D) Literature Review
- 949.** Which of the following best describes a confounding variable in an experiment?
(A) A variable that is intentionally manipulated by the researcher
(B) A variable that is kept constant throughout the experiment
(C) A variable that unintentionally influences the outcome of the experiment
(D) A variable that is measured as the result of the experiment
- 950.** Consider the within-subjects mood study table below. IV is mood induction. Key DV is ice cream buying. On Monday, in Order #1, participants are made happy and asked 'Want to buy ice cream?'. On Tuesday, they are made sad and asked the same question. In Order #2, the order is reversed. What is the independent variable (IV) in this study?
(A) The day of the week
(B) Mood induction (happy or sad)
(C) Ice cream buying
(D) The order of conditions
- 951.** Question that has two possible categories is an example of ____ Variable.
(A) Dichotomous
(B) Continuous
- 952.** Classify this data variable: Model
(A) Quantitatively Discrete
(B) Quantitatively Continuous
(C) Categorically Nominal
(D) Categorically Ordinal
- 953.** The ____ variable has an effect on the ____ variable
(A) Dependent, independent
(B) Independent, dependent
- 954.** Which variable is deliberately changed to observe its effect?
(A) Dependent variable measured as outcome
(B) Independent variable manipulated by researcher

- (C) Confounding variable external and misleading
- (D) Control variable kept constant throughout
- 955.** What internal validity issue can arise from external influences in field settings?
- (A) They can eliminate confounding variables.
- (B) They can introduce confounding variables.
- (C) They can strengthen the study's internal validity.
- (D) They have no effect on the study's internal validity.
- 956.** Which of the following descriptions exemplifies a scientific relationship?
- (A) Children who receive frequent teacher approval are more likely to stay on task.
- (B) There are three basic types of parenting styles used in American homes.
- (C) Most school administrators express frustration with school funding levels.
- (D) The average math achievement of male and female ninth graders is about the same.
- 957.** It is any existing or observable fact or situation that we want to unearth further or understand
- (A) Idea
- (B) Phenomenon
- (C) Knowledge
- (D) Concept
- 958.** Variables represent ____
- (A) ____ a preference in people.
- (B) ____ a value we're trying to find.
- (C) ____ a characteristic we are studying.
- (D) ____ a result we are calculating.
- 959.** Many research studies in education are designed to test the effectiveness of different instructional methods. In this kind of research, the instructional methods being studied constitute a
- (A) Constant
- (B) Scale
- (C) Variable
- (D) Research hypothesis
- 960.** What is the purpose of controlling extraneous variables in an experiment?
- (A) To ensure that any observed effects are due to the manipulated dependent variable.
- (B) To ensure that any observed effects are due to the manipulated independent variable.
- (C) To increase the external validity of the research findings.
- (D) To allow for more confounding factors to be introduced.
- 961.** A type of quantitative variable which can take any numerical value within a specified range.
- (A) Continuous Variable
- (B) Discrete Variable
- (C) Variable
- (D) None of above
- 962.** What are the effects associated with the way independent variables work together called?
- (A) Main effects
- (B) Interaction effects
- (C) Control effects
- (D) Factorial effects
- 963.** The dependent variable in the experiment is the
- (A) Amount of aggressive behavior exhibited by the children
- (B) Amount of time that each child spent interacting with the other children
- (C) Group in which each child was originally placed
- (D) Violent cartoon
- 964.** The variable that needs to be controlled-that is, eliminated or held constant-in a quantitative study is the:
- (A) Outcome variable

- (B) Dependent variable
(C) Independent variable
(D) Confounding variable
- 965.** Which of the following variables is Qualitative?
(A) Age
(B) Weight
(C) Height
(D) Physical activity
- 966.** What is the dependent variable (quantitative) in the Sample Geology Research Design Table?
(A) Number of fossils (# per kg)
(B) Type of rock
(C) Location of sample
(D) Date of collection
- 967.** Ben makes five paper helicopters with different wing lengths. He drops them the same way from a height of two meters for five trials each. He records the amount of time it takes for each helicopter to fall to the ground. What is the independent variable?
(A) Dropping the same way
(B) Wing Length
(C) Amount of time it takes the helicopter to hit the floor
(D) Dropping from the same height
- 968.** The research method is Descriptive. The researcher will investigate how Social Cognitive Theory (states we learn while we interact with other people) happens to students during group activity. It will focus on students' self-esteem as affected by communication skills. What type of variable is "students' self-esteem"
(A) Dependent
(B) Independent
(C) Confounding
(D) Moderator
- 969.** The primary cause of invasive species introduction is
(A) Too much food
(B) Human actions
(C) Weather events
(D) Asteroids
- 970.** The variable that experimenters manipulate is called the ____ variable.
(A) Independent
(B) Intervening
(C) Hypothetical
(D) Dependent
- 971.** This is an attribute that describes an entity such as a person, place or a thing and the value that variable take may vary from one entity to another.
(A) Variable
(B) Sample
(C) Parameter
(D) Population
- 972.** An intervention in a research study is
(A) An independent variable
(B) A dependent variable
(C) An attribute variable
(D) A confounding variable
- 973.** A variable (or response variable) is
(A) A characteristic of interest about each individual element of a population or sample
(B) A characteristic that is irrelevant to the collection of the data
(C) A characteristic that changes when the data is collected
(D) A characteristic or trait that will be ignored in a sample population
- 974.** In a science experiment, Arjun is testing how different amounts of sunlight affect the growth of plants. The amount of sunlight that Arjun provides to the plants is ____
(A) Independent Variable
(B) Dependent Variable

975. The Independent/Manipulated Variable goes on the ____ axis
(A) X
(B) Y
976. Extraneous variables are nuisance variables.
(A) True
(B) False
977. It refers to any quality or characteristic of the entity that is under investigation.
(A) Variable
(B) Instrument
(C) Data
(D) None of above
978. The variable that shows the effect of the independent variable is the:
(A) Dependent variable
(B) Moderator variable
(C) Control variable
(D) Nominal variable
979. The reason for hospital admission is what type of variable?
(A) Quantitative variable
(B) Qualitative variable
(C) Ordinal qualitative variable
(D) Binary qualitative variable
(E) Discrete quantitative variable
980. Which scale would you use for ranking attendance order?
(A) Nominal
(B) Ordinal
(C) Ratio
(D) Interval
981. In an experiment to determine the effects of exercise on motivation, exercise is the
(A) Control condition
(B) Intervening variable
(C) Independent variable
(D) Dependent variable
982. Aspects of behavior that cannot be seen or measured directly
(A) Validation
(B) Replicated
(C) Constructs
(D) Hypothesis
983. The factor that may change in response to the manipulated variable is called the ____
(A) Variable
(B) Manipulated variable
(C) Responding variable
(D) Result
984. In a study examining the impact of different study techniques on exam scores, the dependent variable is:
(A) The choice of study technique
(B) The exam scores
(C) The duration of the study session
(D) The students' age
985. A symbol for an unknown value is called a ____ It is usually a letter such as a, X or Y.
(A) Constant
(B) Coefficient
(C) Operator
(D) Variable
986. Mario wants to find out the absorption capacity of sponge he made. What is the dependent variable in his experiment?
(A) The absorption capacity of sponge
(B) The sponge he made
(C) The absorption of Mario
(D) The experiment of Mario
987. A researcher is studying the effect of music on plant growth. The type of music played is an example of which type of variable?
(A) Quantitative
(B) Qualitative
(C) Continuous
(D) Discrete

988. Which of the following is NOT true about extraneous variables?
- (A) They can influence the relationship between the independent and dependent variables
 - (B) They can lead to confounding effects
 - (C) They are always related to the research question
 - (D) They should be controlled in a research study
989. What is a constant?
- (A) The normal situation
 - (B) The thing we measure in the end
 - (C) The thing we are testing
 - (D) The thing we keep the same for every part of the experiment
990. Which of the following is an example of an operational definition?
- (A) The theoretical framework guiding the research
 - (B) How creativity among school-age children is measured
 - (C) The significance of a research problem
 - (D) The methodology of the study
991. What variable “RESPONDS to a change” in an experiment?
- (A) Independent
 - (B) Dependent
 - (C) Control
 - (D) Intervals
992. Refers to making something clear, specific, and measurable.
- (A) Operationalize
 - (B) Replication
 - (C) Random assignment
 - (D) Double-blind
993. These are any data sets that involve numbers or amounts.
- (A) Dependent Variable
 - (B) Extraneous Variable
 - (C) Moderating Variable
 - (D) Quantitative Variable
- Explanation:** Quantitative variables involve numbers or amounts.
994. A physical or mental change that occurs in participants over time that affects their performance on the dependent variable is called ____
- (A) Instrumentation.
 - (B) Maturation.
 - (C) Regression.
 - (D) None of above.
995. A type of variable that is treated as intervention of a research problem is ____
- (A) Independent Variable
 - (B) Antecedent Variable
 - (C) Dependent Variable
 - (D) Intervening Variable
996. What is a quantitative variable that can take on a certain number of values?
- (A) Categorical variable
 - (B) Qualitative variable
 - (C) Discrete variable
 - (D) Numerical variable
997. What is the process of turning concepts like length or unemployment status into precisely defined variables called?
- (A) Calculation
 - (B) Measurement
 - (C) Estimation
 - (D) Evaluation
998. The variable that we measure or observe is the ____
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Control
 - (D) None of above
999. This refers to the presumed effect.
- (A) Independent Variable
 - (B) Dependent Variable

- (C) Statement of Purpose
(D) Statement of Problem
- 1000.** The variable that is being tested or changed
(A) Independent variable
(B) Dependent variable
(C) Control variable
(D) None of above
- 1001.** Which of the following is NOT continuous data?
(A) Person's height each year
(B) The volume of water in a swimming pool each day
(C) Cars finished in a factory
(D) Height of a plant each day
- 1002.** What measures the effects of the independent variable?
(A) Confounding variable
(B) Dependent variable
(C) Experimental variable
(D) Interdependent variable
- 1003.** In an experiment, the variable that changes in response to manipulated variable is known as: *It is also known as the "outcome" variable
(A) Independent variable
(B) Dependent variable
(C) Changing variable
(D) Control variable
- 1004.** Which of the following is one of the main properties used to describe a population?
(A) Number of individuals
(B) Color of individuals
(C) Number of species
(D) Kind of adaptations
- 1005.** Weight-Is it classified as numerical or categorical?
(A) Categorical
(B) Numerical
- 1006.** Height or weight of individual are continuous variable as they can be fraction
(A) True
(B) False
- 1007.** A statement of procedure used to define research variables is what?
(A) Operational definition
(B) Case study
(C) Naturalistic observation
(D) Survey
- 1008.** The variable that is measured throughout the experiment is the ____ Hint:It may change as a result of your testing.
(A) Controlled Variable
(B) Responsive Variable
(C) Dependent Variable
(D) Independent Variable
- 1009.** Choose the alternative that correctly completes the following statement: A variable is something that varies, and this variation is subject to being ____
(A) Explained
(B) Measured
(C) Controlled
(D) Ignored
- 1010.** What type of variable can be ordered or arranged?
(A) Interval
(B) Nominal
(C) Ordinal
(D) Ratio
- 1011.** The principle in correlational studies is that some variables ____
(A) Procreate
(B) Co-vary
(C) Disseminate
(D) Cooperate
- 1012.** Which of the following is/are the examples of qualitative variable?

- (A) Sex.
(B) Religion and Caste.
(C) Both (A) and (B).
(D) None of these.
- 1013.** The more stress a person experiences causes a decrease in their health. This is an example of ____
(A) Positive correlation
(B) Negative correlation
- 1014.** It is a variable that is dependent on the independent variable
(A) ORDINAL VARIABLE
(B) NOMINAL VARIABLE
(C) DEPENDENT VARIABLE
(D) INDEPENDENT VARIABLE
- 1015.** Identify the response variable in this scenario: The weeds in my garden are 2 inches taller today after the heavy rain we received last night.
(A) Height of weeds
(B) Amount of rain
(C) Neither "height of weeds" or "amount of rain"
(D) Could be "height of weeds" or "amount of rain"
- 1016.** Categories have no implied rank or order. distance between them may differ greatly. these are mutually exclusive categories. here the order matters but the distance between them doesn't: pain scales, cancer stages
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 1017.** What is the importance of operational definitions in research?
(A) To provide clarity and specificity to concepts
(B) To complicate the research process
(C) To entertain the audience
(D) To summarize the findings
- 1018.** Tiffany was investigating how fast it took people to react to different sounds. Identify the manipulated variable.
(A) The time it takes people to react
(B) Different sounds
(C) Types of music
(D) People
- 1019.** The factor of an experiment that might change because of the independent variable
(A) Hypothesis
(B) Independent variable
(C) Dependent variable
(D) Controlled experiment
- 1020.** In an experiment, this is main factor that is being studied, the "if" part of the study.
(A) Distribution
(B) Confounding variable
(C) Independent variable
(D) Correlation
- 1021.** Other type of variable, which is quantitative in nature and is used in interval or ratio scale of measurement.
(A) Covariate
(B) Dichotomous
(C) Latent
(D) Continuous
- 1022.** When an untested variable may be causing the relationship between co-variables, this is:
(A) The first variable problem
(B) The second variable problem
(C) The third variable problem
(D) The fourth variable problem Edit
- 1023.** The study aims to determine the profile of teachers across five specific demographic characteristics. Which of the following is NOT listed as a profile variable?
(A) Age
(B) Salary
(C) Sex
(D) Educational Attainment

- 1024.** In a study examining the relationship between hours of study and exam scores, what would be the dependent variable?
- (A) Hours of study
 - (B) The type of exam
 - (C) Exam scores
 - (D) The location of the study
- 1025.** Complete the statement: The variable that comes between the independent variable and the dependent variable is the ____
- (A) Intervening variable
 - (B) Independent variable
 - (C) Moderating variable
 - (D) Control variable
- 1026.** Which of the following is a measurable characteristic that varies in a study?
- (A) Hypothesis
 - (B) Variable
 - (C) Research question
 - (D) Conclusion
- 1027.** Which of these are NOT examples of physical environments?
- (A) Soil
 - (B) Climate
 - (C) Plant life
 - (D) Transportation
- 1028.** What is the name of the variable that is PURPOSELY changed during an experiment?
- (A) Constant
 - (B) Dependent variable
 - (C) Independent variable
 - (D) None of above
- 1029.** Which variable in psychological research is being described below? this is the variable that may change when the independent variable is manipulated
- (A) Confounding variable
 - (B) Dependent variable
 - (C) Independent variable
 - (D) Correlation
- 1030.** Which of these is NOT discrete data?
- (A) How many students are absent from school each day
 - (B) The number of people who drive through a red light each hour during rush hour
 - (C) Height of a sunflower as measured each day
 - (D) All of the data is discrete
- 1031.** During an experiment, which factors must be controlled so that researchers can draw a logical conclusion from the experiment?
- (A) Variables
 - (B) Hypothesis
 - (C) Theories
 - (D) Inquiries
- 1032.** What is the Dependent Variable in this statement? "The main purpose of this study is to compare the effectiveness of two teaching methods, Audio-lingual and Task-based teaching, in increasing listening comprehension"
- (A) Audio-lingual method
 - (B) Listening comprehension
 - (C) Task-based teaching method
 - (D) Teaching methods
- 1033.** Confounding Variable in scientific experimentation is an experimental element which is constant and unchanged throughout the course of the investigation.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 1034.** An operational definition should primarily accomplish which goal?
- (A) Randomly assign subjects to reduce bias
 - (B) Provide a precise, replicable measurement description
 - (C) Manipulate variables to test hypotheses
 - (D) Ensure accuracy rather than consistency alone

- 1035.** Mr. I. sets up an experiment to see how the mass of a ball affects the distance it rolls off a ramp. Identify the dependent variable.
- (A) Height of the ramp
 - (B) Distance traveled by the ball
 - (C) Mass of the ball
 - (D) Weight of the ball
- 1036.** Which type of variable is used to categorize people by their preferred mode of transportation (e.g., car, bicycle, bus), and why can't this be classified as ordinal, interval, or ratio?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1037.** A questionnaire can be used as part of an experiment to measure:
- (A) The dependent variable
 - (B) An extraneous variable
 - (C) A confounding variable
 - (D) Any variable Edit
- 1038.** A researcher wants to know whether U.S. sanctions reduce Iran's nuclear ambitions. However, international pressure also affects both U.S. sanctions and Iran's policy choice s. Here, "international pressure" acts as a:
- (A) Confounding
 - (B) Intervening
 - (C) Dependent
 - (D) Antecedent
- 1039.** A part of the experiment that changes
- (A) Hypothesis
 - (B) Variables
 - (C) Observation
 - (D) Trial
- 1040.** In the statement 'an examination of the effects of discretionary behavior on employee performance' employee performance is the
- (A) Causal variable.
 - (B) Independent variable.
 - (C) Extraneous variable.
 - (D) Dependent variable.
- 1041.** Why do variables in a study need to be controlled?
- (A) To ensure the results are due to the independent variable
 - (B) To make the study more complex
 - (C) To increase the number of variables
 - (D) To confuse the participants
- 1042.** In research investigating the impact of advertising spending on product sales, the dependent variable is:
- (A) The product being sold
 - (B) The advertising spending
 - (C) The season of the year
 - (D) The product sales
- 1043.** Randomly assigning participants to conditions / eliminates issues associated with participant / variables differ from random sampling
- (A) Double-blind studies
 - (B) Random assignment
 - (C) Random sampling
 - (D) None of above
- 1044.** What type of data? The ratings of a movie ranging from "poor" to "good" to "excellent"
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1045.** Kelly is conducting a research study focused on teen females. Teen females would be considered the ____ of her research study.
- (A) Population
 - (B) Sample
 - (C) Consumer
 - (D) Customer
- 1046.** Scientific Question: Does the type of sneaker you wear affect how fast you can run? What is the independent variable?

- (A) Type of sneaker
 - (B) How fast you run
 - (C) Person
 - (D) None of above
- 1047.** What is the name of an unknown variable that correlates with the independent variable and explains the outcome of the experiment in the same way as the specified independent variable does?
- (A) A confounded variable.
 - (B) An extraneous variable.
 - (C) A controlled variable.
 - (D) An implicit variable.
- 1048.** A prejudice for or against something
- (A) Bias
 - (B) Discrimination
 - (C) Opinion
 - (D) Point of view
- 1049.** A variable is best defined as
- (A) Something which varies despite efforts to control it.
 - (B) Ribute which is influenced by the experimenter
 - (C) Measurable attribute of objects, things or beings
 - (D) Any attribute which disturbs the experimentation.
- 1050.** The effects of the independent variable on the dependent variables are measured.
- (A) True
 - (B) False
- 1051.** What is the main role of keywords in the research background?
- (A) To help identify the research variables
 - (B) To make the background section longer
 - (C) To replace the thesis statement
 - (D) To act as the conclusion
- 1052.** A bug repellent was sprayed on one arm. On the other arm, the bug repellent was not sprayed. After 2 hours, the number of bug bites are recorded. What is the independent variable?
- (A) The type of bug repellent
 - (B) If an arm was sprayed with bug repellent or not
 - (C) The number of bug bites Edit
 - (D) None of above
- 1053.** The zero point is fixed, the values of the ratio of the scale can be calculated
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1054.** Scale that indicates the relative position of two or more objects or some characteristics is called
- (A) Ordinal Scale.
 - (B) Arbitrary Scale.
 - (C) Ranking Scale.
 - (D) Ratio Scale.
- 1055.** What is the term for the following definition? The variable in an experiment that is purposely changed or manipulated, either in quantity or quality, by the researcher; also referred to as the manipulated variable.
- (A) Independent variable (IV)
 - (B) Dependent variable (DV)
 - (C) Control variable
 - (D) Extraneous variable
- 1056.** The variable that causes a change is the
- (A) Constant
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Control
- 1057.** Is is possible for the research instrument used to collect data to be reliable but not valid.
- (A) TRUE
 - (B) FALSE

- 1058.** The quantitative variable that can take all the possible values within a range is called ____
(A) Continuous Data
(B) Discrete Data
- 1059.** Do different types of music make a difference in test scores? What is the dependent variable?
(A) The type of music
(B) The volume of the music
(C) How well the student does on a test
(D) The type of test
- 1060.** A Variable is an attribute or characteristic stated in a specific or applied way
(A) True
(B) False
(C) All the above
(D) None of the above
- 1061.** The elaboration of the variables in the theoretical framework addresses which type of questions?
(A) Why we expect certain relationships to exist.
(B) How we expect certain relationships to exist.
(C) Both of the given questions.
(D) None of the given questions.
- 1062.** These refers to a person, place things or phenomenon that needs to be measured in some way?
(A) Variables
(B) Conceptual Framework
(C) Objective of the study
(D) Methodology
- 1063.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the censorship rating on a movie showing at the cinema.
(A) Categorical
(B) Continuous Numerical
(C) Discrete Numerical
(D) None of above
- 1064.** Undesirable variables that influence the relationship between the independent and dependent variables.
(A) Extraneous (confounding) variables
(B) Placebos
(C) Bias
(D) Triangulation
- 1065.** Which of the following is NOT a type of research variable?
(A) Independent Variable
(B) Dependent Variable
(C) Intervention Variable
(D) Control Variable
- 1066.** The variable that researcher is attempting to predict and by convention is denoted by the letter Y.
(A) DEPENDENT VARIABLES
(B) INDEPENDENT VARIABLES
(C) VARIABLES
(D) HYPOTHESIS
- 1067.** A quantity susceptible or liable to fluctuations or change in value, level, degree, scale, or magnitude under different conditions.
(A) Independent
(B) Dependent
(C) Variable
(D) Constant
- 1068.** Where should the independent variable be on the graph?
(A) X axis
(B) Y axis
(C) Z axis
(D) In the key
- 1069.** What is a controlled variable in a science experiment/investigation?
(A) The part of the experiment that we measure.
(B) The part of the experiment that we manipulate or change.

- (C) The part of the experiment that we keep the same between trials.
- (D) When we make a prediction about what we think the results will show.
- 1070.** Why should variables be defined?
- (A) Because operationalizing a variable makes it measurable
- (B) Because definitions replace data collection
- (C) Because variables cannot change once defined
- (D) Because definitions eliminate the need for analysis
- 1071.** Daniel was investigating how fast it took mice to react to different sounds. Identify the independent variable.
- (A) How fast mice reacted
- (B) Different sounds
- (C) Types of music
- (D) Daniel
- 1072.** The variable GDP per capita (in USD) is measured at which level?
- (A) Interval
- (B) Ratio
- (C) Ordinal
- (D) Nominal
- 1073.** In Quantitative Research, a ____ is something that does not change but takes on a single value.
- (A) Variable
- (B) Constant
- (C) Construct
- (D) None of above
- 1074.** Why do we want to test only one independent variable at a time?
- (A) Because it is hard to setup a data table with more than one variable
- (B) To better identify what is causing the changes
- (C) It is what has always been done
- (D) It's easier to perform the experiment
- 1075.** In a scientific experiment, which variable does the researcher deliberately change to observe its effect on another variable, and why is this manipulation important for testing hypotheses?
- (A) Independent Variable (IV)
- (B) Dependent Variable (DV)
- (C) Nominal Variable
- (D) Ordinal Variable
- 1076.** Penelope wanted to see if the temperature of the oven made cookies softer or harder. What is the independent variable.
- (A) Hardness of cookie
- (B) Type of oven
- (C) Temperature of oven
- (D) None of above
- 1077.** If you conduct an experiment where you place 5 of the same red candies in different types of soda, all in the same amount of liquid and same type cups the independent variable is what?
- (A) Kind of soda
- (B) Type of cup
- (C) Amount of soda
- (D) Color of candy
- 1078.** The variable that you measure is the-
- (A) Independent Variable
- (B) Dependent Variable
- (C) Controlled Variable
- (D) Repeated Trial
- 1079.** The process of defining exactly how you will measure and/or manipulate the variables in a study.
- (A) Independent Variable
- (B) Dependent Variable
- (C) Operationalization
- (D) Validity

- 1080.** Which of the following is a scientific value of separating identical triplets and placing them in different environments for a study?
- (A) It allows for control of genetics, as identical triplets share virtually 100% of their DNA.
 - (B) It ensures all participants are aware of the study's purpose.
 - (C) It prevents any psychological harm to the participants.
 - (D) It guarantees that all families are fully informed.
- 1081.** Observation or Inference? The sun rose at 6:54 this morning.
- (A) Observation
 - (B) Inference
- 1082.** Which of the following is a variable?
- (A) Never married.
 - (B) Married.
 - (C) Divorced.
 - (D) Marital Status.
- 1083.** To investigate the effects of exercise on mathematical problem-solving ability, a researcher assigned subjects to one of the two groups. One group did 50 jumping jacks, the other group did 200 jumping jacks. After exercising, both groups did a set of math problems and their performances were compared. In this experiment, the number of jumping jacks is the ____ variable.
- (A) Control
 - (B) Independent
 - (C) Dependent
 - (D) Intervening
- 1084.** The behavior or mental process that is measured in an experiment (the effect)
- (A) Dependent variable
 - (B) Independent variable
 - (C) Random sample
 - (D) None of above
- 1085.** Which type of variable is held constant to avoid bias in results?
- (A) Control variable
 - (B) Dependent variable
 - (C) Independent variable
 - (D) Extraneous variable
- 1086.** What is the constant?
- (A) What we are changing or testing
 - (B) What we are observing or measuring
 - (C) What we keep the same to make the experiment fair
 - (D) None of above
- 1087.** Children who play violent video games become violent adults. What is the independent variable?
- (A) Children
 - (B) Violence in adults
 - (C) Age
 - (D) Playing violent video games
- 1088.** Find the Independent Variable: You experiment to see if a bouncy ball or a tennis ball bounces higher.
- (A) Type of ball
 - (B) Same drop height
 - (C) Height of bounce
 - (D) Same surface
- 1089.** Which variable always goes on the y-axis (vertical)?
- (A) Independent
 - (B) Dependent
 - (C) Constant
 - (D) Control
- 1090.** It refers to a variable that causes changes, provides effect, and influences the outcome of other variables.
- (A) Confounding
 - (B) Independent
 - (C) Intervening
 - (D) Ordinal

- 1091.** The process of assigning number values to objects/characteristics is called ____
(A) Measurement
(B) Evaluation
(C) Estimation
(D) Classification
- 1092.** Operationalization refers to:
(A) Drawing a regression line
(B) Writing a literature review
(C) Turning theoretical concepts into measurable variables
(D) Measuring the antecedent variable
- 1093.** A variable that can take the infinite number on the value that can occur within a population. It can be answered by decimal point
(A) Dependent Variable (DV)
(B) Independent Variable (IV)
(C) Discrete Variable
(D) Continuous Variable
- 1094.** The factor that depends on the independent variable.
(A) Conclusion
(B) Dependent variable
(C) Bubbles
(D) Independent variable
- 1095.** The first variable is ____ variable
(A) Abstract
(B) Dependent
(C) Independent
(D) Separate
- 1096.** In research, the presumed cause is:
(A) Independent variable
(B) Dependent Variable
(C) Subject
(D) Site
- 1097.** A variable that is antecedent to a certain variable.
(A) DEPENDENT VARIABLE
(B) INDEPENDENT VARIABLE
(C) CONTROL VARIABLE
(D) EXTRANEIOUS VARIABLE
- 1098.** A symbol for an unknown value.
(A) Proportion
(B) Variable
(C) Mean
(D) Integer
- 1099.** Why is it important to change one variable at a time in single case designs?
(A) Changing one variable allows isolation of the cause of the change.
(B) Changing more than one variable at a time confounds those independent variables.
(C) Both A and B are true.
(D) None of the above.
- 1100.** What is a variable in educational research?
(A) A characteristic that does not vary across participants
(B) A quantitative value
(C) A person or thing on whom we collect data
(D) A measurable characteristic
- 1101.** A ____ scale only assigns numbers to objects to classify the objects according to the characteristic of interest.
(A) Dichotomous.
(B) Nominal.
(C) Interval.
(D) Ratio.
- 1102.** In the context of an experiment, what is the relationship between the independent variable and the dependent variable?
(A) The independent variable is affected by the dependent variable.
(B) The independent variable is manipulated to observe its effect on the dependent variable.
(C) The independent variable and dependent variable are the same.

- (D) The independent variable is not related to the dependent variable.
- 1103.** Measurable characteristics that vary, or change, over time or across people
- (A) Variable
 - (B) Theory
 - (C) Random sample
 - (D) None of above
- 1104.** Justin wants to determine the effect of fertilizer on the growth of grass. What is the dependent variable?
- (A) Amount of fertilizer
 - (B) Height of grass
 - (C) Type of plant
 - (D) Time
- 1105.** The variable which is influenced by the intervention of the researcher is called:
- (A) Independent
 - (B) Dependent
 - (C) Discrete
 - (D) Extraneous
- 1106.** What is the INDEPENDENT variable in this experiment?"Which type of medium is best for plant growth?
- (A) Height of plant (cm)
 - (B) Type of medium (soil vs. sand)
 - (C) Amount of medium
 - (D) Types of plant
- 1107.** Which of the following is NOT necessary when determining causal relationship between variables?
- (A) The two variables must be correlated
 - (B) All other possible factors must be considered
 - (C) The research must be based on entire populations, not just representative samples
 - (D) A change in the independent variable must occur before a change in the dependent variable can occur
- 1108.** The term used to describe a memory location whose value changes during program execution
- (A) Constant.
 - (B) Volatile.
 - (C) Variable.
 - (D) Dynamic.
- 1109.** What is the independent variable in the study of the effect of sleep on memory?
- (A) Memory test performance score
 - (B) Amount of sleep
 - (C) Type of memory test
 - (D) Time of day
- 1110.** Which term refers to the level of exactness or consistency in a measurement or result?
- (A) Falsifiability
 - (B) Parsimony
 - (C) Precision
 - (D) Replicability
- 1111.** Letter grades (A, B, C, D, or F) that an English 100 class received on their essays. what type of variable is this?
- (A) Qualitative/ categorical
 - (B) Quantitative/ numeric
 - (C) Quantitative and discrete
 - (D) Quantitative and continuous
- 1112.** The variable that researchers manipulate so that they can determine its effect
- (A) Independent variable
 - (B) Dependent variable
 - (C) Variable variable
 - (D) Beyonce variable Edit
- 1113.** Identify the independent variableThe number of hours, h, worked and the amount of money, m, earned
- (A) Hours, h
 - (B) Money, m
 - (C) The type of job, j
 - (D) There are no independent variables in this situation

- 1114.** A scientist conducted an experiment to determine how the amount of salt in a body of water affects the number of plants that can live in the water. In this experiment the dependent variable is
- (A) The amount of salt in the water
 - (B) The temperature
 - (C) The number of plants in the water
 - (D) None of above
- 1115.** Which of the following is an example of an operationalised behaviour in a checklist on student behaviour in the library
- (A) Student chills out
 - (B) Student gets moody
 - (C) Student gets happy
 - (D) Student is making notes for 20 minutes
- 1116.** A dependent variable is:
- (A) A controlled factor in research
 - (B) The outcome measured based on independent variables
 - (C) A variable with no significance in research
 - (D) A randomly selected component
- 1117.** ___ are those variables the researcher is unable to control, or does not choose to control, and which can influence the results of a study.
- (A) Extraneous Variables
 - (B) Independent Variable
 - (C) Dependent Variable
 - (D) Controlled Variable
- 1118.** True or False. Gender is a qualitative variable.
- (A) True
 - (B) False
- 1119.** A measurement error is:
- (A) The scale to measure variation
 - (B) The difference between a true and obtained score
 - (C) The measurement of a construct
 - (D) None of above
- 1120.** The operations (measurements) a researcher must perform to collect the desired information; putting the conceptual definition into observable or measurable terms
- (A) Conceptual definition
 - (B) Operational definition
- 1121.** The factor that researchers manipulate in an experiment is called the dependent variable.
- (A) TRUE
 - (B) False; placebo
 - (C) False; independent
 - (D) None of above
- 1122.** The course for the race is 5 miles long.
- (A) Quantitative observation
 - (B) Qualitative observation
 - (C) An observation
 - (D) None of the answers
- 1123.** The variable that is being measured
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) None of above
- 1124.** In the context of experimental design, what does 'DV' stand for?
- (A) Dependent Variable
 - (B) Direct Value
 - (C) Derived Vector
 - (D) Design Variable
- 1125.** In research, what does the term 'operationalization' refer to?
- (A) Formulating a research hypothesis
 - (B) Defining how variables will be measured
 - (C) Collecting data from participants
 - (D) Analyzing the results of a study
- 1126.** In an experiment to find out the effects of sunlight on a plant's growth the experimenter completes the following steps. They allow one plant to get sunlight for 2 hours a day. Another plant receives 4 hours of sunlight,

- and the last plant receives 8 hours of sunlight. What is the independent variable?
- (A) The growth of the plant
 - (B) The amount of sunlight
 - (C) The amount of water
 - (D) The experimenter
- 1127.** Which of the following is true about control variables in a research study?
- (A) Control variables are independent variables that potentially influence the dependent variable.
 - (B) Control variables are variables that stand between the independent and dependent variables.
 - (C) Control variables are variables that researchers use statistical procedures to control.
 - (D) Control variables are variables that are not measured or observed in a study.
- 1128.** What could be a potential variable to study in relation to the number of push-ups a person can do?
- (A) 1 rep max bench press/body weight
 - (B) Favorite type of music
 - (C) Favorite color
 - (D) Number of books read per year
- 1129.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the times for the 100 m freestyle event at the world championships over the last 10 years.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 1130.** If I water the plant more often, then it will grow taller. Name the independent variable.
- (A) The height of the plant
 - (B) The size of the pot
 - (C) The amount of water
 - (D) The amount of light.
- 1131.** Which of the following is essential for ensuring reliability and validity when assigning numerical values to variables in research measurement? It requires the ___ and consistent observation of variables.
- (A) Systematic
 - (B) Random
 - (C) Subjective
 - (D) Qualitative
- 1132.** Input is also known as what?
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Additive Relationship
 - (D) None of above
- 1133.** A scientist wants to study the effects of different quantities of Aspirin on the cold. Which is the independent variable?
- (A) The different quantities of Aspirin.
 - (B) An improvement in the symptoms of the illness. Edit
- 1134.** An element that exists between the independent to the dependent variable. An integral part of the cause-effect relationship.
- (A) Independent variable
 - (B) Dependent variable
 - (C) Moderating variable
 - (D) Mediating variable/ intervening variable
 - (E) Control variable
- 1135.** What is the word in statistics for any characteristic or attribute of a person, place, or thing?
- (A) Variable
 - (B) Descriptive statistic
 - (C) Inferential statistic
 - (D) Parameter
- 1136.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the colours of the cars in the school car park.
- (A) Categorical
 - (B) Continuous Numerical

- (C) Discrete Numerical
(D) None of above
- 1137.** In order for a variable to be measured, a researcher must provide a
(A) Operational definition
(B) Hypothesis
(C) Theory
(D) Scale
- 1138.** What is a variable measured by the researcher as a small number of groups or categories?
(A) Variable measured as continuous
(B) Variable measured in categories
(C) Variable measured as a whole
(D) Variable measured in elements
- 1139.** The research method is True Experimental. The researcher will investigate on the relationship between students' perception on Outcome Based Education (OBE) and teachers' teaching strategy. What type of variable is "teachers' teaching strategy"
(A) Independent
(B) Dependent
(C) Extraneous
(D) Moderator
- 1140.** A student is planning an experiment to find out how the height from which he drops a ball affects how high the ball bounces. What is the control variable?
(A) The ball used
(B) The height the ball bounces
(C) Height of the ball being dropped
(D) None of above
- 1141.** What is the name of the variable that is PURPOSELY kept the same in an experiment, so it can be a fair experiment?
(A) Constant
(B) Dependent variable
(C) Independent variable
(D) None of above
- 1142.** In a controlled experiment, it is important to only change or test 1 variable while keeping everything else the same. These things we need to be sure to keep the same are called ____
(A) Control
(B) Independent variable
(C) Dependent variable
(D) Controlled variables/constant
- 1143.** In research, something that does not "vary" is called a ____
(A) Variable
(B) Method
(C) Constant
(D) Control group
- 1144.** What is the term for the following definition? The factors within an experiment that are kept the same for all groups or trials in an attempt to reduce the influence of extraneous variables.
(A) Constants
(B) Variables
(C) Controls
(D) Hypotheses
- 1145.** Constant
(A) A variable that can change over time.
(B) A fixed value that does not change.
(C) An unpredictable outcome.
(D) A temporary measure.
- 1146.** One researcher classified the participants as "good," "average," or "poor" readers. This researcher used a(n)
(A) Nominal scale.
(B) Ordinal scale.
(C) Interval scale.
(D) Ratio scale.
- 1147.** Ms. Stowe set up an experiment to see how the mass of a ball affects the distance it rolls off a ramp. Identify the responding variable.
(A) Distance traveled by the ball
(B) Height of the ramp
(C) Mass of the ball
(D) Where the experiment took place.

1148. Extraneous variables can produce explanations of an outcome separate from the independent variable, thereby creating a ____
(A) Rival hypothesis
(B) Supportive hypothesis
1149. Mr. Johnson wants to know if he could teach his dog tricks if he brought a new kind of treat. What is the Independent Variable?
(A) How many tricks the dog does
(B) The New Treat
(C) Mr. Johnson
(D) None of above
1150. Hypothesis: the louder a classroom environment is, the lower test scores will be. What is the independent variable?
(A) Test scores
(B) Level of noise in the classroom
(C) Type of class
(D) Seating arrangement in the classroom
1151. Which topic can BEST be studied with sleep quality?
(A) Fashion style-Fashion Style and Sleep Quality
(B) Movie genre-Movie Genre and Sleep Quality
(C) Bedtime-Bedtime and Sleep Quality
(D) Sports-Sports and Sleep Quality
1152. A researcher measures aggression by counting how many times a child hits a doll. This is an example of:
(A) Operationalization
(B) HARKing
(C) P-hacking
(D) Theory generation
1153. Which statement characterizes a confounding variable?
(A) A precise description of how to measure
(B) A baseline group not receiving treatment
(C) An external influence affecting both IV and DV
(D) A constant factor ensuring reliable results
1154. What is a 'Dependent Variable'? The variable being tested and measured in an experiment.
(A) Independent Variable
(B) Dependent Variable
(C) Control Variable
(D) Constant
1155. How many independent and dependent variables are there in a One-Way Within Groups ANOVA?
(A) 1 independent variable and 1 dependent variable
(B) 2 independent variables and 1 dependent variable
(C) 1 independent variable and 3 dependent variables
(D) 1 independent variable and 2 dependent variable
1156. These are variables that are categorical, such as eye color and hair color, and gender.
(A) Composite Variables
(B) Confounding variables
(C) Qualitative Variable
(D) Quantitative Variable
Explanation: Qualitative variables are categorical variables, such as eye color, hair color, and gender. They are not numerical or quantitative.
1157. A ____ is an element of an experiment that can change.
(A) Placebo
(B) Variable
(C) Ethic
(D) Value
1158. The independent variable is the ONE thing you ____ to test your hypothesis.
(A) Change
(B) Keep the same
(C) Experiment with
(D) Investigate

- 1159.** The outcome factor; the variable that is measured in the end of the experiment
- (A) Independent variable
 - (B) Dependent variable
 - (C) Controlled variable
 - (D) Uncontrolled variable
- 1160.** Choose the option that correctly completes the definition: Operationalization of variables is the process of taking a variable from the Abstract level to a ____ level.
- (A) Symbolic
 - (B) Conjectural
 - (C) Concrete
 - (D) Hypothetical
- 1161.** What word best describes stratified sampling method?
- (A) Demographics
 - (B) Platform
 - (C) Quantity
 - (D) Numbered
- 1162.** Ranking system is part of which classification?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1163.** Bias means the tendency for a test to overstate or understate the true performance of one or more groups.
- (A) True
 - (B) False
- 1164.** What is a dependent variable?
- (A) It is a variable that stands alone and isn't changed by the other variables you are trying to measure. For example, someone's age might be an independent variable.
 - (B) An element, feature, or factor that is liable to vary or change.
 - (C) The variable that depends on other factors that are measured. e.g. in a study looking at how tutoring impacts test scores. Test scores would be this variable.
 - (D) None of above
- 1165.** How many variables should be tested at a time?
- (A) Three
 - (B) Zero
 - (C) Two
 - (D) One
- 1166.** A scientist wants to see if watering a flower every day will result in better growth. What is the manipulated variable?
- (A) Amount of water
 - (B) Plant growth
 - (C) Temperature
 - (D) Ruler
- 1167.** What term refers to a variable that is not directly observable?
- (A) Construct
 - (B) Observation
 - (C) Index
 - (D) Items
- 1168.** Which of the following is an example of a discrete variable?
- (A) Temperature
 - (B) Distance
 - (C) Age
 - (D) Year/Grade Level
- 1169.** The consequence of the effect of independent variables, showing the nature of the research problem, is the:
- (A) Independent variable
 - (B) Dependent variable
 - (C) Confounder variable
 - (D) Intermediate variable
 - (E) Neutral variable

- 1170.** A variable that is obtained by counting like number of patients.
- (A) Continuous Variable
 - (B) Discrete Variable
 - (C) Numerical-Valued or Quantitative Variable
 - (D) Categorical or Qualitative Variable
- 1171.** The process of assigning numerals to objects according to some rules is termed as
- (A) Measurement.
 - (B) Observation.
 - (C) Analysis.
 - (D) Statistics.
- 1172.** If an examiner, inadvertently, allows three minutes extra time to some subjects in the group on a test of intelligence used in a research, this will introduce in the experiment
- (A) Sampling error of random nature.
 - (B) Measurement error of random nature.
 - (C) Measurement error of constant nature.
 - (D) Sampling error of constant nature.
- 1173.** In an experiment that looks at the effects of sugar consumption on hyperactivity in children, what would the independent variable be?
- (A) Hyperactivity
 - (B) Cookies
 - (C) The age of the experiment
 - (D) Sugar
- 1174.** Below are the examples of external interference except..
- (A) The voices of people talking at the corridor
 - (B) The ringing of mobile phones
 - (C) The pain of the back due to slipped disc
 - (D) The malfunctions of the LCD projector used
- 1175.** A variable that explains the relationship between the independent and dependent variables is:
- (A) Moderating variable
 - (B) Intervening variable
 - (C) Demographic variable
 - (D) Mediating variable
- 1176.** Classify this data variable: Number of Seats
- (A) Quantitatively Discrete
 - (B) Quantitatively Continuous
 - (C) Categorically Nominal
 - (D) Categorically Ordinal
- 1177.** Waiting time in a waiting room
- (A) Categorical
 - (B) Quantitative
- 1178.** When starting research, to avoid hard-to-correct errors later, one must:
- (A) Identify community participation
 - (B) Identify resources for the research
 - (C) Clearly identify the research variables
 - (D) Identify statistical algorithms to be applied
 - (E) Identify unimportant variables that can be omitted
- 1179.** In statistics, it is the characteristic, property or attribute that makes members of a group vary.
- (A) Continuous
 - (B) Discrete
 - (C) Polynomic
 - (D) Variable
- 1180.** What is the variable that the researcher measures to see how much effect the independent variable had?
- (A) Dependent variable
 - (B) Independent variable
 - (C) Confounding variable
 - (D) None of above
- 1181.** There are four basic measurement scales: the nominal, the ordinal, the interval, and the ratio. The nominal scale is strictly a qualitative scale. It is the simplest type of scale. It is used to distinguish logically separated groups.

- Which of the following illustrates the function of the nominal scale?
- (A) The weight of an Olympic barbell set
 - (B) A DSM or ICD diagnostic category
- 1182.** The independent variable is
- (A) The part the scientist measures
 - (B) The part the scientist changes or is testing, do not depend in any other variable
 - (C) A letter
 - (D) None of above
- 1183.** It is also known as STIMULUS VARIABLE
- (A) Dependent variable
 - (B) Intervening variable
 - (C) Independent variable
 - (D) None of above
- 1184.** In an experiment, what is manipulated by the researcher?
- (A) Dependent Variable
 - (B) Independent Variable
 - (C) Control Variable
 - (D) Random Variable
- 1185.** Dependent variable means
- (A) The scientist controls what to test
 - (B) Educated guess
 - (C) Ask a question
 - (D) What is being measured
- 1186.** Variables are things other than the independent variable that might influence the dependent variable
- (A) Independent variable
 - (B) Dependent variable
 - (C) Confounding variable
 - (D) None of above
- 1187.** Does changing the scent of a brand of dog food affect how much the dog eats? How much the dog eats is the ____
- (A) Independent variable
 - (B) Dependent variable
- 1188.** Any quality or quantity in which the researcher is interested and which varies in the course of the research
- (A) Purpose
 - (B) Variable
 - (C) Constant
 - (D) Goal
- 1189.** The number of individuals in an area of a specific size:
- (A) Population
 - (B) Population density
 - (C) Quadrat
 - (D) Demography
- 1190.** A description of the specific procedure used to determine the presence of a variable. Created so that the experiment can be replicated by others.
- (A) Operational definition
 - (B) Independent variable
 - (C) Control group
 - (D) None of above
- 1191.** A(n) ____ is a variable that mediates the effect of one variable on another.
- (A) Intervening variable
 - (B) Moderator variable
 - (C) Control variable
 - (D) Independent variable
- 1192.** What is the independent variable in the Sample Geology Research Design Table?
- (A) Soil sample from different depths (meters)
 - (B) Type of rock found in the sample
 - (C) Amount of water present in the soil
 - (D) Temperature of the environment
- 1193.** Which of the following refers to any systematic change that occurs over time in the way in which the dependent variable is assessed?
- (A) Maturation.
 - (B) Selection.
 - (C) Testing.
 - (D) Instrumentation.

- 1194.** Something that can be changed in an experiment that may affect the outcome
- (A) Variable
 - (B) Experiment
 - (C) Evidence
 - (D) None of above
- 1195.** A student wanted to see if the temperature of water would effect how fast a duck can swim. A baby duck was timed swimming across a small pool in 60°F and 80°F temperature water. What is the independent variable?
- (A) The size of the pool
 - (B) The temperature of the water
 - (C) The time to swim across the pool
 - (D) The duck that was swimming
- 1196.** In an experimental investigating the effects of two types of rewards on employee motivation, the type of rewards is the:
- (A) Dependent variable
 - (B) Extraneous variable
 - (C) Independent variable
 - (D) Employee salary
- 1197.** The ONE thing you, as the experimenter, change is called the:
- (A) Control
 - (B) Constants
 - (C) Independent variable
 - (D) Dependent variable
- 1198.** Which answer provides examples of situational variables?
- (A) Independent variables, dependent variables
 - (B) Time of day, noise level, temperature, location
 - (C) Prior experience, motivation, intelligence, educational background
 - (D) Extraneous variables, confounding variables Edit
- 1199.** A control variable is best described as which statement?
- (A) Unobserved construct inferred indirectly
 - (B) Measured response to manipulation
 - (C) Variable combined into composite index
 - (D) Factor kept constant to ensure fairness
- 1200.** The Control variables
- (A) Are intentionally changed in an experiment.
 - (B) Are what gets measured in an experiment.
 - (C) Are what must stay the same in an experiment.
 - (D) None of above
- 1201.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the brands of cars in the school car park.
- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 1202.** Which of the following is an independent variable?
- (A) “Love Your Heart” program
 - (B) Students’ attitude
 - (C) Student smokers
 - (D) Health status
- 1203.** What type of variable is manipulated by the researcher?
- (A) Dependent Variable
 - (B) Independent Variable
 - (C) Control Variable
 - (D) Confounding Variable
- 1204.** In an experiment, the temperature of a solution is measured every minute. What type of variable is the temperature?
- (A) Qualitative
 - (B) Quantitative
 - (C) Categorical
 - (D) Nominal

- 1205.** What is the INDEPENDENT variable? You are testing which type of paper airplane goes furthest?
- (A) The paper used
 - (B) The type of paper airplane
 - (C) The distance of each plane's flight
 - (D) How hard the plane is thrown
- 1206.** What variable in an experiment is measured?-it is also called the responding variable. For example:measuring the amount of mold on bread
- (A) Dependent variable
 - (B) Operational Definition
 - (C) Independent Variable
 - (D) Control Variable
- 1207.** Less rainfall in an area and higher temperatures could lead to ____
- (A) Urbanization
 - (B) Deforestation
 - (C) Desertification
 - (D) Higher pollution
- 1208.** Action that can be observed or measured
- (A) Behavior
 - (B) Psychology
 - (C) Research
 - (D) Psychodynamic
- 1209.** The factors that remain the same in an experiment.
- (A) Independent Variable
 - (B) Constants
 - (C) Dependent Variable
 - (D) None of above
- 1210.** When conducting an experiment people are assigned to the control group or experimental group by chance. This is called ____
- (A) Random Sampling
 - (B) Representative Sampling
 - (C) Random Assignment
 - (D) Representative Assignment
- 1211.** The controlled variables are the variables you:
- (A) Change
 - (B) Measure
 - (C) Keep the same
 - (D) All answers are correct
- 1212.** Factors that cause differences between the experimental group and control group other than the independent variable.
- (A) Control group
 - (B) Population
 - (C) Confounding variables Edit
 - (D) None of above
- 1213.** Identify the independent variable in this research study:At work, is leader support a factor explaining employee well-being?
- (A) Employees' well-being
 - (B) Leader support
 - (C) At work
 - (D) Leader
- 1214.** Write T if the statement is true, and F if it is false.An operational definition is based on theory or standard reference.
- (A) True
 - (B) False
- 1215.** These are variables that can be placed in distinct categories.
- (A) Discrete variables
 - (B) Continuous variables
 - (C) Qualitative variables
 - (D) Quantitative variables
- 1216.** Will drinking energy drinks increase how long an athlete can run? What is the dependent variable?
- (A) The type of energy drink
 - (B) How long the athlete can run
 - (C) Whether the athlete drinks energy drinks
 - (D) Who the athlete is

- 1217.** Is this Discrete or Continuous? The amount of money spent by customers in a store.
(A) Discrete
(B) Continuous
- 1218.** This is usually the independent variable of the study when using the IPO model
(A) Input
(B) Process
(C) Output
(D) None of above
- 1219.** What is the Independent Variable in this research question? "Will students' scores on a grammar test differ between grammar translation and communicative language teaching?"
(A) Grammar score
(B) Grammar translation method
(C) Communicative language teaching
(D) Teaching methods
- 1220.** Which of the following is NOT a method to control extraneous variables?
(A) Use of standardised procedures
(B) Counterbalancing
(C) Randomisation
(D) Ignoring them
- 1221.** What type of data? Student ID number
(A) Ordinal
(B) Nominal
(C) Interval
(D) Ratio
- 1222.** What is the first step researchers should take when selecting the specific operations for their construct?
(A) Look for measures in use that have documented reliability and validity
(B) Include several measures for each element of their construct
(C) Only use the operations developed by specialists in the discipline
(D) Include a pilot study to test the validity of the measure
- 1223.** Two-way and more complex ANOVAs are used only when:
(A) There is exactly one independent variable in the study design
(B) There are at least three independent variables in the design.
(C) We have two independent variables and two dependent variables in the study design.
(D) There is more than one independent variable in the study design.
- 1224.** What does the variable of interest refer to in a survey?
(A) The characteristic the surveyor wants to know about.
(B) The treatment given to participants.
(C) The number of questions in the survey.
(D) The location where the survey is conducted.
- 1225.** Which one of these is a rate?
(A) 5 seconds
(B) 15.6 yards
(C) 62 mph
(D) 23.57 feet
- 1226.** The population information is called parameter while the corresponding sample information is known as [2013-DECEMBER]
(A) Universe
(B) Inference
(C) Sampling design
(D) Statistics
- 1227.** Which best describes a confounding variable?
(A) Any variable, other than the IV, that may have systematically affected the DV
(B) Any variable that may potentially affect the IV or the DV
(C) Any cue from the researcher or research situation that may reveal the aims of the study
(D) Any effect of the investigator's behaviour that may affect the outcome of research Edit

1228. They analyzed four — to measure the health of animals used in the experiment.
- (A) Theories
 - (B) Factor
 - (C) Criterion
 - (D) Criteria
1229. Which of the following is an example of an independent variable?
- (A) Fitness scores
 - (B) Blood measures
 - (C) Completing an exercise program
 - (D) Number of shots made
1230. Variable that the scientist keeps CONSTANT or the SAME.
- (A) Control Variable
 - (B) Variable
 - (C) Dependent Variable
 - (D) Independent Variable
1231. In an experiment, the variable that the experimenter plans to change.
- (A) Independent variable
 - (B) Dependent variable
1232. The variable being measured in experiments.
- (A) Independent Variable
 - (B) Dependent Variable
 - (C) Operational Variable
 - (D) Validity Variable
 - (E) Reliability Variable
1233. Which of the following changes would remove the source of energy that generates the convection which makes wind here on Earth?
- (A) Growing more vegetation in barren areas.
 - (B) Removing all the salt from sea water.
 - (C) Blocking all solar radiation.
 - (D) Reversing the rotation of Earth.
1234. Which variable in psychological research is being described below? the factor that is manipulated
- (A) Confounding variable
 - (B) Dependent variable
 - (C) Independent variable
 - (D) Correlation
1235. 'Confounding Variable(s)' in research methods and design are:
- (A) Variables that may affect the outcome of an experiment, making it difficult to determine the actual cause of the results.
 - (B) Variables that are intentionally manipulated by the researcher.
 - (C) Variables that are always kept constant throughout the experiment.
 - (D) Variables that have no impact on the results of the study.
1236. Mark the INCORRECT sentence about variables.
- (A) It can store different types of information: number, text, list
 - (B) The information in a variable can never be changed
 - (C) It is possible to create multiple variables in an app
 - (D) Each variable should have a different name
1237. What topic can you partner with the independent variable weight?
- (A) Weight and Self-confidence
 - (B) Weight and Collaboration
 - (C) Weight and Vocabulary Skills
 - (D) Weight and Creativity
1238. Independent variables that are not related to the purpose of the study, but may affect the dependent variable.
- (A) DEPENDENT VARIABLE
 - (B) INDEPENDENT VARIABLE
 - (C) CONTROL VARIABLE
 - (D) EXTRANEIOUS VARIABLE

- 1239.** An operational definition of a construct is the one which defines it in terms of
- (A) Implied behavior pattern.
 - (B) Other constructs.
 - (C) Activities necessary to measure it.
 - (D) Other equivalent words in the dictionary.
- 1240.** Which of the following would not be an appropriate synonym for the dependent variable?
- (A) Outcome variable
 - (B) Response variable
 - (C) Effected variable
 - (D) Experimental variable
- 1241.** Specifies what researcher must do to measure the concept & collect needed info, congruent with conceptual def.
- (A) Operational
 - (B) Functional
 - (C) Relation
 - (D) Substantive
- 1242.** A company wants to explain consumers' purchase intention from the type of advertisement. What is the independent variable?
- (A) Company
 - (B) Consumers
 - (C) Type of advertisement
 - (D) Consumers' purchase intention
- 1243.** When observers see what they want to see?
- (A) Observer bias
 - (B) Observer effect
- 1244.** By applying variable's scale of measurement, what type of variable is "Academic Performance" as presented 70-74 75-79 80-84 85-89 90-94 95-99?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1245.** The variable we are trying to predict is called
- (A) Dependent variable.
 - (B) Explanatory variable.
 - (C) Independent variable.
 - (D) External variable.
- 1246.** Laboratory experiment often randomly allocate participants to the two conditions (of the IV) in order to minimise the problem of —
- (A) Participant variables
 - (B) Situational variables
 - (C) Order effects
 - (D) Counterbalancing
- 1247.** Otherwise known as effect variable
- (A) Independent variable
 - (B) Moderator variable
 - (C) Dependent variable
 - (D) Intervening Variable
- 1248.** Which variable is deliberately manipulated by an experimenter to investigate its effect?
- (A) Confounding variable.
 - (B) Dependent variable.
 - (C) Extraneous variable.
 - (D) Independent variable.
- 1249.** What do you call the number or numerical value that describes a population characteristic?
- (A) Sample
 - (B) Hypothesis
 - (C) Parameter
 - (D) Population
- 1250.** What type of variable is used to hold constant in an experiment to test the effect of the independent variable on the dependent variable?
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) Moderator variable

- 1251.** Variable that can be manipulated or controlled is ____
(A) Independent Variable
(B) Dependent Variable
- 1252.** Define the term: Intervening Variable.
(A) An intervening variable is a variable that mediates the relationship between an independent and a dependent variable.
(B) An intervening variable is a variable that directly causes the independent variable to change.
(C) An intervening variable is a variable that is always constant in an experiment.
(D) An intervening variable is a variable that is unrelated to both the independent and dependent variables.
- 1253.** Determine the role taken by each variable in Quantitative research. May compete with the independent variable in explaining an outcome (Ex. Perhaps an observed relationship between coffee drinking and cancer is actually due to smoking cigarettes)
(A) Independent Variable
(B) Dependent Variable
(C) Mediating (intervening) Variable
(D) Moderator Variable
(E) Extraneous Variable
- 1254.** Operational definitions provide precise, measurable definitions of the variables and procedures used in a study, ensuring ____ and replicability.
(A) Clarity
(B) Ambiguity
(C) Randomness
(D) Subjectivity
- 1255.** On which axis is the independent variable found?
(A) Z-axis
(B) W-axis
(C) Y-axis
(D) X-axis
- 1256.** You are managing a large feed lot. A pharmaceutical company wants you to try a new antibiotic to treat shipping fever in newly arrived cattle. The company claims that it is more effective at a lower cost than your current antibiotic you are using. You will measure the temperature of the cattle to see whether or not it works. WHAT IS THE INDEPENDENT VARIABLE (IV)?
(A) Type of cow
(B) Antibiotic
(C) No Antibiotic
(D) Temperature of Cattle
- 1257.** Data can be stored in a Scratch program, what is data saved in?
(A) Stage.
(B) Variable.
(C) Variant.
(D) Code drawer.
- 1258.** The number of women who died due to childbirth is what type of variable?
(A) Continuous quantitative variable
(B) Discrete quantitative variable
(C) Binary qualitative variable
(D) Ordinal qualitative variable
(E) Nominal qualitative variable
- 1259.** Cadburys, a manufacturer of chocolates, wants to study the market for their product on the basis of gender. Males have assigned the number 0 and females the number 1 as scales of measurement. What type of scaling method does Cadburys follow?
(A) Interval Measurement
(B) Ratio Measurement
(C) Ordinal Measurement
(D) Nominal Measurement
- 1260.** In a research study, what does the term 'operational definition' refer to?
(A) The theoretical framework of the study.
(B) The specific way in which a variable is measured.
(C) The overall aim of the research.

- (D) The background information on the topic.
- 1261.** Which variable can influence the strength of the relationship between the independent and dependent variables?
- (A) Confounding variable
 - (B) Moderating variable
 - (C) Mediating variable
 - (D) Control variable
- 1262.** According to the table, what is an example of an independent variable in the research on plant-based insect repellents?
- (A) Different brands of plant-based repellents (ideally with differing levels of the active ingredient)
 - (B) Number of insects repelled by each brand
 - (C) Amount of time the repellent lasts
 - (D) Temperature of the testing environment
- 1263.** The outcome variable. The factor that is being measured.
- (A) Representative Sampling
 - (B) Independent Variable
 - (C) Control Group
 - (D) Dependent Variable
- 1264.** Statistically, wind energy brings about more _____ than coal plants and 66% more _____ opportunities than nuclear power plants.
- (A) Jobs, employment
 - (B) Homes, business
 - (C) People, educational
 - (D) Jobs, economical
- 1265.** Variables vary in only two values
- (A) Active variables
 - (B) Demographic variable
 - (C) Independent variable
 - (D) Dichotomous variable
- 1266.** Justin wants to determine the effect of different animal food brands on his guinea pig's weight. What is the dependent variable?
- (A) The food brand
 - (B) Guinea pig's weight
 - (C) The amount of food given
 - (D) The guinea pig's size
- 1267.** Careful standardisation should minimise the impact of
- (A) Situational variables
 - (B) Participants variables
 - (C) Demand characteristics
 - (D) Experimenter/researcher bias
- 1268.** Diego wants to know if drinking milk each morning affects how tall Dora grows. Which is the independent variable?
- (A) Drinking milk.
 - (B) Diego's growth.
 - (C) Dora's growth.
 - (D) Chocolate or plain milk.
 - (E) TV channel the show is on Edit
- 1269.** A dependent variable is something that
- (A) Stays the same
 - (B) Changes over time
 - (C) Measured and observed
 - (D) None of above
- 1270.** What does isolating variables help with in a research study?
- (A) It helps in drawing accurate conclusions about the causal relationship between variables being studied.
 - (B) It helps in increasing the number of variables in the study.
 - (C) It helps in making the study more complex and difficult to analyze.
 - (D) It helps in proving that no relationship exists between variables.
- 1271.** Which level of measurement represents rank order?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio

- 1272.** Quality of person or situation that varies/takes on different values (numeric), building blocks of quantitative studies.
- (A) Operational
 - (B) Qualitative
 - (C) Relationship
 - (D) Variable
- 1273.** A person's income, IQ, or a country's literacy rate are examples of ____ variables, or variables that can be measured and given a numerical value.
- (A) Quantitative
 - (B) Qualitative
- 1274.** What is the term for the following definition? The group in an experiment that receives the exact treatment as the experimental groups except it does not receive any change of the independent variable. It is the group to which the experimental groups are compared.
- (A) Control group
 - (B) Experimental group
 - (C) Variable group
 - (D) Test group
- 1275.** What is the difference between a confounding variable and an extraneous variable?
- (A) Extraneous variables are controlled by the researcher, while confounding variables affect the outcome
 - (B) Confounding variables systematically vary with the independent variable, while extraneous variables are unrelated to the experimental conditions
 - (C) Extraneous variables only affect the control group
 - (D) Confounding variables are the dependent variable
- 1276.** What does a factorial design study?
- (A) One independent variable
 - (B) Two or more independent variables
 - (C) One dependent variable
 - (D) One treatment group
- 1277.** A simple correlation was calculated between two variables after removing the effect of a third variable from both, the resulting correlation is called
- (A) Multiple correlation.
 - (B) Canonical correlation.
 - (C) Partial correlation.
 - (D) Part correlation.
- 1278.** Any quality of a person, group, or situation that takes on different values.
- (A) Constant
 - (B) Variables
 - (C) Number
 - (D) Behavior
- 1279.** The things that are kept the same to ensure the results are due to the experiment is called..
- (A) Control
 - (B) Constant
 - (C) Independent Variable
 - (D) Dependent Variable
- 1280.** What are extraneous variables (EV)?
- (A) The variable that is measured
 - (B) The variable that is manipulated
 - (C) Everything else that can happen in and around the study
 - (D) The predictor variable
- 1281.** In an experiment to determine the effects of listening to loud music on test scores, what would the x-axis label be?
- (A) Type of music
 - (B) Test score
 - (C) Volume of music
 - (D) Grade in class
- 1282.** Attrition generally occurs in research where ____
- (A) The study fails.
 - (B) You do demographic research.
 - (C) Some participants do not complete the study.
 - (D) The study is very brief.

- 1283.** This is anything that can vary and is feasible and ethical to measure.
(A) Theory
(B) Hypothesis
(C) Variable
(D) Scatterplot
- 1284.** Many experiments have titles in the format of "The effect of the ___ on the ___"
(A) Dependent variable; independent variable
(B) Independent variable; dependent variable
(C) Control variable; dependent variable
(D) Independent variable; control variable
- 1285.** What type of variable is used on a study or test that ranks competitors from best to worst?
(A) Ordinal
(B) Nominal
(C) Ratio
(D) Interval
- 1286.** Which of the following best describes a research variable?
(A) A constant element in a study
(B) An element that can change in a study
(C) A final conclusion drawn from data
(D) A summary of the research aim
- 1287.** This refers to the presumed cause of the research problem.
(A) Dependent Variable
(B) Independent Variable
(C) Variable
(D) Statement of the Problem
- 1288.** A variable that changes due to the action of another variable is known as the
(A) Independent variable
(B) Extraneous variable
(C) Complex variable
(D) Dependent Variable
- 1289.** How high can an average 6th grader jump? What would be a constant in this experiment?
(A) The average 6th grader
(B) The surface they are jumping from
(C) The height they can jump
(D) None of above
- 1290.** A Discrete variable with no quantitative value, used for labeling (gender, religion)
(A) Nominal variable
(B) Ordinal variable
- 1291.** An 'M' (Male) or 'F' (Female) in a demographic section of a questionnaire represents a:
(A) Categorical variable
(B) Unknown variable
(C) Dependent variable
(D) Continuous variable
- 1292.** In predicting the cases of COVID-19, the final number of total patients can be considered as the ____
(A) Features
(B) Observation
(C) Attribute
(D) Outcome
- 1293.** In an experiment, a factor that does not change.
(A) Constant
(B) Variable
- 1294.** This variable serves as the outcome, result or effect of the experiment. Which of the following is being described in the statement?
(A) Controlled Variable
(B) Dependent Variable
(C) Independent Variable
(D) Uncontrolled Variable
- 1295.** What you measure or observe in an experiment.
(A) Constant variable
(B) Controlled variable
(C) Dependent variable
(D) Independent variable

- 1296.** All are examples of quantitative variables EXCEPT ____
(A) Height
(B) Weight
(C) Age
(D) Gender
- 1297.** State the level of measurement for the variable; Classification of students according to their programme
(A) Nominal
(B) Ratio
(C) Ordinal
(D) Interval
- 1298.** Independent variables are
(A) Those that depend on the independent variables; they are the outcomes or results of the influence of the independent variables.
(B) New variables constructed by a researcher by taking one variable and multiplying it by another to determine the joint impact of both.
(C) Those that (probably) cause, influence, or affect outcomes. They are also called treatment, manipulated, antecedent or predictor variables.
(D) All of the above.
- 1299.** On which axis would you place the dependent variable?
(A) X
(B) Y
(C) Z
(D) None of above
- 1300.** At the hospital of Hue University of Medicine and Pharmacy, patient height is what type of variable?
(A) Discrete quantitative variable
(B) Continuous quantitative variable
(C) Quantitative variable
(D) Qualitative variable
(E) Nominal qualitative variable
- 1301.** A student measured heights of each of 12 classmates. What are the proper labels for the axes of this graph?
(A) X-axis = student and y-axis = height (cm)
(B) X-axis = weight (g) and y-axis = height (cm)
(C) X-axis = age (years) and y-axis = height (cm)
(D) X-axis = height (cm) and y-axis = student
- 1302.** The concepts in a hypothesis are stated as
(A) Variables
(B) Theories
(C) Indices
(D) Ideas
- 1303.** Dilcia wants to know how drinking milk affects how tall a Monica grows. Which is the independent variable?
(A) Monica's growth
(B) Drinking milk
- 1304.** Variables in research as seen in research title refers to a person, thing, place, idea, or a ____
(A) Organization
(B) Program
(C) Task
(D) Phenomenon
- 1305.** Any unaccounted for variable that confuses the relationship between the IV and DV. (a)
(A) Extraneous variable
(B) Response variable
(C) Antecedent variable
(D) Extra variable
- 1306.** The factor that may change in response to the independent variable
(A) Independent variable
(B) Dependent variable
(C) Empirical evidence
(D) Data

- 1307.** Which of the following variable is sometimes called “the manipulated variable”?
- (A) Controlled Variable
 - (B) Dependent Variable
 - (C) Independent Variable
 - (D) Uncontrolled Variable
- 1308.** Dealing with these type of variables gives you difficulty in determining the real cause of changes in the dependent variables.
- (A) Nuisance
 - (B) Extraneous
 - (C) Confounding
 - (D) Situational
- 1309.** Erica is running a study to investigate the effect of exercise on insomnia symptoms. She recruits participants who report having experienced insomnia at least once a week and assigns them to either exercise for 30 minutes every day or to read a book for 30 minutes every day. What is the dependent variable in her study?
- (A) Exercise condition
 - (B) Participants with insomnia
 - (C) Insomnia symptoms
 - (D) Time taken to exercise or read a book
- 1310.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of Blu-ray discs someone owns.
- (A) Categorical
 - (B) Continuous numerical
 - (C) Discrete numerical
 - (D) None of above
- 1311.** Manipulated variable
- (A) Dependent
 - (B) Independent
- 1312.** An extra, unexpected variable that can lead to false conclusions and therefore render the experiment invalid (has an unwanted impact on the DV)
- (A) Confounding
 - (B) Independent
 - (C) Dependent
 - (D) Neutral
- 1313.** Which of the following variables is most likely to be used as categorical?
- (A) Length of a garden hose
 - (B) Recorded rainfall for a day
 - (C) Flower color
 - (D) Weight of books on a shelf
- 1314.** What is the INDEPENDENT variable in this experiment? “I believe given equal amount of heat, the metal copper conducts heat faster than aluminum, steel, or silver.”
- (A) Size of metal
 - (B) Types of metal
 - (C) Time it takes to heat up
 - (D) Shape of the metal Edit
- 1315.** A data set where each data point consists of exactly two measurements is called ____
- (A) Univariate
 - (B) Multivariate
 - (C) Bivariate
 - (D) Interval
- 1316.** Mia is conducting an experiment to test the effect of sunlight on plant growth. What is the significance of using a control variable in her experiment?
- (A) To increase the sample size of the study.
 - (B) To isolate the effect of the independent variable on the dependent variable.
 - (C) To ensure that the experiment is conducted in a controlled environment.
 - (D) None of above
- 1317.** A group of people were asked to test the effectiveness of a new mouthwash compared to their regular mouthwash. What would be the independent variable for this experiment?
- (A) Type of mouthwash
 - (B) Number of times using the mouthwash
 - (C) Going to the dentist
 - (D) Freshness of breath

- 1318.** The respiration rate of a goldfish is measured. The goldfish is then placed in cold water and the respiration rate is measured again. What is the INDEPENDENT variable?
- (A) Respiration rate
 - (B) Temperature of water
 - (C) Type of goldfish
 - (D) Type of bowl
- 1319.** Research Question: Does the type of gasoline put in a car effect how fast the car can drive. What is the independent variable?
- (A) Type of gasoline
 - (B) Which car the gas is put into
 - (C) How fast the car can drive
 - (D) How much gas is put into the car
- 1320.** What is the term for the following definition? An 'undesirable' variable in addition to the independent variable that may influence the results of an experiment, introducing error if it is not, as much as possible, controlled or significantly decreased in the research design.
- (A) Extraneous variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) Moderator variable
- 1321.** This is the stimulus variable which is chosen by the researcher to determine its relationship to an observed phenomenon.
- (A) Independent variable
 - (B) Dependent variable
 - (C) Control variable
 - (D) Intervening variable
- 1322.** How do you ensure high construct validity of your scale if you are measuring depression in children?
- (A) Use nonverbal scale (pictorial response)
 - (B) Use scale that is designed for adults
 - (C) Use scale full of words
 - (D) None of above
- 1323.** Which variable always goes on the x-axis (horizontal)?
- (A) Independent
 - (B) Dependent
 - (C) Constant
 - (D) Control
- 1324.** This is a quality, property or characteristics of the person or thing to be studied that can be quantitatively measured. It is any factor that varies.
- (A) Constant.
 - (B) Objectives.
 - (C) Variable.
 - (D) Hypothesis.
- 1325.** Variables used to describe and measure factors considered causes are:
- (A) Independent variables
 - (B) Dependent variables
 - (C) Confounder variables
 - (D) Intermediate variables
 - (E) Neutral variables
- 1326.** What is the difference between independent and dependent variable?
- (A) Independent does not change: dependent changes
 - (B) Independent and dependent change
 - (C) Dependent only changes if there is a control group
 - (D) Independent only changes when there is a control group
- 1327.** A researcher had one group of children go trick-or-treating wearing masks and a second group of children go trick-or-treating without masks. The researcher found that the children who wore masks took more candy than the children who were not wearing masks. Which was the dependent variable in this study?
- (A) The amount of candy taken.
 - (B) Trick-or-treating
 - (C) Whether or not the children wore masks
 - (D) Whether or not the children wore masks and trick-or-treating

- 1328.** What is a “dependent variable” in psychological research?
(A) A variable that is manipulated by the researcher
(B) A variable that is measured in a study
(C) A variable that is not affected by other variables
(D) A variable that is constant in a study
- 1329.** What type of data? Gender
(A) Ordinal
(B) Nominal
- 1330.** Classify the following variable as categorical, continuous numerical, or discrete numerical data: the highest temperature of the ocean each day.
(A) Categorical
(B) Continuous numerical
(C) Discrete numerical
(D) None of above
- 1331.** Which of the following terms refers to the variable that is measured or recorded as the results of the experiment?
(A) Experimental Controls
(B) Test Controls
(C) Dependent Variable
(D) Independent Variable
- 1332.** Refers to how accurately a method measures what it is intended to measure.
(A) Validity
(B) Reliability
(C) Ethical Considerations
(D) Effectiveness
- 1333.** The factor that is manipulated by the researcher to determine its effect on another variable
(A) Dependent variable
(B) Experiment
(C) Independent variable
(D) Longitudinal method
- 1334.** Unreliable market research is due to b ____
(A) Bios
(B) Bias
(C) Buses
(D) Bees
- 1335.** Why do variables need to be defined in measurable terms in research?
(A) To ensure they remain constant
(B) To allow for accurate measurement and analysis
(C) To make them easier to ignore
(D) To prevent them from changing
- 1336.** Elijah is conducting an experiment to study the effects of long lectures on the sleeping behavior of college students. In Elijah’s study, the dependent variable is:
(A) The sleeping behavior of college students
(B) Long lectures
(C) The length of time a lecture runs
(D) College students
- 1337.** In a study of the effect of a driver training program on driving skill, a possible operationalisation of the dependent variable would be ____
(A) Driving quality
(B) Number of accidents
(C) Hours spent training
(D) Amount of traffic Edit
- 1338.** Which of the following best describes a role of the researcher with regard to variables?
(A) Researchers manipulate the independent variable.
(B) Researchers only measure all of the variables
(C) Researchers only manipulate the dependent variable.
(D) None of the above
- 1339.** Classify the following variables as categorical, continuous numerical or discrete numerical data: the number of cars per household.

- (A) Categorical
 - (B) Continuous Numerical
 - (C) Discrete Numerical
 - (D) None of above
- 1340.** Variable that influences the dependent variable in either a positive or negative way is called as?
- (A) Moderating Variable
 - (B) Independent Variable
 - (C) Mediating Variable
 - (D) Dependent Variable
- 1341.** What key term refers to making sure that all of the variables in research are clearly defined.
- (A) Coding
 - (B) Operationalisation
 - (C) Hypothesis
 - (D) Gatekeeper
- 1342.** When the results of a test are impacted by a subject's awareness of a generalized belief about their subgroup, they are said to experience ____
- (A) Peer pressure.
 - (B) Stereotype threat.
 - (C) Hostile test threat.
 - (D) Functional fixedness.
- 1343.** Which variables are those that a researcher chooses to study in order to assess their possible effects on one or more other variables?
- (A) Dependent
 - (B) Independent
 - (C) Extraneous
 - (D) None of these
- 1344.** The variable that the researcher deliberately manipulates
- (A) Independent
 - (B) Dependent
 - (C) Control
 - (D) Confounding
- 1345.** Sally wanted to know which brand of pencils sharpened the quickest. What is the independent variable?
- (A) Color of pencil
 - (B) Brand of pencil
 - (C) How quick it sharpened
 - (D) Sound sharpener made

1.3.8 Research Design

1. Research design is:
 - (A) The procedures that will be used to collect data
 - (B) Overall structure of the research
 - (C) Predicts future phenomena
 - (D) Less associated with technology
2. Temporality in causality refers to:
 - (A) The order in which x and y occur
 - (B) The strength of association
 - (C) The number of variables
 - (D) The consistency of results
3. Replication in the context of research methods and design refers to:
 - (A) Repeating a study to see if the original results can be reproduced
 - (B) Collecting data from multiple sources at the same time
 - (C) Changing the variables in a study to get different results
 - (D) Analyzing data using different statistical methods
4. Which design uses existing groups and measures after treatment?
 - (A) One-shot case study
 - (B) Static-group comparison
 - (C) Time-series
 - (D) Solomon four group

5. What do we call a division of the sample into groups so that every individual has an equal chance of being put in any group or condition?
- (A) Single blind
 - (B) Double blind
 - (C) Random assignment
 - (D) Random sampling
6. If a researcher wants to study the impact of social media on adolescent self-esteem over five years, which design is most appropriate?
- (A) Cross-sectional
 - (B) Experimental
 - (C) Longitudinal
 - (D) Case study
7. Which research design is most appropriate for studying changes in public opinion over several years using different samples each time?
- (A) Trend
 - (B) Panel
 - (C) Cohort
 - (D) Cross-lagged
8. How does a longitudinal design help in understanding developmental processes?
- (A) By comparing different age groups
 - (B) By manipulating variables
 - (C) By observing the same individuals over time
 - (D) By using random sampling
9. What does this mean by “longitudinal”?
- (A) Carried out in the context in which the subjects normally live and work
 - (B) Interpretative analysis of data.
 - (C) The research involves the interaction between participants
 - (D) The research takes a relative long time
10. Generalizing validity is another term for ____ validity.
- (A) External
 - (B) Internal
 - (C) Construct
 - (D) Statistical conclusion
11. One of the major advantages of a pretest-posttest design is that the pretest provides evidence that two groups were not significantly different between the initial treatment. Thus any group differences observed at the end of the study can be attributed to the treatment
- (A) True
 - (B) False
12. Martina believes that high doses of caffeine slow a person’s reaction time. To test this belief, she has five friends each drink three 8-ounce cups of coffee and then measure their reaction time on a learning task. What is wrong with Martina’s research strategy?
- (A) No independent variable is specified.
 - (B) No dependent variable is specified.
 - (C) There is no control condition.
 - (D) There is no provision for replication of the findings.
13. What is the question that defines the location of doing the research?
- (A) When
 - (B) Where
 - (C) Who
 - (D) Why
 - (E) Not Given
14. The research designs and procedures are replicated to enable the researcher to arrive at valid and conclusive results.
- (A) True
 - (B) False
15. In a research proposal, what should the methodology section explain?
- (A) The researcher’s theoretical perspective on the topic
 - (B) Detailed description of the research design, techniques, and tools used to collect data
 - (C) A review of related literature

- (D) A summary of conclusions drawn from the study
16. How is 'research inquiry' fundamentally linked to research design?
- (A) Through the research funding process
 - (B) Through the selection of research topics
 - (C) Through the methods of data analysis
 - (D) Through the underlying research purpose
17. Which type of validity refers to the factual accuracy of an account as reported by the researcher?
- (A) Ecological validity.
 - (B) Temporal validity.
 - (C) Descriptive validity.
 - (D) None of the above.
18. Which statement best distinguishes research design from method in scientific studies?
- (A) Design is logistics only, method is theory building
 - (B) Design is data analysis only, method is hypothesis testing
 - (C) Design is a list of instruments used, method is sampling steps
 - (D) Design is a preplanned study blueprint, method is technical procedures
19. What kind of logic do confirmatory researchers follow in designing and carrying out studies?
- (A) Exploration
 - (B) Discovery
 - (C) Justification
 - (D) None of above
20. What is necessary to establish for later experiments?
- (A) Basal
 - (B) Ceiling
 - (C) Attrition
 - (D) Foundation
21. Which of the following is NOT an issue to consider when evaluating studies?
- (A) Validity
 - (B) Reliability
 - (C) Generalisability
 - (D) Simplicity
22. The results found in a lab don't always generalize well to the real world. Which concept is reflected when this occurs?
- (A) Internal validity
 - (B) External validity
23. What do researchers have to do to get validity in their research?
- (A) To pay attention to bias, distortion, and unsupported assumptions and conclusions from every step and aspect of the research
 - (B) To eliminate bias, distortion, and unsupported assumptions and conclusions from every step and aspect of the research
 - (C) To consider bias, distortion, and unsupported assumptions and conclusions from every step and aspect of the research
 - (D) None of above
24. What is a longitudinal study in communication research?
- (A) A study that focuses on a single point in time
 - (B) A study that examines historical documents
 - (C) A study conducted over an extended period to observe changes over time
 - (D) A study involving statistical analysis
25. What is the role of a literature review in research design?
- (A) To provide context and background for the study
 - (B) To collect new data
 - (C) To formulate new hypotheses
 - (D) To write new conclusions
26. What is the relationship between research questions and a conceptual framework?

- (A) They serve different functions in a research project
(B) They are identical in scope
(C) They are mutually exclusive
(D) They may overlap and complement each other
27. What does the term 'theoretical framework' refer to in research?
(A) A set of guidelines for data collection
(B) A structure that supports the research study
(C) A method for analyzing numerical data
(D) A summary of the research findings
28. Having a ____ in our study makes our Research Study more scientific and empirical.
(A) Plan
(B) Time
(C) Framework
(D) Theory
29. It is a framework or blueprint for conducting a marketing research project.
(A) Survey
(B) Research Design
(C) Data collection
(D) Problem Definition
30. Type of research design is used when the causes of research problem are not known to the researcher
(A) Descriptive
(B) Conclusive
(C) Diagnostic
(D) Exploratory
31. Research Design Strategy depends on
(A) Time frame
(B) Purpose
(C) Environment
(D) All of the above
32. What is the primary focus of a research adviser's feedback in a scientific study?
(A) Grammar and spelling
(B) Research methodology and analysis
(C) Formatting and style
(D) Length of the paper
33. What does the Methodology section include?
(A) Data collection methods
(B) A summary of findings
(C) A list of tables and figures
(D) A critical review of literature
34. What aspect is crucial for maintaining research rigor?
(A) Large sample sizes
(B) Advanced technology
(C) Methodological consistency
(D) High funding
35. What role does 'research design' play in a study?
(A) It outlines the publication process
(B) It guides the method decisions
(C) It defines the research problem
(D) It provides a statistical analysis plan
36. In which chapter would population and sampling procedures be discussed?
(A) Chapter 1:Introduction
(B) Chapter 2:Review of Related Literature
(C) Chapter 3:Design of the Study
(D) Chapter 4:Data Analysis and Interpretation
(E) Chapter 5:Summary and Conclusion
37. What research design is used when one wants to follow up the development of certain conditions or particular sets of people?
(A) Evaluative Study
(B) Case Study
(C) Tracer Study
(D) Survey Research

38. What are the potential limitations of using a conceptual framework in quantitative research?
- (A) Oversimplification, lack of flexibility, potential bias, difficulty in capturing complexity
 - (B) Inability to generalize findings, lack of empirical evidence, limited scope
 - (C) Lack of relevance, limited applicability, inadequate theoretical basis
 - (D) Difficulty in data collection, lack of statistical analysis, limited sample size
39. A company's marketers hold a meeting to lay out the master plan for conducting a marketing research project. This plan is known as the research
- (A) Questionnaire.
 - (B) Design.
 - (C) Variable.
 - (D) Focus.
40. The proposal's literature review is important because:
- (A) It is expected by the university
 - (B) Your lecturer said you should
 - (C) It shows that you are knowledgeable about the literature that relates to your research topic
 - (D) You have to copy what other people say
41. When data is gathered at one point in time, it is called:
- (A) Longitudinal study
 - (B) Cross-sectional study
 - (C) Experimental study
 - (D) Correlational study
42. This is rarely done in a content analysis but it can be applied.
- (A) Analyzing Data
 - (B) Checking Statistics
 - (C) Checking reliability and validity
 - (D) Locating relevant data
43. Research designs may be broadly classified as ____ or ____
- (A) Exploratory; causal
 - (B) Conclusive; causal
 - (C) Exploratory; conclusive
 - (D) Conclusive; descriptive
44. "Do anxious people tend to sleep less?" This question would be best answered by a ____
- (A) Experimental Design
 - (B) Correlational Design
45. Which type of research design is often used when it's impossible or impractical to manipulate the independent variable?
- (A) Experimental design
 - (B) Correlational design
 - (C) Survey design
 - (D) Qualitative design
46. A company's marketers want to begin marketing research, but they are unfamiliar with the nature of the problem. The most appropriate research design for them would be
- (A) Exploratory research.
 - (B) Descriptive research.
 - (C) Causal research.
 - (D) Discovery research.
47. Which section of a research report typically includes pilot study results?
- (A) Chapter 1:Introduction
 - (B) Chapter 2:Review of Related Literature
 - (C) Chapter 3:Design of the Study
 - (D) Chapter 4:Data Analysis and Interpretation
 - (E) Chapter 5:Summary and Conclusion
48. Which type of validity is established if two different measures hypothesized to be assessing the same psychological trait (e.g., self-esteem) are shown to have a strong positive correlation?
- (A) Divergent validity
 - (B) Content validity
 - (C) Convergent validity
 - (D) Face validity

49. It specifies where the study will be conducted.
- (A) Research locale
 - (B) Independent variable
 - (C) Dependent variable
 - (D) Categorical variable
50. This section of your paper includes what type of research design you will use in answering the questions of your paper. It also includes the methods of data collection and analysis.
- (A) Title
 - (B) Abstract
 - (C) Method
 - (D) Introduction
51. It involves determination of what method (quantitative, qualitative, or mixed) should be best used, the number of respondents, the use of questionnaire (adopted or self-formulated), the data gathering procedure (including on-line platform), and the statistical tool to be used (descriptive or inferential).
- (A) CONCEPTUALIZATION PHASE
 - (B) DESIGN PHASE
 - (C) EMPIRICAL PHASE
 - (D) ANALYTICAL PHASE
 - (E) DISSEMINATION PHASE
52. Quasi-Experimental research design differs from Experimental research design because:
- (A) It does not use any groups
 - (B) It does not randomly assign participants to groups
 - (C) It does not measure variables
 - (D) It does not use a control group
53. Represents the researcher's synthesis of the literature on how to explain a phenomenon. It maps out the actions required in the course of the study, given his previous knowledge of other researchers' point of view and his observations on the subject of research.
- (A) CONCEPTUAL FRAMEWORK
 - (B) THEORETICAL FRAMEWORK
 - (C) (IV-DV) Model
 - (D) (IPO) Model
54. Research design involves:
- (A) Construction of new research tool
 - (B) Development of theory
 - (C) Planning and preparing blue print of the research work
 - (D) None of these
55. Schematic diagram that shows the variables included in the study.
- (A) Assumptions
 - (B) Conceptual Framework
 - (C) Research Locale
 - (D) Significance of the Study
56. When choosing the right design, it is important to prioritize — occurring behaviours and the full range of behaviours.
- (A) Naturally
 - (B) Rarely
 - (C) Artificially
 - (D) Sporadically
57. Generalize research findings to individuals who did not take part in the study
- (A) Generalizability
 - (B) Empirical evidence
 - (C) Assumption of determinism
 - (D) None of above
58. Reliability in research context aligns with
- (A) Consistency
 - (B) Transparency
 - (C) Trustworthiness
 - (D) Reliance
 - (E) Measurement
59. What research design develops theory about phenomena of interest, rooted in observation?
- (A) Narrative Inquiry
 - (B) Case Study
 - (C) Ethnography
 - (D) Grounded Theory

60. When forming basic research questions, sociologists develop an ____, that is, they define the concept in terms of the physical or concrete steps it takes to objectively measure it.
- (A) Operational definition
 - (B) Functional definition
 - (C) Non-functional definition
 - (D) Objective definition
61. A research design in which the same group of participants is tested or observed repeatedly over a long period of time is known as
- (A) Case study
 - (B) Experimental
 - (C) Longitudinal
 - (D) Correlation
62. Each instrument administered once. Two different versions of the same concept or variable. Each participant in the study completes each instrument
- (A) Test-retest reliability
 - (B) Alternate forms reliability
 - (C) Alternate forms and test-retest reliability
 - (D) Interrater reliability
 - (E) Internal consistency reliability
63. James is conducting a research study on the effects of a new teaching method. How can the validity of his study be improved?
- (A) Ensuring the sample size is large enough to be representative.
 - (B) By using a control group to compare results.
 - (C) Using standardized procedures to minimize bias.
 - (D) None of above
64. How can researchers enhance the feasibility of their recommendations for practical implementation?
- (A) By proposing complex and abstract solutions
 - (B) By excluding input from stakeholders
 - (C) By conducting more research to refine recommendations
 - (D) By considering the resources and context of the target audience
65. The most significant decision during the process of designing a research study is:
- (A) The sampling plan.
 - (B) The choice of research approach.
 - (C) The quality of the research design.
 - (D) The details of tactical research problems.
66. What threat to internal or external validity does this statement suggest: "It's a good thing that I'm in this new diet study. I couldn't believe it when the researcher told me that I was 10 lbs. overweight."
- (A) History
 - (B) Testing
 - (C) Selection bias
 - (D) Hawthorne effect
67. Which type of validity is established when a newly created assessment of professional ethics is found to highly correlate with a long-established, respected assessment of professional ethics when both are administered at the same time?
- (A) Predictive validity
 - (B) Face validity
 - (C) Concurrent validity
 - (D) Construct validity
68. Which design is best for evaluating a new curriculum across multiple schools?
- (A) Cross-over
 - (B) Factorial
 - (C) Randomized block
 - (D) Quasi-experimental
69. A key threat to internal validity, stemming from preexisting group differences is the:
- (A) Random threat
 - (B) External threat
 - (C) Selection threat
 - (D) None of above

70. Designing a research is thinking ____
(A) Critically
(B) Skilfully
(C) Literally
(D) Imaginatively
71. Experts in line with the field of study will test the validity of a research instrument.
(A) TRUE
(B) FALSE
72. What does a research plan involve selecting?
(A) The style and format of media products
(B) The quality of sources
(C) The number of respondents required
(D) Appropriate research methods
73. A blueprint of research Work is called as
(A) Research Problem
(B) Research Design
(C) Research Tool
(D) Research Technique
74. Cross-sectional survey is a form of research design
(A) True
(B) False
75. Which reliability measure compares scores from two equivalent test forms?
(A) Split-half reliability
(B) Test-retest reliability
(C) Parallel forms reliability
(D) Inter-rater reliability
76. A single formal theory.
(A) Conceptual Framework
(B) Theoretical Framework
(C) Paradigm
(D) Review of Related Literature
77. An explanation using an integrated set of principles that organizes observations and predicts behaviors or events.
(A) Theory
(B) Hypothesis
(C) Independent variable
(D) Operational definition
78. Dr. Dawson is conducting a study with military veterans from the Vietnam and Gulf wars. He plans to evaluate them every year for 10 years to see if those with PTSD have a more pronounced decline in mental abilities and overall memory. This is a ____ study.
(A) Longitudinal
(B) Eugenic
(C) Cross-sectional
(D) Factor analytic
79. Explains the approach that will be used in gathering data to answer the research questions.
(A) Introduction C.
(B) Methodology
(C) Results
(D) Discussion
80. A study which has a nonexperimental design involving the comparison of a case and a matched counterpart is:
(A) Case-control study
(B) Qualitative study
(C) Descriptive study
(D) None of above
81. What is the main purpose of cross-sectional research?
(A) To monitor the effects of remedial action
(B) To solve practical problems
(C) To develop or refine theory models
(D) To collect data from a specific point in time
82. Which statement best captures the core definition of research design?
(A) A plan aligning data collection with purpose efficiently
(B) A list of hypotheses to test in future studies

- (C) A statistical formula for calculating sample variance
(D) A narrative review summarizing existing literature
83. Why is repetition important in scientific research?
(A) It makes the report longer
(B) It ensures results are reliable
(C) It impresses supervisors
(D) It helps reduce cost
84. A Blue print of Research work is called
(A) Research design.
(B) Research methods.
(C) Research Problem.
(D) Research tools.
85. Mr. Gringo tried to correlate the scores of his pupils in the Social studies test with their grades in the same subject last 3rd quarter. What test validity is he trying to establish?
(A) Content validity
(B) Construct validity
(C) Concurrent validity
(D) Criterion related validity
86. "A researcher was interested in the effect of a new therapy on depression. The researcher may choose to conduct a time-series design because depressive symptoms may change throughout the year." This is a ____
(A) Noninterrupted time-series design
(B) Interrupted time-series design
87. Methodology is considered the "blueprint" of a research study because:
(A) It provides the overall plan and structure for conducting the research.
(B) It only describes the results of the study.
(C) It focuses solely on data analysis techniques.
(D) It is used to summarize the literature review.
88. What does operationalising concepts mean?
(A) Turning abstract ideas into measurable factors
(B) Creating new abstract ideas
(C) Eliminating vague concepts
(D) Simplifying complex theories
89. What is the essential component of experimental design that increases the probability of creating 'equal groups'?
(A) Random assignment
(B) Control group selection
(C) Repeated measures
(D) Matched pairs
90. A ____ is a conceptual framework for organizing knowledge and providing a blueprint for action.
(A) Strategy
(B) Prediction
(C) Theory
(D) Doctrine
91. Leonardo, Addison, and Patty are researchers who want to understand how memory changes with age. They recruit groups of children, teenagers, and adults and study all of them at the same time, comparing the results across these age groups. What type of research design are they using?
(A) Longitudinal
(B) Cross-sectional
(C) Sequential
(D) Cross-cultural
92. The results of a quasi-experiment can be easily misinterpreted because ____
(A) The subjects are not chosen randomly.
(B) The subjects are not randomly assigned to treatment groups.
(C) Both options are correct.
(D) None of above
93. When an instrument is said to have high face validity, it means:

- (A) It appears to measure what it is supposed to measure
(B) It yields consistent results
(C) It measures a complex theoretical construct
(D) It is similar to other instruments used in the same study
94. The research design refers to:
(A) The framework and plan for conducting the study
(B) The conclusion of the study
(C) The title of the research
(D) The bibliography
95. This refers to the overall location for the research:
(A) Site
(B) Cite
(C) Population
(D) Respondents
96. Includes one or more formal theories (in part or whole) as well as other concepts and empirical findings from the literature.
(A) Paradigm
(B) Review of Related Literature
(C) Conceptual Framework
(D) Theoretical Framework
97. THE RELATIONSHIP BETWEEN STUDY HABITS AND ACADEMIC PERFORMANCE OF LANTON HIGH SCHOOL STUDENTS. What will be the research design of the research title?
(A) Descriptive
(B) Correlative
(C) Historical
(D) Analytical
98. This refers to the overall strategy and analytical approach that you have chosen to integrate in a logical way.
(A) Research Design
(B) Research Methodology
(C) Research Proposal
(D) Research Statement
99. A quasi-experiment cannot be considered a controlled experiment because
(A) Subjects cannot be randomly selected
(B) Subjects cannot be randomly assigned
(C) Experimenter bias is unavoidable
(D) Demand characteristics are unavoidable
(E) Too few subjects participate in the procedure
100. It relates to the conditions under which the observations are to be made
(A) The sampling design:
(B) The observational design:
(C) The statistical design:
(D) The operational design:
101. What is feasibility?
(A) It means that the research design should be applied by researchers using less time, skills, and resources
(B) It means that the research design should be doable for researchers in terms of time, skills, information access, and resources
(C) It means that the research design should be doable for researchers expending a lot of time, skills, and resources
(D) None of above
102. Which design is suitable for agricultural research with two extraneous factors?
(A) Factorial
(B) Latin square
(C) Cross-over
(D) Solomon
103. The researcher must state the type of research design, its meaning, and how it is applicable to his study.
(A) The DESIGN PHASE
(B) Determination of Research Design
(C) Adopting Statistical Tool
(D) Identifying Subjects of the Study

- 104.** The ____ effect (also called the experimenter-expectancy effect, expectancy bias, observer effect, or experimenter effect) is a form of reactivity in which a researcher's cognitive bias causes them to subconsciously influence the participants of an experiment.
- (A) Hypothetical
 - (B) Researcher
 - (C) Participant
 - (D) Personal
- 105.** When both the researchers and the participants do not know which conditions the participants are assigned to, the research design is known as ____
- (A) Experimenter bias
 - (B) Operational study
 - (C) Double-blind
 - (D) Single-blind
- 106.** What type of design combines features of both posttest-only and pretest-posttest designs?
- (A) Solomon randomized four-group design
 - (B) Switching replications design
 - (C) Factorial design
 - (D) True experimental design
- 107.** In research, what is the term for the overall plan for addressing the research problem?
- (A) Research question
 - (B) Research design
 - (C) Research objective
 - (D) Research hypothesis
- 108.** This part of the research show the graphical narrative form of the process of the main concepts and variables of the research topic.
- (A) Conceptual framework
 - (B) Theoretical framework
 - (C) Significance of study
 - (D) Statement of the problem
- 109.** The question of whether the research has uncovered the truth about social life and is accurate in its findings is known as what?
- (A) Reliability
 - (B) Certainty
 - (C) Validity
 - (D) Accuracy
- 110.** Which of the following is a method to ensure reliability in psychological research?
- (A) Using a large sample size
 - (B) Standardizing procedures
 - (C) Conducting a pilot study
 - (D) Using qualitative data
- 111.** Using qualitative design helps us determine and better understand relationships between variables or phenomenon crucial to reducing the range of uncertainty because the mathematics behind quantitative studies helps us make close estimates of the outcome from a given condition/s
- (A) TRUE
 - (B) FALSE
 - (C) PARTIALLY TRUE
 - (D) PARTIALLY FALSE
- 112.** A 'Theory' in the context of research methods and design is defined as:
- (A) A set of interrelated concepts and propositions that explains or predicts events or situations.
 - (B) A list of data collection techniques used in a study.
 - (C) A summary of previous research findings without interpretation.
 - (D) A personal opinion about a research topic.
- 113.** Type of reasoning that begins with general statements accepted to be true and ends up with a specific factual statement
- (A) Abductive reasoning
 - (B) Deductive reasoning
 - (C) Inductive reasoning
 - (D) None of above

114. Which of the following is true about research design?
- (A) Research design should be the first consideration in a research project.
 - (B) Research design should be selected after thoroughly considering the problem and research objectives.
 - (C) Research design should be selected during the initial meeting with a client.
 - (D) Research designs should be made after data collection.
115. What are the elements of a research design section?
- (A) Defining the paradigm and approach, and describing the method
 - (B) Defining the instruments and sample
 - (C) Defining the procedures of analysis
 - (D) All except from defining the sample
 - (E) All
116. Which concept BEST reflects validity?
- (A) Objective
 - (B) Accurate
 - (C) Knowledgeable
 - (D) None of above
117. A repeated measures design obtains two or more measurements from the same participant
- (A) True
 - (B) False
118. ____ gives the over-all outline of the entire research study as it shows the key variables and their interrelationships clearly and logically.
- (A) Conceptual Framework
 - (B) Theoretical Framework
 - (C) Hypothesis
 - (D) Introduction
119. Which type of validity refers to the degree to which you can infer that the relationship between two variables is causal?
- (A) Internal validity.
 - (B) Ecological validity.
 - (C) Population validity.
 - (D) Statistical conclusion validity.
120. Which situation most likely requires cross-cultural research design?
- (A) Training one employee for cashier duties
 - (B) Launching one product in diverse countries
 - (C) Selling one item in a single neighborhood
 - (D) Renewing a lease for a local kiosk only
121. Bias is not a limitation of research.
- (A) True
 - (B) False
122. This chapter is focused on the research procedures which contains the research design, descriptions of the samples and the measures to be used, and the steps to be taken in carrying out the study.
- (A) Chapter 1
 - (B) Chapter 2
 - (C) Chapter 3
 - (D) Chapter 4
123. Which of the following terms fails to capture the meaning of a research design?
- (A) Map
 - (B) Blue print
 - (C) Manual
 - (D) Dictionary
124. Which statement best captures why reviewing literature strengthens research design?
- (A) It replaces fieldwork with past conclusions
 - (B) It builds on accumulated knowledge to guide inquiry
 - (C) It ensures every study tests brand-new concepts
 - (D) It focuses only on the most recent publications

125. A research design in which one sample of participants receives each condition of an experiment.
- (A) Independent samples design
 - (B) Matched pairs design
 - (C) Repeated measures design
 - (D) None of above
126. Which design includes an intervention but lacks random assignment?
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) Quasi-experimental
127. What is a key weakness of correlational research?
- (A) It cannot establish causation
 - (B) It is too expensive
 - (C) It lacks real-world applicability
 - (D) It cannot measure variables
128. It can be difficult (and time-consuming) to find and match participants.
- (A) Weakness of Independent Measures Design
 - (B) Weakness of Repeated Measures Design
 - (C) Weakness of Matched-Pair Design
 - (D) None of above
129. Why are large sample sizes valuable in quantitative business studies?
- (A) They remove all bias sources
 - (B) They make qualitative insights
 - (C) They guarantee perfect accuracy
 - (D) They improve external validity
130. What is the purpose of the methodology?
- (A) To describe why the research was conducted
 - (B) To prove your group did a lot of work
 - (C) To describe the steps followed in conducting your research
 - (D) To talk about Microsoft Forms and how it is used
131. Which design controls for the sensitization of subjects to a pretest?
- (A) Pretest-posttest control group design
 - (B) Solomon four-group design
 - (C) One-shot case study
 - (D) Time-series design
132. It deals with the specific techniques by which the procedures specified in the sampling, statistical and observational designs can be carried out
- (A) The sampling design:
 - (B) The observational design:
 - (C) The statistical design:
 - (D) The operational design:
133. It is the backbone of the research procedure.
- (A) Research Design
 - (B) Statistical Tools
 - (C) Sampling
 - (D) None of above
134. Considering this analogy research design as the "Backbone" of research procedure
- (A) Quasi-Experimental
 - (B) Research Design
 - (C) Correlation
 - (D) Population
135. A nurse maps how intake, output, and medication timing interact to affect blood pressure. Which theory is most directly applied?
- (A) Maslow's Needs Theory
 - (B) Erikson's Psychosocial Theory
 - (C) Adaptation Theory
 - (D) General Systems Theory
136. In which design are preexisting groups compared without manipulation?
- (A) Experimental design
 - (B) Quasi-experimental design
 - (C) Case study design
 - (D) Non-experimental design

137. Find the definition of purpose statement:
- (A) A statement that advances the overall direction or focus for the study.
 - (B) A definite or clear expression of something in speech or writing.
 - (C) A document setting out items of debit and credit between a bank or other organization and a customer.
 - (D) The reason for which something is done or created or for which something exists.
138. According to the text, what does causation imply?
- (A) A relationship between variables that is coincidental.
 - (B) A relationship between variables in which a change in one does not affect the other.
 - (C) A relationship between variables in which a change in one indirectly produces a change in the other.
 - (D) A relationship between variables in which a change in one directly produces a change in the other.
139. Research design that identifies the relationship between variables
- (A) Correlational
 - (B) Descriptive
 - (C) Experimental
 - (D) Narrative
140. What is a characteristic of cross-sectional research design?
- (A) Involves observations of the same participants over a long period
 - (B) Requires waiting for participants to age from one stage to another
 - (C) Makes observations of different participants at different ages over a shorter period
 - (D) Measures the performance of the same individuals at various ages
141. It consist of different existing theories from different studies that serve as foundation of a research study.
- (A) Theoretical Framework
 - (B) Conceptual Framework
 - (C) P-Model
 - (D) Statistical
142. WHAT IS THE ROLE OF INSTRUMENTATION PLAN IN RESEARCH PROCESS?
- (A) FOR COLLECTING THE DATA
 - (B) ROAD MAP FOR ENTIRE STUDY
 - (C) DEFINING THE TERMS
 - (D) HELPS IN TO UNDERSTANDING THE CONCEPT
143. Mira is working on a project that requires her to structure techniques and strategies to effectively answer her research inquiry.
- (A) Research Blueprint
 - (B) Research Design
 - (C) Qualitive Inquiry
 - (D) Research Techniques Edit
144. What is the primary focus of research design?
- (A) Choosing the right statistical tool
 - (B) Determining the research question
 - (C) Integrating different components of a study
 - (D) Ensuring the research is published
145. Which design examines whether a change in one variable relates to change in another without manipulation?
- (A) Predictive exploratory modeling
 - (B) Correlational study of variable relationships
 - (C) Experimental study with manipulated variables
 - (D) Quasi-experimental study using existing groups
146. This relates to the validity and reliability of the study
- (A) Delimitation
 - (B) Scope
 - (C) Limitation
 - (D) Range

147. Sources of bias in pretest post test design: events that occur during the course of a study to all or individual participants that can result in bias
- (A) Regression toward the mean
 - (B) History effect
 - (C) Hawthorne effect
 - (D) Testing effect
148. Why is reliability important when conducting research?
- (A) It ensures that the results can be generalized to the population.
 - (B) It ensures that the research measures what it claims to measure.
 - (C) It ensures that the research findings are consistent and replicable.
 - (D) It ensures that the participants are aware of their rights. Edit
149. The longitudinal method in developmental studies has the advantage of:
- (A) More extensive data on individual subjects
 - (B) Data for different age groups at the same point in time
 - (C) Prompt data gathering
 - (D) No sampling errors
150. What does the term "longitudinal design" mean?
- (A) A study completed far away from where the researcher lives
 - (B) A study completed over a distinct period of time to map change in social phenomena
151. What kind of study design did Lewis Terman use when he found a positive correlation between giftedness and 1) high-status jobs and 2) better physical and mental health?
- (A) Aptitude
 - (B) Personality
 - (C) Longitudinal
 - (D) Cross-section
152. "What is the level of acceptance of the parents to the online teaching in the new normal of education for this academic year 2020-2021?" Looking at this statement, what can be the possible Scope and Limitation when referring to the parameter?
- (A) Academic Year 2020-2021
 - (B) Online Teaching in the New Normal
 - (C) Level of Acceptance
 - (D) Parents of the Students who are using On-line Teaching
153. Which of the following is a characteristic of a simple research design?
- (A) It includes multiple variables
 - (B) It is straightforward and easy to execute
 - (C) It requires complex statistical methods
 - (D) It involves several researchers
154. The who, what, why, and how of your research study are determined by your research —
- (A) Data
 - (B) Design
 - (C) Question
 - (D) Title
155. True or False. Time related effects do not pose a threat to internal validity of pre-post design.
- (A) True
 - (B) False
156. Single subject research design is useful when the researcher is attempting to change the behavior of an individual or a small group of individuals and wishes to document that change.
- (A) True
 - (B) False
157. Scarlett notices a correlation between hours spent studying and test scores, but it is unclear which variable is causing the other. Which scenario illustrates the directionality problem in correlational research?

- (A) A third factor explains both variables
(B) Measurement error inflates effect sizes
(C) It is unclear which variable is causing the other
(D) Scores move toward the average over time
- 158.** The methodology section is one of the most important components of a proposal and consists of ____
(A) The statement of the problem
(B) A literature review
(C) A description of the research design
(D) A description of the timeline
- 159.** Practice and fatigue effects are more likely in which type of research designs?
(A) Designs with repetitive tasks
(B) Designs with no tasks
(C) Designs with only one trial
(D) Designs with no measurement
- 160.** Identifying a problem regarding a situation or process and developing a strategy
(A) Action research design
(B) Participatory action research
(C) Meta-analysis design
(D) None of the above
- 161.** Procedure
(A) Provide clear directions to conduct the experiment so anyone can duplicate the experiment
(B) Outline the materials needed for the experiment
(C) Summarize the results of the experiment
(D) List the safety precautions for the experiment
- 162.** The basic structure that serves as mental window of the researcher and gives the direction of the study. It is presented with a paradigm. What part of Chapter 1 is it?
(A) Analytical Framework
(B) Conceptual Framework
(C) Input Process Output
(D) Virtual Presentation
- 163.** It comprises the blueprint for the collection, measurement, and analysis of data.
(A) Research Instrument
(B) Statistical Treatment
(C) Research Design
(D) The Subjects
- 164.** A design consisting of an experimental and a control group but participants are not randomly assigned to the groups is which of the following?
(A) Interrupted time-series design.
(B) Nonequivalent comparison-group design.
(C) Single case design.
(D) All of the above.
- 165.** Identify the Population:Gwinnett County Public Schools randomly selected 230 teachers to find out which technology resource is the most effective. 30 teachers chose Safari Montage, 45 selected Learn Zillion, 100 chose Ed Puzzle, and 55 chose Kahoot. GCPS concluded that all teachers prefer Ed Puzzle.
(A) 230 Teachers
(B) All teachers
(C) 100 Teachers
(D) 55 Teachers
- 166.** What is a benefit of clear operationalisation in research?
(A) It allows others to understand and repeat the research
(B) It makes research more expensive
(C) It limits the scope of research
(D) It focuses only on theoretical aspects
- 167.** When reading a research journal article, the nursing student knows that the research design will be described in:
(A) The introduction
(B) The method section
(C) The discussion section
(D) The references

- 168.** The effectiveness of the research approach that can be tested by repeating the research
- (A) Hypothesis
 - (B) Representativeness
 - (C) Validity
 - (D) Reliability
- 169.** A researcher wants to study how individual social media use changes over time by following the same group of people. Which longitudinal design should they use?
- (A) Panel
 - (B) Trend
 - (C) Cohort
 - (D) Cross-lagged
- 170.** Indicate a suitable type of research design for the following research project: Research Project: "The relationship between the level of anxiety experienced during examinations and the exam performance among the 3rd year students at Tshwane University of Technology"
- (A) Qualitative-Exploratory
 - (B) Quantitative-Descriptive
 - (C) Quantitative-Causal
 - (D) None of above
- 171.** An explicit specification of a set of variables and their interrelationships designed to represent some real system or process in whole or in part is called a(n) ____
- (A) Analytical model
 - (B) Theory
 - (C) Hypothesis
 - (D) Objective
 - (E) Broad-based research
- 172.** The term "external validity" is concerned with:
- (A) The question of whether the result of a study can be generalized beyond the specific research context
 - (B) Whether the research question is judged to be a good research question by those outside the study
- 173.** Exclusion criteria are established to include a broad range of participants in the study
- (A) TRUE
 - (B) FALSE
- 174.** An example that shows a conjecture is incorrect is called ____
- (A) Deductive Reasoning
 - (B) Inductive Reasoning
 - (C) Conjecture
 - (D) Counterexample
- 175.** It is a "GLUE" that holds all elements in a research project together, in short it is a plan of the proposed research work.
- (A) Research Design
 - (B) Sampling Strategy
 - (C) Causality Research
 - (D) None of above
- 176.** If a psychologist predicts that excluded participants will report more distress than included participants, which process are they using?
- (A) Inductive reasoning from observed patterns of social behaviour to general principles
 - (B) Operational definition to specify how distress will be measured in the study
 - (C) Deductive reasoning from evolutionary theory to a specific testable prediction
 - (D) Peer review to ensure that the prediction is scientifically valid
- 177.** It is questionable whether all relevant variables can be matched.
- (A) Weakness of Independent Measures Design
 - (B) Weakness of Repeated Measures Design
 - (C) Weakness of Matched-Pair Design
 - (D) None of above
- 178.** The most frequently used quasi-experimental design is the ____ design.
- (A) Regression discontinuity.
 - (B) Changing-criterion.
 - (C) Interrupted time-series.
 - (D) Non-equivalent comparison-group.

179. Which is not a type of research design?
- (A) Nominal
 - (B) Descriptive
 - (C) Exploratory
 - (D) Experimental
180. What is a Research Design? [2014-DECEMBER]
- (A) A way of conducting research that is not grounded in theory.
 - (B) The choice between using qualitative or quantitative methods.
 - (C) The style in which you present your research findings e.g. a graph.
 - (D) A framework for every stage of the collection and analysis of data.
181. Define: Research Design
- (A) Research Design is the overall strategy or plan for a research project, outlining how data will be collected, measured, and analyzed.
 - (B) Research Design is a type of statistical test used to analyze data.
 - (C) Research Design refers to the process of writing a literature review for a research paper.
 - (D) Research Design is the method of presenting research findings in a conference.
182. Jamie spent the summer at music festivals having a great time and collecting data on how festival goers behaved through personal interviews. Which research design is this?
- (A) Exploratory
 - (B) Descriptive
 - (C) Causal
 - (D) None of above
183. What distinguishes a conceptual framework from isolated concepts?
- (A) It focuses solely on measurable variables
 - (B) It uses statistics to test hypotheses only
 - (C) It organizes concepts into an understandable pattern
 - (D) It eliminates abstract impressions from theories
184. Hazel gave her control and experimental groups an assessment before their exposure to the different treatments. Then, gave them another assessment after the exposure.
- (A) Posttest Only
 - (B) Pretest-Posttest Only
 - (C) Solomon Four Group
 - (D) Factorial
 - (E) Crossover
185. Another factor to consider is how participants were recruited for the study when criticizing the research
- (A) True
 - (B) False
186. What is a common problem that can occur during recruiting by condition in experimental design?
- (A) Sometimes another condition is added in the middle of collection.
 - (B) Participants always follow instructions perfectly.
 - (C) All data is collected without any errors.
 - (D) Recruitment is always completed ahead of schedule.
187. The plan on how a research study will be conducted is known as ____
- (A) Hypothesis
 - (B) Research design
 - (C) Research process
 - (D) Data collection method
188. Which issue affects the credibility of the Methodology section most?
- (A) Lack of references
 - (B) Missing procedures
 - (C) Short discussion
 - (D) Fewer tables
189. What type of design compares the same people at different times or under different conditions?
- (A) Cross-sectional design
 - (B) Between-subjects design

- (C) Longitudinal design
(D) Within-subjects design
- 190.** Division of the sample into groups so that every individual has an equal chance of being put in the experimental group or the control group.
(A) Single blind
(B) Double blind
(C) Random assignment
(D) Random sampling
- 191.** What helps students use flowcharting to understand the attributes and relationships of the main subject and provides a visual tool for brainstorming and planning.
(A) Flowcharts
(B) Inspiration
(C) Visual learning techniques
(D) Concept map/story web
- 192.** Which type of definition explains how a term will be measured in the study?
(A) Conceptual
(B) Operational
(C) Descriptive
(D) Procedural
- 193.** Which of the following is a general rule of the thumb for designing questions?
(A) Always bear in mind your research questions.
(B) Never ask a closed question.
(C) Always use vignettes rather than open questions.
(D) Use ambiguous terms to put respondents at ease.
- 194.** The extent to which the findings from a study could be applied to a different context (e.g. other people, places or situations).
(A) Participant variability
(B) Extraneous variable
(C) Ethical consideration
(D) Generalizability
- 195.** Which check best ensures the Methodology section is sound?
(A) Focuses on researcher's personal workflow
(B) Minimizes replication details for brevity
(C) Contains numerous acronyms and jargon
(D) Methods appropriate and clearly described
- 196.** A ____ is a set of stringent guidelines specifying a procedure that must be followed if an agency is to accept the results.
(A) Technique
(B) Method
(C) Procedure
(D) Protocol
- 197.** At what point in quantitative research are hypotheses and variables most appropriately established?
(A) Simultaneous with sampling decisions
(B) After analyzing collected data
(C) Immediately after reviewing literature
(D) Just before communicating findings
- 198.** What is a key characteristic of a good research design?
(A) Lack of clarity in objectives
(B) Well-defined methodology
(C) Non-reproducible results
(D) Incomplete data
- 199.** Used when there are inherent differences between subjects and possible differences in experimental conditions.
(A) Factorial Design
(B) Randomized Block Design
(C) Post-test only design
(D) Crossover Design
- 200.** It is an overall strategy that you choose to integrate in your study to effectively address the research problem
(A) Sampling Method

- (B) Qualitative Approach
(C) Research Design
(D) Analysis of Data
- 201.** Money is a limitation for studies when designing a feasible experiment group.
(A) True
(B) False
- 202.** This section provides a detailed description of the methodology used in the study. e.g. population, sample size, and sampling techniques and tools used in the study.
(A) Results And Discussion
(B) Analysis of Data
(C) Design of the Study
(D) The Review of Related Literature
- 203.** Discusses the approach that the researcher used for the study (Quantitative or Qualitative) and the design (Phenomenology, Ethnography, Grounded theory).
(A) Population and Sampling
(B) Research locale
(C) Research design
(D) None of above
- 204.** Alternative explanation of phenomena and serves as a basis of formulation of research hypothesis.
(A) Related Literature
(B) Related Studies
(C) Conceptual Framework
(D) Theoretical Framework-
(E) Research Paradigm
- 205.** Experimental design is a balancing act between specificity and
(A) Generality
(B) Precision
(C) Control
(D) Measurement
- 206.** Before selecting the research design, it is important to consider the type of phenomenon being studied and the possible characteristics of the research design.
(A) True
(B) False
- 207.** Which are examples of time dimension research designs?
(A) Cross-sectional
(B) Longitudinal
(C) Experimental
(D) Exploratory
(E) Qualitative
- 208.** Which of the following would be done first when designing and planning a quantitative study
(A) Develop intervention protocols
(B) Identify the population
(C) Design the sampling plan
(D) Formulate a research design
- 209.** TRUE OR FALSE: Conceptual Framework consists of concepts that are placed within a logical and sequential design.
(A) TRUE
(B) FALSE
- 210.** Research design is a blue print, outline and a —
(A) System.
(B) Strategy.
(C) Guide.
(D) Plan.
- 211.** Nonexperimental designs cannot declare —, only correlation.
(A) Causation
(B) Association
(C) Variation
(D) Prediction
- 212.** During the execution of a project, what is crucial for maintaining research integrity?
(A) Altering data to fit the hypothesis

- (B) Following the predefined research design
 - (C) Ignoring participant consent
 - (D) Using unverified sources
- 213.** Why is it necessary for every study to be designed in a way that it can be repeated?
- (A) To ensure the study can be patented
 - (B) To confirm results, or to observe and measure variation between studies
 - (C) To make the study more complex
 - (D) To increase the funding for the research
- 214.** Specify exactly what the intervention will entail & what alternative condition would be.
- (A) Necessity of Research
 - (B) Intervention Protocol
 - (C) Sample
 - (D) Population
- 215.** Research plans include the following except ____
- (A) Methodology
 - (B) Study timeframe
 - (C) Resources needed
 - (D) Initial results
- 216.** In a (____) study, the participants do not have the outcome of interest to begin with. They are selected based on the exposure status of the individual
- (A) Cohort
 - (B) Quasi-experimental study
 - (C) Before and after study
 - (D) Clinical trial
- 217.** Stage of the research process with which we can conduct the project:
- (A) Design.
 - (B) Analysis.
 - (C) Problem.
 - (D) Harvest
- 218.** A research design for the topic “The Effect of Peer Tutoring on Math Performance” should include which of the following elements?
- (A) Participants, variables, and procedures
 - (B) Only participants
 - (C) Only procedures
 - (D) Only variables
- 219.** Construct validity refers to:
- (A) The tool’s reliability
 - (B) The extent to which it measures the theoretical construct
 - (C) The sample’s size
 - (D) The cost of the instrument
- 220.** The ways researchers strategically plan, design, and structure research processes for them to answer research questions in the most complex, rigorous, and nuanced ways possible. This requires data triangulation, the strategic sequencing of methods, and adopting a reflexive approach to design and data collection.
- (A) Purposeful sampling
 - (B) Data set
 - (C) Design complexity
 - (D) Unit of analysis
- 221.** Research designs may be categorized according to their fundamental objective. Which of the following are research design categories?
- (A) Scientific, exploratory, descriptive
 - (B) Descriptive, research, experimental
 - (C) Descriptive, causal, exploratory
 - (D) Causal, experimental, scientific
- 222.** What is the role of a conceptual framework in a research proposal?
- (A) To provide a summary of the literature review
 - (B) To outline the methodology section
 - (C) To establish a clear direction for the study
 - (D) To present the results of the study
- 223.** What term refers to the extent to which a study’s results can be generalized across populations of persons, settings, times, outcomes, and treatment variations?
- (A) Statistical conclusion validity

- (B) Internal validity
(C) External validity
(D) Causal validity
- 224.** CRITERION VALIDITY involves ____
(A) ____ predictive and concurrent validity.
(B) .. predictive and content validity.
(C) ____ proficiency and assessing validity.
(D) ____ concurrent and construct validity.
- 225.** What are the benefits of using a conceptual framework in quantitative studies?
(A) A conceptual framework is not necessary for conducting quantitative studies.
(B) Using a conceptual framework can lead to biased results in quantitative studies.
(C) A conceptual framework provides a clear structure and organization for conducting quantitative studies.
(D) A conceptual framework limits the flexibility and creativity in quantitative studies.
- 226.** Which step in the research process is essential for ensuring that data collection aligns with research objectives?
(A) Literature review
(B) Research design
(C) Hypothesis formulation
(D) Data analysis
- 227.** A type of research design used when the investigator is after uncovering data on a phenomenon little is known about, the exploratory design.
(A) Action research
(B) Descriptive research
(C) Exploratory research
(D) Scientific research
- 228.** A research design is best described as:
(A) A blueprint of the research process
(B) A list of results
(C) A tool for data storage
(D) None of these
- 229.** It is a kind of quantitative research where in it is popular in the fields of special education and counseling. This research design is useful when the researcher is attempting to change the behavior of an individual or a small group of individuals and wishes to document that change.
(A) Experimental Research
(B) Quasi-Experimental Research
(C) Single Subject Design
(D) Correlational Design
- 230.** Which of the following is NOT a condition for causality?
(A) Association
(B) Temporality
(C) Random guessing
(D) Contingency/consistency
- 231.** Under 'Research is Mostly Statistics,' which area deals with selecting sample sizes, identifying variables, and choosing control groups?
(A) Analysis & Interpretation
(B) Hypothesis Testing
(C) Designing Research
(D) Decision Making
- 232.** Researcher employs to answer research questions or test hypotheses. It encompasses the framework and structure of the study, including the selection of research methods, data collection techniques, and data analysis procedures. The ____ acts as a roadmap that guides the researcher throughout the research process.
(A) Research instrument
(B) Methodology
(C) Research design
(D) Practical research
- 233.** The ____ that the researcher wants to develop is Vocabulary Game
(A) Data
(B) Source
(C) Gap
(D) Product

234. Why is clarity important in writing the Methodology?
- (A) To confuse readers
 - (B) To ensure procedures are understood
 - (C) To avoid data analysis
 - (D) To shorten the research
235. Which type of research design involves studying a group of individuals over an extended period of time?
- (A) Cohort study
 - (B) Case-control study
 - (C) Cross-sectional study
 - (D) None of above
236. What is a potential benefit of a researcher successfully reviewing related literature and forming hypotheses?
- (A) It can guide the research design and analysis.
 - (B) It ensures the research will be published.
 - (C) It eliminates the need for data collection.
 - (D) It guarantees the research will be funded.
237. In adhering to the general writing structure of the proposal the researcher should:
- (A) Only report findings at the end of the research
 - (B) Never list the references cited
 - (C) Include only some documents in the appendices
 - (D) Describe the procedure guiding the study
238. This refers to the primary focus of a study. It is the “who”, and/or “what” at the center of the study which can focus on people, perspectives, structure, geographical units, and/or social interactions.
- (A) Purposeful sampling
 - (B) Data set
 - (C) Design complexity
 - (D) Unit of analysis
239. The researchers collect information about people’s lives and then describe and analyze it. This refers to:
- (A) Action research design
 - (B) Explanatory designs
 - (C) Narrative design
 - (D) Correlational design
240. What is a concern regarding internal validity in quasi-experimental designs?
- (A) The treatment and control groups may not be comparable at baseline.
 - (B) The study participants are always randomly assigned.
 - (C) The intervention group always receives a placebo.
 - (D) The comparison group is always larger than the intervention group.
241. Which of the following is/are true about Ex-post Facto Study?
- (A) The investigators attempt to trace an effect which has already occurred to its probable causes.
 - (B) The effect becomes dependent variable.
 - (C) The investigators have no direct control over such variables.
 - (D) All of these.
242. Nonexperimental methods tend to be ____ for establishing definitive conclusions without the presence of manipulation.
- (A) Weaker
 - (B) Stronger
243. What is a research design?
- (A) A way of conducting research that is not grounded in theory
 - (B) The choice between using qualitative or quantitative methods
 - (C) The style in which you present your research findings, e.g. a graph
 - (D) A framework for every stage of the collection and analysis of data

244. Reliability: a measure of whether something stays the ___ or is consistent each time the experiment is carried out using the same design, procedures and measurements.
- (A) Same
 - (B) Different
 - (C) Variable
 - (D) Inconsistent
245. Why is it important to provide a clear and detailed explanation of the research procedure?
- (A) To ensure the replicability of the study.
 - (B) To demonstrate the researcher's expertise.
 - (C) To justify the research design.
 - (D) To avoid ethical issues.
246. Quasi-experimental research designs do not randomly assign participants to treatment or control groups for comparison.
- (A) True
 - (B) False
247. How can researchers enhance the external validity of their study?
- (A) By using a double-blind procedure
 - (B) By increasing the sample size
 - (C) By using random assignment
 - (D) By ensuring the study setting is similar to real-world conditions
248. A university teacher intends to study the relationship between the level of aspiration and the achievement of rural children. Which design of research will be most appropriate in the context?
- (A) Experimental research design
 - (B) Ex post Facto research design
 - (C) Historical research design
 - (D) Survey research design
249. Which of the following is a characteristic of nonexperimental research design?
- (A) No manipulation of independent variables
 - (B) Active manipulation of independent variables
 - (C) Random assignment of groups
 - (D) None of above
250. Which design includes four groups with pretest and posttest combinations?
- (A) Latin square
 - (B) Solomon four-group
 - (C) Factorial
 - (D) Cross-over
251. In a pre-post design, random assignment does not apply.
- (A) True
 - (B) False
252. What is the significance of a conceptual framework in research design?
- (A) A conceptual framework in research design is a step-by-step guide for conducting the study.
 - (B) A conceptual framework in research design is a tool used to analyze the results of the study.
 - (C) A conceptual framework in research design is a visual representation of the data collected.
 - (D) A conceptual framework in research design provides a theoretical foundation and structure for the study.
253. This type of design is one where all participants participate in all experimental treatment conditions.
- (A) Factorial design.
 - (B) Replicated design.
 - (C) Repeated measures design.
 - (D) Pretest-posttest control-group design.
254. Pattern of thought that starts with a theory and ends with confirmation or rejection of a hypothesis:
- (A) Deductive
 - (B) Inductive

255. When designing a research study, which of the following elements is critical for ensuring reliability?
- (A) Using multiple research methodologies
 - (B) Including a large sample size
 - (C) Ensuring consistent measurement tools and procedures
 - (D) Conducting a pilot study
256. When different interviewers are used in a pretest from those used in the posttest and this produces different results in the study, this is an example of a
- (A) History effect.
 - (B) Cohort effect.
 - (C) Instrumentation effect.
 - (D) Mortality effect.
257. Which of the following terms describes the ability to generalize from the sample of individuals on which a study was conducted to the larger target population of individuals and across different subpopulations within the larger target population?
- (A) External validity.
 - (B) Population validity.
 - (C) Temporal validity.
 - (D) Ecological validity.
258. Which of the following best describes the relationship between theory and data in science?
- (A) Data always come before theory
 - (B) Theory guides research and is tested by data
 - (C) Theory is irrelevant
 - (D) Data are always interpreted without theory
259. Research desing that examines the extent to which two variables are associated
- (A) Depth perception
 - (B) Correlation
 - (C) Correlation design
 - (D) Acuity
260. After conceptualizing, it is the time of formulating the research plan.
- (A) CONCEPTUALIZATION PHASE
 - (B) DESIGN PHASE
 - (C) EMPIRICAL PHASE
 - (D) ANALYTICAL PHASE
 - (E) DISSEMINATION PHASE
261. A scientist wishes to support the findings of her previous study. By conducting a second study, the scientist is aiming to demonstrate what in her study's design?
- (A) Control
 - (B) Replicability
262. In a ____ design, participants act as their own control/comparison group (i.e., pre-and post-test).
- (A) Within-subjects
 - (B) Between-subjects
 - (C) Cross-sectional
 - (D) Longitudinal
263. Which research design is most likely to involve manipulating variables to observe effects?
- (A) Experimental
 - (B) Case study
 - (C) Cross-sectional
 - (D) Longitudinal
264. Dr. Christy selects one group of children and assesses their fine motor skills every six months over a two-year period. Dr. Christy is using a ____ research design
- (A) Cross-sectional
 - (B) Sequential
 - (C) Descriptive
 - (D) Longitudinal
 - (E) Experimental
265. Which concept BEST reflects reliability?
- (A) Accuracy of the measure
 - (B) Consistency of the measure
 - (C) The alignment with theory
 - (D) None of above

266. What approach to research design is characterized by the flexibility to adapt to findings?
- (A) Fixed design
 - (B) Experimental design
 - (C) Emergent design
 - (D) Cross-sectional design
267. The most important question when selecting an instrument for research is generally —
- (A) Is the instrument reliable?
 - (B) Does the instrument have norms?
 - (C) Is the instrument objective?
 - (D) Is the instrument valid?
268. Which type of research design involves comparing two or more groups on one or more variables?
- (A) Descriptive
 - (B) Correlational
 - (C) Experimental
 - (D) Longitudinal
269. Which of the following is a feature of a good research design?
- (A) Flexibility
 - (B) Rigidity
 - (C) Ambiguity
 - (D) Complexity
270. Which type of reasoning is used when you make a generalization based on specific observations?
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Abductive Reasoning
 - (D) Analogical Reasoning
271. Which of the following is required for a psychological experiment?
- (A) More than one independent variable
 - (B) Sophisticated equipment
 - (C) Highly generalizable results
 - (D) Precise operational definitions
 - (E) A longitudinal design
272. Which of the following is the best design to test a causal relationship?
- (A) Case Study
 - (B) Correlational Study
 - (C) Experiment
 - (D) Quasi-experiment
273. Which type of nonexperimental design is best for studying developmental changes?
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Experimental
 - (D) Survey
274. The multiple baseline approach
- (A) Varies the amount of time between each intervention and baseline measure.
 - (B) Is also known as the ABAB design.
 - (C) Increases the ability of researchers to generalize their findings.
 - (D) Requires researchers to measure the subject's baseline at least three times.
275. Which statement best describes the primary purpose of a research protocol?
- (A) Provide a flexible, informal outline for study
 - (B) Offer a clear, structured plan for conducting research
 - (C) Summarize previous studies without procedures
 - (D) Serve only as a budget proposal for funding
276. Which one of the following tasks is NOT accomplished by theoretical framework?
- (A) Elaborate the relationship among the variables.
 - (B) Explain the logic underlying the relationship between the variables.
 - (C) Describe the nature, and direction of the relationships among the variables.
 - (D) Relates the previous studies.

277. In selecting a statistical test, which factor is crucial to consider?
- (A) The researcher's preference
 - (B) The research objective and data scale
 - (C) The length of the questionnaire
 - (D) The number of participants
278. An equal likelihood that a participant will be assigned to at treatment, control, or comparison groups is know as
- (A) Equal sampling
 - (B) Pre-experimental design
 - (C) Random sampling
 - (D) Random assignment
279. Blinding in research refers to:
- (A) A method to prevent bias by keeping study participants, investigators, or both unaware of the assigned interventions.
 - (B) A process of collecting data from multiple sources.
 - (C) A technique to increase the sample size.
 - (D) A way to analyze data using statistical software.
280. All observed houses on South Street have roofs that are falling apart. Sherry lives on South Street. Her roof is falling apart.
- (A) Deductive
 - (B) Inductive
 - (C) All the above
 - (D) None of the above
281. What makes the theoretical and conceptual framework similar?
- (A) They both use concept model
 - (B) They both anchor a theory that supports the study
 - (C) They both focus on specific theories already used in the field
 - (D) They are both narrower or more focused
282. Delimitation is research refers to ____
- (A) What is covered in the study
 - (B) What is not covered in study
 - (C) Scope of the Study
 - (D) None of above
283. Which of the following refers to a plan or provides a direction of how the research will be executed?
- (A) Method
 - (B) Design
 - (C) Problem
 - (D) Plan
284. Which design compares different age groups at one point in time?
- (A) Longitudinal
 - (B) Experimental
 - (C) Cross-sectional
 - (D) Case study
285. What is the type of research design used to study the relationships between two or more quantifiable variables?
- (A) Causal-comparative research design
 - (B) Action research design
 - (C) Correlational research design
 - (D) Mixed methods design
286. Lisa is conducting a study on hours of TV watched throughout one's lifespan. She begins by taking a group of two 10 year olds, three 15 year olds, three 20 year olds and so on (increments of 5 years, up to 35 years of age.) Which method of research is she using?
- (A) Cross sectional study
 - (B) Experimentation
 - (C) Longitudinal study
 - (D) Case study
287. What threat to internal or external validity does this statement suggest: "I'm glad I remembered those questions from the first test."
- (A) History
 - (B) Testing
 - (C) Selection bias
 - (D) Hawthorne effect

288. What concept refers to whether findings from research give a true picture of what or who is being studied?
- (A) Representativeness
 - (B) Validity
 - (C) Reliability
 - (D) Generalisability
289. The research design and procedures are replicated
- (A) Replicability
 - (B) Critical
 - (C) Analytical
 - (D) Empirical
290. Which of the following designs permits a comparison of pretest scores to determine the initial equivalence of groups on the pretest before the treatment variable is introduced into the research setting.
- (A) One-group pretest-posttest design.
 - (B) Pretest-posttest control group design.
 - (C) Posttest-only design with nonequivalent groups.
 - (D) Both b and c.
291. Which design examines the effects of multiple independent variables and their interactions?
- (A) Factorial designs (factorial ANOVA).
 - (B) Repeated measures design.
 - (C) Single-subject design.
 - (D) Correlational design.
292. When respondents know-or suspect-the sponsor or subject of the research, their feelings and opinions may bias or alter their answers. This is known as
- (A) Confirmation Bias
 - (B) The Halo Effect
 - (C) The Hawthorne Effect
 - (D) Culture Bias
293. What is the benefit of using a longitudinal study design in research?
- (A) It allows researchers to observe changes over time.
 - (B) It requires fewer resources than cross-sectional studies.
 - (C) It eliminates the need for a control group.
 - (D) None of above
294. A theoretical structure or model that guides the research process by providing a framework for understanding and analyzing the relationships between key variables or concepts, helping researchers organize their thoughts, develop hypotheses, and interpret findings within a theoretical framework.
- (A) Conceptual Framework
 - (B) Significance of the Study
 - (C) Review of Related Literature
 - (D) Scope and Limitations
295. The research plan should be presented in a written proposal. The proposal should include all of the following EXCEPT ____
- (A) The predicted results
 - (B) Research objectives
 - (C) How the results will help management's decision making
 - (D) Estimated research costs
 - (E) The information to be obtained
296. On what does Validity depend?
- (A) Reality
 - (B) Content
 - (C) Truth
 - (D) Form or structure of reasoning
297. Which of the following is a key component of effective research design?
- (A) Personal bias
 - (B) Unstructured data
 - (C) Subjective interpretation
 - (D) Random sampling
298. Which approach involves observing a group over an extended period of time?
- (A) Cross-sectional

- (B) Longitudinal
 - (C) Cohort-sequential
 - (D) Experimental
- 299.** In the context of relating findings to pertinent literature, what is the purpose of a theoretical framework?
- (A) To summarize the study methodology
 - (B) To provide a historical context for the research
 - (C) To guide the interpretation of findings based on established theories
 - (D) To present statistical analyses
- 300.** What is the type of research design that seeks to describe, understand, and interpret the meanings of human life experiences?
- (A) Narrative design
 - (B) Phenomenological design
 - (C) Ethnographic design
 - (D) Case study design
- 301.** Research design has no impact on the choice of data collection methods in a thesis
- (A) TRUE
 - (B) FALSE
- 302.** Research design is defined as the rational and coherent overall strategy that the researcher uses to incorporate all the vital components of the research study.
- (A) True
 - (B) False
- 303.** Which of these elements is typically found in a theoretical framework?
- (A) A review of statistical analyses
 - (B) Established theories that support the research question
 - (C) Raw data from past studies
 - (D) A detailed discussion of sampling techniques
- 304.** “A supposition or system of ideas that is proposed to explain a given phenomenon” best defines which of the following.
- (A) A concept
 - (B) A conceptual framework
 - (C) A theory
 - (D) A paradigm
- 305.** Experimental process for materials and methods
- (A) How did I solve the problem?
 - (B) Who helped me out?
 - (C) Whose work did I refer to?
 - (D) What does it mean?
 - (E) What did I find out?
- 306.** During operationalization, what may occur to the conceptual definition and method choice?
- (A) Definition stays fixed while methods vary
 - (B) Neither definition nor methods should change
 - (C) Methods stay fixed while definition varies
 - (D) Both may influence each other in a circular process
- 307.** What does “External validity” refer to in research terminology?
- (A) The accuracy of the data collection methods
 - (B) The extent to which the results are generalizable to the real world
 - (C) The consistency of the results across different studies
 - (D) The transparency of the research findings
- 308.** When a researcher wants to study a counseling intervention with individuals who live at a homeless shelter versus individuals who live at a domestic violence shelter, the best research design would be
- (A) Experimental design
 - (B) Predictive design
 - (C) Case study
 - (D) Quasi-experimental design

- 309.** What is the third step in the research process, where the researcher identifies the procedures, research design, methods, and tools to be used in collecting data?
- (A) Procedures/Design Phase
 - (B) Data Analysis Phase
 - (C) Problem Identification Phase
 - (D) Reporting Phase
- 310.** Participants in an experiment are said to be blind if they are uninformed about
- (A) The experimental hypothesis being tested.
 - (B) Whether the experimental findings will be statistically significant.
 - (C) How the dependent variable is measured.
 - (D) Which experimental treatment, if any, they are receiving.
- 311.** To be able to conduct a power analysis while designing a study, you first need to have an idea of the size of the effect that you are studying.
- (A) T
 - (B) F
- 312.** When a researcher is interested in linking or making an association between two or more phenomena, the design that should be used is
- (A) Descriptive
 - (B) Exploratory
 - (C) Correlational
 - (D) Grounded theory
- 313.** Which design would best suit a study on seasonal effects on student performance?
- (A) Time-series
 - (B) Static-group
 - (C) One-shot case study
 - (D) Factorial
- 314.** In a treatment-control, pre-post design, what is the purpose of the pre-measurement of the dependent variable (DV)?
- (A) To see if that phenomenon was already happening/assessing how sensitizing a test is.
 - (B) To eliminate the need for a control group.
 - (C) To ensure random assignment of participants.
 - (D) To measure the effect of the independent variable before the intervention.
- 315.** Which research design is flexible in nature?
- (A) Exploratory
 - (B) Descriptive
 - (C) Causal
 - (D) Conclusive
- 316.** Which type of research design is most appropriate for studying cause-and-effect relationships?
- (A) Correlational design
 - (B) Descriptive design
 - (C) Experimental design
 - (D) Longitudinal design
- 317.** Explain how logic can be applied in experimental design.
- (A) Logic helps in structuring hypotheses, defining variables, and analyzing relationships in experimental design.
 - (B) Logic is only useful for statistical analysis.
 - (C) Logic is irrelevant in defining experimental variables.
 - (D) Logic can replace the need for hypotheses in experiments.
- 318.** Which type of research design involves following an individual or group for an extended period?
- (A) Cross-sectional
 - (B) Experimental
 - (C) Longitudinal
 - (D) Nonexperimental
- 319.** An operational definition is:
- (A) One that bears no relation to the underlying concept

- (B) An abstract, theoretical definition of a concept
(C) A definition of a concept in terms of specific, empirical measures
(D) One that refers to opera singers and their work
- 320.** Which is not a direct threat to the internal validity of a research design?
(A) Testing.
(B) Differential selection.
(C) History.
(D) Sampling error.
- 321.** Nora is conducting a research study and unintentionally treats participants in the experimental group differently from those in the control group. This experimenter bias most likely threatens which aspect of research?
(A) Statistical conclusion from low power
(B) Internal validity from differential treatment
(C) External validity from small samples
(D) Construct validity from poor measures
- 322.** Causal-comparative research is considered the best design for establishing a cause-and-effect relationship.
(A) True
(B) False
- 323.** The overall plan or structure of a research project refers to ____
(A) Research method
(B) Research hypotheses
(C) Research report
(D) Research design
- 324.** The researcher's qualifications, preparation, and experience should be adequate for the problem.
(A) Practicality
(B) Feasibility
(C) Relative Importance
(D) Research Knowledge
- 325.** Which of the following is NOT possible using causal-comparative design?
(A) Seeking possible causes for a given effect.
(B) Seeking possible effects for a given cause.
(C) Demonstrating causation.
(D) Comparing groups that differ on some variable.
- 326.** A carefully worded statement of the exact procedures used in a research study that allows for replication of the study.
(A) Random assignment
(B) Operational definition
(C) Operant chamber
(D) Hypothesis
- 327.** What is standardization in research?
(A) Making the experiment as flexible as possible
(B) Keeping the procedure the same for each participant
(C) Allowing for individual participant differences
(D) Manipulating variables freely
- 328.** A multinational brand wants to compare satisfaction scores across countries. What is the most likely research challenge to address first?
(A) Shortage of cloud storage for raw datasets
(B) Cultural differences affecting scale use and meaning
(C) Lack of any statistical methods for comparison
(D) Inability to recruit any respondents at all
- 329.** TRUE OR FALSE: Conceptual Framework clarifies concepts and propose no relationships among the concepts in a study.
(A) TRUE
(B) FALSE

330. It describes the specific research approach you will use in the study. This can be ethnography, case study, historical, phenomenological, narrative, grounded theory and the like.
- (A) Data Collection
 - (B) Research Procedures
 - (C) Research Locale
 - (D) Research Design
331. Which type of validity refers to the extent to which a study is free from confounding factors or alternative explanations?
- (A) External validity
 - (B) Construct validity
 - (C) Statistical validity
 - (D) Internal validity
332. In quasi-experimental designs, what does ecological validity refer to?
- (A) The ability to generalize findings to real-life situations outside of a lab setting
 - (B) The ability to randomize participants
 - (C) The ability to use multiple baselines
 - (D) The ability to collect qualitative data
333. What is a research describing developmental changes in personality characteristics by studying the same group at different age-levels?
- (A) Cross-sectional growth study.
 - (B) Trend study.
 - (C) Longitudinal growth study.
 - (D) Developmental study.
334. Who has defined Ex-Post Facto Research by saying that it is a systematic scientific exploration in which the scientist (researcher) does not have direct control on the independent variable?
- (A) George J. Mouly.
 - (B) John W. Best.
 - (C) Fred Karlinger.
 - (D) Monroe.
335. Which of the following designs does an excellent job of controlling for rival hypotheses that threaten the internal validity of an experiment?
- (A) Posttest-only design with nonequivalent groups.
 - (B) Posttest-only control-group design.
 - (C) Pretest-posttest control-group design.
 - (D) Both B and C are excellent designs.
336. What research design studies changes over time within a group?
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Experimental
 - (D) Case Study
337. Why is research design compared to a blueprint?
- (A) It guides the research process logically.
 - (B) It decorates the project.
 - (C) It is optional.
 - (D) It is used only in architecture.
 - (E) It ensures plagiarism.
338. Specifies which research questions must be answered, how and when the data will be gathered, and how the data will be analyzed
- (A) Research Design
 - (B) Primary Data
 - (C) Survey Research
 - (D) Secondary Data
339. What is a major disadvantage of longitudinal designs?
- (A) Cheap and fast
 - (B) Expensive, difficult, high attrition
 - (C) Lack of cohort effects
 - (D) No generational divides
340. Why is understanding the unit of analysis you wish to study important?
- (A) Because this shapes the kinds of hypotheses you can make
 - (B) Because it will guide the data collection
 - (C) Because it determines what inferences can be made
 - (D) All of the above

- 341.** This part is the core of your paper as it is proof that you use the scientific method.
(A) Introduction
(B) Review of Related Literature
(C) Statement of the Problem
(D) Methodology
- 342.** It is the application of theory in explaining the existence of a phenomenon.
(A) Conceptual Framework
(B) Theoretical Framework
(C) Conceptual Definition of terms
(D) Operational Definition of terms
- 343.** The inclusion and interpretation of historical events by the historian often depends on the ___ framework adopted by him.
(A) Experimental
(B) Abstract
(C) Dialectic
(D) Conceptual
- 344.** The framework or plan for a study that guides the collection and analysis of the data is called ____
(A) Variable of the study
(B) Research Design
(C) Universe of the study
(D) Inclusion Criteria
- 345.** Research design and procedures are repeated to enable the researcher to arrive at valid and conclusive results.
(A) Critical
(B) Analytical
(C) Replicable
(D) Methodical
- 346.** Which answer choice has the correct order of the scientific method?
(A) 1.Observation/Question2. Research3. Hypothesis4. Experiment5. Analyze Data6. Conclusion
(B) 1. Observation/Question2. Hypothesis3. Research4. Analyze Data5. Experiment6. Conclusion
- 347.** What is the relationship between research purpose and research design?
(A) Purpose dictates design.
(B) There is no relationship between the two.
(C) Design is more important than purpose.
(D) Design is unnecessary.
- 348.** Before collecting any data, Dr. Alvarez uploads her study's hypotheses and planned analyses to a public, time-stamped site. Later, she finds an unexpected result but chooses not to change her original plan.What practice is Dr. Alvarez following?
(A) Meta-analysis
(B) Pre-registration
(C) Double-blind review
(D) Peer reviewing
- 349.** Refers to the overall strategy that you choose in order to integrate the different components of the study in a coherent and logical way
(A) RESEARCH DESIGN
(B) RESEARCH INSTRUMENT
(C) RESEARCH BACKGROUND
(D) METHODOLOGY
- 350.** Which design can be adjusted to what is being learned during data collection?
(A) Quantitative design
(B) Qualitative design
(C) Probability design
(D) None of above
- 351.** A strong methodology should include details about the sampling method, data collection tools, and ethical protocols.
(A) TRUE
(B) FALSE
(C) All the above
(D) None of the above
- 352.** This design studies a group of people over a long period of time.
(A) Longitudinal

- (B) Experimental
(C) Descriptive
(D) Sequential
353. What research design emphasized the discovery of ideas and insights?
(A) Correlational
(B) Descriptive
(C) Exploratory
(D) Causal
354. Which distinction best separates factor naming questions from relationship questions in research design?
(A) Selecting the measurement instrument carefully
(B) Defining the study population in detail
(C) Exploring association between two variables
(D) Determining ethical approval requirements
(E) Labeling a single variable precisely
355. Preparation of the plan for the research is popularly known as
(A) Research design.
(B) Setting a hypothesis for the research.
(C) Organizing a research.
(D) Execution of research work.
356. Which is the research design design that generates and modifies a theory?
(A) Grounded Theory
(B) Ethnographic Research
(C) Phenomenological Research
(D) Narrative Inquiry
357. The stages shown (1. Identify and describe problems; 2. Design an action plan; 3. Gather data; 4. Analyze data and form conclusions; 5. Report results; 6. Adjust the theory and begin again) describe the steps of which research design?
(A) Action research
(B) Experimental design
(C) Case study
(D) Cross-sectional survey Edit
358. A 'Causal mechanism' is:
(A) The process or pathway through which a cause leads to an effect.
(B) A random event with no explanation.
(C) An unrelated sequence of events.
(D) A result without a cause.
359. The conceptual underpinnings of a study is known as its ____
(A) Framework
(B) Literature Review
360. The framework of research methods and techniques chosen by a researcher.
(A) Research Instruments
(B) Research Objectives
(C) Research Design
(D) Quantitative Data
361. A quasi-experimental design lacks:
(A) Variables
(B) Control group
(C) Random assignment
(D) Hypothesis
362. What is a design that simply compare groups on preexisting characteristics?
(A) Differential design
(B) Post test only NECG
(C) Pretest posttest NECG
(D) Between group design
363. When a researcher need to define the operational terms which part they need to define it?
(A) Research objective
(B) Research questions
(C) Problem statement
(D) Definition of terms

- 364.** The overall strategy that a researcher chooses to investigate the research problem and test their hypothesis.
- (A) Road Map
 - (B) Proposal
 - (C) Research design
 - (D) Blueprint
- 365.** An advantage of a correlational design over an experimental design is that researchers can find out what caused an effect
- (A) T
 - (B) F
- 366.** It is a plan for conducting research which usually includes specification of elements to be examined and the procedure to be used.
- (A) Method of research
 - (B) Research design
 - (C) Research methodology
 - (D) None of above
- 367.** The time-frame in which a study explores a situation or problem is also called the:
- (A) Reference period
 - (B) Age
 - (C) Longitudinal
 - (D) Retrospective time
- 368.** What aspect of research design ensures rigor and validity?
- (A) The length of the study
 - (B) The type of publication
 - (C) Methodological consistency
 - (D) The number of participants involved
- 369.** In a research study, a 'theoretical framework' is best described as:
- (A) A summary of previous studies
 - (B) A set of theories guiding the research questions
 - (C) A list of all sources referenced
 - (D) An analysis of data collected
- 370.** It exposes research decisions to evaluation before they are carried out.
- (A) Methodology
 - (B) Design
- 371.** A filtering tool for selecting appropriate research questions and related data collection methods.
- (A) Theoretical
 - (B) Conceptual
 - (C) Research Paradigms
 - (D) None of above
- 372.** Which of the following is the best description of research design?
- (A) Set of advance decisions that makes up the master plan specifying the methods and procedures for collecting and analyzing the needed information
 - (B) The specific pieces of information are necessary to solve the problem at hand
 - (C) Set of advance decisions that are made after the data have been collected in order to determine how the data will be analyzed
 - (D) None of above
- 373.** A replicable research design allows for ___ to verify results.
- (A) Repetition
 - (B) Randomization
 - (C) Speculation
 - (D) Estimation
- 374.** Subjects are grouped based on a characteristic they already possess such as age, gender (Ex post facto design), is this a quasi-experiment?
- (A) Yes
 - (B) No
- 375.** Which of the following research designs compares two variables but does NOT include a manipulation of variables?
- (A) Descriptive Design
 - (B) True Experimental Design
 - (C) Correlational Design
 - (D) Quasi-Experimental Design

- 376.** The conceptual framework of a study:
- (A) Is a visual or written representation of the variables and relationships in the study
 - (B) Details the statistical analysis methods used
 - (C) Describes the sampling procedures
 - (D) Is only necessary in quantitative research
- 377.** It deals with matters such as selecting the participants in the study, preparing for data collection, and planning for data analysis.
- (A) RRL
 - (B) The locale of the Study
 - (C) Research Design
 - (D) Respondents
- 378.** In this design, the same group of participants is exposed to two (or more) conditions, and the conditions are compared.
- (A) Independent measures
 - (B) Repeated measures
 - (C) Matched pairs
 - (D) None of above
- 379.** Which of the following will complete the statement “Research plan serves as the guide and “ — “ in the conduct of a research.
- (A) Framework
 - (B) Preliminary blueprint
 - (C) Outline
 - (D) Statement
- 380.** Observational studies maximise internal validity.
- (A) True
 - (B) False
- 381.** Testing Freshmen, Sophomores, and Juniors at the beginning of the school year demonstrates which research design?
- (A) Longitudinal
 - (B) Naturalistic observation
 - (C) Case study
 - (D) Cross-sectional
- 382.** The overall strategy that you choose to integrate the different components of the study in a coherent and logical way
- (A) Research Approach
 - (B) Research Design
 - (C) Research Problem
 - (D) None of above
- 383.** What type of research design studies the same participants over an extended time?
- (A) Cross-sectional
 - (B) Experimental
 - (C) Longitudinal
 - (D) Exploratory
- 384.** What is a possible cover for teachers conducting covert research?
- (A) Principal
 - (B) Supply teacher or classroom assistant
 - (C) Janitor
 - (D) Librarian
- 385.** Researchers can attempt to eliminate the threat of bias from the selection-maturation effect in the non-equivalent comparison-group design by matching experimental and control participants on important variables.
- (A) True.
 - (B) False.
 - (C) Neither True nor False just a statement.
 - (D) None of the above.
- 386.** Research design in which neither the experimenter nor the participants know who is in the experimental group and who is in control group.
- (A) Single blind study
 - (B) Case study
 - (C) Double blind study
 - (D) None of above
- 387.** What is the most critical component of a research proposal that determines its feasibility?
- (A) Literature review

- (B) Methodology
 - (C) Abstract
 - (D) Conclusion
- 388.** The strategy or structure for conducting research.
- (A) Research design
 - (B) Data analysis
 - (C) Sampling method
 - (D) Literature review
- 389.** What is a “construct” in research?
- (A) A specific, observable behavior
 - (B) An abstract concept being studied (e.g., aggression)
 - (C) A type of research design
 - (D) A statistical test
- 390.** Rationale
- (A) A strong belief about someone or something that cannot completely be explained and does not have to be decided by reasoning
 - (B) An ability to understand or know something immediately based on your feelings rather than facts
 - (C) The reason(s) for doing something or making a decision about something
 - (D) None of above
- 391.** What criterion influences the selection of a research approach according to Creswell?
- (A) Predetermined methods
 - (B) Audience preferences
 - (C) Theoretical frameworks
 - (D) Researcher’s personal training and experiences
- 392.** A researcher conducts an experimental study by imposing several controls in respect of samples, data collection tools and situational variables. The likelihood of threat in arriving at generalization in this context will be to:
- (A) Internal validity
 - (B) External validity
 - (C) Both A & B
 - (D) Neither A & B
- 393.** A research design in which members of the sample are randomly allocated to one condition of the experiment.
- (A) Independent samples design
 - (B) Matched pairs design
 - (C) Repeated measures design
 - (D) None of above
- 394.** True or False: A test which is valid for one population is necessarily valid for another.
- (A) True
 - (B) False
- 395.** In a study comparing three antihypertensive drugs across patient types, which design is appropriate?
- (A) Latin square
 - (B) Factorial
 - (C) Randomized block
 - (D) Cross-over
- 396.** Consider the example: A researcher recruits students with low grades (an ‘at risk group’). The pre-measure is ‘How likely are you to drop out?’ The treatment is a social club formed with other participants. The post-measure is ‘How likely are you to drop out?’ What type of design is being used?
- (A) Pre-post design
 - (B) Between-subjects design
 - (C) Experimental design
 - (D) Cross-sectional design
- 397.** Which of the following best describes the purpose of research design?
- (A) To outline how data will be collected and analyzed to answer research questions
 - (B) To list out the results of the study
 - (C) To define the population and sampling procedure
 - (D) To summarize the literature review

- 398.** A business wants to track customer satisfaction changes over three years with the same respondents. Which design is most appropriate?
- (A) Cross-sectional study across demographics
 - (B) Longitudinal panel following individuals
 - (C) Quasi-experiment without randomization
 - (D) Content analysis of online reviews
- 399.** Which is not a criterion for a good research project design?
- (A) Clarity of objectives
 - (B) Relevance to the field
 - (C) Alignment with budget and time
 - (D) Complexity without purpose
- 400.** How does a clear conceptual framework improve the coherence of a research proposal?
- (A) It limits the scope of the literature review
 - (B) It visually organizes and clarifies the relationships among key concepts
 - (C) It shortens the methodology section
 - (D) It simplifies data collection
- 401.** A different group of participants is used for each IV level (e.g. one group will doodle and the other one will not).
- (A) Independent Measures Design
 - (B) Repeated Measures Design
 - (C) Matched-Pair Design
 - (D) None of above
- 402.** Which of the following is the best definition of conceptual framework?
- (A) It explains the research design and tools
 - (B) It presents previous researches or studies
 - (C) It contains variables, constructs, and concepts of the present study
 - (D) None of above
- 403.** Which of the following classification of research designs is based on the dimension of control over independent variables?
- (A) Structured and flexible
 - (B) Cross-sectional and longitudinal
 - (C) Retrospective and prospective
 - (D) Experimental/quasi experimental and non-experimental
- 404.** In the context of research, what does 'feasibility' refer to?
- (A) The ability to conduct the research within time and resource constraints
 - (B) The popularity of the research topic
 - (C) The complexity of the research question
 - (D) The number of researchers involved
- 405.** Which of the following is not a function of a conceptual framework in research?
- (A) Providing a theoretical basis for the study
 - (B) Selecting the appropriate statistical analysis techniques
 - (C) Helping to interpret research findings and draw conclusions
 - (D) Guiding the development of hypotheses or research questions
- 406.** Emphasizes the issues, language, contexts, and standards of stakeholders.
- (A) Goal-Free Model
 - (B) Responsive Model
 - (C) Effectiveness Model
 - (D) Objectives-Centered Model
- 407.** The extent to which we can draw cause-and-effect inferences from a study
- (A) Internal validity
 - (B) Case study
 - (C) Analytical thinking
 - (D) Debriefing
- 408.** What is Selection Bias?
- (A) Non-random assignment or sampling leads to unrepresentative groups.

- (B) Preference for publishing positive results over null findings.
(C) Researcher unintentionally influences participants through tone.
(D) Skewed analysis based on subjective interpretation.
- 409.** Indicate a suitable type of research design for the following research project: Research Project: "A study on the efficiency of a new admission system, compared to the previous admission system which is still being practiced"
(A) Qualitative-Exploratory
(B) Quantitative-Descriptive
(C) Quantitative-Causal
(D) None of above
- 410.** The authenticity of the research relates to?
(A) Data analysis tools and research institutions originate
(B) Topic, theory, measuring tools, subject, and place/setting
(C) Sponsorship, ethics, and researcher background
(D) None of above
- 411.** THE VALUE OF AN INVESTIGATION DEPENDS ON
(A) THE HYPOTHESIS.
(B) HOW WELL IT IS DESIGNED.
(C) THE RESEARCH TOPIC.
(D) THE SPONSOR.
- 412.** Select people for extreme standing in something (either really low or really high) and then that will lead to regression to the mean. What is this threat to internal validity called?
(A) Statistical regression to the mean
(B) Selection bias
(C) Testing effect
(D) Instrumentation
- 413.** How can a researcher test the long-term effect of a treatment?
(A) Use posttest only
(B) Use time-series design
(C) Use static-group comparison
(D) Use one-shot case study
- 414.** A good research design should ensure:
(A) Bias
(B) Reliability and validity
(C) Randomness only
(D) Errors
- 415.** In presenting written methodology, a researcher should NOT include:
(A) Participants or respondents
(B) Data collection plan
(C) Analysis procedures
(D) Final recommendations
- 416.** The extent to which results in an experiment generalize to other people, settings, and times is referred to as:
(A) Internal validity
(B) External validity
(C) Empirical validity
(D) Experimental control
- 417.** Delimitation means:
(A) Limiting the aspects covered in the study
(B) Expanding the study to all areas
(C) Including unrelated topics
(D) Removing the conclusion
- 418.** Which of the following sequences best describes the deductive logic of inquiry?
(A) Theory → data → hypothesis
(B) Data → theory → hypothesis
(C) Data → empirical pattern → theory
(D) Theory → hypothesis → data
(E) Empirical pattern → hypothesis → theory
- 419.** Which type of design uses aspects of both between-and within-subjects designs and uses a mixed ANOVA?
(A) True experimental design
(B) Mixed design
(C) Between-subjects design
(D) Within-subjects design

420. What does operationalising concepts facilitate for other researchers?
- (A) Confusion
 - (B) Replication
 - (C) Misinterpretation
 - (D) Obfuscation
421. A longitudinal study is characterized by:
- (A) Data collected at a single point in time
 - (B) Collecting data over an extended period to observe changes
 - (C) Observing participants in a controlled environment
 - (D) Surveying a large group of participants once
422. It is best to use the method of working multiple hypotheses when —
- (A) You are finished with your research.
 - (B) You are planning your research study.
 - (C) You are hoping to publish your already obtained research results.
 - (D) None of the above.
423. This type of research design is characterized by the long duration of the research process in order to observe possible effects or changes in the trend being studied
- (A) Longitudinal
 - (B) Survey
 - (C) Correlational
 - (D) Cross-sectional
424. A type of longitudinal study in which data are collected from the same people at two or more points in time
- (A) Case control study
 - (B) Panel study
 - (C) Prospective study
 - (D) Retrospective study
425. Why is it important to have a research design in quantitative research?
- (A) A research design enables the researcher to obtain more valid, objective, reliable, and accurate answers to the research questions.
 - (B) A research design ensures that the research is always qualitative.
 - (C) A research design eliminates the need for data analysis.
 - (D) A research design guarantees that the results will be published in top journals.
426. What is the role of a conceptual framework in quantitative research?
- (A) A conceptual framework in quantitative research is a research design methodology.
 - (B) A conceptual framework in quantitative research provides a theoretical foundation for the study.
 - (C) A conceptual framework in quantitative research is a statistical analysis tool.
 - (D) A conceptual framework in quantitative research is used to collect data.
427. In a prospective (cohort) design, it is correct to say that:
- (A) Data about causes are collected before data about effects
 - (B) Data are collected at a single point in time
 - (C) Data is called narratives
 - (D) None of above
428. Researchers must — important concepts in their studies so others would have a clear understanding of exactly how those concepts were defined.
- (A) Randomly assign
 - (B) Randomly select
 - (C) Operationalize
 - (D) Generalize
429. What is the role of a literature review in improving research methodology?
- (A) To provide examples of successful methods
 - (B) To collect data
 - (C) To analyse results
 - (D) To write the conclusion

- 430.** The design in which one group of research participants is administered a treatment and is then compared, on the dependent variable, with another group of research participants who did not receive the experimental treatment is ____
- (A) One-group posttest-only design.
 - (B) One-group pretest-posttest design.
 - (C) Posttest-only design with nonequivalent groups.
 - (D) Time series design.
- 431.** Which design allows each subject to receive all treatments in different orders?
- (A) Factorial
 - (B) Cross-over
 - (C) Solomon
 - (D) Latin square
- 432.** Deductive reasoning derives
- (A) Logical Conclusion
 - (B) Magical Conclusion
 - (C) Radical Conclusion
 - (D) None
- 433.** Why is the Methodology section considered important in a research report?
- (A) To provide references
 - (B) To summarize key elements
 - (C) To evaluate research quality and allow replication
 - (D) To discuss results
- 434.** Which design uses intact groups without randomization?
- (A) True experimental
 - (B) Quasi-experimental
 - (C) Pre-experimental
 - (D) Factorial
- 435.** As a student nurse researcher, you know the following functions of theoretical framework, except:
- (A) Specifies relationship among the concepts
 - (B) Give a graphic view of the data
 - (C) Clarifies the concept on which the study is built
 - (D) States assumptions or scientific guess
- 436.** Which design starts with quantitative data and follows with qualitative data?
- (A) Convergent
 - (B) Exploratory sequential
 - (C) Explanatory sequential
 - (D) Embedded
- 437.** The Methodology section of a full research report should include:
- (A) Only expected results
 - (B) Research design, procedures, materials, tools, and analysis methods
 - (C) A summary of previous studies
 - (D) Conclusions and recommendations
- 438.** A definition that includes information from the real world.
- (A) Technical Definition
 - (B) Operational Definition
 - (C) Expanded Definition
 - (D) Sentence Definition
- 439.** Your research design dictates your research methods and or procedures
- (A) True
 - (B) False
- 440.** In designing the structure of a proposal, the researcher should:
- (A) Be conventional in their approach
 - (B) Study a unique sample and focus on a timely topic
 - (C) Collect typical forms of data
 - (D) Observe a common field site
- 441.** Analysis of how traits vary in individuals raised apart from their biological relatives
- (A) Adoption study
 - (B) Mean
 - (C) Twin study
 - (D) Transduction

442. A measure is reliable if it provides consistent —
(A) Sensitivity.
(B) Hypothesis.
(C) Procedure.
(D) Results.
443. It is a likeness of something which consists of symbols serving as the imitation or an abstraction from reality to serve the purpose of ordering and simplifying our view of reality, while still representing its essential characteristics.
(A) Model.
(B) Communication.
(C) Research.
(D) None of the above.
444. Proposition of some occurrences or considerations that may be considered in eliminating the area of the study.
(A) Assumptions
(B) Conceptual Framework
(C) Research Locale
(D) Significance of the Study
445. The methods section of a study includes
(A) The literature review
(B) The results
(C) The design
(D) The framework
446. Research design is a:
(A) Rough guess
(B) Blueprint of research
(C) Random framework
(D) None
447. If a systematic review fits your topic, the next step is to determine the quality of that review
(A) True
(B) False
448. Which of the following best defines a theoretical framework in research?
(A) A broad explanation of a phenomenon using existing theories
(B) A method for detailing the research variables and relationships
(C) A detailed model for interpreting qualitative data
(D) A framework used only in experimental research
449. Participant variables are controlled as the same people do both conditions.
(A) Strength of Independent Measures Design
(B) Strength of Repeated Measures Design
(C) Strength of Matched-Pair Design
(D) None of above
450. The basic difference between causal-comparative and experimental research is that in causal comparative studies —
(A) There is no independent variable.
(B) The independent variable has already been manipulated by factors outside the researcher's control.
(C) The selection of dependent variables has been predetermined for the researcher.
(D) They use different statistical tests.
451. This is a figurative representation of research framework that includes all the variables, related studies, concepts, related theses and other literatures used in the study.
(A) Conceptual Background
(B) Conceptual Framework
(C) Theoretical Background
(D) Theoretical Framework
452. Which of the following is not a research design?
(A) Natural
(B) Repeated Measures
(C) Independent Samples/Measures
(D) Matched Pairs

- 453.** What is the goal of grounded theory research?
- (A) Developing descriptive summaries of cases
 - (B) Testing pre-existing hypotheses
 - (C) Generating conceptual or theoretical models
 - (D) Analyzing large datasets
- 454.** The research methodology section primarily focuses on:
- (A) Presenting findings
 - (B) Detailing the research design and procedures
 - (C) Listing statistical tools
 - (D) Describing results and recommendations
- 455.** TRUE OR FALSE: Conceptual Framework is based on general concepts and propositions and taken from practical observations and proven investigation.
- (A) TRUE
 - (B) FALSE
- 456.** Which design is most powerful for establishing causality?
- (A) Pre-experimental
 - (B) Quasi-experimental
 - (C) True experimental
 - (D) Descriptive
- 457.** Complete the strategy statement: Seek out expert assistance to ____ the questionnaire.
- (A) Sample
 - (B) Method
 - (C) Design
 - (D) Types
- 458.** Mira is conducting a research project to understand the dietary habits of teenagers in her city. How does using a cross-sectional study design benefit her research?
- (A) It allows for the collection of data at a single point in time.
 - (B) It provides insights into changes over a long period.
 - (C) It requires fewer participants than longitudinal studies.
 - (D) None of above
- 459.** Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: A depression-treatment trial reports that 20% of participants dropped out, mostly those who saw little improvement.
- (A) Publication Bias
 - (B) Attrition Bias
 - (C) Measurement Bias
 - (D) Confounding
 - (E) Selection Bias
- 460.** TRUE OR FALSE: Conceptual Framework represents less formal structure and uses for studies in which existing theory is sufficient.
- (A) TRUE
 - (B) FALSE
- 461.** Which of the following is not a type of longitudinal research design?
- (A) Cross-sectional design
 - (B) Cohort design
 - (C) Panel design
 - (D) Trend design
- 462.** Researchers who use the ____ method study the same group over the course of their lifespan to understand changes.
- (A) Case study
 - (B) Naturalistic observation
 - (C) Cross-sectional
 - (D) Longitudinal
- 463.** Karina wanted to know the effects of playing Mobile Legends to the academic performance of Grade 11 STEM 3 students. What research design would she best use to realize her main objective?
- (A) Exploratory design
 - (B) Cohort design

- (C) Causal design
(D) Action research
- 464.** Statement that attempts to explain why things are the way they are
(A) Hypothesis
(B) Principle
(C) Theory
(D) Cognitive activity
- 465.** Theoretical framework is trying to develop a ____ model of our study.
(A) Conceptual.
(B) Functional.
(C) Practical.
(D) Operational.
- 466.** Which type of research design involves studying a phenomenon over an extended period, collecting data at different time points?
(A) Stratified sampling
(B) Longitudinal
(C) Reliability
(D) Informed consent
- 467.** Which of the following is a characteristic of a quasi-experimental design?
(A) Random assignment of participants
(B) Use of control groups
(C) Lack of random assignment
(D) Double-blind procedures
- 468.** The choice of the research design heavily depends on;
(A) Research questions
(B) Research strategy
(C) Research philosophy
(D) Research approach
- 469.** These are plans and procedures for research that composed the steps from paradigms to research design (procedures of inquiry), detailed methods of data collection, analysis, and interpretation
(A) Research approaches
(B) Variables
(C) Statement of the problem
(D) Methods
- 470.** This design refers to a study in which the same subjects are exposed to two or more condition in random order:
(A) Crossover
(B) Case-control
(C) Descriptive
(D) None of above
- 471.** TRUE OR FALSE: Conceptual Framework provides a context for interpreting the study findings.
(A) TRUE
(B) FALSE
- 472.** If the design of a research study permits researchers to accurately infer that the independent variable is the cause of the changes observed in the dependent variable, then the design of the study is said to have ____ validity.
(A) Internal
(B) Construct
(C) Statistical conclusion
(D) None of above
- 473.** Which type of design can be used when the goal is to create a step-by-step increase (or decrease) in the amount, accuracy, or frequency of some behavior over a period of time?
(A) Nonequivalent comparison-group design.
(B) Changing-criterion design.
(C) Both A and B.
(D) None of the above.
- 474.** John is interested in understanding how people's attitudes toward climate change change over time. He surveys the same group of participants every year for five years. What type of research design is John employing?
(A) Cross Sectional Design
(B) Experimental Design
(C) Longitudinal Design
(D) Survey

475. Concern with the quantitative, & statistical aspects of the design such as technique of study, the methods of model building etc.
- (A) Sample design
 - (B) Observation design
 - (C) Statistical design
 - (D) Operational design.
476. This gives the information about the kind of design to be used in the study in relation to the title and SOP.
- (A) Research design
 - (B) Sampling procedure
 - (C) Respondents of the study
 - (D) Research locale
477. Which is an example of delimitation?
- (A) Only Grade 11 students from one school are included
 - (B) Including all schools in the region
 - (C) Studying all grade levels in the country
 - (D) Using an unlimited time frame
478. In this research design, the implementation of a variety of methodologies forms a critical part of achieving the goal of developing a scale-matched approach, where data from different disciplines can be integrated.
- (A) Comparative
 - (B) Normative
 - (C) Evaluative
 - (D) Methodological
479. Making a conclusion based on facts, definitions, properties, theorems or laws of logic is called
- (A) Inductive Reasoning
 - (B) Deductive Reasoning
 - (C) Valid Reasoning
 - (D) Invalid Reasoning
480. Visualized construct of the present study
- (A) Theoretical Framework
 - (B) Statement of the Problem
 - (C) Conceptual Framework
 - (D) Research Statement
481. Which of the following refers to the process of developing indicators or items for measuring constructs?
- (A) Operationalizing
 - (B) Conceptualizing
 - (C) Measuring
 - (D) Codifying
482. What does replication determine?
- (A) Replication encrypts data in a database.
 - (B) Replication deletes data from one database to another.
 - (C) Reliability of original research design
 - (D) Replication moves data within the same database.
483. Why is replicability important in research?
- (A) It ensures that research is conducted only once.
 - (B) It allows researchers to compare similarities and differences in replicated studies.
 - (C) It eliminates the need for critical thinking in research.
 - (D) It focuses solely on the study of professional trends.
484. How the research is to be conducted, including a description of the research design
- (A) When
 - (B) Why
 - (C) Where
 - (D) How
485. Research — refers to the overall strategy that you choose to integrate the different components of the study in a coherent and logical way.
- (A) Instrument
 - (B) Design
 - (C) Approach
 - (D) None of above
486. Tend to yield more diverse group of study participants, potentially enhancing generalizability of findings
- (A) Study site
 - (B) Multisite studies

487. A study in which events or cases are observed or studied as they occur, or in which human subjects are identified and followed forward in time, often to enable predictions to be made
- (A) Prospective study
 - (B) Longitudinal study
 - (C) Retrospective study
 - (D) Cross-sectional study
488. It will provide structure to the research at hand
- (A) Research design
 - (B) Objective
 - (C) Hypothesis
 - (D) None of above
489. A qualitative researcher wants to collect data on a phenomenon and then develop a theory that describes the data. Which research design should this researcher choose?
- (A) Narrative inquiry
 - (B) Phenomenology
 - (C) Grounded theory
 - (D) Ethnography
490. True or False: The methodology section should include only the tools used for data collection, not the research design.
- (A) True
 - (B) False
491. What is the purpose of a prediction research design?
- (A) To study complex associations among many variables
 - (B) Is to identify variables that will predict an outcome or criterion
 - (C) To determine the tendency or pattern for two (or more) variables
 - (D) To practically control influences in the project
492. A single question that attempts to cover two issues is called a ____
- (A) Filtered question
 - (B) Double-barreled question
 - (C) Random question
 - (D) Coefficient question
 - (E) Two-issue query
493. Identify what chapter of a research study the given element belongs. RESEARCH DESIGN
- (A) Chapter 1
 - (B) Chapter 2
 - (C) Chapter 3
 - (D) Chapter 4
 - (E) Chapter 5
494. Research design is a ____ for conducting the marketing research project.
- (A) Strategy
 - (B) Framework
 - (C) Blueprint
 - (D) Both B & C
495. What is the first step in survey design?
- (A) Analyzing data
 - (B) Writing random questions
 - (C) Defining the purpose and objectives
 - (D) Collecting responses
496. Which of the following should the researcher consider to be able to determine the type of data to be collected?
- (A) Research design
 - (B) Scientific method
 - (C) Pilot study
 - (D) Research process
497. A ____ is one that minimizes bias and maximizes the reliability of the data
- (A) Research process
 - (B) Research methodology
 - (C) Research design
 - (D) Research
498. This refers to the researcher's summary of the overall goal.
- (A) Statement of Purpose

- (B) Statement of Problem
 - (C) Paradigm
 - (D) Evidence-Based Practice
- 499.** This kind of research design derives conclusion from observations and manifestation that already occurred in the past and now compared to some dependent variables.
- (A) Survey
 - (B) Correlational
 - (C) Ex-Post Facto
 - (D) Normative
- 500.** What is the term for a detailed plan that outlines how a research study will be conducted?
- (A) Research Proposal
 - (B) Data Collection Plan
 - (C) Research Design
 - (D) Methodology
- 501.** Which of the following is related to research design
- (A) Sample selection.
 - (B) Formulation of experimental design.
 - (C) Selection and construction of the tool.
 - (D) All of the above.
- 502.** It is known as the process of structuring techniques and strategies that help researchers answer their inquiry.
- (A) Research Blueprint
 - (B) Research Design
 - (C) Qualitative Inquiry
 - (D) Research Techniques Edit
- 503.** This represents the researcher's understanding of how the various variables in his research project connect with each other.
- (A) Theoretical Framework
 - (B) Conceptual Framework
 - (C) Research Design
 - (D) Research Methodology
- 504.** How does a conceptual framework contribute to the validity of research findings?
- (A) A conceptual framework contributes to the validity of research findings by providing a theoretical foundation and guiding the development of the study.
 - (B) A conceptual framework is not necessary for conducting valid research.
 - (C) A conceptual framework limits the scope of research findings.
 - (D) A conceptual framework has no impact on the validity of research findings.
- 505.** Research design includes
- (A) Sampling, observational, statistical and operational designs.
 - (B) Statistical techniques alone.
 - (C) Only sampling design.
 - (D) Only data collection methods.
- 506.** What is a history effect in experimental design?
- (A) An effect caused by repeating the same test multiple times
 - (B) An external effect that happens between pre and post measure
 - (C) The natural development that happens during an interval
 - (D) The tendency for scores to cluster around the average
- 507.** What must a student do to test their hypothesis?
- (A) Write a conclusion
 - (B) Design an experiment
 - (C) Do research
 - (D) Ask a teacher
- 508.** Participants are arranged in pairs. Each pair is similar in important ways to the study, and one member performs at a different level of the IV (e.g. Two boys with similar IQs are divided into doodling and non-doodling).
- (A) Independent Measures Design
 - (B) Repeated Measures Design
 - (C) Matched-Pair Design
 - (D) None of above

509. Planning the research design involves decisions regarding ____
- (A) Data collection mode
 - (B) Type of study
 - (C) . sampling plans
 - (D) All of the above
510. Theoretical generalizability is when we try to apply our findings of one study to explain the behaviour of another population.
- (A) True
 - (B) False
511. What is the significance of methodological suitability?
- (A) Ensures ethical compliance
 - (B) Aligns methods with research questions
 - (C) Determines funding eligibility
 - (D) Selects the research team
512. Why must procedures in the Methodology be detailed?
- (A) To impress readers
 - (B) To allow replication of the study
 - (C) To increase page count
 - (D) To hide errors
513. What does an operational definition describe?
- (A) The process of hypothesis testing
 - (B) The significance of a research problem
 - (C) How variables and conditions are measured or manipulated
 - (D) The relationship between variables
514. Which research design is best for predicting future events?
- (A) Descriptive
 - (B) Predictive
 - (C) Correlational
 - (D) Historical
515. Method triangulation is important to rule out the possibility that it was the choice of research method that led to the findings.
- (A) True
 - (B) False
516. This framework is considered to be the logical masterplan of your research.
- (A) Conceptual Framework
 - (B) Theoretical Framework
 - (C) Hypothetical Framework
 - (D) Research Framework This framework is considered to be the logical masterplan of your research. Hypothetical Framework Research Framework Theoretical Framework Conceptual Framework
517. "Are people who eat canned food more likely to get cancer?" This question would be best answered by a ____
- (A) Experimental Design
 - (B) Correlational Design
518. In a 2 x 2 factorial design, when a main effect is significant
- (A) The other main effect should also be significant.
 - (B) The other main effect need not be significant.
 - (C) The interaction should be significant only if the other main effect is also significant.
 - (D) The interaction should not be significant if the other main effect is significant.
519. A longitudinal study follows:
- (A) Different ages at one time
 - (B) The same people over a long period
 - (C) Only twins
 - (D) Animals in natural habitats
520. What is emphasized in an emergent research design?
- (A) A fixed research plan
 - (B) Adaptability as research progresses
 - (C) Strict adherence to initial design
 - (D) Quantitative data analysis

521. How does a conceptual framework help in organizing research ideas?
- (A) A conceptual framework is not necessary for organizing research ideas.
 - (B) A conceptual framework helps in organizing research ideas.
 - (C) A conceptual framework only adds complexity to research ideas.
 - (D) A conceptual framework limits the scope of research ideas.
522. "Groups of 3-year-olds and 10-year-olds are tested each year over 10 years on their ability to pay attention on a task" This is an example of ____
- (A) Cross-sectional design
 - (B) Longitudinal design
 - (C) Cohort-sequential / cross-sequential design
 - (D) Baseline design
523. Which research design involves picking groups of participants of various age ranges at the same time?
- (A) Longitudinal design
 - (B) Cross sectional design
 - (C) Quasi developmental design
 - (D) Internal focus group
524. Which component of the research method ensures that other researchers can repeat the study and validate the findings?
- (A) Research Objectives
 - (B) Data Collection
 - (C) Research Design
 - (D) Replicability Statement
525. It explains the research design, data collection methods, and analysis techniques used in the study.
- (A) Methodology
 - (B) Discussion
 - (C) Title
 - (D) Conclusion
526. An error in the design of the experiment making an certain result more likely
- (A) Independent variable
 - (B) Dependent variable
 - (C) Data
 - (D) Bias
527. What is a research design in communication research?
- (A) A type of statistical analysis
 - (B) The plan or blueprint for conducting a research study
 - (C) The process of manipulating variables
 - (D) The analysis of media content
528. The importance of clearly defining the research design before conducting the study is:
- (A) It ensures the study is systematic and valid.
 - (B) It allows for random data collection.
 - (C) It eliminates the need for data analysis.
 - (D) It guarantees positive results.
529. Which of the following is not a form of measurement validity?
- (A) Concurrent validity
 - (B) Face validity
 - (C) Conductive validity
 - (D) Convergent validity
530. ____ occurs when two or more extraneous variables (EVs) or possible outcomes overlap so much that the effects cannot be differentiated from one another.
- (A) Confounds
 - (B) Controls
 - (C) Variables
 - (D) Biases
531. What is the purpose of developing a theoretical framework?
- (A) To provide a structure for the research
 - (B) To collect data
 - (C) To analyse results
 - (D) To write the conclusion

532. Which of the following research scenarios best demonstrates deductive reasoning?
- (A) Noticing that anxious patients often had overprotective parents and developing a parenting theory
 - (B) Using attachment theory to predict that secure toddlers will explore new toys more
 - (C) Observing that children share more after praise and forming a pro-social behavior theory
 - (D) Interviewing elite athletes and discovering they all use self-talk before competing
533. A research design is a blueprint for the collection, measurement, and analysis of data, based on ____ of the study
- (A) The purpose
 - (B) The research questions
 - (C) The introduction
 - (D) None of above
534. When adjusting an instrument for cultural context, researchers should conduct:
- (A) Translation only
 - (B) Back-translation and pilot testing
 - (C) Random sampling only
 - (D) Factor analysis only
535. What is the purpose of a conceptual framework?
- (A) The purpose of a conceptual framework is to provide a theoretical foundation for understanding and analyzing a subject or problem.
 - (B) The purpose of a conceptual framework is to provide a step-by-step guide for solving a problem.
 - (C) The purpose of a conceptual framework is to limit creativity and innovation.
 - (D) The purpose of a conceptual framework is to confuse and complicate the subject or problem.
536. The design chosen for a given study depends on the
- (A) Subject area being studied.
 - (B) Assumed answer.
 - (C) Question being asked.
 - (D) Types of variables
537. In research design, what does "logistics" refer to?
- (A) The philosophical underpinnings
 - (B) The data analysis methods
 - (C) The work plan for data collection and analysis
 - (D) The publication strategy
538. How can a researcher minimize the Hawthorne effect?
- (A) Use random sampling
 - (B) Blind the subjects to observation
 - (C) Increase sample size
 - (D) Use pretest-posttest design
539. A study measuring the same individuals repeatedly over years is:
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Quasi-experimental
 - (D) Ethnographic
540. TRUE or FALSE. Causal-comparative research looks at the possible causal relationships among variables that can be manipulated by the researcher.
- (A) False
 - (B) True
541. Research design used to compare groups on some criterion:
- (A) Experimental
 - (B) Correlational
 - (C) Descriptive
 - (D) Causal-comparative
542. Why is there a need for research design?
- (A) To ensure the research problem is clearly defined
 - (B) To collect data
 - (C) To analyse results
 - (D) To write the conclusion

- 543.** What are the characteristics of a research design?
- (A) Time-bound, specific, objectivity, attainable
 - (B) Neutral, reliable, general, valid
 - (C) Valid, specific, attainable, reliable
 - (D) Time-bound, attainable, valid, neutral
- 544.** Indicate a suitable type of research design for the following research project: Research Project: "How does the image of the ideal man influences the male population between the ages 20 and 35?"
- (A) Qualitative-Exploratory
 - (B) Quantitative-Descriptive
 - (C) Quantitative-Causal
 - (D) None of above
- 545.** Restricts the generalizability of the results of a study to other populations/context
- (A) Hypothesis
 - (B) Limitation
 - (C) Implication
 - (D) Literature
- 546.** Which type of research design is used when the topic is new and unclear?
- (A) Exploratory
 - (B) Descriptive
 - (C) Explanatory
 - (D) Experimental
 - (E) Cross-sectional
- 547.** What are research designs?
- (A) The overall structure of your research
 - (B) Using multi-methods to collect data
 - (C) A way of measuring validity of your data collected
 - (D) Your aims and objectives of research
- 548.** Which design would be most appropriate to use in trying to determine if clients' low back pain changes after they were taught an exercise to help correct back alignment?
- (A) One-group pretest-posttest design
 - (B) Posttest-only control group design
 - (C) One-shot case study
 - (D) Pretest-posttest control group design
- 549.** In the criteria of Within your Reach, this means that your study
- (A) Is something you are interested to begin with
 - (B) Is within the bounds of your time, budget and locale
 - (C) Can contribute and add new information for peers scholar and future researcher
 - (D) Must be beneficial to other and can help improve quality of human life
- 550.** A mathematical representation of an object or event is a
- (A) Model
 - (B) Variable
 - (C) Control
 - (D) Theory
- 551.** How does research design affect the reliability of results?
- (A) It has no direct impact
 - (B) It only matters in qualitative studies
 - (C) A solid design ensures reliable and repeatable results
 - (D) It allows data to be ignored out of context
- 552.** In a study examining the effects of different teaching methods on student performance, researchers want to ensure that the groups they are comparing are as similar as possible before the experiment begins. Which technique should they use?
- (A) Random sampling
 - (B) Counterbalancing
 - (C) Group matching
 - (D) Generalizability
- 553.** To ensure that other researchers can repeat their work, psychologists use
- (A) Control groups.
 - (B) Random assignment.
 - (C) Double-blind procedures.
 - (D) Operational definitions.

554. Which of the following belongs in the Methodology section?
- (A) Hypothesis
 - (B) Research design and procedures
 - (C) Interpretation of data
 - (D) Recommendations
555. A study design that examines a group of people who have experienced an event and a group of people who have not experienced the same event. the study looks at how exposure to suspect agents differed between the two groups. this study design is most useful for trying to ascertain the cause of rare events
- (A) Randomized controlled trial
 - (B) Controlled clinical trial
 - (C) Cohort study
 - (D) Case control study
 - (E) Case series
556. A means of setting out an explanation set that might be used to define and make sense of the data that flow from the research question.
- (A) Research Paradigm
 - (B) Theoretical
 - (C) Conceptual
 - (D) None of above
557. Which of the following is not a potential source of bias in longitudinal research?
- (A) Attrition bias
 - (B) Selection bias
 - (C) Recall bias
 - (D) Regression to the mean
558. Which of the following is NOT a consideration when designing a good treatment/experiment group?
- (A) Does it follow from the hypothesis?
 - (B) Is it feasible?
 - (C) Is it the right 'strength'?
 - (D) Is it the most expensive option?
559. It does not possible or even desirable to rule out the differential effects of all relevant variables by means of experimental control. In such instances psychologists employ controlled conditions by mathematical methods. This is called
- (A) Mathematical Control.
 - (B) Physiological Control.
 - (C) Psychological Control.
 - (D) Statistical Control.
560. FEATURES OF A GOOD RESEARCH DESIGN are
- (A) The availability and skills of the researcher and his staff
 - (B) The objective of the problem to be studied;
 - (C) The nature of the problem
 - (D) All of the above
561. A ____ is an image or abstract idea specifically invented for a given research and/or theory-building purpose.
- (A) Variable
 - (B) Construct
 - (C) Concept
 - (D) Theory
 - (E) Model
562. It is a foundational review of existing theories that serves as a roadmap for developing the arguments you will use in your own work.
- (A) Theoretical framework
 - (B) Theory
 - (C) Conceptual framework
 - (D) Organizational framework
563. Operationalization of a construct
- (A) Means to investigate a reading topic
 - (B) Is doing construction on a building
 - (C) Means expressing it in terms of observable behaviour
 - (D) Is the theory of knowledge
564. It refers to the theory that a researcher chooses to guide him/her research.
- (A) CONCEPTUAL FRAMEWORK

- (B) THEORETICAL FRAMEWORK
 - (C) (IV-DV) Model
 - (D) (IPO) Model
- 565.** In an ABA design, the letter A refers to a baseline measure.
- (A) T
 - (B) F
- 566.** Purpose of methodology in research
- (A) To explain how the study was conducted
 - (B) To present the results of the study
 - (C) To summarize the literature review
 - (D) To discuss the implications of the findings
- 567.** Managers and researchers have decided to conduct their marketing research study by looking at individual customers rather than at households. They have determined the
- (A) Unit of analysis.
 - (B) Relevant variable.
 - (C) Decision problem.
 - (D) Research problem.
- 568.** What research design aims to determine a cause from already existing effects?
- (A) Descriptive Research Design
 - (B) Correlational Research Design
 - (C) Quasi-Experimental Research
 - (D) Ex Post Facto
- 569.** These are set so that your goals do not become impossibly large to complete.
- (A) Scope
 - (B) Delimitations
 - (C) Scope and delimitations
 - (D) None of above
- 570.** For a study on anxiety among first-time mothers, which criterion aligns with the inclusion list shown?
- (A) Participants must have multiple prior births
 - (B) Participants must be hospital administrators
 - (C) Participants must be fathers of newborns
 - (D) Participants must be first-time mothers
- 571.** There is no control for participant variables. For example, participants in one group may be naturally better at the task given.
- (A) Weakness of Independent Measures Design
 - (B) Weakness of Repeated Measures Design
 - (C) Weakness of Matched-Pair Design
 - (D) None of above
- 572.** Methodology allows other researchers to replicate the study.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
- 573.** The extent to which a study's results are the product of the manipulation of the independent variable (and not extraneous variables).
- (A) External validity
 - (B) Generalizability
 - (C) Internal validity
 - (D) Population validity
- 574.** What is the purpose of research design?
- (A) The purpose of research design is to manipulate data.
 - (B) The purpose of research design is to analyze existing data.
 - (C) The purpose of research design is to provide a framework for conducting a study and collecting data.
 - (D) The purpose of research design is to determine the sample size.
- 575.** What does the symbol R indicate in an experimental design?
- (A) Observation
 - (B) Experimental variable
 - (C) Comparison groups
 - (D) Random assignment

576. What is the goal of internal validity in quantitative research?
- (A) To ensure generalizability
 - (B) To ensure research is unbiased
 - (C) To measure what was intended
 - (D) To confirm the research findings
577. What type of validity refers to the extent to which the results of a study can be generalized across time?
- (A) Ecological validity.
 - (B) Temporal validity.
 - (C) External validity.
 - (D) Internal validity.
578. Develop a scenario where an illogical conclusion is made and explain why it is illogical.
- (A) Scenario: If it is snowing, it is cold. Therefore, if it is cold, it must be snowing.
 - (B) Scenario: My friend is good at math, so all my friends must be good at math.
 - (C) Scenario: I like chocolate, so everyone must like chocolate.
 - (D) Scenario: Some dogs are friendly.
579. What is the type of research design that focuses on predicting outcomes using certain variables as predictors?
- (A) Correlational research design
 - (B) Action research design
 - (C) Causal-comparative research design
 - (D) Mixed methods design
580. What does a conceptual framework provide in a study?
- (A) Summary of findings
 - (B) Theoretical basis and study structure
 - (C) Statistical analysis methods
 - (D) Research methodology
581. What does "external validity" in marketing research refer to?
- (A) Accuracy of survey wording
 - (B) Ability to apply results to a larger population
 - (C) Honesty of participant responses
 - (D) Complexity of data analysis
582. Which of the following is a type of predictive validity?
- (A) Content validity
 - (B) Construct validity
 - (C) Criterion-related validity
 - (D) Face validity
583. True or False: All studies shape the research design, while research design simultaneously shapes the study.
- (A) False
 - (B) True
584. Which of the following is a longitudinal design?
- (A) Studying the same people over time
 - (B) Studying different people at one time
 - (C) A lab experiment
 - (D) A survey
585. Ex Post Facto research means [2012-JUNE]
- (A) The research is carried out after the incident
 - (B) The research is carried out prior to the incident
 - (C) The research is carried out along with the happening of an incident.
 - (D) The research is carried out keeping in mind the possibilities of an incident.
586. It is done to check the correctness and verify the findings of the study.
- (A) Large Sample Size
 - (B) Numerical Data
 - (C) Objective
 - (D) Replication
587. Quasi experiments are specifically conducted on:
- (A) Randomly allocated groups of participants
 - (B) Pre-existing groups of participants
 - (C) Participants in controlled environments
 - (D) Participants using manipulated variables

- 588.** Which of the following would be a limitation of a marketing research study focused only on Instagram users aged 18-25?
- (A) Generalizability to all digital users
 - (B) Increased cost of research
 - (C) Availability of respondents
 - (D) Too many data points
- 589.** What do researchers create to help keep a research project on track?
- (A) Research Design
 - (B) Marketing Plan
 - (C) Marketing Concept
 - (D) Cost Analysis Report
- 590.** A study is said to have ____ if it yields consistent results each time it is repeated.
- (A) Validity
 - (B) Reliability
 - (C) Sample
 - (D) Correlation Edit
- 591.** What is the importance of a theoretical framework in a research study?
- (A) To provide historical context
 - (B) To guide the research process and analysis
 - (C) To summarize the major findings
 - (D) To list all the references used
- 592.** They affect the inferences you can draw from your study
- (A) Scope and delimitations
 - (B) Delimitations and limitations
 - (C) Assumptions and limitations
 - (D) None of above
- 593.** An argument that is right in form and has to do with the right way of thinking
- (A) Propaganda
 - (B) Truth
 - (C) Validity
 - (D) Informal logic
- 594.** The various types of research design include:
- (A) Exploratory, exploitive, and competitive
 - (B) Deductive, descriptive, and exploitive
 - (C) Exploratory, causal, and competitive
 - (D) Exploratory, descriptive, and causal
- 595.** Research design is mainly concerned with:
- (A) Data entry
 - (B) Blueprint of research process
 - (C) Writing reports
 - (D) Proofreading
- 596.** A research design that determines associations?
- (A) Sequential
 - (B) Longitudinal
 - (C) Correlational
 - (D) Cross-sectional
- 597.** V conducted a study on the effectiveness of Self-Paced Learning approach. After randomly assigning his subjects to the control (CG) and experimental (EG) group, he exposed the EG to the Self-Paced Learning approach while the CG retained the traditional approach. After which, he assessed the performance of both groups.
- (A) Posttest Only
 - (B) Pretest-Posttest Only
 - (C) Solomon Four Group
 - (D) Factorial
 - (E) Crossover
- 598.** Which kind of study looks at a person over a long period of time?
- (A) Longitudinal Study
 - (B) Correlational Study
 - (C) Experimental Study
 - (D) Descriptive Study
- 599.** This gives the information about the place where the study will be conducted.
- (A) Research design
 - (B) Sampling procedure
 - (C) Research respondents
 - (D) Research locale

- 600.** Having a well-developed design will enable the researcher to achieve the following, EXCEPT:
- (A) Review and synthesize previous studies and literature related to the topic.
 - (B) Describe the methods of analysis that will be used on the data gathered.
 - (C) Clearly identify hypothesis that are significant to the problem.
 - (D) Promote cost-effectiveness through documentation.
- 601.** Jaime is running a study comparing the performances on monolinguals and bilinguals on memories for pictures. This study uses a ____ and is a ____
- (A) Participant variable; between-subjects design
 - (B) Participant variable; within-subjects design
 - (C) Experimenter independent variable; between-subjects design
 - (D) Experimenter independent variable; within-subjects design
- 602.** The boundaries of the study are called:
- (A) Scope
 - (B) Delimitation
 - (C) Limitation
 - (D) Synthesis
- 603.** Which is NOT an element of a good research design?
- (A) Sampling design
 - (B) Observational design
 - (C) Financial statement
 - (D) Statistical design
- 604.** It underpins the present study with a cognitive structure that the study intends to verify or support.
- (A) Theoretical Framework
 - (B) Conceptual Framework
 - (C) Literature Review
 - (D) Introduction
- 605.** What is a major disadvantage of cross-sectional design?
- (A) It cannot study changes over time.
 - (B) It is too expensive.
 - (C) It requires too many years.
 - (D) It always involves experiments.
 - (E) It lacks questionnaires.
- 606.** If the research objective is to gain background information, it is likely that the most appropriate research design would be:
- (A) Exploitive
 - (B) Exhaustive
 - (C) Deductive
 - (D) Exploratory
- 607.** The Research design is the place where the study is conducted. Other authors call this the research locale.
- (A) TRUE
 - (B) FALSE
- 608.** Limitations in a study could include factors like sample size, methodological constraints, and potential biases.
- (A) True
 - (B) False
- 609.** Which design involves studying the same subjects over time?
- (A) Cross-sectional
 - (B) Longitudinal
 - (C) Experimental
 - (D) Case study
- 610.** Ex-Post Facto Research is a systematic empirical enquiry in which the scientist does not have direct control of
- (A) Independent Variables.
 - (B) Dependent Variables.
 - (C) Both Independent and Dependent Variables.
 - (D) Controlled Variables.

- 611.** Which term refers to the trustworthiness or consistency of a measure—yielding the same results across multiple applications to the same sample when free of random error?
- (A) Validity
 - (B) Reliability
 - (C) Standard error
 - (D) Normalization
 - (E) Objectivity
- 612.** What role does a conceptual framework play in the process of relating research findings to the literature?
- (A) It provides a summary of the study design
 - (B) It outlines the statistical procedures used in data analysis
 - (C) It offers a theoretical foundation for understanding relationships between variables
 - (D) It guides the selection of participants in the study
- 613.** This refers to the overall plan followed by the research upon starting and finishing the research project.
- (A) Quantitative Analysis
 - (B) Data Gathering Procedure
 - (C) Research Design
 - (D) Instrumentation
- 614.** What are constraints?
- (A) Sharing ideas
 - (B) Guidelines that are needed to be successful
 - (C) Factors that limit what can be done
 - (D) A model of a new design
- 615.** What is the threat to internal validity that occurs in a test-retest situation where there's a break between the first and second test, and must account for any shared experiences or natural maturation between tests?
- (A) Maturation
 - (B) Instrumentation
 - (C) Selection Bias
 - (D) Testing Effect
- 616.** If a researcher wants to study the effect of teaching method and class size, which design is best?
- (A) Latin square
 - (B) Factorial
 - (C) Solomon
 - (D) Cross-over
- 617.** If a researcher follows the same group of people for 20 years, what kind of a study is that?
- (A) Cross-sectional
 - (B) Longitudinal
- 618.** To establish reliability a study must show
- (A) Consistency
 - (B) Durability
 - (C) Accurate results
 - (D) Useful conclusions
- 619.** Research design is a plan to answer your research questions or problems.
- (A) TRUE
 - (B) FALSE
- 620.** For which of the following studies does the researcher not control which individuals are assigned to which group?
- (A) Between subject experiment
 - (B) Within subject experiment
 - (C) Nonequivalent group design
 - (D) Pre-post design
- 621.** What is a benefit of crowdsourced studies?
- (A) No need for software
 - (B) Reduced researcher bias
 - (C) Guaranteed accuracy
 - (D) Real-time feedback
- 622.** The overall location for a study
- (A) Study site
 - (B) Multisite studies
- 623.** A theoretical framework helps in:
- (A) Collecting raw data
 - (B) Structuring concepts and relationships

(C) Testing random ideas

(D) Listing studies

1.3.9 Pilot Study

1. What is the aim of a pilot study?
 - (A) To test the feasibility of a full-scale study
 - (B) To publish final results
 - (C) To gather data for a thesis
 - (D) To conduct a literature review
2. A(n) ____ is a preliminary small-scale study that researchers conduct in order to help them decide how best to conduct a large-scale research project
 - (A) Field experiment
 - (B) Pilot study
 - (C) Triangulation
 - (D) Sampling technique
3. A small experiment to designed to test logistics and gather information prior to a larger study
 - (A) Focus group
 - (B) Secondary data analysis
 - (C) Pilot study
 - (D) Case analysis
4. A pilot study is:
 - (A) Final study
 - (B) Preliminary study
 - (C) Large-scale study
 - (D) Not required
5. What is the main purpose of conducting a pilot test before the main data collection?
 - (A) To confirm the research question
 - (B) To test the reliability and validity of the instrument
 - (C) To analyze data
 - (D) To select the sample population
6. When a researcher conducts a small-scale study to check the questionnaire so as to detect possible errors due to improper design, it is called a(n):
 - (A) Pretest study.
 - (B) Expert study.
 - (C) Experimental study.
 - (D) Secondary data research.
7. Which helps in providing a preliminary idea about the survey?
 - (A) Sampling
 - (B) Telephone interview
 - (C) Personal interview
 - (D) Pilot survey
8. A trial run of the data collection process to determine if any revisions should be made before actual data collection occurs.
 - (A) Pilot study
 - (B) Cross-Sectional Survey
 - (C) Cover letter
 - (D) Response Rate
9. Pilot testing is conducted to:
 - (A) Finalize sample size
 - (B) Pre-test instruments
 - (C) Interpret results
 - (D) Prove hypothesis
10. Using a small sample to pilot a questionnaire helps test:
 - (A) Statistical significance
 - (B) Practicality and clarity of items
 - (C) Hypothesis direction
 - (D) Population parameters
11. ____ refers to the testing of the questionnaire on a small sample of respondents to identify and eliminate potential problems.
 - (A) Post testing
 - (B) Pre-testing
 - (C) Full-scale testing
 - (D) Mock survey

12. One of the best ways to ensure the quality of your questionnaire is to ____
(A) Follow-up with respondents.
(B) Pretest it in a pilot study
(C) Spell-check the document
(D) Proofread it several times.
13. What is the process of refining data collection instruments before the main study?
(A) Triangulation
(B) Pilot Testing
(C) Sampling
(D) Theoretical Framework
14. Before doing the real study, a researcher needs to do a pilot study. A pilot study sample needs to calculate based on ____
(A) 5%
(B) 10%
(C) 15%
(D) 20%
15. In the pre-test, the questionnaire is given to a few researchers or subject experts to assess its wording, logic, flow and its face validity.
(A) True
(B) False
16. Pilot study helps in:
(A) Saving time
(B) Testing feasibility
(C) Publishing faster
(D) Avoiding ethics
17. A pilot study is conducted to:
(A) Finalize the conclusions of a study
(B) Determine the effectiveness of the research design
(C) Test and refine the research instrument
(D) Train the research team
18. A survey on a smaller scale conducted before a large scale field study is termed as ____ survey.
(A) First
(B) Primary
(C) Pilot
(D) Field
19. The process of refining a research instrument through testing and revisions is called:
(A) Sampling
(B) Validation
(C) Piloting
(D) Implementation
20. Pilot testing contributes to the reliability of an instrument by:
(A) Identifying and correcting potential issues before full implementation
(B) Increasing the sample size for the main study
(C) Eliminating the need for further validation
(D) Guaranteeing perfect results in all situations
21. Pilot tests typically use a sample size of ____ participants.
(A) Less Than 100
(B) 100-500
(C) 501-1000
(D) More than 1000
22. What is the primary purpose of pilot testing in research instrument development?
(A) To gather preliminary data
(B) To assess the reliability of the instrument
(C) To finalize the research questions
(D) To select the sample population
23. How does a pilot study help with research clarity?
(A) By simplifying the research topic
(B) By ensuring the research runs smoothly on a larger scale
(C) By reducing the number of participants
(D) By focusing on theoretical aspects

24. Pilot study is a standard scientific tool for soft research, allowing scientists to conduct a ___ analysis before committing to a fullblown study or experiment
- (A) Important
 - (B) Preliminary
 - (C) Last
 - (D) Direct
25. Pilot testing is primarily conducted to collect a large amount of data for the final analysis
- (A) TRUE
 - (B) FALSE
26. A ___ study is a practice / small-scale study conducted before the main study. It allows the researcher to try out the study with a few participants so that adjustments can be made before the main study, so saving time and money.
- (A) Initial
 - (B) Pilot
 - (C) Alpha
 - (D) None of above
27. How could a sociologist increase the likelihood of increasing the reliability of his/her interview?
- (A) Previous to the interview, ask the interviewees what type of questions they believe would be suitable to ask when talking about a certain topic.
 - (B) Conduct a Pre-examination study before the interview
 - (C) Ask another sociologists advice on the questions to ask
 - (D) Conduct a pilot study
28. What is one benefit of conducting a pilot study?
- (A) It guarantees research success
 - (B) It allows researchers to refine their methods
 - (C) It eliminates the need for a main study
 - (D) It provides immediate results
29. What is the purpose of a pilot study in research?
- (A) To test the hypothesis
 - (B) To analyze data
 - (C) To select the final sample
 - (D) To test the research instruments and procedures
30. The survey which helps in pre-testing the questionnaire is:
- (A) Pilot Survey
 - (B) Census Survey
 - (C) Sample Survey
 - (D) None of these
31. What is the main purpose of pilot testing?
- (A) To identify potential problems.
 - (B) To accumulate responses.
 - (C) To identify respondent.
 - (D) To evaluate the research.
32. Pilot testing a questionnaire before full-scale data collection helps to:
- (A) Improve the sample size
 - (B) Identify and fix any issues with the instrument
 - (C) Increase the validity of the entire study
 - (D) Gather a larger number of responses
33. The value of piloting a questionnaire is that it helps you to:
- (A) Test out your questions on some of the people who will be in the final sample.
 - (B) Identify and amend any problems in the question wording, order and format.
 - (C) Find out what a trained pilot would think of the subject matter.
 - (D) All of the above.
34. Before implementing a large, multisite research investigation, a researcher conducts a smaller study of the planned study to identify any problematic areas. This smaller study is known as a(n):
- (A) Abstract

- (B) Exploratory design
 - (C) Pilot study
 - (D) Proposal
35. Which one of the following is not one of the steps researchers take when specifying constructs?
- (A) Choosing the most suitable measurement approach
 - (B) Choosing the specific process for measuring the construct
 - (C) Conducting a pilot study to test the measurement strategy
 - (D) Developing a definition of the concept that uses easily understandable terms
36. This is term which describes the trial run of your study
- (A) Primary method
 - (B) Falsification
 - (C) Pilot study
 - (D) Correlational analysis
37. Which would not be tested in a pilot study?
- (A) The hypothesis
 - (B) The procedures
 - (C) The standardised instructions
 - (D) The materials to be used
38. An initial study undertaken to test the reliability of the research design is known as ____
- (A) A prequel study
 - (B) A pre-emptive study
 - (C) A primary study
 - (D) A pilot study

1.4 Data Collection and Sampling

1.4.1 Data Collection

1. What methods are used to assess the value of the measured indicator in experimental studies?
 - (A) Direct and indirect;
 - (B) Whole and fractional;
 - (C) Old and new;
 - (D) True and old;
 - (E) True and accurate;
2. What is the main advantage of using a data recording sheet?
 - (A) It allows for random data entry.
 - (B) It ensures consistent and accurate data collection.
 - (C) It eliminates the need for data analysis.
 - (D) It is a substitute for statistical software.
3. Scientists determine current climate conditions by
 - (A) Making direct measurements.
 - (B) Creating computer models.
 - (C) Examining ice cores.
 - (D) Using proxy indicators.
4. Any text used to describe data
 - (A) Label
 - (B) Cell
 - (C) Value
 - (D) What-if
5. Which of the following is a research tool where there is a verbal conversation between two people with a objective of relevant information?
 - (A) Observation
 - (B) Interview
 - (C) Rating Scale
 - (D) Intelligence Test
6. What is the role of a research tool in a scientific study?
 - (A) To formulate hypotheses
 - (B) To collect and measure data
 - (C) To publish results
 - (D) To conduct peer reviews

7. People asked to write description of their experiences of phenomenon
(A) Interviews
(B) Observation
(C) Written descriptions by participant
(D) None of above
8. What is a collection of info consisting of one or more related fields about a specific entity?
(A) Table.
(B) Field.
(C) Record.
(D) Database.
9. Diagrams, tables, and graphs are used by scientists mainly to
(A) Organize data
(B) Design a research plan for an experiment
(C) Predict the independent variable
(D) Test a hypothesis
10. Data from Facebook, Instagram, Twitter, Blogs are considered ____ data.
(A) Unstructured/Internal
(B) Unstructured/External
11. Pieces of information obtained in study.
(A) Research
(B) Data
(C) Survey
(D) Questionnaire
12. What is the main characteristic of a good research tool?
(A) Complexity
(B) Reliability
(C) Ambiguity
(D) Length
13. It occurs when data are obtained erroneously or samples are biased.
(A) Non-random sampling
(B) Convenience sampling
(C) Non-sampling error
(D) Sampling error.
14. The tools for information collection in the focus group discussion (FGD) technique are:
(A) Checklists and sample forms for data collection
(B) Eyes, ears, pen and paper, watch, board, video camera, etc.
(C) Interview plans and checklists
(D) Discussion guides and audio recorders
(E) Questionnaires and audio recorders
15. If you want to find out the reasons why people prefer playing mobile games to reading, you will use ____
(A) Open-ended questions
(B) Closed questions
16. Olivia conducted an experiment to measure the growth of plants under different light conditions. The name of the information that she gets from her experiment (she organizes it into charts and graphs) is called what?
(A) Observations/conclusion
(B) Data
(C) Variables
(D) Hypothesis
17. Direct observation enables the observer to note how often a behavior occurs and to establish which of the following?
(A) A baseline
(B) Rapport for follow-up interview
(C) Target analysis
(D) Consequences
18. ____ are caused by human mistakes in recording, processing or analysing data, or because of faulty information given by respondents
(A) Biases
(B) Observations
(C) Non-sampling errors
(D) Sampling errors Edit
19. Which of the following are sources of data?
(A) Sensors
(B) Surveys
(C) Web scrapers
(D) All of these

20. What do you mean by Data collection?
- (A) Gathering and measuring information on variables of interest
 - (B) Gathering and measuring books on variables of interest
 - (C) Gathering and measuring newspapers on variables of interest
 - (D) Gathering and measuring diaries on variables of interest
21. What is the measure of agreement among observers on how they record and classify a particular event?
- (A) Inter-rater reliability
 - (B) Observer bias
 - (C) Classification accuracy
 - (D) Event consistency
22. Which method is most appropriate for gathering quantitative data from a large group of users?
- (A) One-on-one interviews
 - (B) Focus groups
 - (C) Surveys
 - (D) Contextual inquiry
23. What does it mean when researcher records inform from individuals in one of two ways: Asking them to answer questions on a questionnaire or observing an individual and recording scores on a log or checklist?
- (A) Measurement
 - (B) Observation
 - (C) Analysis
 - (D) Comparison
24. It is the name given to a session with seven to ten members present. Discussions are led by a moderator, and may be monitored through a one-way mirror.
- (A) Focus group
 - (B) Research design
 - (C) Executive interview
 - (D) None of above
25. Which evidence suggests a need to formalize data collection in a multinational?
- (A) Unanimous agreement from every local manager
 - (B) Perfectly consistent weekly sales patterns
 - (C) Stable identical preferences in all markets
 - (D) Conflicting regional reports on consumer demand
26. An ordinal scale is used to rank people, objects, or characteristics
- (A) True
 - (B) False
27. When data are classified according to a single characteristic, it is called:
- (A) Quantitative classification
 - (B) Qualitative classification
 - (C) Area classification
 - (D) Simple classification
28. Data that describe a group of people in terms of their tastes, opinions, personality traits, and lifestyle habits is called ____
- (A) Demographic data
 - (B) Psychographic data
 - (C) Geographic data
 - (D) None of above
29. There are many problems that may be faced in collecting data for measurement of criteria, most common one is that people are not always cooperative.
- (A) Step 1: Develop Criteria:
 - (B) Step 2: Choose Design:
 - (C) Step 3: Choosing Measures of Criteria:
 - (D) Step 4: Collecting Data:
 - (E) Step 5: Data Analysis and Interpretation:
30. The following definition is associated with what key concept? A second variable is measured for a group of participants to obtain a set of scores in each treatment condition
- (A) Measurement

- (B) Control
(C) Manipulation
(D) Comparison
31. A scientist put together data that shows different body cells, their total mass and count. Which of the following statements is he most likely studying?
- (A) The number of cells of the same type are in the average human body
(B) Increasing the number of adipocytes will lead to increased muscle cells
(C) Decreasing the number of adipocytes will lead to increased muscle cells
(D) The number of cells of different types are found in the average human body.
32. A literature review requires
- (A) Planning
(B) Odd & clear writing
(C) Lot of rewriting
(D) All
33. What is required to have more confidence in a theory?
- (A) Literature reviews
(B) Data
(C) Parsimony
(D) None of the above
34. Information recorded in your experiment which is used to draw a conclusion is called
- (A) Reliable
(B) Data
(C) Hypothesis
(D) Observation
35. Data acquisition involves compilation of
- (A) New Data
(B) Existing and new data
(C) Existing data
(D) Past Data
36. The ____ scale consists of a number of statements that communicate a favourable or unfavourable attitude toward the concept that is under investigation.
- (A) Likert
(B) Stapel
(C) Ordinal
(D) Semantic differential
37. Scientists observe the thickness of a tree's ____ to learn about past climate conditions.
- (A) Rings
(B) Branches
(C) Roots
(D) Bark
38. Tell which material is MOST suited for the research: Gambling v/s online gaming
- (A) A news article on trending online games
(B) A comprehensive definition of gambling and gaming
(C) An article about the blurry line between online gaming and online gambling
(D) A blog on What is the Difference Between Gambling and Gaming?
39. A researcher is interested in studying the prospects of a particular political party in an urban area. What tool should he/she prefer for the study?
- (A) Rating scale
(B) Interview
(C) Questionnaire
(D) Schedule
40. When the data collected is grouped together and processed at a later point of time such as weekly or monthly this is called
- (A) Batch processing.
(B) Online processing.
(C) Real-time processing.
(D) Time sharing.
41. Reliability means the consistency of measurement
- (A) True
(B) False

42. To reduce nonresponse error,
- (A) Have rigorous administration procedures to achieve as large a return rate as possible.
 - (B) Select as large a sample from the population as possible.
 - (C) Use a good instrument, with clear, unambiguous question and response options.
 - (D) Have a good sampling frame list on which to select individuals.
43. Limitations in the technology/instruments used to collect your data,
- (A) Issues
 - (B) Lack
 - (C) Insufficient
 - (D) Limitations
44. Valid research requires that conclusions are based on actual ____
- (A) Findings
 - (B) Opinions
 - (C) Guesses
 - (D) Assumptions
45. Which data collection method involves monitoring customers either in person or electronically?
- (A) Exploratory Research
 - (B) Predictive Research
 - (C) Causal Research
 - (D) Observation Research
46. Information that is gathered out in the field is known as:
- (A) Empirical data
 - (B) Sample
 - (C) Sources
 - (D) Questionnaires
47. What kind of errors arise if there is inability of the respondent responding to come up with answer?
- (A) Type 1 error
 - (B) Error 2
 - (C) Errors of observation
 - (D) Errors of non-observation
48. What do you call a group of numbers or pieces of information collected together?
- (A) Data Set
 - (B) Spreadsheet
 - (C) Row
 - (D) Column
49. The step of the scientific method that involves gathering information about your problem or topic
- (A) Analyzing data
 - (B) Research & observations
 - (C) Conclusion
 - (D) Hypothesis
50. Which of the following best describes "data collection"?
- (A) Gathering information relevant to the project
 - (B) Testing the model
 - (C) Cleaning the data
 - (D) Presenting results
51. Dr. Chen finds in her study of people's charitable habits that individuals overestimate the amount of money they give to their churches and private schools. Dr. Chen's results may reflect
- (A) Over-representation bias.
 - (B) Social desirability bias.
 - (C) Poor random sampling.
 - (D) Large sample bias.
52. Collections or groups of related data are generally referred to as ____
- (A) Data Intelligence
 - (B) Data Analytics
 - (C) Data analysis
 - (D) Datasets
53. Laboratory observation enables use of sophisticated equipment for measuring and recording ____

- (A) Hypotheses
 - (B) Behavior
 - (C) Natural behavior
 - (D) Validity Edit
54. The process of extracting large amount of information from a website is known as ____
- (A) Spoofing.
 - (B) SYN Flood.
 - (C) Interlaced.
 - (D) Scraping.
55. What type of evidence is being used here to support his claim? According to Academically Adrift—a book based on a study about undergraduate education in the United States—as many as 45 percent of students show “no improvement in critical thinking, complex reasoning or written communication during their first two years in college.”
- (A) Data (percentages, numbers, etc.)
 - (B) A short story
 - (C) Personal opinion
 - (D) None of above
56. Which of the following is an example of external information?
- (A) Payroll System
 - (B) Government Statistics
 - (C) Accounting System
 - (D) Strategic planning system
57. The race was over in ten minutes.
- (A) QUALITATIVE OBSERVATION
 - (B) QUANTITATIVE OBSERVATION
58. Which of these would reduce bias in surveys?
- (A) Clear, neutral wording
 - (B) Suggesting the “best” answer
 - (C) Only asking loyal customers
 - (D) Using complicated terms
59. The name of the information that you get from your experiment (you organize it into tables).
- (A) Observations
 - (B) Data
 - (C) Variables
 - (D) Hypothesis
60. Research procedures refer to
- (A) Activities related to collecting data about research problem/ issue
 - (B) Activities related to reviewing existing literature
 - (C) Activities related to comparing different findings of various research
 - (D) Activities related to accumulating findings from related research
61. It is a type of data that can be expressed in numbers.
- (A) Number Theory
 - (B) Numerical data set
 - (C) Statistics
 - (D) Statistical question
62. Which of the following is part of data collection?
- (A) Identifying how and when data will be gathered
 - (B) Analyzing the results of the data
 - (C) Presenting the data to stakeholders
 - (D) Ignoring the data collection process
63. Siya is conducting a survey to understand the eating habits of teenagers in her school. However, she only surveys her friends, who all have similar tastes. How can bias affect data collection?
- (A) Bias improves data accuracy.
 - (B) Bias has no effect on data collection.
 - (C) Bias ensures data is representative.
 - (D) Bias can lead to inaccurate or unrepresentative data.
64. Data tables are used to record information.
- (A) Create data tables to record information for analysis.
 - (B) Data tables are only for numerical data.

- (C) Data tables are not useful for analysis.
(D) Data tables can only be used in spreadsheets.
65. Which term refers to facts and statistics collected together for analysis?
(A) Data
(B) Media
(C) Product
(D) Survey
66. What is the definition of data?
(A) Processed information
(B) Raw facts and figures
(C) An organized set of records
(D) Contextual information
(E) An analytical result
67. How can you use a tally chart to collect data?
(A) A tally chart is used to analyze data trends over time.
(B) A tally chart is used to record and count occurrences of data in different categories.
(C) A tally chart is used to display data visually without counting.
(D) A tally chart is only for numerical data and not for categories.
68. What are some Collection of Data methods that can be used?
(A) Hosting a party, playing soccer and having a family barbeque
(B) Dancing, running and singing
(C) Interviews, Surveys and Observations
(D) None of above
69. This is a source that is written for academics and professionals, written by experts, uses reliable references, and peer-reviewed by experts.
(A) Popular Sources
(B) Secondary Sources
(C) Scholarly Sources
(D) Primary Sources
70. When a scientist uses a microscope to observe cell structures, what type of data is primarily being collected?
(A) Qualitative
(B) Quantitative
(C) Hypothetical
(D) Theoretical
71. Which path allows you to record data from an experience then observe and display it later?
(A) Manual Entry
(B) Sensor Data
(C) Remote Logging
(D) None of above
72. Statistics presented using figures
(A) Objective
(B) Clearly defined research questions
(C) Structured research instruments
(D) Numerical data
73. What is an advantage of using online surveys?
(A) Time-consuming
(B) Costly
(C) Quick to distribute
(D) Limited reach
74. What does a census involve?
(A) Studying a subset of a population
(B) Selecting respondents based on convenience
(C) Studying every member of a population
(D) Collecting data from list brokers
75. When respondents often show signs of fatigue, such as mentioning that the questions seem repetitive, or start giving similar responses across multiple questions, the research may be seeing
(A) Acquiescence Bias
(B) Habituation
(C) The Hawthorne Effect
(D) Question-Order Bias

76. ____ are first-person accounts of social events or experiences, they generally include the writers feelings and attitudes.
- (A) Official documents
 - (B) Secondary documents
 - (C) Personal documents
 - (D) Unofficial documents
77. Researchers ____ undertaking the data collective process.
- (A) Specify the research design
 - (B) Evaluate the problem
 - (C) Draw inferences
 - (D) Implement the project
78. Data acquired in the project should be ____
- (A) Correct
 - (B) Reliable
 - (C) Authentic
 - (D) All the above
79. The following are qualities of good information except
- (A) Relevance
 - (B) Timeliness
 - (C) Accuracy
 - (D) Observation
80. Information gathered from your experiment.
- (A) Observation
 - (B) Variable
 - (C) Hypothesis
 - (D) Data
81. What type of data does not change during processing?
- (A) Direct data
 - (B) Indirect data
 - (C) Static data
 - (D) Dynamic data
82. What is the role of data collection in research?
- (A) To gather information for analysis
 - (B) To write conclusions
 - (C) To present data
 - (D) To formulate hypotheses
83. A measurement scale with five response categories ranging from "strongly disagree" to "strongly agree," which requires the respondents to indicate a degree of agreement or disagreement with each of a series of statements related to the stimulus object is called a(n) ____
- (A) Likert scale
 - (B) Semantic differential scale
 - (C) Stapel scale
 - (D) Opinion rating scale
 - (E) Penta scales
84. Why is it important to choose sources of information carefully?
- (A) To ensure data is reliable
 - (B) To save time
 - (C) To reduce costs
 - (D) To increase complexity
85. Questionnaire is a ____
- (A) Research method
 - (B) Measurement technique
 - (C) Data collection method
 - (D) Sampling technique
86. Which of the following methods of data collection would be most useful in determining an antecedent event?
- (A) Anecdotal recording
 - (B) Frequency counting
 - (C) Latency recording
 - (D) Duration recording
87. When will information on independent and dependent variables be collected-looking forward or backward in time?
- (A) Crossover
 - (B) Randomization
 - (C) Prospective
 - (D) Retrospective

88. Which word is a synonym for EVIDENCE in this sentence? Despite all this, there is limited empirical EVIDENCE to suggest that streaming results in better outcomes for students.
- (A) Trace
 - (B) Iconic
 - (C) Data
 - (D) Popularize
89. Which one of the following is used by Mira to collect data for her AI project cycle?
- (A) Data Acquisition
 - (B) Modelling
 - (C) Evaluation
 - (D) Project Scoping
90. A brand sent a researcher to visit their main competitors retail store and observe the shop environment. This brand is using ____ a technique to collect data form their market.
- (A) Interview
 - (B) Observation
 - (C) Mystery shopping
 - (D) Like-to-like comparison
91. You are designing methods for data collection in a new project. Which literature review objective supports this task?
- (A) Suggest procedures and appropriate techniques
 - (B) Gather comparative findings for interpretation
 - (C) Enable expertise growth in the topic area
 - (D) Keep abreast of the latest developments
92. What activity occurs during Step 5 of the Scientific Method?
- (A) Collecting the data
 - (B) Drawing conclusions
 - (C) Designing the experiment
 - (D) Conducting the experiment
93. Complete: They ____ data on daily living
- (A) Pick
 - (B) Collect
94. Match each description with the method of data collection it describes. Data obtained by having participants fill out an instrument or preform a behavior designed to measure their ability or degree of skill
- (A) Questionnaire
 - (B) Focus group
 - (C) Interview
 - (D) Test
95. A systematic error that occurs when participants do not remember previous events or experiences accurately or omit details: the accuracy and volume of memories may be influenced by subsequent events and experiences or knowledge of the exposure being studies
- (A) Recall bias
 - (B) Confounding
96. Observations and facts gained from experiments are ____:
- (A) Evidence
 - (B) Predictions
 - (C) Hypotheses
 - (D) Inferences
97. The following survey question best yield which type of data? At school, every class reports the number of students enrolled in the class.
- (A) Data change over time
 - (B) Numerical data
 - (C) Categorical data
 - (D) None of above
98. What resources do scientists use to predict when and where future catastrophic events may occur?
- (A) Scientists map historic catastrophic events caused by natural processes to help predict future events. They also use current technology such as weather tracking technology, doppler radar, etc. to collect data.
 - (B) They use their Magic 8 Ball to help them predict catastrophic events.

- 99.** Which of the following is the most popular data-collection method:
- (A) Experiment
 - (B) Observation
 - (C) Survey
 - (D) Situation Analysis
- 100.** When gathering background information, scientists should:
- (A) Only look for sources that support their own opinions
 - (B) Collect information from multiple credible sources
 - (C) Avoid reviewing past experiments
 - (D) Focus only on recent discoveries
- 101.** Data obtained by measuring, monitoring, logical or arithmetic operations presented in a form suitable for storage, transmission and processing
- (A) Information processes
 - (B) Data
 - (C) Protocol
 - (D) Information
 - (E) Computer
- 102.** Assigning males the value of zero and females the value of one in a database to record the gender of the respondents is an example of
- (A) Test tabulation.
 - (B) Verification.
 - (C) Coding.
 - (D) Editing.
- 103.** How does the use of social media as a research tool impact the quality of information gathered?
- (A) It is the best source for academic research
 - (B) It can lead to the spread of misinformation and biased perspectives if not critically evaluated.
 - (C) It has no impact on research quality
 - (D) It always provides accurate and reliable information
- 104.** Which of the following is a possible source of information about customers' satisfaction?
- (A) Verbal comments
 - (B) Informal surveys
 - (C) Toll-free phone numbers
 - (D) All of the above
- 105.** Data collection is most effective when:
- (A) Instruments are validated before use
 - (B) The research design is finalized during data collection
 - (C) Sampling is excluded from the process
 - (D) Results are predetermined
- 106.** Nielsen collects data to provide an overview of current consumer preferences and trends.
- (A) Sales data
 - (B) Consumer behavior data
 - (C) Weather data
 - (D) Stock market data
- 107.** Brian is measuring the weight of each rat and writing it down on a chart. Which stage of the scientific method is this?
- (A) Hypothesis
 - (B) Collecting Data
 - (C) Question or Problem
 - (D) Conclusion
- 108.** What type of data would your name be?
- (A) Real.
 - (B) Boolean.
 - (C) Integer.
 - (D) String.
- 109.** Recording and quantifying behavior in a lab notebook should be done by:
- (A) Using objective, systematic, and quantifiable measures
 - (B) Relying on memory to recall behaviors
 - (C) Writing only subjective impressions
 - (D) Recording behaviors sporadically without a system

110. Typical quantitative data gathering strategies include the following expect ____
(A) Survey
(B) Questionnaire
(C) Essay
(D) None of above
111. It refers to any information that has been collected, generated, or created to validate original research findings.
(A) Result
(B) Reference
(C) Hypothesis
(D) Data
112. A census is a statistical study in which an entire population is counted, not just a sample. Which of the following stats is most likely to be based on a census?
(A) The mean number of stars in visible galaxies
(B) The average SAT Score for a high school
(C) The number of jobless adults in a country
(D) The average wind speed of a tornado
113. This stage includes selection and construction of measuring tools and collection of needed data.
(A) Filter Facts
(B) Find Facts
(C) Focus Facts
(D) Finalize Facts
114. Surveys and/or questionnaires are used to find out
(A) Demographic information
(B) Psychographic information
(C) Geographic information
(D) All of the options
115. A research method which obtains data by asking participants to provide information about themselves
(A) Experimental tests
(B) Observations
(C) Self reports
(D) None of above
116. This data source specifically provides a useful source of information, serving as a primary source of information about historical and current events.
(A) Podcasts
(B) Magazines
(C) Interviews
(D) Newspapers
117. Raw Data are
(A) Highly Organised
(B) Well Classified
(C) Dis organised
(D) None of these
118. The search for answers to research questions is called collection of:
(A) Data
(B) Information
(C) Forms
(D) Schedules
119. Raw facts or figures, generate useful information, used for collaborations, can be created through data collection, searching, interview, knowledge, etc.
(A) Data
(B) Information
(C) Software
(D) Hardware
120. In Focus groups, mark the one that does NOT relate.
(A) Relatively unstructured
(B) Quantitative
(C) Facilitator is usually the researcher
(D) Can be used as primary and supplementary sources of data
(E) Can be used in a multi-method study

121. Colgate-Palmolive's marketing manager needs information on brand change behavior in the bar soap category. Which of the following sources of information would be more appropriate to use to know the details of purchase in that category monthly?
- (A) Retail store audit.
 - (B) Arbitron diary panel.
 - (C) Starch Scores.
 - (D) Mail diary method.
122. What helps monitor progress of SDG 10?
- (A) Polls
 - (B) Surveys
 - (C) Data collection
 - (D) Speculation
123. Number of views of a YouTube channel is..
- (A) Discrete numerical data
 - (B) Continuous numerical data
124. Which is not an advantage of a telephone survey
- (A) Many people do not like strangers asking questions over the phone
 - (B) Relatively inexpensive
 - (C) The response is immediate
 - (D) A large number of people can be surveyed quickly
125. What type of Argumentative evidence is this: At the dog park there were 15 dogs on a leash; 10 of which were larger breeds.
- (A) Opinion
 - (B) Fact
 - (C) Data
 - (D) Research Study
126. A table which uses tally marks to show data is called ____
- (A) Bar graph
 - (B) Frequency table
 - (C) Pictograph
 - (D) Tally chart
127. In collecting the data, which of the following describes consultation of experts:
- (A) Interview
 - (B) Observation
 - (C) Delphi technique
 - (D) Questionnaire
128. The process of collecting information/data from the sample.
- (A) Census
 - (B) Interview
 - (C) Survey
 - (D) Questionnaire
129. Which type of data sources are sales records, financial statements, and inventory records?
- (A) Research Report
 - (B) Internal Data
 - (C) External Data
 - (D) Quantitative Data
130. Small groups of consumers that interact with products or services and give their feedback based on their experiences are known as ____
- (A) Focus groups
 - (B) Survey takers
 - (C) Market research audiences
 - (D) Test subjects
131. Which of the following is NOT considered a type of data?
- (A) Physical objects
 - (B) Text
 - (C) Images
 - (D) Audio
132. What can be defined as:Scientific data that supports the claim. It is generated from the experiment. This evidence can be qualitative or quantitative.
- (A) Evaluate
 - (B) Evidence
 - (C) Reasoning
 - (D) Recognize

133. Scientists must ____ their data before they can analyze it.
- (A) Report
 - (B) Draw conclusions
 - (C) Organize
 - (D) Bar graph
134. The process of can be described as “bringing to light all the hidden values and extracting all possible information from a questionnaire, while adding nothing extraneous.”
- (A) Field work
 - (B) Coding
 - (C) Editing
 - (D) Auditing
135. If an outside agency was brought in to conduct work for a research project after the first three steps in the marketing research process were completed, which step would the agency conduct?
- (A) Define the problem
 - (B) Develop an approach to the problem
 - (C) Formulate the research design
 - (D) Correct the problem
 - (E) Doing fieldwork or collecting data
136. Respondent is one who gives
- (A) Response to the investigator
 - (B) Takes interviews
137. What does Fujita need before presenting his theory?
- (A) Approval from the pilot
 - (B) More financial support
 - (C) More evidence
 - (D) A better research team
138. Data collection method is generally divided into ____
- (A) Qualitative, quantitative, and mixed method
 - (B) Survey, interview, and observation
 - (C) Population, sample and sampling method
 - (D) None of above
139. When one examines the entire population instead of a subgroup of the population, this is called a ____
- (A) Sampling
 - (B) Census
 - (C) Bias
 - (D) None of above
140. If your friend tells you today’s lunch menu, is that current data or historical data?
- (A) Primary
 - (B) Secondary
 - (C) Current
 - (D) Historical
141. One way to obtain reliable and up-to-date information about employment trends in a certain career or field is by.
- (A) Speaking with a salesperson
 - (B) Reading older periodicals
 - (C) Asking retired workers
 - (D) Visiting government websites
142. How do we get the information about what consumers want or need with regard to a particular brand
- (A) Market research
 - (B) Market share
 - (C) Market segment
 - (D) Market challenger
143. Which of the following are techniques for collecting data from primary sources?
- (A) Conducting interviews, accessing websites and books
 - (B) Making observations, accessing journal articles and magazines
 - (C) Conducting questionnaires and surveys, viewing documentaries
 - (D) Making observations, conducting questionnaires and experiments

144. You need to collect ____ in your experiment that supports your hypothesis.
- (A) Graphs
 - (B) Plants
 - (C) Microscopes
 - (D) Data
145. Both structured and unstructured documents can contain knowledge.
- (A) TRUE
 - (B) FALSE
146. The source of data and information in research can be classified into ____
- (A) Financial and primary data
 - (B) Historical and primary data
 - (C) Primary and secondary data
 - (D) Historical and secondary data
147. Which one of the following is used to collect data for the AI project cycle
- (A) Data Acquisition
 - (B) Modelling
 - (C) Evaluation
 - (D) Project Scoping
148. Students are asked to complete a research project on climate change. Which of the following is the best set of data to use in the report?
- (A) The average temperatures of two cities in North America for 20 years
 - (B) Earth's average temperatures since the year 1800
 - (C) A classroom log of temperatures since September
 - (D) Day and night temperatures over the Atlantic Ocean for 10 years
149. A Likert scale measures:
- (A) Frequency
 - (B) Attitudes or perceptions
 - (C) Population distribution
 - (D) Statistical correlations
150. Prof. Lee wants to know the strategies on how women became successful leaders. Which of the following research techniques can best help the researcher gather pertinent data?
- (A) Drama
 - (B) Life Story
 - (C) Observation
 - (D) Participant Observation
151. The method best suited for illiterate respondents:
- (A) Questionnaire
 - (B) Interview
 - (C) Email survey
 - (D) Online form
152. John is conducting a market research for his new product. He is distributing questionnaires to potential customers. This is an example of which step in the data analysis process?
- (A) Defining the problem
 - (B) Obtaining Data
 - (C) Analyzing Data
 - (D) Applying results
153. It is a collection of data from every element in a population
- (A) Population
 - (B) Census
 - (C) Sample
 - (D) All of the above
154. The person whose help is needed by the investigator in collecting the information.
- (A) Respondent
 - (B) Enumerator
 - (C) Interviewer
 - (D) None of these
155. Which type of test will produce a qualitative data in a crop fertilizer research?
- (A) Height Test
 - (B) Yield Test
 - (C) Color test
 - (D) Soil Acidity test

- 156.** What is the term for the process of ensuring the accuracy of data collected in a research study?
- (A) Data validation
 - (B) Data anonymization
 - (C) Data aggregation
 - (D) None of above
- 157.** A scale that connects two bipolar words is called a ____
- (A) Dichotomous question
 - (B) Multiple-choice question
 - (C) Likert scale
 - (D) Semantic differential
 - (E) Word association
- 158.** Data acquisition is the process in which, physical variables from the real world are
- (A) Converted into electrical signals
 - (B) Modified and converted into a digital format for processing
 - (C) . both a. and b
 - (D) None
- 159.** What are the two types of data collected in an experiment?
- (A) Measurements and observations
 - (B) Hypotheses and theories
 - (C) Guesses and assumptions
 - (D) Facts and opinions
- 160.** Which will prove most useful as a reflective assessment tool during Field Study courses?
- (A) Observation
 - (B) Portfolio
 - (C) Writing Essay
 - (D) Journal
- 161.** A collection of facts, such as numbers, words, measurements, and observations
- (A) Data
 - (B) Categorical data
 - (C) Numerical data
 - (D) Trend
 - (E) Central tendency
- 162.** Scientific explanations must be formed and supported by empirical evidence. Which of the following is an example of empirical evidence?
- (A) Measurements
 - (B) Hunches
 - (C) Intuition
 - (D) Opinions
- 163.** This is one of the criteria for selection and use of data sources in which the data should address the dimensions which the researcher wants to study:
- (A) Adequacy
 - (B) Truthfulness
 - (C) Validity
 - (D) Relevance
- 164.** Doing research in a natural setting means all of the following except:
- (A) Seeing participants behave
 - (B) Observing participants interacting
 - (C) Talking to participants
 - (D) Using structured questionnaires with participants
 - (E) Having face-to-face interaction with participants
- 165.** Which primary data collection method involves collecting data by analyzing written or spoken language, with a focus on understanding social and cultural meanings?
- (A) Discourse analysis
 - (B) Ethnography
 - (C) Narrative analysis
 - (D) Grounded theory analysis
- 166.** The name of the information that you get from your experiment (you organize it into charts and graphs).
- (A) Observationsconclusion
 - (B) Data
 - (C) Variables
 - (D) Hypothesis

167. What should you create for effective focus group discussions?
- (A) A strict agenda
 - (B) A silent atmosphere
 - (C) A comfortable environment
 - (D) A competitive environment
168. Name the phase which comes before data exploration. In this phase data needed for an AI project is collected through various sources and generally in different formats.
- (A) Modelling
 - (B) Problem Scoping
 - (C) Evaluation
 - (D) Data Acquisition
169. Scientific inquiry includes many different types of activities and processes. When someone makes measurements using scientific tools, they are performing (a).
- (A) Collecting data
 - (B) Evaluating data
 - (C) Communicating evaluations
 - (D) Formulating questions
170. What is the process of quantifying physical quantities using calibrated instruments and established procedures to obtain numerical values of varying degree called?
- (A) Measurement
 - (B) Parameter
 - (C) Standard
 - (D) Calibration
171. In a recent community health initiative, Anika was tasked with gathering opinions from residents about their healthcare experiences. The data collection method used to learn information from this large group of people is called ____
- (A) Observation
 - (B) Survey
 - (C) Interview
 - (D) None of above
172. Which of the following is not an example of online surveys?
- (A) Google Forms
 - (B) SurveyMonkey
 - (C) Microsoft Excel
 - (D) Qualtrics
173. What type of data would your age in years be?
- (A) Real.
 - (B) Integer.
 - (C) String.
 - (D) Boolean.
174. Which of the following research tools is used to measure attitudes?
- (A) Questionnaire
 - (B) Interview
 - (C) Rating scale
 - (D) Observation
175. What is one method to collect relevant information?
- (A) Guessing results
 - (B) Using interviews or surveys
 - (C) Writing the introduction first
 - (D) Making up facts
176. Types of Data
- (A) Internal and External
 - (B) Primary and Secondary
177. “ Mathematics is boring “ 1 2 3 4 51-Strongly Disagree2-Disagree3-Not sure4-Agree5-Strongly AgreeThe sample scale above is an example of a ____
- (A) Likert scale
 - (B) Guttman scale
 - (C) Thurstone scale
 - (D) Rosenberg scale
178. Direct quotations are often useful to provide objective data and to establish the severity of a problem as seen by experts.
- (A) True
 - (B) False

- 179.** An automated call that asks 2 questions about the upcoming election is an example of a(n) ____
(A) Poll
(B) Interview
(C) Program Evaluation
(D) Case Study
- 180.** In an ____, the respondents are provided with a scale that has a number or brief description associated with each category.
(A) Itemized rating scale
(B) Rank order
(C) Constant sum
(D) Q-sort scaling
- 181.** Advantages of this type of data collection include relatively low cost, the elimination of interviewers and field supervisors, and centralized control. But it suffers from at least two significant limitations: slow and low response rates.
(A) Mail Survery
(B) At Home
(C) Executive interview
(D) None of above
- 182.** A ____ can be a person, document, or method of research used to discover the truth of a story.
(A) Source
(B) Interview
(C) Research
(D) Transcript
- 183.** Interviewing all members of a given population is called
(A) A sample.
(B) A Gallup poll.
(C) Census.
(D) Nielsen audit.
- 184.** What data does a tsunami buoy collect?
(A) Number of fish
(B) Water pressure
(C) The height of waves
(D) Ocean temperature
- 185.** You could use this technique to evaluate the preferences of a group of people when planning to improve your product (example: new image, new flavor, new brand)
(A) Interview
(B) Ethnography
(C) Focus group
(D) Social experiment
- 186.** A researcher asks users to describe their experience using a new app. What type of question is this?
(A) Binary
(B) Likert scale
(C) Open-ended
(D) Closed-ended
- 187.** Which type of data can be easily organised in a database or spreadsheet format?
(A) Structured
(B) Unstructured
- 188.** Organized rows and columns used to record Raw data.
(A) Line Graph
(B) Bar Graph
(C) Data Table
(D) A piece of paper
- 189.** The following are data-gathering procedure among audience, except
(A) Survey
(B) Observation
(C) Ask a representative
(D) Deduction
- 190.** Scientists can use aerial photos to collect data to determine the biodiversity index of an area.
(A) True
(B) False

191. Any tool that you may use to collect or obtain data, measure data, and analyze data that is relevant to the subject of your research. The format may consist of questionnaires, surveys, interviews, checklists, simple tests.
- (A) Research Instrument
 - (B) Research Paper
 - (C) Literature Review
 - (D) Variable
192. What type of data would be required to show that the amount of carbon dioxide emissions from the burning of fossil fuels for energy can be reduced by using renewable resources?
- (A) The amount of emissions from the burning of fossil fuels
 - (B) The amount of scrubbers on a smoke stack
 - (C) The amount of emissions from renewable sources
 - (D) The amount of renewable resources in a landfill
193. Occurs when there is a difference in the data collection method between two groups which may lead to an error in the conclusion of the association
- (A) Information bias
 - (B) Selection bias
194. People were surveyed about how they got to school. How many ride their bike?
- (A) 112 people
 - (B) 847 people
 - (C) 130 people
 - (D) 110 people
195. This question method are used when there are many possible responses to a particular problem.
- (A) Close-ended questions
 - (B) Open-ended questions
196. What are the two main ways to categorize marketing research data?
- (A) Quantitative data and qualitative data
 - (B) Primary data and secondary data
 - (C) Internal data and external data
 - (D) Historical data and predictive data
197. What is essential for data collection?
- (A) Random guessing
 - (B) Using outdated methods
 - (C) Systematic and accurate collection
 - (D) Ignoring sample size
198. Narrative research uses stories as ___ to have a depth understanding of culture, historical experiences, identify, and lifestyles of the narrator.
- (A) Techniques
 - (B) Tools
 - (C) Data
 - (D) None of above
199. Data collected from 'The Hindu' is
- (A) Primary data
 - (B) Secondary data
 - (C) Internal Data
 - (D) Unpublished Data
200. What do you called the information that the researchers obtain about subjects?
- (A) Data
 - (B) Information
 - (C) Research
 - (D) Subject
201. A good research will not both primary and secondary methods.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
202. Which example best illustrates subjective data underpinning traditional knowledge?
- (A) Nurse reports "patient seems anxious" during rounds
 - (B) Serum potassium measured at 3.2 mmol/L

- (C) Blood pressure recorded at 138/84 mmHg
(D) Urinalysis showing positive nitrites
- 203.** A focus group typically consists of:
(A) 1-2 people
(B) 6-10 people
(C) 20-30 people
(D) None of these
- 204.** Identify the research tool from the following options.
(A) Research Proposal
(B) Research Methodology
(C) Survey Questionnaire
(D) Research Hypothesis
- 205.** Which statement best describes what a focus group is?
(A) Primary research / a group interview
(B) Secondary research
(C) Primary research / questionnaires
(D) Secondary research / provides generalisations of a social group
- 206.** Provide an example of how you can synthesize information from a variety of sources.
(A) Ignoring conflicting data from different sources
(B) Copying information from a single source without verification
(C) Using only one source to draw conclusions
(D) Gathering data from multiple sources and combining it to form a comprehensive understanding.
- 207.** If a community leader wants to identify the strengths and resources within a neighborhood, which method would be most effective?
(A) Needs Assessment
(B) Asset Mapping
(C) Random Sampling
(D) Statistical Analysis
- 208.** It is the step by step process of gathering information from participants
(A) Discussion
(B) Methodology
(C) Results
(D) Data gathering / collection procedure
- 209.** People who provide information by answering questions are called:
(A) Subject
(B) Study Participants
(C) Respondents
(D) Informants
- 210.** The timeframe within which the data is to be collected.
(A) When
(B) Which
(C) Where
(D) How
- 211.** What is a quick method of collecting opinions from a group of people, typically asking a single question with limited response options?
(A) Poll
(B) Debate
(C) Interview
(D) Lecture
- 212.** Why have online surveys become the dominant quantitative method?
(A) Superior nonverbal observation, deep context
(B) Guaranteed random sampling, no bias
(C) Fast deployment, scalable distribution
(D) Exclusive to desktop users, limited reach
- 213.** Values or Affective Assessment-Measures attitudes, values, and emotional responses rather than just cognitive abilities.
(A) Teacher Observations
(B) Interviews
(C) Self-Reflection Journals
(D) Surveys and Questionnaires

- 214.** In the context of NTCC, which of the following activities would be considered most appropriate for research-based learning?
- (A) Attending a guest lecture
 - (B) Writing a literature review and conducting field-based primary research
 - (C) Memorizing definitions from textbooks
 - (D) Participating in a recreational sports event
- 215.** What kind of work is carried out continuously throughout the entire duration of the research topic, up to its completion and the writing of a scientific work:
- (A) Search, collection and processing of STI
 - (B) Registration of research results
 - (C) Calculation of the effectiveness of research results
 - (D) Preparation for the experiment
 - (E) Physical
- 216.** A census means:
- (A) Studying only a small sample
 - (B) Including every element in the target population
 - (C) Excluding non-respondents
 - (D) None of these
- 217.** Qualitative data are least likely to be collected by ____
- (A) Diaries
 - (B) Official records
 - (C) Photographs
 - (D) Questionnaires
- 218.** A questionnaire, interview, and observation checklist are examples of:
- (A) Research methodology
 - (B) Data gathering instruments
 - (C) Sampling methods
 - (D) Analysis procedures
- 219.** A non-experimental technique for obtaining the self-reported attitudes or behaviors of a particular group
- (A) Focus group
 - (B) Case study
 - (C) Interview
 - (D) Survey
- 220.** A special type of semi-structured interview that is conducted with a group of 6-10 people.
- (A) Focus group
 - (B) Focused observation
 - (C) Focused interview
 - (D) Focused case study
- 221.** A moderator handles a very open, free flowing and in-depth discussion with a group of people, including Jackson, Henry, and Sophia, who can provide insightful ideas about a new product or service that will fill a market need.
- (A) Brain-writing
 - (B) Brainstorming
 - (C) Problem Inventory Analysis
 - (D) Focus Group Discussion (FGD)
- 222.** Which of these are necessary for capturing data?
- (A) Traps and observations
 - (B) Observations and measurements
 - (C) Traps and cages
 - (D) Cages and measurements
- 223.** One of the needs in gathering data for your research is through gathering research notes. The following are the types of research notes except for one.
- (A) Critiques
 - (B) Paraphrases
 - (C) Summaries
 - (D) Direct Quotations
- 224.** Books, records, surveys, and experiments are the common sources for ____
- (A) Graphing data
 - (B) Collecting data
 - (C) Analyzing data
 - (D) None of above

225. Ready-made and readily available data is ____
- (A) Primary
 - (B) Personal
 - (C) Organizational
 - (D) Secondary
226. Tell whether the statement is True or False: The choice of a data collection method is not a critical point in the research process.
- (A) True
 - (B) False
227. What is validity in data collection?
- (A) The accuracy of a tool in measuring what it intends to measure.
 - (B) The consistency of data collection.
 - (C) The number of participants in the study.
 - (D) The type of sampling technique.
 - (E) The use of online surveys.
228. Definition: To gather and organize information from various sources for research purposes
- (A) Compose
 - (B) Citation
 - (C) Cite
 - (D) Compile
229. Back up of the data files will help to prevent ____
- (A) Loss of confidentiality.
 - (B) Duplication of data.
 - (C) Loss of data.
 - (D) Virus infection.
230. Which data collection method involves gathering information from a small group of people in a moderated setting?
- (A) Focus group discussion
 - (B) Interview
 - (C) Observation
 - (D) Document analysis
231. Which data collection method places the greatest emphasis on participant observation and detailed field notes to capture the daily patterns and behaviors of a culture-sharing group?
- (A) Ethnography
 - (B) Case Study
 - (C) Grounded Theory
 - (D) Phenomenology
232. Which of the following methods would provide the most accurate information for students collecting data about local attitudes concerning the use of alternative fuels for automobiles?
- (A) Listen to speeches given by politicians
 - (B) Take an opinion poll of drivers
 - (C) Track prices at nearby gas stations
 - (D) Study newspaper articles
233. Any material thing or traces created or left by humans that might provide information about a phenomenon of interest to a researcher (e.g. wear on floor tiles in museums, wear on library books, soil from shoes and clothing, radio dial settings, fingerprints, etc)
- (A) Physical Data
 - (B) Physical Information
234. You want to gather feedback from a group of users discussing a new feature. What method is this?
- (A) Focus group
 - (B) Case study
 - (C) Survey
 - (D) Interview
235. Means the survey of people who have practical experience with the problem.
- (A) Exploratory research design
 - (B) Survey literature
 - (C) Experience survey
 - (D) Case study.
236. What common scaling technique consists of several declarative statements that express viewpoint on a topic?

- (A) Semantic Differential Scale
(B) Completion Type
(C) Observation Checklist
(D) Likert Scale
237. Which data type can hold exactly two different values?
(A) Boolean.
(B) Char.
(C) Byte.
(D) Binary.
238. A process of preparing and collecting data to obtain information for record-keeping or decision-making.
(A) Collection of Data
(B) Analysis of Data
(C) Presentation of Facts
(D) Presentation of Data
239. The process of finding two or more sources for the same information
(A) Attribution
(B) Data Triangulation
(C) Journalism
(D) Sources of Information
240. The facts, figures and other evidence gathered through observations.
(A) Data
(B) Material
(C) Hypothesis
(D) Science
241. This is a method of gathering the student's school performance data to specify and verify problems concerning his/her learning achievement. Thus, the teacher can make decisions regarding the student's learning performance.
(A) Assessment
(B) Testing
(C) Evaluation
(D) Measurement
242. Discuss the potential sources of bias in data collection and how to mitigate them.
(A) Random sampling, standardized measurement tools, and minimizing non-response rates
(B) Conducting non-random sampling
(C) Encouraging non-response rates
(D) Using biased measurement tools
Explanation: To mitigate bias in data collection, use random sampling, standardized measurement tools, and minimize non-response rates.
243. What is an important factor in selecting literature?
(A) Its length and complexity
(B) Its popularity among readers
(C) Its publication date only
(D) Its relevance to the study
244. What data was collected?
(A) Colors
(B) Student's Birthdays
(C) Favorite Birthdays
(D) Favorite Months
245. It refers to the act of providing a written account of spoken words from a recorded interview.
(A) Coding.
(B) Theming.
(C) Transcribing.
(D) None of the above.
246. What is the most appropriate method to gather data from a large group across multiple regions?
(A) Focus Group
(B) Survey
(C) Experiment
(D) Case Study
247. The focus group as a social science method was developed by ___ colleagues in the 1940s
(A) Lewin

- (B) Skinner
 - (C) Bandura
 - (D) Trutkowski
 - (E) Holzl
248. Scientists gather ____ before they make conclusions.
- (A) Stories
 - (B) Idioms
 - (C) Data
 - (D) Area
249. A method to collect data where EVERY person is counted.
- (A) Sample Survey
 - (B) Census
 - (C) Population
 - (D) None of above
250. What is the thing that you use in gathering data?
- (A) Review of Related Literature
 - (B) Conclusion
 - (C) Instrument
 - (D) SOP
251. What can researchers do when they develop research in a natural environment?
- (A) The researchers can obtain very old information that is irrelevant
 - (B) The researchers can access the most relevant and up-to-date information
 - (C) The researchers can obtain not useful and not relevant information
 - (D) None of above
252. A tally chart is only used for counting people.
- (A) True
 - (B) False
253. When does “Data Saturation” occur in qualitative research?
- (A) At the beginning of the study
 - (B) When data collection is complete
 - (C) During participant recruitment
 - (D) None of above
254. What is meant by a method of data collection?
- (A) The computer program that runs statistical calculations on data
 - (B) The steps that are involved in selecting participants for a study
 - (C) The procedures that are followed to obtain data
 - (D) The overall design and strategy for a research study
255. The process of examining the data collected through various methods to detect errors and omissions and correct them for further analysis.
- (A) Editing
 - (B) Coding
 - (C) Processing
 - (D) None of above
256. Zoe is conducting a research project on student study habits. What is essential for data collection?
- (A) Collecting data randomly
 - (B) Using only one method
 - (C) Ensuring data is accurate and reliable
 - (D) Ignoring previous studies
257. This is an organization template that allows students to collect resources that will be used within the research paper. This is the process of gathering and measuring information in an organized fashion.
- (A) Outline
 - (B) Template
 - (C) Data Collection Grid
 - (D) Database
258. Respondant is one who gives
- (A) Response to the investigator.
 - (B) Takes interviews.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).

- 259.** It refers to the information that can be numbers or words that is used in research writing.
- (A) Significance of the study
 - (B) Data
 - (C) Statement of the problem
 - (D) Validity
- 260.** This refers to the quality of being trustworthy.
- (A) Authority
 - (B) Reliability
 - (C) Attention Getter
 - (D) Overall Quality
- 261.** What is inputted into a computer system?
- (A) Data
 - (B) Knowledge
 - (C) Code
 - (D) Information
- 262.** What research strategy is used by a linguist studies the content of different Web sites and rates their level of English.
- (A) Observation
 - (B) Experiment
 - (C) Content analysis
 - (D) Survey
- 263.** What type of response bias is the following? Tendency to agree with most statements
- (A) Social desirability responding
 - (B) Moderacy bias
 - (C) Extremity bias
 - (D) Acquiescence bias
 - (E) Reference group effect
- 264.** 'Focus Groups' are:
- (A) A method of collecting data through group discussions
 - (B) A type of statistical analysis
 - (C) A marketing strategy involving advertisements
 - (D) A financial planning tool
- 265.** Ask respondents to construct their own response to the question
- (A) Experimental research
 - (B) Research design
 - (C) Open-ended questions
 - (D) Forced-choice questions
- 266.** Survey results are likely to be more reliable if they are given on the condition of ____
- (A) Informed consent
 - (B) Debriefing
 - (C) Anonymity
 - (D) Self-serving bias
- 267.** What is field research in business management?
- (A) Collecting information from newspapers
 - (B) Gathering primary information directly from the public/consumer
 - (C) Accessing existing information from competitors
 - (D) None of the above
- 268.** The collection of data from every member of a population
- (A) Population
 - (B) Sample
 - (C) Census
 - (D) Statistics
- 269.** Collecting data by yourself
- (A) Secondary Data
 - (B) Primary Data
 - (C) Information
 - (D) Raw data
- 270.** Which primary data collection method involves collecting data by asking participants to report on their own behaviors or experiences at multiple points in time?
- (A) Longitudinal studies
 - (B) Cross-sectional studies
 - (C) Case-control studie
 - (D) Cohort studies

271. What action is done after developing final tools for data collection
- (A) Piloting the tools
 - (B) Collecting necessary data
 - (C) Tabulating data
 - (D) Administering tools
272. Why might data from social media posts be considered less reliable compared to official statistics?
- (A) Social media posts do not cover large populations.
 - (B) Social media posts are usually outdated.
 - (C) It is difficult to verify the authenticity of social media information.
 - (D) Official statistics are biased.
273. Validity refers to:
- (A) Ability to replicate findings
 - (B) Precision of data entry
 - (C) Accuracy of measurement
 - (D) Honesty of the researcher
274. Which factor most threatens quantitative survey validity through interviewer influence?
- (A) Speed of data collection across modes
 - (B) Potential for interviewer bias during administration
 - (C) High perceived participant anonymity in responses
 - (D) Use of physical stimuli in measurement
275. To know if an environmental solution is working, which of the following is necessary?
- (A) Specific measurements tracked over time
 - (B) Occasional observations without data
 - (C) Ignoring baseline measurements
 - (D) Relying on predictions only
276. The entirety of data gathered for all study participants
- (A) Data
 - (B) Data set
277. The car is blue
- (A) Quantitative data
 - (B) Qualitative data
278. Person participating in the empirical study as a source of oral and written information-are
- (A) Sociologist
 - (B) Respondent
 - (C) Columnist
 - (D) Journalist
 - (E) Publicist
279. Quantifying characteristics using standards and rules is known as
- (A) Evaluation
 - (B) Measurement
 - (C) Test
 - (D) Scale
280. Which type of question works best for quick, quantifiable data?
- (A) Open-ended
 - (B) Closed-ended
 - (C) Essay-style
 - (D) None of the above
281. It is the process of determining or describing the attributes or characteristics of physical objects generally in terms of quantity.
- (A) Evaluation
 - (B) Measurement
 - (C) Assessment
 - (D) Test
282. A survey is limited by the willingness and ____ of respondent
- (A) Help.
 - (B) Access.
 - (C) Attitude.
 - (D) Co-operation.
283. Six Major Methods of Data Collection: Tests, Interviews, Questionnaires, Focus

- Groups, Observation, CONSTRUCTED, SECONDARY, and EXISTING DATA.
- (A) True
(B) False
- 284.** Which type of question is most likely to be used when the researcher is just starting to explore what people think about a particular topic?
- (A) Structured.
(B) Open-ended.
(C) Closed-ended.
(D) Semi structured.
- 285.** What is the first step in the data collection process?
- (A) Analyzing data
(B) Defining the data collection methods
(C) Preparing the final report
(D) Formulating the hypothesis
- 286.** In what scenario might a psychologist choose archival research over longitudinal research?
- (A) When the researcher needs to analyze pre-existing data from past studies.
(B) When the researcher needs real-time data over an extended period.
(C) When the researcher is focused on observing behavior in a natural setting.
(D) When the researcher wants to follow participants over time to study developmental changes. Edit
- 287.** Which of the following is true with regard to problems faced by international researchers?
- (A) Translation of questionnaires increases research costs and risks of error.
(B) Erratic purchasing patterns limit data reliability and validity.
(C) More often than not, cultural differences enrich research findings.
(D) Diverse markets always yield conflicting data.
(E) The primary data obtained by international researchers are almost always error prone
- 288.** Scientists need to — the impact of climate change on various ecosystems.
- (A) Measure
(B) Experiment
(C) Infection
(D) Observe
- 289.** Name any 2 methods of collecting data.
- (A) Surveys and Interviews
(B) Rumors and Myths
(C) AI models and applications
(D) Imagination and thoughts
- 290.** Gathering of crime data from those that are directly involved with criminal or delinquent activity.
- (A) Uniform Crime Report
(B) Victim Survey
(C) National Crime Victimization Survey
(D) Self-reported Survey
- 291.** The term 'instrument' in research refers to:
- (A) The theoretical framework used
(B) A tool or device used for data collection
(C) The sample used in the study
(D) The statistical methods employed
- 292.** Reliability in surveys can be assessed through which methods?
- (A) Test-retest and inter-rater methods
(B) Random sampling
(C) Double-blind procedures
(D) Placebo effect
- 293.** What is the term for a measurement method where the researcher directly interacts with participants, such as by asking questions or giving tests, and how could this affect the responses compared to when the researcher does not interact with participants?
- (A) Obtrusive
(B) Unobtrusive
(C) Indirect
(D) Passive

- 294.** Procedures for making empirical observations and measurements
- (A) Primary Data
 - (B) Previous Studies
 - (C) Data collection techniques
 - (D) Post-Test
- 295.** The information you collect while doing your experiment is called
- (A) Conclusions
 - (B) Data
 - (C) Hypotheses
 - (D) Procedures
- 296.** What is the recommended number of participants in a focus group?
- (A) 2 to 4
 - (B) 15 to 20
 - (C) 3 to 6
 - (D) 6 to 10
- 297.** Which of the following can be the source of information
- (A) Survey
 - (B) Data analysis
 - (C) Thinking
 - (D) Compilation of results
- 298.** What validation type would you use to check that numbers fell within a certain range?
- (A) Range check.
 - (B) Presence check.
 - (C) Check digit.
 - (D) Type check.
- 299.** What type of data typically describes qualitative characteristics and is often categorical in nature?
- (A) Nominal Data
 - (B) Ordinal Data
 - (C) Interval Data
 - (D) Ratio Data
- 300.** A research group has limited funding. Which data collection method would serve a large population over several years that is geographically and economically stratified?
- (A) Surveys
 - (B) Focus groups
 - (C) Observations
 - (D) Tests
- 301.** Science begins with:
- (A) Theoretical modeling
 - (B) Hypothesis testing
 - (C) Systematic observation
 - (D) Data interpretation
- 302.** The researcher gather information through experience and direct data collection. What type of sources of knowledge is used?
- (A) Empirical
 - (B) Nonempirical
 - (C) Basic
 - (D) Evaluation
- 303.** Pottery from an archaeological dig is considered ____
- (A) Biased
 - (B) A secondary source
 - (C) Evidence
 - (D) A conclusion
- 304.** A company is planning to launch a new product. Before the launch, they decide to conduct a survey to understand the potential market. This is an example of which step in the marketing research process?
- (A) Defining the problem
 - (B) Obtaining Data
 - (C) Analyzing Data
 - (D) Applying results
- 305.** If the area of interest is quite wide and the problem of research and development is at the intersection of various industries, then it is better to obtain scientific and technical information through ____
- (A) Interdisciplinary sources

- (B) Single-industry journals
(C) Company newsletters
(D) Local newspapers
- 306.** The main purpose of an open-ended question is to:
(A) Limit the types of responses
(B) Encourage participants to provide detailed answers
(C) Provide options for responses
(D) Measure quantitative data
- 307.** Anya is sending a persuasive memo to her staff asking them to participate in the new wellness program. Which of the following sources of information would be most appropriate to help Anya shape an effective persuasive message for her staff?
(A) Tightly controlled scientific experimentation
(B) Library research rooms
(C) Questionnaires and surveys of employees
(D) Research in company files
- 308.** Data can be collected using
(A) Self observation
(B) Secondary data for example financial data
(C) Online Survey
(D) All of the above
- 309.** You colleague sends you a text message saying how good they thought your warm up activity was. What type of data is this?
(A) Qualitative
(B) Quantitative
- 310.** A well-developed research instrument can enhance the response rate and reduce ____ to participate in the research study.
(A) Refusals
(B) Willingness
(C) Follow-ups
(D) Suggestions
- 311.** Which bias involves giving socially acceptable answers?
(A) Central Tendency Bias
(B) Extreme Response Bias
(C) Social Desirability Bias
(D) Acquiescence Bias
- 312.** Why is accuracy and precision important in recording data during collection?
(A) To reduce participant dropout rates
(B) To limit researcher intervention
(C) To verify assumptions in the research
(D) To ensure validity and reliability in results
- 313.** In research, what is a questionnaire primarily used for?
(A) Data collection
(B) Data analysis
(C) Data interpretation
(D) Data presentation
- 314.** What is a common challenge of conducting field research?
(A) It is always less accurate.
(B) It can take longer to carry out than desk research.
(C) It is less detailed.
(D) It uses only secondary data.
- 315.** What is a data gathering procedure wherein the questions asked are both closed and open-ended questions?
(A) Structured
(B) Semi-structured
(C) Unstructured
(D) Questionnaire
- 316.** In a survey there is an enumerator and a ____
(A) Messenger.
(B) Supervisor.
(C) Respondent.
(D) Guide.

317. According to the textbook, a basic rule of research is to " ____
- (A) Examine primary data first
 - (B) Examine secondary data first
 - (C) Examine experimental data first
 - (D) Examine virtual data first
 - (E) Examine special data first
318. A set of data values, all of a single type; Appear vertically in a table.
- (A) Row
 - (B) Column
 - (C) Cell
 - (D) None of above
319. Which of the following BEST defines the term 'data collection method'?
- (A) The act of collecting data for a research.
 - (B) The process used to gathered information using specific tools or instruments to establish the truth.
 - (C) The tools used to determine the end result of a study.
 - (D) Surveys, interviews and focus groups that are used to conduct a research.
320. Facts, figures, and other evidence learned though observation are called
- (A) Variables
 - (B) Experimentd
 - (C) Questions
 - (D) Data
321. Neha is conducting research for her thesis and needs to gather information from a large group of people. Describe one popular method of data collection that she could use.
- (A) Surveys
 - (B) Interviews
 - (C) Focus Groups
 - (D) Observations
322. The CSEW is a face-to-face ____ survey run by the Office for National Statistics.
- (A) Offender
 - (B) Victim
323. What is the second process step in qualitative data collection?
- (A) To consider what types of information will best answer your research questions.
 - (B) To engage in a sampling strategy that will best help you understand your central phenomenon and the research question you are asking
 - (C) Gain access to these individuals and sites by obtaining permissions
 - (D) To design protocols or instruments for collecting and recording the information
324. A historian's responsibility is to have ____
- (A) Clear arguments
 - (B) Precise issues
 - (C) Accurate data
 - (D) Concise answers
325. Focus groups usually include ____ participants.
- (A) At least ten
 - (B) No more than three
 - (C) Six to twelve
 - (D) A minimum of twenty-five
326. ____ represents raw facts, whereas ____ is data made meaningful.
- (A) Information, reporting.
 - (B) Data, information.
 - (C) Information, bits.
 - (D) Records, bytes.
327. Another name for a collection of information is called ____
- (A) A line
 - (B) A line plot
 - (C) A frequency table
 - (D) Data
328. A measurement tool that uses pairs of opposite adjectives is known as a
- (A) Likert scale
 - (B) Sociometric device
 - (C) Semantic differential
 - (D) Graphic rating scale

- 329.** Research Step #1:Gathering means ____
(A) Collecting information
(B) Showing how information connects
(C) Creating a format to show research
(D) Putting information in order (like an outline)
- 330.** A scale for measuring attitudes that consist of a single adjective in the middle of an even-numbered range of values is called a ____
(A) Likert scale
(B) Semantic differential
(C) Stapel scale
(D) Balanced rating scale
(E) Mid-range scale
- 331.** Which of the following best defines *data*?
(A) Raw facts and figures
(B) Organized information
(C) Processed knowledge
(D) A type of software
- 332.** Data gathered by discussing issues with multiple research participants at the same time in a small-group setting
(A) Focus group
(B) Questionnaire
(C) Test
(D) Interview
- 333.** A tool within Google Drive for creating on-line survey forms.
(A) Google Docs
(B) Google Sheets
(C) Google Forms
(D) Google Exam
- 334.** A mail survey has the advantage of a wide coverage. There are however drawbacks. Which of the following poses a major problem?
(A) Lack of space
(B) Lack of time
(C) Lack of control
(D) Increased costs
(E) Poor Delivery
- 335.** Who is the principal party for collecting data?
(A) Custodian/steward
(B) Owner
(C) Controller
(D) Processor
- 336.** What does data accuracy depend on?
(A) Size of the sample
(B) Competency in data analysis
(C) Consistency and error-free recording
(D) Currency of the data
- 337.** Which of the following is a characteristic of a well-designed research tool?
(A) Ambiguity
(B) Bias
(C) Clarity
(D) Complexity
- 338.** The results of experimental data are obtained as a result of carrying out:
(A) Measuring the values of indicators
(B) Measuring the values of acidity
(C) Measuring the values of aeration
(D) Measuring the values of foaming
(E) Measuring the size of the population
- 339.** The five types of researcher-completed instruments used in educational research are
(A) Rating scales, tally sheets, flowcharts, performance checklists, interview schedules
(B) Questionnaires, tally sheets, flowcharts, performance checklists, interview schedules
(C) Rating scales, tally sheets, personality inventory, performance checklists, interview schedules
(D) Rating scales, tally sheets, flowcharts, performance checklists, personality inventory

- 340.** A researcher wants to determine if ponds and lakes downwind of a coal-burning power plant are affected by the plant's emissions. Which of the following would be the best parameter from the water in the ponds and lakes to measure in order to determine the effect of the plant's emissions on the aquatic ecosystems?
- (A) PH
 - (B) Biological oxygen demand (BOD)
 - (C) Carbon Dioxide
 - (D) Volatile organic compounds (VOC's)
- 341.** Proving the accuracy of information gathered for the intent of including it in a news story is an essential activity known as
- (A) Verification.
 - (B) Critical review.
 - (C) Proofreading.
 - (D) Editing.
- 342.** Data that help you determine how often potential customers use a particular service are called
- (A) Geographic data
 - (B) Demographics
 - (C) Psychographics
 - (D) Use-based data
- 343.** In ____ the interviewer interviews the respondents over the phone. The interviewer has only verbal contact with the respondents. The environment plays a relatively minor role in the data collection process.
- (A) Personal Interview
 - (B) Telephone Interview
 - (C) Mail Survey
 - (D) Fax Survey
- 344.** Which stages of data analysis identifies the sales figures, customer surveys?
- (A) Identify the need
 - (B) Define scope
 - (C) Identify potential sources
 - (D) Source and select information
- 345.** Using only sources that you know have a good reputation for checking and double checking their facts are known as ____ sources.
- (A) Reliable
 - (B) Secondary sources
 - (C) Online sources
 - (D) Periodicals
- 346.** In a 'blitz' study of a forest ecosystem, what is most likely to be prioritized?
- (A) Long-term biodiversity monitoring
 - (B) Rapid species inventory
 - (C) Detailed soil analysis
 - (D) Theoretical modeling
- 347.** Which of the following is an example of an open-ended question?
- (A) Do you want beef or Chicken?
 - (B) Why swimming is your favorite sport?
 - (C) How old are you?
 - (D) Is your mother home?
- 348.** A research watching the behavior of lions in a savannah observes the frequency, duration, and type of social behaviors exhibited. He is gathering ____
- (A) Empirical evidence
 - (B) Anecdotal evidence
 - (C) Critical evidence
 - (D) Pseudo Evidence
- 349.** In conducting marketing research it is necessary to do ____
- (A) Research method
 - (B) Questionnaire development
 - (C) Data development
 - (D) Sampling report
- 350.** What is the best way to collect and record data?
- (A) In a data table
 - (B) On post-it notes
 - (C) On scrap paper
 - (D) Interpretive dance

351. To obtain the freest opinion of the respondent, when we ask general question before a specific question then this procedure is called as the
- (A) Quantitative technique.
 - (B) Qualitative technique.
 - (C) Funnel technique.
 - (D) Research technique.
352. For collecting data from respondents
- (A) Objective
 - (B) Clearly defined research questions
 - (C) Structured research instruments
 - (D) Numerical data
353. Imagine Emma, Sophia, and Luna are on a treasure hunt. In research terms, what would “Data” be?
- (A) The clues that help prove your hypothesis
 - (B) The final answer after gathering evidence
 - (C) The information you collect during your research
 - (D) The most important message in a text
354. Which term encompasses methods, mechanisms of information transmission, and devices for recording information?
- (A) Computer
 - (B) Internet
 - (C) Communication
 - (D) Technology
355. Which of the following is a key aspect of accuracy in research?
- (A) Using precise measurements
 - (B) Striving for personal beliefs
 - (C) Increasing sample size
 - (D) Reducing time spent
356. Information from which a conclusion can be drawn or a prediction can be made:
- (A) Data
 - (B) Opinions
 - (C) Inferences
 - (D) Analysis
357. The information acquired by observation or experimentation.
- (A) Empirical evidence
 - (B) Scientific theory
 - (C) Scientific law
 - (D) Scientific method
358. Mia conducted an experiment in her science class. The name of the information that she got from her experiment (she organized it into charts and graphs) is called what?
- (A) Observationsconclusion
 - (B) Data
 - (C) Variables
 - (D) Hypothesis
359. It is important to identify the electronic sources ___ when conducting a research
- (A) Unreliable
 - (B) Reliable
 - (C) Informal
 - (D) None of above
360. “I need to figure out why one class scored so much better on the midterm than the other class.”
- (A) Active experimental/observational testing of the hypothesis
 - (B) Hypothesis of possible solution
 - (C) Data-collection/field work strategy
 - (D) None of above
361. Which of the following is a weakness of focus group research?
- (A) It relies too much on the individual as opposed to social interaction.
 - (B) It lacks generalizability.
 - (C) It lacks flexibility.
 - (D) All of the above
362. A good research combines primary, secondary and tertiary methods.
- (A) True
 - (B) False

- 363.** Research method where questions are asked to subjects who report their own answers. What type of data collection method is this?
- (A) Case study
 - (B) Experiment
 - (C) Survey
 - (D) Naturalistic observation
- 364.** What errors might be occurred due to the interview, respondent, instrument or method of data collection?
- (A) Type 1 error
 - (B) Error 2
 - (C) Errors of observation
 - (D) Errors of non-observation
- 365.** dat is a:
- (A) Word file.
 - (B) Deleted file.
 - (C) Data file.
 - (D) Driver file.
- 366.** What kind of data has values that are numbers?
- (A) Numerical
 - (B) Categorical
- 367.** Data collected during an experiment must be:
- (A) Accurate and unbiased
 - (B) Estimated
 - (C) Irrelevant
 - (D) Ignored unless convenient
- 368.** Identify if the following is primary or secondary data. Definition: results from sources other than the researcher's own investigations (Source: Edrolo)
- (A) Primary Data
 - (B) Secondary Data
- 369.** What is the primary purpose of surveys and interviews in research?
- (A) To collect self-reported data on behaviors and opinions from specific groups
 - (B) To observe natural behaviors
 - (C) To conduct experiments
 - (D) To analyze statistical data
- 370.** A class collects data on which place they would like to visit for a vacation.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
- 371.** If you look up how many inches of rain fell in our town last year, is that current data or historical data?
- (A) Current
 - (B) Historical
 - (C) Primary
 - (D) Secondary
- 372.** For data handling we take surveys with the help of
- (A) MICR
 - (B) Bar code reader
 - (C) OMR and OCR
 - (D) RFID devices
- 373.** Julie took a survey. She asked her classmates, "What is your favorite place to swim in the summer?" She received the following responses: lake, pool, pool, lake, ocean, lake, pool, ocean, ocean, lake, pool, lake, ocean, pool, lake, pool, pool. Which table shows the data that Julie collected?
- (A)
 - (B)
 - (C)
 - (D)
- 374.** In a 'blitz' study, which of the following is typically a priority?
- (A) Detailed theoretical modeling
 - (B) Comprehensive long-term data
 - (C) Rapid data acquisition
 - (D) Minimal data collection

375. What property of soil could be tested by rubbing soil between fingers?
- (A) Color
 - (B) Ability to retain water
 - (C) Weathering
 - (D) Texture
376. In the information search stage, which of the following is considered an "internal source" of information?
- (A) Word-of-mouth recommendations.
 - (B) Personal experiences and knowledge.
 - (C) Advertising.
 - (D) Product reviews.
377. Which of these activities is most likely part of a research internship?
- (A) Taking attendance
 - (B) Filing legal papers
 - (C) Collecting and analysing data
 - (D) Running marketing campaigns
378. This section indicates the tools that you will use for data collection.
- (A) Design
 - (B) Instruments
 - (C) Respondents and Sampling
 - (D) None of above
379. What is an attitude scale in which each item's value is calculated by finding out the mean or median of the ratings of a large number of judges on an eleven-point rating scale?
- (A) Guttman type.
 - (B) Likert type.
 - (C) Thurstone type.
 - (D) Bogardus type.
380. It means to obtain information about "what is."
- (A) Measurement
 - (B) Assessment
 - (C) Evaluation
 - (D) None of above
381. Documents which can be used for content analysis are:
- (A) Books, newspapers, magazines, television content among others
 - (B) Internet documents only
 - (C) Films and documentaries only
 - (D) None of above
382. Designing a plan for primary data collection requires decisions on all of the following EXCEPT ____
- (A) Research instruments
 - (B) Contact methods
 - (C) Sampling plan
 - (D) Research results
 - (E) Research approaches
383. Which of the following is a disadvantage of desk research?
- (A) It is easier to gather information.
 - (B) It is always relevant.
 - (C) The information could be biased.
 - (D) It is more expensive than field research.
384. Data is collected about the age of all students sent to the nurses office.
- (A) Census
 - (B) Sample Survey
 - (C) Observational Study
 - (D) Experiment
385. A procedure carried out to gather data about an object or event.
- (A) Evidence
 - (B) Inquiry
 - (C) Investigation
 - (D) Experiment
386. Which of the following is most likely to be a benefit of collecting data via a focus group?
- (A) The data collected is usually quantitative and easy to analyse
 - (B) Detailed information can be collected about consumer tastes

- (C) They are quick and inexpensive to conduct
(D) A large sample size is usually involved making the data fully reliable
- 387.** What is the term used to describe the information collected in an experiment?
(A) Inference
(B) Variables
(C) Data
(D) Observations
- 388.** The type of questions allow participants to give a free-form answer, called?
(A) Qualitative questions
(B) Survey
(C) Open-ended questions
(D) Close-ended questions
- 389.** Identify the objective of the data acquisition stage in the data science lifecycle.
(A) To solve problems and answer questions through data analysis.
(B) Understand the business and its objective.
(C) Understand the data and all the different needs.
(D) To visualize the data.
- 390.** What is the first step in the data flow of a company?
(A) Collecting data
(B) Integrating Data
(C) Cleaning Data
(D) Data Governance
- 391.** When making an argument about how climate change is affecting Earth, which one of the following would not be a strong type of evidence?
(A) Data tracking glacier size for the last 2 years.
(B) Data tracking the surface temperature for the last 200 years.
(C) Data tracking carbon dioxide levels for the last 100 years.
(D) None of above
- 392.** A gross error must necessarily be excluded from:
(A) From experimental data;
(B) From the thesis;
(C) From a discussion of the results;
(D) And do not repeat;
(E) From research practice;
- 393.** To obtain results that are defensible and trustworthy, what should action researchers do?
(A) Informally describe any observations made during the investigation
(B) Gather and keep track of evidence of successful and effective interventions
(C) Verbally communicate observations to others in regular meetings
(D) Keep repeating the action cycle until noticeable change occurs and then document it
- 394.** Data is:
(A) A collection of facts, numbers, and symbols stored electronically
(B) A physical storage device
(C) A type of spreadsheet file
(D) A programming language
- 395.** Credible source
(A) People/places/texts in which you gathered reliable information
(B) Unverified online articles
(C) Personal opinions and anecdotes
(D) Social media posts
- 396.** Camera, tape recorder, video tape etc are ____ Devices of observation
(A) Casual
(B) Mechanical
(C) Technical
(D) Manual

397. Research organizations conduct periodic surveys about ____ by asking questions such as Do you intend to buy a car in the next six months?, and placing the answers on a purchase probability scale.
- (A) Buyer Intent survey
 - (B) Expert opinion
 - (C) Previous Sales analysis
 - (D) Market test method
398. Method of Collecting Data: Based on questionnaires
- (A) Quantitative
 - (B) Qualitative
399. Which of the following types of resources should you not use for research?
- (A) Nonfiction Books
 - (B) Internet
 - (C) Magazines
 - (D) Fiction Books
400. What is an example of validity?
- (A) A set of questions fully answering what the business wants to know about a target market
 - (B) A set of questions that are poorly written
 - (C) A set of questions that vaguely answer the company's question
 - (D) A long survey asking the consumer random questions
401. Within variation can be observed with:
- (A) Longitudinal data
 - (B) Cross-sectional data
402. Which of the following is not valid for Data Acquisition?
- (A) Web scraping
 - (B) Surveys
 - (C) Sensors
 - (D) Announcements
403. The pieces of information researchers collect in a study
- (A) Data
 - (B) Data set
404. What aspect of advancing renewable energy sources involves collecting data about how they work in different environments?
- (A) Data Deletion
 - (B) Data Encryption
 - (C) Data Manipulation
 - (D) Data Collection & Analysis
405. What is a census?
- (A) A tool used to collect statistical data
 - (B) Statistics collected from an entire population
 - (C) The factual information collected from a survey or other source
 - (D) A group chosen from a population
406. "A data-gathering technique in which respondents record their purchases online or in a diary." What is this?
- (A) Online interview
 - (B) Telephone survey
 - (C) In-person focus group
 - (D) Purchase panels
407. Response from others in the form of information, opinions, and feelings
- (A) Transformational communication
 - (B) Trust
 - (C) Feedback
 - (D) Disclosure
408. This is the second phase of the AI project cycle, which is focused on obtaining the necessary data for the project. While developing an AI system for predictive purposes, it's essential to begin by training it with relevant data.
- (A) Project Scoping
 - (B) Data Acquisition
 - (C) Data Exploration
 - (D) Modeling

- 409.** Which term below is defined as the process of obtaining information to be used to make decisions about curriculum, students, programs, and educational policies?
- (A) Evaluation
 - (B) Measurement
 - (C) Assessment
 - (D) None of above
- 410.** The information you record in an experiment is called your ____
- (A) Data
 - (B) Conclusions
 - (C) Notebook
 - (D) Inquiry Edit
- 411.** Archival data allows us to estimate a trend of something, however ____
- (A) It is time consuming
 - (B) It is difficult
 - (C) It may not directly respond to the research question
 - (D) It is too easy to be analysed
- 412.** Data collection is the process of ____
- (A) Gathering and measuring information on variables of interest
 - (B) Gathering and measuring books on variables of interest
 - (C) Gathering and measuring newspapers on variables of interest
 - (D) Gathering and measuring diaries on variables of interest
- 413.** The following are sources of reliable information except
- (A) Universities
 - (B) Museums
 - (C) Government agencies
 - (D) Advertisements
- 414.** These are units of information, often numeric, recorded and used for the purpose of analysis.
- (A) Questionnaire
 - (B) Data
 - (C) Statistics
 - (D) None of above
- 415.** What is the role of field observations in geospatial data collection?
- (A) To entertain
 - (B) To provide firsthand data
 - (C) To confuse researchers
 - (D) To create art
- 416.** 'Using data from deep-sea cameras, Tharp and Heezen's job was to locate airplanes that had crashed and sunk to the bottom of the ocean.' What is data?
- (A) Facts and statistics
 - (B) False information
 - (C) Theories
 - (D) Spelling mistakes
- 417.** Facts, figures, and other evidence collected during a scientific investigation
- (A) Data
 - (B) Subjective reasoning
 - (C) Objective reasoning
 - (D) Skepticism
- 418.** Why might a researcher use open-ended questions?
- (A) To limit choices
 - (B) To collect detailed insights
 - (C) To make surveys faster
 - (D) To confuse respondents
- 419.** In a scientific experiment, data is often classified into which two main categories?
- (A) Qualitative and Quantitative
 - (B) Primary and Secondary
 - (C) Theoretical and Practical
 - (D) Experimental and Control
- 420.** In this step you identify what additional information is needed and what is the best way to collect it
- (A) Define the problem

- (B) Analyze the situation
 - (C) Develop data collection
 - (D) Gather and study info
 - (E) Propose a solution
- 421.** Census data is an example of
- (A) Basic data
 - (B) Primary data
 - (C) Secondary data
 - (D) Casual data
- 422.** For any study, you should question the validity and reliability of:
- (A) The sampling procedure
 - (B) The interviewing process
 - (C) The questionnaire
 - (D) All that are mentioned above
- 423.** Data gathered during an investigation
- (A) Evidence
 - (B) Investigation
 - (C) Experiment
 - (D) Hypothesis
- 424.** Which of the following best describes raw data?
- (A) Data that has already been analyzed.
 - (B) Unprocessed data that has just been collected.
 - (C) Data that is always numerical.
 - (D) Data that is always qualitative.
- 425.** Assigning numerals or other symbols to the categories or response is called
- (A) Coding.
 - (B) Tablet ion.
 - (C) Transcription.
 - (D) Editing.
- 426.** Observations made during an experiment are called:
- (A) Data
 - (B) Problems
 - (C) Conclusions
 - (D) Questions
- 427.** Which data is less expensive to obtain?
- (A) Primary Data
 - (B) Secondary Data
- 428.** What is the definition of raw data?
- (A) Aggregated and summarized data
 - (B) Data with errors and inconsistencies
 - (C) Data that has not been aggregated or summarized
 - (D) Qualitative data transformed into quantitative data
- 429.** Which data are MOST useful for analyzing the climate of the region?
- (A) Average time of sunrise and sunset in July
 - (B) Average temperatures for July, measured over 30 years
 - (C) The highest and the lowest daily rainfall in July of this year
 - (D) The daily high temperature for every day in July of this year
- 430.** In survey research, primary data collection techniques are applicable except?
- (A) Desk Review
 - (B) Key informant interview
 - (C) Questionnaire
 - (D) Focus group discussion
- 431.** Types of Quantitative Data and Measuresan instrument used to record observations about individual behavior. (Flanders' Interaction Analysis)
- (A) Personal assessment
 - (B) Affective scale
 - (C) Behavioral checklist
 - (D) Public document or school records
- 432.** In what kind of data researcher transfers the data from the responses on instruments to a computer file for analysis?
- (A) Cleaning for missing data
 - (B) Selecting the database
 - (C) Inputting the data
 - (D) Gathering the data

433. Gathering accurate information is essential for making sound communication decisions.
(A) True
(B) False
434. To find the missing information in a research, look for it in another source
(A) True
(B) False
435. Maps made with satellites use ____ to collect data/ features
(A) Star gazers
(B) Electron emission
(C) Proton pumps
(D) Radar
436. How many participants are typically involved in a focus group?
(A) 2-4 participants
(B) 5-10 participants
(C) 15-20 participants
(D) 25-30 participants
437. This Part of the survey asks the respondent certain important personal details.
(A) Introduction
(B) Profile of the Respondent
(C) Questions to Answer
(D) None of above
438. A typical data acquisition system consists of ____
(A) Op amps
(B) Sensors
(C) Rectifiers
(D) Transistors
439. T/F: Whenever possible, you should combine primary and secondary research.
(A) True
(B) False
440. In narrative research this step can be carried out through conversations or interviews, and written information through field texts. Journal or diary entries, letters sent by the individual, photographs, memory boxes, and stories.
(A) Collect the story from the participant
(B) Restory or retell the individuals story
(C) Select one or more participants to study
(D) None of above
441. Not all problems with data in manuscripts come from authors committing fraud. It can also be
(A) Data entry or management errors.
(B) Reviewer fraud.
(C) Editors misinterpreting findings.
(D) Authors' predictions being contradicted.
442. Process of collecting data for information is:
(A) Data acquisition
(B) Date acquisition
(C) Bar codes
(D) Real time
443. Raw facts, observations, and figures collected from various sources.
(A) Data
(B) Information
(C) Knowledge
(D) Statistics
444. What is the main purpose of using a Likert scale in a survey?
(A) To collect numerical facts
(B) To measure attitudes or opinions
(C) To test a software program
(D) To visualize complex data
445. Raw data is data that has not been processed for use.
(A) TRUE
(B) FALSE
446. When analyzing survey data, one common method to ensure the quality of responses is:

- (A) Random assignment
(B) Pre-testing the survey instrument
(C) Increasing the sample size
(D) Reducing the number of questions
- 447.** Connected with or related to the matter at hand
(A) Relevant
(B) Conclusion
(C) Argument
(D) Claim (noun)
- 448.** Empirical study consist of ____
(A) Putting data through preliminary checking
(B) Synthesis of discussion
(C) Gathering of data
(D) Determining growth rate
- 449.** One of the most important components of a research design is the ____ because they gather or collect data or information.
(A) Statistical Treatment
(B) Research Instrument
(C) Research Design
(D) The Subjects
- 450.** What type of Data are we collecting when asking: "Where were you born?"
(A) Categorical Data
(B) Quantitative Data
- 451.** The researcher can draw up conclusions regarding the research even if the research instrument used to collect data is not reliable.
(A) TRUE
(B) FALSE
- 452.** Which method is commonly used to study consumer behavior?
(A) Laboratory experiments
(B) Observation, interviews, and surveys
(C) Genetic testing
(D) Brain imaging
- 453.** Which is not a tool of data collection?
(A) Interview Schedule
(B) Questionnaire
(C) Verbal message from someone
(D) Observation
- 454.** Which of these is typically done during the data collection stage?
(A) Writing bibliography
(B) Creating graphs
(C) Conducting surveys or interviews
(D) Reviewing literature
- 455.** When you ____ something, you look for the size or quantity of it.
(A) Network
(B) Fundraiser
(C) Help out
(D) Measure
- 456.** SCORES OF STUDENTS: 25,49,47,43,36,27,12,27,50,45,33
(A) SOURCE: PRIMARY
(B) SOURCE: SECONDARY
(C) ARRANGEMENT: UNGROUPED
(D) ARRANGEMENT: GROUPED
- 457.** Information is gathered twice a year, every six months, on the experience of those involved in a crime.
(A) Uniform Crime Report
(B) Victim Survey
(C) National Crime Victimization Survey
(D) Self-reported Survey
- 458.** Questions a person is to answer in his/her own words
(A) Questionnaire
(B) Sample
(C) Open-Ended
(D) Closed-Ended
- 459.** These are all sources of information you can use for your Review of Related Literature except ____
(A) POLICY REPORTS

- (B) EXECUTIVE ORDER
 - (C) ENCYCLOPEDIA
 - (D) BLIND ITEM NEWS
- 460.** In a community project aiming to reduce water contamination, which systematic method would best track pollution sources and their impact?
- (A) Statistical Sampling
 - (B) Geographic Information Systems (GIS) Mapping
 - (C) Qualitative Interviewing
 - (D) Case Study Analysis
- 461.** Which of the following is a key responsibility of researchers in a scientific study?
- (A) Funding the research
 - (B) Guiding the research process
 - (C) Conducting experiments and collecting data
 - (D) Publishing the research
- 462.** Which tool of quantitative research best suits collecting standardized responses from a large audience quickly?
- (A) Unscheduled conversations at events
 - (B) Online surveys with structured questions
 - (C) Telephone interviews during peak hours
 - (D) Face-to-face interviews in public places
- Edit
- 463.** The first step of AI process is ____
- (A) Data Representation
 - (B) Evaluation
 - (C) Testing
 - (D) Data Collection
- 464.** What is the purpose of data collection?
- (A) To gather information for analysis
 - (B) To write conclusions
 - (C) To present data
 - (D) To formulate hypotheses
- 465.** What is the role of the moderator in a focus group?
- (A) To simulate discussion and keep the conversation on track.
 - (B) To ask leading questions.
 - (C) To sit apart from the group and observe their behavior.
 - (D) To evaluate the group's performance on a particular task
- 466.** The tools used to collect, measure, and analyze data related to your subject.
- (A) Research Instruments
 - (B) Validity
 - (C) Abstract
 - (D) Previous Studies
- 467.** When researching, you should evaluate each source to find the most relevant and suitable ones.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 468.** Respondents might alter their answers due to social desirability bias because they want to:
- (A) Appear more favorable to others
 - (B) Provide accurate information
 - (C) Express their true feelings
 - (D) Avoid answering
- 469.** What are the resulting measurements called?
- (A) Data
 - (B) Variables
 - (C) Instruments
 - (D) Labels
- 470.** Complete: ____ and ____ became standard data collection procedures in an ethnographic design.
- (A) Observations and questionnaires
 - (B) Survey and interviews
 - (C) Observations and interviews
 - (D) Questionnaires and survey.

471. Which type of data may be out-dated?
(A) Primary data
(B) Secondary data
472. The Research Instruments describes the tools for data collection.
(A) TRUE
(B) FALSE
473. Two types of data scientists collect are ____
(A) Random and sample
(B) Qualitative and quantitative
(C) Descriptive and inferential
(D) Parameter and statistic
474. One of the reasons why Online Survey nowadays is the preferred means of collecting data and responses from students like Aiden and William is convenience. They can take surveys from home or school, at their own pace.
(A) Agree
(B) Disagree
475. Data
(A) Information that you and a co worker discussed
(B) Group of people or target market on which research is done
(C) Pieces of information gathered during research
(D) None of above
476. Which of the following types of sources is not a periodical?
(A) Scholarly journal
(B) Magazine
(C) Textbook
(D) Newspaper
477. How can people take attitude research?
(A) Economic forecasting
(B) Advertisement recall
(C) Mail surveys
(D) Sales forecasting
478. Transcripts and public records rely on ____ as sources of information.
(A) People
(B) Documents
(C) Computers
(D) Data
479. When creating a research plan, what should you consider when selecting sources for your research?
(A) The number of participants
(B) The quality of sources, including relevance and accuracy
(C) The color preferences of the audience
(D) Conducting focus groups
480. Which type of question provides respondents with fixed choices?
(A) Open-ended questions
(B) Closed-ended questions
(C) Rating scale questions
(D) Probing questions
481. Precise, logical, and consistent data collection
(A) Empirical evidence
(B) Subjective reasoning
(C) Objective reasoning
(D) Skepticism
482. An institution that for years has collected and shared reliable and correctly sourced information are known as ____ sources.
(A) Primary
(B) Good
(C) Reputable
(D) Secondary
483. An information, especially facts or numbers, collected to be examined and considered and used to help with making decisions. It is called?
(A) Facts
(B) Data
(C) Input
(D) Information simulation

- 484.** Which of the following is a quantitative observation?
- (A) The petals are red
 - (B) There are eight petals
 - (C) The petals are shaped like hearts
 - (D) The petals are smooth
- 485.** Satisfaction surveys used to gather information about existing products would be an example of
- (A) Market Intelligence
 - (B) Market Info Systems
 - (C) Product Research
 - (D) Attitude Research
- 486.** What type of questions would you want to use in a survey so that the results could be precisely measured, easily compared, large numbers could be collected, and statistical techniques could be used to make sense of the data?
- (A) Open-ended
 - (B) Closed-ended
- 487.** The researchers use a scale that uses an opposing pair of words, constituting the endpoint of the scale. What type of scale do they use?
- (A) Likert scales
 - (B) Rankd order scales
 - (C) Visual analogue scale
 - (D) Semantic differential scale
- 488.** Photographs, Audio Recording, Diary accounts, Transcriptions are samples of —
- (A) Qualitative Data
 - (B) Quantitative Data
- 489.** Which of the following is NOT a method of desk research?
- (A) Internet
 - (B) Newspapers
 - (C) Interviews
 - (D) Books
- 490.** All are analog computers except
- (A) Clinical thermometer.
 - (B) Voltmeter.
 - (C) Speedometer.
 - (D) Laptop.
- 491.** Which of the following is a disadvantage of direct data collection?
- (A) It often provides outdated information
 - (B) It may be time-consuming and expensive
 - (C) It can be less reliable
 - (D) It is usually more accurate
- 492.** Refers to the collection of facts where the researcher gets information.
- (A) Collection of Data
 - (B) Organization of Data
 - (C) Analysis of Data
 - (D) None of the above
- 493.** If research instruments are not prepared carefully, which of the following is most likely to happen?
- (A) The results may be inaccurate or unreliable.
 - (B) The research will always be successful.
 - (C) The instruments will become more expensive.
 - (D) The research will require less time.
- 494.** A person or thing that gives information
- (A) Statistic
 - (B) Bias
 - (C) Inform
 - (D) Source
- 495.** What type of data is being collected when an organizations using spreadsheets and forms for data input?
- (A) Structured data.
 - (B) Application data.
 - (C) Unstructured data.
 - (D) Raw data.

496. Data from ____ questions are easily measured, but more limited in value.
(A) Close-ended
(B) Open-ended
497. About 12 participants are gathered in a room for a two-hour feedback session lead by a moderator. They are doing ____
(A) A focus group
(B) An in-depth interview
(C) An observation study
(D) None of above
498. In designing a research plan, these are utilized for data gathering procedures.
(A) The sampling plan
(B) The data sources/resources
(C) The research instruments
(D) The research approaches
499. Data documented clearly and consistently to ensure effective communication is described as 'Recorded in a standard manner.'
(A) True
(B) False
500. Quantifying an event or behavior according to generally accepted rules.
(A) OBSERVATION
(B) MEASUREMENT
(C) EXPERIMENTATION
(D) RESEARCH
501. Which type of data is more challenging for computers to understand?
(A) Structured data
(B) Unstructured data
(C) Machine-generated data
(D) Relational data
502. Which example will give you quality data?
(A) A person asks you for clarification
(B) A person misunderstands a question
(C) A person completes only three questions
(D) A person lies about their age
503. A focus group activity in which participants assemble photos or other objects that represent their thoughts and feelings.
(A) Word association
(B) Cartoons
(C) Collages
(D) Usability tests
504. True or False: It is possible to completely eliminate all researcher and respondent bias in a survey.
(A) True
(B) False
505. Poor data collection procedures can affect the overall credibility of the study by:
(A) Introducing bias and reducing the reliability of results.
(B) Ensuring accurate and consistent findings.
(C) Improving the validity of the study.
(D) Strengthening the study's conclusions.
506. What kind of questions should you ask?
(A) Close ended
(B) Open ended
507. The people and institutions from whom you gather your information are your ____
(A) Friends
(B) Audience
(C) Sources
(D) Snitches
508. What is the role of data acquisition systems (DAQs)?
(A) To calibrate instruments
(B) To collect and process data from sensors
(C) To display data on screens
(D) To design new sensors
509. Which of the following is NOT a method of collecting direct data?
(A) Interviews
(B) Observation
(C) Data logging
(D) Purchasing data from a vendor

- 510.** Which research method best validates customer reactions to a new product idea before development?
- (A) Post-launch sales trend analysis
 - (B) Internal brainstorming workshops
 - (C) Concept testing with target respondents
 - (D) Historical benchmarking of rivals
- 511.** What is a con of qualitative data?
- (A) Easier to analyze
 - (B) Faster to gather
 - (C) Slower to gather
 - (D) Easier to make decisions from
- 512.** Newspapers, books, magazines, and reports are examples of:
- (A) Primary sources
 - (B) Electronic sources
 - (C) Empirical data
 - (D) Print sources
- 513.** Methods in which participants provide information about themselves (ex. surveys, questionnaires)
- (A) Case studies
 - (B) Observational research
 - (C) Self-report methods
 - (D) None of above
- 514.** Which aspect of research does the following explanation belong to? Decide how I want to take and organize my notes. Then use that method to take notes from each source.
- (A) Arrange your notes
 - (B) Broaden or narrow your topic
 - (C) Take well-organized notes
 - (D) Identify and evaluate sources
- 515.** What type of evidence is Dale Stephens using in this part? Furthermore, some recent college graduates are not faring too well in the job market. According to the economist Andrew Sum of Northeastern University, more than 44 percent of college graduates under 25 who were area studies majors were unemployed in 2009 or working in a job that did not require their degree.
- (A) Data and facts: 44% of graduates were unemployed
 - (B) A short story about a 25 year old graduate
- 516.** Experimental research designs involve collecting — and performing statistical analysis on them during research.
- (A) Variables
 - (B) Quantitative Data
 - (C) Qualitative Data
 - (D) Information
- 517.** What is an advantage of using open-ended questions in data collection?
- (A) They are easy to analyze statistically
 - (B) They encourage detailed responses
 - (C) They limit the scope of responses
 - (D) They produce only quantitative data
- 518.** Which source of data error is the MOST frequent?
- (A) Human
 - (B) Systematic
 - (C) Statistical
 - (D) Randomized
- 519.** Which is the most effective way of recording steps taken when conducting research?
- (A) Asking people you know to help with your research
 - (B) Using social media to obtain respondents for your questionnaire
 - (C) Entering everything you observe in your diary or notebook
 - (D) Being organised and developing a time line
- 520.** These are the pieces of information obtained in a study:
- (A) Information
 - (B) Resonses
 - (C) Research Data
 - (D) Variables

521. Tools for Data Collection In health science research are ____
- (A) Questionnaires, observations
 - (B) Questionnaires, questions, observations
 - (C) Questionnaires, interviews and observations
 - (D) Ethics, questionnaires, interviews and observations
522. The numbers, words, images and symbols which do not bear a meaning, when standing alone are called as ____
- (A) Data
 - (B) Information
 - (C) System
 - (D) Computer
523. Which of the following are types of data that need to be collected in order to know what kind of weather to expect over the next few days?
- (A) Air Pressure
 - (B) Air Temperature
 - (C) Wind
 - (D) All of these
524. Which among the below options is not an offline data?
- (A) Sensor
 - (B) Observations
 - (C) Web Scraping
 - (D) Cameras
525. Which scientific method is commonly used to assess pollution levels in the waters around Rio de Janeiro?
- (A) Spectroscopy
 - (B) Chromatography
 - (C) Mass Spectrometry
 - (D) Titration
526. What is Data
- (A) Information
 - (B) Consists of observations, counts, responses
 - (C) Collection of Data
 - (D) None of above
527. True/False: A researcher gets a more holistic understanding of the topic being studied in a focus group as compared to an interview.
- (A) True
 - (B) False
528. The major weakness of mail survey is
- (A) The impersonality of communication.
 - (B) The inability to direct your message to a specific person.
 - (C) The strong risk of non-response.
 - (D) The inability to secure confidential information.
529. The main sources of data are:
- (A) Primary
 - (B) Secondary
 - (C) Primary and Secondary
 - (D) Neither (a) nor (b)
530. This process involves methods to determine the participants in the study, how variables are measured, and how data will be documented and collected.
- (A) Data Collection
 - (B) Conclusion
 - (C) Recommendation
 - (D) None of above
531. Mira and Ishaan are conducting a research project on the effectiveness of a new teaching method. How does triangulation enhance the credibility of their research findings?
- (A) By using multiple data sources to confirm results.
 - (B) By increasing the sample size significantly.
 - (C) By ensuring that only quantitative data is used.
 - (D) None of above

532. Three of these words might be put into the same category. Which word does NOT belong in that category?
- (A) Questionnaire
 - (B) Survey
 - (C) Experiment
 - (D) Source
533. What is a research instrument?
- (A) A tool used to collect and analyze data
 - (B) A statistical method
 - (C) A type of experimental control
 - (D) A software program
534. This refers to data that has been compiled and organized to answer research questions. This may include data from interviews, archival documents, and/or focus groups.
- (A) Purposeful sampling
 - (B) Data set
 - (C) Reflexivity
 - (D) Unit of analysis
535. Which of the following is a potential weakness of FGDs?
- (A) Lack of interaction
 - (B) Groupthink
 - (C) Long data collection times
 - (D) High costs
536. Information gathered from observations, surveys and experiments
- (A) Data
 - (B) Population
 - (C) Sample
 - (D) Stats
537. Each row in a table is called ____
- (A) Entity
 - (B) Data line
 - (C) Field
 - (D) Record
538. Which of the following is a tool used to gather data in research?
- (A) Research Hypothesis
 - (B) Research Instrument
 - (C) Research Conclusion
 - (D) Research Analysis
539. Information gathered from your observations are called
- (A) Data
 - (B) Inference
 - (C) All the above
 - (D) None of the above
540. The major problem with mail surveys is the:
- (A) Low response rate
 - (B) Cost
 - (C) Time required
 - (D) Training required
541. Step 6: Information collected on charts and tables.
- (A) Data
 - (B) Hypothesis
 - (C) Conclusion
 - (D) Procedure Edit
542. In temporal classification, data are classified on the basis of:
- (A) Location
 - (B) Time
 - (C) Originality
 - (D) Purpose
543. It is important to collect data and record it.
- (A) True
 - (B) False
544. Who developed the Likert scale?
- (A) Albert Likert
 - (B) Rensis Likert
 - (C) Marie Likert
 - (D) Likert Reton

545. When deciding on sampling and data collection within an action study, researchers consider ____ method(s) to cover the entirety of the study's focus.
- (A) Multiple
 - (B) One
546. The facts, figures, and other information you collect while doing your experiment is called
- (A) Conclusions
 - (B) Data
 - (C) Trials
 - (D) Procedures
547. Data saved in a table structured format.
- (A) Comma Separated Values (CSV).
 - (B) File Extension.
 - (C) File Name.
 - (D) Types of data.
548. The collection of data through primary and secondary sources is classified as
- (A) Observational Research
 - (B) Objective Research
 - (C) Data Sources
 - (D) Applied Research
549. Is a combination of questionnaire & interview method.
- (A) Schedule method
 - (B) Stratified sampling
 - (C) Quota sampling
 - (D) Cluster sampling.
550. Luisa is conducting an investigation about trees. She will use a meter stick to measure the length of the trees. Which of the following best describes why Luisa should write down her measurements in a data table as part of this investigation?
- (A) To help her use a meter stick
 - (B) To help her control variables
 - (C) To help her organize her data
 - (D) To help her plan the steps to follow
551. It is a collection of observations from which conclusions can be drawn. It can be words, numbers or images.
- (A) Hypothesis
 - (B) Systematic
 - (C) Research
 - (D) Data
552. What is a key factor in determining how revealing a source is?
- (A) The color of the source material
 - (B) The amount and quality of information
 - (C) The size of the source document
 - (D) The age of the source
553. What are the types of data according to nature?
- (A) Qualitative.
 - (B) Quantitative.
 - (C) Both of them.
 - (D) None of the above.
554. Which of the following is not an example of a 'unit of analysis'?
- (A) Significant actors
 - (B) Words
 - (C) Validity
 - (D)) subjects and themes
555. A table that uses tally marks to record data
- (A) Tally table
 - (B) Frequency table
 - (C) Vertical bar graph
 - (D) Picture graph
556. The process of converting audiotape recordings or field notes into text data
- (A) Transcription
 - (B) Qualitative data
 - (C) Data analysis
 - (D) Sampling

- 557.** When one examines the entire population instead of a subgroup of the population, this is called a ____ This is what is happening in the US this year, 2020.
- (A) Sampling
 - (B) Census
 - (C) Bias
 - (D) None of above
- 558.** An organized way to collect and record scientific observations is with a(n) ____
- (A) Data table
 - (B) Inference
 - (C) Model
 - (D) Definition
- 559.** If you wanted to estimate the number of students in your school who play video games more than 10 hours per week. What is the best method of data collection?
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
- 560.** While Clara was talking to John, a glass fell off the table and broke. This incident interfered Clara's flow of communication with John. This interference is called ____
- (A) Lapse
 - (B) Noise
 - (C) Blockage
 - (D) Distortion
- 561.** Teacher Dane wants to investigate if the behavior of his students are linked to their consumption of media (e.g., watching action TV shows/ movies, etc.). To do this, he plans to gather data on the shows they watch. What tool should he use?
- (A) Survey
 - (B) Observation
 - (C) Records/ documents
 - (D) Interviews
- 562.** What is the primary goal of Literature Discovery?
- (A) To collect and organize research data
 - (B) To identify relevant and high-quality research literature
 - (C) To analyze and interpret research findings
 - (D) To publish research results
- 563.** One of the key benefits of online focus groups is:
- (A) Geographical flexibility and cost-effectiveness
 - (B) Lack of engagement from participants
 - (C) The ability to avoid ethical considerations
 - (D) Increased response bias
- 564.** A vertical line of cells
- (A) Maximum
 - (B) Minimum
 - (C) Column
 - (D) Formulas
- 565.** What type of data was collected for this line plot?
- (A) Survey
 - (B) Numerical
 - (C) Categorical
 - (D) Data
- 566.** The intersection of a column and a row is called a ____
- (A) Gridline
 - (B) Cell
 - (C) Value
 - (D) Formula
- 567.** Below is the approach used in quantitative research data collection EXCEPT ____
- (A) Mail Questionnaire
 - (B) Online Interview
 - (C) Telephone Interview
 - (D) Internet data

568. Among the steps of the research process, which step is most likely to go wrong?
- (A) Identify the problem
 - (B) Planning
 - (C) Collect information
 - (D) Report
569. The facts or numbers gathered in a survey is an example of?
- (A) Sample
 - (B) Data
 - (C) Census
 - (D) Statistics
570. Which of the following is the best way to collect research?
- (A) Use only electronic sources.
 - (B) Use as few resources as possible.
 - (C) Use a variety of sources.
 - (D) Use only books and magazines. Edit
571. Answer: This question type produces a “rich array of information based on the respondent’s frame of reference.”
- (A) Focus group
 - (B) Open ended question
 - (C) Closed ended question
 - (D) None of above
572. Information and facts
- (A) Hypothesis
 - (B) Data
 - (C) Focus Groups
 - (D) External Factors
573. The reliability of a research instrument refers to:
- (A) Its ability to measure what it intends to
 - (B) Consistency in results when the instrument is used repeatedly
 - (C) Its alignment with other measures in the study
 - (D) Its applicability in various settings
574. This is collecting data through interviews with a group of people, typically 4 to 6. What is this?
- (A) One on one interview
 - (B) Telephone interview
 - (C) Electronic email interview
 - (D) Focus group discussion
575. Raw facts and figures before they have been processed.
- (A) Data
 - (B) Data dictionary
 - (C) Data encryption software
 - (D) Data subject
 - (E) Data theft
576. Which data collection method would you use to collect data for this study? A study of U.S. residents’ approval rating of the U.S. president.
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
577. Which type of data is contained by census of india?
- (A) National Income
 - (B) Industry
 - (C) Population
 - (D) Agriculture
578. Which term best matches this definition? Counting how often a behavior occurs.
- (A) Frequency Recording
 - (B) Percentile Rank
 - (C) Errorless Learning in Assessment
 - (D) Criterion-Referenced Test
579. Data should be available for easier completion of the study.
- (A) Interest
 - (B) Magnitude
 - (C) Level of expertise
 - (D) Data availability

580. The most complete and continuous demographic record of population is provided by
(A) Statistical Organisation (CSO)
(B) National Sample Survey Organisation (NSSO)
(C) Registrar General of India (RGI)
(D) Census of India
581. A ___ is a collection of numbers gathered to give some information.
(A) Tally mark
(B) Data
(C) None of these
(D) Pictograph
582. You can list all the ways you collected data, including surveys, experiments, or field research.
(A) Abstract
(B) Methodology
(C) Introduction
(D) Conclusion
583. Which type of validity examines if an instrument truly represents all aspects of the concept being measured?
(A) Criterion validity
(B) Content validity
(C) Construct validity
(D) Face validity
584. How do we record our observations?
(A) With our mobile phones.
(B) From memory.
(C) Data recording sheet.
(D) None of the above
585. Interviews or questionnaires are classed as a market research strategy, and collect data in a variety of techniques.
(A) True
(B) False
586. It is necessary to carry out as many comparisons as possible combinations of two elements.
(A) Constant Sum
(B) Rank Order
(C) Q sort
(D) Paired Comparison
587. An instrument for data collection is:
(A) Tool to gather information
(B) Data analysis method
(C) Sampling technique
(D) Theory building method
588. Focus groups are a useful data-collection tool because they
(A) Generate in-depth discussion
(B) Are intimidating to respondents
(C) Are inexpensive
(D) Eliminate the need for quantitative data
589. A set of data organized in a participants(rows)-by-variables(columns) format is known as a "data set."
(A) True.
(B) False.
(C) Neither True nor False just a statement.
(D) None of the above.
590. Which of the following is not a form of data obtained by a focus group?
(A) Body language
(B) Conversation, including tone of voice
(C) Silence/pauses
(D) All of the above are forms of data collection
591. A dataset is an unorganized collection of data.
(A) TRUE
(B) FALSE
592. A student is interested in researching the educational requirements for becoming a registered nurse. What steps should they take to gather accurate information?
(A) Ask a friend who is interested in nursing

- (B) Search official nursing association websites and speak with school counselors
(C) Guess based on TV shows
(D) Only look at social media posts
- 593.** Accepts data
(A) Input
(B) Output
(C) Menu desktop
(D) Hardware
- 594.** Observable behavior is ____.
(A) Anything that you can see only
(B) Anything that you can see but not hear
(C) Anything that you can see, hear, or experience with the senses
(D) Anything that can be measured
- 595.** The students from the school decided to conduct a project to solve the problem of water pollution. Which suggestion is the most suitable solution?
(A) Feed the fishes near the factories.
(B) Test water and dead fish from the canal to see if the fish actually die from polluted water.
(C) Release more fishes into the water near the factories to rejuvenate the fish population.
(D) Plant more trees near the factories.
- 596.** Identify the type of data collection method: Surveys with closed-ended questions.
(A) Quantitative
(B) Qualitative
(C) Both
(D) Neither
- 597.** The liquid in the test tube is 90 degrees Fahrenheit.
(A) Quantitative Observation
(B) Inference
(C) Qualitative Observation
(D) None of above
- 598.** Answer: This is the next step to be undertaken once a researcher has (1) defined the problem, (2) planned the research design, and (3) specified the sampling procedure.
(A) Collect the data
(B) Analyze the data
(C) Follow up
(D) Prepare report
- 599.** Information collected by the researcher in quantitative or qualitative form are named as:
(A) Single score
(B) Raw score
(C) Variable
(D) Attributes
- 600.** A credible source is a source of information that is:
(A) Unbiased
(B) Supported by evidence
(C) Written by a professional author
(D) Posted on social media
- 601.** What is included in the list of research tools?
(A) Only a question list
(B) Only a list of sources
(C) Collection folder, question list, and list of sources
(D) Only a collection folder
- 602.** Which of the following is a common method for collecting data?
(A) Using unstructured interviews
(B) Ignoring participant feedback
(C) Analyzing historical data only
(D) Relying solely on theoretical frameworks
- 603.** Which method of data gathering has the advantage of collecting the data from a large group at once?
(A) Text messaging
(B) Audience response system
(C) Audio conferencing
(D) None of above

- 604.** Information collected during a scientific investigation
- (A) Evidence
 - (B) Conclusions
 - (C) Inferences
 - (D) Opinions
- 605.** What type of response bias is the following? Responding in a way that disguises one's true feelings so as to appear more socially acceptable
- (A) Social desirability responding
 - (B) Moderacy bias
 - (C) Extremity bias
 - (D) Acquiescence bias
 - (E) Reference group effect
- 606.** This part consists of questionnaires, surveys, interviews, checklists or simple tests.
- (A) Research design
 - (B) Respondents of the study
 - (C) Instrument used
 - (D) Validation
- 607.** It is a collection of information that can be classified into groups.
- (A) Categorical data set
 - (B) Numerical data set
 - (C) Statistics
 - (D) Statistical question
- 608.** The process of gathering information/data from EACH member of the population.
- (A) Census
 - (B) Interview
 - (C) Survey
 - (D) Questionnaire
- 609.** Which of the following is an example of unstructured data?
- (A) Dates and times
 - (B) Cell phone numbers
 - (C) Social security numbers
 - (D) Text-only files
- 610.** The process of quantifying data is referred to as ____
- (A) Enumeration.
 - (B) Diagramming.
 - (C) Typology.
 - (D) Coding.
- 611.** This data collection strategy makes use of books, journals, magazine, art works, songs, pictures and others to obtain common themes or construct for analysis.
- (A) Documentary Analysis
 - (B) FGD
 - (C) Observation
 - (D) Interview
- 612.** Data for an AI project can be collected through ____
- (A) Web Scraping
 - (B) Surveys
 - (C) Sensor
 - (D) All the above
- 613.** What kind of observation is this: 30 mL of water
- (A) Quantitative
 - (B) Qualitative
 - (C) Neither quantitative nor qualitative
 - (D) None of above
- 614.** Which challenge of big data storage is characterized by the need to make data accessible from anywhere at anytime?
- (A) Access.
 - (B) Security.
 - (C) Management.
 - (D) Analytics.
- 615.** Klay wanted to check the events during the Spanish colonial period. She went to museums and searched for books and articles. What is the data collection method used?
- (A) In-depth interviews
 - (B) Focus group discussion
 - (C) Observation
 - (D) Document reviews

- 616.** What should be closely referenced in resource checking according to the notes?
- (A) Literature review
 - (B) Theoretical framework
 - (C) Results of observation, interviews, or any other form
 - (D) Data collection methods
- 617.** Data collection is based on the physical evidence of past behaviour
- (A) Audits
 - (B) Trace analysis
 - (C) Content Analysis
 - (D) Observation
- 618.** Which of the following examples of data collection instruments is used for recording frequency of behavior, remarks, activities, etc.?
- (A) Tally sheets
 - (B) Flow charts
 - (C) Anecdotal records
 - (D) Time logs
- 619.** Fieldwork includes all the activities you need to carry out in order to collect you data
- (A) True
 - (B) False
- 620.** Pick the letter of the term that best matches the description. site where continuous CO₂ records have been maintained since 1958
- (A) Carbon dioxide
 - (B) Zooplankton
 - (C) Mauna Loa, Hawaii
 - (D) Computer model
 - (E) Global warming
- 621.** What is a common challenge in data collection?
- (A) Obtaining data from reliable sources
 - (B) The ease of conducting surveys
 - (C) The unlimited number of participants
 - (D) There are no challenges in collecting data
- 622.** An enquiry in which each unit of the universe is studied is called ____
- (A) Population
 - (B) Complete enumeration
 - (C) Incomplete enumeration
 - (D) Sample
- 623.** What does data refer to in the context of statistics?
- (A) A method of presenting information visually
 - (B) A type of software used for calculations
 - (C) Pieces of information collected for analysis
 - (D) A collection of random thoughts
- 624.** What is a data capture form specifically designed to collect?
- (A) Tags
 - (B) Data.
 - (C) Tables
 - (D) Records
 - (E) Files
- 625.** What does empirical evidence consist of in research?
- (A) Hypotheses and theories
 - (B) Data
 - (C) Personal experiences
 - (D) Philosophical reasoning
- 626.** Who compiles statistical sources?
- (A) Only government agencies
 - (B) Only research organizations
 - (C) Only private companies
 - (D) Government agencies, research organizations, and private companies
- 627.** Comments made on Twitter can be monitored and provide businesses with useful qualitative research. Which of the following methods of data collection is this an example of?
- (A) Social media
 - (B) Surveys
 - (C) Observation
 - (D) Questionnaires

628. Which bias involves systematic differences between those who drop out and those who remain in a study?
- (A) Volunteer Bias
 - (B) Response Bias
 - (C) Dominant Responder Bias
 - (D) Attrition Bias
629. Which of the following are types of fieldwork? I. Controlled experiments. (a) II. Within subjects. (b) III. Yarning circles. (c) IV. Focus groups. (d) V. Direct observation. (e)
- (A) Not fieldwork
 - (B) Fieldwork
 - (C) All the above
 - (D) None of the above
630. If you read about how many people attended a parade five years ago, is that current or historical data?
- (A) Historical
 - (B) Current
 - (C) Secondary
 - (D) Primary
631. True/False: It is less difficult to preserve anonymity and confidentiality in a focus group than in an interview.
- (A) True
 - (B) False
632. Agreeable relationship between source and reporter
- (A) Primary source
 - (B) 5 W;s and H
 - (C) Rapport
 - (D) Observing details
633. What is the term for the following definition? A behavioral recording technique where behaviors that occur within a sequence are recorded in the order in which they occur.
- (A) Sequence sampling
 - (B) Event sampling
 - (C) Time sampling
 - (D) Interval recording
634. In an AI project, historical salary information used for training is termed as ____
- (A) Testing data
 - (B) Prediction data
 - (C) Training data
 - (D) Acquired data
635. If the title of the study is “Evaluation of Modular Learning Approach of Elementary Students of Sto. Nino De Praga Academy for Academic Year 2020-2021”. Who are the possible respondents of the study?
- (A) Parents, school, students
 - (B) Community, students, teachers
 - (C) Students, parents, teachers
 - (D) Elementary pupils, staff
636. Researchers may reword or rephrase a respondent's answer in order to confirm a hypothesis, build rapport or overestimate their understanding of the respondent. This is known as
- (A) Leading Question & Wording Bias
 - (B) Confirmation Bias
 - (C) The Hawthorne Effect
 - (D) Habituation
637. The part of the methodology that explains how data will be collected is called:
- (A) Data gathering procedure
 - (B) Research locale
 - (C) Research instrument
 - (D) Population and sampling
638. Quantitative observation involves the standardization of all observed procedures. Including all of the following EXCEPT ____
- (A) Who is being observed
 - (B) Why observations take place
 - (C) When observations occur
 - (D) None of above

- 639.** The process of collecting and converting data for information systems:
- (A) Data acquisition
 - (B) Real-time
 - (C) RF/ID
 - (D) MES
- 640.** A well-balanced paper would contain information from
- (A) One single comprehensive website
 - (B) Several different types of information sources
 - (C) Wikipedia and .com URLs
 - (D) Only current newspaper articles
- 641.** Mary is assigned a science project. Where should she begin her research?
- (A) A science website for kids
 - (B) A television show
 - (C) A magazine
 - (D) A science fiction book
- 642.** What do qualitative studies use to gather data?
- (A) Data Collection Method
 - (B) Data Gathering Process
 - (C) Data Instrument
 - (D) Data Reports
- 643.** What does not lead to unreliable data?
- (A) Participants are not happy to participate in the research
 - (B) Test administration procedures are consistent and standardized
 - (C) Ambiguous and unclear questions on instruments
 - (D) Research sample is collected from one person
- 644.** Which primary market research method involves watching and analyzing customer behavior in real-world settings?
- (A) Focus groups
 - (B) Observation
 - (C) Consumer trials
 - (D) Questionnaires
- 645.** Data that are collected using scientific processes that describe particular observations
- (A) Empirical evidence
 - (B) Data
 - (C) Subjective reasoning
 - (D) Objective reasoning
- 646.** These types of images can help scientists track severe weather patterns such as Hurricanes and Volcanic Ash.
- (A) Doppler radar
 - (B) Hazard maps
 - (C) Satellite Images
 - (D) Infrared Images
- 647.** Which source provides quantitative information?
- (A) Focus groups
 - (B) Interviews
 - (C) Questionnaires
 - (D) Books and journals
- 648.** Community mapping can be used in a conceptual sense, to refer to a store of information with or without a ___ representation.
- (A) Symbol
 - (B) Visual
 - (C) Vision
 - (D) Group
- 649.** Data that includes longitude and latitude coordinates of a particular research area is called ___
- (A) De-identified
 - (B) Cross-sectional
 - (C) Public use
 - (D) Geospatial
- 650.** What kind of questions could you ask?
- (A) Open and closed questions
 - (B) Only open questions
 - (C) Yes/no questions
 - (D) None of above

651. What are the two ways scientists get data for making maps?
- (A) Through ground surveys and satellite imagery
 - (B) Through archaeological excavations and weather forecasts
 - (C) Through analyzing ancient maps and counting tree rings
 - (D) Through underwater exploration and studying fossils
652. What type of panel asks the panel members the same questions on each panel measurement?
- (A) Inquisitional panel
 - (B) Discontinuous panel
 - (C) Repeatability panel
 - (D) Continuous panel
653. The use of multiple observers to allow cross-checking of observations to make sure that the investigators agree with what took place is known as ____
- (A) Multiple Operationalism.
 - (B) Interpretive validity.
 - (C) Investigator triangulation.
 - (D) Researcher bias.
654. A ____ is a small group of research participants discussing issues in one setting at a time
- (A) Observation
 - (B) Interview
 - (C) Questionnaire
 - (D) Focus group
655. Which data collection method is most likely to involve open-ended questions?
- (A) Survey questionnaires
 - (B) Structured interviews
 - (C) Case studies
 - (D) Experiments
656. Which of the following is NOT a data gathering technique?
- (A) Interview Method
 - (B) Questionnaire Method
 - (C) Communication Method
 - (D) Experimental Method
657. Data collected in Data acquisition is used for:
- (A) Training
 - (B) Testing
 - (C) Training & testing
 - (D) None of these
658. Which bias involves a preference for using extreme ends of a scale?
- (A) Extreme Response Bias
 - (B) Recall Bias
 - (C) Hawthorne Effect
 - (D) Central Tendency Bias
659. What do you call the type of scale used to measure behaviors and attitudes quantitatively?
- (A) Rank-Order Scale
 - (B) Likert Scale
 - (C) Open-ended scale
 - (D) Dichotomous Scale
660. The primary purpose of a computer is to process ____ and convert it into information.
- (A) Electricity.
 - (B) Data.
 - (C) Raw material.
 - (D) A bit.
661. A research team using focus groups finds that some participants dominate the discussion. What is the best solution?
- (A) Ask dominant participants to leave
 - (B) Conduct individual interviews instead
 - (C) Use a skilled moderator to ensure balanced participation
 - (D) Ignore the issue and continue data collection
662. Which of the following is not an authentic source for data acquisition?

- (A) Sensors
 - (B) Surveys
 - (C) Web Scraping
 - (D) System Hacking
- 663.** Why is it recommended to over-recruit participants for focus groups?
- (A) To increase the diversity of participants
 - (B) To account for participants who may not attend after being recruited
 - (C) To reduce the number of focus groups needed for the research
 - (D) To ensure that the recruited participants are new to the company
- 664.** All the facts and information scientists gather
- (A) Data
 - (B) Conclusion
 - (C) Inference
 - (D) Control group
- 665.** Which tool is best for collecting large-scale quantitative data quickly?
- (A) Surveys.
 - (B) Interviews.
 - (C) Focus groups.
 - (D) Case studies.
- 666.** During an experiment you collect?
- (A) Food
 - (B) Ideas
 - (C) Data
 - (D) Apples
- 667.** Which of the following is an example of empirical evidence?
- (A) Guesses
 - (B) Inferences
 - (C) Data
 - (D) None of above
- 668.** Sources of Data Collection
- (A) Interview and observation
 - (B) Questionnaires and survey
 - (C) Primary sources and secondary sources
 - (D) Books and journal
- 669.** What is data gathering?
- (A) The process of collecting and evaluating information
 - (B) A collection of facts, such as numbers, words, measurements, observations.
 - (C) Exchange of data between a source and a receiver
 - (D) Systematic process of gathering observations or measurements
- 670.** Which research tool is typically used to gather quantitative data?
- (A) Interview
 - (B) Focus Group
 - (C) Survey
 - (D) Observation
- 671.** Data that can be counted or measured.
- (A) Categorical Data
 - (B) Statistical Data
 - (C) Numerical Data
 - (D) None of above
- 672.** The final step before full-scale administration of an instrument is typically:
- (A) Publishing results
 - (B) Training data collectors and confirming administration procedures
 - (C) Hypothesis formulation
 - (D) Sampling frame listing
- 673.** This data collection strategy involves a series of the same questions to eight to ten people in a room together:
- (A) Structured interview
 - (B) Focus group
 - (C) Panel discussion
 - (D) Survey
- 674.** Raw facts are referred to as ____
- (A) Information
 - (B) Data

- (C) Request
(D) Sequence
- 675.** A researcher used a computer program to help determine how fast a virus might spread through a city. What kind of data collection method is this?
(A) Survey
(B) Simulation
(C) Experiment
(D) Observational study
- 676.** Students use a dissolved oxygen probe during a laboratory activity involving 1,000 mL samples of pond water. The function of the probe is to-
(A) Create a model
(B) Gather accurate data
(C) Test a hypothesis
(D) Analyze investigation conditions
- 677.** The data collection methods are:
(A) Qualitative and Research
(B) Quantitative and Research
(C) Qualitative and Quantitative
(D) Quantitative and Sources
- 678.** Which answer shows numerical data?
(A) Favorite animal
(B) Hours of sleep last night
(C) Hair color
(D) Elementary school you attended
- 679.** A question that respondents can answer in an almost unlimited number of ways is called a ____ question.
(A) Structured
(B) Closed-end
(C) Completely unstructured
(D) Dichotomous
(E) Multiple choice
- 680.** Which of the following data collecting methods is not normally used in qualitative research?
(A) Participant observation
(B) Focus groups
(C) Questionnaire
(D) Semi-structured interview
- 681.** When making an argument about how climate change is affecting the ice cover on Earth, which of the following would be the least effective type of evidence to support your argument? Responses
(A) Data tracking the amount of snowfall for the last 50 years
(B) Data tracking the surface temperature for the last 200 years
(C) Data tracking carbon dioxide levels for the last 100 years
(D) Data tracking glacier size for the last 2 years
- 682.** Can we conduct test using Google Form
(A) Yes
(B) No
(C) All the above
(D) None of the above
- 683.** A brief data collection plan for research about “Academic Stress and Sleep Patterns among SHS students” should include:
(A) Selecting participants, choosing data collection methods, and determining analysis techniques.
(B) Only interviewing teachers about student stress.
(C) Focusing solely on sleep patterns without considering stress.
(D) Collecting data only from university students.
- 684.** Data entry can be performed with all of the following except
(A) OCR /OMR.
(B) COM.
(C) Voice-recognition systems.
(D) MICR.

- 685.** Which specific data can satellites provide for global warming research?
(A) Ocean currents, earthquake activity, volcanic eruptions
(B) Temperature changes, sea level rise, ice melt, greenhouse gas concentrations, and land use changes
(C) Wind speed, cloud cover, precipitation
(D) Crop yields, population growth, urban development
- 686.** When would it be better to do research in the library rather than on the Internet?
(A) You are writing a report on recent U. S. Supreme Court decisions.
(B) You want to know the historical performance of a stock you are considering purchasing.
(C) You need to compare credit card interest rates.
(D) You want to find out more about the old trails through the forest in your town.
- 687.** Which question can best be answered using remote sensing image data?
(A) How much of the Amazon river basin has been deforested?
(B) How many frog species have become extinct as a result of deforestation?
(C) How can biodiversity be restored on deforested lands?
(D) None of above
- 688.** What is a common method used by researchers to ensure the reliability of their findings in educational settings?
(A) Triangulation of data
(B) Relying on anecdotal evidence
(C) Conducting multiple interviews
(D) Using a single data source
- 689.** Data is collected from satellites, aerial photos, and scanners. Maps are made by adding many different layers of data to one map.
(A) Global Positioning System
(B) Geographic Information System
- 690.** How are data organized in a spreadsheet ____
(A) Layers and planes.
(B) Rows and columns.
(C) Height and width.
(D) None of these.
- 691.** Implies the creation of a continuum wherein the measured objects are located
(A) Scaling
(B) Measuring
(C) Isomorph
(D) None of above
- 692.** Firms that are engaged in sentiment mining are analyzing data collected from?
(A) Experiments.
(B) Social media sites.
(C) Focus groups.
(D) In-depth interviews.
- 693.** The government census could be used today as
(A) Primary data
(B) Rich data
(C) Secondary data
(D) Qualitative data
- 694.** Which of these sources is likely to be non-reliable?
(A) A peer-reviewed journal
(B) A book from a well-known publisher
(C) A random website with no contact information
(D) An official government report
- 695.** Which type of data is classified as volatile evidence?
(A) Data on a backup tape
(B) Archived emails
(C) Data stored in RAM
(D) Data stored on a hard drive

- 696.** All the persons involved in the collection of data and supervision of data collection process are called
- (A) Fieldworkers.
 - (B) Researchers.
 - (C) Research assistants.
 - (D) None of the given options.
- 697.** What is the best source of information used in scientific research?
- (A) An article published in a peer-reviewed science journal.
 - (B) A blog of a graduate student at a prestigious university
 - (C) An interview by a news reporter of a Nobel laureate
 - (D) A Wikipedia article on the topic.
- 698.** Are discrete entities that are described objectively without interpretation
- (A) Data
 - (B) Information
 - (C) Knowledge
 - (D) Null
- 699.** Which of the following is not a typical data classification category?
- (A) Public
 - (B) Internal
 - (C) Secret
 - (D) Random
- 700.** What kind of observation is being made in the following statement: The pendulum made 17 full swings in 30 seconds.
- (A) Qualitative
 - (B) Quantitative
 - (C) Both
 - (D) Neither
- 701.** Which survey question is collecting quantitative data?
- (A) Do you like chocolate or vanilla, yes or no?
 - (B) Why should marijuana be legalised?
 - (C) What kind of toppings do you like on your pizza?
 - (D) How should you discipline a child?
- 702.** This refers to using data from a variety of accessible sources.
- (A) Method triangulation
 - (B) Data triangulation
 - (C) Researcher triangulation
 - (D) Theory triangulation
- 703.** If you are asked to do a research on the CSR activities of a company then which of the following sources you will consider
- (A) Wikipedia
 - (B) Marketing research agencies Report
 - (C) Company website
 - (D) Newspaper and magazines
 - (E) All the above except Option 1
- 704.** What are the different types of data collection methods used in practical research?
- (A) Guessing the results
 - (B) The different types of data collection methods used in practical research include surveys, interviews, observations, experiments, and secondary data analysis.
 - (C) Sending emails to friends
 - (D) Asking random people on the street
- 705.** Process of translating verbal into numeric form.
- (A) Coding
 - (B) Numeral
 - (C) Translation
 - (D) Interpretation
- 706.** In Step 2, what does the CFO need to do concerning data sources?
- (A) Ignore non-financial data
 - (B) Analyze only financial data
 - (C) Identify essential data sources
 - (D) Stick to the chart of accounts

707. While an important benefit of focus groups is economy, what is the primary benefit of focus groups?
- (A) Highly detailed data
 - (B) Quick and plentiful data
 - (C) Group interaction and non-verbal communication
 - (D) Flexibility
708. Information you collect when you observe something or conduct an experiment
- (A) Data
 - (B) News
 - (C) Constant
 - (D) None of above
709. ____ require the respondent to arrange a set of objects with regard to common criterion: advertisements in terms of interest, product features in terms of importance, or new product concepts with regard to willingness to buy in the future.
- (A) Single-Item Scales
 - (B) Category Scales
 - (C) Graphic Rating Scales:
 - (D) Rank-Order Scale
 - (E) Itemized Rating Scales
710. The role of a gatekeeper in a field study is to:
- (A) Collect data from participants.
 - (B) Analyze the data collected.
 - (C) Facilitate access to the research site and participants.
 - (D) Write the final report.
711. Janie asked her coworkers how many emails they received one day. She organized her data into the graph below. How many coworkers did Janie survey?
- (A) 5 coworkers
 - (B) 15 coworkers
 - (C) 13 coworkers
 - (D) 20 coworkers
712. It explains the specific steps you will undergo in order to collect the data for your study
- (A) Data Collection Analysis
 - (B) Data Collection Procedure
 - (C) Data Process
 - (D) Data
713. Information written while doing an experiment is called
- (A) Data
 - (B) Hypothesis
 - (C) Materials
 - (D) Conclusion
714. Detailed and unambiguous instructions are particularly important for
- (A) Mail surveys.
 - (B) Internet surveys.
 - (C) Computer-assisted personal interviews.
 - (D) Computer-assisted telephone surveys.
715. The following statements are the purpose of using a source EXCEPT:
- (A) It is used for expressing opinions.
 - (B) It is used for verifying statements.
 - (C) It is used to compare results.
 - (D) It used to gather information and data.
716. The step in the research process that generates observations and data
- (A) Formulation of hypothesis
 - (B) Making conclusion
 - (C) Conducting the experiment
 - (D) Review of related literature
717. The process of conducting field research involves:
- (A) Collecting data in a natural setting
 - (B) Analyzing data in a laboratory
 - (C) Reading books in a library
 - (D) Writing reports in an office
718. What is one way to improve the reliability of measurements?

- (A) Take multiple measurements and average
 - (B) Use only one measurement
 - (C) Ignore fluctuations in data
 - (D) Change the measurement units
719. Sound must be converted from (what) into digital format before it can be processed
- (A) Music.
 - (B) Wave.
 - (C) Audio.
 - (D) Analogue.
720. Gathering information about your observations and measurements in a systematic way.
- (A) Measure
 - (B) Collect Data
 - (C) Observe
 - (D) Estimate
721. In this measurement, the attributes can be rank-ordered.
- (A) Ordinal Measurement
 - (B) Interval Measurement
 - (C) Ratio Measurement
 - (D) None of above
722. Raw facts and figures is called ____
- (A) Information
 - (B) Processed data
 - (C) Data
 - (D) None of the above
723. Which type of data is most likely to be biased due to personal opinions?
- (A) Secondary data from government reports
 - (B) Data collected from a controlled experiment
 - (C) Interview responses
 - (D) Census data
724. What are two methods of self-reports?
- (A) Tests and interviews
 - (B) Experiments and questionnaires
 - (C) Interviews and questionnaires
 - (D) Case studies and experiments
725. Which of the following best describes the term 'data' in a scientific context?
- (A) Raw facts and figures collected from experiments
 - (B) A hypothesis that explains a scientific phenomenon
 - (C) A theory that has been proven through experiments
 - (D) A law that governs scientific principles
726. What is the defining feature of a focus group?
- (A) Economy
 - (B) Manageable size
 - (C) Interaction between participants
 - (D) Narrow topics for discussion
727. Information about a population, such as ethnic background, age, and education is known as ____
- (A) Demographics
 - (B) Social graphics
 - (C) Research
 - (D) Investigation
728. Why are focus groups used?
- (A) To bring together a group of people to discuss a particular product or issue
 - (B) All of them
 - (C) It enables open ended questions
 - (D) It can generate 'rich' information rather than a standard response
729. What can happen during a focus group discussion?
- (A) Participants may only agree with the researcher
 - (B) Participants may react to each other's comments by disagreeing or reinforcing
 - (C) Participants are not allowed to react to each other's comments
 - (D) Participants must remain silent throughout the discussion

- 730.** Initial data management consists:
- (A) The organization of the data, the transcription of the interviews and the mechanization of the field notes, as well as the decision to analyze the data by hand or by computer.
 - (B) It is a technique for ordering the instruments used in the research
 - (C) Requires numerical data to obtain results
 - (D) None of above
- 731.** Which of the following is a common challenge faced by researchers?
- (A) Accessing reliable data
 - (B) Finding participants who are too eager to help
 - (C) Having too much funding
 - (D) Receiving too much feedback
- 732.** Which of the following is the best way to obtain necessary data for a study on academic adjustments of teachers and students on learning delivery modes during the COVID-19 pandemic?
- (A) Design a procedural flowchart and use surveys or interviews to collect data.
 - (B) Rely solely on anecdotal evidence from social media.
 - (C) Use only data from previous unrelated studies.
 - (D) Guess the adjustments based on personal experience. Edit
- 733.** Projective techniques rely on:
- (A) Standardised answers
 - (B) Structured interviews
 - (C) Open-ended responses
 - (D) Objective data
- 734.** Information that can be trusted and backed up with evidence
- (A) Credible sources
 - (B) Primary source
 - (C) Secondary source
 - (D) Supporting details
- 735.** There should be enough data before conducting research.
- (A) TRUE
 - (B) FALSE
- 736.** One sunny day, Aaliyah, Oliver and Mason decided to have a little competition. They wanted to see who could spot the most birds in a tree. Priya, being the smart one, suggested they should record their findings. What is the best way for them to keep track of the number of birds they spot?
- (A) Draw a fun picture of the birds
 - (B) Make a wild guess
 - (C) Fill in a data table
 - (D) Tell their friend about it
- 737.** How many tools can be used for data collection?
- (A) Only 1
 - (B) Two
 - (C) One or more than one
 - (D) Five
- 738.** Maya is researching how cities in the U.S. manage their garbage. She wants to know: Where does the majority of U.S. municipal solid waste end up?
- (A) Composting facilities
 - (B) Incinerators
 - (C) Recycling centers
 - (D) Landfills or other disposal sites
- 739.** Data that depends on a data model and resides in a fixed field within a record
- (A) Structured
 - (B) Unstructured
 - (C) Graph based
 - (D) Streaming Data
- 740.** What is an important step in evaluating the credibility of online sources?
- (A) Analyzing the author's expertise and background.
 - (B) Ensuring the website loads quickly.

- (C) Reading reviews about the website on social media.
(D) Checking if the website has a .org domain.
741. Which of the following is an example of dynamic data?
(A) A newspaper story
(B) Data on a CD ROM
(C) Data stored in a hard copy
(D) Data on a webpage
742. What is presented in the findings section of a research report?
(A) A discussion of the results
(B) The quantitative or qualitative data that was collected
(C) The theoretical foundations for the research study
(D) The methods that were used to collect the data
743. Student Satisfaction Survey is conducted through
(A) Online
(B) Offline
744. Data collection is the process of ___ and ___ information from countless different sources.
(A) Gathering & Measuring
(B) Collecting & Saving
745. ___ is where the questionnaire is posted on a secure website where clients can instantaneously view results as soon as any respondent has completed the interview
(A) Personal interview
(B) Self-administered interview
(C) Omnibus survey
(D) Telephone interviewing
(E) Web survey
746. What does it mean to collect samples in a research project?
(A) To gather data or materials for analysis
(B) To write a summary of the experiment
(C) To draw a graph
(D) To publish an article
747. Census is
(A) The method of planning, organizing, and publishing data.
(B) The method in which no data is collected
(C) The method in which data is collected from each and every unit.
(D) The method in which few units out of the entire population are chosen.
748. One Source of data to produce accurate DEM is
(A) Paper map
(B) A-GPS measurement
(C) LANDSAT satellite image
(D) Terrestrial laser scanning (lidar)
749. Data collection is the process of gathering information that will answer the research questions.
(A) True
(B) False
750. Which of the following is a data collection method commonly used in media research?
(A) Ethnography
(B) Regression analysis
(C) Hypothesis testing
(D) Literature review
751. What makes a source relevant to your research?
(A) It was published in the last year
(B) It directly relates to your topic and answers your questions
(C) It has a lot of pictures
(D) It was written by a famous person
752. What is the main function of methodology in research design?
(A) Data collection and data analysis
(B) Hypothesis generation
(C) Literature review
(D) Result interpretation

753. Which of the following is the cyclical process of data collection?
- (A) Deductive
 - (B) Iterative
 - (C) Coding
 - (D) Inductive
754. Rika is writing a report on school uniforms for the school newspaper. Which source would be the best resource for her report?
- (A) An advertisement from a company that sells school uniforms
 - (B) The website of a school that has decided to do away with school uniforms
 - (C) A blog post written by a student giving her opinion about wearing a school uniform
 - (D) An article written by an educator detailing the connection between dress and student achievement
755. What is a focus group?
- (A) A moderated group discussion used to explore opinions and experiences.
 - (B) A survey sent to hundreds of people.
 - (C) A laboratory experiment.
 - (D) A statistical test.
 - (E) A literature summary.
756. What is the last step you must consider in detailing your data collection plan?
- (A) The timeframe available for conducting the data collection
 - (B) The information that needs to be obtained
 - (C) The storage and retrieval management of the collected data
 - (D) The financial and human resources available and required for conducting the data collection
757. Which of the errors are more serious
- (A) Sampling error
 - (B) Non-sampling error
758. There are four “types” of research studies to collect in Primary Data, what are they?
- (A) Surveys, Focus Groups, Experiments, and Observations
 - (B) Product, Place, Promotion, and Price
 - (C) Problem, Data, Solutions, and Results
 - (D) Primary, Secondary, Survey, and Observation
759. Which method involves weighing all wastes collected from a sampling area for a period of time to determine the generation rate?
- (A) Materials Mass Balance Analysis
 - (B) Sampling from representative generation units
 - (C) Load Count Analysis
 - (D) Weight-volume analysis
760. In general, which type of question will garner more information?
- (A) Open Ended Questions
 - (B) Close Ended Questions
 - (C) All the above
 - (D) None of the above
761. A 'Likert Scale' in research methods and design is:
- (A) A scale used to measure attitudes or opinions by offering a range of answer options from strongly agree to strongly disagree.
 - (B) A statistical method for analyzing data.
 - (C) A type of experimental design.
 - (D) A qualitative interview technique.
762. It involves interviewing people, observation, and collecting information.
- (A) Analyzing Data
 - (B) Reporting Findings
 - (C) Developing the research Design
 - (D) Collecting Data
763. In a research study, Alisha is using a specific instrument to gather data. This instrument is essential for her method. An instrument used in method is called ____
- (A) Sample
 - (B) Technique
 - (C) Tool
 - (D) Survey

764. If information is ____, it can be trusted as truth.
(A) Timely
(B) Newsworthy
(C) Secondary
(D) Reliable
765. What is a limitation of observational research?
(A) It can establish causation
(B) It cannot explain why behaviors occur
(C) It is always unethical
(D) It requires random assignment
766. Scientists can look at fossilized pollen found in soil. If pollen from an/a ____ is found, then the climate was warmer during that time period.
(A) Evergreen tree
(B) Palm tree
767. A study on teenage mental health finds that some participants provide conflicting answers in their interviews. What is the best course of action?
(A) Investigate possible reasons for inconsistencies
(B) Disregard responses that differ from the majority
(C) Assume participants are being dishonest
(D) Only include responses that fit the hypothesis
768. Leonardo is making an experiment, but he forgot to calibrate the instruments he used. What does this mean?
(A) His results will not be reliable or valid.
(B) His experiment is not objective.
(C) He'll have to adjust the results.
(D) It doesn't make a difference.
769. The development of a ____ scale commences with a concept which should be rated, such as the image of a brand or the quality of a service. The market researcher chooses opposite pairs of words or phrases (for instance, reliable (1) to unreliable (7)) which could be used to capture the concept.
(A) Semantic differential
(B) Nominal
(C) Likert
(D) Ordinal
770. Information, collected during an investigation, to support a hypothesis.
(A) Evidence
(B) Inquiry
(C) Experiment
(D) Control variable
771. Input device that reads printed text, scans it, and converts it to text that can be edited in a word processor.
(A) Magnetic stripe readers
(B) Optical Character Recognition
(C) Optical Mark Recognition
(D) Magnetic Ink Character Recognition
772. Which instrument is commonly used for collecting quantitative data?
(A) Focus Group
(B) Diary
(C) Observation Notes
(D) Interview
(E) Questionnaire
773. A scale on which opposing adjectives are presented is called a
(A) Likert scale.
(B) Sociometric device.
(C) Semantic differential.
(D) Graphic rating scale.
774. "The data obtained is very basic" means ____
(A) It is based on data analysis.
(B) It is based on researcher's opinion.
(C) It is based on existing facts, events, and realities.
(D) It has no data researched before.

775. Application that allows you to get electronic information from a variety of people as surveys, etc.
- (A) Google Forms
 - (B) Google Slides
 - (C) Gmail
 - (D) Google Docs
776. Bias from people's responding in ways they presume a researcher expects or wishes
- (A) Wording effect
 - (B) Confirmation bias
 - (C) Social desirability bias
 - (D) Sampling bias
777. What does desk research involve?
- (A) Gathering existing data
 - (B) Conducting surveys
 - (C) Gathering new data
 - (D) None of above
778. The phase which is generally the most expensive and error-prone
- (A) Analyze the information
 - (B) Develop the Research Plan
 - (C) Collect the information
 - (D) Define the Problem
779. The tool/s to be used in gathering the data needed.
- (A) Research instruments
 - (B) Sampling procedure
 - (C) Research respondents
 - (D) Research locale
780. Which of the following is NOT a purpose of data collection?
- (A) To obtain information
 - (B) To keep on record
 - (C) To use for personal reasons
 - (D) To pass information
781. A major part of a wildlife technician's job includes:
- (A) Enforcing hunting regulations to control harvest
 - (B) Time at a drafting table designing land capability maps
 - (C) Working in a lab testing groundwater for pesticide contamination
 - (D) Working outdoors to tag animals for research
782. All are forms of data collection except ____
- (A) Forms and Questionnaires
 - (B) Oral Histories
 - (C) Interviews
 - (D) Data Accuracy
783. At the end of this module, you should be able to plan ____ collection procedure.
- (A) Data
 - (B) Music
 - (C) Art
 - (D) Food
784. There are 13 students making paper airplanes. What type of observation is this?
- (A) Quantitative
 - (B) Qualitative
785. In marketing research, the ____ phase is generally the most expensive and most subject to error.
- (A) Interpreting and reporting the findings
 - (B) Exploratory research
 - (C) Data collection
 - (D) Data validation
786. Information and measurements collected during an experiment.
- (A) Controlled variable
 - (B) Gather materials
 - (C) Conclusion
 - (D) Collected data
787. The word "data" is originated from the latin word:
- (A) Datum

- (B) Datum
(C) Datam
(D) Detem
- 788.** Information in research is
(A) Raw data
(B) Processed data
(C) Input data
(D) Organized data
- 789.** A small group of people discuss a product, service, or concept.
(A) Focus Groups
(B) Observational Research
- 790.** Units of information or any statistics, facts, figures, general material evidence or knowledge collected during the course of the study.
(A) Information
(B) Data
(C) Statistics
(D) Parameter
- 791.** It is a data collection method in experimental research that can be shared with the respondents both physically and electronically.
(A) Survey
(B) Interview
(C) Simulation
(D) None of above
- 792.** Data tables help you to organize your observations and test results.
(A) True
(B) False
- 793.** Our recorded observations are called ____
(A) Data
(B) Control factors
(C) Hypotheses
(D) Experiments
- 794.** Any individual that answers questions during an interview or replies to a survey. For example, citizens responding to an annual census or students filling out course evaluations at the end of a semester.
(A) Respondent
(B) Researcher
(C) Observer
(D) Control group
- 795.** Why is validity important in data collection for quantitative research?
(A) Validity is not important in data collection
(B) Validity ensures that the data accurately measures what it is intended to measure.
(C) Validity only applies to qualitative research
(D) Data accuracy is not a priority in quantitative research
Explanation: Validity is important in quantitative research as it ensures accurate measurement of intended variables.
- 796.** As a researcher you are interested in how your subjects will behave in a laboratory situation. You will be interested in collecting what type of data?
(A) Test
(B) Self-Report
- 797.** It is the step by step process of gathering information from participants, we do this by coding, transcription, clustering and thematic analysis
(A) Data collection / gathering procedure
(B) Research instrument
(C) Methodology
(D) Sampling design
- 798.** When collecting data for an Independent Research Project, it is important that validity is demonstrated. Which is most likely to achieve validity?
(A) Using more than one method in data collection.

- (B) The identity of the respondents is kept confidential.
- (C) There is evidence of bias in the data collection.
- (D) Secondary research data is carefully selected.
- 799.** The places where you get information are called ____
- (A) Resources
- (B) Sources
- (C) Fountains Edit
- (D) None of above
- 800.** Which step involves gathering raw data for the AI project?
- (A) Creating visualizations for the data
- (B) Identifying data sources and collecting relevant information
- (C) Running machine learning algorithms
- (D) Cleaning the data before analysis
- 801.** Evidence (facts) that support the reasons (claims)
- (A) Reasons
- (B) Data
- (C) Claim
- (D) Rebuttal
- 802.** ____ are numerical information collected and used by the government and its agencies to make decisions about society and the economy.
- (A) Cross-sectional statistics
- (B) Interpretive statistics
- (C) Official statistics
- (D) Value-free statistics
- 803.** What is the main characteristic of structured data collection instruments?
- (A) Quantifiable
- (B) Objective
- (C) Subjective
- (D) Accurate
- 804.** ____ are facts and numbers that help us understand something better.
- (A) Data
- (B) Stories
- (C) Opinions
- (D) Drawings
- 805.** In what criterion in evaluating sources does this statement “Are the sources related to your research topic or title?” belong?
- (A) Authority
- (B) Accuracy
- (C) Relevance
- (D) Currency
- 806.** A tool used to gather or analyze data
- (A) Instrument
- (B) Variable
- (C) Hypothesis
- (D) Table
- 807.** Character readers are those devices which read the characters printed on the source documents and then convert them directly into computer-usable input. Which of the following is not a character reader?
- (A) OCR.
- (B) MICR.
- (C) OMR.
- (D) LCD.
- 808.** Which of the following represents an example of data?
- (A) A weather forecast for tomorrow
- (B) A list of temperature readings
- (C) A customer profile summarizing purchase behavior
- (D) A sales trend analysis
- 809.** Facts or statistics gathered from experimentation.
- (A) Qualitative
- (B) Quantitative
- (C) Energy
- (D) Data

- 810.** Which primary data collection method involves collecting data by asking participants to rate or rank items based on their preferences or opinions?
- (A) Semantic differential scales
 - (B) Likert scales
 - (C) Thurstone scales
 - (D) Guttman scales
- 811.** Why should you research information and use more than one source?
- (A) The second source could be better and more useful than first source
 - (B) The second source might not be reliable
 - (C) The second source is more reliable
 - (D) The second source is a primary source and is better to use
- 812.** Criminal activity report where data is gathered and reported by the Federal Bureau of Investigation.
- (A) National Crime Victimization Survey
 - (B) Uniform Crime Report
 - (C) Self-reported Survey
 - (D) Crime Data Survey
- 813.** The need of objective observation is
- (A) In performing experiment.
 - (B) In research.
 - (C) In normal behavior.
 - (D) In all the situations.
- 814.** What is one advantage of desk research?
- (A) It is always up to date.
 - (B) It is normally cheaper to carry out than field research.
 - (C) It is specifically tailored for your needs.
 - (D) It is always unbiased.
- 815.** This data table shows the results of an investigation. What information should be used for the column headings marked X?
- (A) Trial number
 - (B) Number of seeds
 - (C) Predicted value for the results
 - (D) Average of the data in each column
- 816.** ____ are defined as people's written or oral accounts of their thoughts, feelings, or actions.
- (A) Physiological measures
 - (B) MIS reports
 - (C) Self-reports
 - (D) Behavioral measures
- 817.** What are two types of Self Reports?
- (A) Questionnaires and Interviews
 - (B) Observations and Experiments
 - (C) Case Studies and Surveys
 - (D) Tests and Measurements
- 818.** ____ is a collection of raw statistics and information generated by a research study.
- (A) Database
 - (B) Data table
 - (C) Dataset
 - (D) None of the above
- 819.** Data triangulation involves collecting data through the same method from different sources
- (A) TRUE
 - (B) FALSE
- 820.** When trying to get accurate information it is best to ____
- (A) Use multiple credible sources
 - (B) Use one single, credible source
 - (C) Use as many sources as possible, even if they are unreliable
 - (D) Not use any sources
- 821.** Tell whether the statement is True or False One of the least important decisions a researcher must make is the way in which the data will be collected.
- (A) True
 - (B) False
- 822.** For quantitative data, what coding strategy is described?
- (A) Dual coding with external auditors
 - (B) Adaptive coding during analysis
 - (C) Pre-coded before collection
 - (D) Post-collection coding only

823. When working with other researchers to collect data to be interpreted it is necessary to establish
- (A) Ecological validity
 - (B) Inter-observer reliability
 - (C) Strong relationships
 - (D) Mutual respect
824. This section presents the tools in gathering data, whether in the form of a questionnaire, interview, focus group discussion, survey, and tests among others.
- (A) METHODOLOGY
 - (B) INSTRUMENT
 - (C) DATA GATHERING
 - (D) DATA ANALYSIS
825. During which part of an experiment would a scientist collect data?
- (A) Share results
 - (B) Drawing conclusion
 - (C) Asking a question
 - (D) Conducting an investigation
826. In which assessment tool for affect is the respondent asked to put a check or an X to determine presence or absence of a trait?
- (A) Rating scale
 - (B) Likert scale
 - (C) Checklist
 - (D) Bipolar adjective scale
827. Which primary data collection method involves collecting data by examining the written or spoken language used by individuals or groups, with a focus on understanding how meaning is constructed and communicated?
- (A) Discourse analysis
 - (B) Ethnography
 - (C) Content analysis
 - (D) Grounded theory
828. What is the relationship between data triangulation and reliability?
- (A) More triangulation increases data reliability.
 - (B) Triangulation decreases research validity.
 - (C) They are unrelated.
 - (D) Triangulation prevents qualitative research from being subjective.
829. Sample surveys and questionnaires primarily contributed which advantage to marketing research?
- (A) Perfect prediction accuracy
 - (B) Real-time purchase tracking
 - (C) Guaranteed causal proof
 - (D) Standardized comparable data
830. A scale from 'Strongly Agree' to 'Strongly Disagree' is:
- (A) Nominal scale
 - (B) Interval scale
 - (C) Likert scale
 - (D) Ratio scale
831. An Interview schedule is a
- (A) Sampling Method
 - (B) Research objective
 - (C) Data Collection method
 - (D) Variables
832. ___ consists of inviting 6 to 10 people to meet with a trained moderator to talk about a product, service, or organization.
- (A) Telephone interviewing
 - (B) Individual interviewing
 - (C) An online survey
 - (D) Focus group interviewing
833. Which primary data collection method involves collecting data by examining existing documents, such as letters, diaries, or photographs?
- (A) Archival research
 - (B) Discourse analysis
 - (C) Ethnography
 - (D) Grounded theory

834. Students were asked to monitor the behavior of the animals in their natural habitats. What type of setting is involved in the scenario?
- (A) Library
 - (B) Field
 - (C) Laboratory
 - (D) None of the above
835. Which type of data sources are U.S. Department of Labor Statistics and Advertising Age?
- (A) Research Report
 - (B) Internal Data
 - (C) External Data
 - (D) Quantitative Data
836. Which of the following is NOT a method of field research?
- (A) Interviews
 - (B) Observations
 - (C) Taste Tests
 - (D) Statistical analysis
837. What is the primary source used to determine the amount of carbon dioxide in the atmosphere years ago?
- (A) Ocean data
 - (B) Ice core samples
 - (C) Trees
 - (D) Large lakes
838. A focus group is not a debate:
- (A) True
 - (B) False
839. Data where the columns and rows are not adjacent to each other and which is not that easy to use together.
- (A) Non-contiguous data.
 - (B) Contiguous data.
 - (C) Double Data Entry.
 - (D) Visual Verification.
840. What is the name of the technique where people would examine their own thoughts/behaviors?
- (A) Introspection
 - (B) Structuralism
 - (C) Functionalism
 - (D) Empricism
841. Select one item which is NOT a data collection instrument for a classroom Action research.
- (A) Songs
 - (B) Photos
 - (C) Questionnaires
 - (D) Interviews
 - (E) Journals
842. People who participating in surveys or helping researchers gather data are contributing to the research
- (A) False
 - (B) True
843. Which of the following is done after finalizing tools?
- (A) Testing hypothesis
 - (B) Formulating hypothesis
 - (C) Collecting data
 - (D) Drawing conclusion
844. A proofing technique whereby rules can be set up that prevent you from entering incorrect types of data.
- (A) Validation.
 - (B) Mail merge.
 - (C) Gridlines.
 - (D) Hanging paragraph.
845. These are the data-gathering devices used by the researchers to get the necessary data and information needed for the study.
- (A) Statistical tools
 - (B) Instruments
 - (C) Sampling
 - (D) Population
846. What is the first step in data collection for creating a pie chart?

- (A) Create the chart
 - (B) Gather data
 - (C) Analyze data
 - (D) Review data
- 847.** What is the importance of using a variety of sources in research?
- (A) To ensure a balanced perspective and comprehensive understanding
 - (B) To make the bibliography longer
 - (C) To confuse the reader with too much information
 - (D) To avoid having to analyze data
- 848.** You want to understand the challenges users face when using your app. Which method is best?
- (A) Open-ended survey
 - (B) Random sampling
 - (C) Likert scale
 - (D) Closed-ended survey
- 849.** It involves an intensive interaction between the researcher and the subjects or participants.
- (A) Simulation
 - (B) Nonparticipant Observation
 - (C) Naturalistic Observation
 - (D) Participant observation
- 850.** What are the two criteria for data to be considered reliable?
- (A) Completeness and Accuracy
 - (B) Speed and Efficiency
 - (C) Simplicity and Clarity
 - (D) Cost and Accessibility
- 851.** Which of the following is not a data-collection method?
- (A) Research questions
 - (B) Unstructured interviewing
 - (C) Postal survey questionnaires
 - (D) Participant observation
- 852.** When conducting background reading, you should:
- (A) Use only personal blogs as sources
 - (B) Consult encyclopedias and reliable articles
 - (C) Avoid reading about similar research
 - (D) Limit yourself to social media posts
- 853.** A research team wants high response rates from busy consumers. Which administration method aligns best with this goal?
- (A) Mobile phone survey links via messaging apps
 - (B) Door-to-door interviews on weekends
 - (C) Phone calls on landlines during work hours
 - (D) Faxed questionnaires to office numbers
- 854.** Sourcing
- (A) Helps us get an accurate picture of the past
 - (B) Is original documents and objects created at the time of study.
 - (C) Identifies and answers questions about the origins of the source.
 - (D) Locates events and sources in time and space.
- 855.** Match the statement below to the correct description: There are five birds on the limb.
- (A) Qualitative data
 - (B) Quantitative data
- 856.** What is the main purpose of a source in research?
- (A) To play music
 - (B) To decorate a room
 - (C) To provide evidence or information
 - (D) To cook food
- 857.** Retrieving or processing data from unstructured data sources for further data processing, storage and/or analysis is the definition of
- (A) Cache
 - (B) Analytics
 - (C) Concatenation

- (D) Extraction
(E) Indexing
- 858.** Evidences in research are collected from
(A) Primary and secondary sources.
(B) Pure and applied sources.
(C) Active and passive sources.
(D) None of the above.
- 859.** Empirical evidence is
(A) A well supported explanation of nature.
(B) Conducting an experiment.
(C) All the measurements and data Scientists gather in support of a scientific explanation.
(D) None of above
- 860.** Which of these sentences is conveying information?
(A) "Could you open the window?"
(B) "I don't like spicy food."
(C) "I'm so tired today."
(D) "The library closes at 6 p.m."
- 861.** We can get information about past climates looking at
(A) Fossils
(B) Ice cores
(C) Geologic formations
(D) All of these
- 862.** Which of following is one type of subject-completed instrument used in educational research?
(A) Tally sheets
(B) Performance tests
(C) Interview scales
(D) Performance checklists
- 863.** The primary purpose of data gathering instruments is to:
(A) Make the research look professional
(B) Ensure data is collected systematically
(C) Shorten the research process
(D) Guarantee positive results
- 864.** What is the primary purpose of a research tool in a study?
(A) To analyze data
(B) To collect data
(C) To publish findings
(D) To review literature
- 865.** The person who leads a focus group discussion is called a ____
(A) Moderator
(B) Facilitator
(C) Recorder
(D) Influencer
- 866.** For researchers looking to gather information regarding study participant opinions, which tool would be recommended?
(A) Rating Scale
(B) Weighted Scale
(C) Grading Scale
(D) None of above
- 867.** ____ are the most costly form of data collection.
(A) Telephone interviews
(B) Mail surveys
(C) Personal interviews
(D) E-mail surveys
- 868.** When a respondent tells the interviewer that he reads "Best Selling English News Paper" on a daily basis so that he can impress the interviewer, this is an example of
(A) Administrative bias.
(B) Response bias.
(C) Submission bias.
(D) Interviewer bias.
- 869.** Reliable data can be gathered by the following means EXCEPT:
(A) Interview
(B) Expert Opinion
(C) Gossiping and Hearsay
(D) Research

- 870.** Which is objective information?
(A) 23 mm, 7.2 g
(B) Amazing, beautiful
- 871.** What is the primary purpose of the methodology section in a research proposal?
(A) To describe the research participants.
(B) To outline the data collection procedures.
(C) To present the research questions.
(D) To summarize the literature review.
- 872.** Which of the following is the largest unit?
(A) Data.
(B) Field.
(C) Record.
(D) Database file.
- 873.** What is reliability in data collection?
(A) The consistency of results when measurements are repeated.
(B) The accuracy of a measuring instrument.
(C) The flexibility of a questionnaire.
(D) The creativity of research questions.
(E) The ethical approval process.
- 874.** Great white sharks can grow up to 20 feet (6 meters) and weigh up to 5,00 pounds (2,268). This is an example of ____
(A) An observation
(B) A quantitative observation
(C) An inference
(D) A prediction
- 875.** In a research study, a Likert-scale survey is best used to:
(A) Collect numerical data about attitudes or opinions
(B) Record detailed narratives
(C) Measure physical behaviors
(D) Compute averages of height and weight
- 876.** A researcher measures the height of plants in centimeters. What type of observation is this?
(A) Qualitative
(B) Quantitative
(C) Descriptive
(D) Subjective
- 877.** If a study requires strict control of the data collection setting to minimize distractions, which method is least appropriate?
(A) Supervised computer-assisted
(B) Controlled facility sessions
(C) Monitored lab interviews
(D) Unsupervised online surveys
- 878.** Reporters must pay close attention when gathering
(A) Facts
(B) Gossip
(C) Hearsay
(D) Opinions
- 879.** Which question helps you evaluate if a source is relevant?
(A) Is the text at an appropriate level for my needs?
(B) Are there errors, broken links, etc?
- 880.** Which of the following best describes the purpose of data collection in statistics?
(A) To create visual presentations of information
(B) To gather information from various sources for analysis
(C) To eliminate the need for statistical analysis
(D) To summarize existing data without further analysis
- 881.** Measurement techniques, extensive interviews and observations, or a set of documents are employed in?
(A) Presentation of findings
(B) Data Analysis
(C) Data Collection
(D) Testing Hypothesis

882. Sue wanted to research parental attitudes to toy advertising so she invited six mothers to get together, watch some carefully selected adverts and then discuss them. She asked them some questions but mainly just encouraged them to talk. Which research technique was she using
- (A) Case study
 - (B) Survey
 - (C) Focus Group
 - (D) None of above
883. Level-I of Educational Research is concerned with
- (A) Data collection.
 - (B) Internal validity.
 - (C) External validity.
 - (D) None of these.
884. Which method is most suitable for collecting quantitative data?
- (A) In-depth interviews
 - (B) Focus group discussions
 - (C) Participant observation
 - (D) Structured surveys with closed-ended questions
885. Facts and information are examples of ____
- (A) Monitor
 - (B) Crisis mapping
 - (C) Crowdsourcing
 - (D) Data
886. What do we call the resource that is used to narrow the search for a topic?
- (A) Thesaurus
 - (B) Dictionary
 - (C) Keyword
 - (D) Index
887. How is scientific data collected for a journal article?
- (A) Using the scientific method to conduct and experiment
 - (B) Posting a poll on Facebook
 - (C) Reading the comments section on a YouTube video
 - (D) Conducting a survey of a random group of people in a public place
888. Shipping/inventory and billing records are examples of-
- (A) External data
 - (B) Internal data
 - (C) Qualitative data
 - (D) Clickstream data
889. Which of the following cannot be considered as a criterion in evaluating sources?
- (A) Accuracy
 - (B) Affiliation
 - (C) Currency
 - (D) Relevance
890. Raw, unprocessed facts and figures are known as
- (A) Information
 - (B) Knowledge
 - (C) Data
 - (D) Wisdom
891. Eudora would like to gather quantitative data from the parents of her scholars. However, she found out that most of the parents are illiterate.
- (A) In-depth Interview
 - (B) Content Analysis
 - (C) Structured Interview
 - (D) Self-administered questionnaire
- Explanation:** Structured Interview is the best method to gather quantitative data from illiterate parents as it allows for direct interaction and guidance.
892. Which of the following is an example of a reliable information source?
- (A) Online forums and social media posts
 - (B) Popular opinion polls on news websites
 - (C) National statistical institutes like INEGI
 - (D) User-generated content on blogs

893. What should you do after deciding your sources?
- (A) Start writing your report
 - (B) Locate them and have them ready
 - (C) Create a presentation
 - (D) Summarize the information
894. You are assigned to present a group discussion on "Green Technology in Malaysia." Which is the BEST way to start gathering reliable information?
- (A) Watch a science-fiction movie
 - (B) Browse trending hashtags on Instagram
 - (C) Visit the Ministry of Energy and Natural Resources website
 - (D) Ask your classmate who is not part of your group
895. What is a limitation of focus groups?
- (A) Halo effect
 - (B) Social Loafing
 - (C) Conformity effect
 - (D) None of above
896. Which of the following is an authoritative source for statistical data?
- (A) Personal blog
 - (B) Fictional novel
 - (C) Unverified online article
 - (D) National statistical agency report
897. The extent to which questions address the intended marketing-research topics.
- (A) Validity
 - (B) Order bias
 - (C) Reliability
 - (D) Data mining
898. Sally is 150 cm tall.
- (A) Qualitative observation
 - (B) Quantitative observation
899. What do you do after your brainstorm and pick your sources of information?
- (A) Think about a topic.
 - (B) Identify your audience
 - (C) Make up questions to research
 - (D) Do the research
900. Which of the following is NOT recognized as a classification for the various method of collecting survey data?
- (A) Telephone interview
 - (B) Mail interview
 - (C) Observational interview
 - (D) Electronic interview
901. Team A submitted their data logbook to the judges in one of the Division Science and Technology Fairs. The judges were amazed that the entries were all neatly written. However, they noticed that the data were dated earlier than the experimentation process. What do the researchers team failed to do?
- (A) The timetable
 - (B) The research plan
 - (C) The actual experimentation
 - (D) Data logbook and Photo-documentation
902. What is a common method for collecting direct data?
- (A) Using census data
 - (B) Analyzing social media
 - (C) Conducting surveys
 - (D) Reviewing historical records
903. Scientists collected and analyzed ____ for their research.
- (A) Data
 - (B) Crowdsourcing
904. Identify whether the statement is true or false. Errors in the course of measurement can be traced to a number of factors such as carelessness, negligence, ignorance in the usage of the instruments.
- (A) True
 - (B) False

905. It is the step in converting data to information where you gather all needed information or data.

- (A) Storage
- (B) Acquisition
- (C) Retrieval
- (D) Manipulation

906. A biology class of 24 students decides to measure the height of each student and then calcu-

late the average height for the class. Which of these is a possible source of error in this activity?

- (A) The total number of students in the class
- (B) The number of males and females in the class
- (C) The difference in the ages of the students in the class
- (D) The accuracy of making and recording measurements

1.4.2 Primary Data

1. An interview with Picasso is a:

- (A) Primary source
- (B) Secondary source

2. Which combination of type of research and research characteristic best describes a focus group?

- (A) Primary research / an interview schedule is often used
- (B) Secondary research / provides projections into the future
- (C) Primary research / questionnaires are necessary
- (D) Secondary research / provides generalisations of a social group

3. You are writing an argumentative essay on Viking warfare. What is the best way to support your argument? Choose your answer from the following.

- (A) "Viking warfare was effective because I saw it in a movie.
- (B) "Viking warfare tactics are supported by historical records and archaeological findings."
- (C) "Some historians disagree about Viking tactics, so I don't need to provide evidence."
- (D) "Viking warfare was impressive because I think it was."

4. ___ is the collected information for first-hand research

- (A) Secondary data

(B) Primary data

(C) Purpose of marketing research

(D) Marketing plan

5. What kind of source is a laboratory experiment?

- (A) Primary
- (B) Secondary

6. What is the term for the following definition? Original data collected firsthand through surveys, interviews, experiments, or observations specifically for a research purpose.

- (A) Primary Research
- (B) Secondary Research
- (C) Meta-Analysis
- (D) Literature Review

7. Is it primary (direct from source) or secondary (indirectly)? "Diary"

- (A) Primary
- (B) Secondary

8. A newspaper article created about 9/11 at the same time of 9/11

- (A) Primary
- (B) Secondary

9. An interview with a refugee about their journey to a new country is a:

- (A) Primary Source
- (B) Secondary Source

10. Is this a primary or secondary source? Jan takes a picture of a tornado
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above
11. How can primary sources be used in different academic disciplines?
- (A) Primary sources are irrelevant in academic research
 - (B) Primary sources provide firsthand accounts, original data, and historical context for research and analysis.
 - (C) Primary sources are only useful in literature studies
 - (D) Primary sources are only used in scientific experiments
12. A common disadvantage of primary research for a small business is that:
- (A) It is time-consuming to obtain
 - (B) It doesn't answer the questions asked
 - (C) It doesn't allow for qualitative questions
 - (D) It can't be done online
13. Which of the following relates most to demographics?
- (A) People's age, gender or employment status
 - (B) A researcher's interviews, focus groups or questionnaires
14. The data of research is ____
- (A) Qualitative only
 - (B) Quantitative only
 - (C) Both (a) and (b)
 - (D) Neither (a) nor (b)
15. Data obtained first hand by the investigator for his specific purpose
- (A) Primary data
 - (B) Secondary data
 - (C) Independent variable
 - (D) Dependent variable
16. Collecting firsthand data for a specific purpose
- (A) Primary research
 - (B) Secondary research
 - (C) Qualitative data
 - (D) Quantitative data
17. When researching a topic, it is best to ____
- (A) Only use secondary sources
 - (B) Only use primary sources
 - (C) Ask your dad
 - (D) Get as close to the primary sources as possible, while using a few credible secondary sources
18. What is a self-report?
- (A) A type of observational study
 - (B) A research method where participants provide data about themselves
 - (C) An experiment with controlled variables
 - (D) A method of collecting quantitative data
19. Sources of data may be classified broadly as Internal and External Sources.
- (A) True
 - (B) False
20. You are looking for facts about your grandmother. Here is a list of places to find information. *letter *diary *piece of clothing *photo What kind of sources are these?
- (A) Primary sources
 - (B) Secondary sources
21. What is the primary purpose of an archive?
- (A) To provide a place where people can examine a collection of primary sources to gather facts, data, and evidence.
 - (B) To store large amounts of data, especially audiovisual data.
 - (C) All the above
 - (D) None of the above

22. Data drawn from research that has been carried out by the researcher is known as
(A) Secondary data
(B) Reliable data
(C) Valid data
(D) Primary data
23. Observations, Interviews, Surveys, and Experiments are examples of
(A) Primary Data
(B) Secondary Data
24. John is conducting a survey in his neighborhood to understand their favorite ice cream flavor. This survey is an example of
(A) Primary data
(B) Secondary data
25. As interns in human resource management, Ravi and his team are administering a professionally developed employee questionnaire to collect information on workplace violence. This type of research produces data that is considered
(A) Firsthand information.
(B) Informal documentation.
(C) Supplementary, secondary information.
(D) Scientific experimentation.
26. Things produced by your research participants during the research study such as drawings, paintings, diaries, recordings, videos, and newly produced personal documents. Used in qualitative, quantitative and mixed research
(A) Constructed Data
(B) Standardized Data
27. Emma saw the tornado touch down firsthand, so I guess you could call her a ____ source
(A) Secondary
(B) Primary
(C) Bias
(D) None of the above
28. Primary research allows:
(A) Use of previously published information
(B) High cost savings
(C) Control over data collection
(D) No customer engagement
29. How can primary data be collected from the following methods?
(A) Observation
(B) Experimentation
(C) Interview survey.
(D) And (c)
(E) All methods mentioned above.
30. Primary research can be obtained by several methods except for ____
(A) Observations
(B) Focus groups
(C) University academic publications
(D) Photographic evidence
31. Which source is considered primary research?
(A) Books and journals
(B) Internet sites/research
(C) Magazines and newspapers
(D) Interviews
32. If I needed to research Spanish colonialism in Puerto Rico, and wanted to understand the exact words and experience of the colonist's point of view. Which type of source would be most beneficial for the research?
(A) Primary
(B) Secondary
33. If you interviewed your classmates to find out their favorite school subjects, what is that data type?
(A) Primary
(B) Secondary
34. Is interviewing people about their holiday traditions primary or secondary data?
(A) Primary

- (B) Secondary
(C) Historical
(D) Current
35. Which of the following is not a way to collect primary data?
(A) Focus groups
(B) Consumer opinion blogs
(C) Surveys
(D) Observation
36. A letter written by a soldier during the Vietnam War is an example of what type of source?
(A) Secondary source
(B) Tertiary source
(C) Primary source
(D) Quaternary source
37. Which method is NOT a source of primary data?
(A) Interview
(B) Government report
(C) Direct observation
(D) Experiment
38. Is it primary (direct from source) or secondary (indirectly)? "Focus Group"
(A) Primary
(B) Secondary
39. Field research is primarily used to gather what type of data?
(A) Quantitative data
(B) Primary/new data
(C) Secondary data
(D) Archived data
40. The focus group, individual respondent, and panel of respondents are classified as
(A) Pointed data sources
(B) Secondary data sources
(C) Primary data sources
(D) Itemized data sources
41. You create a survey to determine what other students like about your tote bag. What type of research is this?
(A) Primary
(B) Secondary
(C) Sales
(D) Consumer
42. Formal report writers conduct most of their research using primary sources
(A) True
(B) False
43. 'Primary research' is when we get first hand data from the sample
(A) True
(B) False
44. Which of the items below is a primary source?
(A) Magazine
(B) Letter
45. It is the name given to data that is collected for the first time to answer a specific research question.
(A) Primary data
(B) Secondary Data
(C) Sample
(D) None of above
46. Primary-source data are data ____
(A) Collected by researchers themselves
(B) Collected by others
(C) Expected to overturn previous findings
(D) Provided by the American Sociological Association
47. This research involves collecting first-hand data directly from sources such as consumers, businesses, and industry experts. It is conducted to gather new insights tailored to specific business needs.
(A) Primary Market Research
(B) Secondary Market Research

48. A ____ source is information that was created at the same time as an event or by a person directly involved in the event.
(A) Primary
(B) Secondary
(C) Tertiary
(D) Quaternary
49. Which one of the following is the best explanation of primary data?
(A) Data that is the most important information collected
(B) The opposite of secondary data
(C) Data that has been collected by a leading research institute and is considered prime
(D) Data that is collected specifically for the research at hand
50. What type of source can an interview be classified as?
(A) Print source
(B) Digital source
(C) Nonprint source
(D) None of the above
51. What type of source is the engraving?(hint: think about the image itself-not the book it is in)
(A) Primary
(B) Secondary
(C) Encyclopedia
(D) Journal
52. What type of documents are considered primary sources?
(A) Documents made long after the event
(B) Documents made near the time of the event
(C) Documents that summarize other documents
(D) Documents that are fictional
53. Is it primary (direct from source) or secondary (indirectly)? "Online Survey"
(A) Primary
(B) Secondary
54. Conducting an online survey is an example of secondary research
(A) True
(B) False
55. Which type of data is gathered directly by the researcher?
(A) Secondary data
(B) Primary data
(C) Tertiary data
(D) None of these
56. A student is conducting a research project about the effectiveness of local community support services for parents and carers in a town. Which of the following methods would provide the most appropriate primary data for this project?
(A) Randomly surveying households in the town
(B) Examining statistics from local welfare agencies
(C) Interviewing Community Health Centre workers
(D) Interviewing all parents and carers who use support services
57. Primary data for the research process be collected through ____
(A) Survey
(B) Experiment
(C) Both (A) and (B)
(D) None of the above
58. What is a disadvantage of primary research?
(A) May be outdated
(B) Less specific to needs
(C) Time-consuming
(D) Easily accessible
59. Which of the following is a primary source in scientific research?
(A) A research article presenting original findings
(B) A textbook summarizing various studies

- (C) A review article analyzing multiple research papers
(D) An encyclopedia entry on a scientific topic
60. What does the primary information contain?
(A) New, original research and development results;
(B) Information from the NTI and the result of processing the original source;
(C) Summary of the original source and its analysis;
(D) Full content of the original source and analysis of the development;
(E) Analysis of the results of processing the original source;
61. Which of the following are examples of primary sources?
(A) Diaries and letters
(B) Textbooks and encyclopedias
(C) Newspaper articles and documentaries
(D) Biographies and history books
62. What form of data is more likely to be up-to-date and relevant to the project at hand?
(A) Primary Data
(B) Internal Data
(C) External Data
(D) Secondary Data
63. What source of information is an interview with a politician?
(A) Primary
(B) Secondary
(C) Tertiary
(D) None of above
64. Why might a business carry out primary research?
(A) To gather data that does not already exist.
(B) To discover their customer needs and wants.
(C) To produce better goods or services for their customers.
(D) To gain more market share.
65. Discovering new information is
(A) Consumer Research
(B) Primary Research
(C) Secondary Research
(D) Marketing Research
66. My mom has CDs of my grandparents telling stories about when they were kids. We love to listen to these at family gatherings. What are we listening to?
(A) Primary source
(B) Secondary source
67. Is a scientific practical report outlining the aim, method, results, discussion and conclusion of a Year 11 student's experiment that they designed and conducted; a primary or secondary source?
(A) Primary
(B) Secondary
(C) All the above
(D) None of the above
68. Primary data is —
(A) Data that you have collected yourself.
(B) Data collected by a professional researcher.
(C) Data collected for a purpose.
(D) Data sourced on the internet.
69. What is an advantage of using primary data instead of secondary data?
(A) The research design can be tailored to address specific questions.
(B) It is less expensive and more efficient to collect and analyze.
(C) It relies on statistical data and is therefore more reliable.
(D) The data has already been collected, so it can be examined immediately.
70. Shreya is conducting a research project on consumer behavior. She decides to gather information directly from potential customers. What type of data is she collecting?
(A) Data collected from the internet

- (B) Data collected using other forms of media
- (C) Data collected through questionnaires, interviews and observations
- (D) Data not yet published
71. A Primary source of data would be
- (A) Crime statistics published by the police
- (B) NHS statistics on health
- (C) An observation you carried out in college
- (D) An experimental Journal you sourced in the library
72. The data that is collected directly from the data source
- (A) Research Background.
- (B) Primary Data.
- (C) Data collection techniques.
- (D) Interview.
73. When an event happened and you took part or experienced the event, what source of information would you call that?
- (A) Primary
- (B) Nursery
- (C) Secondary
- (D) Tertiary
74. Identify if the given item is PRIMARY, SECONDARY, or TERTIARY source studies published in academic journals
- (A) Primary
- (B) Secondary
- (C) Tertiary
- (D) None of the above
75. In the context of scientific experiments, what is a primary source?
- (A) A published review article
- (B) A textbook chapter
- (C) A research paper with original data
- (D) A scientific magazine article
76. If you create a survey to issue to people who eat fast food; what type of data would you be gathering.
- (A) Primary Research
- (B) Secondary Research
77. This kind of information source contains the most recent information or opinions.
- (A) Reference materials
- (B) Books
- (C) Government documents
- (D) News / magazine articles
78. Which of the following is NOT a characteristic of a primary source?
- (A) Contains original data or findings
- (B) Provides firsthand evidence
- (C) Summarizes existing research
- (D) Is created by someone directly involved in the research
79. An article about the Civil War written during the Civil War
- (A) Primary
- (B) Secondary
80. The Data which is collected by the researcher freshly for the first time is called
- (A) Primary data
- (B) Secondary data
- (C) Nil data
- (D) None of above
81. When we conduct our research, where can we obtain primary data?
- (A) Books
- (B) Journals
- (C) Personal interview
- (D) Newspapers and magazines
82. An audio recording of an eyewitness describing a recent natural disaster. Is this a contemporary account or a later analysis?
- (A) Primary (Contemporary account)
- (B) Secondary (Later analysis)
- (C) Tertiary (Compilation)
- (D) None of above

83. What kind of source is an online bulletin board?
- (A) Primary
 - (B) Secondary
 - (B) A documentary film about a historical period.
 - (C) A textbook summarizing historical events.
 - (D) A diary written by a historical figure.
84. An interview with Alexander Graham about how he invented the telephone
- (A) Primary source.
 - (B) Secondary source.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
85. Interviews of an eyewitness
- (A) Tertiary Source
 - (B) Primary Source
 - (C) Secondary Source
 - (D) None of above
86. Evidences in research collect from
- (A) Primary and secondary sources.
 - (B) Active and passive sources.
 - (C) Pure and applied sources.
 - (D) None of the above.
87. Which of the following sources of data can be classified as a primary source of data?
- (A) Data available in UGC reports
 - (B) Data collected by interviews of UGC experts
 - (C) Data available from socio-cultural tables of census of India, 2011
 - (D) Data on Educated unemployment available in Directorate of Employment and Training
88. Primary market research involves collecting new data directly from original sources.
- (A) True
 - (B) False
89. Which of the following is an example of Primary Source in Historical Context?
- (A) An article analyzing a historical figure's impact.
 - (B) A documentary film about a historical period.
 - (C) A textbook summarizing historical events.
 - (D) A diary written by a historical figure.
90. Primary research should always be carried out before secondary research is considered
- (A) True
 - (B) False
91. A company conducts a survey to collect new information directly from customers about their favorite product flavors. What type of data is this?
- (A) Qualitative data
 - (B) Syndicated data
 - (C) Secondary data
 - (D) Primary data
92. An original source of information: photographs, documents, video, artifacts
- (A) Secondary source
 - (B) Citations
 - (C) False analogy
 - (D) Primary source
93. A livestream of a world leader announcing a new environmental policy is a:
- (A) Primary Source
 - (B) Secondary Source
94. Discovering new information is called
- (A) Consumer Research
 - (B) Primary Research
 - (C) Secondary Research
 - (D) Marketing Research
95. Primary sources are ones that ____
- (A) Compile data on a particular topic: encyclopedias
 - (B) Analyze or interpret original data: biographies
 - (C) Information that is original and not analyzed: speech
 - (D) None of above

96. Original photographs capturing scenes from the American Civil Rights Movement. Are these direct observations or modern reproductions?
- (A) Primary (Direct observations)
 - (B) Secondary (Modern reproductions)
 - (C) Tertiary (Compilation)
 - (D) None of above
97. What is a drawback of qualitative data?
- (A) Smaller sample size
 - (B) Quick and simple to conduct
 - (C) Increased number of participants
 - (D) Easier to analyse
98. A soldier's diary describing daily life during the Vietnam War. Is this a firsthand account or a later interpretation?
- (A) Primary (Firsthand account)
 - (B) Secondary (Later interpretation)
 - (C) Tertiary (Compilation)
 - (D) None of above
99. Primary Data is generated by researcher himself
- (A) True
 - (B) False
100. Since secondary data provide a good starting point for research and often help define problems and research objectives, companies do not need to collect primary data.
- (A) TRUE
 - (B) FALSE
101. A category of primary resource which presents visual documents published or made by an eyewitness or the participant.
- (A) Artifacts
 - (B) Images
 - (C) Oral testimonies
 - (D) Written sources
102. What are primary sources of information?
- (A) Original, firsthand sources of information
 - (B) Interpretations of primary sources by others
 - (C) Official records
 - (D) Collections of secondary sources
103. You are looking for facts about your grandmother. Here is a list of places to find information: Letter Diary Piece of clothing Photo
- (A) Primary sources
 - (B) Secondary sources
104. Primary data results from gathering — data from firsthand experience, from interviews and surveys, or from direct observation.
- (A) Second-hand
 - (B) Published
 - (C) Correct
 - (D) Original
105. Which of the following is not an advantage of primary data compared to secondary data?
- (A) Higher update frequency.
 - (B) Lower search costs.
 - (C) Higher reliability.
 - (D) Once collected, data processing will be faster.
106. This refers to the information supplied by participants in a study-the first order concepts.
- (A) Emic data
 - (B) Etic data
 - (C) Negotiation
 - (D) Schema
107. What type of source is typically used to verify experimental results?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) None of the above
108. Primary research collects data for
- (A) Marketers across the industry to use
 - (B) Understanding economic cycles
 - (C) The research project at hand
 - (D) Informational purposes only

- 109.** How is primary research different now than it was in the past?
- (A) It is more enjoyable.
 - (B) It is more affordable.
 - (C) It is more difficult.
 - (D) It is more time-consuming.
- 110.** The following are all examples of sources except
- (A) Written letter
 - (B) Interview
 - (C) Table of contents
 - (D) Photograph
- 111.** Texts from ancient India that are part of a collection of the oldest surviving Hindu scriptures. They provide details about the religious practices and culture of ancient Indian civilization.
- (A) Brahmanism
 - (B) Caste System
 - (C) Varnas
 - (D) Vedas
- 112.** Government records
- (A) Tertiary Source
 - (B) Primary Source
 - (C) Secondary Source
 - (D) None of above
- 113.** Aarav is conducting a research project on consumer behavior. He needs to gather information directly from potential customers to understand their preferences. What are the characteristics of primary data?
- (A) Data that is collected from secondary sources
 - (B) Characteristics of primary data include being original, specific, current, and directly collected from the source.
 - (C) Data that is generalized and not specific
 - (D) Information that is outdated and irrelevant
- 114.** Which type of research involves collecting new data directly from sources?
- (A) Secondary research
 - (B) Primary research
 - (C) Qualitative research
 - (D) Quantitative research
- 115.** You are doing a discussion on "Electric Vehicles in Malaysia." Which source is MOST LIKELY to provide recent and relevant data?
- (A) A car enthusiast's personal blog from 2018
 - (B) A 2024 news article from a trusted tech news website
 - (C) A 2010 automotive magazine
 - (D) An old textbook from the library
- 116.** Pieces of information collected directly by an individual or organization.
- (A) Dating
 - (B) Focus
 - (C) Primary Data
 - (D) Social Trend
- 117.** What type of source is the document?
- (A) Primary
 - (B) Secondary
 - (C) Editorial
 - (D) Argumentative
- 118.** To gather information about a career in finance, which of the following would be considered a primary source of career information:
- (A) Watching a documentary film about finance outsourcing
 - (B) Reading a magazine article about finance job growth
 - (C) Examining online reviews of several finance companies
 - (D) Interviewing a finance director about their work experiences
- 119.** This type of source provides direct or first-hand evidence about an event, object, person, or work of art
- (A) Scholarly Source
 - (B) Primary Source

- (C) Secondary Source
(D) Popular Source
- 120.** What are facts obtained for the first time and used specifically for the particular problem or issue under study
(A) Primary Data
(B) Media Research
(C) Secondary Data
(D) Product Research
- 121.** Define 'primary' data
(A) Data collected from the internet
(B) Data collected using other forms of media
(C) Data collected through questionnaires, interviews and observations
(D) Data not yet published
- 122.** Type of research is defined by the fact that the data is collected directly from the source, that is, it consists of primary, first-hand information.
(A) Longitudinal research
(B) Cross-Sectional Study
(C) Primary research
(D) Secondary research
- 123.** Primary data refers to information that is gathered first-hand by the researcher.
(A) True
(B) False
- 124.** Aarav is conducting research for his history project and needs to gather information. He decides to look for the original documents and firsthand accounts related to the events he is studying. The original source from which Aarav collects information is ____
(A) Primary Source
(B) Secondary Source
(C) Both primary and secondary
(D) None of these
- 125.** Which of the following would be considered a primary source in a study about the lifestyles of American colonists?
(A) A modern-day history textbook
(B) A painting from the 1700s depicting daily life
(C) A documentary made in the 21st century
(D) An article summarizing colonial diaries
- 126.** When determining sources of needed data, which option reflects appropriate focus?
(A) Primary archives, field observations, administrative records
(B) Personal opinions, viral posts, entertainment media
(C) Random blogs, unsourced quotes, private diaries
(D) Unverifiable rumors, anonymous comments, hearsay
- 127.** Primary data collection requires:
(A) Existing published materials
(B) Direct measurement tools
(C) Social media ads
(D) None of these
- 128.** Which of the following is not a primary source of problem
(A) Journals
(B) Diaries
(C) Bibliographies
(D) Speeches
- 129.** Which of the following best defines primary market research?
(A) It is data collection that always produces quantitative data
(B) It uses information that has already been collected
(C) It is also known as desk research
(D) It gathers original data by contacting consumers directly
- 130.** If you ask your friends what their favorite movies are, is that primary or secondary data?
(A) Primary
(B) Secondary
(C) Historical
(D) Current

131. An original source, such as a speech, diary, novel, legislative bill, laboratory study, field research report, or eyewitness account.
- (A) Primary source
 - (B) Secondary source
 - (C) Quote
 - (D) Journal
132. Data that a company collects specifically for a current research project is known as:
- (A) Secondary data
 - (B) Public data
 - (C) Internal data
 - (D) Primary data
133. A local mall conducts personal interviews with customers
- (A) Primary
 - (B) Secondary
134. Surveys can generate primary data economically and efficiently from large groups of people
- (A) True
 - (B) False
135. This type of data results from research specifically developed and conducted for explicit objectives and goals of the company or brand.
- (A) Primary data
 - (B) Secondary data
136. Thea is writing a report on President Donald J. Trump and wants to include both primary and secondary sources. Which of the following sources is not a primary source about President Trump?
- (A) A videotaped interview with him
 - (B) An encyclopedia entry about him
 - (C) A tweet he wrote and posted
 - (D) An email from him to his chief of staff
137. Someone's Twitter page is an example of a ____
- (A) Primary Source
 - (B) Secondary Source
138. Which statement best defines primary data in research?
- (A) Data generated by computer models without human input
 - (B) Data compiled from published reports and prior studies
 - (C) Data collected from first-hand experience by researchers
 - (D) Data synthesized across studies using statistical reviews
139. A marriage record is a ____
- (A) Primary Source
 - (B) Secondary Source
140. Which type of data is collected specifically for the research study at hand and is not previously available?
- (A) Primary data
 - (B) Secondary data
 - (C) Qualitative data
 - (D) Observational data
141. Facts collected specifically for the problem at hand:
- (A) Decision problem
 - (B) Demographics
 - (C) Unit of analysis
 - (D) Primary data
142. A common disadvantage of primary research for a startup is that:
- (A) It is time-consuming to obtain
 - (B) It doesn't answer the questions asked
 - (C) It doesn't allow for qualitative questions
 - (D) It can't be done online
143. What is the purpose of primary market research?
- (A) To gather firsthand information about customer needs and preferences.
 - (B) To analyze existing data.
 - (C) To develop marketing strategies.
 - (D) To create new products and services.

144. A photograph of a protest in the 1960s is a:
- (A) Primary source
 - (B) Secondary source
 - (C) Fictional representation
 - (D) None of the above
145. Which of the following is a con of a primary source?
- (A) Multiple perspectives presented
 - (B) Real human emotions
 - (C) Too many historical voices
 - (D) Usually biased
146. Primary data in a science context is ____
- (A) Data that you have collected yourself.
 - (B) Data collected by a professional researcher.
 - (C) Data collected for a purpose.
 - (D) Data sourced on the internet.
147. Documents containing the results of scientific research and development, new scientific information relate to:
- (A) Primary
 - (B) Secondary
 - (C) Review publications
 - (D) Abstract publications
 - (E) Book publications
148. Online surveys are an example of:
- (A) Secondary data
 - (B) Primary data
 - (C) Experimental design
 - (D) None
149. Which of the following is an example of primary data collection in marketing research?
- (A) Accessing data from online databases
 - (B) Reviewing government statistics
 - (C) Conducting interviews with potential customers
 - (D) Analyzing published industry reports
150. Primary research is ____
- (A) Data that has not been processed by a firm.
 - (B) Using questionnaires to collect quantitative data.
 - (C) Collecting new data for a specific purpose.
 - (D) Using experimentation and observations to find out what customers want or need.
151. Identify if the given item is PRIMARY, SECONDARY, or TERTIARY sourcecourt records
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of the above
152. It is a first-hand source
- (A) Primary data
 - (B) Secondary data
153. Data is collected to know the brand awareness of the customers
- (A) Primary data
 - (B) Secondary data
 - (C) Internal data
 - (D) None of these
154. Is an article published in the journal Nature a primary or secondary source?
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above
155. Interviews, surveys, and fieldwork are known as
- (A) Writings
 - (B) Primary
 - (C) Secondary
 - (D) What trump does
156. Sources can be classified into which two categories?

- (A) Documents and videos
 - (B) Academic and government
 - (C) Primary and secondary
 - (D) Books and textbooks
- 157.** Which type of source do Diaries belong to?
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of above
- 158.** Between primary and secondary data, it is the type of data that would be produced if Acme administered a survey questionnaire to its customers to solve a particular problem.
- (A) Primary
 - (B) Secondary
- 159.** Is it primary (direct from source) or secondary (indirectly)? "Interview"
- (A) Primary
 - (B) Secondary
- 160.** Immediate, first-hand accounts of a topic, from people who had a direct connection with it
- (A) Primary source
 - (B) Perspective
 - (C) Secondary source
 - (D) Reliable
- 161.** What is an advantage of collecting primary data?
- (A) It is usually readily available.
 - (B) It is always less expensive than secondary data.
 - (C) It can be tailored specifically to the research needs.
 - (D) It is less time-consuming than secondary data.
- 162.** A source that is original, from the time period & a first hand account
- (A) Primary
 - (B) Secondary
- 163.** Primary sources may include ____
- (A) Information from multiple sources
 - (B) Third person pronouns
 - (C) Very specific details
 - (D) Objective facts
- 164.** Witness Interview
- (A) Primary Source
 - (B) Secondary Source
- 165.** A speech given by a president during a war is a:
- (A) Primary source
 - (B) Secondary source
 - (C) Fictional account
 - (D) Tertiary source
- 166.** Your parents describe how your great-grandfather came to the city where you live:
- (A) Primary Sources
 - (B) Secondary Sources
 - (C) Both A and B
 - (D) All other answers are not correct
- 167.** What is one key difference between primary and secondary marketing research?
- (A) Primary research collects new data directly from sources, while secondary research uses existing data.
 - (B) Primary research is always less expensive than secondary research.
 - (C) Secondary research is more accurate than primary research.
 - (D) Primary research is only used for historical analysis.
- 168.** Information that contains new, original results of research and development—monographs, articles in scientific and industrial journals, collections of proceedings of scientific conferences, descriptions of inventions, patents, dissertations or their abstracts:
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) New
 - (E) Scientific

169. Collecting new data like surveys and interviews
(A) Primary research
(B) Secondary research
(C) Qualitative research
(D) Quantitative Research
170. Why are primary sources important in scientific research?
(A) They provide second-hand information
(B) They offer direct evidence of research findings
(C) They are easier to access
(D) They are more entertaining
171. Survey research is a form of ___ data
(A) Primary
(B) Secondary
172. Data collected by investigator is called the secondary data.
(A) True
(B) False
173. Which of the following is NOT a source of primary data for marketers?
(A) Customers
(B) Employees
(C) Managers
(D) Competitors
174. Primary research is considered more:
(A) Expensive and time-consuming
(B) Inexpensive and fast
(C) Generalized
(D) Inaccurate
175. An autobiography is a
(A) Primary Source
(B) Secondary Source
176. What are the two types of information?
(A) FIRST SOURCES AND SECOND SOURCES
(B) PRIMARY SOURCES AND SECONDARY SOURCES
(C) INITIAL SOURCES AND SUBORDINATE SOURCES
(D) None of above
177. Which of the following is an example of a primary source in research?
(A) A textbook summarizing various studies
(B) A newspaper article reporting on a study
(C) An interview conducted by the researcher
(D) A blog post discussing research findings
178. Primary data is ___ research that collects ___ data for a specific purpose.
(A) Desk, existing
(B) New, new
(C) Field, new
(D) Field, existing
179. If you interview an accountant to learn about his experiences on the job, he is considered a ___ source of information.
(A) Secondary
(B) Primary
(C) Alternative
(D) None of above
180. What type of data is collected through participant observation?
(A) Second-hand data
(B) Theoretical data
(C) First-hand empirical experience
(D) Hypothetical data
181. Which of the is most likely to be a primary data source:
(A) A sales invoice
(B) A customer record
(C) An expense report
(D) A customer survey
182. Facts collected specifically for the problem or project at hand

- (A) Primary data
 - (B) Qualitative data
 - (C) Marketing research
 - (D) Quantitative data
- 183.** A diary entry from a student describing their experiences during online learning in 2020 is a:
- (A) Primary Source
 - (B) Secondary Source
- 184.** Which of the following is NOT an advantage of primary research?
- (A) Fits organization's specific needs
 - (B) Up to date
 - (C) Allows marketers to interact personally with respondents
 - (D) Provides data that is always free
- 185.** Sketches made by an artist during a live performance. Are these immediate observations or interpretations made later?
- (A) Primary (Immediate observations)
 - (B) Secondary (Interpretations made later)
 - (C) Tertiary (Compilation)
 - (D) None of above
- 186.** Which statements below are benefits of primary and secondary data?
- (A) Builds knowledge on market trends
 - (B) Minimize risk
 - (C) Helps in customer data monetization
 - (D) All of the above
- 187.** Statistical data is a Primary Source because ____ (one answer)
- (A) They are numbers representing facts about an event
 - (B) Numbers never lie and neither do Primary sources
 - (C) They aren't! They are Secondary Sources
 - (D) None of above
- 188.** What type of data is collected directly from potential customers?
- (A) Secondary data
 - (B) Primary data
 - (C) Tertiary data
 - (D) Quaternary data
- 189.** Which of the following may be a primary source of information for a researcher?
- (A) Encyclopedia of Educational Research.
 - (B) Research paper in a professional journal.
 - (C) An abstract of a research study.
 - (D) A research review article.
- 190.** A government publication during a historical period is a:
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) None of the above
- 191.** A source from the time in which an event being studied occurred and created by someone who was present at the event
- (A) Primary Source
 - (B) Secondary Source
 - (C) Impossible Source
 - (D) Works Cited source
- 192.** What is the term for a source of information that was created at the time under study and provides direct evidence about the topic?
- (A) Primary source
 - (B) Secondary source
 - (C) Bias
 - (D) Inquiry
- 193.** Is it primary (direct from source) or secondary (indirectly)? "Video footage"
- (A) Primary
 - (B) Secondary
- 194.** Which of the following is a form of primary research?
- (A) Get information from a Company website

- (B) Get information from a Magazine
 - (C) Conduct an Interview
 - (D) All mentioned.
- 195.** Data that is freshly gathered for a specific purpose is called ____
- (A) Secondary data
 - (B) Explanatory data
 - (C) Behavioral data
 - (D) Syndicated data
 - (E) Primary data
- 196.** How can you use evidence from primary sources in your research?
- (A) By quoting them to support your thesis
 - (B) By changing the information to fit your argument
 - (C) By only using primary sources that agree with your viewpoint
 - (D) By ignoring any primary sources that contradict other research
- 197.** Which of the following is NOT an example of primary research?
- (A) Focus Groups
 - (B) Questionnaires
 - (C) Observations
 - (D) Newspapers
- 198.** Primary data is collected from research while secondary data is collected by the researcher.
- (A) True
 - (B) False
- 199.** A scientist's lab notes documenting experiments in the 19th century. Are these original records or a later summary?
- (A) Primary (Original records)
 - (B) Secondary (Later summary)
 - (C) Tertiary (Compilation)
 - (D) None of above
- 200.** Written, created or present during the time period; directly connected to the topic or event by time or participation; provide first-hand evidence of historical events
- (A) Primary Source
 - (B) Secondary Source
 - (C) Propaganda
 - (D) Opinion
- 201.** An Observation, Questionnaire and Interviews are examples of what type of research?
- (A) Secondary
 - (B) Quantitative
 - (C) Primary
 - (D) Qualitative
- 202.** What is primary research?
- (A) Research you get from books
 - (B) Research you collect yourself, like surveys or experiments
 - (C) Research you copy from someone else
 - (D) Research from the internet
- 203.** The data collected by the investigator himself is called:
- (A) Primary data
 - (B) Secondary data
 - (C) Both primary and secondary data
 - (D) None of these
- 204.** Which type of data is gathered for the first time by the person using it?
- (A) Primary Data
 - (B) Secondary Data
 - (C) Forced Response
 - (D) Multiple Choice
- 205.** What is an advantage to primary research?
- (A) Results are specific to the business.
 - (B) Time consuming
 - (C) Costs the business money
 - (D) Poor design produces poor results
- 206.** You are studying the weather. Which of the items below is raw data and not organized information?
- (A) The temperature outside today
 - (B) Toothpaste *don't pick me

- 207.** Primary data is preferred over secondary data where:
- (A) Time available is short
 - (B) Accuracy is important
 - (C) Sufficient finance is not available
 - (D) Much accuracy is not required
- 208.** This is information that is collected for the first time to solve the problem being studied or for use in achieving the goal of the project.
- (A) Primary Data
 - (B) Secondary Data
- 209.** What is one way to ensure data reliability when using primary data?
- (A) Use complex jargon to impress respondents.
 - (B) Collect data from secondary sources.
 - (C) Ensure the data is collected by someone else.
 - (D) Follow a good methodology for gathering data.
- 210.** Anne Frank's diary describing her life during World War II
- (A) Primary source.
 - (B) Secondary source.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 211.** Which of the following is a primary source of market data?
- (A) Focus group interviews
 - (B) Historical fiction books
 - (C) Political speeches
 - (D) Product advertisements
- 212.** When developing new toys, Mattel Inc. creates a room for observing children playing with toy prototypes.
- (A) Primary
 - (B) Secondary
- 213.** Fatima needs to use one PRIMARY source for her project on politics and culture in the US in the 1980s. Which would her teacher accept?
- (A) A novel of historical fiction set in 1985
 - (B) An article about Ronald Reagan written in 2004
 - (C) A diary entry written by Madonna in 1988
 - (D) An essay about how art of the 1980s influenced later decades
- 214.** What are the limitations of using primary sources?
- (A) They are easily accessible and widely available
 - (B) They provide a comprehensive and unbiased view
 - (C) They are always accurate and reliable
 - (D) They may be biased, limited in scope, or difficult to interpret.
- 215.** Data collected using focus group discussions is
- (A) Primary data
 - (B) Secondary data
 - (C) Tertiary data
 - (D) None of above
- 216.** Which of the following best describes a primary source?
- (A) A textbook summarizing historical events
 - (B) An original document or firsthand account
 - (C) A newspaper article analyzing a study
 - (D) A blog post discussing a novel
- 217.** 'Heezen gathered information at sea. He then sent it to Tharp, who began the difficult job of making sense out of the raw data.' What is raw data?
- (A) Uncooked data
 - (B) Information collected indirectly from a source
 - (C) False information
 - (D) Information collected directly from a source or study

- 218.** Primary data is collected directly from the source. Which of the following is NOT a method of collecting primary data?
- (A) Interviews
 - (B) Sensor readings
 - (C) Measurements
 - (D) Newspaper articles
- 219.** Identify if the given item is PRIMARY, SECONDARY, or TERTIARY sourcedictionaries
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of the above
- 220.** A researcher is interested in studying why the "new math" of the 1960s failed. She interviews several teachers who used the new math during the 1960s. These teachers are considered as
- (A) External critics.
 - (B) Secondary Sources.
 - (C) Primary sources.
 - (D) Internal critics.
- 221.** In scientific writing, which source is most likely to be cited for original data?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) None of the above
- 222.** The benefit of using primary research over secondary research is:
- (A) Customization to specific needs
 - (B) Faster data collection
 - (C) Lower costs
 - (D) Broad information
- 223.** An artifact, document, diary, manuscript, or other source of information created at the time of study is a ____
- (A) Primary Source
 - (B) Secondary Source
- 224.** What are the advantages of using primary sources in research compared to secondary sources?
- (A) Primary sources provide outdated information and are not reliable
 - (B) Secondary sources offer original data and firsthand information
 - (C) Primary sources provide firsthand information and original data.
 - (D) Primary sources are difficult to access and analyze
- 225.** What type of source is Anne Frank's diary?
- (A) Primary source
 - (B) Secondary source
 - (C) Multimedia source
 - (D) Unreliable source Edit
- 226.** The following are example of primary sources, except
- (A) Movie reviews
 - (B) Legal documents
 - (C) Pieces of creative writing
 - (D) Interviews
- 227.** Which of the following is an example of primary data?
- (A) Literature review summaries
 - (B) Interviews conducted by the researcher
 - (C) Data gathered from textbooks
 - (D) Information taken from secondary articles
- 228.** Documents created by individuals who witnessed or participated in an event are known as
- (A) Secondary sources
 - (B) Point of view
 - (C) Primary sources
 - (D) Historian
- 229.** A firsthand testimony or direct evidence concerning a topic, an event, a person's life, original works of literature, and historical facts are all examples of
- (A) Primary sources

- (B) Secondary sources
(C) The Big6
(D) Subject searches
- 230.** Read the following titles carefully. Which one is an example of a primary source?
(A) Code Talker: A Novel About the Navajo Marines of World War Two by Joseph Bruchac
(B) The New Concise History of the Crusades by Thomas F. Madden
(C) The Autobiography of Andrew Carnegie by Andrew Carnegie
(D) 1776 by David McCullough
- 231.** Which source of information is an example of a primary source?
(A) Encyclopedia
(B) Thesaurus
(C) Dictionary
(D) Journal entry
- 232.** Which of these is not a source of Primary Data collection?
(A) Questionnaire
(B) Newspaper
(C) Survey
(D) Interview
- 233.** A historical account created by individuals who were present during the events described is known as a ____
(A) Secondary Source
(B) Corroboration
(C) Primary Source
(D) Sourcing
- 234.** Neha is conducting research for her thesis and needs to gather information directly from her target audience. She is considering various methods to collect primary data. List two examples of primary data collection methods that Neha can use.
(A) Focus Groups
(B) Case Studies
(C) Surveys, Interviews
(D) Observational Studies
- 235.** How can one distinguish between primary and secondary sources?
(A) By looking at the font size and style
(B) By determining the popularity of the source
(C) By checking the publication date
(D) By understanding if the source is a first-hand account or original material (primary) or an interpretation or analysis of primary sources (secondary).
- 236.** How does primary research benefit marketers compared to secondary research?
(A) It is less time-consuming.
(B) It provides data that is up-to-date and specific to their needs.
(C) It is more affordable than secondary research.
(D) It eliminates the need for data analysis.
- 237.** Original materials or evidence from the time under study are called:
(A) Primary sources
(B) Secondary sources
(C) Tertiary sources
(D) Quaternary sources
- 238.** Primary Research is about collecting
(A) 2nd hand data
(B) Old data
(C) Firsthand data
(D) None of above
- 239.** Which type of source is shown in the image? (government document)
(A) Primary
(B) Secondary
- 240.** Speeches, letters and diaries are examples of?
(A) Tertiary source
(B) Primary source
(C) Secondary source
(D) None of above

- 241.** Which of the following is a primary source when researching a topic?
- (A) A diary entry
 - (B) A textbook
 - (C) An encyclopedia
 - (D) A newspaper article
- 242.** Is this a primary or secondary source? An interview of Beyonce about her new album
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above
- 243.** Publix conducts a focus group regarding customer attitudes toward its meat department
- (A) Primary
 - (B) Secondary
- 244.** Primary data is available in the form of published or unpublished reports.
- (A) True
 - (B) False
- 245.** Theses & dissertations
- (A) Primary Sources
 - (B) Secondary Sources
 - (C) Tertiary Sources
 - (D) None of the Choices
- 246.** A government report on the effects of lockdowns during the COVID-19 pandemic is a:
- (A) Primary Source
 - (B) Secondary Source
- 247.** Which type of source can include the author's personal opinions or bias?
- (A) Primary sources
 - (B) Secondary sources
 - (C) Both
 - (D) Neither
- 248.** Which of the following would NOT be considered a primary research method?
- (A) Interview
 - (B) Survey
 - (C) Online research from other studies
 - (D) Focus group
- 249.** The news articles are considered as ____ source.
- (A) Secondary
 - (B) Artifacts
 - (C) Important
 - (D) Primary
- 250.** What is First hand data
- (A) Primary
 - (B) Secondary
- 251.** How can primary sources provide insight into the past?
- (A) By creating a distorted view of the past
 - (B) By providing firsthand accounts or direct evidence of events, people, or time periods.
 - (C) By offering biased opinions about historical events
 - (D) By providing fictional stories about the past
- 252.** True or False: Primary research can be very expensive and time consuming.
- (A) True
 - (B) False
- 253.** Write T if the statement is true, and F if it is false. Primary sources are original research studies.
- (A) True
 - (B) False
- 254.** Which of the following is not a problem associated with primary research data?
- (A) Sample size.
 - (B) Bias.
 - (C) Focus.
 - (D) Cost.

255. Which of the following defines the concept of "primary source"?
- (A) Second-hand information summarizing an event
 - (B) First-hand information on the historic event
 - (C) Argumentative articles or sources of past historic events
 - (D) None of above
256. Which is NOT a primary data tool?
- (A) Interview
 - (B) Survey
 - (C) Observation
 - (D) Textbook
257. What type of data is observed & recorded directly in order to address a specific issue?
- (A) Quantitative
 - (B) Qualitative
 - (C) Primary
 - (D) Secondary
258. ___ data is that which is collected by sociologists themselves during their own research using research tools such as experiments, survey questionnaires, interviews and observation. ___ data can take a quantitative or statistical form, e.g. charts, graphs, diagrams and tables.
- (A) Participant
 - (B) Secondary
 - (C) Triangulated
 - (D) Primary
259. Primary Data:
- (A) Data obtained for the first time and used specifically for the particular problem or issue under study
 - (B) Data already collected for some purpose other than the current study
 - (C) This is the study of sales data
 - (D) The study conducted to determine the effectiveness of a company's advertising message and media placement
260. An original manuscript of a speech given by a famous civil rights leader is a:
- (A) Primary Source
 - (B) Secondary Source
261. Autobiography
- (A) Primary Source
 - (B) Secondary Source
262. These are first hand accounts, raw data and considered authentic materials.
- (A) Primary Sources
 - (B) Secondary Sources
263. Primary sources of information in conducting research refers to
- (A) Collating the information available from business records
 - (B) The use of published data
 - (C) Getting first-hand information from the business
 - (D) Government statistics
264. First hand information such as autobiographies, photographs, letters and diaries.
- (A) Primary Source.
 - (B) Secondary Source.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
265. Is a survey a primary or secondary research method?
- (A) Primary.
 - (B) Secondary.
 - (C) Neither.
 - (D) Both. Edit
266. When doing scientific research, which is best?
- (A) Primary Sources
 - (B) Secondary Sources
 - (C) All the above
 - (D) None of the above

- 267.** Which of the following is NOT a type of secondary data?
- (A) Financial records
 - (B) Employee records
 - (C) Customer feedback from social media
 - (D) Data from an unpublished survey
- 268.** Information describing the qualities of objects observed, but not measured.
- (A) Qualitative data
 - (B) Gravity
 - (C) Acceleration
 - (D) Net force
- 269.** What type of source is a photograph?
- (A) Primary
 - (B) Secondary
- 270.** Primary sources are:
- (A) Secondary sources that interpret and analyze primary sources
 - (B) Books and articles written by historians
 - (C) Original materials or documents created at the time of the event or period being studied
 - (D) Photocopies or reproductions of original documents
- 271.** In historical research, diaries, journals, and other original records of an event are classified as what type of sources?
- (A) Secondary
 - (B) Anecdotal
 - (C) Primary
 - (D) Tertiary
- 272.** If you wanted to find more information about Missouri's natural resources, what would the best source be?
- (A) Historical fiction that takes place in Missouri
 - (B) A dictionary
 - (C) Newspaper article about economy
 - (D) Nonfiction text about Missouri's resources
- 273.** What is an example of internal data?
- (A) Social media trends
 - (B) Employee payroll records
 - (C) Government reports
 - (D) Competitor pricing data
- 274.** Primary data are characterized by which feature?
- (A) Aggregated from company databases
 - (B) Derived from statistical repositories
 - (C) Obtained from previous publications
 - (D) Collected first time, original and fresh
- 275.** Which of the following is a source of primary market research:
- (A) Focus groups
 - (B) US Census Bureau
- 276.** A public opinion poll on what should be the next Mountain Dew flavor is an example of a —
- (A) Primary Source
 - (B) Secondary Source
- 277.** What characterizes subjective information in healthcare communication?
- (A) Directly measurable data
 - (B) Information reported by residents or families that may not be accurate
 - (C) Permanent medical records
 - (D) Standardized medical observations
- 278.** Which of the following is a primary data collection method in educational research?
- (A) Reviewing journal articles
 - (B) Administering surveys or questionnaires
 - (C) Reading textbooks
 - (D) Analyzing government reports
- 279.** A key difference between primary data and secondary data is that primary data is more time consuming and expensive to collect than secondary data
- (A) True
 - (B) False

280. Which type of primary data is represented by characteristics such as age, education, occupation, marital status or gender?
- (A) Personality/Lifestyle
 - (B) Awareness/Knowledge
 - (C) Demographic/Socioeconomic
 - (D) Attitudes
281. Adam told me that someone got hurt during gym when he was there. Adam is the?
- (A) Primary Source
 - (B) Secondary Source
282. Which of the following scenarios involves collecting primary data?
- (A) Analyzing data from a government database
 - (B) Conducting interviews with participants
 - (C) Reading a scientific review article
 - (D) Using data from a published book
283. What is true about all primary sources?
- (A) They are either handwritten or photographs only
 - (B) They are a way to learn about an event, object, or person
284. Discovering new information in your LHS survey is called
- (A) Consumer Research
 - (B) Primary Research
 - (C) Secondary Research
 - (D) Marketing Research
285. What type of source is an eyewitness to an accident?
- (A) Primary
 - (B) Secondary
286. Manuscript
- (A) Primary Source
 - (B) Secondary Source
 - (C) Tertiary Source
 - (D) None of above
287. When interviewing, a ____ would be a person with first-hand information, meaning they witnessed what happened.
- (A) Secondary source
 - (B) Transcript
 - (C) Primary source
 - (D) Database
288. Which type of data is more time consuming and expensive to collect?
- (A) Primary data
 - (B) Secondary data
289. What is one advantage of primary data being up-to-date?
- (A) It is more expensive to collect.
 - (B) It is likely more valid.
 - (C) It is harder to gather.
 - (D) It is less reliable.
290. Primary sources of data include:
- (A) Interviews and surveys
 - (B) Textbooks
 - (C) Encyclopedias
 - (D) Review articles
291. Which of the following best describes a primary source in science?
- (A) It provides a summary of existing research
 - (B) It presents original data or findings
 - (C) It offers an analysis of multiple studies
 - (D) It compiles information from various sources
292. These are information collected directly from the subjects being studied, such as people, areas, or objects.
- (A) Quantitative Data
 - (B) Qualitative Data
 - (C) Primary Data
 - (D) Secondary Data
- Explanation:** Primary Data refers to information collected directly from the subjects being studied, such as people, areas, or objects. It is the correct choice in this context.

- 293.** How can primary sources be used to support an argument?
- (A) Primary sources provide firsthand evidence or direct information related to the topic.
 - (B) Primary sources can be used to provide background information on the topic.
 - (C) Primary sources can be used to present opposing viewpoints to the argument.
 - (D) Primary sources can be used to analyze the credibility of secondary sources.
- 294.** Which type of source is shown in the image? (letter of Columbus)
- (A) Primary
 - (B) Secondary
- 295.** Primary source
- (A) An original historical document or object created by someone who witnessed the event
 - (B) A summary of events written by a historian
 - (C) A fictional account of a historical event
 - (D) An analysis of primary sources by a researcher
- 296.** Which type of research provides firsthand evidence or direct testimony?
- (A) Primary sources
 - (B) Secondary sources
 - (C) Tertiary sources
 - (D) Quaternary sources
- 297.** Which statements are true about primary data?
- (A) Real-time data
 - (B) Always specific to researcher's needs
 - (C) More capable to solve a specific problem
 - (D) All of the above
- 298.** It refers to the information we received from our senses through experiences.
- (A) Empirical Data
 - (B) Nominal Data
 - (C) Ordinal Data
 - (D) Qualitative Data
- 299.** Which of the following would be the best primary source when writing a research paper about the Natives of Texas?
- (A) A map
 - (B) Photos from Instagram
 - (C) Excerpts from the Diary of Cabeza de Vaca
 - (D) A biography on Cabeza de Vaca
- 300.** ____ is the first place where information comes from, like a person who saw something happen.
- (A) Primary source
 - (B) Secondary source
 - (C) Encyclopedia
 - (D) Textbook
- 301.** What is the reliability of Primary data?
- (A) Depends on the agency collecting the data.
 - (B) Always more reliable compared to secondary data.
 - (C) Depends on the care with which data have been collected.
 - (D) Less reliable compared to secondary data.
- 302.** Information collected from marketing surveys is an example of ____ data.
- (A) Primary
 - (B) Experimental
 - (C) Secondary
 - (D) Observational
- 303.** What are the characteristics of a primary source data?
- (A) Resulting from an experiment
 - (B) Made available by others
 - (C) Data collected in an observational study
 - (D) Data collected by yourself

304. Which of the following is most likely to provide a business with primary market research?
- (A) A television show
 - (B) A customer survey
 - (C) A newspaper article
 - (D) An Australian Bureau of Statistics Publication
305. Which sources directly report or present a person's own experiences?
- (A) General references
 - (B) Primary sources
 - (C) Secondary sources
 - (D) Tertiary sources
306. The data collected for the first time by the researcher is known as
- (A) Primary
 - (B) Secondary
 - (C) Both a & b
 - (D) None of the above
307. A birth certificate is a
- (A) Primary source
 - (B) Secondary source
 - (C) Both
 - (D) None of above
308. Primary data has an advantage over secondary data because ____
- (A) The data already exists so it is cheaper to gather.
 - (B) It is normally less time consuming to gather.
 - (C) It saves data collection time.
 - (D) It is unique to the purpose of the research.
309. A photography is an example of
- (A) Primary Source
 - (B) Secondary Source
310. Primary data consist of ____
- (A) Data that does not age
 - (B) Data obtained from the public domain
 - (C) Information collected for the specific purpose at hand
 - (D) Information that is the least expensive and the easiest to obtain
311. What are primary sources?
- (A) Original materials or first-hand accounts of an event, person, or topic
 - (B) Secondary materials or second-hand accounts of an event, person, or topic
 - (C) Materials that are not relevant to the topic
 - (D) Fictional stories about an event, person, or topic
312. The Declaration of Independence is a?
- (A) Primary Source
 - (B) Secondary Source
313. Which statement correctly describes the difference between primary and secondary sources in nursing research?
- (A) Primary sources summarize other researchers' findings.
 - (B) Secondary sources present original empirical data.
 - (C) Primary sources include firsthand research studies or case reports.
 - (D) Secondary sources contain unpublished experimental data.
 - (E) Primary sources are less reliable than secondary ones.
314. A primary source of information is gathered from:
- (A) A person through a survey
 - (B) A textbook
 - (C) A website such as Wikipedia
 - (D) The radio
315. Primary research means getting information ____ from the source by conducting interviews and surveys and by observing people, events, or processes in action.
- (A) Secondhand
 - (B) Directly

- 316.** Photo/video
(A) Primary Source
(B) Secondary Source
- 317.** A researcher wants to study the impact of COVID-19 on mental health. Which of the following would be considered primary data?
(A) A published research article on COVID-19
(B) A government health report
(C) A survey conducted among students about their mental health
(D) A newspaper article
- 318.** Are data obtained (collected) for the first time and used specifically for the problem or issue under study
(A) Primary data
(B) Secondary data
(C) Sample data
(D) Point of sale data
- 319.** Which of the following is unlikely to be a drawback of primary research
(A) Unrepresentative sample used to generate findings.
(B) Respondents may exaggerate their views.
(C) Wrong or inappropriate questions may be asked.
(D) May lack specific focus.
- 320.** What are primary data?
(A) Data collected specifically for the project at hand directly from individuals
(B) Data collected from external sources only
(C) Data that are always subjective in nature
(D) Data that are never measurable
- 321.** Which of the following is NOT a characteristic of primary data?
(A) Collected firsthand
(B) Original and unique
(C) Derived from existing sources
(D) Specific to the researcher's needs
- 322.** Manuscripts or material evidence written in the immediate aftermath of an incident is ____
(A) Primary tools
(B) Secondary tools
(C) Historical tools
(D) None of these
- 323.** Mail surveys, phone surveys, personal interviews, & online surveys are examples of what type of data collection?
(A) Tertiary
(B) Secondary
(C) Primary
(D) Unreliable
- 324.** Are government records like the Census considered primary or secondary sources?
(A) Primary
(B) Secondary
- 325.** Data that focuses on information that can be counted and subjected to statistical analysis is called?
(A) Secondary Data
(B) Primary Qualitative Data
(C) Primary Quantitative Data
(D) None of above
- 326.** Which of the following is a primary source for a scientific experiment?
(A) A published research paper
(B) A science textbook
(C) A documentary film
(D) A science news article
- 327.** These are original historical sources.
(A) Static sources
(B) Descriptive sources
(C) Primary sources
(D) Interpretative sources
- 328.** Which of the following is a primary data source in qualitative research?
(A) Newspaper articles
(B) Interviews with participants

- (C) Reports by other researchers
(D) Published books
- 329.** A personal interview response to a new cereal packaging design is
(A) Primary data
(B) Secondary data
- 330.** A report of a research study written by the individuals who conducted the study is
(A) A primary source.
(B) A secondary source.
(C) Both a primary and a secondary source.
(D) Exempt from peer review when submitted to a journal for publication.
- 331.** A small business would primarily rely on which source of information for customer needs?
(A) Market research reports
(B) Customer surveys
(C) Social media analytics
(D) Direct customer feedback
- 332.** Asking customers if they like the new loyalty program.
(A) Primary
(B) Secondary
- 333.** A first-hand or contemporary account of an event or topic. They are the most direct evidence of a time or event because they were created by people or things that were there at the time or event.
(A) Integrate
(B) Primary Source
(C) Secondary Source
(D) Plagiarism
- 334.** What data is commonly used to monitor changes in the land?
(A) Remote Sensing Data
(B) Cross sections
(C) Local wildlife observations
(D) None of above
- 335.** Data collected directly from its original source without any intermediary is known as
(A) Personal data
(B) Village data
(C) Primary data
(D) Quarterly data
- 336.** A pro of primary research is:
(A) It's always free
(B) Information is highly specific
(C) It's widely available online
(D) It's quick to gather
- 337.** Why do we need to know what type of Source we are looking at?
(A) Primary Sources are more interesting and we only want to have interesting Sources
(B) Different Source types provide different perspectives
(C) We need to have an equal amount of both Sources
(D) We need to know how a Source relates to the topic and if a Source is valuable and valid
- 338.** What is the primary source of data in research methods?
(A) Books and articles
(B) Respondents and participants
(C) Tables and graphs
(D) Statistical analysis
- 339.** A photograph of a protest march taken by a journalist is a:
(A) Primary Source
(B) Secondary Source
- 340.** Those from which you obtain information "first hand" from an original source and are typically more reliable —
(A) Primary Source
(B) Secondary Source
(C) Treachery Source
(D) Location Source

- 341.** Which of the following is NOT a reason to use primary sources in research?
- (A) To gain a firsthand perspective of historical events
 - (B) To provide evidence that supports your thesis
 - (C) To replace the need for secondary sources
 - (D) To understand the historical context of an event
- 342.** Which of the following research sources will provide you with firsthand information?
- (A) Internet websites and articles
 - (B) Reference books
 - (C) Electronic databases
 - (D) Interviews
- 343.** Primary sources are always more reliable and credible than secondary sources.
- (A) True
 - (B) False
- 344.** When the researcher gets information from someone directly, that person is a:
- (A) Primary source
 - (B) Target population
 - (C) Secondary source
 - (D) Informant
- 345.** True or False: Primary/Original research is information that has not already been found and written about by someone else.
- (A) False
 - (B) True
- 346.** When the data and information collected is fresh data collected for a specific purpose.
- (A) Personal data
 - (B) PERT
 - (C) Physical protection methods
 - (D) Primary research method
 - (E) Project life cycle
- 347.** Which of the following is an example of using a primary source in a scientific study?
- (A) Analyzing data from a recent experiment
 - (B) Reading a review article on the topic
 - (C) Consulting a textbook for background information
 - (D) Watching a documentary about the research area
- 348.** ____ are originated by a researcher for the specific purpose of addressing the problem at hand.
- (A) Synthesis
 - (B) Theories
 - (C) Secondary data
 - (D) Primary data
- 349.** Which of the following is a benefit of using primary data?
- (A) It is more specific to the research question
 - (B) It is always more reliable
 - (C) It is less expensive to collect
 - (D) It requires less time to gather
- 350.** Primary data can be collected through
- (A) Experiment
 - (B) Survey
 - (C) Experiment and Survey
 - (D) None of these
- 351.** What makes primary data more reliable than secondary data?
- (A) It is always collected faster.
 - (B) It is gathered by the researcher themselves.
 - (C) It is less expensive to collect.
 - (D) It is always more comprehensive.
- 352.** Which of the following is a Primary Source Document?
- (A) Movie about the Declaration of Independence
 - (B) Magazine Article about the Declaration of Independence

- (C) The Declaration of Independence in the National Archive Museum
(D) Commentary about the Declaration of Independence
- 353.** Which of the following data sources are more reliable?
(A) Primary
(B) Secondary
- 354.** Which is a more reliable source?
(A) Primary source
(B) Secondary source
- 355.** Which of the following is a primary source in the study of a new chemical compound?
(A) A journal article detailing the synthesis and properties of the compound
(B) A textbook chapter on chemical compounds
(C) A review article on chemical synthesis
(D) A blog post about chemical research
- 356.** One of the claimed advantages of primary data is that: 1) it is quick and easy to collect 2) it is usually up-to-date 3) it is always 100% accurate 4) it is cheap because it has already been collected
(A) 1
(B) 2
(C) 3
(D) 4
- 357.** What type of information does field research gather?
(A) Secondary information
(B) Primary/new information
(C) Historical information
(D) Theoretical information
- 358.** Written or created by someone who was present at an event
(A) Primary Source
(B) Secondary source
- 359.** What type of documents are scientific and technical reports, dissertations, deposited manuscripts, scientific translations, design documentation:
(A) Primary unpublished
(B) Primary published
(C) Reference secondary documents
(D) Abstract secondary documents
(E) There is no correct answer among the answers
- 360.** First hand information data are called
(A) Primary data
(B) Secondary data
(C) Both
(D) None of these.
- 361.** Letters, diaries, autobiographies, eyewitness accounts
(A) Examples of third person point-of-view
(B) Contains only indirect quotes
(C) Examples of secondary sources
(D) Examples of primary sources
- 362.** Firsthand evidence of an event in history
(A) Primary source
(B) Secondary source
(C) Third source
(D) Bias
- 363.** A document or other record of past events created by someone who was present during the events or the time period in which they occurred.
(A) Secondary Source
(B) Primary Source
- 364.** The researchers wanted to control their data collection. What data would they use?
(A) Primary data
(B) Secondary data
(C) Quantitative data
(D) Qualitative data

365. A document or source that was created during the time under study is known as:
- (A) Secondary Source
 - (B) Tertiary Source
 - (C) Primary Source
 - (D) Quaternary Source
366. A ____ source is an original object or document-the raw material or first-hand information
- (A) Primary
 - (B) Secondary
 - (C) Main
 - (D) Reliable
367. Gathering data and information through interviews you conduct.
- (A) Primary
 - (B) Secondary
368. Gathering data that has not been collected before. Methods to collect it can include interviews, surveys, observations or any type of research that you go out and collect yourself.
- (A) PARAPHRASE
 - (B) PLAGIARISM
 - (C) PRIMARY RESEARCH
 - (D) SECONDARY RESEARCH
369. Information collected for the very first time to fit a specific purpose.
- (A) Primary data
 - (B) Secondary data
 - (C) Quantitative data
 - (D) None of above
370. An advantage of using primary data in a marketing research project is that they are
- (A) Easier to collect than secondary data.
 - (B) Quicker to collect than secondary data.
 - (C) Usually more up-to-date than secondary data.
 - (D) Less expensive to collect than secondary data.
371. A travelling is an example of?
- (A) Tertiary
 - (B) Primary
 - (C) Secondary
 - (D) None of above
372. One of the following is not included in the method of collecting primary data.
- (A) Observation
 - (B) Questionnaire
 - (C) Schedule method
 - (D) All of the above.
373. Which of the following is not a method of primary data collection?
- (A) Direct personal investigation
 - (B) Collection of information through questionnaire
 - (C) Indirect oral investigation
 - (D) Reports of committees and commissions
374. A primary source is ____
- (A) Information created at the time that the topic happened that is being researched, first-hand
 - (B) Elementary kids telling you something
 - (C) Yellow, red, or blue source
 - (D) The first thing you research
375. The benefit of primary research is ____
- (A) It is quick to do
 - (B) It is cheaper
 - (C) You have more control and it might be more reliable
 - (D) None of above
376. User trials are classed as which type of data collection?
- (A) Secondary source
 - (B) Primary source
 - (C) Tertiary source
 - (D) None of the above

377. Letters, diaries, and government records are examples of secondary sources.
(A) TRUE
(B) FALSE
378. A document or object which was written or created by someone who saw or experienced the event
(A) Primary source
(B) Secondary source
(C) Scholarly
(D) Encyclopedia
379. Original source from which researcher directly collects the data that has not been previously collected
(A) Primary data.
(B) Secondary Data.
(C) Tertiary Data.
(D) None of these.
380. How can you gather data yourself (otherwise known as primary data)?
(A) Surveys
(B) Ordering pizza
(C) Eating at panera
(D) None of above
381. What is the term for data that is collected specifically for the study at hand?
(A) Primary
(B) Secondary
(C) Attitude
(D) Media
382. The main difference between primary sources and secondary sources is ____
(A) If you can find it in a dictionary
(B) Where they are from
(C) Perspective/point-of-view
(D) If it is fiction or nonfiction
383. Conducting Surveys is the most common method of generating
(A) Primary data
(B) Secondary data
(C) Qualitative data
(D) None of these
384. What source of data is referred to in this statement? Recording the observations on customers' behavior when choosing cosmetics products to purchase in a supermarket.
(A) Primary
(B) Secondary
385. You are researching 19th century acting styles. Which source is most credible?
(A) The New York Times theater reviews from the 19th century
(B) Diaries from 20th century actors
(C) Your teacher
(D) Wikipedia's page on "19th Century Acting"
386. Data that describes a group of people in terms of age, marital status, family size, ethnicity, gender, profession, education, and income is called ____
(A) Demographic data
(B) Psychographic data
(C) Geographic data
(D) None of above
387. A source created about an event or time-period by someone who was there
(A) Primary
(B) Secondary
388. Why is primary data considered more relevant than secondary data?
(A) It is cheaper to obtain.
(B) It is collected by someone else.
(C) It can be directed to find precise data needed.
(D) It is always more accurate.
389. Data originally collected in the process of investigation are known as
(A) Secondary data
(B) Foreign data

- (C) Primary data
(D) Third data
- 390.** Which of the following is a source of primary data collection method?
(A) Journals
(B) Newspapers
(C) Surveys
(D) Textbooks
- 391.** A photograph is an example of a
(A) Questionnaire
(B) Secondary Source
(C) Primary Source
(D) None of these
- 392.** Surveys, focus groups, customer interviews conducted by a business are considered ____
(A) Primary research
(B) Secondary research
(C) Qualitative research
(D) Quantitative research
- 393.** Examples of primary data are
(A) Company records or archives, government publications, industry analysis, websites and the Internet.
(B) Individuals' responses on a set of questionnaires, and interviews generated from focus groups and panels of respondents.
- 394.** Which of the following is a disadvantage of using primary data?
(A) It may not be specific enough for the research question
(B) It is not reliable
(C) It requires more time and resources to collect
(D) It cannot be updated
- 395.** Which type of source includes original research studies?
(A) Secondary Sources
(B) Primary Sources
(C) Review Sources
(D) Mixed Sources
- 396.** What kind of data are contained in the census of population and national income estimates, for the government?
(A) Primary data
(B) Secondary data
(C) Internal data
(D) None of these
- 397.** Internal secondary data may come from all of the following EXCEPT:
(A) Inventory reports
(B) Quarterly sales reports
(C) New customer surveys
(D) Customer data
- 398.** What type of source is a autobiography?
(A) Primary
(B) Secondary
- 399.** There are four methods for collecting primary data
(A) True
(B) False
- 400.** Which formal research source is best to obtain firsthand information?
(A) Internet Web sites and articles
(B) Reference books
(C) Electronic databases
(D) Interviews
- 401.** Sources created by people who witnesses or took part in the events they describe are?
(A) Primary source
(B) Database
(C) Secondary source
(D) Index
- 402.** Contents analysis involves primary data.
(A) True
(B) False
- 403.** Information found in an encyclopedia is an example of a primary source.
(A) True
(B) False

- 404.** What type of source is a diary from World War II?
(A) Secondary source
(B) Primary source
(C) Tertiary source
(D) None of the above
- 405.** Which of the following is the source of primary data
(A) Personal records.
(B) Personal diaries, autobiography.
(C) Official records.
(D) All of the above.
- 406.** The original source from which researcher collects information is ____
(A) Primary Source
(B) Secondary Source
(C) Both primary and secondary
(D) None of these
- 407.** An interview is an example of ____
(A) Primary Source
(B) Secondary Source
- 408.** Which of the following is an example of a primary source?
(A) A scientist's original lab notes
(B) A newspaper article about a scientific discovery
(C) A documentary on a scientific topic
(D) A science magazine summarizing recent studies
- 409.** Court records
(A) Primary
(B) Secondary
(C) Tertiary
(D) None of the above
- 410.** What makes a primary source reliable?
(A) It's a firsthand account of an event or time period
(B) It was written last year
(C) It has many advertisements
(D) It's written anonymously
- 411.** A Diary
(A) Primary
(B) Secondary
- 412.** Researchers are conducting focus groups as part of their current marketing research project. The results of these focus groups are examples of:
(A) Secondary data.
(B) Relevant variables.
(C) Units of analysis.
(D) Primary data.
- 413.** An example of primary research is:
(A) Academic journals
(B) Customer surveys
(C) Newspaper articles
(D) Government reports
- 414.** Your environmental studies professor has assigned a research paper about dams in North America. At least 2 of your sources must be primary. Which of the following is an example of a primary source?
(A) PBS documentary about major dams
(B) Photos taken of Lake Powell in 1955 before the construction of the Glen Canyon Dam
(C) A manual published in 2012 about maintaining original electrical systems in dams
(D) All of the above
- 415.** Data from primary sources always contain accurate information, true or false
(A) True
(B) False
- 416.** Raw Data is defined as:
(A) Processed information
(B) Unorganized and unprocessed facts
(C) Summarized data
(D) Analyzed results

417. Metro Center mall conducts personal interviews with customers to find out why no one visits this mall anymore.
(A) Primary
(B) Secondary
418. A firsthand account of an event given by someone who was actually at the event is considered a ____
(A) Primary source
(B) Secondary source
(C) Wikipedia entry
(D) Google search
419. What kind of source is a door to door interview?
(A) Primary
(B) Secondary
420. Suppose you want to study the social integration of Filipino nurses that immigrated to work in Ireland over the past 5 years. What method would be best suited?
(A) Primary research
(B) Secondary research
421. What is data called that the researcher does themselves?
(A) Secondary
(B) Private
(C) Primary
(D) Autonomous
422. Research data, such as census statistics Official and unofficial records of organizations and government agencies Artifacts of all kinds, such as tools, coins, clothing, furniture, etc. Audio recordings, DVDs, and video recordings Government documents (reports, bills, proclamations, hearings, etc.) Patents Technical reports Scientific journal articles reporting experimental research results Are known as
(A) Primary
(B) Secondary
(C) Documents
(D) None of above
423. The data which are collected from the place of origin is known as:
(A) None of these
(B) Primary & Secondary
(C) Secondary data
(D) Primary data
424. What type of source is this? An original photograph from the 1941 attack at Pearl Harbor that you found in your grandparents photo album
(A) Primary
(B) Secondary
425. Which of the following best defines primary market research? 1) It is data collection that always produces quantitative (number based) results 2) It uses information that has already been collected 3) It is also known as desk research 4) It gathers original data by contacting consumers directly
(A) 1
(B) 2
(C) 3
(D) 4
426. Data originally collected in the process of investigation are known as
(A) Foreign data
(B) Primary data
(C) Third data
(D) Secondary data
427. What type of research involves collecting data that does not yet exist?
(A) Primary research
(B) Secondary research
(C) Market research
(D) Product research
428. ____ is information you obtain for the first time and use specifically for your study.
(A) Reputable data
(B) Primary data
(C) Secondary data
(D) Descriptive research

429. Which type of source is shown in the image?
(picture of the civil war)
(A) Primary
(B) Secondary
430. A primary research is used to collect raw data from
(A) Competitors
(B) Producers
(C) Respondents
(D) None of above
431. Primary data refer to information obtained ____ by the researcher on the variables of interest for the specific purpose of the study.
(A) First-hand
(B) Second-hand
(C) Third-hand
(D) None of above
432. Interviews are one type of field research, which is often referred to as ____ research because the researcher interacts directly with the subject(s) and is engaged in the activities and behavior of the thing being studied.
(A) Primary
(B) Secondary
433. I'm studying dinosaurs in the Jurassic period. Dinosaur fossils from the Jurassic period are ____
(A) Primary Sources
(B) Secondary Sources
434. Interviews and questionnaires are classed as ____ research data.
(A) Primary
(B) Secondary
(C) Tertiary
(D) Qualitative
435. Which primary data collection method involves collecting data from a representative sample of a population?
(A) Interviews
(B) Observations
(C) Surveys
(D) Experiments
436. Information that can be collected during an investigation
(A) Thesis
(B) Variables
(C) Observable
(D) Trial
437. Which is not an example of primary market research.
(A) Surveys.
(B) Published reports.
(C) Questionnaires.
(D) Interviews.
438. A research journal article written by the researchers who conducted a study is a(n) ____ source for a research review:
(A) Primary
(B) Secondary
(C) Electronic
(D) Qualitative
439. Which of the following is not a contact method used in primary research?
(A) Mail
(B) Telephone
(C) Personal
(D) Research that has already been done before
440. Which of the following is an example of a primary data source:
(A) Inventory reports
(B) Survey
(C) Sales reports
(D) Expense reports
441. Which of the following is considered a primary resource?
(A) Diary
(B) Encyclopedia
(C) Junior Scholastic magazine
(D) History textbook

442. A direct account of an event or time period in history
(A) Agricultural Revolution
(B) Neolithic Age
(C) Paleolithic Age
(D) Primary source
443. What is an example of a primary research method?
(A) Books and journals
(B) Focus groups
(C) Magazines
(D) Television
444. If I wanted to look into the original maps of the West Indies, designed by the Spaniards during the era of conquest, what type of source should I use?
(A) Primary
(B) Secondary
445. Collection, accumulation and processing of information consists in:
(A) Finding primary sources material and working with them;
(B) Preparing for the experiment and conducting it;
(C) Mathematical planning of the experiment;
(D) Registration of information in the form of a form-card;
(E) The calculation of a certain technological scheme of production;
446. What kind of source is a small group or focus group?
(A) Primary
(B) Secondary
447. The data gathered from this kind of research is called ____, because you are collecting it directly from people and it reflects their current attitude or opinion about food, atmosphere, and other topics. Other examples of ____ include questionnaires, interviews, and focus groups or group interviews.
(A) Primary Data
(B) Main Data
(C) Alternate Data
(D) Secondary Data
448. What is the main advantage of using individuals as a source of data?
(A) They provide current information
(B) They are always available for interviews
(C) Their knowledge and expertise is reliable
(D) Their questionnaire responses will not be biased
449. Data obtained for the first time and used specifically for the particular problem or issue being studied is known as
(A) Market data
(B) Consumer data
(C) Secondary data
(D) Primary data
450. Conduction surveys is the most common method of generating
(A) Primary data
(B) Qualitative data
(C) Secondary data
(D) Schedule
(E) Not aware of
451. In a scientific experiment, which type of data is collected directly from the experiment itself?
(A) Primary data
(B) Secondary data
(C) Tertiary data
(D) Quaternary data
452. Which statement describes a primary source?
(A) A letter written by a Revolutionary soldier
(B) An encyclopedia entry about the French and Indian War
(C) A documentary describing the Civil War
(D) An essay explaining the history of the Middle Colonies Edit

453. Testimony from living witnesses; narrative records, such as previous histories, memoirs, letters, and imaginative literature; are known as?
- (A) Primary Source
 - (B) Secondary Source
454. Primary sources provide:
- (A) Firsthand information or data from the time period being studied.
 - (B) Opinions or interpretations of the time period being studied.
 - (C) Information or data from a different time period.
 - (D) Secondhand information or data from the time period being studied.
455. Methods to collect Primary Data are
- (A) Interview, Survey
 - (B) Observation, Experimentations
 - (C) Both of the above
 - (D) None of the above
456. Information collected for the first time to solve the problem being studied
- (A) Primary Data
 - (B) Secondary Data
 - (C) Market Research
 - (D) None of above
457. Focus groups are one of the ____ effective and routinely used primary research techniques.
- (A) Least
 - (B) Most
 - (C) Only
 - (D) Consistently
458. Which of the following is an advantage of using primary data in research?
- (A) It is less expensive to obtain
 - (B) It provides specific insights tailored to the research
 - (C) It is easier to access
 - (D) It is already analyzed and interpreted
459. Which term describes a source that provides firsthand evidence or direct data?
- (A) Secondary source
 - (B) Primary source
 - (C) Tertiary source
 - (D) Quaternary source
460. A primary source is created by someone who
- (A) Read about an event.
 - (B) Made up an event from their imagination.
 - (C) Was present at an event.
 - (D) Heard about an event from a witness.
461. What kind of data is it if you collect the number of cars passing by your house each hour?
- (A) Secondary
 - (B) Primary
462. What is the DIFFERENCE between a Primary and Secondary Source?
- (A) They are the same
 - (B) A Primary Source comes DIRECTLY from a person who experienced an event. A Secondary Source is information that DOES NOT COME DIRECTLY from a person who experienced that event.
 - (C) A Primary Source DOES NOT COME DIRECTLY from a person who experienced an event. A Secondary Source is information that comes DIRECTLY from a person who experienced that event.
 - (D) None of above
463. What should be verified about primary sources?
- (A) Their location and time of publication
 - (B) Their identification and experts' credentials, affiliations, and impartiality
 - (C) Their popularity and number of citations
 - (D) Their length and complexity
464. Autobiographies
- (A) Primary Source
 - (B) Secondary Source
 - (C) Tertiary Source
 - (D) None of above

- 465.** Which of the following is a major disadvantage associated with the collection of primary data in the course of marketing research?
- (A) It provides the most recent data possible
 - (B) It is typically expensive
 - (C) It allows for secrecy from competitors
 - (D) It fits the firm's marketing needs well
 - (E) Data collection is rapid
- 466.** All of the following are secondary sources, EXCEPT:
- (A) An encyclopedia.
 - (B) A biography.
 - (C) A personal letter.
 - (D) A book about famous people.
- 467.** Which of the following would be the most reliable source of information for a school report?
- (A) Political blog or radio show.
 - (B) Wikipedia.
 - (C) [Www.nationalgeographic.com](http://www.nationalgeographic.com).
 - (D) None.
- 468.** A record of past events created by someone who was at the events when they happened
- (A) Secondary Source
 - (B) Primary Source
- 469.** Primary research data can be defined as ____
- (A) Information that comes from reading what others have experienced and observed
 - (B) Information gained from firsthand experience and observation
 - (C) Statistics collected during the first stage of research
 - (D) Data received from the World Wide Web
- 470.** Why is it important to critically evaluate primary sources?
- (A) To ensure their reliability, accuracy, and relevance to the research topic.
 - (B) To ignore the credibility and accuracy of the information
 - (C) To save time and effort by not evaluating the reliability
 - (D) To blindly trust the primary sources without verification
- 471.** What is an example of a primary source in history?
- (A) Newspaper articles about World War I
 - (B) Textbooks about World War I
 - (C) Interviews with historians about World War I
 - (D) Diaries written by soldiers during World War I
- 472.** Dr. Garcia is conducting a study on the impact of online learning on high school students. Which of the following would be considered a primary source for her research?
- (A) A blog post discussing the challenges of online learning
 - (B) An article reviewing online learning outcomes
 - (C) A survey conducted with high school students about their online learning experiences
 - (D) A book published about the history of online education
- 473.** Primary source documents are all of the following EXCEPT ____
- (A) First hand accounts of someone's experience
 - (B) Analysis of events
 - (C) An original document that does not analyze other documents
 - (D) Original research
- 474.** Immediate, first-hand accounts of a topic, from people who had a direct connection with it. They may have witnessed the event or know people who did.
- (A) Secondary Sources
 - (B) Primary Sources
 - (C) Annotations
 - (D) Bias
- 475.** All primary research
- (A) Involves talking directly to people

- (B) Requires a questionnaire
(C) Involves a focus group
(D) Is collected for a specific purpose
- 476.** Which source is a primary source?
(A) A recent textbook chapter explaining the causes of an ancient war
(B) A museum curator's blog post summarizing several articles
(C) A soldier's first-hand diary written during the war
(D) A modern documentary that analyzes old letters
- 477.** Manuals and guidebooks
(A) Tertiary Source
(B) Primary Source
(C) Secondary Source
(D) None of above
- 478.** One of the claimed advantages of primary data is that:
(A) It is quick and easy to collect
(B) It is usually up-to-date
(C) It is always 100% accurate
(D) It is cheap because it has already been collected
- 479.** ___ is the collection and collation (put together) of original data via direct contact with potential or existing customers. [Also called field research]
(A) Primary research
(B) Secondary research
(C) Focus group
(D) Interviews
- 480.** A scrapbook of a soldier from the Civil War is a:
(A) Primary source
(B) Secondary source
(C) Tertiary source
(D) None of the above
- 481.** Maddie is creating a survey to determine student's favorite place to shop. This type of research is:
(A) Primary
(B) Secondary
(C) Sales
(D) Product
- 482.** A letter from a soldier in the Civil War is a:
(A) Secondary source
(B) Tertiary source
(C) Primary source
(D) Fictional document
- 483.** Which type of data set is expensive, more time consuming and has a higher level of control?
(A) Primary data
(B) Secondary data
- 484.** These sources were present during an experience or time period and offer an inside view of a particular event.
(A) Primary source
(B) Secondary source
(C) Comic book
(D) Coloring book
- 485.** Primary research sometimes also referred to as Field research.
(A) True
(B) False
- 486.** ___ sources are original materials such as experiments, observations, surveys, interviews, diaries, first-person accounts, and so on.
(A) Primary
(B) Secondary
- 487.** Primary data is collected:
(A) From books
(B) First-hand by researcher
(C) From journals
(D) From government reports

- 488.** Data collected by the researcher themselves is known as secondary data.
- (A) True
 - (B) False
- 489.** Which of these is NOT an example of a primary source?
- (A) Original uniforms worn at a time in history
 - (B) Diaries written at the time of an event
 - (C) Film footage of a historical event
 - (D) A poem about World War II from your classmate
- 490.** Researchers need to be familiar with these three basic types of sources:
- (A) General references, historical resources, and secondary resources.
 - (B) General references, primary resources, and secondary resources.
 - (C) Tertiary references, primary resources, and secondary resources.
 - (D) General references, primary resources, and statistical resources.
- 491.** What is a direct data source?
- (A) Data collected for a specific purpose
 - (B) Data that is dynamic
 - (C) Data that is static
 - (D) Data obtained from a third party
- 492.** Which type of source is shown in the image? (map of the indies)
- (A) Primary
 - (B) Secondary
- 493.** Scientific and technical information is conventionally divided into:
- (A) Primary and secondary
 - (B) Secondary and tertiary
 - (C) Primary and tertiary
 - (D) Secondary and first
- 494.** Emma is working on a history project and needs to find a primary resource. Which of the following should she choose?
- (A) A textbook summarizing historical events
 - (B) A newspaper article analyzing a political speech
 - (C) An audio recording of a President's inauguration speech
 - (D) A blog post discussing a scientific study
- 495.** A video recording of a panel discussion on renewable energy at a global conference is a:
- (A) Primary Source
 - (B) Secondary Source
- 496.** What is a key feature of primary sources in science?
- (A) They provide a summary of existing research
 - (B) They contain original research data or findings
 - (C) They offer a broad overview of a topic
 - (D) They are often used for quick reference
- 497.** Primary data is generally considered to be:
- (A) Less relevant
 - (B) Less expensive
 - (C) More reliable and specific
 - (D) Already analysed
- 498.** Materials created by people who witnessed or took part in the event they supply information about
- (A) Relevance
 - (B) Primary source
 - (C) Secondary source
 - (D) Credible source
- 499.** Which is NOT an example of primary data?
- (A) Financial reports
 - (B) Surveys
 - (C) Polls
 - (D) Focus Groups

- 500.** How can you determine if a source is primary or secondary?
- (A) Consider its proximity to the original event or data and whether it is a firsthand account or an interpretation of primary sources.
 - (B) Look for the publication date of the source.
 - (C) Consider the length of the source.
 - (D) Check if the source is written by a well-known author.
- 501.** Commonly used primary data collection methods are:
- (A) Survey & Interviews
 - (B) Survey & Focus Groups
 - (C) Observation & Survey
 - (D) Survey & Experiment
- 502.** If you wanted to conduct research about the Great Flood of 1993, where would be the best place to get more information?
- (A) Thesaurus
 - (B) Dictionary
 - (C) Newspaper article about the flood
 - (D) Encyclopedia
- 503.** Diaries, journals, speeches, letters, legal documents, and experiments are considered to be ____
- (A) Primary sources
 - (B) Secondary sources
 - (C) Wikipedia entries
 - (D) Google search terms
- 504.** A researcher conducted a focus group to understand the motives behind consumer rejection for a brand's previous collection. This researcher is collecting ____ data
- (A) Functional
 - (B) Secondary
 - (C) Historical
 - (D) Primary
- 505.** Which of the following involves collecting first-hand data
- (A) Secondary inquiry
 - (B) Product analysis
 - (C) Primary research
 - (D) Feasibility study
- 506.** Research that I have collected myself is called ____
- (A) Secondary research
 - (B) Tertiary research
 - (C) Primary research
 - (D) Opinion based research
- 507.** What type of source is this? Amerindian artefact found in Banwari trace
- (A) Primary Source
 - (B) Secondary Source
- 508.** True or False: primary research is very generic and not specific.
- (A) True
 - (B) False
- 509.** Secondary data can almost always be obtained more quickly and at a lower cost than ____ data.
- (A) Tertiary
 - (B) Collective
 - (C) Research
 - (D) Primary
- 510.** A photograph is an example of
- (A) Primary
 - (B) Secondary
- 511.** Research you do for a study.
- (A) Primary Research
 - (B) Secondary Research
 - (C) All the above
 - (D) None of the above
- 512.** A Native American's journal that describes what it was like to meet white settlers for the first time
- (A) Primary
 - (B) Secondary

513. An original first hand source, such as a speech or a letter.
- (A) Objective source
 - (B) Subjective source
 - (C) Primary source
 - (D) Secondary source
514. A firsthand account such as a diary entry, autobiography, or letter that shows intimate details
- (A) Primary source
 - (B) Trustworthy source
 - (C) Secondary source
 - (D) Unreliable source

1.4.3 Secondary Data

1. Mona is reading a book about her project. What source of information will she get from the book?
- (A) Tertiary
 - (B) Secondary
 - (C) Primary
 - (D) Nursery
2. Where should you look for high-quality secondary sources during background research?
- (A) Any available sources.
 - (B) Social media and blogs.
 - (C) Journal articles, academic books, and reliable websites.
 - (D) None of the above
3. If a sociologist were to analyze pre-collected data, like U.S. Census Bureau reports or U.S. Department of Labor reports, what type of research would they be doing?
- (A) Primary Analysis
 - (B) Participant Observation
 - (C) Questionnaire
 - (D) Secondary Analysis
4. Which type of research involves analyzing and interpreting data collected by someone else?
- (A) Primary sources
 - (B) Secondary sources
 - (C) Tertiary sources
 - (D) Quaternary sources
5. They are classified as ____ sources when they describe, interpret or analyze primary sources.
- They are often information written or presented by authors who did not personally witness an event or occurrence.
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of the above
6. Michael Kors Fashions examines financial documents available from a large marketing firm for other apparel stores of its size.
- (A) Primary
 - (B) Secondary
7. Which of the following is not the published sources?
- (A) Govt publications
 - (B) Semi govt publications
 - (C) International publications
 - (D) Website
8. What are the materials used to gather information: books, encyclopedias, magazines, websites?
- (A) Homework
 - (B) Supplies
 - (C) Instructions
 - (D) Resources
9. Which is NOT an example of secondary data?
- (A) Sales reports
 - (B) Government reports
 - (C) Financial reports
 - (D) Statistical methods

10. What is a disadvantage of secondary data?
- (A) It is collected directly
 - (B) It may be outdated
 - (C) It always fits your needs
 - (D) It is always accurate
11. What are statistical sources?
- (A) Sources that use qualitative data
 - (B) Sources that provide historical information
 - (C) Sources that contain a collection and organization of numerical data
 - (D) Sources that focus on theoretical concepts
12. Secondary data are ____
- (A) Collected mostly via surveys
 - (B) Expensive to obtain
 - (C) Never purchased from outside suppliers
 - (D) Not always very usable
13. Which form of data below can usually be obtained more quickly and at a lower cost than the others?
- (A) Secondary Data
 - (B) Primary Data
 - (C) Online marketing research
 - (D) None of the above
14. What is 'desk research' in the context of data collection?
- (A) Field research
 - (B) In-depth interviews
 - (C) Secondary research
 - (D) Qualitative research
15. Which of the following is an example of Secondary Sources Literature?
- (A) Statistical data
 - (B) Review Article
 - (C) Survey Data
 - (D) Audio & Videos
16. External secondary research involves ____
- (A) Original research conducted internally
 - (B) Existing research gathered outside of a researcher's company
 - (C) Original research conducted by an external firm
 - (D) Existing research gathered within a researcher's own company
17. Secondary research is an unstructured, exploratory research methodology based on small samples intended to provide insight and understanding of the problem setting
- (A) True
 - (B) False
18. There are several sources of research. These are published writings and reports that critique or reports on primary sources and can be found in periodical and references books.
- (A) Primary sources.
 - (B) Secondary sources.
 - (C) Tertiary sources.
 - (D) Non-documentary searching.
19. Sources are ____
- (A) Articles, books, magazines, etc. that are used to gather facts for research
 - (B) Quotations used in text evidence
 - (C) A list that shows all the source citations
 - (D) None of the above
20. Which statements are true about secondary data?
- (A) Past data
 - (B) Low cost or free
 - (C) Lack of control over data quality
 - (D) All of the above
21. Research that involves using already existing data is called ____
- (A) Secondary research
 - (B) Primary research
 - (C) Quantitative data
 - (D) Existential data

22. These are materials made by people long after the events being described had taken place.
- (A) Diplomatic source
 - (B) Primary source
 - (C) Scientific source
 - (D) Secondary source
23. Type of data obtained when one accesses databases on the Internet.
- (A) Primary
 - (B) Secondary
24. A common secondary research source includes:
- (A) Focus groups
 - (B) Surveys
 - (C) Published journals
 - (D) Interviews
25. Is it primary (direct from source) or secondary (indirectly)? "news broadcasts"
- (A) Primary
 - (B) Secondary
26. What type of source is a meta-analysis in scientific research?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) Experimental source
27. How can books be useful in secondary market research?
- (A) They provide real-time data.
 - (B) They offer detailed information on a wide range of topics.
 - (C) They are always free to access.
 - (D) They provide competitor analysis.
28. What type of source is a newspaper reporter?
- (A) Primary
 - (B) Secondary
29. Why might a researcher choose to use secondary data?
- (A) It is more time-consuming to collect
 - (B) It is less reliable
 - (C) It is already available and can save time
 - (D) It is more specific to the researcher's needs
30. Data that have been previously collected, used, or analyzed by another individual or group for specific purposes are known as:
- (A) Interviews
 - (B) Questionnaires
 - (C) Primary data
 - (D) Secondary data
31. The only thing to be seen before using Secondary data is that they are
- (A) Reliable.
 - (B) Adequate for the purpose in hand.
 - (C) Representative.
 - (D) All of the above.
32. A scientist uses data from a previous study to support their hypothesis. What type of data are they using?
- (A) Primary data
 - (B) Secondary data
 - (C) Experimental data
 - (D) Qualitative data
33. What is the primary role of secondary sources in the scientific community?
- (A) To present new research findings
 - (B) To provide raw data for experiments
 - (C) To summarize and interpret existing research
 - (D) To offer a broad overview of a topic
34. Sources created by people not directly involved in the events they describe are?
- (A) Plagiarism
 - (B) Database
 - (C) Primary source
 - (D) Secondary source

35. Which document is a secondary source?
- (A) Research findings on video gaming's effects
 - (B) Population statistics from the U.S Census Bureau
 - (C) An almanac
 - (D) Abraham Lincoln's Gettysburg Address
36. Secondary sources can be divided into government data sources, private data sources and internet data base.
- (A) True
 - (B) False
37. Secondary data consist of ____
- (A) Information collected for the specific purpose at hand
 - (B) Data that does not age
 - (C) Information that already exists somewhere, having been collected for another purpose
 - (D) Information collected from conducting personal, in-depth interviews
38. Secondary data are found
- (A) In government publications
 - (B) On the Internet
 - (C) In newspapers
 - (D) All of these
39. In conducting secondary data research, what is the next step after assessing the availability of the secondary data?
- (A) Assess Inclusion of Key Variables
 - (B) Assess sampling
 - (C) Assess construct validity
 - (D) Specify the construct theoretically
40. Data collected from Economic Times news paper is an example of
- (A) Secondary data.
 - (B) Observed data.
 - (C) Historical data.
 - (D) Primary data.
41. A textbook chapter explaining the effects of the Industrial Revolution is a:
- (A) Primary Source
 - (B) Secondary Source
42. Works that analyze, interpret, or critique primary sources are called:
- (A) Primary sources
 - (B) Secondary sources
 - (C) Tertiary sources
 - (D) Quaternary sources
43. A book about Roman bridges written by a historian is a:
- (A) Primary source
 - (B) Secondary source
44. Information created by someone not present during the event is known as:
- (A) Primary Source
 - (B) Eyewitness Account
 - (C) Secondary Source
 - (D) Tertiary Source
45. What can affect the results of secondary research?
- (A) The biases in the original primary research.
 - (B) The ease of access to the research.
 - (C) The number of researchers involved.
 - (D) The cost of conducting the research.
46. The writers were not directly involved or present at the time of the event is known as what?
- (A) Source
 - (B) Tertiary Source
 - (C) Primary Source
 - (D) Secondary Source
47. What is secondary sources?
- (A) Interview session with the sample
 - (B) Data collect from an experiment
 - (C) Any data gained from a survey or questionnaires
 - (D) Publications, government documents, brochures, newsletters, annual reports

48. Somebody else has already put their own interpretation on the original information. The accuracy of information might need to be checked when using ____ sources.
- (A) Primary Source
 - (B) Secondary Source
 - (C) Treachery Source
 - (D) Location Source
49. Textbooks, biographies, newspaper articles, magazine articles, and biographies are considered to be ____
- (A) Primary sources
 - (B) Secondary sources
 - (C) Wikipedia entries
 - (D) Google search terms
50. Secondary data are an economical and quick source of background information
- (A) True
 - (B) False
51. Identify if the given item is PRIMARY, SECONDARY, or TERTIARY source: newspapers
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of the above
52. Which of the following is an example of a secondary source in online research?
- (A) An original research article.
 - (B) A historical document.
 - (C) A book review.
 - (D) A scientific experiment.
53. Sources of internal secondary research include each of the following, except ____
- (A) Existing customer survey results
 - (B) Sales data from customer databases
 - (C) Existing employee satisfaction survey results
 - (D) Population statistics of a target market area
54. A secondary source is ____
- (A) The second thing you research
 - (B) Purple, green, or pink source
 - (C) A source that discusses information originally presented somewhere else-written later by someone that did not experience it first hand
 - (D) Discusses information about second thoughts
55. In which criteria of secondary data evaluation researcher checks "Assess accuracy by comparing data from different sources."?
- (A) Specifications/ Methodology
 - (B) Error/Accuracy
 - (C) Currency
 - (D) Dependability
56. Your local library is good place to gather ____ data
- (A) Secondary
 - (B) Primary
57. Identify if the given item is PRIMARY, SECONDARY, or TERTIARY source: textbooks
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of the above
58. Secondary research is also known as desk research / library research.
- (A) Yes
 - (B) No
59. Using raw data that others have collected is called
- (A) Primary data
 - (B) Secondary data
 - (C) Raw Data
 - (D) Information
60. Which of the following would be considered a secondary source in a scientific study?
- (A) A meta-analysis of clinical trials

- (B) A clinical trial report
(C) A scientist's field notes
(D) A patent application
61. Data that has already been collected for another study but can be applied to the current study/research is known as
(A) Market data
(B) Consumer data
(C) Secondary data
(D) Primary data
62. Secondary data refers to:
(A) Direct interviews
(B) Already existing data
(C) Surveys
(D) Case study
63. I was watching ESPN and one of the reporters said he had heard good reviews about a new sports movie. When he talks about the movie, what is he?
(A) Primary source
(B) Secondary source
64. Which is a disadvantage of secondary market research?
(A) Time consuming to collect and analyse
(B) Requires substantial financial investment
(C) Research data may not be up-to-date
(D) Specialist training and skills required to conduct effectively
65. Which of the following is NOT a characteristic of a secondary source?
(A) Interprets and analyzes primary sources
(B) One or more steps removed from the event
(C) May have pictures, quotes, or graphics of primary sources in them
(D) Created during an experience or time period with inside view of a particular event
66. Identify if the following is primary or secondary data. Definition: reference, interpret and comment on primary sources. (Source: Monash University)
(A) Primary Data
(B) Secondary Data
67. This Textbook is a Secondary Source
(A) True
(B) False
68. Before Sandra opened her florist shop she read all she could about the floral industry. She also consulted several published research reports to understand growth patterns in the local area with particular interest in the location of florists throughout the city. This — helped her to decide on the location of her store.
(A) Primary data
(B) Secondary data
(C) Primitive data
(D) Tertiary information
(E) License information
69. The data that has been collected by someone else but made available for others to use.
(A) Secondary Data
(B) Research Background
(C) Ethnography Research
(D) Observation
70. What is the purpose of background research in the context of a literature review?
(A) To create your own ideas.
(B) To provide a summary of secondary sources.
(C) To conduct surveys and interviews.
(D) None of the above
71. Sources that are not firsthand accounts, but combine and analyze primary sources to understand historical events
(A) Source
(B) Primary Source
(C) Secondary Source
(D) Tertiary Source

72. An advantage of secondary data over primary data is that secondary data are easier and cheaper to develop.
(A) True
(B) FALSE
73. This is a type of source that describes discusses, interprets, comments upon, analyzes, evaluates, summarizes, and processes primary sources.
(A) Popular Source
(B) Secondary Source
(C) Primary Source
(D) Scholarly Source
74. A tech startup uses insights from past studies and online articles to support its marketing research project. What type of data is this?
(A) Qualitative Data
(B) Secondary Data
(C) Primary Data
(D) Experimental Data
75. Secondary Data is?
(A) An Outside Source
(B) First Hand Source
(C) Numbers that start with 2
(D) Opinions and Attitudes
76. Which is not an internal record?
(A) Customer feedback.
(B) Sales.
(C) Marketing activity.
(D) Published data.
77. Which of the following is an advantage of using personal documents as secondary sources in sociological research?
(A) They provide large volumes of data.
(B) They offer unique perspectives on historical events.
(C) Personal documents are easily accessible online.
(D) They are created and published by government agencies.
78. What is one of the benefits of increased access to substantial sample sizes in secondary research?
(A) It decreases the validity of findings.
(B) It supports increased validity and more generalisable findings.
(C) It makes research more expensive.
(D) It limits the scope of research.
79. A scholarly journal discussing the impact of excessive drinking on high school students would be an example of a ____
(A) Primary Source
(B) Secondary Source
80. A source that comments on, analyzes, or otherwise relies on primary source
(A) Primary source
(B) Reference
(C) Data
(D) Secondary source
81. This source interprets and analyzes primary sources
(A) Ordinary Source
(B) Primary Source
(C) Secondary Source
(D) Third Source
82. ____ are those collected and interpreted at least once for some specific situation other than the current one. Availability of this type of information is normally high.
(A) Subjective information
(B) Secondary information
(C) Primary information
(D) None of above
83. An Internet search is an example of
(A) Secondary research
(B) Qualitative research
(C) Primary research
(D) Quantitative research

84. Secondary/existing data may include which of the following?
- (A) Official documents
 - (B) Personal documents
 - (C) Archived research data
 - (D) All of the above
85. Which is a method commonly used in secondary research?
- (A) Experiments
 - (B) Interviews
 - (C) Surveys
 - (D) Government reports
86. Dictionaries and encyclopedias
- (A) Tertiary Source
 - (B) Primary Source
 - (C) Secondary Source
 - (D) None of above
87. Secondary research means getting information — by reading what other researchers have compiled in books and articles (in print or online or both).
- (A) Secondhand
 - (B) Directly
88. A textbook describing the civil war.
- (A) Primary
 - (B) Secondary
89. Consist of research from public documents, books, journals, magazines, the Internet, and even the company's internal database.
- (A) Primary data
 - (B) Secondary data
90. External secondary data sources are:
- (A) Company records
 - (B) Employee databases
 - (C) Government publications
 - (D) Internal sales reports
91. A magazine article discussing the events of September 11, 2001, published in 2022.
- (A) Primary source
 - (B) Eyewitness account
 - (C) Secondary source
 - (D) Original document
92. State whether it is primary or secondary data sources. School records
- (A) Primary data
 - (B) Secondary data
93. A sport/event organization that wants to obtain information about the population in a certain geographic location might use
- (A) Government sources
 - (B) Primary Databases
 - (C) Personal Questionnaires
 - (D) Telephone surveys
94. A blog post summarizing the main points of a new research study on climate change is a:
- (A) Primary Source
 - (B) Secondary Source
95. I'm studying the French Revolution. A history textbook chapter about the French Revolution is a —
- (A) Primary Source
 - (B) Secondary Source
96. What is the advantage of internal secondary data?
- (A) It is readily available and accurate
 - (B) It covers an entire industry
 - (C) It is expensive to obtain
 - (D) It requires external verification
97. What is the primary focus of secondary sources?
- (A) To provide raw, unfiltered data
 - (B) To analyze and interpret historical events
 - (C) To document eyewitness accounts
 - (D) To create artifacts for study

98. Which term refers to a source of information that was created later by someone who did not experience first-hand or participate in the events or conditions you're researching?
- (A) Bias
 - (B) Primary source
 - (C) Secondary source
 - (D) Inquiry
99. Which of the following is an example of secondary market research?
- (A) Questionnaire
 - (B) Focus groups
 - (C) Interviews
 - (D) Trade magazines
100. List out the secondary sources
- (A) Interview
 - (B) Book
101. Which of the following is an example of a secondary source in science?
- (A) A scientist's lab notebook
 - (B) A peer-reviewed research article
 - (C) A science magazine article
 - (D) A raw data set
102. A book analyzing the global impact of the COVID-19 pandemic is a:
- (A) Primary Source
 - (B) Secondary Source
103. What is a limitation related to secondary data?
- (A) Relatively easy to analyse
 - (B) Data can be very consistent, precise and reliable
 - (C) Related secondary data is sometimes not available or accessing available data is difficult/impossible
 - (D) Findings can be generalised if selection process is well-designed and sample is representative of study population
104. Can a youtube video be used as a source for a research project?
- (A) Yes, depending on its credibility.
 - (B) No, absolutely not.
105. An encyclopedia entry on the causes of World War II is a:
- (A) Primary Source
 - (B) Secondary Source
106. Examples of this type of data include U.S. Census data and internal sales records.
- (A) Primary Data
 - (B) Secondary Data
 - (C) Sample
 - (D) None of above
107. Secondary data consists of information ____
- (A) That already exists somewhere and was collected for another purpose
 - (B) Used by competitors
 - (C) That does not currently exist in an organised form
 - (D) That already exists somewhere and is outdated
108. It is important to know the following when evaluating secondary sources
- (A) The creator, the date of publication, bias and prejudice, the author's POV
 - (B) The author's POV, the publisher, the creator, the time stamp of any online resources (if any)
 - (C) The creator, the context, the argument, bias and prejudice
 - (D) Bias and prejudice, the creator, the argument, the author's POV.
109. In scientific research, which source type is typically used to gather background information?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) Experimental data

- 110.** Avni is conducting research on consumer behavior for her marketing project. She is trying to understand how secondary data differs from primary data.
- (A) Secondary data is always more accurate than primary data.
 - (B) Primary data is collected from existing sources.
 - (C) Secondary data is gathered firsthand by researchers.
 - (D) Secondary data differs from primary data in that it is collected from existing sources rather than being gathered firsthand.
- 111.** What distinguishes a secondary source from a primary source?
- (A) Secondary sources contain original data
 - (B) Secondary sources interpret or summarize primary research
 - (C) Secondary sources are always less credible
 - (D) Secondary sources focus on current events only
- 112.** The data collected from second source by the researcher is known
- (A) Primary
 - (B) Secondary
 - (C) Both a & b
 - (D) None of these
- 113.** Monographs and treatises are examples of:
- (A) Secondary sources
 - (B) Primary sources
 - (C) Tertiary sources
 - (D) Patents
- 114.** One reason that marketers conduct secondary research is to
- (A) Clarify research questions
 - (B) Create hypotheses
 - (C) Make accurate predictions
 - (D) Learn more about a specific industry
- 115.** Secondary data are originated by the researcher for the specific purpose of addressing the research problem at hand
- (A) True
 - (B) False
- 116.** Match the vocabulary term to its definition. secondary source
- (A) A source that provides firsthand evidence
 - (B) A source that uses other sources
 - (C) A study or examination to learn about a subject
 - (D) A person or thing that gives information
 - (E) A list of sources used in a written paper
- 117.** Which type of secondary source is more likely to provide real-time data on social trends and opinions?
- (A) Digital Content
 - (B) Official Statistics
 - (C) Personal Documents
 - (D) Media Source
- 118.** Second Hand research gathered by others is known as what?
- (A) Second hand data
 - (B) Secondary data
 - (C) Supplementary data
 - (D) Significant data
- 119.** What is a better definition of desk research?
- (A) Stealing someone else's information
 - (B) Collecting new information
 - (C) Using information that already exists
 - (D) Finding old research
- 120.** A secondary source is a firsthand piece of evidence written by someone who was present during the event.
- (A) True
 - (B) False
- 121.** In conducting secondary data analysis, researchers should ask themselves all of the following EXCEPT:

- (A) Who produced the document?
 - (B) Is the material genuine?
 - (C) How can respondents be re-interviewed?
 - (D) Why was the document produced?
- 122.** Which word best matches this definition?:(in scholarly studies) pertaining to or being a derived or derivative account, an evaluation of original data, etc.
- (A) Primary source
 - (B) Secondary Source
 - (C) Supporting Detail
 - (D) Summary
- 123.** The data which are collected through Internet is called:
- (A) External secondary data
 - (B) Internal secondary data
 - (C) Documentary sources
 - (D) None of the above
- 124.** Encyclopedia
- (A) Primary Source
 - (B) Secondary Source
- 125.** What is a key factor that can evidence some level of credibility in secondary research?
- (A) The research is from unreliable sources.
 - (B) The research is from reliable sources.
 - (C) The research is unpublished.
 - (D) The research is outdated.
- 126.** Source of data collected and compiled by others is called ____
- (A) Primary
 - (B) Secondary
 - (C) Primary and Secondary
 - (D) None of the above
- 127.** What makes desk research easier to obtain?
- (A) Information is out of date
 - (B) Decisions can be made quickly
 - (C) The research has already been carried out
 - (D) Information is more useful
- 128.** Which of the following is an example of a secondary source in research?
- (A) A diary entry
 - (B) A research article analyzing multiple studies
 - (C) An original research study
 - (D) A government document
- 129.** What is true about Secondary data?
- (A) No scrutiny is required while using it.
 - (B) Should be used after careful scrutiny.
 - (C) While scrutinizing, only thing to see is who collected it.
 - (D) Should never be used.
- 130.** Which of the following is an example of a secondary research method?
- (A) Conducting interviews
 - (B) Analyzing market trends
 - (C) Observations
 - (D) Conducting surveys
- 131.** A website presenting a timeline of major events during the Renaissance. Does this rely on firsthand accounts from the period, or is it a summary of existing historical information?
- (A) Primary (Relying on firsthand accounts)
 - (B) Secondary (Summary of existing historical information)
 - (C) Tertiary (Compilation)
 - (D) None of above
- 132.** Why might desk research be considered irrelevant?
- (A) It is always biased.
 - (B) It is not carried out for your specific function.
 - (C) It is too expensive.
 - (D) It is always out of date.
- 133.** Which of the following is a good source of secondary market research:
- (A) The US Census Bureau
 - (B) A survey of all customers
 - (C) A personal interview
 - (D) Observing customer behavior

134. Which of the following is a limitation of using print sources of data in research?
- (A) Print resources may contain very specific information on the chosen topic.
 - (B) Print resources add depth and detail to the research process.
 - (C) The information in print resources is always objective after proofing and publishing.
 - (D) The information in print resources may become outdated soon after printing.
135. Is it primary (direct from source) or secondary (indirectly)? "History Textbook"
- (A) Primary
 - (B) Secondary
136. What is one of the benefits of secondary data sources in terms of cost?
- (A) They are always expensive.
 - (B) They are available for free or at a very low cost.
 - (C) They require a subscription fee.
 - (D) They are moderately priced.
137. What should you do if the work you find is inconclusive or there is little published work?
- (A) Ignore the topic.
 - (B) Only use published work.
 - (C) Track down unpublished studies, dissertations, and technical reports.
 - (D) Change your research question.
138. Which of the following is a secondary data collection method
- (A) Schedules
 - (B) Questionnaire
 - (C) Government Records
 - (D) Interviews
139. All of the following represent examples of sources of secondary data EXCEPT:
- (A) Trade organizations
 - (B) The Bureau of Census
 - (C) The Internet
 - (D) A and b above
 - (E) Experience surveys
140. If an article is published about an issue of interest to your study and you decide to use it, that article is a:
- (A) Respondent
 - (B) Primary source
 - (C) Sample
 - (D) Secondary source
141. Which is a published source of secondary data?
- (A) Personal diaries from participants
 - (B) Private emails from respondents
 - (C) Government and institutional reports
 - (D) Raw lab notebooks unshared
142. A dictionary, an almanac, and an encyclopedia are all examples of a?
- (A) Primary Source
 - (B) Secondary Source
143. Which advantage makes secondary data useful for historical work?
- (A) Ensures perfect alignment
 - (B) Provides background framework
 - (C) Forces new data collection
 - (D) Eliminates sampling error
144. ____ are data that were collected for another purpose and already exist.
- (A) Primary data
 - (B) Secondary data
 - (C) Tertiary data
 - (D) Inordinate data
 - (E) Ordinate data
145. Is your Year 11 Chemistry textbook a primary or a secondary source?
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above

146. Which of the following is a method of collecting secondary data?
- (A) Interviews
 - (B) Experiments
 - (C) Census data
 - (D) Surveys
147. Which of the following is NOT a source of secondary data?
- (A) Textbooks
 - (B) Web information
 - (C) Official statistics
 - (D) Personal diaries
148. Pre-existing public information such as data in a magazine, newspaper, or government report.
- (A) Quantitative Data
 - (B) Qualitative Data
 - (C) Primary Research
 - (D) Secondary Research
149. A web page created by a student about the Civil War.
- (A) Primary
 - (B) Secondary
150. The construction company "Vinci" decides to build a new shopping center in the city of Barranquilla and has not yet determined what kind of stores to install. From the availability of secondary sources, what would be the most accurate source to determine a successful location, competitors, land development, and construction costs?
- (A) Databases and feedback from the company's current customers.
 - (B) Census data.
 - (C) Directories.
 - (D) Industrial classification systems.
151. Why is it important to ensure the source of secondary data is trustworthy?
- (A) To save time in data collection
 - (B) To ensure the data is reliable
 - (C) To reduce data storage costs
 - (D) To increase data volume
152. Methods to collect Secondary Data are
- (A) Internal sources
 - (B) External sources
 - (C) Other sources
 - (D) All of the above
153. A book analysing the political situation in Iraq is which source?
- (A) Secondary
 - (B) Primary
 - (C) Tertiary
 - (D) None of above
154. What kind of source is a newspaper?
- (A) Primary
 - (B) Secondary
155. Data that were collected, recorded, or left behind at an earlier time usually by a different person and often for an entirely different purpose than the current one at hand. May be used with other data for corroboration or may be the primary data to be used in your research study.
- (A) Secondary and Existing Data
 - (B) Constructed Data
156. A secondary source is created by:
- (A) Someone who experienced the event first-hand
 - (B) An author analyzing primary sources
 - (C) A government official during the event
 - (D) None of the above
157. Data already collected for some purpose other than the current study.
- (A) Primary
 - (B) Secondary
 - (C) Attitude
 - (D) Media

158. Data that has already been published and collected for other purposes is called:
- (A) Primary data
 - (B) Secondary data
 - (C) Qualitative data
 - (D) Observational data
159. Data collected by third party is
- (A) Primary data
 - (B) Secondary data
 - (C) Tertiary data
 - (D) None of above
160. Which sources depend on Primary sources?
- (A) Tertiary sources
 - (B) Primary sources
 - (C) Secondary sources
 - (D) None of above
161. Data that is readily available through published and unpublished sources is called?
- (A) Secondary Data
 - (B) Primary Qualitative Data
 - (C) Primary Quantitative Data
 - (D) None of above
162. What type of source is a biography?
- (A) Primary
 - (B) Secondary
163. What is a key advantage of using secondary data in marketing research?
- (A) It is always highly relevant to the specific research problem.
 - (B) It is often more accurate than primary data.
 - (C) It is generally less expensive and faster to obtain.
 - (D) It is always the most current data available.
164. Which of the following is classified as a print source of data?
- (A) Film
 - (B) Internet site
 - (C) Newspaper
 - (D) Radio
165. Which of the following is NOT an example of a secondary source?
- (A) Textbook
 - (B) Biographies
 - (C) Documentary
 - (D) Personal Journal of a historic figure
166. Why is secondary data considered quicker to use than primary data?
- (A) It requires more time to analyze.
 - (B) The research has already been done and is readily available.
 - (C) It involves hiring more people for surveys.
 - (D) It needs additional data-gathering processes.
167. A source containing information gathered from other sources
- (A) Primary source
 - (B) Reliable source
 - (C) Secondary source
 - (D) Media source
168. ___ are data that have already been collected for purposes other than the problem at hand.
- (A) Secondary data
 - (B) Tertiary data
 - (C) Primary data
 - (D) Original data
169. Data that were collected by persons or agencies for purposes other than solving the problem at hand:
- (A) External data.
 - (B) Primary data.
 - (C) Secondary data.
 - (D) Internal data.
170. Secondary data can be gathered from the use of ___
- (A) Focus groups.

- (B) Observations.
 - (C) Suggestion boxes.
 - (D) Social trends.
171. What type of source is an 'encyclopedia entry'?
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) Gray literature
172. Methods that use data and information that has already been collected, for example using a book or website to find out statistics that have already been collected and, possibly, processed.
- (A) Risk
 - (B) Risk mitigation
 - (C) Secondary research methods
 - (D) Section
 - (E) Social engineering
173. A research article analyzing the effects of climate change on polar bears is a:
- (A) Primary Source
 - (B) Secondary Source
174. Newspaper articles that interpret data
- (A) Tertiary Source
 - (B) Primary Source
 - (C) Secondary Source
 - (D) None of above
175. Using existing data for new analyses is known as what?
- (A) Observations
 - (B) Secondary Data Analysis
 - (C) Cluster Sampling
 - (D) Hypothesis Testing
176. Which is a secondary data source?
- (A) Lab report
 - (B) Survey form
 - (C) Newspaper
 - (D) Interview
177. What type of source is a journal article analysis of a historical event?
- (A) Primary
 - (B) Secondary
178. Is this a primary or secondary source? A news paper article about crime over the last month in Columbia
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above
179. — is information about something that someone else already wrote about; getting the information second-hand.
- (A) Secondary source
 - (B) Primary source
 - (C) Original document
 - (D) Eyewitness account
180. Which best describes secondary analysis?
- (A) Using pre-collected information
 - (B) An event that occurs as a result of several factors working in combination
 - (C) Focus on a single group, incident, or community
 - (D) Defined by membership in a category
 - (E) A statement of relationships among well-defined variables
181. Research data collected from local statistics or from diaries and life histories of a community are obtained using the method of:
- (A) Use of existing information
 - (B) Focus group discussion
 - (C) Cross-checking
 - (D) In-depth interviewing
 - (E) Observation
182. Which of the following is considered a secondary source by historians?
- (A) The Great Pyramid
 - (B) A ziggurat near the Euphrates River
 - (C) A biography of Hammurabi
 - (D) The Rosetta Stone

- 183.** Internal sources of secondary data include:
- (A) Sales records
 - (B) Newspaper articles
 - (C) Census reports
 - (D) Industry reports
- 184.** In scientific research, what is the role of a secondary source?
- (A) To present new experimental data
 - (B) To provide a summary and analysis of existing research
 - (C) To offer firsthand evidence
 - (D) To compile raw data for analysis
- 185.** Which of the following is not a source for obtaining secondary data?
- (A) Interviews about your product
 - (B) Government statistics
 - (C) Annual business reports from other companies
 - (D) Chamber of commerce
- 186.** Which research method provides broad, general information from multiple sources?
- (A) Primary research
 - (B) Secondary research
 - (C) Experimental research
 - (D) Quantitative research
- 187.** Example of secondary data is
- (A) Newspaper
 - (B) Field enquiry
- 188.** Which source of secondary data is the researcher consulting when they review articles online such as on Google Scholar.
- (A) In-house
 - (B) Syndicated data
 - (C) Pooled data
 - (D) Other published sources
- 189.** Which type of source is typically used for in-depth analysis of scientific research?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) None of the above
- 190.** Government reports and market reports of other companies are considered ____
- (A) Primary research
 - (B) Secondary research
 - (C) Qualitative research
 - (D) Quantitative research
- 191.** Identify the type of source: 'A documentary film about the Civil Rights Movement.'
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) Gray literature
- 192.** Essays or reviews
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) None of above
- 193.** Choose a sources that would most likely contain information that would answer the research question: What makes Disneyland a fun place for people of all ages?
- (A) Magazine article explaining the attractions at Disneyland and how they could appeal to senior citizens
 - (B) A newspaper article reviewing the raise in ticket prices at Disneyland over the past 25 years
- 194.** What can you conclude is the reason why secondary data is desirable?
- (A) It includes survey information from consumers.
 - (B) It includes information not usually accessible to a company.
 - (C) It includes focus group data.
 - (D) It includes information that a company has in its databases.
- 195.** Secondary data is collected from:
- (A) Field visits

- (B) Direct interviews
 - (C) Government reports
 - (D) Experiments
- 196.** A description of an event given by someone who was not there is considered a ____
- (A) Primary source
 - (B) Secondary source
 - (C) Wikipedia entry
 - (D) Google search
- 197.** A report about the life of Abraham Lincoln written by a 5th grade student
- (A) Primary
 - (B) Secondary
- 198.** Which is a secondary source?
- (A) Map from the 1800s
 - (B) Biography written in 2020 about an 1800s figure
 - (C) Personal letter
 - (D) A sculpture from the Renaissance
- 199.** Which of the following is an example of external data?
- (A) Government statistics
 - (B) Employee feedback
 - (C) Internal sales reports
 - (D) Customer satisfaction surveys
- 200.** What type of source is typically NOT included in a literature review?
- (A) Scholarly articles
 - (B) Newspaper articles without research basis
 - (C) Government publications
 - (D) Books relevant to the research topic
- 201.** Select the right group of secondary sources.
- (A) Photographs, archives
 - (B) Books, biography
 - (C) Films, newspaper
 - (D) Biography, journals
- 202.** Is it primary (direct from source) or secondary (indirectly)? "internet sites"
- (A) Primary
 - (B) Secondary
- 203.** Which of the following is not a definition of Secondary Sources?
- (A) It interprets, analyzes and may also criticize sources.
 - (B) These sources were present during an experience or time period and offer an inside view of a particular event.
 - (C) The works about the thought of other persons or works based on data gathered
 - (D) Something that was not created firsthand by someone who participated in the historical era.
- 204.** Which of the following is NOT a use of secondary research?
- (A) Re-analyzing existing data
 - (B) Re-using data to ask different questions
 - (C) Conducting new experiments
 - (D) Replicating to support the level of confidence
- 205.** Secondary source documents are all of the following EXCEPT:
- (A) An analysis of primary sources or events
 - (B) Interpretation of original documents
 - (C) Sources created later by someone who did not participate in the event
 - (D) Original materials
- 206.** The personal Diary of Anne Frank could be used in a sociological study as
- (A) Primary Data
 - (B) Quantitative data
 - (C) Secondary Data
 - (D) Factual data
- 207.** Which answer below is a Secondary Source?
- (A) Autobiography
 - (B) Photograph
 - (C) Diary
 - (D) Textbook

- 208.** What type of secondary source is an autobiography written by a person who experienced a significant historical event?
- (A) Official Statistics
 - (B) Personal Document
 - (C) Digital Content
 - (D) Media Source
- 209.** ____ is data that has been collected by someone else and stored for later use. Other examples of ____ include published reports, government statistics, and trade organization records.
- (A) Primary Data
 - (B) Main Data
 - (C) Alternate Data
 - (D) Secondary Data
- 210.** Which type of source is created by someone who did not experience the event first-hand?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) Quaternary source
- 211.** Secondary market research involves analyzing data that has already been collected for other purposes.
- (A) True
 - (B) False
- 212.** What is one advantage of secondary research for marketers?
- (A) It is always up-to-date.
 - (B) It is quicker to complete.
 - (C) It is less expensive.
 - (D) It guarantees complete and precise data.
- 213.** Indicate whether the following statement is TRUE / FALSE. The researcher can use secondary data to interpret and evaluate primary data.
- (A) TRUE
 - (B) FALSE
- 214.** Our History textbook is an example of:
- (A) A primary source
 - (B) A secondary source
 - (C) None of these
 - (D) None of above
- 215.** Why might a company use past internal primary research as secondary data?
- (A) It is always more accurate than external data sources
 - (B) It is readily available and likely applicable to the target market
 - (C) It will use the same statistical techniques the current research team is used to
 - (D) It is always up-to-date and aligned with current objectives
- 216.** How can secondary sources be useful in scientific research?
- (A) They provide raw data
 - (B) They offer a summary and analysis of primary sources
 - (C) They are the original source of data
 - (D) They are always more accurate
- 217.** Information that has already been collected by another researcher or already exists is known as ____ data
- (A) Secondary
 - (B) Interview
 - (C) Questionnaire
 - (D) Primary
- 218.** Before you purchase a perfume online, you would search on the internet to see reviews and rating from others. This is an example of secondary research.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 219.** Examines data that has been collected by someone else (historical materials, personal documents, public records, etc.)
- (A) Secondary analysis

- (B) Survey
 - (C) Content analysis
 - (D) None of above
- 220.** What sources report or describe other people's experiences or worldviews?
- (A) General references
 - (B) Primary sources
 - (C) Secondary sources
 - (D) Tertiary sources
- 221.** These include written sources such as books, journals, newspapers, websites, and government documents.
- (A) Public records
 - (B) Official data
 - (C) Sources of secondary data
 - (D) Sources of primary data
- 222.** Using a keyword search tool to see what people are searching for is an example of what type of data source?
- (A) Public data
 - (B) Secondary data
 - (C) Reviews
 - (D) Focus group
- 223.** A documentary about the history of the internet, using interviews and archive footage, is a:
- (A) Primary Source
 - (B) Secondary Source
- 224.** What is secondary research?
- (A) Original research conducted by the researcher
 - (B) Existing research not originally conducted by the researcher
 - (C) Research conducted after primary research
 - (D) Research conducted using internal databases only
- 225.** Which type of source would be LEAST reliable for scientific research?
- (A) A peer-reviewed journal article
 - (B) A personal blog post
 - (C) A government research website
 - (D) A university study
- 226.** Bibliographies are
- (A) Secondary sources
 - (B) Primary sources
 - (C) Type of biography
 - (D) All of the above
- 227.** Two major problems associated with secondary data in international marketing research:
- (A) The accuracy of the data and the comparability of data.
 - (B) The relevance of the data and the control of the data.
 - (C) The cost of the data and the benefits of the data.
 - (D) The level of the data and the problems of the data.
- 228.** Secondary data is in raw form
- (A) True
 - (B) False
- 229.** A source that summarizes, analyzes, or otherwise comments on some other source is a —
- (A) Primary source
 - (B) Secondary source
 - (C) Useless source
 - (D) None of above
- 230.** Which of the following is an example of secondary research?
- (A) Conducting interviews
 - (B) Observing audience behavior
 - (C) Using internet searches to gather data
 - (D) Administering surveys
- 231.** If your teacher gives you a chart from a research study, what type of data is it?
- (A) Primary

- (B) Secondary
(C) Quantitative
(D) Current
- 232.** A researcher conducts a correlational study to determine where people buy homes based on their occupations. How should this researcher gather data?
(A) By using extrapolation to predict future buying patterns based on occupation
(B) By using constructed information from videos of participants' homes
(C) By exploring past records of home buyers' occupations in particular areas
(D) By questioning homogenous groups of home buyers in certain occupations
- 233.** What is the purpose of secondary research?
(A) To create new information and data from various sources.
(B) To gather existing information and data from various sources.
(C) To analyze existing information and data from various sources.
(D) To conduct experiments and gather primary data.
- 234.** Types of Quantitative Data and Measures information from public sources that provides data about a sample or population. (census data)
(A) Personal assessment
(B) Affective scale
(C) Behavioral checklist
(D) Public document or school records
- 235.** This source of data analysis includes government census reports, other governmental databases, and administrative data.
(A) Quantitative Data Analysis
(B) Qualitative Data Analysis
(C) Secondary Data Analysis
(D) Primary Data Analysis
- 236.** What is one of the main advantages of secondary research?
(A) It is always expensive.
(B) It is often free or accessible through educational institutions.
(C) It requires primary data collection.
(D) It is more time-consuming than primary research.
- 237.** What type of data is compiled for some purpose other than the current investigation?
(A) Quantitative
(B) Qualitative
(C) Primary
(D) Secondary
- 238.** Which of the following best describes a secondary source?
(A) A firsthand account of an experiment
(B) An analysis of multiple research studies
(C) A dataset from a scientific experiment
(D) A patent for a new invention
- 239.** An unpublished secondary source may include which item?
(A) International organization datasets
(B) Trade reports and market books
(C) National newspapers and magazines
(D) Institutional archives and theses
- 240.** The following are sources when doing academic research, except
(A) Journals
(B) Conference proceedings
(C) Diary
(D) Book chapter
- 241.** Define 'secondary' data
(A) Data that is published
(B) Data that you have collected yourself
(C) Data collected using interviews and questionnaires
(D) None of above
- 242.** How can government publications and statistics be useful in market research?

- (A) By providing detailed and accurate information.
 - (B) By offering free products.
 - (C) By reducing marketing costs.
 - (D) By avoiding customer feedback.
- 243.** Which of the following is a pro of secondary sources?
- (A) More detailed description
 - (B) Firsthand experience
 - (C) Provide expert analysis
 - (D) Give history a more personal feel
- 244.** What is the term for the following definition? Using existing data that was collected by others, such as reports, studies, or statistics, to inform your research.
- (A) Secondary Research
 - (B) Primary Research
 - (C) Experimental Research
 - (D) Field Research
- 245.** A second hand account of an event is a
- (A) Primary source
 - (B) Secondary source
 - (C) URL
 - (D) Subject search
- 246.** Contacting the local Chamber of Commerce for population and demographic information is what type of research?
- (A) Primary
 - (B) Secondary
 - (C) Sales
 - (D) Consumer
- 247.** The important sources of secondary data in India are
- (A) Census
 - (B) NSSO
 - (C) Both
 - (D) None of these
- 248.** A book published in 1955 discussing Ancient Chinese Dynasties is considered:
- (A) Primary source
 - (B) Tertiary source
 - (C) Secondary source
 - (D) Quaternary source
- 249.** Look for recent reports, check on the author's qualification and the reputation of the publisher-characteristic of?
- (A) Secondary sources.
 - (B) Primary sources.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 250.** Which of the following is an example of a secondary source related to Philippine history?
- (A) A speech delivered by President Ferdinand Marcos in 1972 announcing Martial Law.
 - (B) A diary entry of a Filipino soldier during the Battle of Manila in 1945.
 - (C) A personal letter from Emilio Aguinaldo to his wife during the Philippine Revolution.
 - (D) A biography of Andres Bonifacio written by a historian in 1995.
- 251.** Which source would provide the most reliable information for use in a research project investigating the effects of antibiotics on disease-causing bacteria?
- (A) A-the local news section of a newspaper from 1993
 - (B) B-a news program on national television about antigens produced by various plants
 - (C) C-a current professional science journal article on the control of pathogens
 - (D) D-an article in a weekly news magazine about reproduction in pathogens
- 252.** What type of information does desk research gather?
- (A) Primary information
 - (B) Secondary/old information
 - (C) Experimental data
 - (D) Personal interviews

253. Which type of source is shown in the image? (magazine of multiple articles of different times)
(A) Primary
(B) Secondary
254. I am writing an essay on George Washington for my U.S. History class. I used articles from Wikipedia and another encyclopedia. What am I using?
(A) Primary source
(B) Secondary source
255. You are reading an article in AdvertisingAge magazine about the latest marketing trends. This article is an example of ____
(A) Primary data
(B) Secondary data
256. There are sources providing information in details segregated into chapters or parts.
(A) Reference materials
(B) Books
(C) Government documents
(D) News/magazine articles
257. Which source is considered secondary research?
(A) Interviews
(B) Online surveys
(C) Internet sites/research
(D) Questionnaires
258. What does not apply to secondary scientific information:
(A) Dissertation
(B) Textbook
(C) Encyclopedia
(D) Directory
(E) Abstract journal
259. Data collected from "The IEEE journals" is
(A) Primary data
(B) Secondary data
(C) Both (a) and (b)
(D) None of these
260. Using data that has already been collected.
(A) Primary research
(B) Secondary research
(C) Market research
(D) Online surveys
261. Created by someone who did not experience first-hand or participate in the events you're researching.
(A) Bias
(B) Secondary Sources
(C) Primary Sources
(D) Annotation
262. In which criteria of secondary data evaluation researcher checks "Census data are periodically updated by syndicated firms"?
(A) Specifications/ Methodology
(B) Error/Accuracy
(C) Currency
(D) Dependability
263. A classmate giving a report about 1930 Labour riot
(A) Primary
(B) Secondary
264. At school we used textbooks to learn about subject-verb agreement. What source are we using?
(A) Primary
(B) Secondary
265. I like to read People magazine. I really like the articles written by others about Hollywood actors. When I read these stories, what am I reading?
(A) Primary source
(B) Secondary source
266. Which of the following is an example of a secondary research method that could be used in a research project on work-life balance?
(A) Observing individuals in the workplace
(B) Randomly surveying individuals on work habits

- (C) Interviewing individuals about their career choices
(D) Analysing census data on home and employment commitments
- 267.** Materials used for research, such as diaries or manuscripts
(A) Source material
(B) Text evidence
(C) Revise
(D) Research
- 268.** How do secondary sources contribute to the depth of research?
(A) By providing the only necessary perspective on a topic
(B) By offering personal anecdotes and testimonies
(C) By adding layers of interpretation and analysis to primary data
(D) By serving as the original evidence for historical events
- 269.** What is secondary source literature?
(A) Sources include speeches, letters, diaries, autobiographies, interviews
(B) Literature that summarizes primary sources
(C) The collection of scholarly writings on a topic
(D) Original reports of research found in academic journals detailing the methodology used in the research, in-depth descriptions, and discussions of the findings are considered primary sources of information.
- 270.** A ____ source gets its information from somewhere else or by a person not directly involved in the event.
(A) Primary
(B) Secondary
(C) Tertiary
(D) Quaternary
- 271.** Secondary Data:
(A) Data obtained for the first time and used specifically for the particular problem or issue under study
(B) Data already collected for some purpose other than the current study
(C) This is the study of sales data
(D) The study conducted to determine the effectiveness of a company's advertising message and media placement
- 272.** Existing data for new research purposes ____
(A) Graphs
(B) Primary Research
(C) Secondary Data
(D) Assessments
- 273.** Select the appropriate source type for the example: The New York Times Book Review.
(A) Primary
(B) Secondary
(C) Peer Review
(D) Journal
- 274.** Which of the following statements about using books for business research is accurate?
(A) Because books are obsolete, they should never be used for business research.
(B) Books provide excellent historical, in-depth data.
(C) Books are best for finding current data about technical trends.
(D) Most business reports are based on research found in books.
- 275.** A social worker reads an article in Time magazine about a study on college campuses showing that students are intolerant of conservative political speakers appearing on campus. Which type of source is this?
(A) Primary
(B) Secondary
(C) Tertiary
(D) None of above
- 276.** A textbook summarizing key scientific discoveries of the 20th century. Does it provide

- original research or consolidate information from various sources?
- (A) Primary (Original research)
 - (B) Secondary (Consolidating information)
 - (C) Tertiary (Compilation)
 - (D) None of above
277. Which type of research provides an interpretation or analysis of primary sources?
- (A) Primary sources
 - (B) Secondary sources
 - (C) Tertiary sources
 - (D) Quaternary sources
278. Published printed sources, books, journals and magazines are examples of this type of data analysis.
- (A) Secondary Data Analysis
 - (B) Internal Sources
 - (C) Observations
 - (D) Primary Data Analysis
279. Between primary data and secondary data, it is the one that is typically less expensive to collect
- (A) Primary
 - (B) Secondary
280. Which of the following is true regarding secondary source of data???
- (A) It provides first hand information
 - (B) It implies collection of data from its original source
 - (C) Collection of data from sources who already collected the data
 - (D) Can rely on this data as compare to primary data
281. A biography of Picasso is a:
- (A) Primary source
 - (B) Secondary source
282. Which of the following is true with regard to gathering secondary data?
- (A) Gathering secondary data involves costly fees to government agencies.
 - (B) Commercial online databases contain primary rather than secondary data.
 - (C) Internet search engines can be useful sources of relevant secondary data.
 - (D) It is illegal for firms to purchase secondary data from outside suppliers.
 - (E) Secondary data eliminates the need for primary data in most cases.
283. If I wanted to study a historical analysis and a collective view of data which type of source would be most beneficial for me?
- (A) Primary
 - (B) Secondary
284. John is conducting a research. He finds that the data he collected does not exactly address his issue or problem. This is a disadvantage of —
- (A) Primary data
 - (B) Secondary data
285. An article in a 1950s magazine discussing a 1900s event is:
- (A) A primary source
 - (B) A secondary source
 - (C) Both primary and secondary
 - (D) Neither primary nor secondary
286. Secondary data come from reading what others have published, experienced, or observed.
- (A) True
 - (B) FALSE
287. One of the advantages of reviewing secondary data it can be done quickly and easily.
- (A) True
 - (B) False
288. What type of source is a 'peer-reviewed journal article'?
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) Gray literature

- 289.** Secondary information that already exists outside an organization
(A) External Data
(B) Focus group
(C) Internal data
(D) Hypothesis
- 290.** Is a research method that involves compiling existing data sourced from a variety of channels. This includes internal sources (e.g. in-house research) or, more commonly, external sources (such as government statistics, organizational bodies, and the internet).
(A) PARAPHRASE
(B) PLAGIARISM
(C) PRIMARY RESEARCH
(D) SECONDARY RESEARCH
- 291.** Which is a form of secondary data?
(A) Case Studies
(B) Interviews
(C) Government Websites
(D) Observations
- 292.** The most significant benefits secondary data offer a researcher are:
(A) Control over data collection and accuracy.
(B) Savings in cost and time.
(C) More time taken and more effort expended.
(D) Relevance and availability.
- 293.** What is the primary focus of desk research?
(A) Gathering new data
(B) Collecting secondary/old information
(C) Conducting experiments
(D) Observing customer behavior
- 294.** These describe, interpret or analyze primary sources.
(A) Primary Sources
(B) Secondary Sources
- 295.** What is the main advantage of using newspapers and trade magazines for market research?
(A) They provide insights into current trends and industry developments.
(B) They are always free.
(C) They are always easy to find.
(D) They offer competitor analysis.
- 296.** Which of the following is an advantage of secondary data?
(A) Saves time and effort
(B) Always up-to-date
(C) Specifically collected for your research
(D) Always reliable
- 297.** A ____ source could be a publication or production that gathers information to share with others or a person who was not part of a news story but has knowledge of it.
(A) Primary
(B) Secondary
(C) Valid
(D) Reliable
- 298.** Desk research can be conducted by ____
(A) Personal interviews.
(B) Telephone interviews.
(C) Postal surveys.
(D) Using company annual accounts.
- 299.** Why does the study rely on secondary data rather than primary data collection?
(A) Secondary data allows comparison between national policies and documented implementation outcomes
(B) Primary data is not relevant to governance research
(C) Secondary data produces more objective statistical results
(D) Fieldwork is impossible in Bangladesh
- 300.** What is a secondary source in the context of scientific literature?
(A) A lab notebook documenting an experiment

- (B) A journal article reviewing multiple studies
(C) A dataset collected from an experiment
(D) A conference presentation of new research
- 301.** Is this a primary or secondary source? A Civil War Reference Book
(A) Primary
(B) Secondary
(C) All the above
(D) None of the above
- 302.** A research team reviews government census data and academic journals to understand consumer behavior trends. What type of data are they using?
(A) Primary Data
(B) Quantitative Data
(C) Experimental Data
(D) Secondary Data
- 303.** Facts, figures, and statistics that have been collected for purposes other than the project at hand:
(A) Relevant variables
(B) Research objective
(C) Secondary data
(D) Primary data
- 304.** A map produced in 2016 showing what land European countries controlled in America in the 18th century would be considered a ____
(A) Primary Source
(B) Secondary Source
- 305.** Which of the following defines the concept of "secondary source"?
(A) Information created by the people involved in the historic event
(B) Summaries of several historic sources
(C) First-hand information from the moment of the event by the people who lived such event
(D) None of above
- 306.** Which one is not an example of secondary research?
(A) Website
(B) Financial reports
(C) Word of mouth
(D) NZ Herald
- 307.** Literature review can be obtained from the following sources EXCEPT
(A) Journal
(B) Newspaper
(C) Internet
(D) Television
- 308.** Take a moment to think about each of the items below. Which one qualifies as a secondary source?
(A) A photo of Vincent Van Gogh's "A Wheatfield, With Cypresses"
(B) Original sketch of "A Wheatfield, With Cypresses"
(C) A critique of Vincent Van Gogh's paintings, including "A Wheatfield, With Cypresses"
(D) A and C
- 309.** An advantage of secondary data is that the information is already available.
(A) True
(B) False
- 310.** Exit Poll that shows the chances of winning the number of seats by different parties in 2014 Lok Sabha election shown on T.V. by some channels, for the viewer is
(A) Primary data
(B) Secondary data
(C) Continuous data
(D) Discrete data
- 311.** What type of research involves collecting data that already exists?
(A) Primary research
(B) Secondary research
(C) Market research
(D) Product research

- 312.** Identify if the following is primary or secondary data. Data: A newspaper article
(A) Primary Data
(B) Secondary Data
- 313.** What type of source is a textbook?
(A) Primary
(B) Secondary
- 314.** Anything—such as a database article, magazine article, web page, video, person, or book—that provides information for a research paper.
(A) Summary
(B) Periodical
(C) Source
(D) Citation
- 315.** A literature review summarizes information from ____ about the research topic of interest. The information gathered through literature review helps a researcher make decisions throughout the process of planning and designing a research study?
(A) Journal articles and other published materials
(B) A researcher's personal notes
- 316.** Imagine Charlotte and Olivia are on a treasure hunt. They find a map that's a secondary source. What does this map provide them?
(A) Information based on primary sources and interpretations of primary sources.
(B) Information based on personal opinions and anecdotes.
(C) Information based on secondary sources and interpretations of secondary sources.
(D) Information based on primary sources only.
- 317.** What is a characteristic of the statistical data found in almanacs and abstracts?
(A) The data are unreliable.
(B) The data are generally reliable, and sources are often provided.
(C) The data are only related to education.
(D) The data are presented in chronological order.
- 318.** Personal websites, homemade videos, blogs, wikis and podcasts are most likely:
(A) Free from bias
(B) Always accurate
(C) Unreliable data sources
(D) 100% reliable data sources
- 319.** Which type of source is typically considered authoritative in academic research?
(A) Personal blogs
(B) Peer-reviewed journals
(C) Online forums
(D) Social media posts
- 320.** ____ uses information that has already been collected and is available for use by others. [Also called desk research.]
(A) Market research
(B) Primary research
(C) Secondary research
(D) Market-oriented
- 321.** What is a problem with using secondary data?
(A) It is easy to find
(B) It is normally quicker to find
(C) You did not create it (it might be unreliable)
(D) You have to find the information yourself
- 322.** What is an indirect data source?
(A) Data collected for one purpose but used for another
(B) Data collected for a specific purpose
(C) Data that is always accurate
(D) Data that is original and firsthand
- 323.** Examples of this are the company records, government reports, information from industry trade associations and other business groups, research reported in magazines, and studies completed by universities and colleges.

- (A) Secondary data
 - (B) Primary data
 - (C) Purpose of marketing research
 - (D) Marketing plan
- 324.** A source that comments on, analyzes, or otherwise relies on primary sources. An article in a newspaper, that reports on a scientific discovery or a book that analyzes a writer's work —
- (A) Primary source
 - (B) Secondary source
 - (C) Thesis
 - (D) Citation
- 325.** Kaira feels that her study lacks substantial data from previous studies.
- (A) Research question
 - (B) Analysis
 - (C) Thesis statement
 - (D) Source of information
- 326.** True or false:secondary sources don't provide all the information some businesses need
- (A) True
 - (B) False
- 327.** Why might information from desk research not be as useful?
- (A) It is cheaper to access
 - (B) It is already gathered
 - (C) It is out of date
 - (D) None of the above
- 328.** A wide range of statistics that have already been collected and can be found on the internet
- (A) Statistical surveys
 - (B) Statistical reports
 - (C) Data reports
 - (D) Data mines
- 329.** An article discussing the impact of social media on modern relationships, based on a review of multiple studies. Does this offer first-hand accounts or provide an analysis based on existing research?
- (A) Primary (Firsthand accounts)
 - (B) Secondary (Analysis based on existing research)
 - (C) Tertiary (Compilation)
 - (D) None of above
- 330.** Sales reports, Consumer Reports Magazine, government reports
- (A) Primary Data
 - (B) Secondary Data
 - (C) Sampling
 - (D) Population
- 331.** What do we call resources that examine an event, interpret and examine primary sources, or combine information from several primary sources?
- (A) Primary sources
 - (B) Secondary sources
 - (C) People
 - (D) Magazine
- 332.** Which of the following is a characteristic of secondary data?
- (A) Always collected first-hand
 - (B) Often cheaper and quicker to obtain
 - (C) Specifically tailored for a new study
 - (D) Not used in research
- 333.** A marketer is having difficulty finding data about a competitor because the competitor's financial records have not been made public. Which disadvantage of secondary research does this situation illustrate?
- (A) It can be incomplete
 - (B) It can be out of date
 - (C) It can be costly
 - (D) It can be time-consuming
- 334.** Which of the following data collection methods would be the BEST choice for someone looking to open up a new fast food restaurant based on location?
- (A) Informal Observations
 - (B) Census Data

- (C) Formal Observations
 - (D) Interviews
 - (E) Experiments
335. Published data sources typically include:
- (A) Confidential company reports
 - (B) Government and non-government publications
 - (C) Employee records
 - (D) Customer call logs
336. What is an example of an secondary source?
- (A) Speech
 - (B) Film
 - (C) Biography
 - (D) Letter
337. What type of source is this? A newspaper article written on the attempted Coup by the Jamaat Al Muslimeen in 1990
- (A) Primary Source
 - (B) Secondary Source
338. Researchers are studying a company's past sales invoices as part of their current marketing research project. The sales invoices are examples of
- (A) Relevant variables.
 - (B) Secondary data.
 - (C) Primary data.
 - (D) Units of analysis.
339. One of the claimed advantages of secondary data is that:
- (A) It is always 100% accurate as the firm does the research
 - (B) It is usually up-to-date
 - (C) It is often cheap as the research has been done by others
 - (D) It will not be available to rival businesses
340. Is an article published in Cosmos magazine a primary or secondary source?
- (A) Primary
 - (B) Secondary
 - (C) All the above
 - (D) None of the above
341. What is the main purpose of a secondary source in science?
- (A) To present new experimental data
 - (B) To interpret and analyze primary sources
 - (C) To provide firsthand accounts
 - (D) To conduct original experiments
342. An advantage of secondary research is?
- (A) It gives the business unique data
 - (B) It is cheap
 - (C) It is time consuming
 - (D) None of above
343. Why is it important for researchers to critically evaluate secondary sources of data?
- (A) To manipulate data for political reasons.
 - (B) To ensure that the data is biased.
 - (C) To identify strengths and limitations for accurate analysis.
 - (D) To use them as primary data sources.
344. Secondhand information is an example of a secondary source
- (A) True
 - (B) False
345. What type of source is a literature review in a scientific journal?
- (A) Primary source
 - (B) Secondary source
 - (C) Tertiary source
 - (D) Quaternary source
346. Information previously collected by someone else is called ____
- (A) Secondary data
 - (B) Primary data
 - (C) Marketing history
 - (D) Historical research

347. This is developed with information from other sources, which are generally based on scientific literature and other documents compiled by another researcher.
- (A) Secondary research
 - (B) Primary research
 - (C) Cross-sectional research
 - (D) Longitudinal Study
348. Which from the below are secondary source data?
- (A) Reports
 - (B) Newspaper
 - (C) Survey
 - (D) Catalog
349. Secondary research uses data and information that has been collected before.
- (A) True
 - (B) False
350. Which one takes less time and is less expensive?
- (A) Primary Data
 - (B) Secondary Data
 - (C) Both of the above
 - (D) None of the above
351. What role do NGO reports play in the study's data sources?
- (A) They replace academic literature
 - (B) They provide official government policy positions
 - (C) They highlight local-level challenges and gaps in implementation
 - (D) They evaluate climate models and projections
352. What type of source is a research article analyzing ancient texts?
- (A) Primary source
 - (B) Secondary source
 - (C) Oral history
 - (D) None of the above
353. Which method involves analyzing existing data from other sources?
- (A) Focus groups
 - (B) Interviews
 - (C) Secondary research
 - (D) Questionnaires
354. Using precollected information for data collection and research purposes
- (A) Secondary Analysis
 - (B) Field Research
 - (C) Case Study
 - (D) Participant Observation
355. Exit poll that shows the chances of winning the number of seats by different parties in 2014 election shown on T. V. For the viewer is
- (A) Primary data
 - (B) Secondary data
 - (C) Continuous data
 - (D) Discrete data
356. What is a disadvantage of using indirect data sources?
- (A) More control over data accuracy
 - (B) Faster data collection
 - (C) Limited data availability
 - (D) Higher costs
357. What is the main advantage of secondary research data over primary research data?
- (A) It provides a much smaller sample, though with the same measure of depth.
 - (B) It focuses more on the target market.
 - (C) It is more easily accessible and more cost effective.
 - (D) It is generally more accurate than primary data.
358. What is desk research in business management?
- (A) Conducting research within the business
 - (B) Gathering primary information directly from the public/consumer

- (C) Accessing existing information that has already been gathered
(D) None of the above
- 359.** If you read a newspaper article to learn about how many people visited a new museum last year, are you using primary or secondary data?
(A) Primary
(B) Secondary
- 360.** This research involves analyzing existing data from various sources to gain insights into the market.
(A) Secondary Market Research
(B) Primary Market Research
- 361.** How does secondary data help in avoiding bias?
(A) The data is collected by the researcher.
(B) The researcher can influence the findings.
(C) The data is gathered by someone else, preventing influence.
(D) It allows for subjective interpretation.
- 362.** In which criteria of secondary data evaluation researcher checks "Data should be reliable, valid, and generalizable to the problem at hand."
(A) Specifications/ Methodology
(B) Error/Accuracy
(C) Currency
(D) Dependability
- 363.** An academic book reviewing various studies on the effects of climate change on wildlife. Does this present firsthand research data or synthesize findings from different studies?
(A) Primary (Firsthand research data)
(B) Secondary (Synthesizing findings)
(C) Tertiary (Compilation)
(D) None of above
- 364.** Which term describes data collected by another source and used in research?
(A) Primary data
(B) Secondary data
(C) Public data
(D) Focused data
- 365.** Which of the following is most likely to be a secondary data source:
(A) A focus group
(B) A call report
(C) An Internet survey
(D) A research study
- 366.** Documents containing the results of analytical and logical processing of one or more primary documents refer to:
(A) Secondary
(B) Primary
(C) Collections of scientific papers
(D) Patent documentation
(E) Reference
- 367.** You are researching smog and air quality. Which sources is most credible?
(A) A blog about air quality
(B) The local newspaper
(C) A university study about air quality
(D) Interviewing kids with asthma
- 368.** Secondary sources are:
(A) Sources that provide information about primary sources
(B) Sources that provide information about secondary sources
(C) Sources that provide information about tertiary sources
(D) Sources that provide information about reliable sources
- 369.** What form of data is relatively quick, easy, and inexpensive to collect?
(A) Primary Data
(B) Internal Data
(C) External Data
(D) Secondary Data

370. Which of these is a major drawback of using secondary data?
- (A) Too many participants
 - (B) Lack of ethics
 - (C) May not be specific to the research problem
 - (D) Cost involved
371. Which source is more trustworthy to answer this question? Who was present at the signing of the Declaration of Independence?
- (A) A movie about the American Revolution that was made in 2001
 - (B) A book written by a famous historian who is an expert on the American Revolution, published in 1999
 - (C) A blog about the Declaration of Independence
 - (D) None of the above
372. What is a document or other record of past events created by someone who was not present during the events or the time period in which they occurred?
- (A) Primary source
 - (B) Secondary source
 - (C) Bias
 - (D) Inquiry
373. Identify if the following is primary or secondary data. Data: A encyclopedia
- (A) Primary Data
 - (B) Secondary Data
374. When starting to gather data, marketing researchers typically begin with
- (A) Primary data.
 - (B) Survey data.
 - (C) Secondary data.
 - (D) Focus group data.
375. Desk Research is also known as ____
- (A) Primary Research
 - (B) Secondary Research
 - (C) Third Research
 - (D) Fourth Research
376. Data collected through government's official records is an example of ____
- (A) Primary Data
 - (B) Secondary Data
 - (C) Both Primary and Secondary Data
 - (D) None of the above
377. This is information that is useful and has already been collected for another purpose.
- (A) Primary Data
 - (B) Secondary Data
378. Which of the following is an example of digital content that can be used as a secondary source in sociological research?
- (A) Government reports
 - (B) Diaries
 - (C) Social media posts
 - (D) TV news reports
379. Written or created by someone either not present when the event took place or removed by time from the topic or event; based on primary sources, research and study; a work that interprets or analyzes an historical event or topic
- (A) Primary Source
 - (B) Secondary Source
 - (C) Periodization
 - (D) Propaganda
380. A source from some time after the period being studied is a ____ source.
- (A) Primary
 - (B) Secondary
381. Data collected for someone else or for non-marketing reasons, but are available for you to use.
- (A) Marketing Research
 - (B) Primary Data
 - (C) Secondary Data
 - (D) None of above

- 382.** What is the secondary source of data in research methods?
- (A) Numerical data
 - (B) Books, articles, and literatures
 - (C) Survey questionnaires
 - (D) Words from the interviewee
- 383.** Indicate whether the following statement is TRUE / FALSE. The researcher can use secondary data to monitor the enterprise's external environment
- (A) TRUE
 - (B) FALSE
- 384.** Which of the following are important sources of secondary data?
- (A) Census of India
 - (B) NSSO
 - (C) Both
 - (D) None
- 385.** Which type of research is generally less expensive and quicker to conduct?
- (A) Primary research
 - (B) Market orientation
 - (C) Secondary research
 - (D) Product orientation
- 386.** Government Statistics, Annual Reports, Newspapers, Online Articles are examples of:
- (A) Primary data
 - (B) Secondary data
 - (C) Field research
 - (D) None of above
- 387.** What is true about all secondary sources?
- (A) They are based on primary sources
 - (B) The author never adds his own thoughts
 - (C) They are all biographies
 - (D) None of above
- 388.** Which of the following terms best describes data that were originally collected at an earlier time by a different person for a different purpose?
- (A) Primary data
 - (B) Secondary data
 - (C) Experimental data
 - (D) Field notes
- 389.** In research the secondary sources of research are
- (A) Account or record of an historical event.
 - (B) The reports of a person who relates the testimony of actual witness of, or participant in an event.
 - (C) The writer himself does not present on the scene but reports what other person said.
 - (D) All of the above.
- 390.** One of the claimed advantages of secondary data is that: 1) it is always 100% accurate as the firm undertakes its own data collection 2) it is usually up-to-date 3) it is often cheap as the research has been conducted by others 4) it will not be available to rival businesses
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 391.** You are researching current vacation trends. Which is the most credible source?
- (A) Conde Nast Traveler magazine
 - (B) University study on vacation trends from 1996
 - (C) Interviews with neighbors who went on a cruise
 - (D) University study on vacation trends from 2019
- 392.** Secondary data can be best described as:
- (A) Research completed by high school students.
 - (B) Research completed after primary research.
 - (C) Research gathered through investigations done by others.
 - (D) Research that supports the primary research investigated.

393. Which one is NOT a characteristic of secondary data?
- (A) Already collected by someone else
 - (B) Can be historical
 - (C) Always relevant to your specific study
 - (D) May be publicly available
394. A news article summarizing recent research on the benefits of a Mediterranean diet. Does this present firsthand research findings or offer a summary of existing studies?
- (A) Primary (Firsthand research findings)
 - (B) Secondary (Summary of existing studies)
 - (C) Tertiary (Compilation)
 - (D) None of above
395. They are interpretations and evaluations of primary sources. These are not evidence, but rather a commentary on and discussion of evidence.
- (A) Primary Source
 - (B) Secondary Source
 - (C) Tertiary Source
 - (D) None of above
396. Information that contains information from the primary Scientific-technical information and is the result of processing the original source, reflecting in the most concise form its content:
- (A) Secondary
 - (B) Tertiary
 - (C) New
 - (D) Scientific
 - (E) Primary
397. What is secondary data?
- (A) Data collected directly by the researcher
 - (B) Data obtained from existing sources
 - (C) Data that is not yet analyzed
 - (D) Data that is collected through experiments
398. Biographies
- (A) Primary Sources
 - (B) Secondary Sources
 - (C) Tertiary Sources
 - (D) None of the Choices
399. What is the purpose of secondary sources of information?
- (A) Provide organized access to information from various secondary sources
 - (B) Provide commentary, analysis, or synthesis of primary information
 - (C) Offer unique insights into historical events
 - (D) Present all sides of an argument
400. A classmate is giving a report about Cleopatra. The classmate giving the report is a?
- (A) Primary Source
 - (B) Secondary Source
401. A textbook analyzing World War II is:
- (A) A primary source
 - (B) A secondary source
 - (C) A historical artifact
 - (D) Both primary and secondary
402. Which of the following is a method of desk research?
- (A) Surveys
 - (B) Experiments
 - (C) Books
 - (D) Focus groups
403. What kind of source is and internet search?
- (A) Primary
 - (B) Secondary
404. Secondary data is more expensive to obtain than primary data.
- (A) True
 - (B) False
405. For a research paper, you are downloading some data from the Census Bureau. This data is called
- (A) Primary data

- (B) Secondary data
 - (C) Big data
 - (D) None of above
- 406.** Why is secondary research also called 'desk research'?
- (A) Because it involves fieldwork and direct observation.
 - (B) Because it requires laboratory experiments.
 - (C) Because you can collate the information from behind a desk, usually at a computer.
 - (D) Because it involves face-to-face interviews.
- 407.** Second hand information such as text books, biographies, and encyclopedias.
- (A) Primary Source.
 - (B) Secondary Source.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 408.** What type of source is a scientific review article?
- (A) Primary
 - (B) Secondary
 - (C) Tertiary
 - (D) Quaternary
- 409.** Analysis of available secondary data is a non-essential step in the problem definition process.
- (A) True
 - (B) False
- 410.** Which data source is commonly used in secondary research?
- (A) Focus groups
 - (B) Product testing
 - (C) Published reports
 - (D) Customer feedback
- 411.** Is it primary (direct from source) or secondary (indirectly)? "Biography"
- (A) Primary
 - (B) Secondary
- 412.** Which of the following is an example of a secondary source in qualitative research?
- (A) First-hand interviews
 - (B) Research reports
 - (C) Observations
 - (D) Video recordings
- 413.** How can secondary sources be useful in scientific education?
- (A) They provide direct evidence from experiments
 - (B) They help students understand the context and significance of research
 - (C) They are the only sources used in scientific education
 - (D) They replace the need for primary sources
- 414.** Contents analysis involves ____
- (A) Secondary qualitative data
 - (B) Secondary quantitative data
 - (C) Primary qualitative data
 - (D) Primary quantitative data
- 415.** To a nurse seeking evidence on a question, a literature review article in a journal would be considered:
- (A) Bibliographic database
 - (B) A secondary source
 - (C) A primary source
 - (D) A descendant in the descendancy approach
- 416.** Trade journals, industry-related publications, government statistics, and competitors' Web sites are examples of ____ research.
- (A) Secondary
 - (B) Action
 - (C) Principal
 - (D) Legacy
- 417.** Which is not a source of existing statistics?
- (A) Personal interviews.
 - (B) Private sources.
 - (C) Government.
 - (D) International agencies.

- 418.** Is this graph a primary or secondary data source?
(A) Primary
(B) Secondary
- 419.** Resource libraries, economic census, trade shows & associations would be examples of what kind of data sources?
(A) Tertiary
(B) Secondary
(C) Primary
(D) Unprofessional
- 420.** What is one limitation of using personal documents as secondary sources of data?
(A) Limited sample size and generalizability.
(B) Large volumes of data available for analysis.
(C) Easy verification of the authenticity of information.
(D) Covers large populations and long time periods.
- 421.** Bill reads about a candidate's polling numbers on the online page of the New York Times. Which is the most specific way to describe how he gained this information?
(A) Print media
(B) Social media
(C) Mass media
(D) Internet media
- 422.** Ava is writing a research paper on climate change. She uses a book that analyzes various scientific studies on the topic. What type of information is conveyed by this book?
(A) First-hand experience
(B) Analytical interpretation
(C) Direct observation
(D) Original data
- 423.** Commentaries
(A) Primary
(B) Secondary
(C) Tertiary
(D) None of above
- 424.** Secondary Research is ____
(A) Data that already exists that has been collected for a different purpose
(B) Data collected first-hand for a specific research purpose
(C) Research carried out by customers
(D) Research carried out by stakeholders
- 425.** What type of data was collected to help develop an insight into how different sites engaged with IPC and family member involvement?
(A) Survey data
(B) Experimental data
(C) Documentary data
(D) Quantitative data
- 426.** Information already collected for another purpose that can be used to solve the current problem
(A) Primary Data
(B) Secondary Data
(C) Market Research
(D) Population
- 427.** Reliable sources usually:
(A) Give you facts and data
(B) Ask for your opinion
- 428.** Secondary data are data obtained from sources such as books, journals, and online articles.
(A) True
(B) False
- 429.** What is the primary purpose of using secondary sources in academic research?
(A) To provide firsthand evidence of an event

(B) To offer an analysis or interpretation of primary sources
(C) To replace the need for primary sources
(D) To present original findings or new evidence

- 430.** What is a potential limitation of using media sources as secondary data?
- (A) Data may lack depth and context.
 - (B) Wide accessibility for researchers.
 - (C) Different perspectives from various media outlets.
 - (D) Timely coverage of events and issues.
- 431.** Second-hand information and commentary from other researchers
- (A) Secondary source
 - (B) Primary source
 - (C) Subjective
 - (D) Tone
- 432.** Data collected by a student from Government Journals to prepare a Project Report is
- (A) Primary data
 - (B) Secondary data
 - (C) Census data
 - (D) None of the above
- 433.** Secondary data can be useful because:
- (A) It always matches your objectives
 - (B) It saves time and resources
 - (C) It is unpublished
 - (D) It is hard to access
- 434.** A company using sales data from the previous year to forecast next year's performance is relying on:
- (A) Primary data
 - (B) Experimental data
 - (C) Secondary data
 - (D) Observational data
- 435.** When a researcher uses existing data to answer new questions, this is called
- (A) Primary analysis
 - (B) Secondary analysis
 - (C) Survey
 - (D) None of above
- 436.** Information provided by a person not directly involved/not present when the event occurred
- (A) Secondary source
 - (B) Primary source
 - (C) Credible source
 - (D) Indirect quote
- 437.** Using existing records to try to answer a research question is known as ____
- (A) Naturalistic observation
 - (B) Survey research
 - (C) Longitudinal research
 - (D) Archival research
- 438.** A travel agency takes a look at their sales figures to find out how much profit they make via online bookings. This refers to a ____
- (A) ____ secondary qualitative research
 - (B) ____ primary qualitative research
 - (C) ____ secondary quantitative research
 - (D) ____ primary quantitative research
- 439.** What is a disadvantage of secondary research?
- (A) Time-consuming
 - (B) Costly
 - (C) May be outdated
 - (D) Specific to needs
- 440.** A marketer wants to estimate the value of a market and units sold each year. Which method fits best?
- (A) Trade-off analysis using conjoint techniques
 - (B) Focus groups exploring motivations qualitatively
 - (C) Hall tests with controlled environment samples
 - (D) Published market research reports and desk research
- 441.** T/F: Most online information would be considered a secondary source.
- (A) True
 - (B) False

442. A disadvantage of secondary research is that it can be based on rumour, opinion and hearsay which is not always reliable.
(A) True
(B) False
443. During a research study, if the researcher uses data that was originally collected by someone else, this is an example of ____
(A) Primary data
(B) Secondary data
444. The researcher must be concerned about the following problems while using secondary data in research.
(A) Validity.
(B) Reliability.
(C) Both of these.
(D) None of these.
445. What type of source is this? A website that summarizes Indentureship
(A) Primary source
(B) Secondary source
(C) Both
(D) None of above
446. It is the data obtain in sources like newspapers, magazines, and journals.
(A) Secondary Sources
(B) Secondary Data
(C) Primary Sources
(D) Primary Data
447. Secondary data can be collected from the following sources:
(A) Inside the business
(B) Outside the business
(C) Both inside and outside the business
(D) Survey exploration
448. Information, statistics, or other type of data that already exists. Someone has already collected the information, but others can use it.
(A) Market research
(B) Primary data
(C) Variable
(D) Secondary data
449. What data are collected in a standard format and not specifically collected for a single client?
(A) Primary Data
(B) Syndicated Data
(C) Secondary Data
(D) Scanner Data
450. Information collected from Internet search engines is an example of ____ data.
(A) Primary
(B) Secondary
(C) Binary
(D) Low-level
(E) Disposable
451. Which type of source is shown in the image? Biography
(A) Primary
(B) Secondary
452. Secondary sources may include ____
(A) Personal opinions
(B) Very specific details
(C) First person point of view
(D) Information from multiple sources
453. Which of the following is a source for gathering secondary data?
(A) Questionnaire
(B) Telephone survey
(C) Mailing
(D) None of the above
454. Which of the following is a characteristic of a secondary source?
(A) It provides an eyewitness account of an event.
(B) It is created by someone who did not experience the event firsthand.

- (C) It is always a physical object, like a diary or artifact.
(D) It cannot be used in academic research.
- 455.** The data which is already collected is called as
(A) Secondary data
(B) Primary data
(C) Extraordinary data
(D) None of above
- 456.** What do we call data that are used for a new study but which were collected by an earlier researcher for a different set of research questions?
(A) Primary Data
(B) Secondary Data
(C) Quantitative Data
(D) Field data
- 457.** The term “secondary analysis” refers to the technique of:
(A) Analysing existing data that has been collected by another person or organization
(B) Conducting a study of seconds, minutes and other measures of time
- 458.** Why might a scientist consult secondary sources?
(A) To gather original data for their research
(B) To understand the broader context of their field
(C) To publish their own experimental results
(D) To avoid conducting experiments
- 459.** Identify if the given item is PRIMARY, SECONDARY, or TERTIARY source
magazines
(A) Primary
(B) Secondary
(C) Tertiary
(D) None of the above
- 460.** How does using data from others in secondary research benefit your work?
(A) It reduces the credibility of your research.
(B) It makes your research less reproducible.
(C) It allows you to show reproducibility and replicability.
(D) It makes your research more expensive.
- 461.** Which of the following is least likely to be disadvantage of secondary market research?
(A) It is relatively expensive to collect
(B) It can be rather too general
(C) It is available to competitors
(D) It is often out of date quite quickly
- 462.** The best place to find credible statistical data is a government website or official publications.
(A) True
(B) False
- 463.** What is a common feature of secondary sources in science?
(A) They include original experimental data
(B) They interpret and analyze primary sources
(C) They are written by the original researchers
(D) They are published in scientific journals only
- 464.** What are the limitations of relying solely on secondary sources?
(A) Secondary sources may lack primary data
(B) Secondary sources may not be up-to-date
(C) Secondary sources may not provide a comprehensive analysis
(D) Limitations of relying solely on secondary sources include potential inaccuracies, lack of context, bias, and incomplete information.
- 465.** Imagine that you need a cartoon image of a dog for your ICT coursework. You ask your friend to draw one for you as you are not very good at art. You then use it in your work. Is this image primary or secondary?
(A) Primary
(B) Secondary

- (C) Neither
(D) None of above
- 466.** Information that has been collected for purposes other than the project at hand
(A) Sample
(B) Primary data
(C) Survey
(D) Secondary data
- 467.** You find a great deal of information in the wall street journal that you would like to apply to your next start-up venture. The information that you obtained from the newspaper would be considered ____
(A) Primary Research
(B) Secondary Research
- 468.** ____ is considered as a source for secondary research in market research.
(A) Observations
(B) Managers focus groups
(C) Own company's observations
(D) Governmental financial reports
- 469.** Mega Furniture, a retailer examines financial ratios available from Dun and Bradstreet for furniture stores of its size
(A) Primary
(B) Secondary
- 470.** Which source of secondary data is the researcher consulting when they review Invoices and sales reports of the company.
(A) In-house
(B) Syndicated data
(C) Pooled data
(D) Other published sources
- 471.** Which research method involves using libraries, archives, and internet searches to gather information?
(A) Primary research
(B) Demographic research
(C) Secondary research
(D) Market trend analysis
- 472.** Secondary data is cheaper and takes less time to gather than primary data because it has already been collected
(A) TRUE
(B) FALSE
- 473.** In ____ data from a previous study may be analyzed in light of new research questions or new hypotheses. This type of study is efficient and economical, because data collection is the most time-consuming part of most studies.
(A) Simulation Study
(B) Secondary Data Analysis.
(C) Correlational Study
(D) Experimental Study
- 474.** A map that is compiled from several different sources, a composite map, is what kind of source?
(A) Primary
(B) Secondary
(C) Cartographer
(D) Tertiary
- 475.** Secondary information that already exists in an organization's "in-house" system
(A) Hypothesis
(B) Primary data
(C) Internal data
(D) External data
- 476.** Analyzing existing data from reports, studies, government publications and online sources.
(A) Primary research
(B) Secondary research
(C) Qualitative research
(D) Quantitative Research
- 477.** Is using statistics from a government report primary or secondary data?
(A) Primary
(B) Secondary

478. What is the main purpose of a secondary source?
- (A) To provide firsthand evidence
 - (B) To interpret and analyze primary sources
 - (C) To offer a personal opinion
 - (D) To present fictional stories
479. Why is desk research advantageous?
- (A) Provides information specific to your purpose
 - (B) Cheaper to access existing information
 - (C) More time-consuming than field research
 - (D) Ensures information is up-to-date
480. A ____ source is a document or record about a primary source.
- (A) Primary
 - (B) Secondary
 - (C) Unreliable
 - (D) Verified
481. Which of the following are types of secondary search?
- (A) Websites, newspapers, books, articles, magazines and census
 - (B) Questionnaires or surveys, observations, interviews, trials and focus groups
482. A TV show explaining the discovery of the first commercial oil discovery in 1968 off the East Coast of Trinidad
- (A) Primary
 - (B) Secondary
483. A pro of secondary research is:
- (A) High customization
 - (B) Time-consuming
 - (C) Cost-effectiveness
 - (D) Limited data sources
484. Using websites such as the U.S. Census Bureau is an example of what type of data source?
- (A) Public data
 - (B) Reviews
 - (C) Case study
 - (D) Focus group
485. Secondary source
- (A) An eyewitness account that is filled with multiple points of view
 - (B) A diary entry
 - (C) A document that interprets a primary source
 - (D) A live video of an event taking place
486. Secondary research is very cost effective for marketers because the data
- (A) Is incomplete
 - (B) Is cheap to purchase
 - (C) Is specific
 - (D) Already exists
487. What type of data do companies get from external sources?
- (A) Customer transactions
 - (B) Supplier contracts
 - (C) Market research reports
 - (D) Employee performance reviews
488. What is secondary data?
- (A) Data collected from some other agency
 - (B) None
 - (C) Both
 - (D) Data collected in the process of investigation
489. During a research project, Tara is looking for information on consumer behavior. She finds a report compiled by a marketing firm that includes statistics and analyses from various surveys. Tara realizes that the data in this report was not collected by her but by other researchers. This type of data is called ____
- (A) Primary
 - (B) Secondary
 - (C) Primary and Secondary
 - (D) None of the above

490. Which of the following is an example of secondary data collection?

- (A) A traffic count to see how many vehicles passed by a shop
- (B) A postal questionnaire researching into

consumer tastes

- (C) A newspaper report on the sales figures of a rival's product
- (D) None of above

1.4.4 Sampling

1. Procedure used to avoid bias in a survey result by making sure all members of the population of interest have an equal opportunity to be chosen for the survey.
 - (A) Random assignment
 - (B) Random sampling
2. If you select a sample for a national opinion poll prior to a general election. The process would start by dividing the country into areas and a random sample of areas is taken. Next divide the country into town and cities and a sample is taken again. Then perhaps a sample of streets and a random sample of houses are then chosen. This is an example of which type of sampling:
 - (A) Simple
 - (B) Random
 - (C) Multi-stage
 - (D) Cluster
3. Determining the sample interval (represented by k), randomly selecting a number between 1 and k , and including each k th element in your sample are the steps for which form of sampling?
 - (A) Simple Random Sampling.
 - (B) Stratified Random Sampling
 - (C) Systematic Sampling
 - (D) Cluster sampling
4. A student measures the weight of every individual in his batch. This means that he will get —
 - (A) Sample
 - (B) Statistics
 - (C) Variable
 - (D) Parameter
5. Why is sampling used when conducting research?
 - (A) It is consistent and valid
 - (B) It is reliable and accurate
 - (C) It is reliable and has integrity
 - (D) It is representative and cost effective
6. A manager samples 400 customers and estimates the net promoter score for all customers. Which concept is central to this process?
 - (A) Hypothesis testing on qualitative themes
 - (B) Population inference from sample data
 - (C) Skewness correction in distributions
 - (D) Daily pivot tables for quick insights
7. What is the advantage of selecting sample?
 - (A) Economy of time.
 - (B) Economy of money.
 - (C) Knowledge of more truth.
 - (D) All of the above.
8. Dylan wants to know how the students at his school rate the cafeteria. He surveyed his school's basketball team to rate the school cafeteria. Is this a biased sample of the school's population?
 - (A) Yes, because it is a convenience survey
 - (B) No, the basketball team has the smartest students
 - (C) Yes, because it's voluntary survey
 - (D) No, he should have asked the football team
9. Which one of the following is not called a demerit of a sample?
 - (A) Less accuracy.

- (B) Misleading conclusions.
(C) High reliability.
(D) Requires specialized training.
10. The respondents for your study will be:
(A) The individuals who will answer your survey or questionnaire.
(B) The people who design the survey.
(C) The organizations funding the research.
(D) The supervisors overseeing the project.
11. According to the text, which of the following is the first step in the sampling design process?
(A) Count your resources available
(B) Determine the sampling frame
(C) Select sampling technique(s)
(D) Determine the sample size
(E) Define the population
12. A principal orders t-shirts and wants to check some of them to make sure they were printed properly. She randomly selects 2 of the 10 boxes of shirts and checks every shirt in those 2 boxes. What type of sampling method is this?
(A) Simple Sampling
(B) Stratified Sampling
(C) Cluster Sampling
(D) Systematic Sampling
13. Which one of the following factors would make a research problem un-researchable?
(A) You do not know the literature of the problem
(B) You cannot obtain access to the population of study
(C) You cannot conduct statistical analysis
(D) You cannot add to practice through your study
14. Which sampling technique relies on participants' characteristics and not random selection?
(A) Random sampling
(B) Stratified sampling
(C) Systematic sampling
(D) Purposive sampling
15. All the people with the characteristics that a researcher wants to study.
(A) Population
(B) Survey
(C) Questionnaire
(D) Boat Edit
16. Data collected from each and every unit of population is called ____ method
(A) Sampling
(B) Census
(C) Data collection
(D) Research design
17. You must survey schools in a state. You randomly select schools and then survey every student in those schools. Which method is this?
(A) Systematic sampling by class roster
(B) One-stage cluster sampling using schools
(C) Two-stage cluster sampling across districts
(D) Stratified sampling by grade level
18. How many people were polled in this survey?
(A) 5 people
(B) 40 people
(C) 100 people
(D) 145 people
19. What do representative samples accurately reflect?
(A) The characteristics of the population.
(B) The opinions of the researchers.
(C) The results of previous studies.
(D) The preferences of the sample collectors.
20. Interview the first 30 students who enter the school in the morning. What type of sample is this?
(A) Simple random

- (B) Voluntary response
(C) Systematic
(D) Convenience
21. Cluster sampling selects:
(A) Individual respondents only
(B) Groups or clusters of units
(C) Only online respondents
(D) None of these
22. There are 700 men, 800 women and 500 children in a town. A sample of 80 people is required with a stratified sample. How would the sample be composed?
(A) Men = 28 Women = 32 Children = 20
(B) Men = 32 Women = 28 Children = 20
(C) Men = 20 Women = 32 Children = 28
(D) Men = 29 Women = 31 Children = 20
23. Identify the type of sampling technique "A researcher selected a sample of $n=120$ from a population of 850 by using the Table of Random Numbers."
(A) Simple Random Sampling
(B) Systematic Sampling
(C) Stratified Sampling
(D) Cluster Sampling
24. The group of people selected to represent the population in a study.
(A) Sample
(B) Population
25. A finite population is one that ____
(A) Can be physically listed
(B) The membership in the population is unlimited
(C) Ends abruptly due to a catastrophe
(D) Ends abruptly due to natural causes, such as a flood or the ice age
26. Involves surveying the first group or individual who then suggests other groups or individuals who could participate and so on. Which sampling method is this describing?
(A) Snowballing
(B) Quota
(C) Convenience
(D) Cluster
27. In Structured observations, behaviours cannot be written down instantaneously therefore how is the data recorded in a systematic way?
(A) Sampling behaviours-event and time sampling
(B) Random sampling
(C) Stratified sampling
(D) Systematic sampling
28. Why do researchers use a sample instead of studying the entire population?
(A) To reduce the need for valid data
(B) To avoid drawing any conclusions
(C) To represent the larger whole efficiently
(D) To increase the number of variables
29. Two advantages of ____ are that the cost is lower and data collection is faster than measuring the entire population.
(A) Sampling
(B) Census
(C) Data collection
(D) Research design
30. Which of the following is to be considered when selecting the participants for FGD?
(A) Age
(B) Gender
(C) Power
(D) All of the above.
31. People recruited to participate in a research study are often referred to as
(A) Stooges.
(B) Partners.
(C) Participants
(D) Confederates.

32. Considerations for choosing sample size include
- (A) The degree of precision required
 - (B) Method of sampling
 - (C) All of the above
 - (D) None of above
33. What are the two types of sampling methods?
- (A) Random or probability sampling and non-probability sampling
 - (B) Probability sampling and random sampling
 - (C) Probability sampling and non-random sampling
 - (D) All of the above
34. This sampling technique makes use of taking a unit at random from the first k unit and every kth subsequent unit.
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Multi-stage
35. Setting a target number of respondents per segment is mainly part of which area?
- (A) Sampling methods set
 - (B) Sample size determination plan
 - (C) Sampling procedure plan
 - (D) Sampling overview primer
36. The physical and social characteristics of the population:
- (A) Decision problem
 - (B) Demographics
 - (C) Unit of analysis
 - (D) Primary data
37. Which of the following is most useful for helping survey researchers avoid false generalization
- (A) The case study
 - (B) Naturalistic observation
 - (C) Random sampling
 - (D) Operational definition
 - (E) Standard deviation
38. What is the process of choosing a part of the population you want to study?
- (A) Target Population.
 - (B) Samples.
 - (C) Sampling.
 - (D) Sampling method.
39. This type of sampling makes use of blocks or districts as a sampling frame in order to cut down a huge population size.
- (A) Systematic
 - (B) Stratified
 - (C) Simple
 - (D) Cluster
40. A ___ is a part of your target population.
- (A) Sample
 - (B) Hypothesis
 - (C) Replication
 - (D) Control group
41. The act of studying or examining only a segment of the population to represent the whole
- (A) Sampling
 - (B) Hypothesis testing
 - (C) Cohort
 - (D) Methodology
42. Which of the following is a method of selecting a sample from a population?
- (A) Systematic sampling
 - (B) Random sampling
 - (C) Stratified sampling
 - (D) All of the above
43. A group of doctors are participating in a study that's investigating the amount of sleep they obtain and its effects on the quality of the diagnoses they make. In this example, which component represents the study's sample?
- (A) All humans
 - (B) All doctors
 - (C) The doctors in the study
 - (D) The doctors in the study who have sleep issues

44. What is the problem with targeting specific samples in cross-cultural studies?
- (A) Power
 - (B) Universals
 - (C) Equivalent
 - (D) Variations
 - (E) Generalization
45. Complete the definition: A ____ is a subset of a population
- (A) Sample
 - (B) Sampel
 - (C) People
 - (D) Statistics
 - (E) Group
46. When the population under investigation is infinite, we should use
- (A) Census method
 - (B) Sample method
 - (C) Both methods
 - (D) None of the above
47. This refers to the subjects and/or participants in a study
- (A) Data
 - (B) Sample
 - (C) Literatures
 - (D) Methods
48. Which choice best distinguishes quota sampling from stratified random sampling?
- (A) Random selection within statistically defined strata
 - (B) Reliance on volunteers to fill demographic gaps
 - (C) Non-random selection within predefined strata
 - (D) Use of clusters rather than strata for selection
49. A (a) occurs when all the members of some set of individuals have an equal chance of being selected.
- (A) Population
 - (B) Collection
 - (C) Sample of convenience
 - (D) Random sample
50. A word that refers to your method or process of selecting respondents or people to answer questions meant to yield data for research study
- (A) Population
 - (B) Samples
 - (C) Sampling
 - (D) Sampling frame
51. The sampling technique refers to:
- (A) The type of data collected during a study.
 - (B) The method used to obtain participants for a study.
 - (C) The analysis performed on the collected data.
 - (D) None of above
52. Identify the type of sampling technique "A researcher interviewed people from each town in the Province of Rizal for his research on population."
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
53. A subset of a population is called a
- (A) Sample
 - (B) Sampling
 - (C) Set
 - (D) Size
54. To ensure the accuracy of the research, what should the researcher do?
- (A) Select a random research sample
 - (B) Use uncontrolled variables
 - (C) Continuously change independent variables
 - (D) Provide unclear hypotheses

55. What sampling method divides a population into naturally occurring groups?
(A) Cluster Sampling
(B) Random Sampling
(C) Purposive Sampling
(D) Snowball Sampling
56. A small part of the target population is called a ____
(A) Control Group
(B) Experimental Group
(C) Sample
(D) Double Blind
57. Representative part of universe is called?
(A) Population
(B) Element
(C) Unit
(D) Sample.
58. Tom surveys 40 moviegoers by randomly choosing their names. What type of sampling method is this?
(A) Random
(B) Convenience
(C) Biased
(D) Self-Selected
59. The number of people surveyed, interviewed, or polled about your restaurant ideas.
(A) Target Market
(B) Market Share
(C) Market Area
(D) Sample Size
60. Choosing research subjects from the population
(A) Random assignment
(B) Random sample
61. ____ is defined as the procedure researchers use to obtain participants from a population.
(A) Validation
(B) Sampling
(C) Interpreting
(D) Replication
62. Representative of your study to answer questionnaires or as participants
(A) Population
(B) Samples
(C) Sampling
(D) Sampling frame
63. A sample frame is a unit of population chosen during the sampling process.
(A) True
(B) False
64. Identify the sampling design: Mrs. Krohn asked each of her A day classes who their favorite Tiger King cast member is
(A) Cluster
(B) Unbiased
(C) Stratified
(D) Convenience
65. Identify the sampling technique used in the following study: A radio station asks its listeners to call in their opinion regarding the use of American forces in peacekeeping missions.
(A) SRS
(B) Convenience
(C) Systematic
(D) Cluster
(E) Stratified
66. All the interacting members of a species in a single area. (a)
(A) A Population
(B) Overpopulation
(C) Impact
(D) Environment
67. A smaller group that's representative of the population.
(A) Sample
(B) Oligodem
(C) Demo group
(D) Small group

68. When everybody has an equal chance of being included in a study, this process is called
- (A) Unbiased reporting
 - (B) Survey
 - (C) Random sample
 - (D) Reliability
69. A sampling frame is a:
- (A) Questionnaire
 - (B) Complete list of population units
 - (C) Hypothesis
 - (D) Data table
70. A good sample is one which is ____
- (A) Free of random errors
 - (B) Representative
 - (C) Large
 - (D) Systematic
71. The surveyor surveys houses numbered: 13, 18, 23, 28, 33, 38, ____ This is a method of sampling:
- (A) Systematic sampling
 - (B) Random sampling
72. Members of the population are ordered so every n -th member is chosen.
- (A) Proportional
 - (B) Probable
 - (C) Stratified
 - (D) Systematic
73. In qualitative research differences among types of purposive sample are based on differences in:
- (A) Individual variability
 - (B) Timing during the study
 - (C) Representativeness
 - (D) All of the above
74. Isabella is conducting a research study on the effects of a new teaching method on student performance. What is the significance of using a large sample size in her research?
- (A) It increases the generalizability of the findings.
 - (B) It ensures that the study is free from any bias.
 - (C) It guarantees that the results will be statistically significant.
 - (D) None of above
75. People who volunteer to participate in studies may bring with them a different outlook than those who choose not to participate. What is this called?
- (A) Reactional control
 - (B) Stratified bias
 - (C) Voluntary organizing
 - (D) Volunteer bias
76. Dr. Gonzalez surveys how 8,000 students on her campus feel about a proposed tuition increase. She selects 600 students for the survey. These 600 students and 8000 students completely represent respectively:
- (A) Experimental, control group
 - (B) Sample, population
 - (C) Experimental group, population
 - (D) Sample, control group
77. What do we call it, when a representative group is taken from the target population?
- (A) Focus group
 - (B) Dumpling
 - (C) Sampling
 - (D) Theft
78. Why is random sampling important in research?
- (A) It ensures the sample is representative of the population
 - (B) It simplifies data analysis
 - (C) It reduces the need for a hypothesis
 - (D) It guarantees research success
79. Zoie completes a report by asking 70 students across campus. She found that 48% of CIAA students do not wash their hands after using

- the bathroom. What is the population of her survey?
- (A) The bathroom
 - (B) CIAA students
 - (C) 48% of students
 - (D) None of above
80. What is quantitative technique where samples of populations are statistically determined to be used for a number of processes, such as quality control and marketing research?
- (A) Sampling theory
 - (B) Statistical decision theory
 - (C) Linear programming
 - (D) Simulation
81. A ____ Is “a smaller (but hopefully representative) collection of units from a population used to determine truths about that population
- (A) SAMPLE SIZE
 - (B) SAMPLE
 - (C) GROUPs
 - (D) POPULATION
82. Random-Digit Dialing (RDD) is a method used for:
- (A) Conducting surveys by randomly generating telephone numbers
 - (B) Generating random numbers for lottery draws
 - (C) Creating random passwords for online accounts
 - (D) Selecting random samples in a laboratory experiment
83. If every individual in a population has the same chance of being included in a sample, the sample is a(n) ____ sample.
- (A) Biased Sample
 - (B) Convenience Sample
 - (C) Random Sample
 - (D) Stratified Sample
84. The local movie theater wanted to know the average age of its patrons, so they asked every 15th person leaving the theater their age.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
85. What is a subset of a larger population in which every member of the population has an equal chance of being selected?
- (A) Random sample
 - (B) Biased sample
 - (C) Systematic sample
 - (D) Convenience sample
86. Which action would most improve credibility when using convenience samples?
- (A) Avoid reporting any potential selection biases
 - (B) Document access constraints and compare with known benchmarks
 - (C) Increase the number of easily available respondents only
 - (D) Ignore differences between sample and target population
87. A school principal wants to offer an after-school club setting. She decided to survey 300 students about this. Which word best describes the group of 300 students?
- (A) Population
 - (B) Sample
 - (C) Census
 - (D) Prediction
88. “a sampling error that occurs when individuals chosen for the sample do not respond to the survey, biasing the sample” this is ____
- (A) Coverage error
 - (B) Social desirability bias
 - (C) Nonresponse error
 - (D) None of above

89. Why might a researcher use cluster sampling in Mapleville?
- (A) To ensure every individual in Mapleville is surveyed
 - (B) To reduce costs and increase efficiency
 - (C) To focus on a specific demographic
 - (D) To improve the accuracy of the results
90. A researcher has $N = 900$ customers and needs $n = 90$ using simple random sampling. Which procedural step is essential to ensure randomness?
- (A) Assign each element a unique ID from 1 to N
 - (B) Select the first ninety listed customers
 - (C) Replace missing IDs with the value zero
 - (D) Sort the frame alphabetically before selection
91. A finite subset of a population, selected from it with the objective of investigating its properties is called ____
- (A) Population
 - (B) Universe
 - (C) Sample
 - (D) None of above
92. What is criterion-based sampling in qualitative research?
- (A) Participants must meet specific criteria relevant to the study.
 - (B) Random selection of participants.
 - (C) Numerical data collection.
 - (D) Generalization of findings.
93. Mr. Roberts is forming a faculty advisory committee. He decides to randomly choose 2 teachers from each of the core content subjects. This is an example of
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Cluster sampling
 - (D) Stratified sampling
94. A sample is a segment of the population selected for marketing research to represent the population as a whole
- (A) TRUE
 - (B) FALSE
95. Kim surveys 100 moviegoers that entered the movie theater in the first hour. What type of sampling method is this?
- (A) Random
 - (B) Convenience
 - (C) Biased
 - (D) Self-Selected
96. Devon is studying the relationship between the rate of teen pregnancies in U.S. high school students and the availability of contraceptives. She selects a sample composed of equal numbers of first-year, sophomore, junior, and senior women from a local high school. Devon's sample is
- (A) Biased
 - (B) Random
 - (C) Representative
 - (D) Generalizable
97. Alaa is going to send out a survey. To ensure that a sample represents a target population, Alaa selects
- (A) People at random from the target population
 - (B) A large number of people from one subgroup
 - (C) A slightly larger percentage of people from certain subgroups
 - (D) All of the above
98. Random sampling of subjects is not possible in survey research design
- (A) True
 - (B) False
99. The textbook of Johnson and Christensen recommended that you include the entire population in your research study when the population is 100 or less.

- (A) True
(B) False
- 100.** — is the entire group of objects or individuals considered for a survey.
(A) Sample
(B) Population
(C) Random Sample
(D) Quartile
- 101.** This category of error occurs when a sample does not represent the target population. Nonresponse error (the respondents differ from the sample) is an example.
(A) Sampling Error
(B) Frame Error
(C) Random Error
(D) Sample
- 102.** Portion of objects drawn from the population
(A) Statistics
(B) Population parameter
(C) Descriptive Statistics
(D) Sample
- 103.** The results of a random survey showed that 42 out of 84 people plan to vote for Coach Vasquez for teacher of the month. Which is the best prediction of the total number of votes he will receive if 2,000 people vote?
(A) 825
(B) 750
(C) 1200
(D) 1000
- 104.** Which type of sampling method is obtained by selecting one unit on a random basis and choosing additional elementary units at evenly spaced intervals until the desired number of units is obtained?
(A) Simple Random Sampling
(B) Systematic Random Sampling
(C) Cluster Sampling
(D) Random Sampling
- 105.** How can researchers ensure they are using diverse perspectives in their online research?
(A) By only using sources from their own country
(B) By focusing solely on mainstream media
(C) By ignoring minority viewpoints
(D) By seeking out sources from various authors, cultures, and disciplines to gain a well-rounded view of the topic.
- 106.** What would be a limited number of units that are chosen to represent the whole?
(A) Sample
(B) Census
(C) Sampling
(D) Population
- 107.** To determine the most popular type of cake among all the students at your school, choose 3 math classes and ask all of the students in those math classes.
(A) Cluster Sample
(B) Simple Random Sample
(C) Stratified Random Sample
(D) Interval Sample
- 108.** What term is used to describe a smaller part of the research population that the sociologist selects for study?
(A) Sample
(B) Target population
(C) Control group
(D) Research variable
- 109.** What decision is most tightly linked to desired statistical precision?
(A) Define the target population
(B) Determine sample size
(C) Choose a sampling frame
(D) Pick a sampling method
- 110.** Identify the sampling design: Lexington county school district wants to survey its employees. They pick randomly 4 schools from the county and survey every single employee in each of the 4 buildings.
(A) Cluster sampling

- (B) Convenience sampling
(C) Systematic sampling
(D) Simple random sampling
(E) Stratified sampling
- 111.** Which method of sampling is used when a population is widely dispersed across geographical locations?
(A) Cluster.
(B) Random.
(C) Stratified.
(D) Quota.
- 112.** What is a limitation of cluster sampling?
(A) It involves convenience sampling methods.
(B) Identifying clusters in a population is not possible.
(C) It limits a sample to individuals in the chosen clusters.
(D) It applies a random sampling method to select participants in each cluster.
- 113.** In quantitative studies, the key criterion for evaluating a sample is its:
(A) Representativeness of the population
(B) The results of the study
- 114.** Yields larger & often more diverse group of participants.
(A) Construct
(B) Phenomenology
(C) Multi-site studies
(D) Multi-sectoral studies
- 115.** How is the method called, where you need a clear understanding of the concept or larger theory expected to emerge during the research
(A) Concept sampling
(B) Typical Sampling
(C) Homogeneous Sampling
(D) Critical Sampling
- 116.** Which type of sampling ensures that every member of the sampling frame has an equal chance of being selected?
(A) Convenience sampling
(B) Snowball sampling
(C) Random sampling
(D) Stratified sampling
- 117.** Subset of population
(A) Set
(B) Sample
(C) Group
(D) Community
- 118.** A sampling that is preferred by grounded theory researches:
(A) Historical sampling
(B) Quota sampling
(C) Theoretical sampling
(D) None of above
- 119.** Snowball sampling is especially useful when:
(A) The population is small and hard to reach
(B) A very large sample is needed
(C) Research must be random
(D) No contacts exist
- 120.** The information on population of India is collected by Government Agency for every ten years through
(A) Census
(B) Sample survey
(C) Both (a) and (b)
(D) None of the above
- 121.** Select the sampling method that would most fairly represent the people in the viewing area.
(A) 100 people that are trying out for a reality TV show
(B) 100 students at your middle school
(C) Every 100th person at a shopping mall
(D) None of above

122. A real-life school-based situation where stratified sampling would be more appropriate than simple random sampling is:
- (A) Selecting students from each grade to ensure all grades are represented in a survey.
 - (B) Choosing students randomly from the entire school for a survey.
 - (C) Picking only students from one class for a survey.
 - (D) Surveying only students who volunteer to participate.
123. A method of selecting every n th element of the population
- (A) Restricted random sampling
 - (B) Unrestricted random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
 - (E) Stratified random sampling
124. Mr. Marino has compiled a list of 1,348 students in his high school. He has selected a sample of 42 students by choosing every 14th student on this list. Which type of sampling is he using?
- (A) Simple random
 - (B) Stratified random
 - (C) Cluster random
 - (D) Systematic random
125. If the researcher makes sure that each member of the population has the same chance of being included in the sample, then the approach is known as a simple purposive sample.
- (A) True
 - (B) False
126. The sampling process comprises of
- (A) Defining the population of concern
 - (B) Specifying a sampling frame
 - (C) Specifying a sampling method
 - (D) All of the above
127. Which sampling method involves selecting several geographical areas and then randomly choosing people within these areas for market research purposes?
- (A) Quota
 - (B) Cluster sampling
 - (C) Convenience
 - (D) Snowballing
128. The most common strata used in stratified random sampling are age, gender, socioeconomic status, religion, nationality and educational attainment.
- (A) True
 - (B) False
129. The complete group of elements under study is called:
- (A) Sample
 - (B) Population
 - (C) Parameter
 - (D) Universe
130. The group of individuals who actually have a chance of being selected for a survey is called the ____ The set of all individuals who belong to the group being studied by a survey is called the ____
- (A) Population, sample
 - (B) Sample, population
 - (C) Population, test group
 - (D) Test group, population
131. What do you call the process of identifying or selecting the participants for your research?
- (A) Sample
 - (B) Sapling
 - (C) Sampling
 - (D) Sample Sample
132. The subgroup of the population that participates in the study is called the
- (A) Sample.
 - (B) Assignment.
 - (C) Group.
 - (D) None of above

133. If we select 100 persons from 25,000 registered voters and question them about candidates and issues, the 100 persons are referred to as the population.
(A) True
(B) False
134. Factors that influence sample representativeness
(A) Sampling procedure
(B) Sample size
(C) Participation
(D) All of the above
135. Each and every element of a large group of data.
(A) Population
(B) Sample
(C) Variable
(D) Data
136. A large sample can be obtained quickly and without much effort.
(A) Strength of Opportunity Sampling Technique
(B) Strength of Random Sampling Technique
(C) Strength of Volunteer Sampling Technique
(D) None of above
137. What is sampling?
(A) Selecting a subset of the population
(B) Investigating the whole population
(C) Involving a large number of people
(D) Specifying the subject we are interested to investigate
138. Errors in the findings of an experimental study caused by deliberate selection of some bright students for experimental group is known as
(A) Random sampling error.
(B) Systematic sampling error.
(C) Random measurement error.
(D) Systematic measurement error.
139. In a sample of people in the school district, 16 out of 25 favored building a new football stadium. If 6,000 people vote in the next local election, how many are likely to vote in favor of the new football stadium based on this sample?
(A) 2,980
(B) 3,840
(C) 2,160
(D) None of above
140. When a researcher selects Tashkent City as a test marketing city for a new brand of laundry detergent because he/she lives in the city, this is an example of a(n):
(A) Judgment sample.
(B) Convenience sample.
(C) Stratified random sample.
(D) Systematic sample.
141. The ADC converts the analogue signal into digital data through a process called?
(A) Sampling.
(B) Binary.
(C) Collecting.
(D) Waves.
142. An error in the sampling process that allows some members of a population to be more or less likely than others to be included in a study.(Research Methods and Statistics Part I)
(A) Experimenter Bias
(B) Sampling Bias
(C) Hindsight Bias
(D) Confirmation Bias
143. If we took the 500 people attending a school in New York City, divided them by gender, and then took a random sample of the males and a random sampling of the females, the variable on which we would divide the population is called the ____
(A) Dependent variable.
(B) Sampling variable.
(C) Independent variable.
(D) Stratification variable.

144. Which practical advantage motivates the use of quota sampling in fieldwork?
- (A) Lower susceptibility to interviewer selection bias
 - (B) Better coverage of isolated or stigmatized populations
 - (C) Stronger inference to population with known selection odds
 - (D) Faster field completion while approximating population structure
145. When recording a sound, computers take measurements at regular intervals. This is called
- (A) Interval selection.
 - (B) Parameters.
 - (C) Sampling.
 - (D) Digital signals.
146. Which statement describes a disadvantage of sampling compared to complete enumeration?
- (A) Sampling always provides a perfect answer
 - (B) Sampling requires more time and money
 - (C) Sampling cannot obtain a precise perfect answer and only estimates the answer
 - (D) Sampling always achieves 100% response rate
147. Suppose you are interested in taking a research project on B. Ed. Pupil teachers and you deserve a judicious sample of this population then what kind of sampling procedure would you like to adopt?
- (A) Multi-level sampling.
 - (B) Systematic sampling.
 - (C) Group sampling.
 - (D) None of the above.
148. People that complete the survey are called —
- (A) Sample
 - (B) Customers
 - (C) Respondents
 - (D) Survey-senders
149. A biologist wants to estimate the average weight of a species of fish in a lake. She catches and weighs a random sample of 100 fish. What is the biologist trying to infer?
- (A) The total number of fish in the lake
 - (B) The average weight of all fish in the lake
 - (C) The heaviest fish in the lake
 - (D) The lightest fish in the lake
150. What does SRS stand for?
- (A) Sample Random Survey
 - (B) Sample Random Surroundings
 - (C) Simple Random Survey
 - (D) Simple Random Sample
151. How does a sampling frame enhance a study?
- (A) By enhancing the representativeness of the sample.
 - (B) By increasing the sample size.
 - (C) By reducing the number of variables.
 - (D) By eliminating outliers.
152. This is a reason for sampling which emphasizes on saving time, resources and effort.
- (A) Practicality
 - (B) Economy
 - (C) Necessity
 - (D) Ethicality
153. What does the term population refer to in a study?
- (A) Portion or part of the group
 - (B) Single measurement from a sample
 - (C) Totality of elements under study
 - (D) Only individuals in experiments
154. A psychologist studying children with autism selects a random group of children who are hopefully representative of all children who have been diagnosed with the disorder. The group of children included in this study by this psychologist is collectively known to researchers as what type of group?
- (A) Population

- (B) Target group
(C) Sample
(D) Control group
- 155.** What do we call all of the individuals in the group to which a study applies?
(A) Random sample
(B) Population
(C) Group
(D) None of above
- 156.** Stratified sampling is used when:
(A) Population is homogeneous
(B) Population is heterogeneous and divided into groups
(C) Population is infinite
(D) Only one sample is needed
- 157.** The study population is ____
(A) The group of interest for the study from which the sample is selected from
(B) The number of elements from which information is obtained
(C) Findings based on the information obtained
(D) The way elements are selected for the sample
- 158.** It is the specific group of individuals that you will collect data from.
(A) Group
(B) Population
(C) Respondents
(D) Sample
- 159.** A higher sample size always guarantees more accurate and reliable results in a thesis
(A) TRUE
(B) FALSE
- 160.** A part of the entire population size taken by a researcher.
(A) Sample
(B) Portion
(C) Part
(D) Group
- 161.** A group of people, objects, or items taken from a larger population for measurement/research. The chosen should be an accurate reflection of the entire population.
(A) Sample
(B) Target market
(C) Response
(D) Recording
- 162.** The school librarian wants to determine how many students use the library on a regular basis. What type of sampling method would she use if she chose to randomly select 20 students in the cafeteria during each of the three lunch periods on Monday.
(A) Convenience Sample
(B) Simple Random Sample
(C) Stratified Random Sample
(D) Interval Sample
- 163.** This occurs when the sample is not adequate for the aims of the research.
(A) Confirmation bias
(B) Sampling bias
(C) Question order bias
(D) Biased reporting
- 164.** What is a sampling procedure wherein the researcher chooses his/her own respondents based on his/her expert opinion?
(A) Convenience
(B) Judgemental
(C) Snowball
(D) Systematic
- 165.** When considering the food preferences of students in his Data Management class at their high school, the teacher decides to ask every student in the class what they like to eat. What is the population for this question?
(A) The students in the Data Management class
(B) The students taking math at their high school
(C) The students in Grade 12 at their high school
(D) The students at their high school

- 166.** Subdivisions of a population are called:
- (A) Groups
 - (B) Strata
 - (C) Bias
 - (D) None of above
- 167.** How many total people were surveyed about what ice cream flavor they would pick?
- (A) 107
 - (B) 92
 - (C) 70
 - (D) 269
- 168.** Dr. Alee is interested in the prevalence of ADHD among five-year-old boys. The population in Dr. Alee's research is
- (A) All five-year-old boys.
 - (B) All five-year old boys diagnosed with ADHD.
 - (C) All children diagnosed with ADHD.
 - (D) All people diagnosed with ADHD.
- 169.** A "good" sample is said to have which of the following characteristics?
- (A) Identifies the probability that a unit of analysis will be included in the study
 - (B) Enables decisions concerning sample size requirement
 - (C) Enables quantification of the degree of confidence made from inferential statistics
 - (D) All of the above
- 170.** Subset of a population chosen for inclusion in an experiment
- (A) Case study
 - (B) Observations
 - (C) Sample
 - (D) None of above
- 171.** A researcher puts an advert in a newspaper, asking for people to take part in their study on mental health. Which sampling technique have they used?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Opportunity sampling
 - (D) Random sampling
 - (E) Systematic sampling
- 172.** A group of people or things that is chosen from the population is ____
- (A) Population
 - (B) Sample
 - (C) Sampling
 - (D) None of above
- 173.** Identify the sampling design: The RCC registrar wants to investigate attitudes of their graduates. The registrar randomly selects 100 names from each of the four past graduating classes.
- (A) Cluster
 - (B) Volunteer
 - (C) Stratified
 - (D) Simple random
- 174.** Which term refers to the entire group about which a researcher wants to draw conclusions?
- (A) Population
 - (B) Sample
 - (C) Element
 - (D) Sampling frame
- 175.** A ____ is the calculation used to estimate the smallest sample size needed for an experiment
- (A) Power Analysis
 - (B) Refractory Tangent
 - (C) Insular Modal Fix
 - (D) Coded Integer Method
- 176.** The process of selecting participants.
- (A) Sampling
 - (B) Analyzing
 - (C) Measuring
 - (D) Reporting

177. A study in which DHS students are grouped by grade level and given a psychological test would be problematic because it is an example of what?
- (A) Hindsight bias
 - (B) Sample bias
 - (C) Extraneous variable
 - (D) A double-blind procedure
178. A study where participants either know what the experiment is about or involves participants who willingly signed up for the study may result in ____
- (A) Volunteer Bias
 - (B) Bystander Effect
 - (C) Ethical Violations
 - (D) Sample Bias
179. Research sample
- (A) The researcher watches people or situations and records facts
 - (B) 6-9 people on which research is done
 - (C) Group of people or target market on which research is done
 - (D) None of above
180. A study where those sampled reflect the characteristics of the larger population is known as:
- (A) Generalisable
 - (B) Representative
 - (C) Valid
 - (D) Reliable
181. Which of these sampling methods introduces researcher bias?
- (A) Systematic sampling
 - (B) Opportunity sampling
 - (C) Stratified sampling
 - (D) Random sampling
182. Which of the following sampling techniques is most at risk of researcher bias?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Opportunity sampling
 - (D) Random sampling
 - (E) Systematic sampling
183. It has sample intervals.
- (A) Stratified
 - (B) Quota
 - (C) Multistage
 - (D) Systematic
184. Which consideration pertains specifically to sampling within research design?
- (A) Choosing probability versus nonprobability strategies
 - (B) Selecting color schemes for presentation slides
 - (C) Arranging travel for conference attendance
 - (D) Designing the study's logo and branding
185. It is a complete collection of all elements (scores, people, etc) to be studied.
- (A) Census
 - (B) Sample
 - (C) Population
 - (D) None of the above
186. A firm has a population of 1,200 customers and needs a sample of 120. What sampling interval k should be used for systematic sampling?
- (A) $K = 10$ exactly
 - (B) $K = 8$ exactly
 - (C) $K = 12$ exactly
 - (D) $K = 14$ exactly
187. Which of the following are examples of sampling methods?
- (A) Individuals, groups, print, digital
 - (B) Questionnaire, interviews, observation
 - (C) Random, systematic, stratified, cluster, population
 - (D) Random, systematic, stratified, cluster, convenience

- 188.** When research participants have an equally likely chance of being assigned to an experimental condition or the control condition, the experimenter has:
- (A) Manipulated the independent variable
 - (B) Demonstrated external validity
 - (C) Employed random assignment
 - (D) Set up a quasi-experiment
- 189.** Identify the sampling technique used: Students are classified according to major. Twenty students are selected from each major and asked how often they use the library.
- (A) Random sample
 - (B) Stratified sample
 - (C) Cluster sample
 - (D) Systematic sample
- 190.** Which of the following is a disadvantage of online focus groups?
- (A) Responses are not instantaneous.
 - (B) Controlling the online sample is difficult.
 - (C) Results take a long time to tabulate and analyze.
 - (D) Facility, technology, and travel costs are very high.
 - (E) Researchers are unable to view the sessions in real-time.
- 191.** In systematic random sampling, how is the skip interval calculated?
- (A) Population size divided by sample size
 - (B) Sample size divided by population size
 - (C) Population size multiplied by sample size
 - (D) Sample size minus population size
- 192.** A normative sample segmented by any of the criteria initially used in selecting subjects for the sample (group of people ex. dumagat, ita etc..)
- (A) Local norms
 - (B) Subgroup norms
 - (C) Age norms
 - (D) Percentiles
- 193.** The method of generalizing data collected from a few units out of the entire population is called ____
- (A) Sample method
 - (B) Census method
 - (C) Median
 - (D) Probability
- 194.** What is the main characteristic of maximum variation sampling?
- (A) Selecting cases with extreme experiences
 - (B) Selecting cases with a wide range of variation that is of interest to the researcher
 - (C) Selecting cases with similar characteristics
 - (D) Selecting cases with predetermined criteria of importance
- 195.** Why might systematic sampling be preferred over simple random in large lists?
- (A) Avoids numbering the population
 - (B) Simplifies selection with fixed intervals
 - (C) Eliminates need for randomness entirely
 - (D) Guarantees perfect representativeness
- 196.** Random selection refers to:
- (A) Assigning participants to control and experimental groups
 - (B) Choosing participants from the population so everyone has an equal chance
 - (C) Measuring the dependent variable
 - (D) Eliminating confounding variables
- 197.** A student goes to the basketball court and measures the height of 10 students to find the average height of Year 8 students.
- (A) Census
 - (B) Sample
 - (C) Observation
 - (D) None of above

- 198.** What is meant by 'Population' in research methods?
- (A) Population refers to the entire group of individuals or items that the researcher is interested in studying.
 - (B) Population refers to a small group selected for detailed study.
 - (C) Population refers to the number of experiments conducted in a research.
 - (D) Population refers to the tools and techniques used in research.
- 199.** A retailer wants $n = 50$ from $N = 1,930$ and must use systematic sampling. Which plan best demonstrates sound procedure?
- (A) Set $k = 39$, sort by spend first, then take every 39th
 - (B) Set $k = 50$, choose any convenient start, sample each 50th
 - (C) Set $k = 40$, start at first record always, sample each 40th
 - (D) Set $k = 38$, pick a random start 1-38, sample every 38th
- 200.** Which content area clarifies differences between quota and convenience sampling?
- (A) Sampling overview orientation
 - (B) Sampling methods distinctions
 - (C) Sample size determination limits
 - (D) Sampling procedure logistics
- 201.** Part of the entire group being surveyed.
- (A) Random sample
 - (B) Biased sample
 - (C) Sample
 - (D) Population
- 202.** What is the benefit of using a well-chosen sample?
- (A) It makes research more expensive
 - (B) It helps make accurate and generalizable conclusions
 - (C) It complicates the research process
 - (D) It limits the scope of the study
- 203.** The process of identifying a subset of a population that provides an accurate reflection on the whole.
- (A) Qualitative Data Collect Process
 - (B) Quantitative Data Collect Process
 - (C) Sampling
 - (D) Stratified Sampling
- 204.** Willy wants to find what percent of students at his school drink milk after they finish their cereal. He randomly selects 10 students from each grade level (freshmen, sophomore, and junior, senior). What type of sampling is this?
- (A) Simple random sampling
 - (B) Cluster Sampling
 - (C) Stratified Sampling
 - (D) Systematic sampling
- 205.** Which consists of all elements, units, or individuals of interest to researchers for a specific study?
- (A) Sample
 - (B) Census
 - (C) Sampling
 - (D) Population
- 206.** The drama teacher wants to determine where the drama club should go to celebrate their final performance. Which of the following is NOT a representative sample?
- (A) Every 4th student selected from an alphabetical roster of the club
 - (B) Students whose names are randomly selected from a hat
 - (C) Students who appear in the first act
 - (D) None of above
- 207.** A psychologist investigating language development takes all the names of deaf babies from the NHS register and gets a computer to randomly generate 40 names. Which sampling technique have they used?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Opportunity sampling

- (D) Random sampling
(E) Systematic sampling
- 208.** A large department store pays an employee to stand outside and hand out a coupon to every 20th customer. The employee then asks this customer two quick questions about his or her shopping preferences.
(A) Cluster
(B) Volunteer
(C) Systematic
(D) Simple random
- 209.** Division of the sample into groups so that every individual has an equal chance of being put in any group or condition.
(A) Single blind
(B) Double blind
(C) Random assignment
(D) Random sampling
- 210.** Unbiased sampling is:
(A) When you choose the group you think will give you the answer you want, accept volunteers or survey by convenience
(B) When any member of the population is equally likely to be chosen for the sample
- 211.** You need 15 students from a list of 300 in reverse alphabetical order. Which approach fits systematic sampling?
(A) Randomly draw 15 names from a hat
(B) Pick a random start then every 20th name
(C) Select first 15 names on the list
(D) Choose 3 classes and sample within
- 212.** It is a type of sample where each member of the population has an equal chance of being selected.
(A) Random sample
(B) Convenience sample
(C) Stratified random sample
(D) Cluster sample
- 213.** Which sampling technique involves the researcher approaching nearby people to ask them if they would participate in their study?
(A) Stratified sampling
(B) Volunteer sampling
(C) Opportunity sampling
(D) Random sampling
(E) Systematic sampling
- 214.** What is the overall group of individuals that the researchers are interested in called?
(A) Population
(B) Sample
(C) Control group
(D) Variable
- 215.** Greg Beck of Quality Market Research tells placement student John to go out and select for personal interview ten men and ten women. Greg is using ____ sampling for this phase of the research.
(A) Random.
(B) Stratified.
(C) Quota.
(D) Area.
- 216.** Review: If a field of study has 123 boys and 104 girls, how many boys should be surveyed if gender is a determining variable and the sample size is 50?
(A) 27
(B) 23
(C) 42
(D) 8
- 217.** Part of the population of 10,800 hawks at a national park are building nests. A random sample of 72 hawks shows that 12 hawks are building nests. Estimate the number of hawks building a nest in the population.
(A) 1,800 hawks
(B) 150 hawks
(C) 432 hawks
(D) 10,800 hawks

218. Type of sample that is proportional to the target population
(A) Random
(B) Equality based
(C) Proportional
(D) Stratified
219. What sampling method are you using if you survey every 10th person who enters the cafeteria?
(A) Convenience
(B) Systematic
(C) Simple Random
(D) None of above
220. Which type of sampling is most vulnerable to bias?
(A) Quota Sampling
(B) Convenience Sampling
(C) Purposive Sampling
(D) Snowball Sampling
221. The IRS researcher investigates cheating on income tax reports by surveying all waiters and all waitresses at 35 randomly selected restaurants.
(A) Random sampling
(B) Systematic sampling
(C) Convenience sampling
(D) Stratified sampling
(E) Cluster sampling
222. A researcher wants to conduct a survey of the drug users. Which type of sampling technique will be most appropriate here?
(A) Sequential sampling.
(B) Snowball sampling.
(C) Quota sampling.
(D) Convenience sampling.
223. "Sampling" in research means ____
(A) Dividing the population into small groups
(B) Pick the people I know from the whole population
(C) Picking a random group from the whole population
(D) Picking a representative group from the whole population
224. Which technique is generally followed when the population is finite?
(A) Area sampling technique
(B) Purposive sampling technique
(C) Systematic sampling technique
(D) None of the above
225. Action Research uses random sampling or prefers a subset of a statistical population in which each member of the subset has an equal probability of being chosen..
(A) True
(B) False
226. A random sample of Manila hospitals is surveyed to discover their nurse-to-patient ratios. What is the sampling frame for this study?
(A) All patients of the sample hospitals
(B) All nurses hired by the hospitals
(C) All Manila hospitals
(D) Hospitals responding to the survey
227. The group accessible to the researcher from which a sample is drawn is the:
(A) Population
(B) Sampling frame
(C) Sample
(D) Universe
228. When researchers select participants who are readily available, they are using:
(A) Random sampling
(B) Snowball sampling
(C) Convenience sampling
(D) Stratified sampling
229. Systematic sampling can introduce bias when the population list has a hidden pattern. Which list feature most threatens validity?
(A) Alphabetical ordering by name

- (B) Grouping by geographic region
 - (C) Periodic ordering matching k
 - (D) Randomized ordering of elements
- 230.** Which choice best explains why defining the target population precisely is critical?
- (A) It makes nonresponse completely disappear
 - (B) It reduces coverage error and selection bias
 - (C) It guarantees perfect external validity
 - (D) It replaces the need for a sampling frame
- 231.** A researcher sends out a paper questionnaire but gets few responses. What is a likely drawback?
- (A) Low response rate
 - (B) Inaccurate questions
 - (C) High cost
 - (D) Biased data
- 232.** What is the primary purpose of sampling in research?
- (A) To examine every member of a population
 - (B) To draw accurate conclusions about the population
 - (C) To reduce bias in the results
 - (D) To measure all variables equally
- 233.** Source of bias that occurs when an individual chosen for the sample CAN'T be contacted or refuses to cooperate.
- (A) Response Bias
 - (B) Undercoverage
 - (C) Nonresponse
 - (D) Voluntary Response
- 234.** Sample is
- (A) The group that is treated in the same way as the experimental group except that the experimental treatment (the independent variable) is not applied
 - (B) An educated guess about the relationship between two variables
 - (C) The small group of participants, out of the total number available, that a researcher studies
 - (D) Any factor that is capable of change
- 235.** What is the name of an individual who is asked questions in a survey?
- (A) A sample
 - (B) A supplier
 - (C) A respondent
 - (D) None of above
- 236.** Which statement best distinguishes stratified sampling from simple random sampling?
- (A) Stratified samples units until quotas are achieved
 - (B) Stratified selects every i th unit from the full list
 - (C) Stratified uses volunteer respondents for each stratum
 - (D) Stratified divides into subgroups then samples within each
- 237.** In sampling, a(n) ____ is the object or person about which or from which the information is desired.
- (A) Element
 - (B) Incident
 - (C) Hypothesis
 - (D) Census
- 238.** In simple random sampling (SRS), how are elements chosen?
- (A) Units are picked to mirror known population quotas
 - (B) Groups are selected and all members surveyed
 - (C) Elements are chosen at fixed periodic intervals
 - (D) Each element has equal independent chance of selection
- 239.** The subjects are divided into many groups, each group has a homogeneous characteristic. This is a technique of:

- (A) Stratified sampling
 - (B) Random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
- 240.** A random sample is:
- (A) A sample that is selected randomly from a population
 - (B) A sample that includes every member of a population
 - (C) A sample that is biased towards a certain group
 - (D) A sample that is selected based on convenience
- 241.** Cluster sampling is most useful when:
- (A) Studying individuals only
 - (B) The population is scattered and naturally grouped
 - (C) Every individual must be selected
 - (D) Time and cost are not a concern
- 242.** When people are selected at random as a source of information for market research.
- (A) Random sample
 - (B) Quota sample
 - (C) Survey
 - (D) Sampling
- 243.** Stratified, simple random, and systematic are all types of
- (A) Convenience samples
 - (B) Biased samples
 - (C) Haphazard samples
 - (D) Unbiased samples
- 244.** Explain the term 'sample size' and its importance in research.
- (A) Sample size is the number of observations in a study, important for ensuring reliable and valid research results.
 - (B) Sample size refers to the total duration of a study.
 - (C) Sample size is the average age of participants in research.
 - (D) Sample size is the number of researchers involved in a study.
- 245.** A sample is a small group that is representative of the population.
- (A) True
 - (B) False
- 246.** A marketing research term describes A subset drawn from a larger population
- (A) A sample
 - (B) A market plan
 - (C) Secondary data
 - (D) Marketing research
- 247.** If a researcher places an advert on a notice board asking people to reply if they would like to take part in a memory experiment, Which sampling technique would have been used?
- (A) Volunteer sampling
 - (B) Opportunity sampling
 - (C) Random sampling
 - (D) Stratified sampling
- 248.** What is a non-representative sample?
- (A) A sample that does not reflect the makeup of the population (a biased sample).
 - (B) A sample that includes every member of the population.
 - (C) A sample that is chosen randomly from the population.
 - (D) A sample that reflects the makeup of the population accurately.
- 249.** "The average Japanese woman lives to the age of 86." What is the population behind this statistic?
- (A) A randomly selected group of Japanese women
 - (B) All of the women in the world
 - (C) All of the women in Japan
 - (D) Everybody in Japan
- 250.** What sampling method ensures equal representation of subgroups?
- (A) Stratified Random Sampling

- (B) Convenience Sampling
 - (C) Snowball Sampling
 - (D) Purposive Sampling
- 251.** The entire group of individuals about whom we hope to gain information
- (A) Sample
 - (B) Population
 - (C) Bias
 - (D) Parameter
- 252.** A sample that accurately reflects the larger population is called:
- (A) Stratified sample
 - (B) Representative sample
 - (C) Random assignment
 - (D) Control group
- 253.** To find out if the 7th graders would like to have a dance, Ms. Hudson asks her soccer players. This type of sampling is called?
- (A) Simple
 - (B) Systematic
 - (C) Stratified
 - (D) Voluntary
 - (E) Convenience
- 254.** A retail chain lists 12,000 loyalty members and chooses every 120th name after a random start. Identify the method used.
- (A) Cluster sampling of store-based groups
 - (B) Simple random sampling without replacement
 - (C) Systematic sampling using interval $k = 120$
 - (D) Quota sampling based on spending tiers
- 255.** Which of the errors can be minimised by taking a larger sample
- (A) Sampling error
 - (B) Non-sampling error
- 256.** A sampling frame refers to the
- (A) Baseline group without treatment
 - (B) Precise measurement description
 - (C) List or source from which samples are drawn
 - (D) Method for randomizing group assignment
- 257.** In a thesis data gathering procedure, random sampling is not necessary for achieving a representative sample
- (A) TRUE
 - (B) FALSE
- 258.** Population, Sample, or either: A survey given out at random in a mall about shopping activity in that mall.
- (A) Population
 - (B) Sample
 - (C) Either Edit
 - (D) None of above
- 259.** Why is a large sample size generally preferred in psychological research?
- (A) It reduces the likelihood of confounding variables affecting the results
 - (B) It ensures the experiment has higher internal validity
 - (C) It improves the reliability and generalizability of the findings
 - (D) It makes it easier to manipulate the independent variable
- 260.** Mrs. Trahan samples her class by selecting all students sitting at group 1 and group 5 in her classroom. This sampling technique is called?
- (A) Simple
 - (B) Stratified
 - (C) Systematic
 - (D) Cluster
- 261.** The portion of the population that is selected for analysis is called:
- (A) A sample
 - (B) A frame
 - (C) A parameter
 - (D) A statistic

- 262.** To prevent a biased sample and control for order effects in an experimenter, a researcher would respectively need to use
(A) Random sampling and stratified sampling
(B) Random allocation and random sampling
(C) Counterbalancing and random sampling
(D) Random sampling and counterbalancing
- 263.** Sample bias most closely refers to which situation?
(A) Systematic over or underrepresentation
(B) Random fluctuation around the mean
(C) Errors from data entry mistakes
(D) Variation due to small sample size
- 264.** What does a sample group represent?
(A) Control group
(B) Community
(C) Universe
(D) Study subjects
- 265.** Which one of these is a correct assumption you need to make about a population between samplings?
(A) It is a closed population
(B) It won't rain between samplings
(C) There are lots of deaths
(D) There are lots of births
- 266.** Asking for volunteers to take part in research through advertisements.
(A) Opportunity Sampling Technique
(B) Random Sampling Technique
(C) Volunteer Sampling Technique
(D) None of above
- 267.** The most objective sampling technique is involved in which of the following selection processes?
(A) Quota
(B) Purposive
(C) Random
(D) Convenience
- 268.** Which term describes mistakes arising from sampling design?
(A) Non-sampling errors
(B) Sampling errors
(C) Errors and omissions
(D) Bias
- 269.** Small, manageable number of subjects that represent the population
(A) Participants
(B) Random sample
(C) Sample
(D) None of above
- 270.** What is the purpose of understanding target population samples in research?
(A) To identify the strengths of the research
(B) To understand the general population
(C) To differentiate between the general population and a sample
(D) To identify weaknesses in the research
- 271.** A relatively small group out of the total population is?
(A) Sample
(B) Variable
(C) Control group
(D) Case study Edit
- 272.** A sample in which known subgroups are represented in proportion to their numbers in the general population is called a
(A) Random sample
(B) Stratified sample
- 273.** A sample is a:
(A) Complete data set
(B) Subset of a population
(C) The entire target group
(D) None of the above
- 274.** Identify the sampling design: Mrs. Rebmann asks Mr. May, her neighbor, who his favorite America's Got Talent contestant is
(A) Random

- (B) Unbiased
 - (C) Systematic
 - (D) Convenience
275. Population, Sample, or either: 1/5 of all single parents in Fairhope were interviewed for a report on childcare and parent resources in the area.
- (A) Sample
 - (B) Population
 - (C) Either
 - (D) None of above
276. What is a common drawback of online surveys for business research?
- (A) Excess travel costs for fieldwork, lodging
 - (B) Sampling bias from self-selection, coverage gaps
 - (C) Inability to randomize question order, routing
 - (D) Guaranteed 100% completion rates, perfect data
277. Why must a sample be representative?
- (A) In order to capture the variability within the population
 - (B) In order to represent each member of a population
 - (C) In order to facilitate the development of grounded theory
 - (D) In order to select a sampling frame
278. The stages of the sampling process comprise
- (A) Defining the population
 - (B) Specifying sampling frame
 - (C) Specifying sampling method
 - (D) All the above
279. An entire group of objects-people, animals, plants-from which data can be collected.
- (A) Population
 - (B) Sample
 - (C) Representative sample
 - (D) Random sample
280. A relatively small group out of the total population under study
- (A) Sample
 - (B) Qualitative
 - (C) Hypothesis
 - (D) Observation
281. Sampling method that consists of n individuals from the population chosen in such a way that every individual has an EQUAL chance of being selected.
- (A) Stratified Sampling
 - (B) Simple Random Sampling (SRS)
 - (C) Cluster Sampling
 - (D) Systematic Sampling
282. Charlotte is conducting a survey to understand the eating habits of people in her city. However, she only collects responses from people at a local health food store. Sampling bias occurs when a sample does what?
- (A) Produces an unrepresentative sample
 - (B) Overrepresents rare outcomes
 - (C) Uses excessive random assignment
 - (D) Includes too many control subjects
283. Ms. Noelle took a sample by selecting all students sitting in group 1 and group 5 in her classroom. This sampling technique is called?
- (A) Simple Random
 - (B) Stratified
 - (C) Systematic Random
 - (D) Cluster
284. If we took the 400 people making up a local corporation, divided them by gender, and then took a random sample of females and a random sampling of males, the variable on which we divided the population is called the —
- (A) Stratification variable
 - (B) Systematic variable
 - (C) Selection variable
 - (D) Sampling variable

285. The process of selecting participants is called:
- (A) Data Collection
 - (B) Sampling
 - (C) Data Analysis
 - (D) Scope
286. It specifies the sampling technique used and how the sample size is determined.
- (A) Methodology
 - (B) Population Sampling or Respondents of the Study
 - (C) Research Instrument
 - (D) Statistical Treatment of Data
287. According to a random telephone survey of 200 adults, 75% of all working adults in the U.S. are satisfied with their current job. What is the population in this survey?
- (A) 200 adults
 - (B) Adults in the U.S.
 - (C) 75% of adults
 - (D) None of above
288. True or False: all samples lead to a good prediction about an entire population.
- (A) True
 - (B) False
289. What do you call the small portion of the population from whom data is gathered?
- (A) Census
 - (B) Sample
 - (C) Target
 - (D) Probability
290. I have learned that when determining the sample size of the study ____
- (A) It is important to consider the desired level of confidence and margin of error.
 - (B) The number of researchers is the only factor to consider.
 - (C) The sample size should always be as large as possible, regardless of resources.
 - (D) The sample size does not affect the validity of the study.
291. ____ is defined as the level of how well or how accurately something reflects upon a sample. When a study gives a good indication of what the whole population believes, this is an example of a study with good ____
- (A) Representativeness
 - (B) Reliability
 - (C) Validity
 - (D) Correlation
292. Mrs. Delos Santos samples her class by selecting all students sitting at group 1 and group 5 in her classroom. This sampling technique is called?
- (A) Simple
 - (B) Stratified
 - (C) Systematic
 - (D) Cluster
293. Mrs. Croix is conducting a survey to find out the favorite snack of fifth and sixth graders. She will ask a sample of 100 students. Which of the groups below should be surveyed to get the BEST representative sample?
- (A) 20 students from each of the 5 local fifth- and sixth-grade schools.
 - (B) The first 100 students who go to a local baseball game
294. What is the main difference between stratified random sampling and simple random sampling?
- (A) Stratified random sampling divides the population into subgroups before sampling, while simple random sampling does not.
 - (B) Simple random sampling gives an equal chance to all members, while stratified does not.
 - (C) Stratified random sampling is only used for small populations.
 - (D) Simple random sampling is more accurate than stratified random sampling.
295. The whole group you want to study or describe is called the ____
- (A) Sample

- (B) Control Group
 - (C) Experimental Group
 - (D) Target Population
- 296.** Which statement about population in social research is accurate?
- (A) Population is any random subset of cases
 - (B) Population is a sample drawn for convenience
 - (C) Population is the total number of cases with given characteristics
 - (D) Population is unrelated to a defined set or class
- 297.** The process of selecting a representative group from the population:
- (A) Sampling
 - (B) Interviewing
 - (C) Observing
 - (D) Hypothesizing
- 298.** Sampling every 50th item or person is called —
- (A) Biased
 - (B) Simple Random
 - (C) Voluntary
 - (D) Systematic
- 299.** Which of the following descriptions is a summary of what random sampling is?
- (A) The researchers go out looking for the right number of each sort of person required in each category.
 - (B) Every tenth or hundredth name on a list is selected.
 - (C) Dividing the population into males and females, and then taking a 1% sample of each.
 - (D) The sample is selected purely by random chance, eg, names may be drawn out of a hat.
- 300.** It is defined as a subgroup of the population.
- (A) Statistic
 - (B) Parameter
 - (C) Sample
 - (D) Population
- 301.** The group of participants you obtain for your study and should be representative of the population.
- (A) Population
 - (B) Parameter
 - (C) Sample
 - (D) Statistic
- 302.** A group that includes a cross section of the entire population that is targeted.
- (A) Marketing research
 - (B) Data
 - (C) Secondary data
 - (D) Representative sampling
- 303.** All members of an identified group about which a researcher is interested
- (A) Sample
 - (B) Population
 - (C) Variables
 - (D) None of above
- 304.** Sampling error decreases with the [2013-DECEMBER]
- (A) Decrease in sample size
 - (B) Increase in sample size
 - (C) Process of randomization
 - (D) Process of analysis
- 305.** Why must researchers avoid generalizing from focus group participants to the whole market?
- (A) Participants' responses are not reliable.
 - (B) Most of the participants are likely to be ignorant about the topic of discussion.
 - (C) The size of the group is too small and the sample is not drawn randomly.
 - (D) Most of the participants are likely to exhibit similar tastes and preferences.
 - (E) The participants usually come from diverse backgrounds.

- 306.** A study on social media use selects 50 male students and 50 female students. What method is this?
- (A) Snowball sampling through peer referrals
 - (B) Systematic sampling using every tenth student
 - (C) Cluster sampling by classroom groups
 - (D) Quota sampling with gender-based quotas
- 307.** What effect does increasing the sample size have upon the sampling error?
- (A) It reduces the sampling error
 - (B) It increases the sampling error
 - (C) It has no effect on the sampling error
 - (D) None of the above
- 308.** People may not see the advert or make time to reply, or they may just ignore it. Those who do volunteer may be different from those who do not choose to volunteer.
- (A) Weakness of Opportunity Sampling Technique
 - (B) Weakness of Random Sampling Technique
 - (C) Weakness of Volunteer Sampling Technique
 - (D) None of above
- 309.** A statistical study where the sample is equal to the population is called a/an ____
- (A) Census
 - (B) Sampling
 - (C) Survey
 - (D) Experiment
- 310.** The researcher should select the respondents because he is about to gather data through questionnaire. What sampling method will he use if each member of the population has an equal chance of being drawn to be included in the sample?
- (A) Independence
 - (B) Equiprobability
 - (C) Fish Bowl
 - (D) Draw lots
- 311.** What kind of sampling technique is the following: List the names of all the students alphabetically and contact the parent of every 10th student.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
- 312.** Which of the following will produce the least sampling error?
- (A) A large sample based on convenience sampling
 - (B) A small sample based on random sampling
 - (C) A large snowball sample
 - (D) A large sample based on random sampling
- 313.** Which procedure helps to ensure that the participants in a survey are representative of a larger population?
- (A) Random assignment
 - (B) Replication
 - (C) Correlation
 - (D) Naturalistic observation
 - (E) Random sampling
- 314.** Population
- (A) The entire pool from which a statistical sample is drawn.
 - (B) A specific group of individuals selected for a study.
 - (C) The average of all data points in a sample.
 - (D) A method of collecting data from a sample.
- 315.** A ____ is a small portion of the population used to gather data from.
- (A) Systematic Sampling Method
 - (B) Sample
 - (C) Population
 - (D) Bias

- 316.** You survey every person in the food court at the mall. Which type of sampling method are you using?
- (A) Convenience
 - (B) Systematic
 - (C) Simple Random
 - (D) None of above
- 317.** It is the complete set of all the elements that will be studied
- (A) Inferential Data
 - (B) Population
 - (C) Sample
 - (D) None of above
- 318.** What are we talking about when we say Population in Psychology?
- (A) The entire group of people or animals in which the researcher is interested.
 - (B) A sample that has characteristics that are similar to those in the population.
 - (C) Subjects in an experiment who are not subjected to the independent variable and may receive a placebo treatment.
 - (D) Study in which the subject do not know if they are in the experimental or the control group
- 319.** This is ALL of the people in a group that are being studied.
- (A) Sample
 - (B) Population
 - (C) Group
 - (D) Assignment
- 320.** Population, Sample, or either: All the teachers at Fairhope High School
- (A) Population
 - (B) Sample
 - (C) Either
 - (D) None of above
- 321.** A subset of the population
- (A) Questionnaire
 - (B) Sample
 - (C) Secondary data
 - (D) Survey
- 322.** All the organisms of the same species that live in the same area at the same time
- (A) Carrying capacity
 - (B) Population
 - (C) Urban sprawl
 - (D) Desertification
- 323.** Which sampling method selects every kth member?
- (A) Cluster sampling
 - (B) Stratified sampling
 - (C) Systematic sampling
 - (D) Simple random sampling
- 324.** Refers to the procedure of selecting sampling units from the universe.
- (A) Research design
 - (B) Sample design
 - (C) Research
 - (D) None of these.
- 325.** A sample should be
- (A) Representative of only middle school students only
 - (B) A very large group
 - (C) Representative of the population
 - (D) Representative of people who volunteer
- 326.** Will conducting this survey introduce bias? Surveying parents of Year 8 students to find out how many children the average adult has.
- (A) Yes, because the survey was conducted with only parents of Year 8s.
 - (B) Yes, because the survey was conducted only with adults.
 - (C) Yes, because parents are able to opt out and not complete the survey.
 - (D) No, there is no bias.
- 327.** What is the process of selecting representative units from a total population?
- (A) Sample

- (B) Census
(C) Sampling
(D) Population
328. An essential aspect of random samples is that the population must be ____ defined or identified.
(A) Explicitly
(B) Transportation
(C) Revealed
(D) Inhibited
329. If a survey finds a percentage, how much would that percentage fluctuate if additional random samples of the Canadian population were taken?
(A) It would remain the same
(B) It would fluctuate slightly
(C) It would fluctuate significantly
(D) It would not fluctuate at all
330. Sampling methods are used to select
(A) A representative sample of your target population
(B) The best candidates for your study
(C) The participants who will perform best in your study
(D) Participants whom are similar to each other
331. In an organization of 500 employees, the HR team decides on conducting team building activities, they prefer picking chits out of a bowl. In this case, each of the 500 employees has an equal opportunity of being selected.
(A) Sampling
(B) Lottery method
(C) Stratifying
(D) Table of random numbers
332. Elise, a supermarket employee, approached 50 random customers and asked whether they would be willing to discuss what they like most about the store. She interviewed the 22 who said yes. Is this sample of the supermarket's customers likely to be biased?
- (A) Yes
(B) No
333. Any group of data, which includes all the data you are interested in, is called a ____
(A) Population
(B) Parameter
(C) Sample
(D) Statistic
334. A researcher selects three school branches randomly and studies all students there. Which technique is used?
(A) Quota sampling
(B) Cluster sampling
(C) Systematic sampling
(D) Stratified sampling
335. What is a suitable way to sample plants in a field?
(A) Counting Random Plants
(B) Using Quadrats
(C) Using Pooters
(D) Using Pitfall traps
336. Sampling is done because:
(A) It saves time and cost
(B) It is easier than studying the entire population
(C) It provides representative data
(D) All of the above
337. What is biased sampling?
(A) When some members of a population are more likely to be selected than others.
(B) When all members of a population have an equal chance of being selected.
(C) When no members of a population are selected.
(D) When only one member of a population is selected.
338. The population describes:
(A) The group of people, objects or events being surveyed

- (B) A part of the group being surveyed
(C) The whole world
(D) The school
- 339.** Is a definite plan for obtaining a sample from a given population.
(A) Research design
(B) Sample design
- 340.** Which of the following is NOT a method scientists use to measure the biodiversity of an area?
(A) Canopy fogging
(B) Transect sampling
(C) Biological control
(D) Aerial photos
- 341.** The best sampling technique for a large and diverse population is:
(A) Convenience sampling
(B) Stratified random sampling
(C) Snowball sampling
(D) Quota sampling
- 342.** Sample designs are classified into
(A) Probability
(B) Non-probability
(C) All of the above
(D) None of the above
- 343.** Any subset of elements drawn by some appropriate method from a population; small portion/part of a population.
(A) Population
(B) Data
(C) Sample
(D) Ratio
- 344.** What do you call the set of all data that researchers want to investigate?
(A) . data
(B) Population
(C) Random
(D) Information
- 345.** Aanya is conducting a research study on the reading habits of high school students in her city. The aggregate of all the students she is considering for her study is called ____
(A) Population
(B) Unit
(C) Sample
(D) Frame
- 346.** A defined group serving as the subject of a study
(A) Sample
(B) Population
(C) Random sample
(D) None of above
- 347.** Which of the following means the sample is more representative of the target population?
(A) It has more women than the target population
(B) It is a very small sample
(C) It is conducted at a specific place or time
(D) It is a large and randomly selected sample
- 348.** Part of methodology describing who provides data
(A) Respondents or participants
(B) Variables
(C) Instruments
(D) Procedures
- 349.** Directions: Each statement below describes a situation involving one of the CHAMPS research biases. Select the most appropriate bias for each example: A clinical trial recruits volunteers through a fitness-center mailing list, resulting in a sample that is younger and healthier than average adults.
(A) Measurement Bias
(B) Confounding
(C) Selection Bias
(D) Attrition Bias
(E) Publication Bias

350. What is the term for the group from which a sample is drawn for a research study?
- (A) Variable
 - (B) Data Set
 - (C) Sample
 - (D) Population
351. When people are selected on the basis of certain characteristics (such as age, gender or income) as a source of information for market research.
- (A) Population
 - (B) Sampling
 - (C) Random sample
 - (D) Quota sample
352. A ____ is a subset of a ____?
- (A) Sample, population
 - (B) Population, sample
 - (C) Statistic, parameter
 - (D) Parameter, statistic
353. What sampling method are you using if you survey every 12th customer that enters the amusement park.
- (A) Convenience
 - (B) Systematic
 - (C) Simple Random
 - (D) None of above
354. When the group being studied can account for the whole population, accounting for all social minority groups and diversity.
- (A) Generalisability
 - (B) Representativeness
 - (C) Operationalisation
 - (D) Survey
355. Choosing individuals as a sample according to the purposes of the research as his control/an individual is chosen as a part of the sample because of good evidence that he is representative of the total population
- (A) Convenience sampling
 - (B) Judgemental sampling
 - (C) Quota sampling
 - (D) Snowball sampling
 - (E) Purposive sampling
356. The sample size formula takes the following into account, except ____
- (A) Desired confidence level
 - (B) Desired margin of error
 - (C) Population size
 - (D) All of these are taken into account
357. Which one of the following principles is not applicable to sampling?
- (A) Sample units must be clearly defined
 - (B) Sample units must be dependent on each other
 - (C) Same units of sample should be used throughout the study
 - (D) Sample units must be chosen in a systematic and objective manner
358. All those in a group being studied is referred to as the ____
- (A) Random sample
 - (B) Representative sample
 - (C) Population
 - (D) Sampling bias
359. Suppose the population is quite comprehensive and distributed in a large geographical area. In such a situation what kind of sampling procedure would you like to adopt?
- (A) Multi-level sampling.
 - (B) Systematic sampling.
 - (C) Cluster sampling.
 - (D) None of the above.
360. Selecting those available at the time of research.
- (A) Opportunity Sampling Technique
 - (B) Random Sampling Technique
 - (C) Volunteer Sampling Technique
 - (D) None of above

- 361.** Stratified sampling is least likely to take account of ____
- (A) Race or ethnicity.
 - (B) Occupations.
 - (C) Heterogeneous characteristics of a population.
 - (D) Homogenous characteristics of a population.
- 362.** Target population is also called
- (A) Population.
 - (B) Population frame.
 - (C) Population element.
 - (D) Survey population.
- 363.** The following are types of sampling, except
- (A) Quota.
 - (B) Snowball.
 - (C) Purposive.
 - (D) Alternative.
- 364.** This method produces results that differ from population because of personal influence.
- (A) Valid sample
 - (B) Variable sample
 - (C) Biased sample
 - (D) Cluster sample
- 365.** What is 'Sampling Bias' in research methods?
- (A) Sampling bias occurs when the sample is not representative of the population, leading to skewed or invalid results.
 - (B) Sampling bias is when all members of the population have an equal chance of being selected.
 - (C) Sampling bias refers to the process of increasing the sample size to improve accuracy.
 - (D) Sampling bias is the deliberate manipulation of data to achieve desired results.
- 366.** Identify the POPULATION in the following question: What are the ages of the students at Clarke Middle School?
- (A) Students
 - (B) Age
 - (C) Clarke Middle School
 - (D) None of above
- 367.** Which step would NOT typically belong to sampling procedure planning?
- (A) Define target population precisely
 - (B) Select appropriate sampling frame
 - (C) Choose a method for selection
 - (D) Conduct factor analysis on data
- 368.** How do researchers select a representative sample in a study?
- (A) By choosing participants randomly from the entire population
 - (B) By excluding some members of the intended population
 - (C) By conducting a census of the entire population
 - (D) Selecting participants based on convenience
- 369.** Slovin's formula is used when:
- (A) The population is small and homogeneous
 - (B) Determining the margin of error in qualitative research
 - (C) Calculating the sample size when the population size is known but variability is unknown
 - (D) Determining reliability of instruments
- 370.** The principal randomly selects four classes and surveys each student in those classes. What kind of sampling technique is used?
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Stratified sampling
 - (D) Systematic Sampling
- 371.** What are biased samples?
- (A) Samples that do not accurately represent the population
 - (B) Samples that are randomly selected

- (C) Samples that are large in size
(D) Samples that are collected over a long period
- 372.** Generalisation of findings is most likely when using which sampling technique?
(A) Random sampling
(B) Opportunity sampling
(C) Volunteer sampling
(D) Stratified sampling
(E) Systematic sampling
- 373.** The process of selecting a number of participants for a study in such a way that they represent the larger group from which they were selected is known as
(A) Research Design
(B) Sampling
(C) Data collection
(D) Random assignment
- 374.** Population refers to:
(A) A subset of respondents
(B) All elements under study
(C) Only customers aged 18+
(D) None of these
- 375.** Sampling Cases means [2014-DECEMBER]
(A) Sampling using a sampling frame
(B) Identifying people who are suitable for research
(C) Literally the researchers brief case
(D) Sampling of people, newspapers, television programmes etc.
- 376.** Is it important to follow up on those persons in a survey who did not return questionnaires mailed to them?
(A) No, because high precision is not needed in questionnaire surveys.
(B) No, because such delayed returns would be of doubtful value.
(C) Yes, because the sample that has already returned the questionnaire may be biased.
(D) Yes, because descriptive statistics require a large sample.
- 377.** Which step is essential for systematic sampling but not required in stratified sampling?
(A) Selecting units by a fixed interval
(B) Randomly sampling within subgroups
(C) Creating subgroups by characteristics
(D) Ensuring proportional representation
- 378.** Identify the sampling technique used in the following study: A survey regarding download time on a certain Web site is administered on the Internet by a market research firm to anyone who would like to take it.
(A) SRS
(B) Convenience
(C) Systematic
(D) Cluster
(E) Stratified
- 379.** In which sample population is divided into different strata and sample is taken from different strata?
(A) Quota Sampling
(B) Snow ball sampling
(C) Stratified sampling
(D) Purposive Sampling
- 380.** The term “population” in marketing research refers to:
(A) The number of surveys conducted
(B) A group of researchers conducting the study
(C) The total group the research aims to understand
(D) Respondents from other countries
- 381.** Identify the sampling design: Mr. April asks Mrs. May, his neighbor, who her favorite America’s Got Talent contestant is
(A) Cluster
(B) Unbiased
(C) Stratified
(D) Convenience

- 382.** Sampling error occurs due to:
- (A) Studying the entire population
 - (B) Non-representative sample
 - (C) Perfect measurement
 - (D) Data redundancy
- 383.** What is a sample in the context of sampling methods?
- (A) A subset drawn from the population.
 - (B) The entire population being studied.
 - (C) A method of collecting data.
 - (D) A type of statistical error.
- 384.** A researcher chooses only her classmates as respondents because they are easy to access. What is the sampling type and its limitation?
- (A) Convenience sampling; may not represent the larger population
 - (B) Random sampling; ensures equal chance for all
 - (C) Stratified sampling; covers all subgroups
 - (D) Systematic sampling; follows a fixed pattern
- 385.** Cluster sampling is best applied when:
- (A) The population is small and easy to access.
 - (B) The population is large and geographically spread out.
 - (C) The population is divided by age only.
 - (D) The population is already sampled.
- 386.** What is the role of the sample population in research?
- (A) To represent the entire population, reflecting its characteristics
 - (B) To add diversity to the study
 - (C) To increase the size of the study
 - (D) To provide biased data
- 387.** A sample that accurately represents the target population.
- (A) Representative sample
 - (B) Opportunity sampling
 - (C) Sampling bias
 - (D) Purposive sampling
- 388.** At the end of this module, you should be able to describe ____ procedure and the sample.
- (A) Sampling
 - (B) Testing
 - (C) Analyzing
 - (D) Measuring
- 389.** What do you call the sub-population that is group according to two or more mutually exclusive categories based on the researchers variables of interest?
- (A) Census
 - (B) Population
 - (C) Strata
 - (D) Sample
- 390.** Our data come from ____, but we really care most about ____
- (A) Theories; mathematical models
 - (B) Subjective methods; objective methods
 - (C) Samples; populations
 - (D) Populations; samples
- 391.** A researcher is studying the average income of households in a city. She uses a random sample of 200 households. What is the main goal of using this sample?
- (A) To determine the total number of households in the city
 - (B) To estimate the average income of all households in the city
 - (C) To find the household with the highest income
 - (D) To find the household with the lowest income
- 392.** A small section of the 'population' who are selected for a research survey.
- (A) Sample
 - (B) Population
 - (C) Survey
 - (D) Focus group

393. The ___ number of the sample of a population, the results or generalizations are more reliable and valid.
- (A) Smaller
 - (B) Bigger
 - (C) Exact
 - (D) Least
394. What is the primary purpose of using a representative sample?
- (A) To reduce computation time only
 - (B) To make valid inferences about the population
 - (C) To guarantee zero measurement error
 - (D) To increase the number of variables studied
395. What word best describes systematic sampling method?
- (A) Demographic
 - (B) Platform
 - (C) Quantity
 - (D) Numbered
396. A researcher divides participants into age groups and selects an equal number from each for the survey. What sampling method is being used?
- (A) Simple Random Sampling
 - (B) Convenience Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
397. Which sampling technique involves selecting participants based on their availability and accessibility?
- (A) Convenience sampling
 - (B) Random sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
398. Why is it advantageous to randomly select subjects from those available in each of the preexisting groups?
- (A) Representation of the subjects in each group is assured.
 - (B) Equal numbers of subjects can participate
 - (C) Specific subjects can be targeted for participation
 - (D) Sample sizes can be controlled.
399. Asking customers at a restaurant if pizza should be added to the menu.
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
400. When using systematic sampling to select a sample of 25 from a target population of 100, every ___ person must be selected.
- (A) 3rd
 - (B) 4th
 - (C) 5th
 - (D) 10th
401. The population in a research study is ___
- (A) The whole group of research interest.
 - (B) The smaller group that has been chosen from the group of research interest.
 - (C) Exactly the same as the sample.
 - (D) Always smaller than the sample. Edit
402. The process of selecting a sample is ___
- (A) Population
 - (B) Sample
 - (C) Sampling
 - (D) None of above
403. This refers to the group of people where the samples are taken from.
- (A) Respondents
 - (B) Population
 - (C) Sample
 - (D) Participants
404. Which is NOT included in the scope and delimitation of the study?
- (A) Location
 - (B) Problem

- (C) Respondents
(D) Sampling technique
- 405.** Which statement defines sampling error most accurately?
(A) Difference from faulty tools
(B) Difference from using a subset
(C) Difference from nonresponses
(D) Difference from biased wording
- 406.** ____ is the group of people to which the findings of the study are expected to be generalized.
(A) Sample
(B) Random sampling
(C) Target population
(D) Matching variables
- 407.** GHC conducts a study of student drinking by randomly selecting 20 different classes and interviewing all of the students in each of those classes.
(A) Random sampling
(B) Systematic sampling
(C) Convenience sampling
(D) Stratified sampling
(E) Cluster sampling
- 408.** There is a direct relationship between the ____ of the sample and the ____ of the results
(A) Homogeneity, quality
(B) Quality, homogeneity
(C) Size, heterogeneity
(D) Size, quality
- 409.** When it comes to representativeness in standardised sampling, which one of the following is best when one needs to consider economic constraints?
(A) Simple random sampling
(B) Stratified random sampling
(C) Cluster sampling
(D) Snowball sampling
- 410.** A Good sample has the quality of
(A) Representativeness.
(B) Adequacy.
(C) Homogeneity.
(D) All of the above.
- 411.** Representative sample
(A) A small quantity of something that accurately reflects the larger entity.
(B) A random selection of items from a larger group.
(C) A biased selection that favors certain characteristics.
(D) A collection of items that are all identical.
- 412.** What does the Participation Selection Model focus on in explanatory sequential research?
(A) Conducting follow-up questions.
(B) Specifying criteria for selecting participants for qualitative research.
(C) Comparing past and present data.
(D) Analyzing quantitative data only.
- 413.** A sample is considered ____ if it accurately reflects the population.
(A) Appropriate
(B) Realistic
(C) Representative
(D) Non-negotiable
- 414.** What do you call the people who have been invited to take part in a study?
(A) Locale of the study
(B) Period of the study
(C) Population Involved
(D) Respondents
- 415.** The most important consideration in selecting a sample is that the sample be:
(A) Selected from the population by means of a table of random numbers
(B) Made up of a large number of subjects
(C) Representative of the population
(D) Selected from a large number of individuals or elements

- 416.** In a study of undergraduate students at a university, what is the group of students who are recruited into the study?
- (A) Sampling frame
 - (B) Population
 - (C) Sample
 - (D) None of above
- 417.** Allocating equal number of respondents to each subgroup, regardless of size, describes:
- (A) Proportionate stratified sampling
 - (B) Disproportionate stratified sampling
 - (C) Systematic sampling
 - (D) Convenience sampling
- 418.** A social work researcher completes a study of students on six college campuses then uses the results to make conclusions about all college students. How is the researcher applying the results?
- (A) Generalization
 - (B) Reduction
 - (C) Abstraction
 - (D) None of above
- 419.** What does sampling refer to in research?
- (A) The process of analyzing data
 - (B) The process of selecting individuals from the population to participate in the study
 - (C) The process of publishing research findings
 - (D) The process of forming a hypothesis
- 420.** Mr. Gallagher is conducting a study of college freshmen in Louisiana. He has been able to compile a list of every freshman enrolled in the state supported universities, but the information on students attending private universities is not available to him. The students on his list are referred to as the ____
- (A) Target population.
 - (B) Accessible population.
 - (C) Sample.
 - (D) Stratified sample.
- 421.** The correct definition for a sample is:
- (A) A survey which is conducted on the entire population
 - (B) A set of data taken from only part of a population
 - (C) When a sample favours a certain outcome
 - (D) The amount surveyed
- 422.** A teacher samples her class by selecting every third person on her class list. Which type of sampling method is this?
- (A) Simple
 - (B) Systematic
 - (C) Stratified
 - (D) Cluster
- 423.** Identify the sampling technique used in the following study: In an effort to determine customer satisfaction, United Airlines randomly selects 50 flights during a certain week and surveys all passengers on the flights.
- (A) SRS
 - (B) Convenience
 - (C) Systematic
 - (D) Cluster
 - (E) Stratified
- 424.** This is a subset of a population that we take to analyze some property or variable of interest
- (A) Infinite
 - (B) Parameter
 - (C) Statistic
 - (D) Sample
- 425.** The sampling section in the proposal needs to provide information about ____
- (A) The names of participants
 - (B) The software used
 - (C) The type of analysis used
 - (D) The sampling population
- 426.** What is the term for the following definition? A behavioral recording technique where

- a narrative (i.e., what is called an essay in English class) is written on every behavior of one individual or group for a set length of time.
- (A) Focal sampling
 - (B) Interval recording
 - (C) Event sampling
 - (D) Time sampling
- 427.** The meaning of Randomization is
- (A) Each element of population has equal chances to be included in the sample.
 - (B) The selection of an individual from population does not pose threat to the selection of other individuals in the sample.
 - (C) The method does not include the personal basis.
 - (D) All the above.
- 428.** The subjects are the ones volunteering to constitute the sample
- (A) Convenience sampling
 - (B) Purposive sampling
 - (C) Quota sampling
 - (D) Voluntary sampling
 - (E) Snowball sampling
- 429.** What is the reason for sampling?
- (A) Constraints such as time, finances and access to people; make it difficult to reach 100% of the population.
 - (B) Testing out the questionnaire to see if it works before sending it out to the entire population
 - (C) Conducting research using people you know; and hoping they represent the general population
 - (D) Dividing the population into clusters that you think represent the entire population
- 430.** This method involves study of each and every items of the universe
- (A) Sampling
 - (B) Census
 - (C) Random sampling
 - (D) None of these
- 431.** The CDC chooses 15 hospitals around the country to survey. Every doctor in the chosen hospitals is required to participate in the study.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
- 432.** The entire set of items from which data can be selected?
- (A) Population
 - (B) Sample
 - (C) Statistics
 - (D) Data
- 433.** A researcher randomly selects and interviews fifty male and fifty female teachers.
- (A) Simple random sampling
 - (B) Stratified random sampling
 - (C) Cluster sampling
 - (D) Systematic sampling
- 434.** Which step of the research process that concerned with the target population?
- (A) Collect the data
 - (B) Determine the sample and method of data collection
 - (C) Determine the research design
 - (D) Analyze the data
- 435.** To improve the generalizability of their findings, researchers strive to:
- (A) Manipulate the independent variable to observe its effects on the dependent variable.
 - (B) Use a control group to compare against the experimental group.
 - (C) Include only participants who have high levels of expertise in the study's subject.
 - (D) Select a diverse sample that accurately represents the population of interest.

436. Which item focuses on the sequence from defining the population to selecting elements?
- (A) Sampling overview general concepts
 - (B) Sample size determination formulas
 - (C) Sampling procedure operational steps
 - (D) Sampling methods probability typology
437. The final result of a study will be more accurate if the sample drawn is
- (A) Purposive
 - (B) Fixed by quota
 - (C) Taken randomly
 - (D) Representative to the population
438. What is the main disadvantage of convenience sampling?
- (A) Expensive
 - (B) Lacks generalizability
 - (C) Time-consuming
 - (D) Difficult to implement
439. A musician wanted to see what people who bought his last album thought about the songs. Which choice best represents a sample?
- (A) Every person who bought the album.
 - (B) A selection of people who didn't want to buy the album.
 - (C) 250 girls who bought the album.
 - (D) A selection of 3,294 people who bought the album.
440. If a sample resembles the population from which it was drawn in all respects, except for total size, it is considered ____
- (A) Representative
 - (B) Biased
441. The actual population is the ____ population, for example, all Senior High School Students enrolled in Science, Technology, Engineering, and Mathematics (STEM) in the Division of Cagayan de Oro City.
- (A) Target
 - (B) Sample
 - (C) Accessible
 - (D) Experimental
442. A community college student interviews everyone in his biology class to determine the percent of students that own a car.
- (A) Systematic
 - (B) Convenience
 - (C) Random
 - (D) Stratified
443. How does random sampling differ from random assignment?
- (A) Random sampling is used to select participants, while random assignment is used to assign them to groups
 - (B) Random sampling ensures equal group sizes, while random assignment ensures equal group characteristics
 - (C) Random sampling is a method of data collection, while random assignment is a method of data analysis
 - (D) Random sampling and random assignment are the same process
444. Which is the first step when selecting a sample for a qualitative study?
- (A) Identifying the population
 - (B) Categorizing participants based on experience
 - (C) Defining who qualifies for the study
 - (D) Randomly selecting participants
445. The following statement corresponds to which concept? "It refers to the list, the map, or the source from which all the sampling units or units of analysis in the population can be extracted and from which the study subjects will be taken."
- (A) Sampling error
 - (B) Sampling frame
 - (C) Sample size
 - (D) Population parameter
446. The population represents a complete collection of every item that has the same characteristics as the individuals in the sample group.

- (A) True
 - (B) False
- 447.** Identify the Population:
- (A) 230 Teachers
 - (B) All Cebu City Teachers
 - (C) Students
 - (D) Cebu City Elementary Schools
- 448.** Asking participants to recommend others to take part in the research.
- (A) Systematic sampling
 - (B) Snowball sampling
 - (C) Stratified sampling
 - (D) Random sampling
- 449.** The process of drawing a sample from a population is known as ____
- (A) Sampling.
 - (B) Census.
 - (C) Survey research.
 - (D) None of the above.
- 450.** A representative segment of a target population
- (A) Sample
 - (B) Longitudinal method
 - (C) Cross sectional method
 - (D) Control group
- 451.** Participants who volunteer for research may be different types of people than those who don't volunteer resulting in volunteer bias.
- (A) TRUE
 - (B) FALSE
- 452.** What is the term for the entire group under study in research?
- (A) Sample
 - (B) Population
 - (C) Variable
 - (D) Hypothesis
- 453.** A small quantity of a larger group of data is called a ____
- (A) Population
 - (B) Parameter
 - (C) Sample
 - (D) Statistic
- 454.** A subset of the population from which data are obtained is called
- (A) The raw data
 - (B) A characteristic
 - (C) A confidence interval
 - (D) A sample
- 455.** Which of the following is one of the basic decisions in designing a sample?
- (A) Who will be surveyed
 - (B) Isolate the segment of the population that will give you the results you hope for
 - (C) Identify the research company to be used in the sampling process
 - (D) What month to do the sampling
- 456.** Which sampling type relies on availability and ease of access to participants?
- (A) Quota sampling
 - (B) Convenience sampling
 - (C) Stratified random sampling
 - (D) Systematic sampling
- 457.** Which of the following sampling strategies was used when the three students with the highest GPAs were selected?
- (A) Extreme case.
 - (B) Snowball.
 - (C) Maximum variation.
 - (D) Normal case.
- 458.** Mrs. Connie wants to know the average student's opinion of the tardy policy at our school. Which group of students should she survey in order to achieve the most accurate-non-biased results?
- (A) 30 students who are often tardy.
 - (B) 30 students who are rarely tardy.

- (C) 30 7th grade students.
(D) 30 randomly selected students from our school.
- 459.** The whole from which the sample was taken.
(A) Range
(B) Population
(C) Variability
(D) Survey
- 460.** Cross-sectional researches are fundamentally related with
(A) Tendencies.
(B) Sample.
(C) Eugenics.
(D) Statistics.
- 461.** Name the sampling method: Take a large group of students between the ages of 13 and 19 and split them into clusters by age. Then select on those students who are 14 and 16 as part of the sample.
(A) Systematic
(B) Stratified
(C) Cluster
(D) Simple random sample
- 462.** Ms. Zibilich wants to survey Hannan students about their opinions on school pep rallies. How would she collect a representative sample?
(A) Choosing 10 seniors to answer the survey
(B) Choosing 15 faculty members to answer the survey
(C) Randomly selecting high school students from Northshore schools
(D) Randomly selecting students from grades 8-12 at Hannan
- 463.** It is the process of randomly placing study participants in a treatment or control group.
(A) Comparison Group
(B) Equating the group
(C) Randomization
(D) Solomon Four-Group Design
- 464.** It deals with the method of selecting items to be observed for the given study;
(A) The sampling design:
(B) The observational design:
(C) The statistical design:
(D) The operational design:
- 465.** What is a sampling frame?
(A) A group of students chosen for a survey.
(B) A random number table.
(C) A list of all the members of the population.
(D) A method of data analysis.
- 466.** What is sampling technique?
(A) A method of collecting data from all members of a population
(B) A method used to select a subset of individuals from a larger population
(C) A way to analyze data once it has been collected
(D) A technique used for statistical analysis
- 467.** Why is random sampling important in surveys?
(A) It increases bias
(B) It helps avoid skewed results
(C) It reduces the number of responses
(D) It makes surveys longer
- 468.** A representative sample is
(A) A small number of people who reflect a more extensive group as accurately as possible.
(B) A large number of people who reflect more than 70%
(C) Any number of people could represent the group.
(D) None of the above
- 469.** Sample is regarded as a subset of?
(A) Data
(B) Set
(C) Distribution
(D) Population

- 470.** A sampling frame is:
- (A) A list of all the items in a population from which a sample is drawn.
 - (B) A method of data collection.
 - (C) A type of statistical analysis.
 - (D) A tool for measuring variables.
- 471.** What do I know about the population and sample of the study?
- (A) The population is the entire group being studied, and the sample is a subset of that group.
 - (B) The population is a subset of the sample.
 - (C) The sample and population are always the same.
 - (D) The sample is the entire group being studied, and the population is a subset.
- 472.** Students from a journalism class ask only their friends to participate in a school newspaper survey and neglect to ask the rest of the student body. The journalism students' data may not be generalizable due to ____
- (A) A lack of debriefing
 - (B) Sampling bias
 - (C) Participant bias
 - (D) Social desirability bias
 - (E) Placebo effects
- 473.** A sample frame is a useful tool to ____ a target population.
- (A) Approximate
 - (B) Assess
 - (C) Assimilate
 - (D) Attach
- 474.** A fewer number of respondents is needed in a study to minimize the error.
- (A) FALSE
 - (B) TRUE
- 475.** A researcher identifies professional athletes as a group of interest to test her research hypothesis. She then identifies a few local professional teams and selects a small group of the local athletes to be observed. In this example, who is the target population?
- (A) Not clearly identified
 - (B) All professional athletes
 - (C) The few local professional athletes
 - (D) The small group of professional athletes who were observed
- 476.** Which of the following is a benefit of representative sampling?
- (A) Representative sampling allows researchers to approximate results with only minor statistical weighting.
 - (B) Representative sampling is faster and easier than other types of sampling.
 - (C) Representative sampling allows researchers to use a subset to approximate results to the entire population.
 - (D) Representative sampling is more reliable than in-depth interviews.
- 477.** A ____ is a part of the population that we actually examine to gather info.
- (A) Stratified
 - (B) Survey
 - (C) Portion
 - (D) Sample
- 478.** Stratified sampling requires dividing the population:
- (A) Randomly without criteria
 - (B) Into subgroups or strata
 - (C) By alphabetical order only
 - (D) None of these
- 479.** Used in large-scale studies which population is geographically spread out
- (A) Restricted random sampling
 - (B) Unrestricted random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
 - (E) Stratified random sampling
- 480.** What sampling method did Zimbardo use to recruit potential participants for his prison study?

- (A) Systematic
 - (B) Opportunity
 - (C) Volunteer
 - (D) Random
- 481.** Surveying the students in one home room is an example of which type of sampling method?
- (A) Convenience
 - (B) Systematic
 - (C) Simple Random
 - (D) None of above
- 482.** Sarah draws 10 names out of a bowl containing the names of all the students at her school to determine which students she will interview for a study on the school's computer usage. This is an example of a
- (A) Stratified sample
 - (B) Case study
 - (C) Random sample
 - (D) Cross-sectional study
- 483.** What is a smaller, representative group drawn from a population?
- (A) Unit
 - (B) Sample
 - (C) Parameter
 - (D) Statistic
- 484.** In a study to determine the average age of people attending a concert, a random sample of attendees is selected. What is the sample used for in this study?
- (A) To determine the total number of attendees
 - (B) To estimate the average age of all attendees
 - (C) To find the oldest attendee
 - (D) To find the youngest attendee
- 485.** In social research, how are the terms 'population' and 'universe' commonly used?
- (A) As unrelated concepts with different meanings
 - (B) Interchangeably in a specific research sense
 - (C) Only to describe biological communities
 - (D) Exclusively for mathematical sets
- 486.** Most often in laboratory studies it is studied:
- (A) Not the object itself, but its sample;
 - (B) Not the bioreactor itself, but its sample;
 - (C) Not the fermenter itself, but its structure;
 - (D) Not the object itself, but its drawing;
 - (E) Not the object itself, but its structure;
- 487.** Which of the following precaution should be kept in mind by the researcher during the selection of a representative sample?
- (A) Deep knowledge of the target population.
 - (B) The adequate knowledge of the sampling techniques.
 - (C) Accurate implementation of the sampling design.
 - (D) All of the above.
- 488.** What is a population?
- (A) A tool used to collect statistical data
 - (B) Statistics collected from an entire population
 - (C) All the people or objects on which data is collected
 - (D) A group chosen from a population
- 489.** Why is careful selection of sampling methods important in research?
- (A) Different sampling methods can lead to different conclusions.
 - (B) It makes the research process faster.
 - (C) It guarantees the research will be published.
 - (D) It eliminates the need for data analysis.
- 490.** Which sampling method involves choosing every "nth" person on a list?
- (A) Opportunity sampling

- (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Random sampling
- 491.** What is a subset of individuals selected from the larger population called?
- (A) Sample
 - (B) Group
 - (C) Cluster
 - (D) Section
- 492.** What kind of sample technique is the following: Question every person in the movie theater parking lot.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
- 493.** The sample is gathered via the participants putting themselves forward. Found through adverts
- (A) Quota
 - (B) Volunteer sample
 - (C) Random
 - (D) None of above
- 494.** It is a scientific way of gathering participants for your research
- (A) Sampling plan
 - (B) Mixed methods
 - (C) Qualitative data
 - (D) None of above
- 495.** Which scenario indicates a potential limitation of simple random sampling in practice?
- (A) Each unit has a known nonzero probability
 - (B) The sampling frame is incomplete or outdated
 - (C) Random numbers are generated by software
 - (D) Population elements are uniquely numbered
- 496.** Now I know that sampling procedures involve ____
- (A) Selecting a subset of a population for study
 - (B) Analyzing the entire population
 - (C) Ignoring data collection methods
 - (D) Focusing only on qualitative data
- 497.** A good way to get a small standard error is to use a ____
- (A) Repeated sampling.
 - (B) Small sample.
 - (C) Large sample.
 - (D) Large population.
- 498.** Sampling is:
- (A) Measuring the entire population
 - (B) Studying a portion of the population
 - (C) Ignoring population characteristics
 - (D) Randomly collecting irrelevant data
- 499.** ____ is used when getting the information from the respondents involves too much time, travelling and money
- (A) Interviews
 - (B) Convenience sampling
 - (C) Cluster sampling
 - (D) Observations Edit
- 500.** A student is researching the hypothesis that adolescent females contribute more to household tasks than adolescent males. Four females and two males are selected to be interviewed as the sample group. Using this sample group may lead to
- (A) Biased results.
 - (B) Subjective data.
 - (C) Issues of privacy.
 - (D) Valid conclusions.
- 501.** With respect to the sampling plan, three decisions must be made: 1) the sampling unit—who is to be surveyed; 2) sample size—how many people should be surveyed; and 3) ____
- (A) Sample cost—how much does sampling cost

- (B) Surveyor skill—who should conduct the survey
- (C) Sample security—how should the sample data be protected
- (D) Sampling procedure—how should respondents be chosen
- (E) Sample supervisor—who leads the sampling effort
- 502.** In order to describe the population of data in a thesis, ____ can be done
- (A) A representative sample can be studied
- (B) A mapping can be detected
- (C) Data collection can be done
- (D) A statistical record can be maintained
- 503.** Which one of the following principles is not applicable to sampling?[2008-JUNE]
- (A) Sample units must be clearly defined
- (B) Sample units must be dependent on each other
- (C) Same units of sample should be used throughout the study
- (D) Sample units must be chosen in a systematic and objective manner
- 504.** It pertains to the entire group that you want to draw conclusion about. It can mean a group containing elements of anything you want to study, such as objects, events, organizations, countries, species, organisms, etc.
- (A) Population
- (B) Sample
- (C) Variable
- (D) Literature Review
- 505.** Which feature must strata have in stratified sampling?
- (A) Mutually exclusive and collectively exhaustive
- (B) Ordered by a numeric identifier only
- (C) Geographically compact and equal sized
- (D) Small enough to survey fully each time
- 506.** Determine if the given sample is random or not random: Rachel chooses each player on the soccer team whose last name starts with a vowel to participate in a survey about team sports
- (A) Biased sample
- (B) Unbiased sample
- (C) Random sample
- (D) Biased population
- 507.** Why is sampling often used instead of complete enumeration?
- (A) Sampling provides a precise, perfect answer
- (B) Sampling saves time, energy, and money, making it more feasible
- (C) Sampling always achieves a 100% response rate
- (D) Sampling is less popular than complete enumeration
- 508.** It refers to the process of choosing a part of the population you want to study.
- (A) Sampling
- (B) Conclusion
- (C) Recommendations
- (D) Interpretation
- 509.** A sampling element is:
- (A) A part of the population chosen for analysis
- (B) The entire population
- (C) A method of data collection
- (D) A statistical error
- 510.** Which of the following is not something a researcher will have to consider when thinking about their sample size?
- (A) Time and cost.
- (B) Non. response.
- (C) Length of questionnaire.
- (D) Heterogeneity of population.
- 511.** In non-probability sampling, which technique involves selecting individuals who are easiest to reach?
- (A) Simple random sampling

- (B) Snowball sampling
 - (C) Convenience sampling
 - (D) None of the above
512. To accurately predict an outcome, it is necessary for researchers to study a group that represents the ____
- (A) Sample
 - (B) Bias
 - (C) Target population
 - (D) Local attitude
513. Which of these instruments would be used to measure a biotic factor?
- (A) Light meter
 - (B) PH meter
 - (C) Thermometer
 - (D) Quadrat
514. Select the most critical risk when the sample is not representative.
- (A) More complex visualizations and charts
 - (B) Longer processing times in software
 - (C) Biased predictions about the population
 - (D) Higher variance but unbiased estimates
515. A representative set of a population, to gain information from a large group
- (A) Population
 - (B) Response Survey
 - (C) Sample
 - (D) Experiment
516. A ____ is a large group that includes everything being studied.
- (A) Sample
 - (B) Stratified Sampling Method
 - (C) Population
 - (D) Voluntary-Response
517. A researcher is concerned that the sample they have chosen for their study may not accurately reflect the population they are interested in. What concept are they concerned about?
- (A) Representative sample
 - (B) Random sampling
 - (C) Counterbalancing
 - (D) Order effects
518. What type of sampling involves subdividing the population into separate proportional categories?
- (A) Cluster
 - (B) Stratified
 - (C) Systematic
 - (D) Quota
519. Group of people who represent a larger population
- (A) Population
 - (B) Sample
 - (C) Secondary Analysis
 - (D) Field Research
520. The study population is information about
- (A) Phenomenon
 - (B) People
 - (C) Problem
 - (D) Programme
521. The university book shop selects 200 of its more than 8000 customers to participate in a study on service quality in the shop. The book Shop has established a ____ for use in its research.
- (A) Field setting.
 - (B) Sample.
 - (C) Population.
 - (D) Dependent grouping.
522. What refers to any procedure done to select samples?
- (A) Experimentation
 - (B) Replication
 - (C) Sampling
 - (D) Treatment

523. It is the process of selecting subgroups from a population.
(A) Sample respondents
(B) Population
(C) Sampling
(D) None of above
524. An example of ensuring reliability in research is:
(A) Using a large sample size
(B) Ignoring outliers
(C) Relying on anecdotal evidence
(D) Using biased sampling methods
525. In sampling, the lottery method is used for
(A) Theorisation
(B) Randomisation
(C) Interpretation
(D) Conceptualisation
526. Questions in which only two alternatives are possible is called
(A) Multiple choice questions
(B) Dichotomous questions
527. Selecting people from a population to ensure everyone in a population is proportionally included.
(A) Random Sampling
(B) Representative Sampling
(C) Random Assignment
(D) Representative Assignment
528. One way to specifically identify the number of respondents to be used in the study is through ____?
(A) Instrumentation
(B) Example
(C) Sample
(D) Sampling
529. Which of the following would generally require the largest sample size?
(A) Cluster sampling
(B) Simple random sampling
(C) Systematic sampling
(D) Proportional stratified sampling
530. What is meant by "target population" in research?
(A) The group of people who will read the research
(B) The entire group a researcher is interested in studying
(C) The group of people who fund the research
(D) The group of people who conduct the research
531. A sample is representative if
(A) Only volunteer subjects are used.
(B) It is different from the population as possible
(C) All subjects are chosen from a single, unusual segment of the population
(D) Its composition is similar to the composition of the population
532. Sample attrition refers to:
(A) The process of selecting a sample from a population.
(B) The loss of participants over time in a study.
(C) The method of ensuring random sampling.
(D) The variation in participant responses.
533. Sampling is about ____ a sample from a population.
(A) Adding
(B) Including
(C) Predicting
(D) Selecting
534. This method produces values that systematically differ from the population being sampled.
(A) Valid sample
(B) Variable sample
(C) Biased sample
(D) Cluster sample

535. What is the term for the following definition? A subcollection of data that represent a larger population.
- (A) Sample
 - (B) Variable
 - (C) Parameter
 - (D) Statistic
536. Identify the sampling design: Mr. Altenhof asks each family member what their favorite TV show is
- (A) Cluster
 - (B) Unbiased
 - (C) Stratified
 - (D) Convenience
537. You draw a random sample of 400 from 40,000 customers. The estimate differs from the true mean by chance. What is this difference called?
- (A) Measurement error
 - (B) Sampling error
 - (C) Selection bias
 - (D) Nonresponse bias
538. All those in a group being studied from which a sample may be drawn:
- (A) Random sample
 - (B) Sampling bias
 - (C) Population
 - (D) None of above
539. This sample consists of the entire population
- (A) Convenience
 - (B) Census
 - (C) Cluster
 - (D) Simple
540. Sampling method based upon LOCATION and you randomly pick a location and sample all there
- (A) Stratified Sampling
 - (B) Simple Random Sampling (SRS)
 - (C) Cluster Sampling
 - (D) Systematic Sampling
541. Selecting every nth member of the population is known as what?
- (A) Systematic Sampling
 - (B) Cluster Sampling
 - (C) Random Sampling
 - (D) Stratified Sampling
542. How many steps are there to select a qualitative research sample?
- (A) 2
 - (B) 3
 - (C) 4
 - (D) 5
543. Market research may be inaccurate due to:
- (A) Large sample size
 - (B) Clear understandable questions
 - (C) Good methodology (how it was done)
 - (D) Small sample size
544. Which method minimizes sampling frame bias effectively?
- (A) Convenience sampling
 - (B) Random digit dialing
 - (C) Quota sampling
 - (D) Purposive sampling
545. In generalising from a sample to the population, it is important that the sample
- (A) Is representative
 - (B) Has been standardised
 - (C) Is not too large
 - (D) Is selected so that all members of the population participate
546. Which of the following factors affect sampling error?
- (A) Sample size
 - (B) Population variability
 - (C) Sampling method
 - (D) All of the above
547. The main advantage of sampling:
- (A) Reduces time and cost

- (B) Eliminates errors
 - (C) Guarantees accuracy
 - (D) Avoids analysis
- 548.** The total group to be studied or described from whom samples may be drawn
- (A) Survey
 - (B) Target population
 - (C) Bias
 - (D) Volunteer bias
- 549.** Drawing a sample from each stratum in the proportion to latter's share in the total population is called
- (A) Stratified sampling
 - (B) Proportioned stratified sampling
 - (C) Disproportionate sampling
 - (D) Quota sampling
- 550.** A ____ can be defined as including all people or items with the characteristic one wishes to understand
- (A) Sample
 - (B) Population
 - (C) Groups
 - (D) None of the above
- 551.** Define: Sampling
- (A) Sampling is the process of selecting a subset of individuals from a population to represent the whole population in a study.
 - (B) Sampling is the process of analyzing the entire population without selecting any subset.
 - (C) Sampling is the process of increasing the population size for a study.
 - (D) Sampling is the process of eliminating all individuals from a population.
- 552.** A survey recruits customers from a brand's fan forum only. Which error is most likely?
- (A) Random error
 - (B) Coverage error
 - (C) Sampling error
 - (D) Sample bias
- 553.** Fundraisers for the GHC Foundation test a new telemarketing campaign by obtaining an alphabetical list of all GHC alumni and selecting every 100th name on the list, beginning with the first name.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
- 554.** Involves making observations during and directly after a specific event has occurred. Data collection instruments are usually close-ended. Used for confirmatory purposes
- (A) Event sampling
 - (B) Time-interval sampling
- 555.** Sequential sampling is often used with other sampling methods. True or False?
- (A) True
 - (B) False
- 556.** All of the following are stages in the selection of a sample EXCEPT
- (A) Conduct fieldwork.
 - (B) Determine sample size.
 - (C) Select a sampling frame.
 - (D) Analyze data.
- 557.** Respondents are chosen through ____
- (A) Sampling procedure
 - (B) Sampling unit
 - (C) Sampling size
 - (D) None of above
- 558.** Identify the sampling design: SCPS wants to survey its employees. They pick 4 schools from the county and survey every single employee in each of the 4 buildings.
- (A) Cluster
 - (B) Volunteer
 - (C) Systematic
 - (D) Simple random

559. How many pupils took part in the survey?
(A) 210
(B) 180
(C) 320
(D) 240
560. A ____ is all the subjects that you wish to study.
(A) Group
(B) Population
(C) Sample
(D) Subject
561. Which statement compares systematic sampling with simple random sampling most accurately?
(A) Simple random guarantees zero bias
(B) Systematic always produces smaller variance
(C) Simple random needs no sampling frame
(D) Systematic is easier and often less costly
562. Mrs. Cameron samples her class by splitting the class into two groups, boys and girls and then she picks 3 boys and 3 girls closest to her.
(A) Simple
(B) Quota
(C) Stratified
(D) Systematic
563. Population, sample, either All of the Wal*Mart employees at the Foley Wal*Mart were interviewed anonymously about their job satisfaction and working environment because of a few complaints that went to corporate.
(A) Population
(B) Sample
(C) Either
(D) None of above
564. Surveying the students at the next band practice is an example of which type of sampling method?
(A) Convenience
(B) Systematic
(C) Simple Random
(D) None of above
565. Which of the following is NOT an example of random sampling?
(A) Systematic Sampling
(B) Quota Sampling
(C) Cluster Sampling
(D) Lottery Sampling
566. When can we consider a research sample as the “best”?
(A) Representative of the population
(B) Systematically chosen
(C) Conveniently represented
(D) Purposely selected
567. A sample represents
(A) Audience.
(B) Crowd.
(C) Population.
(D) None of these.
568. A school randomly chose ten English teachers and asked them which type of juice their students would prefer. Which reason best shows why this sample is biased?
(A) The sample didn't include students.
(B) The sample is too small.
(C) The sample can only be accurate if each teacher is included in the sample
(D) None of above
569. If researchers only question a part of the target population they are taking a ____ of the population.
(A) Questionnaire
(B) Bias
(C) Class
(D) Sample

570. Sampling bias

- (A) A bias in which a sample is collected in such a way that some members of the intended population are less likely to be included than others.
- (B) A method of selecting a sample that ensures every member of the population has an equal chance of being included.
- (C) A technique used to eliminate all forms of bias in research studies.
- (D) A process of gathering data from a random selection of individuals without any specific criteria.

571. Before a nation-wide election, a polling place was trying to see who would win. Which choice best represents a sample?

- (A) A selection of voters over age 50.
- (B) A selection of male voters.
- (C) A selection of voters of different ages.
- (D) All voters.

572. What is a sampling procedure which involves choosing people to which the researcher has an easy access to?

- (A) Convenience
- (B) Judgemental
- (C) Snowball
- (D) Stratified

573. Zoie completes a report by asking 70 students across campus. She found that 48% of Garinger students do not wash their hands after lunch. What is the sample size?

- (A) 48
- (B) 100
- (C) 70
- (D) Garinger students

574. Respondents are obtained on the availability or preference of the researcher

- (A) Convenience sampling
- (B) Purposive sampling
- (C) Quota sampling
- (D) Voluntary sampling
- (E) Snowball sampling

575. How is random sampling helpful?

- (A) Reasonably accurate
- (B) An economical method of data collection
- (C) Free from personal biases
- (D) All of the above

576. Sample — means the number of items to be selected from the universe to constitute a sample.

- (A) Size
- (B) Unit
- (C) Method
- (D) Design

577. A method for choosing the sample for the research study in which participants are selected from a variety of levels or types of people in the population.

- (A) Random sample
- (B) Statistical sample
- (C) Stratified sample
- (D) Quasi-sample

578. The difference between a statistical average based on the entire population and the one based on a sample is known as

- (A) Standard Error.
- (B) Mean Difference.
- (C) Sampling Error.
- (D) Mean Deviation.

579. A sportswriter wants to know how strongly Lafayette residents support the local minor league baseball team, the Lafayette Leopards. She stands outside the stadium before a game and interviews the first 20 people who enter the stadium. This is an example of a

- (A) Cluster sample
- (B) Convenience sample
- (C) Voluntary response sample
- (D) Stratified random sample

- 580.** A SURVEY OF 500 ADULTS IN THE U.S. FOUND THAT 54% DRINK COFFEE DAILY. IDENTIFY THE POPULATION
- (A) COLLECTION OF THE 500 ADULTS SURVEYED
 - (B) COLLECTION OF ALL ADULTS IN THE U.S
 - (C) 54%
 - (D) 500
- 581.** Sampling bias results in a sample that is not —
- (A) Selected from a population
 - (B) Accessible
 - (C) Biased
 - (D) Representative
- 582.** Marshall intends to collect a systematic sample of 300 people in a population of 6000. He/she numbers each element of the population from 1-6000 and will choose every — individual to be a part of the sample.
- (A) 10th
 - (B) 200th
 - (C) 20th
 - (D) 31st
- 583.** What is Volunteer Bias?
- (A) Researcher's expectations subtly influence participants' behavior.
 - (B) One or two people dominate a focus group discussion.
 - (C) General tendency to respond in a certain way regardless of the question.
 - (D) People who volunteer for research differ systematically from those who do not.
- 584.** A nurse researcher is studying adolescents addicted to drugs. The researcher asks the early participants to refer others in the same conditions. This type of sampling is called:
- (A) Theoretical sampling
 - (B) Concurrent sampling
 - (C) Stratified random sampling
 - (D) Snowball sampling
- 585.** If the population on which a study is based is such that all its units can be reached, it is termed as
- (A) Heterogeneous population.
 - (B) Accessible population.
 - (C) Target population.
 - (D) Homogeneous population.
- 586.** In this method, sample selection depends on the choice of the investigator:
- (A) Quota sampling
 - (B) Cluster Sampling
 - (C) Purposive sampling
 - (D) Systematic sampling
- 587.** It is helpful to use a multi-stage cluster sample when:
- (A) The population is widely dispersed geographically
 - (B) You have limited time and money available for travelling
 - (C) You want to use a probability sample in order to generalise the results
 - (D) All of the above
- 588.** The first step in selecting a sample should be to:
- (A) Define the population
 - (B) Decide how to stratify the population
 - (C) Compile a list of the population
 - (D) Determine how to randomize
- 589.** What is the best way to place a quadrat?
- (A) Place it where you like
 - (B) Divide the sample area into a grid and use a random number generator to choose a square.
 - (C) Throw the quadrat so it's random
 - (D) Divide the sample area into a grid and choose a square.
- 590.** A school chooses 3 randomly selected athletes from each of its sports teams to participate in a survey about athletics at the school. What kind of sampling technique is used?
- (A) Simple random sampling

- (B) Cluster Sampling
(C) Stratified Sampling
(D) Systematic Sampling
- 591.** What kind of sample technique is the following: Question everyone in the cafeteria.
(A) Convenience Sampling
(B) Simple Random Sampling
(C) Systematic Sampling
(D) Sample
- 592.** A researcher wants to understand student's study habits across the state. However, she lives in a rural area and decides to use the local middle school instead of schools across the state. What kind of sampling is this?
(A) Quota sampling
(B) Random sampling
(C) Stratified sampling
(D) Convenience sampling
- 593.** All the people the researcher can choose from because they have the information needed for a research are known as:
(A) Interviewees
(B) Research sample
(C) Target population
(D) Respondents
- 594.** Specifying — means to translate the problem definition into a precise statement of who should or should not be included in the sample.
(A) The sampling frames
(B) The sampling element
(C) The target population
(D) The sampling unit
- 595.** Why are samples used?
(A) Populations are too large for a researcher to include everyone
(B) Samples are used to test rocket fuel
(C) Samples are used to confuse researchers
(D) Samples are used to make coffee
- 596.** In research, what does the term 'sampling bias' refer to?
(A) The error introduced when the sample is not representative of the population.
(B) The process of selecting a sample from a population.
(C) The degree to which a sample accurately reflects the population.
(D) The method used to collect data from participants.
- 597.** Mrs. Trahan samples her class by selecting all students living at Jakarta Barat and Jakarta Timur in her classroom. This sampling technique is called?
(A) Simple
(B) Stratified
(C) Systematic
(D) Cluster
- 598.** This occurs when a sample is collected in such a way that some members of the intended population are less likely to be included than others.
(A) Sampling error
(B) Sampling bias
(C) Random sampling
(D) Clustered sampling
- 599.** Identify the sampling design: Mr. Rhoades asks Mr. May, his neighbor, who his favorite America's Got Talent contestant is
(A) Cluster
(B) Unbiased
(C) Stratified
(D) Convenience
- 600.** This is the overall group to which the researcher wants to be able to generalize.
(A) Universe / Population
(B) Men
(C) Women
(D) High end

- 601.** Which statement provides the BEST definition of the term 'sample'?
- (A) The group of people about whom the results of a study are intended to generalize
 - (B) A group of people who are representative of the population as a whole
 - (C) The people actually measured in a study
 - (D) A group of people used to pilot test a study
- 602.** A youth unemployment study selects 40 urban and 40 rural youth. Which risk remains if selection is non-random?
- (A) Selection bias within each quota subgroup
 - (B) Overcoverage due to high sampling fraction
 - (C) Temporal bias from seasonal unemployment
 - (D) Measurement error from instrument drift
- 603.** Mr. Bala samples his class by selecting all students sitting at group 1 and group 5 in his classroom. This sampling technique is called?
- (A) Simple
 - (B) Stratified
 - (C) Systematic
 - (D) Cluster
- 604.** Which is one way that researchers ensure that a sample represents a target population?
- (A) Selecting people at random from the target population
 - (B) Using a large number of people from one subgroup
 - (C) Creating a large sample from certain subgroups
 - (D) Choosing the entire target population
- 605.** It is essential to understand the limitations of your sampling.
- (A) True
 - (B) False
- 606.** The following is an example of this type of error: A researcher wants to survey the very poor using a mail survey. She plans on using a purchased mailing list. However, her survey will miss homeless individuals who have no mail service.
- (A) Frame error
 - (B) Random error
 - (C) Field service error
 - (D) Sampling error
- 607.** Sample is different from population because ____
- (A) A set of items selected from the population
 - (B) A complete set
 - (C) A measuring variable for every unit in the population
 - (D) A study done before the actual framework
- 608.** Response rates depend on the ____ chosen for a research project.
- (A) Topic
 - (B) Researcher
 - (C) Target population
 - (D) None of above
- 609.** Describes the demographic characteristics of the respondents of the study
- (A) Population and Sampling
 - (B) Research locale
 - (C) Research design
 - (D) None of above
- 610.** Increasing the sample size of sample will reduce the
- (A) Bias.
 - (B) Variability.
 - (C) Mean.
 - (D) Nothing, it will stay the same.
- 611.** A type of sampling based on referrals from early participants is a:
- (A) Snowball (network) sampling

- (B) Convenient sampling
(C) Systematic sampling
(D) None of above
- 612.** What is a sampling unit?
(A) The population.
(B) The sampling frame.
(C) All the individual elements of the final sample, drawn together.
(D) The basic unit containing the elements of the population to be sampled.
- 613.** This step in the marketing research process occurs after the plan for the research design has been completed, but before data collection.
(A) Follow up
(B) Specify the sampling procedures
(C) Collect Primary Data
(D) Analyze the Data
- 614.** What is the difference between a population and a sample in research?
(A) Population is a subset of sample researchers work with
(B) Sample is the entire set of entities researchers are interested in
(C) Population is the entire set of entities researchers are interested in, while sample is a subset researchers work with
(D) Sample and population are always the same group
- 615.** What is the whole group that you want to study and describe?
(A) Culture
(B) Hypothesis
(C) Population
(D) Range
- 616.** A university lecturer selects every 10th student on their Psychology course to take part in their study on perception. Which sampling technique have they used?
(A) Stratified sampling
(B) Volunteer sampling
(C) Opportunity sampling
(D) Random sampling
(E) Systematic sampling
- 617.** Because there is very rarely enough time or money to gather information from everyone or everything in a population, the goal becomes finding a ___ of that population.
(A) Respondent
(B) Representative sample
(C) Sample
(D) Participants
- 618.** It is used to select a sample from within a general population.
(A) Statistics
(B) Classifying
(C) Sampling
(D) Data analysis
- 619.** What sampling method are you using if you survey every 10th person who enters the shop?
(A) Convenience
(B) Systematic
(C) Simple Random
(D) None of above
- 620.** What does it mean to generalize results?
(A) To let the General make decisions about the results
(B) To reinforce stereotypes
(C) To create a trope
(D) To apply findings based on a sample to a larger group
- 621.** What is the definition of 'population' in the context of research?
(A) The entire set of individuals or objects with some common characteristic
(B) A collection of data points
(C) A subset of the population comprising those selected to participate in the study
(D) A group of people living in a particular area

- 622.** How big should your sample size be?
- (A) It depends on the study design and desired confidence level.
 - (B) Always 100
 - (C) At least 30
 - (D) Exactly 50
- 623.** What is the best way to ensure that results of a study are generalizable to a population?
- (A) By making sure to use as many participants as possible
 - (B) By making sure the results are significant
 - (C) By making sure to use an equal number of men and women
 - (D) By using random assignment
 - (E) By using a random selection of people in that population
- 624.** The sampling design the purpose of which is to reduce per unit cost:
- (A) Simple random.
 - (B) Cluster.
 - (C) Systematic.
 - (D) Stratified.
- 625.** Mrs. Sampling samples her class by selecting 5 girls and 7 boys. This type of sampling is called?
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Cluster
- 626.** In survey research, ___ are segments of the total group who are the subject of interest to the researcher.
- (A) Populations
 - (B) Volunteers
 - (C) Control groups
 - (D) Samples
- 627.** What is the accessible population in research?
- (A) The total group of interest.
 - (B) The portion of the population to which the researcher has reasonable access.
 - (C) The process of selecting a group for analysis.
 - (D) The representative subset of the population.
- 628.** To increase the probability of external validity, your sample must be ___ of the population you are studying.
- (A) Generalized
 - (B) Representative
 - (C) Correlation
 - (D) Dependent
- 629.** What is Sample
- (A) Information
 - (B) A subset, or part, of a population.
 - (C) Data
 - (D) None of above
- 630.** A sample refers to ___ of a population.
- (A) A subset
 - (B) A list
 - (C) A description
 - (D) Another name
- 631.** It is best to use a census while conducting a survey if:
- (A) The population is large
 - (B) The population is small
 - (C) Time is limited to conduct the survey
 - (D) Cheaper method is needed
- 632.** "Doctors who work at hospitals are chosen for a sample by identifying all hospitals in different areas of the US and then randomly choosing 10 hospitals in each area of the US to sample from." This is an example of ___
- (A) Convenience sampling
 - (B) Stratified random sampling
 - (C) Cluster sampling
 - (D) Snowball sampling

- 633.** What is the process of selecting a portion of a population for study?
(A) Sampling
(B) Data Collection
(C) Measurement
(D) Hypothesis Testing
- 634.** Which action logically follows selecting a research design in quantitative studies?
(A) Formulate hypotheses again
(B) Select population and sample
(C) Define the study purpose
(D) Communicate conclusions early
- 635.** Collection of a subset of the population
(A) Population
(B) Sample
(C) Parameter
(D) Statistic
- 636.** Identify the sampling design: The AACC registrar wants to investigate attitudes of their graduates. The registrar randomly selects 100 names from each of the last four past graduating classes.
(A) Cluster
(B) Voluntary
(C) Stratified
(D) Simple random
- 637.** Sampling pertains to the systematic process of selecting the group to be analyzed in the research study.
(A) True
(B) False
- 638.** Identify the population and the sample: The average annual salary for 35 of a company's 1200 accountants is \$68,000.
(A) Population:1200 Sample:\$68,000
(B) Population:35 Sample:1200
(C) Population:1200 Sample:35
(D) Population:\$68,000 Sample:1200
- 639.** It is recommended to use the whole population rather than a sample when the population size is of what size?
(A) 500 or less.
(B) 100 or less.
(C) You should always use a sample.
(D) 1000 or less.
- 640.** Which refers to the process of selecting a portion of the population to represent the entire population so that inferences about the population can be made?
(A) Sampling
(B) Design
- 641.** When conducting a survey, it is important to identify your target population.
(A) TRUE
(B) False; participants
(C) False; sources of funding
(D) None of above
- 642.** Sixteen classes are randomly selected from a school. Each of the students from selected classes is given a survey questionnaire to answer.
(A) Systematic sampling
(B) Stratified sampling
(C) Simple random sampling
(D) Cluster Sampling
- 643.** A ____ is the group of individuals taking part in the research study.
(A) Population
(B) Sample
(C) Variable
(D) Control
- 644.** A researcher wants to compare user satisfaction across different age groups. Which sampling method is best?
(A) Quota
(B) Stratified
(C) Convenience
(D) Simple random

- 645.** Which technique is generally followed when the population is finite?(December-2007)
- (A) Area Sampling Technique.
 - (B) Purposive Sampling Technique.
 - (C) Systematic Sampling Technique.
 - (D) None of the above.
- 646.** When a population is naturally grouped, selecting subgroups and omitting the other groups is an example of ____
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
- 647.** The small group selected from a larger group to participate in research is known as ____
- (A) Sample
 - (B) Element
 - (C) Copulative study
 - (D) Sample population
- 648.** What type of sample would you have if you started with a subgroup of school districts in the state of New York, and within each subgroup, you selected a simple random sample of schools. Then, within each school, you selected a simple random sample of grade levels, and within each grade level, you selected a simple random sample of students for study?
- (A) Stratified
 - (B) Cluster
 - (C) Matched-pairs
 - (D) Multi-stage
- 649.** Identify the type of sampling techniques”The registrar gave the researcher a list of 500 Grade 11 students. The researcher selected every 5th name on the list.”
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
- 650.** Which type of bias occurs when the sample used in a study is not representative of the population?
- (A) Selection bias
 - (B) Response bias
 - (C) Confirmation bias
 - (D) Sampling bias
- 651.** Why is purposive sampling described as suitable for specialized populations?
- (A) It eliminates nonresponse bias completely
 - (B) It ensures perfect statistical representativeness
 - (C) It targets individuals with specific knowledge
 - (D) It requires no prior understanding of topic
- 652.** The CDC chooses 15 doctors from each hospital in the United States to participate in a study.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
- 653.** This sampling design is used for national, regional, provincial or country-level studies.
- (A) Multi-staged random sampling
 - (B) Cluster Random Sampling
 - (C) Stratified Random Sampling
 - (D) Simple Random Sampling
- 654.** What is one potential problem with inductive generalizations?
- (A) Other relevant information not contained in the premises
 - (B) Size of sample
 - (C) Representativeness of sample
 - (D) Disconfirming instances
- 655.** Includes all people or items with the characteristic one wishes to understand.

- (A) Population
 - (B) Sample size
 - (C) Group
 - (D) None of the above
- 656.** What type of sample may be best if you have a population dispersed over a wide geographic region where a simple random sample is not feasible?
- (A) Stratified
 - (B) Cluster
 - (C) Matched-pairs
 - (D) Multi-stage
- 657.** Which among the following is an example of a methodological recommendation?
- (A) Gather more literature sources related to one of the research objectives.
 - (B) Include other demographic qualities in choosing interview respondents.
- 658.** A set of observations that constitute PART of the population.
- (A) Statistic
 - (B) Census
 - (C) Population
 - (D) Sample
- 659.** B) Amount of time high school students spend online each week
- (A) Simulation
 - (B) Sampling
 - (C) Experiment
 - (D) Census
- 660.** In Cluster Sampling, what is the process involved?
- (A) Selecting random samples from each cluster
 - (B) Dividing the population into clusters and then randomly selecting entire clusters
 - (C) Choosing every nth individual from the population
 - (D) Using a non-random selection process
- 661.** When might judgmental sampling be most defensible?
- (A) Quality control requiring randomized inspection
 - (B) National polling with tight margin of error
 - (C) Confirmatory studies demanding population inference
 - (D) Exploratory research requiring expert-picked cases
- 662.** Which step comes first in designing a sampling plan for a business study?
- (A) Execute the fieldwork procedures
 - (B) Choose a sampling technique type
 - (C) Define the target population clearly
 - (D) Determine the final sample size
- 663.** Which of these is most likely to improve sampling accuracy?
- (A) Inferential statistics
 - (B) Descriptive statistics
 - (C) Random sampling
 - (D) Control variables
- 664.** In the methodology section, which of the following describes the “sample”?
- (A) The data collection process
 - (B) The instruments used for analysis
 - (C) The participants selected for the study
 - (D) The research question and hypothesis
- 665.** Method mainly used by researching deviant or hard to access groups. One contact will recruit other participants (and so on)
- (A) Systematic
 - (B) Snowball
 - (C) Stratified
 - (D) None of above
- 666.** If a researcher wants to give all members of a research population an equal chance of being part of a sample, then they would use a
- (A) Random sample
 - (B) Stratified sample
 - (C) Operationalised sample
 - (D) Convenience sample

- 667.** What is the biggest problem with a survey done by mail?
- (A) It is not ethical
 - (B) The sample will be too large to be accurate
 - (C) The sample is probably not a representative sample
 - (D) It is not double-blind
- 668.** Random start or random point plays a vital role in
- (A) Cluster sampling
 - (B) Simple random sampling
 - (C) Sequential sampling
 - (D) Systematic sampling
- 669.** The target population should be defined in terms of all of the following EXCEPT:
- (A) Elements.
 - (B) Cost.
 - (C) Sampling units.
 - (D) Time frame.
 - (E) Extent.
- 670.** What is the sampling method used in the given situation? Teacher Joan wants to know if the new learning modalities of the school effects on the academic performance of students in the science curriculum. He took the list of students and selected every 8th name in each class list as participant.
- (A) Stratified Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Cluster Sampling
- 671.** Which topic explains how to decide the number of participants to include in a study?
- (A) Sampling procedure step-by-step stages
 - (B) Sampling overview basics and scope
 - (C) Sampling methods selection alternatives
 - (D) Sample size determination decision rules
- 672.** Which sampling technique has the lowest attrition rate?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Opportunity sampling
 - (D) Random sampling
 - (E) Systematic sampling
- 673.** A good sample is the one in which there is no bias from the sampling process. This is defined as ____
- (A) Random
 - (B) Precision
 - (C) Accuracy
 - (D) Consistency
- 674.** The part of the population being studied
- (A) Population
 - (B) Sample
- 675.** The concept that people who volunteer to participate in research studies often differ from those who do not volunteer
- (A) Volunteer bias
 - (B) Random sample
 - (C) Cross sectional method
 - (D) Experimental group
- 676.** A sample drawn in such a way that known subgroups within a population are represented in proportion to their numbers in the general population
- (A) Independent variable
 - (B) Experiment
 - (C) Random sample
 - (D) Stratified sample
- 677.** When items or people are purposely excluded from a sample is ____
- (A) Valid
 - (B) Unbiased
 - (C) Biased
 - (D) Cluster
- 678.** Which sampling method is least likely to represent the whole population accurately?
- (A) Cluster sampling
 - (B) Systematic sampling

- (C) Judgmental sampling
(D) Simple random sampling
- 679.** Darrien surveys 60 of the actors theater class. He concludes that 8 out of 15 actors have previous acting experience. What is the sample size?
(A) 60
(B) 8
(C) 15
(D) 53
- 680.** The sampling design procedure commences with a number of steps which are interrelated. These steps include the definition of the target population, the ____, and the selection of sampling approaches.
(A) Sampling frame
(B) Individuals
(C) Research
(D) Items
- 681.** What is a sample?
(A) A group of people who take part in research
(B) A group of people who a researcher wants to study
(C) The methods used to select participants
(D) The extent to which findings can be generalised
- 682.** A marketing researcher is conducting a survey in a large selling area by contracting a small group of people that is representative of all people in that area. The small representative group is known as the
(A) Population
(B) Sample
(C) Stratification
(D) Universe
- 683.** A teacher hands out an index card and asks all of her students to write down the following information: age, height (in inches), and what grade they are in. Which of the following best describes her method of data collection?
(A) Census
(B) Simple Random Sample
(C) Cluster Random Sample
(D) Stratified Random Sample
- 684.** The process of selecting units from a population to estimate characteristics of the population is called
(A) Analyzing
(B) Inference
(C) Research
(D) Sampling
- 685.** Random sampling is to ____ as random assignment is to ____
(A) Surveys; experiments
(B) Illusory correlation; control group
(C) Description; prediction
(D) Replication; correlation
- 686.** Which description aligns with the idea of a sample as a 'picture in miniature'?
(A) It replaces the need for conclusions
(B) It excludes common characteristics
(C) It captures only rare events
(D) It mirrors the population to support inference
- 687.** Representatives of the population is known as:
(A) Source list
(B) Sample
(C) Suggestions
(D) Hypothesis
- 688.** A student measures the weight of every individual in his batch with a total of 120 students. He only needs a specific data on a group of students. This means that he will get the ____
(A) Sample
(B) Statistics
(C) Variable
(D) None of above

- 689.** Which is most true regarding sampling
- (A) Obtaining a representative sample is quite easy to do
 - (B) The purpose of a sample is to establish a specific participant type
 - (C) Obtaining a representative sample is quite difficult to do
 - (D) All sample methods should represent the general population
- 690.** Chesca wanted to know the STEM students' opinion on doing self-care checkouts in an online classroom. She randomly selected 2 students from each STEM section to interview. What sampling method did she employ in this case?
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
- 691.** The way a researcher selects participants from a population
- (A) Correlation
 - (B) Sampling
 - (C) Variable
 - (D) Placebo effect
- 692.** Which statement differentiates probability from non-probability sampling?
- (A) Probability requires convenience-based recruitment
 - (B) Non-probability always provides known selection probabilities
 - (C) Both guarantee equal inclusion chances for all units
 - (D) Probability uses random selection; non-probability uses judgment
- 693.** A company divides customers into income groups, then draws simple random samples within each group. Which method is being used?
- (A) Cluster sampling with income-based clusters
 - (B) Convenience sampling of available customers
 - (C) Stratified sampling across defined income strata
 - (D) Systematic sampling using income order
- 694.** The representative subset of the population refers to the ____ For example, 60 out of 240 students constitute this group.
- (A) Sample
 - (B) Variable
 - (C) Parameter
 - (D) Population
- 695.** When all the items in the population are included for the study it is called as
- (A) Multiple study.
 - (B) Systematic sample study.
 - (C) Census study.
 - (D) Sample study.
- 696.** Selecting every 10th person from a list of the population is called:
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Purposive sampling
 - (D) Snowball sampling
- 697.** A ____ population represents the exact proportional make-up of that population.
- (A) Sample
 - (B) Stratified
 - (C) Target
 - (D) Random
- 698.** In order to yield information that is generalizable to the population from which it was drawn, a sample must be
- (A) Made up of at least 30 members of the population
 - (B) As large as possible
 - (C) Normally distributed
 - (D) Representative of the population
 - (E) Made up of at least 50 percent of the members of the population

- 699.** What does the term "sampling frame" refer to in communication research?
- (A) The group of participants selected for a study
 - (B) The list from which the sample is drawn
 - (C) The process of selecting a representative sample
 - (D) The manipulation of independent variables
- 700.** Choosing 20 people at random from a large lecture class of 400 people is an example of which of the following?
- (A) Random assignment
 - (B) Random sampling
- 701.** The sampling frame or framework is a list of names from the general population who can be researched.
- (A) True
 - (B) False
- 702.** Researchers sometimes engage in multisite studies because the use of multiple sites usually offers:
- (A) Better conclusion
 - (B) Narrow generalization
 - (C) A smaller sample of study participants
 - (D) A larger or more diverse sample of study participants
- 703.** Which of the following is not a part of a Sampling Plan?
- (A) Sampling unit
 - (B) Sample size
 - (C) Sampling procedures
 - (D) Consumers tasting product samples
- 704.** Sample method compared to Census method is much better because
- (A) More expensive
 - (B) More reliable
 - (C) It is less time consuming
 - (D) Carried out by large no. of investigators
- 705.** Why is a sampling frame important?
- (A) It ensures every member of the population has a known chance of being selected.
 - (B) It reduces the cost of data collection.
 - (C) It increases the speed of data processing.
 - (D) It eliminates the need for data analysis.
- 706.** The selection of sample known as ____
- (A) Sampling
 - (B) Population
 - (C) Research method
 - (D) Sample design.
- 707.** For more reliable data analysis
- (A) Numerical data
 - (B) Large sample sizes
 - (C) Replication
 - (D) Future outcomes
- 708.** The participants of a given study may be classified as the research ____
- (A) Population
 - (B) Samples
 - (C) Statistics
 - (D) Variables
- 709.** What is a population in the context of sampling?
- (A) A list of names from a school register.
 - (B) Only a small group chosen for a survey.
 - (C) Everyone or everything that could be involved in the investigation.
 - (D) A group of teachers in a school.
- 710.** A random sample of 50 was taken from a shipment of 12,000 light bulbs. There were 2 broken bulbs in the sample. How many broken bulbs would you expect in the entire shipment?
- (A) 240
 - (B) 480
 - (C) 2,400
 - (D) 4,800

711. Group the businesses according to type: medical, shipping, retail, manufacturing, financial, construction, restaurant, hotel, tourism, other. Then select a random sample of 10 businesses from each business type. What kind of sampling techniques is this?
- (A) Systematic sampling
 - (B) Cluster Sampling
 - (C) Stratified sampling
 - (D) Convenience sampling
712. Regarding to sampling, which statement is true?
- (A) In nonprobability sampling, inferences can be made about the population.
 - (B) In probability sampling, results are generalizable from the sample to the population.
 - (C) Probability sampling relies on personal judgment in the element selection process
 - (D) In nonprobability sampling, one can statistically assess level of sampling error.
713. A politician asks his neighbors their opinions about a controversial issue. What kind of sampling technique is used?
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Convenience Sampling
 - (D) Stratified sampling
714. What are the three stages of cluster sampling?
- (A) Stage 1: Selecting clusters, Stage 2: Selecting elements within clusters, Stage 3: Analyzing the data
 - (B) Stage 1: Defining the population, Stage 2: Selecting a sample, Stage 3: Collecting data
 - (C) Stage 1: Data collection, Stage 2: Data analysis, Stage 3: Data interpretation
 - (D) Stage 1: Identifying variables, Stage 2: Collecting data, Stage 3: Analyzing results
715. What does 'sampling cases' mean?
- (A) Sampling using a sampling frame
 - (B) Identifying people who are suitable for research
 - (C) Literally, the researcher's briefcase
 - (D) Sampling people, newspapers, television programs, etc.
716. A student randomly selects 15 male and 15 female students to participate in survey about their eating habits.
- (A) Census
 - (B) Sample
 - (C) Observation
 - (D) None of above
717. Determining Sampling Methods To study the migratory behavior of swallows, biologists randomly tag 120 swallows in San Juan Capistrano.
- (A) Systematic
 - (B) Simple Random
 - (C) Convenience
 - (D) Cluster
718. This sample consists of an easily accessible subject of the population.
- (A) Convenience
 - (B) Simple Random
 - (C) Systematic
 - (D) Stratified
 - (E) Quota
719. A radio station in Raleigh, NC wants to know the most popular song of the week. The DJ surveys random listeners who call in throughout the week. What is the population of the DJ's survey?
- (A) All the people in Raleigh, NC
 - (B) Listeners of this radio station
 - (C) The listeners who call the station
 - (D) The most popular song of the week
720. A researcher wants to find out about the lunch time eating habits of workers in a particular car factory. She obtains a list of all employees, chooses a starting number, chooses an interval number and then works through the list, developing her sample list from the

- employees that appear at the correct interval on the list.
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
- 721.** In a research study, researchers use a technique called random sampling to select participants for their study. What does random sampling ensure?
- (A) Every member of the population has an equal chance of being selected for the study.
 - (B) Participants are matched based on certain characteristics to form equivalent groups.
 - (C) The study's results can be generalized to other populations.
 - (D) The participants are unaware of which group they belong to.
- 722.** Sampling in which every member of the target population has an equal chance of being in the sample is known as
- (A) Systematic sampling.
 - (B) Opportunity sampling.
 - (C) Quota sampling.
 - (D) Random sampling.
- 723.** Which of the following is/are advantages of studying the sample instead of whole population?
- (A) It saves time
 - (B) It saves money
 - (C) Both (a) and (b)
 - (D) Neither (a) nor (b)
- 724.** Representative, adequate size, free from bias, conformity to subject matter are the characteristic of?
- (A) Research
 - (B) Research problem
 - (C) Research design
 - (D) Good sample.
- 725.** Ms. Ramos decides to randomly select an entire group from a larger population for her research. What method is she using?
- (A) Cluster sampling
 - (B) Purposive sampling
 - (C) Snowball sampling
 - (D) Convenience sampling
- 726.** Units of the population are ordered in some fashion. Usually, every k-th unit is chosen.
- (A) Proportional
 - (B) Probable
 - (C) Stratified
 - (D) Systematic
- 727.** If Mrs. Holder selects 100 students out of each grade level to make a decision about an after school event, and she makes sure she has 50% male/ 50% female as well as a diverse sample similar to Blackman's overall population, she has created a(n) ____
- (A) Stratified (representative) sample
 - (B) Random assignment
 - (C) Representative selection
 - (D) Population control
- 728.** The Math teacher could put the names of all the students in a box, mix the names without looking. This describes what kind of sampling?
- (A) Random sample
 - (B) Cluster sample
 - (C) Stratified random sample
 - (D) Systematic sample
- 729.** The main goal of sampling is to ____
- (A) Be able to generalize the research results over the whole population
 - (B) Be able to understand the population
 - (C) Be able to divide the population
 - (D) Be able to count the population
- 730.** What is referred to as a subset of the population under investigation that a researcher selected to be part of the study?
- (A) Sample

- (B) Population
 - (C) Variable
 - (D) Replicate
731. It may be defined as the method of getting a representative portion of a population.
- (A) Statistical Treatment
 - (B) Sampling
 - (C) The Subjects
 - (D) Research Instrument
732. Which of the following statements is true regarding the sample size you need in a research study?
- (A) You should include 10% of the population in your sample.
 - (B) The more categories or breakdowns you want to make in your data analysis, the smaller the sample size needed.
 - (C) The more homogeneous the population the larger the sample size needed.
 - (D) The larger the sample size, the smaller the sampling error.
733. What is sampling bias?
- (A) Bias resulting when non-probability sample is drawn.
 - (B) Bias resulting from the inappropriate designation of eligibility criteria.
 - (C) Bias resulting from the use of probability sampling method.
 - (D) Bias resulting from over-representation or under-representation of population segments in a sample.
734. A toy store owner is tracking how much kids spend each month on toys. Which choice best represents a population?
- (A) All of the kids who buy toys.
 - (B) 227 rich kids.
 - (C) 228 boys age 7-15.
 - (D) 235 kids from age 10 to 15.
735. Riyaan is conducting a research study on the eating habits of teenagers in his city. He needs to select a group of teenagers to participate in his study. It is the process of choosing samples from a population.
- (A) Sample
 - (B) Population
 - (C) Sampling
 - (D) None of above
736. It is the name or other identification of the specific process by which the entities of the sample have been selected.
- (A) Research Design
 - (B) Research Methodology
 - (C) Sampling Technique
 - (D) Statistical Treatment
737. A portion or part of a population is called a
- (A) Random survey
 - (B) Sample
 - (C) Tally
 - (D) Frequency distribution
738. The collection of the elements (people or objects) which has some or the other characteristic in common is ____
- (A) Population
 - (B) Sample
 - (C) Sampling
 - (D) None of above
739. If a survey states that a large number of people agree that the Dallas Cowboys are the best football team in Texas, but the only people surveyed were in a Dallas Cowboys fan shop, the survey results can be considered ____
- (A) Credible
 - (B) Biased
 - (C) Reliable
 - (D) Accurate
740. The process of choosing a representative portion of a population.
- (A) SUBJECT
 - (B) POPULATION
 - (C) SAMPLE
 - (D) SAMPLING

741. The differences between the observation in a population and the sample representing that population in a study.
- (A) What is Sampling Error?
 - (B) What is Descriptive Statistics?
 - (C) What is Selection Bias?
 - (D) What is Nominal Scale?
742. A representative sample is a
- (A) Subset of a population that truly reflects the characteristics of that population.
 - (B) Randomly generated series of numbers that help researchers select people to participate in a study.
 - (C) Selected group of people whom the researcher can easily persuade to participate in a study.
 - (D) Research method that employs such techniques as interviewing and surveying.
743. A ___ is simply a subset of the population being studied; it represents the larger population and is used to draw inferences about that population. Sociologists typically use two ___: those based on probability and those that are not.
- (A) Sample; sampling techniques
 - (B) Sample; triangulations
 - (C) Sampling techniques; sociological effects
 - (D) Value; sampling techniques
744. For a statistics project, you survey your family members about the upcoming election.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
745. Which of the following does not belong to Simple Random Sampling?
- (A) Table of Random Numbers
 - (B) Tabulator
 - (C) Lottery Techniques
 - (D) Random Number Generator
746. What sampling technique is most appropriate for a study on hard-to-reach populations?
- (A) Simple random sampling
 - (B) Snowball sampling
 - (C) Stratified sampling
 - (D) Systematic sampling
747. When the sample doesn't accurately represent the target population.
- (A) Ecological validity
 - (B) Sampling bias
 - (C) Participant variability
 - (D) Participant expectancy effect
748. This shows how the respondents would be selected.
- (A) Research instruments
 - (B) Sampling procedure
 - (C) Research respondents
 - (D) Research locale
749. What is the term for the following definition? The complete collection of every item that has the same characteristics of the individuals in the sample group.
- (A) Population
 - (B) Sample
 - (C) Variable
 - (D) Statistic
750. The sampling frame must be ___ of the population
- (A) Sample
 - (B) Subset
 - (C) Individual
 - (D) Representative
751. Sampling error decreases with the
- (A) Decrease in sample size
 - (B) Increase in sample size
 - (C) Process of randomization
 - (D) Process of analysis

752. Exit polls (where the surveyor asks those who are leaving the poll booths on election day) are a form of:
- (A) Voluntary Response
 - (B) Convenience Sampling
 - (C) Simple Random Sampling
 - (D) Systematic Sampling
753. The purpose of random sampling is to ensure ____
- (A) A sufficient sample size.
 - (B) A clearly defined target population.
 - (C) Representation of specific subgroups in the population
 - (D) Representativeness of the sample.
754. Selection of a few items as representatives of all items of the universe is:
- (A) Population
 - (B) Sample
 - (C) Survey
 - (D) None
755. Sampling bias or the error resulting from taking a non-random sample of a population include
- (A) Pre-screening
 - (B) Self-Selection Bias
 - (C) Selection from a Specific Area
 - (D) All of the above
756. Which of these is a common sampling method in research?
- (A) Guesswork sampling
 - (B) Arbitrary selection
 - (C) Random sampling
 - (D) Undefined sampling
757. Applicable when population is small, homogeneous & readily available
- (A) Simple random sampling
 - (B) Stratified sampling
 - (C) Cluster sampling
 - (D) Multistage sampling
758. Identify the Sample: A restaurant wants to know if customers buy dessert when they eat out. As people leave the restaurant one evening, 20 people are surveyed at random. Eight people say they usually order dessert when they eat out. The restaurant concluded that most customers do not order dessert.
- (A) 20 customers
 - (B) All customers
 - (C) 8 customers
 - (D) Dessert
759. Which of the following actions is NOT an example of the researcher displaying bias?
- (A) Asking leading questions
 - (B) Omitting data that does not support the researcher's hypothesis
 - (C) Convenience sampling
 - (D) Random sampling
760. If random samples are selected from a population, what happens to the margin of error is the sample size is increased from 50 to 200?
- (A) It decreases
 - (B) It increases
 - (C) It remains the same
 - (D) There is no way to know without more information.
761. In random sampling, the sample should be ____ the population
- (A) As large as
 - (B) Different from
 - (C) Not taken from
 - (D) Representative of
762. These are facts about the population.
- (A) Graphics
 - (B) Demographics
 - (C) Research
 - (D) Test product
763. A sample that is by chance.
- (A) Random sample
 - (B) Stratified sample
 - (C) Systematic sample
 - (D) None of above

764. The group a researcher wants to study or describe
- (A) Bias
 - (B) Sample
 - (C) Questionnaire
 - (D) Target population
765. Which of the following can be considered as the best sample?
- (A) Conveniently chosen
 - (B) . purposefully selected
 - (C) Selected at random
 - (D) Self-selected
766. A study on academic stress splits students into Arts, Science, and Commerce. What makes this stratified rather than clustered?
- (A) Using a fixed-interval selection across all students
 - (B) Sampling proportionally within each stratum
 - (C) Selecting a single class as the entire sample
 - (D) Allowing volunteers to opt in from any stream
767. Chosing people for a survey according to a plan, so that the sample has the same characteristics as the basic population
- (A) Partial sample
 - (B) Random sample
 - (C) Representative sample
 - (D) Complete sample
768. A reason for sampling which gives importance to the fact that testing might be destructive to a population. Therefore, only a portion of that population will be affected.
- (A) Practicality
 - (B) Economy
 - (C) Necessity
 - (D) Comprehensiveness
769. A sample in a market research study is pulled to represent the ____
- (A) Concept
 - (B) Population
 - (C) Research
 - (D) Sample
770. A poll about favorite sports is taken from 100 seniors in a high school where the senior class has 575 students. 23% of respondents said that baseball was their favorite sport. The “100” is the ____
- (A) Sample Size
 - (B) Population Size
 - (C) Statistic
 - (D) Parameter
771. It is needed to arrive at a more reliable data analysis.
- (A) Objective
 - (B) Numerical Data
 - (C) Replication
 - (D) Large Sample Size
772. Which situation justifies disproportionate stratified sampling rather than proportionate allocation?
- (A) Some small strata need adequate analytic precision
 - (B) All strata have identical variances and sizes
 - (C) The sampling frame lacks stratum identifiers
 - (D) The budget prohibits any oversampling anywhere
773. A wildlife reserve has a population of 120 elephants. A group of researchers trapped 42 elephants and recorded their vital statistics. Of the trapped elephants, 35 were female. If that rate holds true for the entire population of 120 elephants, how many female elephants are on the wildlife reserve?
- (A) 100
 - (B) 120
 - (C) 132
 - (D) 216

774. A marketer surveys people exiting a mall because it's convenient. What type of sampling is this?
- (A) Cluster Sampling
 - (B) Convenience Sampling
 - (C) Quota Sampling
 - (D) Stratified Sampling
775. A poll is taken from 100 seniors in a high school where the senior class has 575 students. The 100 seniors is an example of a ____
- (A) Sample
 - (B) Population
776. Determining sample size by using formulas, given margin of error and confidence level is part of:
- (A) Sample design
 - (B) Convenience techniques
 - (C) Instrument validation
 - (D) Hypothesis testing
777. We seek a sampling frame which has the property that we can identify ____ and include any in our sample
- (A) No elements
 - (B) Every single element
 - (C) All elements
 - (D) Elements
778. The principal purpose of sampling is the application of results in the population.
- (A) True
 - (B) False
779. It is a subset of a set of data.
- (A) Population
 - (B) Sample
 - (C) Error
 - (D) Parameter
780. Which of the following is a disadvantage of using a convenience sample in research?
- (A) Generalizability to the population
 - (B) Cost-effectiveness
 - (C) Representative diversity
 - (D) Reduced response bias
781. Which of the following best describes the concept of sampling in research?
- (A) The method of analyzing qualitative data
 - (B) The process of selecting a subset of individuals from a population
 - (C) The approach to validating research hypotheses
 - (D) The technique of summarizing research findings
782. That part of the population from which information is collected.
- (A) Constant
 - (B) Population
 - (C) Sample
 - (D) Variable
783. A researcher needs a quick method for a large, dispersed population. Which sampling method is most practical?
- (A) Judgmental expert sampling
 - (B) Systematic fixed-interval selection
 - (C) Stratified proportional sampling
 - (D) Cluster sampling of intact groups
784. In Stage sampling, the sample selection process is made in a number of stages and randomly.
- (A) False
 - (B) True
785. Gavin and Jake are doing a survey. They ask their classmates who wants to participate. What kind of bias have they created?
- (A) Self-serving
 - (B) Hindsight
 - (C) Confirmation
 - (D) Volunteer
786. Which approach refers to the general rule or rule of thumb for sample size?
- (A) Literature Review

- (B) Heuristics
(C) Formulas
(D) Experimental
787. During a recent study on consumer preferences, Ishika decided to use sampling to gather data. She wanted to understand why sampling is an essential method in research.
(A) It is consistent and valid
(B) It is reliable and accurate
(C) It is reliable and has integrity
(D) It is representative and cost effective
788. Stratified sampling involves:
(A) Selecting participants who meet specific criteria
(B) Dividing the population into groups and sampling from each
(C) Choosing individuals based on convenience
(D) Randomly selecting individuals without grouping
789. Which sampling method selects entire clusters?
(A) Simple random
(B) Stratified
(C) Cluster
(D) Systematic
790. Aggregate or totality of all the objects, subjects, and members that conform to a set of specifications
(A) Population
(B) Samples
(C) Sampling
(D) Sampling frame
791. Disneyland often surveys its guests as they exit a restaurant during their visit. The surveyor stands at the restaurant exit, counts the number of people leaving, and surveys every 25th guest. What type of sampling method is this?
(A) Random Sample
(B) Stratified Random Sample
(C) Voluntary Response
(D) Systematic Sampling
792. Which sampling procedure involves selecting every person relevant to the sample population from a list and picking every n th one?
(A) Systematic selection
(B) Convenience sampling
(C) Quota sampling
(D) Snowball sampling
793. A group of subjects selected from a population is a ____
(A) Portion
(B) Sample
(C) Group
(D) Data
794. This is the person where the data of the research is derived from.
(A) Respondents
(B) Questionnaire
(C) Abstract
(D) Statement of the Problem
795. Which of the following is not likely to be used to stratify a sample for a study investigating the use of a computerized algebra program?
(A) Number of siblings in the home.
(B) Socio-economic status.
(C) Gender.
(D) Ethnicity.
796. Which sampling technique involves dividing the population into subgroups and then selecting participants from each subgroup?
(A) Random sampling
(B) Stratified sampling
(C) Convenience sampling
(D) Cluster sampling
797. Which of the following is not a sample that would be used in developing a sample plan.
(A) Formulation Sampling

- (B) Stratified Sampling
 - (C) Cluster Sampling
 - (D) Random Sampling
- 798.** Suppose you want to investigate the working efficiency of nationalized bank in India, which one of the following would you follow?
- (A) Area Sampling
 - (B) Quota Sampling
 - (C) Sequential Sampling
 - (D) Multi-stage Sampling
- 799.** What is a target population?
- (A) The whole group you want to study or describe
 - (B) The population that is practicing for the Hunger Games
 - (C) Population inside the classroom
 - (D) Part of the group you want to study or describe
- 800.** Ms. Marianne wanted to know her students' opinions on the new schedule at school. So she randomly selected 2 students from each of her classes to survey. Assuming that all of her classes are roughly the same size, this is a form of:
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
- 801.** Sampling design is the blue print of for obtaining sample from ____
- (A) Sampling frame
 - (B) Population
 - (C) Research.
 - (D) None
- 802.** A type of sampling that needs to select the sample size more than once.
- (A) Stratified
 - (B) Simple
 - (C) Systematic
 - (D) Multi-stage
- 803.** As part of a 6th grade statistics project, the teacher brings a candy jar full of gumballs (red & green). The assignment is to estimate the proportion of red gumballs in the jar. Suppose one of the students draws 25 gumballs from the jar: 8 are red, 17 are green. What is the POPULATION?
- (A) Students
 - (B) Red gumballs
 - (C) All gumballs in jar
 - (D) 25 gumballs drawn
- 804.** The basic principle behind sampling methods is that
- (A) It should include everyone in the research
 - (B) It should represent the general public
 - (C) It should represent the target population
 - (D) It should represent only certain individuals
- 805.** The subjects are divided into many groups but each group does not have a homogeneous characteristic. This is a technique of:
- (A) Cluster sampling
 - (B) Random sampling
 - (C) Systematic sampling
 - (D) Stratified sampling
- 806.** Eric surveyed 402 employees at the company who worked in Marketing. Is this a random sample of the employees at the company in general?
- (A) Yes
 - (B) No
- 807.** Group of people with certain specific characteristics
- (A) Population
 - (B) Sample
 - (C) Open-Ended
 - (D) Participant Observation
- 808.** Which of the following are sampling considerations?

- (A) What kind of sampling strategy will you employ?
(B) How to skip sampling
809. Lee will conduct a survey at his school. He will select a random sample of students at the school to take the survey. Which sample is the best random sample for Lee to use?
(A) Every other student in the drama club
(B) Every fifth student who enters the school
(C) Every student who rides the same bus as Lee
(D) Every fourth student in Lee's homeroom class
810. Which type of sampling is used if the population is divided into groups by certain common characteristics and random sampling is done from each group.
(A) Cluster
(B) Pilot
(C) Stratified
(D) Systematic
811. Systematic Sampling is a method of selecting a sample from a population.
(A) A method of selecting a sample from a population
(B) A method of collecting data from a sample
(C) A method of analyzing data
(D) A method of organizing data
812. What do you call the set of all people, objects, events, or ideas you want to investigate?
(A) Sample
(B) Population
(C) Data
(D) Statistics
813. A group of third year ($n = 122$) from 253 pre-registration diploma of nursing students at Lake View College were contacted for a study. The group is called a ____
(A) Sample
(B) Population
(C) Purposive sample
(D) Convenience sample
814. Which statement best describes a population in a study?
(A) Subset selected to participate
(B) Entire group under investigation
(C) List that identifies potential sources
(D) Group receiving the intervention
815. Why is purposive sampling commonly used in qualitative research?
(A) It ensures a random selection of participants.
(B) It allows researchers to target individuals with relevant experiences.
(C) It provides a large sample for statistical analysis.
(D) It reduces researcher bias.
816. Population is
(A) It is a subset of selected members of a population
(B) It is the complete set of all the elements that will be studied
(C) It is the variable that describes some characteristics
(D) It is a numerical characteristic
817. It is defined as a smaller set of data that is chosen and/or selected from a larger population by using a predefined selection method.
(A) Validation
(B) Data
(C) Sampling
(D) Research
818. Which of the following is NOT a sampling method?
(A) Census
(B) Cluster
(C) Simple Random
(D) Systematic

- 819.** This is a procedure on how to select the members of a sample.
- (A) Sampling technique
 - (B) Sampling
 - (C) Sample
 - (D) None of above
- 820.** Describes your respondents for who they are and their profiles
- (A) Subjects of the study
 - (B) Statistical treatment applied
 - (C) Control Group
 - (D) Description of research instrument
- 821.** Which sampling method is described as quick to use, cheap, and does not need a full list of the population?
- (A) Quota Sampling
 - (B) Stratified Sampling
 - (C) Systematic Sampling
 - (D) Cluster Sampling
- 822.** A flawed sampling process that produces an unrepresentative sample:
- (A) Random sample
 - (B) Survey
 - (C) Naturalistic observation
 - (D) Sampling bias
- 823.** A few units drawn out from the total is called
- (A) Sample
 - (B) Example
- 824.** The President of GHC wants to know the average salary of tenured faculty for all the colleges in the University System of Georgia. Fifty tenured faculty from each University System of Georgia college is randomly selected and interviewed.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
- 825.** The sampling ratio is:
- (A) The proportion of the sample to the population
 - (B) The number of samples taken
 - (C) The frequency of sampling
 - (D) The method of sampling
- 826.** A sample is a segment of the population designed to —
- (A) Mislead others in the population
 - (B) Represent the population as a whole
 - (C) Allow for greater data misrepresentation
 - (D) Provide more accurate results than the entire population
- 827.** Which choice most directly influences coverage error before data collection starts?
- (A) Type of regression model
 - (B) Choice of confidence level
 - (C) Post-survey weighting scheme
 - (D) Sampling frame specification
- 828.** Why do we randomly select our samples?
- (A) For control
 - (B) To reduce bias
 - (C) So we don't get the same answers from everyone
 - (D) To eliminate confounding results
- 829.** Done in several stages
- (A) Multistage sampling
 - (B) Unrestricted random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
 - (E) Stratified random sampling
- 830.** The most crucial factor when selecting a research sample is:
- (A) The sample should be representative of the population
 - (B) The sample should be selected from a wide geographical area
 - (C) The sample should consist of a large number of participants
 - (D) The sample should only include high-performing individuals

- 831.** It is the process of choosing samples from a population.
(A) Sample
(B) Population
(C) Sampling
(D) None of above
- 832.** In a study, what is a relatively small group out of the total population called?
(A) Case study
(B) Control group
(C) Sample
(D) Survey
- 833.** What is a sample in research design?
(A) A sample is a subcollection that represents the entire population. It is the group from which you actually collect data.
(B) A sample is the entire population being studied.
(C) A sample is the process of analyzing data.
(D) A sample is the method used to collect data from every individual in the population.
- 834.** Using all the sample elements in all the selected clusters may be expensive or unnecessary in ____
(A) Systematic
(B) Simple random
(C) Multi-Stage
(D) Area
(E) None of the options
- 835.** What is the purpose of a sampling method in research?
(A) To validate the researcher's personal beliefs
(B) To entertain the audience with diverse opinions
(C) To complicate the data analysis process
(D) To ensure every individual has an equal chance of selection
- 836.** When the sampling frame is subdivided and the sample is randomly chosen from these sub samples
(A) Systematic
(B) Stratified
(C) Snowball
(D) None of above
- 837.** What is a population in research?
(A) A single individual or item chosen to represent the entire group
(B) The researchers conducting the study
(C) The sample size used in the study
(D) Overall group of individuals that the researcher is interested in
- 838.** In which of the following sample designs, maps rather than lists or registers are used as the sampling frame?
(A) Simple random sample.
(B) Cluster sample.
(C) Area Sample.
(D) None of these.
- 839.** What would be the sample in this example? Surveyors in a mall choose shoppers to ask about products they prefer.
(A) The surveyors
(B) All shoppers in the mall
(C) The shoppers who were asked their preferences
(D) None of above
- 840.** A member of the population is called a/an ____
(A) Element
(B) Sample
- 841.** A company has a sampling frame of 2,000 customers and needs a sample of 200 using systematic sampling. What sampling interval k should be used?
(A) $K = 20$ customers per selection
(B) $K = 5$ customers per selection
(C) $K = 100$ customers per selection
(D) $K = 10$ customers per selection

- 842.** In this sampling, the members of the population is divided into groups based on geographical area.
- (A) Simple Random Sampling
 - (B) Stratified Sampling
 - (C) Cluster Sampling
 - (D) Systematic Sampling
- 843.** What is the primary purpose of a sampling overview in marketing research?
- (A) Run data collection fieldwork
 - (B) Analyze multivariate results
 - (C) Compute optimal sample size
 - (D) Define key terms and scope
- 844.** When a researcher includes in his sample those individuals who are willing and are readily available, the sampling technique is called
- (A) Simple Random Sampling.
 - (B) Quota Sampling.
 - (C) Snowball Sampling.
 - (D) Incidental Sampling.
- 845.** The bigger group from where you choose the sample is called ____
- (A) Crowd
 - (B) Group
 - (C) People
 - (D) Population
- 846.** Which of the following does not determine the size of an adequate sample?
- (A) The nature of the population.
 - (B) The degree of precision desired.
 - (C) Researcher's insight into sampling.
 - (D) The type of sampling design.
- 847.** In market research, a sample is defined as ____
- (A) A free gift to consumers.
 - (B) A trial of the product so that consumers can test it at home and then give their opinions.
 - (C) All of the potential consumers of a product.
 - (D) A group selected from all of the potential consumers of the product.
- 848.** To assess reactions to a proposed tuition hike at her college, Ariana sent a questionnaire to every 5th person in the college list of all currently enrolled student. She employed the technique of
- (A) Random assignment
 - (B) Replication
 - (C) Correlation
 - (D) Random sampling
- 849.** A teacher asks everyone in his Year 7 group for their shoe size. This is a ____ of the Year 7 group.
- (A) Census
 - (B) Sample
 - (C) Biased sample
 - (D) Population
- 850.** The best sample to use for learning the opinions of the students in a high school is ____
- (A) The 50 students with the highest GPAs
 - (B) 50 names drawn from a box containing the names of all the students
 - (C) The first 50 students to walk through the door one morning.
 - (D) All of the students in the high school
- 851.** Entire collection or set of individuals or objects whose properties are analyzed
- (A) Sample
 - (B) Population
 - (C) Special group of interest
 - (D) Parameter
- 852.** The sampling procedure I will employ is:
- (A) Simple random sampling
 - (B) Convenience sampling
 - (C) Quota sampling
 - (D) Snowball sampling

- 853.** What sampling technique is used when the researcher would like to consider giving an equal chance to the member of the accessible population being selected as part of the study?
- (A) Simple Random Sampling Technique
 - (B) Stratified Sampling
 - (C) Systematic Sampling
 - (D) Cluster Sampling
- 854.** A teacher samples her class by dividing them by gender and then selecting 5 girls and 5 boys. This type of sampling is called?
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Cluster
- 855.** Selecting a group from a particular region.
- (A) Quota
 - (B) Random
 - (C) Snow-Balling
 - (D) Stratified
 - (E) Cluster
- 856.** In statistics, a sample:
- (A) Can be used for inferences but not for predictions.
 - (B) Is another word for population.
 - (C) Is a set of data taken from the population to represent the population.
 - (D) Is only used in descriptive statistics.
- 857.** A small part that represents the whole
- (A) Sample
 - (B) Factor
 - (C) Aim
 - (D) Steps taken
- 858.** The collection of subjects selected for observation in an empirical study.
- (A) Sample
 - (B) Journal
 - (C) Descriptive statistics
 - (D) Replication
- 859.** Which step directly follows selecting the sampling technique in the five-step sampling design process?
- (A) Define measurement scales
 - (B) Pilot test the questionnaire
 - (C) Compute the sampling interval
 - (D) Determine the required sample size
- 860.** A school leader surveys key stakeholders regarding the school vision and goals to learn what they believe about the purposes of education. Which set of stakeholder groups is the leader LEAST likely to survey about this particular topic?
- (A) Superintendent, central office administrators
 - (B) Members of school board, parents of students
 - (C) Community business owners, business workers
 - (D) Students, teachers, paraprofessionals at school
- 861.** A sample study is a study of
- (A) Whole population
 - (B) Only representative items
 - (C) 51 items
 - (D) None of these
- 862.** What is the term used to describe the entire group you want information about?
- (A) Population
 - (B) Sample
 - (C) Variable
 - (D) Statistic
- 863.** A type of sampling in which the researcher specifies the characteristics of the population of interest and locates individuals with those characteristics is called?
- (A) Purposive sampling
 - (B) Quota sampling
 - (C) Snowball sampling
 - (D) Convenience sampling

- 864.** A total number of people in a group is called the ____
(A) URL
(B) Data
(C) Survey
(D) Population
- 865.** Why is random sampling preferred over convenience sampling?
(A) It reduces bias and increases the representativeness of the sample.
(B) It is faster and always cheaper than convenience sampling.
(C) It guarantees that every subgroup is equally represented.
(D) It eliminates the need for any sampling frame.
- 866.** A researcher numbers 1,000 students and uses a lottery to pick 100. What sampling method is used?
(A) Systematic sampling
(B) Quota sampling
(C) Purposive sampling
(D) Simple random sampling
- 867.** Why do scientists use sampling techniques to gather population data rather than counting everything?
(A) Scientists are lazy
(B) Sampling is more efficient and achievable
(C) Sampling is more accurate
(D) Scientists prefer estimations
(E) Sampling is cheaper
- 868.** Systematic sampling involves selecting:
(A) Every kth element
(B) Only volunteers
(C) Only the youngest participants
(D) None of these
- 869.** What is the disadvantage of sampling?
(A) Better scrutiny of data.
(B) Suitable in limited resources.
(C) Chances of bias.
(D) Greater speed.
- 870.** A source that is highly knowledgeable about a topic.
(A) Interviewer
(B) Attribution
(C) Person-on-the-street
(D) Expert
- 871.** A population consists of the total set of individuals, households, or businesses you want to include in your study.
(A) True
(B) False
- 872.** Identify the type of sampling technique "A researcher is doing a research work on the student's reaction to the newly implemented curriculum in mathematics and interviewed every 10th student entering the gate of the school."
(A) Simple Random Sampling
(B) Systematic Sampling
(C) Stratified Sampling
(D) Cluster Sampling
- 873.** Population is a group of people the study actually examines in the empirical investigation.
(A) True
(B) False
- 874.** The entire group that you want to draw conclusions about.
(A) Population
(B) Methodology
(C) Sample
(D) Variable
- 875.** What is a Quadrat?
(A) A square
(B) Method used by ecologists to sample small areas and survey the organisms
(C) An instrument used in biology
(D) Some technique for ecosystems

- 876.** Identify the sampling design: Mr. Rhoades asks all his classmates what's their favorite TV show is
- (A) Cluster
 - (B) Unbiased
 - (C) Stratified
 - (D) Convenience
- 877.** What do you call to a small group of people or things taken from a larger group and used to represent the larger group?
- (A) Sample
 - (B) Sampling
 - (C) Persons
 - (D) People
- 878.** A member of the population is called ____
- (A) Element
 - (B) Census
 - (C) Sample
 - (D) Group
- 879.** Quota sampling is used intensively in which type of research?
- (A) Experimental research.
 - (B) Market research.
 - (C) Action research.
 - (D) Ethnographic research.
- 880.** It refers to the group of individuals who will participate in your study. They are the ones who will answer surveys or interviews. It is the specific group within a population that you will be collecting data from.
- (A) Data
 - (B) Sample
 - (C) Population
 - (D) Reference
- 881.** A group of subjects that are studied
- (A) Variable
 - (B) Sample
 - (C) Significant effect
 - (D) Instrument
- 882.** What is an opportunity sample?
- (A) People who are easily available are selected
 - (B) People respond to an advert
 - (C) People in the population have an equal chance of being selected
 - (D) Every nth person in the target population is selected
- 883.** What is the purpose of sampling in IT research?
- (A) To collect primary data for analysis
 - (B) To ensure a representative sample of the population
 - (C) To establish cause-and-effect relationships
 - (D) To explore subjective experiences and meanings
- 884.** Random sampling and random assignment are crucial for creating representative samples and ____ groups, respectively.
- (A) Equalizing
 - (B) Dividing
 - (C) Isolating
 - (D) Controlling
- 885.** This fairly represents a population because each member has an equal chance of inclusion.
- (A) Random assignment
 - (B) Random sample
 - (C) Hindsight bias
 - (D) Sampling bias
- 886.** The Research Participants indicate the characteristics of the element from which the samples will be taken. This elaborates on how the samples will be chosen.
- (A) TRUE
 - (B) FALSE
- 887.** Which component would detail steps like define population, choose frame, and select?
- (A) Sampling procedure sequence
 - (B) Sampling overview narrative

- (C) Sampling methods typology
(D) Sample size determination math
- 888.** Ms SK had included all students enrolled in the Bachelor of Nursing program of a major university in Kuala Lumpur at the time of the study. This group is called ____
(A) Sample
(B) Population
(C) Purposive sample
(D) Convenience sample
- 889.** Which procedure matches systematic sampling?
(A) Choose a start then select every kth item
(B) Write all names and draw slips randomly
(C) Recruit whoever is available nearby
(D) Select only from predefined subgroups
- 890.** A beverage company wanted to see if people in the United States liked their new logo. Which choice best represents a population?
(A) A selection of logo artists.
(B) Every person in the United States.
(C) A selection of shoppers from different shoppers from different states.
(D) 3, 800 children age 5-15
- 891.** A smaller group selected from the population
(A) Primary Data
(B) Sampling
(C) Market Research
(D) Population
- 892.** Explain the relationship between samples and drawing inferences.
(A) Samples are used to draw inferences about a population.
(B) Samples are unrelated to drawing inferences.
(C) Drawing inferences does not require samples.
(D) Samples complicate the process of drawing inferences.
- 893.** Mrs. Ramos writes each name of all grade 7 students on small pieces of paper, he then put them in a box and draws 300 names to participate in the study. Which random sampling technique does she apply?
(A) Cluster
(B) Simple
(C) Stratified
(D) Systematic
- 894.** The people who take part in a research project are called the
(A) Participants
(B) Person
(C) Investigation
(D) Survey
- 895.** Population, Sample, or either: all robotics students in a study about how well the robotics program is doing at this school.
(A) Population
(B) Sample
(C) Either Edit
(D) None of above
- 896.** Sampling is advantageous as it ____
(A) Saves time
(B) Helps in capital-saving
(C) Both (A) and (B)
(D) Increases accuracy
- 897.** Identify the sampling technique used in the following study: A school official divides the student population into five classes: freshman, sophomore, junior, senior, and graduate student. The official takes a random sample from each class and asks the members' opinions regarding student services.
(A) SRS
(B) Convenience
(C) Systematic
(D) Cluster
(E) Stratified

- 898.** All subjects under investigation
- (A) Sample
 - (B) Data
 - (C) Data set
 - (D) Population
- 899.** A sample is a ___ of people who are ___ to respond to a market research exercise.
- (A) Sample, sampled
 - (B) Packet, asked
 - (C) Group, selected
 - (D) Group, sampled
- 900.** Which is most likely to produce a representative sample?
- (A) Opportunity sampling
 - (B) Volunteer sampling
 - (C) Systematic sampling
 - (D) Stratified sampling Edit
- 901.** Census method needs less number of enumerators.
- (A) True
 - (B) False
- 902.** Farmer Joe separates his apple tree farm into 10 regions. He counts the number of apples produced in just one of the regions and uses that estimate to predict the number of apples produced on the whole farm. This is ___ sampling.
- (A) Simple
 - (B) Cluster
 - (C) Stratified
 - (D) Systematic
- 903.** The size of sample for a study mostly depends on
- (A) Gravity of the population.
 - (B) Geographical area of the study.
 - (C) Homogeneity and heterogeneity of the population.
 - (D) Type of population.
- 904.** What is a potential source of bias in sociological research related to the way that a sample is selected?
- (A) Interviewer bias
 - (B) Hawthorne effect
 - (C) Sampling bias
 - (D) Observer effect
- 905.** Where the sample chosen is not representative of the population-it is
- (A) Secondary
 - (B) Sample
 - (C) Bias
 - (D) Parameter
- 906.** If the entire population is surveyed, the type of survey is a/an:
- (A) Stratified Sampling
 - (B) Random Sampling
 - (C) Population Sampling
 - (D) Census
- 907.** A gaming website wanted to find out which console its visitors owned. Which choice BEST represents a population?
- (A) Visitors with an 'e' in their user name.
 - (B) Visitors to the 3DS section.
 - (C) Visitors over 22.
 - (D) All the website visitors.
- 908.** The first step in sampling design is:
- (A) Collecting data
 - (B) Defining population
 - (C) Writing conclusion
 - (D) Interpreting results
- 909.** Interview every 10th student who enters the school in the morning. Determine the sampling method used.
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Systematic sampling
 - (D) Convenience sampling

- 910.** What kind of sample technique is the following: Question 90 employees chosen at random.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
- 911.** Identify the type of sampling technique "A researcher who is studying the effects of educational attainment on promotion conducted a survey of 50 randomly selected workers from each of these categories: high school graduate, with undergraduate degrees, with master's degree, and with doctoral degree."
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
- 912.** A ____ is a sub-set of the population.
- (A) Subject
 - (B) Sample
 - (C) Population
 - (D) Group
- 913.** Systematic sampling involves selecting samples every n th member of the population. If the population size is 75 and the sample size is 25, what is the interval for selection?
- (A) 3
 - (B) 5
 - (C) 2
 - (D) 10
- 914.** A simple random and systematic sample are types of
- (A) Convenience samples
 - (B) Biased samples
 - (C) Unfair samples
 - (D) Unbiased samples
- 915.** In order to use samples to estimate something from the population, the sample should be ____ the population.
- (A) Exactly the same as
 - (B) Nothing like
 - (C) Representative of
 - (D) Larger than
- 916.** The set of ALL observations made on all objects under study for a given characteristic or variable.
- (A) Sample
 - (B) Population
 - (C) Survey
 - (D) Parameter
- 917.** A smaller part or sub-group of the population.
- (A) Population
 - (B) Methodology
 - (C) Sample
 - (D) Variable
- 918.** OXFORD Publication is planning a study of educator preferences to determine the needs of college instructors. Because of the number of college instructors, OXFORD will select a portion of the target population, known as a(n) ____, to participate in the study.
- (A) Element
 - (B) Sample
 - (C) Census
 - (D) Sampling Frame
- 919.** In market research, a sample is defined as: 1) a free gift to the consumer 2) a trial of the product so that consumers can test it at home and then give their opinions 3) all of the potential consumers of a product 4) a group selected from all of the potential consumers of a product
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 920.** In market research, a sample if the population is defined as:
- (A) A free gift to the consumer
 - (B) A trial of the product so that consumers can test it at home and then give their opinions

- (C) All of the potential consumers of a product
- (D) A group selected from all of the potential consumers of a product
- 921.** When a research problem is related to heterogeneous population, the most suitable sampling method is:[2008-DECEMBER]
- (A) Cluster Sampling
- (B) Stratified Sampling
- (C) Convenient Sampling
- (D) Lottery Method
- 922.** In a community of 3000 people, 80% are Hindus, 10% Muslims, 5% Sicks, 4% Christians, and 1% Jains. To select a sample of 300 people to analyze food habits, the ideal sampling method would be
- (A) Simple random sampling
- (B) Stratified random sampling
- (C) Systematic random sampling
- (D) Inverse sampling
- 923.** Which characteristic of survey research shows a list of the target?
- (A) Sampling from a population
- (B) Collecting data through questionnaires or interviews
- (C) Designing instruments for data collection
- (D) Obtaining a high response rate
- 924.** In research, a population refers to:
- (A) The entire group of individuals or items being studied
- (B) A small sample selected for analysis
- (C) Only the people living in a specific area
- (D) The researchers conducting the study
- 925.** In research, a sample is:
- (A) The entire group of interest
- (B) A subset of the population studied
- (C) Another term for the control group
- (D) Only used in qualitative research
- 926.** A hospital-based study selects all diabetic patients admitted consecutively until 100 samples are collected. What key feature distinguishes this method?
- (A) Random-digit dialing across the city
- (B) Stratified selection by age and sex quotas
- (C) Cluster selection from multiple hospital units
- (D) Time-bounded, all eligible cases until target met
- 927.** Sampling is used in research to —
- (A) Represent the population being investigated.
- (B) Test out what is being offered.
- (C) Answer the focus question or to prove/disprove hypothesis.
- (D) Decrease the bias in research.
- 928.** Sampling frame means
- (A) Identification of target and accessible population.
- (B) Defining sample unit and selecting units.
- (C) Preparing a complete list of the units of a finite population for drawing a sample.
- (D) Fixing the sample size and drawing a sample.
- 929.** The group of people who represent the target market and are taking part in a research study
- (A) Target market
- (B) Sample
- (C) First responders
- (D) Interviewees
- 930.** Identify the population: A survey of 500 adults in the U.S. found that 54% drink coffee daily.
- (A) Collection of the 500 adults surveyed
- (B) Collection of all adults in the U.S.
- (C) 54%
- (D) 500
- 931.** The process of selecting that specific part of the population size.

- (A) RCBD
 - (B) CRD
 - (C) Sampling
 - (D) Grouping
- 932.** The aggregate of all the units pertaining to a study is called
- (A) Population or universe
 - (B) Unit
 - (C) Sample
 - (D) Frame
- 933.** Which of the following refers to the list of sampling units organized by the researchers?
- (A) Parameter
 - (B) Sample
 - (C) Sampling frame
 - (D) Statistic
- 934.** If you drew all possible samples from some population, calculated the mean for each of the samples, and constructed a line graph (showing the shape of the distribution) based on all of those means, what would you have?
- (A) A population distribution.
 - (B) A sampling distribution.
 - (C) A sample distribution.
 - (D) A parameter distribution.
- 935.** An aggregate set of people /objects with specified characteristics is a:
- (A) Sample
 - (B) Population
 - (C) Quota
 - (D) None of above
- 936.** The ____ is a segment of the population or object of study.
- (A) Sample
 - (B) Methodology
 - (C) Experiment
 - (D) Population
- 937.** Which of the following should you think about when preparing your sample size?
- (A) Your sample frame and sampling strategy.
 - (B) The ethical issues that might arise.
 - (C) Access to the set sample.
 - (D) The universe, sample frame, sampling strategy and budget.
- 938.** While students are lined up for school pictures, a teacher passes out a survey to every 10th student.
- (A) Simple Sampling
 - (B) Stratified Sampling
 - (C) Cluster Sampling
 - (D) Systematic Sampling
- 939.** Which tool can be used for determining sample size, especially if you have a large sample size?
- (A) Heuristics
 - (B) Literature Review
 - (C) Cochran
 - (D) Experimental
- 940.** Random sample
- (A) A subset of individuals that are randomly selected from a population.
 - (B) A group of individuals chosen based on specific characteristics.
 - (C) A collection of data points gathered from a single source.
 - (D) A sample that is biased towards a particular outcome.
- 941.** Why is a large sample size important in research?
- (A) It minimizes the chance of extreme outcomes, enhancing the reliability of results.
 - (B) It guarantees that all results will be statistically significant.
 - (C) It eliminates the need for data analysis.
 - (D) It ensures that only positive results are obtained.

942. A good sample should have characteristics of the represented population that are within the scope of the study with fair accuracy.
- (A) True
 - (B) False
943. Identify the sampling design: The LFCC registrar wants to investigate attitudes of their graduates. The registrar randomly selects 100 names from each of the four past graduating classes.
- (A) Cluster
 - (B) Volunteer
 - (C) Stratified
 - (D) Simple random
944. Which statement best defines sampling in social research?
- (A) Selecting a portion to infer about the whole
 - (B) Selecting cases randomly without any purpose
 - (C) Selecting the whole population for study
 - (D) Selecting only extreme cases for analysis
945. Why use samples?
- (A) To save time and resources
 - (B) To increase complexity
 - (C) To avoid making decisions
 - (D) To ensure 100% accuracy
946. In Marketing Research, there is sampling plan entity called “sampling units”. what is that?
- (A) How many people should be surveyed?
 - (B) Whom should we survey?
 - (C) How should we choose the respondents
 - (D) Probability sampling allows marketers to calculate confidence limits for sampling error
947. Cluster, stratified, simple random, and systematic are all types of
- (A) Convenience samples
 - (B) Biased samples
 - (C) Haphazard samples
 - (D) Unbiased samples
948. What is a representative sample?
- (A) A subset of a population that accurately reflects the members of the entire population
 - (B) A sample that is larger than the population
 - (C) A sample that is chosen randomly without any criteria
 - (D) A sample that includes only the most common elements of the population
949. Do you think a small sample size in a survey is really a problem, as long as you present the facts accurately?
- (A) It's not a problem, because the results are accurate and honest, and that's the most important thing.
 - (B) It's a problem because the results are not true.
 - (C) It's a problem because the results are misleading.
 - (D) None of above
950. The term used to describe when a research sample has the components of the target population so that it can be generalized:
- (A) Alternative
 - (B) Definitive
 - (C) Representative
 - (D) Constructive
951. The school librarian wants to determine how many students use the library on a regular basis. What type of sampling method would she use if she choose to select every 5th student who enters the library on Tuesday.
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Cluster sampling
 - (D) Multi-stage sampling

1.4.5 Probability Sampling

1. Is used when the population is made up of groups of items with different characteristics
(A) STRATIFIED RANDOM SAMPLING
(B) CLUSTER SAMPLING
(C) PURPOSIVE SAMPLING
(D) SIMPLE RANDOM SAMPLING
2. Probability sampling is strongly linked to the science of ____
(A) Statistics
(B) Biology
(C) Chemistry
(D) Physics
3. What is a key feature of probability sampling?
(A) Uses some form of random sampling to give everyone a fair chance of being chosen
(B) Selects participants based on convenience
(C) Only includes people who volunteer
(D) Ignores subgroups within the population
4. Involves all members listed in the sampling frame representing a certain population focused on by your study.
(A) Probability
(B) Non-Probability Sampling
(C) Probability Sampling
(D) Non-Probability
5. What is multistage cluster sampling?
(A) A third form of probability sampling in which people are chosen due to some characteristics
(B) Choosing a sample in two or more stages
(C) A choice of sample is done via one stage sampling
(D) Probability sampling which chooses sample based on distribution of the population
6. A researcher has a full list of everyone in the target population and uses a computer to pick respondents so that each person has an equal chance of selection. Which sampling method is being used?
(A) Systematic sampling
(B) Simple random (probability) sampling
(C) Cluster sampling
(D) Quota sampling
(E) Snowball sampling
7. What sampling method are you using if you survey every 5th person who enters the room.
(A) Convenience
(B) Systematic
(C) Simple Random
(D) None of above
8. To study the amount of time students spend doing homework each day, use a random number generator to select 25 freshmen, 25 sophomores, 25 juniors, and 25 seniors to survey.
(A) Convenience Sample
(B) Simple Random Sample
(C) Stratified Random Sample
(D) Interval Sample
9. Which sampling method divides the population into levels and samples from each?
(A) Cluster sampling
(B) Systematic sampling
(C) Stratified sampling
(D) Snowball sampling
10. Is the basic sampling method assumed in statistical methods and computation, each unit of the target population is assigned a number, a set of numbers is then generated and the units having those numbers are included on the sample.
(A) Probability sampling
(B) Non-probability sampling
(C) Simple random sampling
(D) Systematic sampling
(E) Stratified sampling
11. Random sampling method is also known as ____
(A) Judgement sampling

- (B) Probability sampling
(C) Systematic sampling
(D) Quota Sampling
12. The principal groups the grade 7 students according to the barangay where they live. She randomly picks a barangay and all of the students living in that barangay answer the questionnaire. Which random sampling technique does she apply?
(A) Cluster
(B) Simple
(C) Stratified
(D) Systematic
13. A ___ sampling scheme is one in which every unit in the population has a chance (greater than zero) of being selected in the sample
(A) Simple Random
(B) Probability
(C) Systematic
(D) Stratified Random
14. The names of 25 employees are chosen out of a hat from a company of 250 employees. This is an example of which type of sampling?
(A) Random sampling
(B) Stratified sampling
15. In a stratified design with proportionate allocation, how are stratum sample sizes determined?
(A) Weighted by cost per interview only
(B) Equal numbers selected from every stratum
(C) Proportional to each stratum's population share
(D) Based on interviewer availability per region
16. Probability sampling includes:
(A) Judgment sampling
(B) Quota sampling
(C) Simple random sampling
(D) Convenience sampling
17. Involves a method where the researchers divide a more extensive population into smaller groups (strata) that usually don't overlap but represent the entire population.
(A) Quota Sampling
(B) Purposive Sampling
(C) Snowball Sampling
(D) Stratified Sampling
18. What kind of sample technique is the following: Selecting every 8th person in line for a water slide.
(A) Convenience Sampling
(B) Simple Random Sampling
(C) Systematic Sampling
(D) Sample
19. When every member of the accessible population has an equal chance of being selected to participate in the study, the researcher is using
(A) Simple random sampling.
(B) Stratified random sampling
(C) Convenience sampling.
(D) Purposive sampling
20. Which sampling method is ideal for studies aiming to generalize findings to a broader population?
(A) Probability sampling
(B) Non-probability voluntary sampling
(C) Non-probability convenience sampling
(D) Non-probability quota sampling
21. True or False: Random samples are most likely to yield a sample that truly represents the population.
(A) True
(B) False
22. What kind of sample technique is the following: Question every 10th person you see leaving the mall.
(A) Convenience Sampling
(B) Simple Random Sampling
(C) Systematic Sampling
(D) Sample

23. Ana wants to know the average student's opinion of the tardy policy at her school. Which group of students should she survey in order to achieve the most accurate results?
- (A) Thirty students who are often tardy
 - (B) Thirty students who are rarely tardy
 - (C) Thirty of her friends
 - (D) Thirty randomly selected students from her school
24. Farmer Joe randomly picks 100 trees using a random number generator to estimate the number of apples produced by his apple trees. This is ____ sampling.
- (A) Simple
 - (B) Stratified
 - (C) Cluster
 - (D) Systematic
25. What is stratified sampling?
- (A) Assigning participants randomly to different treatment groups
 - (B) Sampling individuals who are readily available or easily accessible
 - (C) Randomly selecting participants from the entire population
 - (D) Dividing the population into homogeneous groups and selecting participants from each group
26. Identify the sampling method: A high school wants to survey the attitudes of their graduates. The school randomly selects 100 names from groups of the four past graduating classes.
- (A) Cluster
 - (B) Volunteer
 - (C) Stratified
 - (D) Simple random
27. Which of the following refers to a probability sample in which the population is divided into mutually exclusive groups (such as blocks), and the researcher draws a sample of the groups to interview?
- (A) Quota sample
 - (B) Judgment sample
 - (C) Cluster sample
 - (D) Stratified random sample
 - (E) Simple random sample
28. The method of sampling so that each unit has an equal probability of being selected is:
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
29. Which of the following sampling methods is based on probability? [2012-DECEMBER]
- (A) Convenience sampling
 - (B) Quota sampling
 - (C) Judgement sampling
 - (D) Stratified sampling
30. Mr Synowicki samples his class by selecting 5 girls and 7 boys. This type of sampling is called?
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Cluster
31. The type of sampling in which each member of the population selected for the sample is returned to the population before the next member is selected is called ____
- (A) Sampling without replacement.
 - (B) Sampling with replacement.
 - (C) Simple random sampling.
 - (D) Systematic sampling.
32. A sampling where every member of the population has an equal chance of being selected. Your sampling frame should include the whole population.
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling

33. What is a random sample?
- (A) When every n th member of a target population is selected
 - (B) The sample reflects the proportions of people in subgroups with a population
 - (C) All members of the target population have an equal chance of being picked
 - (D) Selection is from people who are easily available
34. Subjects were taken from a population with an equal number of males and females.
- (A) Simple Random Sample
 - (B) Sample of Convenience
 - (C) Information
 - (D) Systematic Sample
35. What type of sampling is this? Soybeans are planted on a 48-acre field. The field is divided into one acre subplots. A sample of plants is taken from each subplot to estimate the harvest.
- (A) Random sample
 - (B) Convenience sample
 - (C) Stratified Random sample
 - (D) Census
36. It involves random selection, allowing you to make strong statistical inferences about the whole group.
- (A) Concluding
 - (B) Non-probability Sampling
 - (C) Probability Sampling
 - (D) Sampling Technique
37. What is the main purpose of stratified random sampling?
- (A) To select participants at constant intervals
 - (B) To divide the population into distinct subgroups based on specific characteristics
 - (C) To ignore subgroups within the population
 - (D) To use convenience sampling
38. What is cluster sampling?
- (A) Randomly selecting participants from the entire population
 - (B) Sampling individuals who are readily available or easily accessible
 - (C) Dividing the population into naturally occurring groups and randomly selecting groups to sample
 - (D) Using statistical techniques to analyze the collected data
39. If you choose a sample of the population that gives each person an equal chance of participating, this would be:
- (A) A biased sample
 - (B) A random sample
 - (C) An optimal sample
 - (D) An atypical sample
40. In a probability sample, all of the following are considered EXCEPT ONE.
- (A) Scientific
 - (B) Empirical
 - (C) Quantitative
 - (D) Subjective
41. To ensure a sample fairly represents a population, every member must have an equal chance of inclusion. This is:
- (A) Representative sampling
 - (B) Convenience sampling
 - (C) Random sampling
 - (D) Stratified sampling
42. In a random sample, each individual in the population has an equal chance of being selected. Selection is by chance. In a new study, however, it will be important to include 20% African Americans. What type of sampling procedure will be necessary?
- (A) Cluster sampling is called for
 - (B) Stratified sampling would be best
43. Which sampling technique involves dividing the population into different strata and then taking samples from each different stratum?

- (A) Stratified sampling
(B) Purposive sampling
44. You wish to examine the effects of community quarantine on your fellow students. You decided to borrow a list from the guidance office and select every 10th student on it. What sampling technique are you using?
(A) Convenience
(B) Purposive
(C) Stratified
(D) Systematic
45. Which of the following sampling methods is based on probability?
(A) Quota sampling
(B) Stratified sampling
(C) Judgement sampling
(D) Convenience sampling
46. A type of probability sampling that allows the researcher to draw more precise conclusions by ensuring that every subgroup is properly represented in the sample
(A) Simple random sampling
(B) Systematic sampling
(C) Stratified sampling
(D) Cluster sampling
47. Every individual has a known & equal chance of being selected is known as?
(A) Probability sampling
(B) Non-probability sampling
(C) Research design
(D) None
48. Identify the sampling technique used in the following study: A lobbyist has a list of 100 senators of the United States. In order to determine the Senate's position regarding farm subsidies, they decide to talk with every seventh senator on the list starting with the third.
(A) SRS
(B) Convenience
(C) Systematic
(D) Cluster
- (E) Stratified
49. It is a process of selecting clusters from a population which is very large or widely spread out over a wide geographical area.
(A) Simple Random Sampling
(B) Stratified Random Sampling
(C) Systematic Random Sampling
(D) Cluster Random Sampling
50. What sampling technique ensures every member of the population has an equal chance of selection?
(A) Stratified Sampling
(B) Cluster Sampling
(C) Random Sampling
(D) Systematic Sampling
51. Under which method, chits are taken out to form a sample?
(A) Lottery method
(B) Tippet's method
(C) Sample method
(D) None of these
52. Lottery method, use of random table number and Computers methods can be used to draw sample in this approach
(A) Systematic
(B) Simple random
(C) Multi-Stage
(D) Area
(E) None of the options
53. What is a sampling procedure wherein the researcher chooses the n^{th} member after randomly selecting the 1^{st} , through n^{th} element as starting point?
(A) Systematic
(B) Stratified
(C) Simple random
(D) Snowball

54. A company wants to test a new feature with a group that represents their entire user base. What sampling method should they use?
- (A) Simple random sampling
 - (B) Judgement sampling
 - (C) Convenience sampling
 - (D) Snowball sampling
55. Random sampling is also called ____
- (A) Availability sampling
 - (B) Probation sampling
 - (C) Probability sampling
 - (D) Prospect sampling
56. What type of sample is it if every unit within the population has an equal chance of being selected?
- (A) Non-probability
 - (B) Stratified
 - (C) Probability
 - (D) Quota
57. A sample in which every person, object, or event has an equal chance of being selected.
- (A) Random sample.
 - (B) Biased sample.
58. A researcher divides the population of product users into three groups based on degree of use. If the researcher then draws a random sample from each user group independently, the researcher has created a ____ sample.
- (A) Simple random
 - (B) Stratified
 - (C) Judgment
 - (D) Quota
59. When it comes to representativeness in standardised sampling, which one of the following is adequate but does not ensure representativeness?
- (A) Simple random sampling
 - (B) Stratified random sampling
 - (C) Cluster sampling
 - (D) Snowball sampling
60. Selecting people completely by chance from a population
- (A) Random Sampling
 - (B) Representative Sampling
 - (C) Random Assignment
 - (D) Representative Assignment
61. Each group of size “n” has an equal chance of being selected
- (A) Convenience
 - (B) Simple Random
 - (C) Systematic
 - (D) Stratified
 - (E) Quota
62. Random sampling does not
- (A) Make the sample representative of the population.
 - (B) Ensure generalization of results.
 - (C) Reduce error and increase precision of the experiment.
 - (D) Maximize experimental variance.
63. When each member of a population has an equal chance of being selected, this is called:
- (A) A snowball sample
 - (B) A stratified sample
 - (C) A random probability sample
 - (D) A non-random sample
64. A simple random sample is one in which:
- (A) From a random starting point, every nth unit from the sampling frame is selected
 - (B) A non-probability strategy is used, making the results difficult to generalize
 - (C) The researcher has a certain quota of respondents to fill for various social groups
 - (D) Every unit of the population has an equal chance of being selected
65. What kind of sample technique is the following: Select at random 150 parents of high school and send them a survey.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample

66. What is a key assumption of simple random sampling?
- (A) Items sorted in reverse order first
 - (B) Selection based on researcher judgment
 - (C) Interval changes with each selection
 - (D) Equal and likely chance for every item
67. In ____ every member of the target population has an equal chance of becoming part of the sample.
- (A) Stratified sampling
 - (B) Random sampling
 - (C) Opportunity sampling
 - (D) Self-selected sampling
68. A teacher chooses her “student of the week” by choosing a name out of a hat. What is this an example of?
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Convenience Sampling
 - (D) Quota Sampling
 - (E) Stratified Sampling
69. What is the main characteristic of Stratified Sampling?
- (A) It involves dividing the population into subgroups.
 - (B) It selects samples randomly without any grouping.
 - (C) It focuses on a single characteristic of the population.
 - (D) It uses a fixed sample size for all subgroups.
70. This Sampling technique uses randomization to make sure that every element of the population gets an equal chance to be part of the selected sample.
- (A) Probability Sampling
 - (B) Non-Probability Sampling
71. Used by making subdivision of the total population into smaller groups to represent the sample of the study
- (A) Restricted random sampling
 - (B) Unrestricted random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
 - (E) Stratified random sampling
72. Which of the following sampling methods is the best way to select a group of people for a study if you are interested in making statements about the larger population?
- (A) Convenience sampling
 - (B) Quota sampling
 - (C) Purposive sampling
 - (D) Random sampling
73. A student is choosing 10 companies to research out of the top 50 Fortune 500 companies. She does this by assigning a number to each of the 50 companies and using a random number generator to choose these 10. What is this an example of?
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Convenience Sampling
 - (D) Quota Sampling
 - (E) Stratified Sampling
74. Which of the following is the best way to generate a random sample of students for a research study?
- (A) Mail out a questionnaire that students could voluntarily complete and return
 - (B) Stand by the door of the library and ask people who pass by to answer your questions
 - (C) Offer extra credit for students in a particular classroom who choose to participate
 - (D) Use a table of random numbers to pick participants from a student listing
75. This refers to the method of gaining enough participants that represent various backgrounds of people, allowing researchers to generalize results to the larger population:
- (A) Full sampling
 - (B) Double-blind placebo experiment
 - (C) Random sampling
 - (D) Naturalistic study

76. More likely to be representative.
- (A) Strength of Opportunity Sampling Technique
 - (B) Strength of Random Sampling Technique
 - (C) Strength of Volunteer Sampling Technique
 - (D) None of above
77. Which of the following is NOT a type of random sampling?
- (A) Cluster
 - (B) Purposive
 - (C) Simple
 - (D) Systematic
78. Is this sample biased or unbiased? A sample of 50 randomly selected students.
- (A) Biased
 - (B) Unbiased
79. Which type of sampling Mr. Weber use to draw a sample that is not biased?
- (A) Non-probability.
 - (B) Concurrent.
 - (C) Random.
 - (D) None of the above.
80. Sampling which provides for a known non zero chance of selection is ____
- (A) Probability sampling
 - (B) Non probability sampling
 - (C) Multiple Choice
 - (D) Analysis
81. Everyone in the population has an equal chance of being selected
- (A) Population
 - (B) Sample
 - (C) Random Sampling
 - (D) None of above
82. What is an advantage of probability sampling?
- (A) It ensures randomness and generalizability
 - (B) It is cost-effective
 - (C) It allows quick participant selection
 - (D) It does not require a sampling frame
83. In cluster sampling, what is randomly selected first?
- (A) Sampling frames for each subgroup
 - (B) Clusters that partition the population
 - (C) Strata defined by a classification variable
 - (D) Individual elements from the full population
84. You want to ensure your sample represents different user types. What should you use?
- (A) Stratified sampling
 - (B) Snowball sampling
 - (C) Judgement sampling
 - (D) Convenience sampling
85. In a recent political poll, a computer is used to randomly generate telephone numbers for subjects that were called and interviewed.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
86. Assign each car in a dealership a number and then use a random-number table to select the cars to be inspected.
- (A) Systematic
 - (B) Simple random sample
 - (C) Convenience
 - (D) Cluster
87. Most basic and strong forms of sampling.
- (A) Simple random sampling and quasi-random sampling
 - (B) Convenience sampling and stratified sampling
 - (C) Simple random sampling and stratified sampling
 - (D) None of above

88. In sampling, the lottery method is used for [2013-DECEMBER]
(A) Interpretation
(B) Theorisation
(C) Conceptualisation
(D) Randomisation
89. In a ____ sample all the participants of a study population have an equal opportunity to be chosen for the study.
(A) Simple random
(B) Stratified random
(C) Judgment
(D) Convenience
90. What is a stratified sample?
(A) People select themselves
(B) Find anyone who is around at the time
(C) The sample reflects the proportions of people in subgroups in a population
(D) Everyone in the target population has an equal chance of being picked
91. A sampling method which involves a random start and then proceeds with the selection of every k th element from then onwards (where $k = \text{population size} / \text{sample size}$):
(A) Systematic sampling
(B) Stratified random sampling
(C) Snowball sampling
(D) None of above
92. Units of the population are grouped; one or more groups are selected at random. All units of that group are included in the sample.
(A) Cluster sample
(B) Simple random
(C) Stratified
(D) Proportional
93. A sample where all members have a known chance of selection is:
(A) Convenience sample
(B) Systematic sample
(C) Probability sample
(D) Random sample
94. Random sampling is important in quantitative research because:
(A) It ensures that every member of the population has an equal chance of being selected.
(B) It guarantees that the results will be qualitative.
(C) It eliminates the need for data analysis.
(D) It only includes participants who volunteer.
95. Stratified sampling
(A) Probability
(B) Non-Probability
96. Probability Sampling includes the following, except:
(A) Simple Random
(B) Stratified Random
(C) Purposive
(D) Fishbowl
97. For items 40-43, identify the sampling procedures and the sample that correspond to the statements below. Choose your answers in the box provided (a. convenience sampling; b. purposive sampling; c. random sampling; d. quota sampling). Each subject has a known probability of being selected.
(A) Convenience sampling
(B) Purposive sampling
(C) Random sampling
(D) Quota sampling
98. A type of sampling method where all members of a target population may be asked to participate through the use of a randomized method.
(A) Random sampling
(B) Opportunity sampling
(C) Self-selected sampling
(D) Purposive sampling

99. Which type of sample provides a group of participants who are most representative of the target population?
- (A) Census
 - (B) Judgement
 - (C) Probability
 - (D) Non Probability
100. A sample is a sample if each unit in the population is given some chance of being selected.
- (A) Probability
 - (B) Non-probability
 - (C) All of the above
 - (D) None of the above
101. Marianne wanted to know students' opinion on the new schedule at school. She places students' names in a container and randomly picks out 20 names. What type of sampling method is this?
- (A) Convenience Sampling
 - (B) Systematic Sampling
 - (C) Random Sampling
 - (D) Self-Selected Sampling
102. Which method of randomization involves using a machine to generate random numbers?
- (A) Lottery method
 - (B) Tossing a coin
 - (C) Computer
 - (D) Drawing straws
103. Which sampling method is described as randomly selecting people from a list so that everyone in the study population has an equal chance of being included?
- (A) Simple random sampling
 - (B) Quota sampling
 - (C) Snowball sampling
 - (D) Systematic selection
104. You stop every fifth person coming out of the Apple store and ask what colour iPhone they purchased today. What is this an example of?
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Convenience Sampling
 - (D) Stratified Sampling
 - (E) Quota Sampling
105. Which method of randomization involves flipping an object to determine an outcome?
- (A) Lottery method
 - (B) Tossing a coin
 - (C) Computer
 - (D) Drawing straws
106. Which method of randomization involves selecting numbers from a container?
- (A) Lottery method
 - (B) Tossing a coin
 - (C) Computer
 - (D) Drawing straws
107. A research study is to be conducted into the time spent by students on social media. Which of the following actions would contribute to the validity of the research?
- (A) The participants have to be identified
 - (B) A case study is conducted in a single school
 - (C) Qualitative data is graphed based on findings
 - (D) The student participants are to be randomly selected
108. The Vice President for Academic Affairs divides the GHC student population into groups based on the campus attended. Fifty students from each campus are randomly selected to participate in a survey.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
109. In systematic sampling, participants are selected:
- (A) Based on convenience

- (B) Randomly from subgroups
 - (C) At regular intervals from a list
 - (D) Through volunteer referrals
- 110.** Participants are divided into groups, then chosen at random from those groups. Classify the sample.
- (A) Self-selected
 - (B) Simple random
 - (C) Stratified
 - (D) Systematic
- 111.** ____ is a sampling technique in which the researcher divided the entire target population into different sub groups, or strata and then randomly picks the final subject proportionally from different strata
- (A) Probability sampling
 - (B) Non-probability sampling
 - (C) Simple random sampling
 - (D) Systematic sampling
 - (E) Stratified sampling
- 112.** Grace is conducting a survey at her school. She wants to ensure that her sample is a random sample. Which of the following best describes how Grace should select her participants?
- (A) Volunteers with prior study experience
 - (B) Participants selected for convenience
 - (C) Each member has an equal chance of inclusion
 - (D) Groups matched on key characteristics
- 113.** What is the primary goal of using random sampling in psychological research?
- (A) To control confounding variables
 - (B) To ensure that each member of the population has an equal chance of being selected
 - (C) To guarantee that the study is replicable
 - (D) To prevent demand characteristics
- 114.** Identify the sampling design: Mr. Rhoades puts all of his students' names in a hat and randomly selects one without looking.
- (A) Cluster
 - (B) Volunteer
 - (C) Systematic
 - (D) Simple random
- 115.** Mrs. Dela Cruz samples her class by selecting 5 girls and 7 boys. This type of sampling is called?
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Cluster
- 116.** When should probability sampling be used instead of non-probability sampling?
- (A) When a fair chance for anyone being chosen is required
 - (B) When only volunteers are needed
 - (C) When the population is very small
 - (D) When time and money are unlimited
- 117.** Mrs. Gilmore samples her class by selecting 5 girls and 7 boys. This type of sampling is called?
- (A) Stratified
 - (B) Systematic
 - (C) Simple
 - (D) Cluster
- 118.** The sampling that is mainly used in Quantitative research wherein the sample is selected using random methods.
- (A) Snowball
 - (B) Non-probability
 - (C) Probability
 - (D) Quota
- 119.** In this sampling technique, all members of the population are known
- (A) Probability Sampling
 - (B) Non-Probability Sampling
- 120.** Which scenario best illustrates systematic sampling?
- (A) Randomly picking one full classroom as the sample

- (B) Dividing patients by age groups before sampling
(C) Selecting volunteers from two departments equally
(D) Choosing every 15th name from a randomized list
- 121.** This sample is selected by dividing the population into subgroups and then taking a fixed number of units from each group using the simple random sample.
(A) Stratified
(B) Cluster
(C) Judgment
(D) Experimental
- 122.** Which statement best defines probability sampling in business research?
(A) Only convenient participants are included by accessibility
(B) Every population element has known nonzero selection chance
(C) Experts handpick units based on expected usefulness
(D) Participants volunteer after seeing public invitations
- 123.** Every possible group of units of the required size has the same chance of being the selected sample as any other sample of the same size.
(A) Simple Random
(B) Thoughtful
(C) Typical
(D) Proportional
- 124.** A researcher divides 300 students into two strata: 180 TVL and 120 GAS. Compute the sample from each stratum if total sample $n = 150$.
(A) Sample from TVL = $(180/300) * 150 = 90$; Sample from GAS = $(120/300) * 150 = 60$
(B) Sample from TVL = $(180/300) * 150 = 80$; Sample from GAS = $(120/300) * 150 = 70$
(C) Sample from TVL = $(180/300) * 150 = 100$; Sample from GAS = $(120/300) * 150 = 50$
(D) Sample from TVL = $(180/300) * 150 = 60$; Sample from GAS = $(120/300) * 150 = 90$
- 125.** Mrs. Combs samples her class by selecting 5 girls and 7 boys. This type of sampling is called?
(A) Stratified
(B) Systematic
(C) Simple
(D) Cluster
- 126.** There is a rule applied to choose the sample. Put a Population in some order and select every "kth" Member
(A) Convenience
(B) Simple Random
(C) Systematic
(D) Stratified
(E) Quota
- 127.** Mr. Snell assigns numbers 1-20 to all his students. He samples his class by picking 5 numbers randomly from his hat. This is ___ sampling.
(A) Systematic
(B) Simple Random
(C) Stratified
(D) Cluster
- 128.** A sample chosen at random from a randomly chosen subgroup or subgroups.
(A) Random sample
(B) Systematic sample
(C) Stratified sample
(D) None of above
- 129.** A sample is selected to match the distribution of age and religion that occurs in the population. This type of sample is called a
(A) Matched sample
(B) Stratified sample
(C) Random sample
(D) Convenience sample

130. Which of the following involves group-by-group selection of samples?
- (A) Simple random sampling
 - (B) Stratified sampling
 - (C) Snowball sampling
 - (D) Quota sampling
131. Which sampling method uses characteristics to divide groups?
- (A) Convenience sampling
 - (B) Simple random sampling
 - (C) Stratified sampling
 - (D) Snowball sampling
132. In this method, the universe is divided into homogeneous groups and sample is taken from each group at random
- (A) Stratified random sampling
 - (B) Unrestricted random sampling
 - (C) Systematic sampling
 - (D) Cluster sampling
133. Which sampling technique would involve having to form the target population into a randomly ordered list?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Opportunity sampling
 - (D) Random sampling
 - (E) Systematic sampling
134. Which of the following is an example of a random sampling technique?
- (A) Taking the name of every person in your phonebook
 - (B) Generating a list of numbers by picking numbers out of a hat and matching these numbers to names in your phonebook
 - (C) Taking all the odd numbers from the list of all the names in your phonebook
 - (D) Taking the first 100 names in your phonebook
135. The Sullivan County Commissioner of Jurors obtains a list of 42,763 car owners and constructs a pool of jurors by selecting every 100th name on the list.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified sampling
 - (E) Systematic sampling
136. The Dean of Mathematics uses a random number generator to generate 100 GHC ID numbers. Each student whose ID is generated will participate in the study.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
137. As a researcher, you ask the people of your barangay on how they spent their money during the community quarantine. You decided to group them according to their socio-economic status and then proportionately and randomly selecting samples from these groups. Which type of sampling are you using?
- (A) Convenience
 - (B) Purposive
 - (C) Stratified
 - (D) Systematic
138. Which of the following is not a feature of random sampling?
- (A) It makes the sample representative of the population
 - (B) It ensures generalisation of result
 - (C) It reduces error and increases precision of the experiment
 - (D) It maximises experiment variances
139. A national hair salon chain is trying to improve their customer service. They divide up their database of customers by hair color and then randomly select 15 clients from each color group to send a questionnaire to.
- (A) Stratified.

- (B) Systematic
(C) Cluster
(D) Biased.
- 140.** Which sampling technique will be most appropriate to draw a representative sample of heterogeneous population?
(A) Stratified Random.
(B) Quota.
(C) Purposive.
(D) Incidental.
- 141.** Each participant is randomly selected from the target population. Every member of the group has an equal chance of being selected (e.g. the names of every member of the group is put in a hat and the required number of names is picked out).
(A) Opportunity Sampling Technique
(B) Random Sampling Technique
(C) Volunteer Sampling Technique
(D) None of above
- 142.** This procedure allows every member of the targeted population an equal chance of being selected for the study.
(A) Random sampling
(B) Quota sampling
(C) Convenience sampling
(D) Snowball sampling
- 143.** At a police sobriety checkpoint, every fifth driver was stopped and interviewed by the local police department.
(A) Random sampling
(B) Systematic sampling
(C) Convenience sampling
(D) Stratified sampling
(E) Cluster sampling
- 144.** A researcher divides the populations into PG, graduates and 10+2 students and using the random digit table he selects some of them from each. This is technically called.
(A) Settled sampling.
(B) Stratified random sampling.
(C) Representative sampling.
(D) None of these.
- 145.** Which category of sampling is used when the probability of selecting each individual in a population is known and every member of the population has an equal chance of being selected?
(A) Probability sampling
(B) Nonprobability sampling
(C) Both probability and nonprobability sampling could be correct
(D) Neither probability nor nonprobability sampling could be correct
- 146.** A hospital selects every 5th patient for a satisfaction survey. What is the key step that makes this systematic?
(A) Using a fixed interval after a random start

(B) Matching patients by similar diagnoses
(C) Including all patients arriving on week-ends
(D) Ensuring equal numbers from each ward
- 147.** Select three students from a class to receive ice cream by putting all the students' names in a hat and picking out three names randomly.
(A) Simple random sampling
(B) Stratified random sampling
(C) Cluster sampling
(D) Systematic sampling
- 148.** What kind of sample technique is the following: Survey every 8th customer who leaves your store.
(A) Convenience Sampling
(B) Simple Random Sampling
(C) Systematic Sampling
(D) Sample
- 149.** An economist is studying the effect of education on salary and conducts a survey of 150 randomly selected workers from each of these categories: less than a high-school

- diploma, high-school diploma, more than a high-school diploma.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified random sampling
 - (E) Systematic sampling
- 150.** It is a process of selecting n sample size in the population via random number or through lottery method.
- (A) Simple Random Sampling
 - (B) Stratified Random Sampling
 - (C) Systematic Random Sampling
 - (D) Cluster Random Sampling
- 151.** Probability sampling means?
- (A) Every individual has chance of being selected.
 - (B) No probability is associated with an individual of being selected.
 - (C) None of these.
 - (D) None
- 152.** Dividing a population into subgroups and sampling proportionally from each is:
- (A) Cluster sampling
 - (B) Quota sampling
 - (C) Stratified sampling
 - (D) Systematic sampling
- 153.** What kind of sample technique is the following: Survey 130 names chosen out of a hat.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
- 154.** Ms. Noelle draws a sample on her class by picking 10 numbers from her hat and each number is assigned to a student. This is ____ sampling.
- (A) Systematic Random
 - (B) Simple Random
 - (C) Stratified
 - (D) Cluster
- 155.** Which sampling method gives every item/person in the population an equal chance of being selected?
- (A) Judgement Sampling
 - (B) Quota Sampling
 - (C) Random Sample
 - (D) Opportunity Sampling
- 156.** Farmer Jose separates his farm into 10 regions. He then randomly selected a proportional number of trees from each region to estimate the number of apples produced on his apple tree farm. This is ____ sampling.
- (A) Cluster
 - (B) Systematic Random
 - (C) Stratified
 - (D) Simple Random
- 157.** Is a sample selected from a population in such a way that every member of the population has an equal chance of being selected & the selection of any individual does not influence the selection of any other.
- (A) Stratified sample
 - (B) Non-random sample
 - (C) Simple random sample
 - (D) Complex random sample.
- 158.** The student population at the local middle school is divided into groups using birth month (12 groups). Ten students from each birth month group are randomly selected to participate in an afterschool program.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
- 159.** When it comes to representativeness in standardised sampling, which one of the following is less likely to select a biased sample?
- (A) Simple random sampling
 - (B) Stratified random sampling
 - (C) Cluster sampling
 - (D) Snowball sampling

160. A researcher divides a population into subgroups and randomly selects participants from each subgroup. This is called:
- (A) Stratified Sampling
 - (B) Convenience Sampling
 - (C) Systematic Sampling
 - (D) Snowball Sampling
161. Systematic sampling involves selecting every nth member of a population.
- (A) True
 - (B) False
162. To estimate the total amount of unpaid balances of their customers, a convenience store selected using the lottery method 100 customers from their list of charge accounts.
- (A) Systematic sampling
 - (B) Stratified sampling
 - (C) Simple random sampling
 - (D) Cluster Sampling
163. In here the elements of the population are put into a list then every ith element in the list is chosen(systematically) for inclusion in the sample.
- (A) Probability sampling
 - (B) Non-probability sampling
 - (C) Simple random sampling
 - (D) Systematic sampling
 - (E) Stratified sampling
164. Sampling technique where each member has equal chance:
- (A) Stratified sampling
 - (B) Purposive sampling
 - (C) Random sampling
 - (D) Snowball sampling
165. When there is a need to apply different data collection methods to different parts of the population, the best sampling method would be
- (A) Double sampling.
 - (B) Cluster sampling.
 - (C) Stratified random sampling.
 - (D) Systematic random sampling.
166. Which of the following is the first step when using stratified sampling?
- (A) Identifying the strata
 - (B) Calculating the proportions needed for the sample
 - (C) Randomly selecting the proportion needed for each stratum from the target population
 - (D) Randomly allocating participants to each condition
167. Which sampling method divides population into strata?
- (A) Cluster sampling
 - (B) Stratified sampling
 - (C) Systematic sampling
 - (D) Simple random sampling
168. Which statement best defines stratified sampling?
- (A) Selecting nearby units to reduce travel and time costs
 - (B) Selecting elements in one step from a single large list
 - (C) Dividing the population into strata, sampling within each stratum
 - (D) Dividing the population into clusters, selecting clusters randomly
169. Every person in the population has an equal chance of being selected-which sampling method
- (A) Systematic sampling
 - (B) Quota sampling
 - (C) Volunteer sampling
 - (D) Random sampling
170. Name the sampling method:I break the classes (Freshman, sophomore, junior, and senior) into groups and then randomly sample 25 students from those groups.
- (A) Cluster
 - (B) Stratified

- (C) Simple random sample
(D) Group sampling
171. Mr. Crayton samples his class by selecting 5 girls and 7 boys. This type of sampling is called?
(A) Stratified
(B) Systematic
(C) Simple
(D) Cluster
172. A sampling procedure in which each element of the population has a fixed probabilistic chance of being selected for the sample is called ____
(A) Probability sampling
(B) Nonprobability sampling
(C) Quota sampling
(D) Snowball sampling
(E) Window sampling
173. Identify the sampling design: Mrs. Rebmann puts all of her students' names in a hat and randomly selects one without looking.
(A) Convenience
(B) Volunteer
(C) Systematic
(D) Simple random
174. Sampling where every 10th name is picked from an alphabetical list of students would be an example of which type of sampling?
(A) Cluster
(B) Random
(C) Stratified
(D) Systematic
175. When sampling a population if there are several well defined groups which method would be used?
(A) Random sampling
(B) Systematic sampling
(C) Stratified sampling
(D) Multi-stage sampling
176. In a ____ sample all members of the target group have an equal chance of being selected.
(A) Systematic
(B) Random
(C) Experimental
(D) Biased
177. What is a systematic sample?
(A) Everyone has an equal chance of being picked
(B) Every nth member of a population is chosen
(C) Anyone who is close by is selected
(D) Participants select themselves
178. Each member of the population has a chance of being selected as a participant of a study.
(A) Non-probability Sampling
(B) Probability Sampling
179. Random sampling gives every member an equal chance of being selected.
(A) TRUE
(B) FALSE
180. Which of the following is random sampling?
(A) Convenience
(B) Non-probability
(C) Purposive
(D) Stratified
181. ____ sampling is a probability sample which is distinguished by the following processes: the original population is divided into two or more mutually exclusive and exhaustive subsets (e.g., males and females) and simple random samples of elements from two or more subsets are selected independently of each other
(A) Systematic
(B) Stratified
(C) Single Random
(D) Cluster

182. In which of the following sampling techniques lottery method can be used?
- (A) Simple random sampling
 - (B) Purposive sampling
 - (C) Quota sampling
 - (D) Snowball sampling
183. Which of the following is a technique used to ensure every individual has an equal chance of being selected in a sample?
- (A) Systematic sampling
 - (B) Convenience sampling
 - (C) Snowball sampling
 - (D) Judgmental sampling
184. The Human Resources director decides to take a poll on the current dress code at work. He puts all the employee names in a random generator program, selects 25 names, and emails those 25 employees a survey.
- (A) Systematic
 - (B) Simple random sample
 - (C) Convenience
 - (D) Self-selected (volunteer)
185. If you have a small subgroups of people within the target population and you want a representative sample, which sampling techniques is it best to use?
- (A) Stratified sampling
 - (B) Systematic sampling
 - (C) Opportunity sampling
 - (D) Random sampling
186. Ms. Noelle took a proportional number of girls and boys in her class. This type of sampling is called?
- (A) Stratified
 - (B) Systematic Random
 - (C) Simple Random
 - (D) Cluster
187. To apply the technique of ___ sampling, you first divide the population list into sublists according to some relevant trait and then sample from the sublists.
- (A) Simple
 - (B) Systematic
 - (C) Stratified
 - (D) Cluster
188. Which phrase captures the essence of stratified sampling?
- (A) Interval-based fixed selection
 - (B) Entire clusters chosen randomly
 - (C) Subgroups plus random selection
 - (D) First-come first-served sampling
189. What kind of sampling technique is the following: Select at random 150 students and send them a survey.
- (A) Convenience sampling
 - (B) Simple random sampling
 - (C) Systematic sampling
 - (D) Snowball sampling
190. A researcher wants to understand more about the coping strategies of nurses working in busy hospitals at night. It is not possible, financially or practically to visit every hospital in country. The researcher decides to choose several specific geographical locations and then obtain list of all hospitals within each location.
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
191. A researcher selects a probability sample of 100 out of the total population. It is
- (A) A cluster sample.
 - (B) A random sample.
 - (C) A stratified sample.
 - (D) A systematic sample.
192. Mr. Punongbayan samples his class by picking 10 numbers from a box and each number is assigned to a student. This is ___ random sampling.
- (A) Systematic
 - (B) Simple

- (C) Stratified
(D) Cluster
- 193.** When using stratified sampling, researchers must identify the strata. This involves:
(A) Calculating the percentage proportions of people in the target population e.g. 70% being male or 20% being elderly etc.
(B) Calculating the nth term
(C) Approaching people who are nearby and asking if they are available to take part.
(D) None of above
- 194.** If a population consists of 40% males and 60% females, and you want a sample of 100 using stratified sampling, how many males and females should be selected?
(A) 40 males and 60 females
(B) 50 males and 50 females
(C) 60 males and 40 females
(D) 100 males and 0 females
- 195.** Mrs. Trahan samples her class by assigning a number to all 35 students, then randomly selecting five students using a random number generator. This is ____ sampling.
(A) Systematic
(B) Simple Random
(C) Stratified
(D) Cluster
- 196.** Mrs. Ramos groups the grade 7 students according to their school's last attended. She proportionately and randomly chooses students from each group. Which random sampling technique does she apply?
(A) . cluster
(B) . simple
(C) Stratified
(D) Systematic
- 197.** This type of sampling subdivides the population into subpopulations.
(A) Stratified
(B) Systematic
(C) Simple
(D) Cluster
- 198.** Which two sampling techniques involve pulling names out of a hat to select the sample?
(A) Stratified sampling
(B) Volunteer sampling
(C) Opportunity sampling
(D) Random sampling
(E) Systematic sampling
- 199.** What is 'Random Sampling' in research methods?
(A) Random sampling is a method of selecting a sample from a population in such a way that every member has an equal chance of being chosen.
(B) Random sampling is a method where only volunteers are selected for the study.
(C) Random sampling is a method where the researcher selects participants based on their own judgment.
(D) Random sampling is a method where participants are chosen based on their availability.
- 200.** Which example illustrates cluster sampling as described?
(A) Selecting students from each department proportionally
(B) Randomly choosing five colleges and surveying all students
(C) Conveniently interviewing students in the cafeteria
(D) Judgmentally recruiting top-performing students
- 201.** Willy wants to find what percent of students at his school drink milk after they finish their cereal. He randomly selects 50 student names from a hat. What type of sampling is this?
(A) Simple random sampling
(B) Cluster sampling
(C) Stratified sampling
(D) Convenience sampling

- 202.** Identify the sampling design: Student government randomly samples 25 students of each of the four classes (freshmen, sophomores, juniors and seniors).
- (A) Stratified
 - (B) Volunteer
 - (C) Systematic
 - (D) Simple random
- 203.** Motivated by a student who died from binge drinking, the College of Newport conducts a study of student drinking by randomly selecting 10 different classes and interviewing all of the students in each of those classes.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified sampling
 - (E) Systematic sampling
- 204.** A large company surveys 100100100 employees by taking random samples of 101010 managers and 909090 non-managerial employees. What type of sample is this?
- (A) Simple random sample
 - (B) Systematic random sample
 - (C) Stratified random sample
 - (D) None of the others
- 205.** Which of the following is a potential limitation of systematic random sampling?
- (A) It always identifies hidden patterns
 - (B) It can miss hidden patterns such as class standings
 - (C) It never requires a sampling frame
 - (D) It is only used for non-probability sampling
- 206.** Population is put into subgroups based on characteristic, then sample each subgroup. Sub groups are chosen randomly.
- (A) Convenience
 - (B) Simple Random
 - (C) Systematic
 - (D) Stratified
 - (E) Quota
- 207.** What is Simple Random Sampling?
- (A) It is a way of choosing individuals in which all members of the accessible population are given an equal chance to be selected.
 - (B) It is a method where only specific groups are chosen based on certain characteristics.
 - (C) It is a process where participants are selected based on their availability.
 - (D) It is a sampling technique where only volunteers are included in the study.
- 208.** Identify the sampling method: A high school conducted a survey on after graduation plans. Graduating students were listed alphabetically. The school selected a random number between 1 and 15, obtaining a number 11. Then, they selected every 11th student for the survey.
- (A) Cluster
 - (B) Volunteer
 - (C) Systematic
 - (D) Simple random
- 209.** The method of randomization is
- (A) Lottery method.
 - (B) Dice method.
 - (C) Tippit's table of a regular members.
 - (D) All of the above.
- 210.** In a Gallop Poll of 1059 adults, the interview subjects were selected by using a computer to randomly generate telephone numbers that were then called.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified sampling
 - (E) Systematic sampling
- 211.** Randomized selection of a small segment from a population.
- (A) Quota sampling
 - (B) Random sampling
 - (C) Probability sampling
 - (D) Standard sampling

- 212.** Review: A Field of Study contains 453 boys and 622 girls. A researcher wants to survey this field of study and she wants to stratify by gender. If the sample size is to be 100, how many girls should she survey?
(A) 42
(B) 45
(C) 58
(D) 73
- 213.** What is the sampling procedure wherein the researcher must have a list of all possible members of the population of interest. From this list, the sample is drawn?
(A) Stratified
(B) Systematic
(C) Simple random
(D) Snowball
- 214.** Every member of a population has an equal chance of being selected in this type of sample.
(A) Mean
(B) Biased
(C) Random
(D) Median
- 215.** This type of sampling procedure gives equal chances to the members of the population to be part of the sample. It is done in a random way.
(A) Probability Sampling
(B) Non-Probability Sampling
- 216.** Why is it important to know the probability for each person to be selected for the researcher's sample?
(A) To ensure the sample is representative of the population
(B) To ensure that participants are protected from harm
(C) To recruit additional participants
(D) None of above
- 217.** Farmer Joe's apple tree farm is set up in 100 rows. He counts the number of apples produced on every 10th row to estimate the number apples produced on the whole farm. This is ___ sampling.
(A) Simple
(B) Stratified
(C) Cluster
(D) Systematic
- 218.** Which sampling technique is most desirable in quantitative research?
(A) Random sample
(B) Convenience sample
(C) Purposeful sample
(D) Criterion-based sample
- 219.** If random selection occurred only among male students that had an excellent academic background, what type of sampling is this?
(A) Random Samples
(B) Stratified Samples
(C) Cluster Samples
(D) Snowball Samples
- 220.** You need a sample of 100 from 1000 students who were asked about their preferred subject. To avoid selection bias due to different grades having different subjects, the students are grouped according to the grade, and students are chosen from each grade. This way, you won't have an over-representation of the Grade 7 students and under-representation of the Grade 8 students. This is an example of which type of sampling?
(A) Random sampling
(B) Stratified sampling
- 221.** To achieve generalizable results in business market research, you should prioritize:
(A) Purposive selection of extreme cases
(B) Snowballing among known participants
(C) Convenience sampling from easy contacts
(D) Random sampling with adequate sample size

222. Sampling design in which the population is grouped into small units such as blocks or districts is
- (A) Cluster sampling
 - (B) Quota sampling
 - (C) Incidental sampling
 - (D) Random sampling
223. A state politician wants to gauge public opinion in his area before deciding to run for re-election. He randomly selects 250 registered voters from each county in his district.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
224. What type of sample is divided the sampling frame into homogeneous and non-overlapping subgroups and draws a simple random sample from each subgroup?
- (A) Stratified
 - (B) Cluster
 - (C) Matched-pairs
 - (D) Multi-stage
225. "sample chosen randomly from the population such that each individual has an equal chance of being selected" this is a ____
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Snowball sampling
 - (D) Stratified random sampling
226. Which sampling technique divides the population into subgroups?
- (A) Cluster sampling
 - (B) Stratified sampling
 - (C) Convenience sampling
 - (D) Snowball sampling
227. When all the needed subjects get an equal chance to be selected in a sample, this is:
- (A) Probability sampling
 - (B) Quota sampling
 - (C) Non-probability sampling
 - (D) Snowball sampling
228. What sampling method are you using if you survey the students in the school whose names are picked out of a hat?
- (A) Convenience
 - (B) Systematic
 - (C) Simple Random
 - (D) None of above
229. For her current research project, Margaret Rogers wants to select a sample in which every member has a known and equal chance of selection. In other words, Margaret is looking for a ____
- (A) Simple random sample
 - (B) Convenience sample
 - (C) Stratified random sample
 - (D) Judgment sample
 - (E) Quota sample
230. The researchers wanted to create a statistically representative sample. What sampling method would they use?
- (A) Quota sampling
 - (B) Convenience sampling
 - (C) Probability sampling
 - (D) Nonprobability sampling
231. Random sampling means:
- (A) Participants are selected based on certain criteria.
 - (B) Every member of the population has an equal chance of being chosen.
 - (C) Only volunteers are included in the study.
 - (D) Participants are selected at the researcher's discretion.
232. An online store uses a random selection of customers to evaluate overall satisfaction levels. What type of sampling technique is this?
- (A) Convenience Sampling
 - (B) Stratified Sampling

- (C) Simple Random Sampling
(D) Quota Sampling
233. When the population is clustered geographically and random clusters are selected, that's:
(A) Stratified sampling
(B) Cluster sampling
(C) Systematic sampling
(D) Purposive sampling
234. A sample chosen in a way that individuals are chosen with a specific probability
(A) What is a Probability Sample?
(B) What is a Convenience/Purposeful Sample?
235. "Reduces sampling error by choosing from all members of the population to best represent the population" which of the following sampling method provides this advantage?
(A) Simple random sampling
(B) Convenience sampling
(C) Stratified random sampling
(D) Quota sampling
236. A teacher puts students' names in a hat and chooses without looking to get a sample of 333 students. What type of sample is this?
(A) Stratified random sample
(B) Convenience sample
(C) Simple random sample
(D) Cluster random sample
237. What kind of sample technique is the following: Question every 5th person you see in the school hallway.
(A) Convenience Sampling
(B) Simple Random Sampling
(C) Systematic Sampling
(D) Sample
238. Which sampling method ensures equal probability for all members of a population?
(A) Systematic sampling
(B) Stratified sampling
- (C) Random sampling
(D) Cluster sampling
239. In simple random sampling, researchers
(A) Select a sample of individuals who are easily accessible in the target population.
(B) Identify sample populations and randomly select one of them to be studied.
(C) Ensure that each individual in the population has an equal chance of being in the sample.
(D) All of these
240. In ____ sampling the researcher selects every nth element from the sampling frame.
(A) Cluster
(B) Systematic
(C) Simple random
(D) Stratified
241. An independent research company wants to go door to door to survey people in the city of Fontana. The company decides to number all blocks within the city limit, randomly choose 50 blocks and survey all households on each selected block. This is an example of:
(A) Simple Random Sample
(B) Stratified Random Sample
(C) Cluster Random Sample
(D) Systematic Random Sampling
242. A quantitative sampling technique in which the population is divided into different subgroups or "strata" and then a random sample is taken from each "stratum."
(A) Stratified Random Sampling
(B) Self-selected sampling
(C) Random sampling
(D) Opportunity (convenience) sampling
243. What is a representative/stratified sample?
(A) A random sample
(B) A sample in which the subgroups within a population are ignored
(C) A sample in which the subgroups within a population are proportionately represented

- (D) A sample in which the effects of the stratosphere on people are measured
- 244.** A college president wants to find out which courses students consider to be of the most benefit to them. Which procedure would be most likely to produce a statistically unbiased sample?
- (A) Having students complete a questionnaire on the college web site
 - (B) Asking students to mail in a questionnaire
 - (C) Surveying a random sample of students taken from the list of all students
 - (D) Surveying the first hundred students on an alphabetical list
- 245.** A sample in which every member of the population has an equal chance of being selected.
- (A) Random sample
 - (B) Biased sample
 - (C) Sample
 - (D) Population
- 246.** Mrs. Trahan samples her class by selecting every third person on her class list. Which type of sampling method is this?
- (A) Volunteer
 - (B) Systematic
 - (C) Stratified
 - (D) Cluster
- 247.** A teacher puts students' names in a hat and chooses without looking to get a sample of 33 students. What kind of sampling technique is used?
- (A) Simple Random Sampling
 - (B) Cluster Sampling
 - (C) Stratified Sampling
 - (D) Systematic sampling
- 248.** A type of probability sampling where every member of the population is listed with a number, but instead of randomly generating numbers, individuals are chosen at regular intervals
- (A) Simple random sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
- 249.** Simple random sampling gives each unit:
- (A) A zero chance of selection
 - (B) An equal chance of selection
 - (C) Selection only by convenience
 - (D) None of these
- 250.** The author of the statistical study was an observer at a police sobriety checkpoint at which every 5th driver was stopped and interviewed. Which sampling type is this?
- (A) Random
 - (B) Systematic
 - (C) Convenience
 - (D) Stratified
 - (E) Cluster
- 251.** A national retailer wants to compare satisfaction across income groups. They first divide the customer list into income groups, then randomly select respondents from each group in proportion to its size. Which probability method aligns with this plan?
- (A) Stratified sampling
 - (B) Cluster sampling
 - (C) Systematic sampling
 - (D) Multistage sampling
 - (E) Convenience sampling
- 252.** A type of sampling in which all members of the population are given a chance of being selected. Also called scientific sampling
- (A) Probability random sampling
 - (B) Non-probability sampling
- 253.** ____ is a sample in which each individual or object in the entire population has an equal chance of being selected.
- (A) Sample
 - (B) Population
 - (C) Random Sample
 - (D) Biased Sample

254. Where we use segmentation to determine who we need to ask from a wider group
- (A) Quota
 - (B) Random
 - (C) Snow-Balling
 - (D) Stratified
 - (E) Cluster
255. Which of the following is a common sampling method used to ensure diversity in a sample?
- (A) Stratified sampling
 - (B) Random sampling
 - (C) Quota sampling
 - (D) Snowball
256. A method of sampling that ensures proportional representation of all sections of the population is termed as
- (A) Simple Random Sampling.
 - (B) Stratified Sampling.
 - (C) Purposive Sampling.
 - (D) Systematic Sampling.
257. Which scenario illustrates simple random sampling in a village of 500 households?
- (A) Sample only from the largest street
 - (B) Interview households nearest the center
 - (C) Select every 10th house from the list
 - (D) Write house numbers, mix, pick 50 slips
258. When the population should have equal chance to be included in the sample, there is —
- (A) Variable manipulation
 - (B) Random assignment
 - (C) Groupings
 - (D) Nonprobability sampling
259. Systematic sampling includes procedures in which every n th numbered person from a list is selected
- (A) True
 - (B) False
260. The target population is subdivided into segments or strata that share similar characteristics. Members are then chosen (randomly) from each stratum to form a representative sample. Which sampling method is this describing?
- (A) Convenience
 - (B) Stratified
 - (C) Cluster
 - (D) Random
261. The student population at the local middle school is divided into groups using birth month (12 groups). Four birth months are randomly selected and all students born in those months are surveyed.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
262. Mrs. Trahan samples her class by selecting 5 girls and 7 boys, from differing grades. This type of sampling is called:
- (A) Stratified
 - (B) Systematic
 - (C) Convenience
 - (D) Cluster
263. The school librarian wants to determine how many students use the library on a regular basis. What type of sampling method would she use if she chose to use a random number generator to randomly select 50 students from the school's attendance roster.
- (A) Convenience Sample
 - (B) Simple Random Sample
 - (C) Stratified Random Sample
 - (D) Interval Sample
264. In which sampling method is generalizability MOST likely to be important?
- (A) Probability
 - (B) Non-probability
 - (C) Snowball
 - (D) None of above

265. Which sampling technique involves selecting every k -th item from a list?
- (A) Cluster sampling
 - (B) Systematic sampling
 - (C) Stratified sampling
 - (D) None of the above
266. What is a random sample in survey research?
- (A) A sample selected based on convenience
 - (B) A sample selected without any systematic pattern
 - (C) A sample selected based on specific characteristics
 - (D) A sample selected through experimental research
267. Selecting every k -th name from a list exemplifies which method category?
- (A) Systematic probability selection
 - (B) Quota-based proportional control
 - (C) Convenience nonprobability access
 - (D) Cluster area multistage grouping
268. You must survey 100 students at your university. How would you pick the students using Cluster Random Sampling?
- (A) Pick 100 students randomly from a list of all students at university
 - (B) Randomly pick 10 faculties and randomly choose 10 students from each faculty
 - (C) Find the demographics of students (60% female, 40% male) and randomly pick 60 girls and 40 boys
 - (D) Send out an email to all students asking for 100 volunteers
269. A sample in which every element in the population has a known statistical likelihood of being selected
- (A) Probability Sample
 - (B) Convenience Sample
 - (C) Random Sample
 - (D) None of above
270. To study the amount of time students spend doing homework each day, use a random number generator to select 25 students from the student enrollment database to survey.
- (A) Convenience Sample
 - (B) Simple Random Sample
 - (C) Stratified Random Sample
 - (D) Interval Sample
271. A scheme is one in which every unit in the population has a chance (greater than zero) of being selected in the sample
- (A) NON probability sampling
 - (B) Equal probability schemes
 - (C) Probability samplinG
 - (D) None of the above
272. Which method gives each member of the public an equal chance of being selected as part of a sample?
- (A) Cluster.
 - (B) Random.
 - (C) Stratified.
 - (D) Quota.
273. Mr. Stats samples his class by picking 10 numbers from his hat and each number is assigned to a student. This is ___ random sampling.
- (A) Systematic
 - (B) Simple
 - (C) Stratified
 - (D) Cluster
274. Random sampling:
- (A) Represents a given population
 - (B) Allows each person an equal chance of participating
 - (C) Allows greater generalizability
 - (D) All of the above
275. A type of probability sampling where Instead of sampling individuals from each subgroup, the researcher randomly select the entire subgroups.
- (A) Simple random sampling

- (B) Systematic sampling
 - (C) Stratified sampling
 - (D) Cluster sampling
- 276.** The process of dividing the population into subgroups or 'strata' and drawing members at random from each subgroup or 'strata'.
- (A) Simple Random Sampling
 - (B) Stratified Random Sampling
 - (C) Systematic Random Sampling
 - (D) Cluster Random Sampling
- 277.** Identify the sampling design: School admin conducted a survey on post-graduation plans. Students of senior class 2018 were listed in order by class rank. The school selected a random number between 1 and 15, obtaining a number 11. Then, they selected every 11th student for the survey.
- (A) Cluster
 - (B) Volunteer
 - (C) Systematic
 - (D) Simple random
- 278.** The selection of the sample is accomplished in more than 2 steps
- (A) Multi stage sampling
 - (B) Snowball sampling
 - (C) Cluster sampling
 - (D) Networking sampling
- 279.** Which method is most likely to produce a random sample of the members of your class?
- (A) Listing the first six students that come to mind
 - (B) Choosing the five oldest students in the class
 - (C) Writing the name of each student on a separate piece of paper and then drawing these slips from a hat
 - (D) Selecting the first six students to arrive at class
- 280.** Which statement best defines simple random sampling in research?
- (A) Units grouped by characteristics then sampled
 - (B) Participants selected by convenience access
 - (C) Items chosen using fixed periodic interval
 - (D) Each item has equal chance of selection
- 281.** When each member of a population has an equal chance of being chosen for a study, the individuals selected constitute a(n) ____ sample.
- (A) Random
 - (B) Stratified
 - (C) Independent
 - (D) Significant
- 282.** Which step is necessary when performing systematic sampling?
- (A) Ensure alphabetical sorting only
 - (B) Cluster units before selecting
 - (C) Use lottery after listing all names
 - (D) Choose a random starting point
- 283.** The sampling technique in which every element of the population has an equal, nonzero probability of being selected in a sample, is called
- (A) Probability sampling.
 - (B) Convenience sampling.
 - (C) Purposive sampling.
 - (D) Quota sampling.
- 284.** Items are selected from the target population by selecting the random selection point and selecting the other methods after a fixed sample interval.
- (A) Simple Random
 - (B) Systematic Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
- 285.** Simple random sampling is when ____
- (A) A sample is collected in mutually exclusive groups proportionate to the population

- (B) Researchers choose every n th record on a list
- (C) A random number generator is used to select those on a list
- (D) Researchers invite their friends and colleagues to participate in a study
- 286.** What is the main procedure step unique to systematic sampling?
- (A) Recruit volunteers using broad advertisements
- (B) Assign numbers and draw purely at random
- (C) Select a random start and use a constant interval
- (D) Stratify population and sample within strata
- 287.** Mrs. Trahan samples her class by picking 10 numbers from her hat and each number is assigned to a student. This is ____ random sampling.
- (A) Systematic
- (B) Simple
- (C) Stratified
- (D) Cluster
- 288.** A sample in which every member of a population has an equal chance of being selected for a study represents which type of sample?
- (A) Biased
- (B) Random
- (C) Stratified
- (D) Matched
- 289.** A Statistics student did a research on the time spent by Grade 12 students playing video game. He selected the subjects by using the Table of Random Numbers. What technique is used?
- (A) Simple Random Sampling
- (B) Stratified Random Sampling
- (C) Systematic Random Sampling
- (D) Cluster Random Sampling
- 290.** All members of the population are considered to be selected.
- (A) Probability Sampling
- (B) Non-Probability Sampling
- (C) Purposive sampling
- (D) Judgmental Sampling
- 291.** This method consists of selecting every n th items from the complete list of population:
- (A) Stratified sampling
- (B) Purposive sampling
- (C) Systematic sampling
- (D) Unrestricted Random sampling
- 292.** You decided to include all year levels of nursing for your study. Which sampling method that would get representative samples from each level?
- (A) Cluster sample
- (B) Stratified sampling
- (C) Systematic sampling
- (D) Random sampling
- 293.** When each element in the population has equal and known chance of being selected; we refer it as
- (A) Non-random sampling
- (B) Random sampling
- (C) Convenience sampling
- (D) Judgement sampling
- 294.** The broad class of sampling in which every element of a population has an equal chance of being selected is:
- (A) Probability sampling
- (B) Systematic sampling
- 295.** Simple random sampling is a:
- (A) Non-probability sampling
- (B) Purposive sampling
- (C) Probability sampling
- (D) Convenient sampling
- 296.** How can a representative sample of the plant species growing in a field be obtained?
- (A) By randomly placing a quadrat at many different locations around the field

- (B) By randomly placing many quadrats in one corner of the field
- (C) By placing one quadrat at a random location in the field
- (D) None of above
- 297.** What ensures research findings are generalizable?
- (A) Convenience Sampling
- (B) Probability Sampling
- (C) Purposive Sampling
- (D) Snowball Sampling
- 298.** Ms. Washington is investigating teachers' attitudes toward year-round schooling. She is particularly interested in describing the attitudes of teachers from small, medium, and large schools. Which sampling procedure should be used by Ms. Washington to ensure her sample is representative of these types of schools?
- (A) Simple random sampling
- (B) Stratified random sampling
- (C) Systematic random sampling
- (D) Convenience sampling
- 299.** Which of the following probability sampling is the basic and commonly used technique in descriptive research?
- (A) Stratified random sampling
- (B) Simple random sampling
- (C) Systematic random sampling
- (D) Cluster sampling
- 300.** In a local community, 3 different Publix stores are chosen randomly, out of all 15 Publix stores in the community, and the salaries of all 3 employees in those 3 stores are used as data. Is an example of what sampling technique?
- (A) Stratified
- (B) Cluster
- (C) Random
- (D) Systematic
- 301.** Which of the following is an example of probability sampling
- (A) Simple random sampling
- (B) Convenience sampling
- (C) Purposive sampling
- (D) None of the above
- 302.** Random sampling or probability sampling includes all the following techniques, except:
- (A) Simple random sampling
- (B) Stratified random Sampling
- (C) Cluster sampling
- (D) Purposive Sampling
- 303.** In simple random sampling:
- (A) Every individual has an equal chance of being selected
- (B) Only known individuals are selected
- (C) Samples are grouped in clusters
- (D) Participants are selected based on availability
- 304.** Chosen at random, 1819 patients who had outpatient surgery were sent a survey via U.S. mail and asked their opinion of the care they received.
- (A) Cluster sampling
- (B) Convenience sampling
- (C) Simple random sampling
- (D) Stratified sampling
- (E) Systematic sampling
- 305.** Randomly selecting a sample from a larger population
- (A) Double-blind studies
- (B) Random assignment
- (C) Random sampling
- (D) None of above
- 306.** When participants are selected from different sub-groups in the target population in proportion to the sub-groups frequency in that population it is known as
- (A) Random sampling
- (B) Opportunity sampling
- (C) Systematic sampling
- (D) Stratified sampling

- 307.** If I wanted to do a random sample of the population, but I wanted to make sure each ethnic group in Ontario was equally represented, which type of sampling technique would be the best choice?
- (A) Simple Random Sample
 - (B) Voluntary Sample
 - (C) Systematic Sample
 - (D) Stratified Random Sample
- 308.** Which of the following is a reason for using a random sample of the population in market research? 1) It is more accurate than asking the whole population 2) It is more expensive than asking the whole population 3) It gives everyone in the population an equal chance of being questioned 4) It concentrates research on consumers who share similar characteristics, e.g. all of the same age
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 309.** The total population is divided into smaller groups to complete the sampling process. The small group is formed based on a few characteristics in the population.
- (A) Simple Random
 - (B) Systematic Sampling
 - (C) Stratified Sampling
 - (D) Cluster Sampling
- 310.** Which probability method ensures each group in a population is represented?
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Stratified sampling
 - (D) Convenience sampling
- 311.** Where every n th name is taken (e.g. every 10th) is taken from the sampling frame
- (A) Stratified
 - (B) Systematic
 - (C) Snowball
 - (D) None of above
- 312.** The population is divided into characteristics of importance (e.g. class/ethnicity) and a proportionate amount of people will be chosen from each category to reflect the population.
- (A) Stratified sampling
 - (B) Systematic sampling
 - (C) Snowball sampling
 - (D) None of above
- 313.** A sampling technique that is used to give all participants an equal chance to be selected as part of the sample?
- (A) Quota Sampling
 - (B) Non Probability Sampling
 - (C) Probability Sampling
 - (D) Simple Random Sampling
- 314.** You assign the students in your class a number and choose 6 numbers from a basket. What sampling method are you using?
- (A) Convenience
 - (B) Systematic
 - (C) Simple Random
 - (D) None of above
- 315.** What is the sampling technique where the population is divided into clusters, then randomly selects entire clusters?
- (A) Systematic Sampling
 - (B) Cluster Sampling
 - (C) Random Sampling
 - (D) Stratified Sampling
- 316.** A sample that represents a population because each member has an equal chance of inclusion is known as
- (A) Random sample
 - (B) Random assignment
 - (C) Random variable
 - (D) Random blind study

317. The researcher identifies the relevant stratum and their actual representation in the population. What sampling technique the researcher adheres to?
- (A) Random
 - (B) Systematic
 - (C) Stratified
 - (D) Quota
318. Which of the following is the type of probability sampling that uses a pure chance selection process?
- (A) Systematic sampling
 - (B) Stratified sampling
 - (C) Simple random sampling
 - (D) Cluster sampling
319. A researcher who is studying the effects of educational attainment on promotion conducted a survey of 50 randomly selected workers from each of these categories: high school graduate, with undergraduate degree, with master's degree, and with doctoral degree. What technique is most appropriate?
- (A) Simple Random Sampling
 - (B) Systematic Random Sampling
 - (C) Stratified Random Sampling
 - (D) Cluster Random Sampling
320. Identify the sampling technique used in the following study: A farmer divides his orchard into 50 subsections, randomly selects 4 and samples all of the trees within the 4 subsections in order to approximate the yield of his orchard.
- (A) SRS
 - (B) Convenience
 - (C) Systematic
 - (D) Cluster
 - (E) Stratified
321. "The majority of U.S. car owners still buy American cars." Ideally, what would the sample be in the study that generated this stat?
- (A) Everyone in the United States who owns a car
 - (B) Everyone in the United States who owns an American car
 - (C) A randomly selected group of car owners in the U.S.
 - (D) A randomly selected group of Americans who own American cars
322. Procedure in which everyone in the population has equal chance of being selected in a sample.
- (A) Focus group
 - (B) Secondary data
 - (C) Primary data
 - (D) Random sampling
323. A sample that follows a rule, formula, or pattern.
- (A) Random sample
 - (B) Stratified sample
 - (C) Systematic sample
 - (D) None of above
324. Probability sampling ensures what key property for each member of the population?
- (A) Accurate description of measured variables
 - (B) Equal measurement reliability across groups
 - (C) Convenience-based inclusion judgment
 - (D) Known nonzero chance of selection
325. A researcher wants to study the relationship of family size to income. He classifies his population into different income slabs and then takes a random sample from each slab in order. Which technique of sampling is he working with?
- (A) Cluster sampling.
 - (B) Random sampling.
 - (C) Stratified random sampling.
 - (D) Systematic sampling.
326. Choosing every 4th house on a street is an example of:
- (A) Opportunity sampling
 - (B) Volunteer sampling

- (C) Systematic sampling
- (D) Stratified sampling

327. Members of the population are grouped; one or more groups are selected at random. All members of that group are included in the sample.

- (A) Cluster sample
- (B) Simple random
- (C) Stratified

- (D) Proportional

328. Sampling technique which follows every n^{th} element chosen start random and picking every n^{th} element in succession is ____?

- (A) Simple random sampling
- (B) Snow ball sampling
- (C) Stratified sampling
- (D) Systematic sampling

1.4.6 Non-Probability Sampling

1. Which of the following sampling methods allows the use of any group of research subjects?

- (A) Convenience
- (B) Purposive
- (C) Systematic sampling
- (D) Random sampling

2. Which one is called non-probability sampling?

- (A) Quota sampling
- (B) Cluster sampling
- (C) Systematic sampling
- (D) Stratified random sampling

3. Kian, a researcher, asks the initial subject to identify another potential subject who also meets the criteria of the research. This is done in which Sampling technique?

- (A) Judgemental Sampling
- (B) Convenience Sampling
- (C) Quota Sampling
- (D) Snowball Sampling

4. A startup needs quick feedback. They stand outside a mall and survey whoever is most available. Which non-probability method best describes this approach?

- (A) Purposive sampling
- (B) Quota sampling
- (C) Snowball sampling
- (D) Convenience sampling
- (E) Systematic sampling

5. Which of the following is an example of non-representative sampling?

- (A) Population:High School Students, Sample:Only Freshmen
- (B) Population:High School Students, Sample:All Grades
- (C) Population:College Students, Sample:All Majors
- (D) Population:High School Students, Sample:Randomly Selected Students from All Grades

6. Mr. Piper surveys his students he has in Imp-Time. That type of sampling is called?

- (A) Simple
- (B) Systematic
- (C) Stratified
- (D) Voluntary
- (E) Convenience

7. What is the purpose of purposive sampling?

- (A) To ensure randomness in participant selection
- (B) To generalize findings to a larger population
- (C) To obtain expert opinions or unique perspectives
- (D) To divide participants into different treatment groups

8. A type of sampling method where the researchers advertise the study and participants volunteer to participate.

- (A) Random sampling

- (B) Opportunity sampling
 - (C) Self-selected sampling/ Volunteer sampling
 - (D) Purposive sampling
9. In this type of sampling, samples are mainly based on ease of access. Instead of the researcher choosing participants and directly contacting them, people volunteer themselves.
- (A) Convenience sampling
 - (B) Voluntary response sampling
 - (C) Purposive sampling
 - (D) Snowball sampling
10. What kind of sample technique is the following: Giving a survey to everyone on your swim team.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
11. A researcher may choose people who look suitable and therefore bias the sample (similar characteristics).
- (A) Weakness of Opportunity Sampling Technique
 - (B) Weakness of Random Sampling Technique
 - (C) Weakness of Volunteer Sampling Technique
 - (D) None of above
12. Which sampling method is most appropriate when you have limited resources and generalizability is not a primary concern?
- (A) Non-probability quota sampling
 - (B) Probability sampling
 - (C) Stratified sampling
 - (D) Simple random sampling
13. Snowball sampling is a
- (A) Probability sampling
 - (B) Non-probability sampling
 - (C) Random sampling
 - (D) None of the above
14. Which of the following refers to a nonprobability sample in which the researcher selects the easiest population members from which to obtain information?
- (A) Quota sample
 - (B) Judgment sample
 - (C) Convenience sample
 - (D) Stratified random sample
 - (E) Simple random sample
15. A team wants to test a new feature with users who are easy to reach. What sampling method are they using?
- (A) Cluster
 - (B) Stratified
 - (C) Systematic
 - (D) Convenience
16. Sampling method utilized when samples are difficult to locate and relies on referrals from other subjects
- (A) Snowballing
 - (B) Purposive sampling
17. This sampling is much more practical but generates less-than-perfect sample.
- (A) Random sampling
 - (B) Non-random sampling
18. This is a method of selecting samples that are available and are capable of participating in a research study on a current issue.
- (A) Quota Sampling
 - (B) Voluntary Sampling
 - (C) Snowball Sampling
 - (D) Convenience Sampling
19. Which scenario best illustrates convenience sampling?
- (A) Using cluster sampling across several store locations
 - (B) Stratifying customers by income and sampling proportionally

- (C) Randomly selecting households across the whole region
(D) Surveying customers buying the same product after purchase
20. What is a potential weakness of quota sampling?
(A) Not all individuals in the population have an equal chance of selection, so results are not highly generalizable.
(B) It is always more expensive than other methods.
(C) It requires a complete list of the population.
(D) It cannot be used when resources are limited.
21. A key disadvantage of non-probability sampling is:
(A) It is costly
(B) It takes too much time
(C) It may not represent the entire population
(D) It is always more accurate than probability sampling
22. A researcher is interested in studying the flood victims. Which one of the following is a suitable sample selection method?
(A) Random Sampling.
(B) Stratified Sampling.
(C) Systematic Sampling.
(D) Purposive Sampling.
23. Select available participants
(A) Convenience sampling
(B) Snowball sampling
(C) Quota sampling
(D) Purposive / Judgement sampling
24. Involves choosing the respondents of the study on the basis of pre-determined criteria set by the researcher
(A) PURPOSIVE SAMPLING
(B) CLUSTER SAMPLING
(C) SIMPLE RANDOM SAMPLING
(D) STRATIFIED RANDOM SAMPLING
25. Why do in-depth interviews lack generalizability?
(A) There is too much data.
(B) They are typically conducted selectively as opposed to randomly.
(C) The sample sizes are typically too large.
(D) Interviews are subjective.
26. ___ sampling is a type of non-probability sampling which is also known as chain-referral sampling.
(A) Cluster
(B) Snowball
(C) Random
(D) Experimental
27. What best describes judgmental (purposive) sampling?
(A) Choosing every kth unit from a constructed list
(B) Selecting units based on researcher expertise and purpose
(C) Drawing names using simple random procedures
(D) Dividing the population into proportionate strata
28. You need respondents for your research about fear of sex (erotophobia). however, it's hard to find people with this kind of phobia. you then call your friend whom you know has the condition and then ask her if she could refer others. fortunately, she could. the person referred was also able to give you names. you were able to employ what kind of sampling technique?
(A) Expert sampling
(B) Convenience sampling
(C) Snowball sampling
(D) Purposive sampling
29. A sample chosen in a way that the probability of an individual being chosen cannot be determined
(A) What is a Probability Sample?
(B) What is a Convenience/Purposeful Sample?

30. This sample consists of units of the population that are easily accessible.
- (A) Cluster
 - (B) Convenience
 - (C) Volunteer
 - (D) Observational
31. In purposive sampling for qualitative studies, the researcher ____
- (A) Establishes the purpose of the study and omits subjects who don't fit
 - (B) Eliminates outliers from the sample
 - (C) Samples to obtain a wide range of subjects
 - (D) Selects only non-typical subjects
32. In ____ the interviews are simply given quotas to be filled from the different strata with some restriction they are to be filled
- (A) Quota sampling
 - (B) Cluster sampling
 - (C) Stratified sampling
 - (D) Sequential sampling.
33. A research recognises that 70% of their target population are female and so 70% of their sample are female. which sampling technique does this best apply to?
- (A) Stratified sampling
 - (B) Volunteer sampling
 - (C) Qouta Sampling
 - (D) Systematic sampling
34. Why might non-probability voluntary sampling lead to biased results?
- (A) Participants self-select, often having strong interest in the topic.
 - (B) All individuals have an equal chance of being selected.
 - (C) It uses a random number generator for selection.
 - (D) It requires a complete list of the population.
35. The researcher is interested in getting an inexpensive approximation of data. What sampling technique the researcher adheres to?
- (A) Random
 - (B) Convenience
 - (C) Stratified
 - (D) Quota
36. Encourage other cases to take part (secret societies, inaccessible professions)
- (A) Convenience sampling
 - (B) Quota sampling
 - (C) Purposive / Judgement sampling
 - (D) Snowball sampling
37. A type of sampling used in qualitative research that involves selecting cases that disconfirm the Researcher's expectations and generalizations is referred to as ____
- (A) Extreme case sampling.
 - (B) Critical-case sampling.
 - (C) Negative-case sampling.
 - (D) Typical-case sampling.
38. A student chooses to send a survey out to the G9-11 students at her school to collect data for her IA. What is this an example of?
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Convenience Sampling
 - (D) Quota Sampling
 - (E) Stratified Sampling
39. Which statement best defines quota sampling in business research?
- (A) Using probability weights to correct coverage imbalances
 - (B) Asking each respondent to recruit one additional participant
 - (C) Randomly selecting respondents from every population stratum
 - (D) Selecting respondents until segment quotas are filled

40. A volunteer sample is characterized by:
- (A) Participants being randomly assigned to a group.
 - (B) Participants choosing to participate in the study.
 - (C) Participants being selected based on specific traits.
 - (D) Participants being assigned by the researcher.
41. This is the easiest kind of sampling technique.
- (A) Simple random sampling
 - (B) Convenience sampling
 - (C) Snowball sampling
 - (D) None of above
42. A teacher wants to know the average time spent doing homework by the students in her class of 20 girls and 5 boys. She selects the five closest to her desk.
- (A) Simple Random Sampling
 - (B) Stratified Sampling
 - (C) Convenience Sampling
 - (D) Systematic Sampling
43. ___ sampling is a good method to use when conducting a pilot study.
- (A) Non-probability
 - (B) Non-probable
 - (C) Non-random
 - (D) None of above
44. In non-probability snowball sampling, how are new participants typically recruited?
- (A) By current participants referring future participants.
 - (B) By random selection from a list.
 - (C) By using a number generator.
 - (D) By selecting only those with no interest in the topic.
45. Name the sampling method: A student wants to gather information about what the students at a school think about a certain rule, it would be easiest for her to sample students who are in her classes.
- (A) Systematic
 - (B) Convenience
 - (C) Cluster
 - (D) Stratified
46. Which statement best defines nonprobability sampling in business research?
- (A) Units selected only through stratified random frames
 - (B) Sampling driven solely by statistical power formulas
 - (C) Every population member has equal selection probability
 - (D) Selection not based on random chance mechanisms
47. What is Purposeful Sampling?
- (A) Selecting random cases
 - (B) Selecting information-rich cases
 - (C) Selecting cases based on convenience
 - (D) Selecting cases based on cost
48. What type of sample would you have if the population was segmented into mutually exclusive subgroups, and then a non-random set of observations was chosen from each subgroup to meet a predefined proportion?
- (A) Stratified
 - (B) Proportional
 - (C) Matched-pairs
 - (D) Quota
49. Which sampling strategy focuses on specific criteria in the target population?
- (A) Random sampling
 - (B) Purposive sampling
 - (C) Systematic sampling
 - (D) Stratified sampling
50. For a statistics assignment, you pass out surveys to the first 25 GHC students you meet in the parking lot.
- (A) Random sampling
 - (B) Systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling

51. Which of the following does not belong to the category of non probability sample?
- (A) Incidental sample.
 - (B) Multi-stage sample.
 - (C) Purposive sample.
 - (D) Quota sample.
52. Compared with probability sampling, purposive sampling primarily:
- (A) Relies on researcher judgment for inclusion
 - (B) Uses random numbers to draw cases
 - (C) Guarantees unbiased population estimates
 - (D) Prevents overlap in sample selection
53. Conceptual research typically involves:
- (A) Large sample sizes
 - (B) Random sampling
 - (C) Purposive sampling
 - (D) Convenience sampling
54. Selecting sample units in just a "hit and miss" fashion is called
- (A) Purposive sampling.
 - (B) Convenience or Accidental sampling.
 - (C) Stratified sampling.
 - (D) Proportionate sampling.
55. Why would researchers choose purposive sampling?
- (A) To randomly select participants
 - (B) To select participants who have specific knowledge about the topic
 - (C) To ensure an equal chance for all participants to be selected
 - (D) To focus on participants from different demographics
56. What kind of sample technique is the following: Survey the students in your classroom.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
57. Which of the following sampling techniques refer on the subjective judgment of the researcher when selecting units from the population to be included in the sample?
- (A) Probability Sampling
 - (B) Non-probability Sampling
 - (C) Convenience Sampling
 - (D) Quota Sampling
58. Liezel selects student-athletes by interviewing those who arrive at the gym. What non-probability sampling method is being used?
- (A) Purposive sampling
 - (B) Convenience sampling
 - (C) Snowball sampling
 - (D) Quota sampling
59. In quota sampling, how are quotas typically determined?
- (A) By the order respondents arrive online
 - (B) By random numbers from a table
 - (C) By convenience of interviewer availability
 - (D) By key characteristics mirroring the population
60. Which of the following types of sampling involves the researcher determining the appropriate sample sizes for the groups identified as important, and then taking convenience samples from those groups?
- (A) One-stage cluster sampling.
 - (B) Quota sampling.
 - (C) Proportional stratified sampling.
 - (D) Two-stage cluster sampling.
61. You are doing a research on Malaysians and their perception on recycling. You divided the population according to race and choose your sample according to this division. You have a Chinese friend and passes the survey to him to fill the allocation for Chinese participants. What sampling technique is this?
- (A) Quota Sampling
 - (B) Stratified Random Sampling
 - (C) Purposive Sampling
 - (D) Snowball Sampling

62. Which list contains only non-probability sampling types mentioned?
- (A) Stratified, cluster, systematic, simple
 - (B) Convenience, quota, judgmental, snowball
 - (C) Judgmental, stratified, cluster, quota
 - (D) Systematic, quota, stratified, snowball
63. Which one of the following is a non probability sampling? [2014-JUNE]
- (A) Simple Random
 - (B) Purposive
 - (C) Systematic
 - (D) Stratified
64. — refers to a group of non-probability sampling techniques in which units are selected because they have characteristics that you need in your sample. In other words, units are selected “on purpose” in this sampling.
- (A) Purposive sampling
 - (B) Incidental sampling
 - (C) Stratified random sampling
 - (D) Stratified sampling
65. A store manager surveys customers who happen to be in the checkout line at 5 p.m. This is an example of which method?
- (A) Quota sampling matched to demographics
 - (B) Convenience sampling in a time-bound location
 - (C) Judgmental sampling using expert criteria
 - (D) Systematic sampling with fixed intervals
66. Mrs. Trahan samples her school by posting a flyer in the cafeteria that announces the study and asks for participants.
- (A) Simple
 - (B) Volunteer
 - (C) Stratified
 - (D) Systematic
67. A type of sampling method where the researchers conduct their study on people who are available at the time of the study.
- (A) Random sampling
 - (B) Opportunity sampling
 - (C) Self-selected sampling
 - (D) Purposive sampling
68. Which of the following is a key characteristic of nonprobability sampling?
- (A) Researchers always determine the sample size in advance.
 - (B) There is limited knowledge about the larger population from which the sample is drawn.
 - (C) Quantitative research focuses on non-probability sampling.
 - (D) Elements are selected using a mathematically random process.
69. Opportunity sampling involves:
- (A) Choosing participants based on their willingness to participate.
 - (B) Selecting participants based on their availability.
 - (C) Randomly selecting participants from a population.
 - (D) Sampling a predetermined number of participants from each group.
70. Any sampling method where some elements of population have no chance of selection (these are sometimes referred to as ‘out of coverage’/‘undercovered’),
- (A) Equal probability schemes
 - (B) Probability sampling
 - (C) NON probability sampling
 - (D) None of the above
71. Samples created using subjects who are easily accessible (such as students using other students for market research purposes) refers to which method of sampling?
- (A) Quota
 - (B) Stratified
 - (C) Snowballing
 - (D) Convenience

72. Why is causality difficult to determine in non-experimental research?
- (A) Variables are manipulated
 - (B) Random assignment is used
 - (C) Observations are uncontrolled
 - (D) Control groups are present
73. A television station is interested in predicting whether voters in its viewing area are in favor of offshore drilling. It asks its viewers to phone in and indicate whether they support or are opposed to offshore drilling. This is an example of
- (A) Convenience sampling
 - (B) Cluster sampling
 - (C) Census
 - (D) Voluntary response
74. ____ is known as grab or convenience sampling or opportunity sampling.
- (A) Systematic
 - (B) Simple random
 - (C) Multi-Stage
 - (D) Accidental
 - (E) Quota sampling
75. What risk most threatens validity in snowball sampling?
- (A) Attrition due to long follow-up
 - (B) Measurement error in instruments
 - (C) Selection bias within social networks
 - (D) Confounding from randomization
76. Why might non-probability sampling be chosen despite its limitations?
- (A) Guarantees known probabilities for every unit
 - (B) Allows quick access when a sampling frame is unavailable
 - (C) Ensures perfect representativeness of strata
 - (D) Simplifies randomization across the population
77. Which scenario best illustrates consecutive sampling in a hospital setting?
- (A) Selecting a random subset of mothers from weekly admissions lists
 - (B) Recruiting volunteers among mothers through posters in the lobby
 - (C) Choosing mothers admitted on week-ends to balance weekday bias
 - (D) Including every first-time mother over one month then stopping at fifty
78. A type of non probability sampling where the samples are chosen based on the goals of the study. They may be chosen based on their knowledge of the study being conducted or if they satisfy the traits or conditions set by the researcher
- (A) Convenience sampling
 - (B) Purposive sampling
 - (C) Quota sampling
 - (D) Snowball sampling
79. In this sampling, the samples are selected based on the availability. This method is used when the availability of sample is rare and also costly.
- (A) Purposive Sampling
 - (B) Convenience Sampling
 - (C) Snowball Sampling
 - (D) Cluster Sampling
80. For items 40-43, identify the sampling procedures and the sample that correspond to the statements below. Choose your answers in the box provided (a. convenience sampling; b. purposive sampling; c. random sampling; d. quota sampling). In this type of sampling, it is not possible to specify the possibility of one person being included in the sample.
- (A) Convenience sampling
 - (B) Purposive sampling
 - (C) Random sampling
 - (D) Quota sampling
81. Which of the following sampling is not based on probability?

- (A) Simple random sampling
 - (B) Stratified sampling
 - (C) Quota sampling
 - (D) Cluster sampling
82. The process of snowball sampling is:
- (A) A method where existing study subjects recruit future subjects from among their acquaintances.
 - (B) A technique used to measure snow density.
 - (C) A process of forming snowballs for recreational activities.
 - (D) A method to calculate snowfall rates.
83. If a researcher stopped people in the street and asked them to complete a questionnaire, What type of sampling would this be?
- (A) Stratified sampling
 - (B) Random sampling
 - (C) Systematic sampling
 - (D) Opportunity sampling
84. Juan selects participants who are currently available to participate due to time limitations. What sampling technique did he use?
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Snowball sampling
 - (D) Purposive sampling
85. Snowball sampling can be useful when it is hard to identify ____
- (A) Participants (respondents)
 - (B) Target populations
 - (C) Sample frames
 - (D) None of above
86. ____ sampling is a non-probability sampling technique wherein the assembled sample has the same proportions of individuals as the entire population with respect to known characteristics, traits or focused phenomenon
- (A) Systematic
 - (B) Simple random
 - (C) Multi-Stage
 - (D) Accidental
 - (E) Quota
87. Which is an example of non-probability sampling?
- (A) Cluster sampling
 - (B) Lottery method
 - (C) Purposive sampling
 - (D) Table of random numbers
88. Which one of the following is a non probability sampling?
- (A) Simple random
 - (B) Purposive
 - (C) Systematic
 - (D) Strategic
89. If participants recruit other participants for a study, which sampling method is being used?
- (A) Convenience sampling
 - (B) Snowball sampling
 - (C) Purposive sampling
 - (D) Stratified sampling
90. This type of qualitative sampling is the most superficial approach where you just use a sample that is easily available or accessible.
- (A) Quota
 - (B) Snowball
 - (C) Convenience
 - (D) None of above
91. What sampling technique will be used if the researcher can't find enough participants and asked referrals from the initial participants?
- (A) Convenience Sampling
 - (B) Quota Sampling
 - (C) Purposive Sampling
 - (D) Snowball Sampling
92. In non-probability sampling, what is generally true about population members' chance to participate?
- (A) All have equal measurable probabilities
 - (B) Only clusters have inclusion probabilities

- (C) Not all members have a chance to participate
(D) Every stratum is proportionally represented
93. Which of the non-probability sampling technique in which the samples have traits that are rare to find?
(A) Convenience Sampling
(B) Snowball Sampling
(C) Quota Sampling
(D) None of above
94. Which of the following is NOT a probability sample?
(A) Cluster sampling
(B) Stratified sampling
(C) Systematic sampling
(D) Convenience sampling
95. Which sampling is mostly affected from being bias?
(A) Lottery method
(B) Convenience sampling
(C) Snowball sampling
(D) Cluster sampling
96. Which limitation is shared by convenience and judgmental sampling?
(A) Inability to recruit any specialized segments
(B) High cost due to complex field logistics
(C) Requirement for complete sampling frames
(D) Limited generalizability to the wider population
97. It attempts to obtain a sample of convenient elements where the selection of sampling units is left primarily to the interviewer. Relying on the available subjects such as stopping people on a street corner as they pass by is one method of sampling although it is extremely risky and comes with many cautions.
(A) Convenience sampling
(B) Judgmental sampling
(C) Quota sampling
(D) Snowball sampling
(E) Purposive sampling
98. Selecting participants who just happen to be available is called:
(A) Opportunity sampling
(B) Volunteer sampling
(C) Random sampling
(D) Quota sampling
99. The researcher collects data from one or more elements of the population simply because they were available at that time.
(A) Quasi-random sampling
(B) Quota sampling
(C) Purposive sampling
(D) Convenience sampling
100. A type of non probability sampling where proportion of the groups in the population were considered in the number and selection of the respondents
(A) Convenience sampling
(B) Purposive sampling
(C) Quota sampling
(D) Snowball sampling
101. Is a sampling technique where the samples are gathered in a process that does not give all the individuals in the population equal chances of being selected. It does not use the chance selection procedure rather on the personal judgement of the researcher.
(A) Probability sampling
(B) Non-probability sampling
(C) Simple random sampling
(D) Systematic sampling
(E) Stratified sampling
102. Which of the following should a psychologist avoid using?
(A) Representative Sample
(B) Random Sample
(C) Stratified Sample
(D) Nonrepresentative Sample

- 103.** What is the most common sampling in case study?
- (A) Snowball sampling
 - (B) Comprehensive sampling
 - (C) Purposeful sampling
 - (D) Maximum variation sampling
- 104.** In purposive sampling, what primarily guides the selection of participants?
- (A) Their availability at the time
 - (B) Their relevance to the study purpose
 - (C) Their representativeness by probability
 - (D) Their geographic proximity to researcher
- 105.** A survey on job satisfaction includes 30 government employees and 30 private employees. Which concept is applied?
- (A) Balanced quotas across predefined employment sectors
 - (B) Convenience sampling at a job fair
 - (C) Matched pairs across identical job roles
 - (D) Probability sampling from HR registries
- 106.** Which scenario correctly uses snowball sampling?
- (A) Drawing every 10th name from a registry
 - (B) Stratifying by income levels systematically
 - (C) Identifying one drug user who recruits others
 - (D) Randomly selecting school classes
- 107.** In which sampling technique do researchers select participants based on their ease of access?
- (A) Volunteer Sampling
 - (B) Random Sampling
 - (C) Opportunity Sampling
 - (D) None of above
- 108.** Convenience Sample
- (A) Probability
 - (B) Non-Probability
- 109.** Sampling of participants in qualitative studies is typically:
- (A) Random
 - (B) Cluster random
 - (C) Purposive
 - (D) Convenience
- 110.** The primary limitation of using a small sample size, such as in a focus group, is that the findings:
- (A) Are often too objective.
 - (B) Cannot be generalized to the broader population.
 - (C) Lack qualitative depth.
 - (D) Do not provide a foundation for further research.
- 111.** What is the main reason for using purposeful sampling in qualitative research?
- (A) To select participants randomly
 - (B) To deliberately choose cases that will best contribute to the study
 - (C) To ensure a large sample size
 - (D) To end the study quickly
- 112.** If your research topic is highly sensitive in nature, which of the following might be the best sampling method?
- (A) Quota
 - (B) Cluster
 - (C) Snowballing
 - (D) Stratified
- 113.** It is the most common non-probability sampling technique that only look for the availability of the respondents.
- (A) Convenience Sampling
 - (B) Judgement Sampling
 - (C) Quota Sampling
 - (D) Snowball Sampling
- 114.** Which of the following is not a type of non-probability sampling?
- (A) Snowball sampling
 - (B) Stratified random sampling
 - (C) Quota sampling
 - (D) Convenience sampling

115. Allocating respondents to mirror population age groups aligns with which idea?
- (A) Cluster sampling with blocks
 - (B) Snowball recruitment referrals
 - (C) Simple random number draws
 - (D) Quota sampling control totals
116. What type of sampling? A student asks 12 friends to participate in a psychology experiment.
- (A) Random sample
 - (B) Convenience sample
 - (C) Stratified Random sample
 - (D) Census
117. Bias is most likely to appear in a news story when ____
- (A) The reporter relies on multiple sources and gives abundant time or space to all sides of a controversy.
 - (B) The reporter's story is reviewed by a large number of editors and supervisors.
 - (C) The reporter is writing about people she or he has known for some time.
 - (D) The reporter relies on one source or gives disproportionate time to space to one side of a controversy.
118. This sampling technique uses the sample that is easily available or accessible.
- (A) Purposive sampling
 - (B) Theoretical sampling
 - (C) Snowball sampling
 - (D) Convenience sampling
119. Which of the following non-probability sampling methods is NOT commonly used in qualitative research?
- (A) Convenience sampling.
 - (B) Quota sampling.
 - (C) Purposive sampling.
 - (D) Snowball sampling.
120. Using this technique, research participants themselves recruit other members to participate in the study.
- (A) Convenience sampling
 - (B) Expert sampling
 - (C) Systematic sampling
 - (D) Snowball sampling
121. The statement "The procedure is not mechanical; it depends on the investigator's decision-making process" corresponds to which type of sampling?
- (A) Nonprobabilistic samples
 - (B) Probabilistic samples
 - (C) Systematic samples
 - (D) Cluster samples
122. Which scenario best illustrates referral sampling?
- (A) An initial group of experts recommends peers who then recommend others
 - (B) A researcher stratifies hospitals and samples within strata
 - (C) Interviewers intercept shoppers at alternating times of day
 - (D) A survey platform randomly invites registered users
123. What is a volunteer sample?
- (A) Every person in the population has an equal chance of being selected
 - (B) People respond to an advert
 - (C) The sample reflects the sub-groups in a population
 - (D) People who are easily available are used
124. What sampling technique selects participants based on predefined criteria?
- (A) Purposive Sampling
 - (B) Random Sampling
 - (C) Cluster Sampling
 - (D) Stratified Sampling
125. A process of selecting respondents which the members of the entire population do not have an equal chance of being selected as samples
- (A) Probability random sampling
 - (B) Non-probability sampling

126. Which example aligns with purposive (judgmental) sampling?
- (A) Using town census lists to sample households
 - (B) Choosing participants by lottery for fairness
 - (C) Selecting only rehabilitation center inmates to study addiction
 - (D) Recruiting volunteers via online survey ads
127. What is the key characteristic of convenience sampling?
- (A) Choosing readily available respondents near the researcher
 - (B) Selecting participants using random number generators
 - (C) Drawing a cluster sample from multiple locations
 - (D) Recruiting a stratified set across known subgroups
128. The researcher has a clear idea of the sample and they pick participants that meet their criteria
- (A) Random
 - (B) Quota
 - (C) Volunteer
 - (D) None of above
129. The Purposive sample will be
- (A) Depending on the researcher's whims.
 - (B) Based upon a specific objective of sampling procedure.
 - (C) Based on the excellent method of sampling.
 - (D) None of the above.
130. What type of sampling? A journalist asks his family how they feel about water pollution.
- (A) Random sample
 - (B) Convenience sample
 - (C) Stratified Random sample
 - (D) Census
131. A sampling approach in which participants are intentionally selected by the researcher to fulfill the needs of the study is known as:
- (A) Convenient sampling
 - (B) Purposive sampling
 - (C) Strata
 - (D) None of above
132. The school librarian wants to determine how many students use the library on a regular basis. What type of sampling method would she use if she stands in the hall and selects the first 20 students to walk by.
- (A) Convenience Sample
 - (B) Simple Random Sample
 - (C) Stratified Random Sample
 - (D) Cluster Sample
133. Which of the following is not a sampling technique for non-probability sampling?
- (A) Chain Sampling
 - (B) Consecutive Sampling
 - (C) Cluster Sampling
 - (D) Quota Sampling
134. What kind of sample technique is the following: A statistics student surveys everyone in the cafeteria.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
135. Which of the following sampling methods is not based on probability? [2013-JUNE]
- (A) Simple Random Sampling
 - (B) Stratified Sampling
 - (C) Quota Sampling
 - (D) Cluster Sampling
136. Groups are selected based on their easy access and proximity to the researcher. Which sampling method is this describing?
- (A) Friend sample
 - (B) Cluster
 - (C) Convenience
 - (D) Stratified

137. Which of the following is not an example of a nonrandom sampling technique?
- (A) Purposive
 - (B) Quota
 - (C) Convenience
 - (D) Cluster
138. Which type of sampling is used when a researcher selects the sample by a chain referral from the key samples that have his/her own experience with the required matter of the research?
- (A) Snowball sampling
 - (B) Quota sampling
 - (C) Cluster sampling
 - (D) Simple random sampling
 - (E) Not aware of
139. Snowballing is ____
- (A) Primary research that builds on the work conducted by secondary researchers.
 - (B) Secondary research that stems from the work of primary researchers.
 - (C) Surveys or interviews carried out with individuals, who then suggest other friends, family or colleagues to increase the sample.
 - (D) Secondary information that mounts very quickly due to the vast amount of information that is available.
140. This sampling technique happens when a small number of participants are invited and asked to invite other people they know who also are of interest for the purposes of the research.
- (A) Purposive sampling
 - (B) Theoretical sampling
 - (C) Snowball sampling
 - (D) Convenience sampling
141. When people are readily available, volunteer, or are easily recruited to the sample, this is called:
- (A) Snowball sampling
 - (B) Convenience sampling
 - (C) Random sampling
 - (D) None of above
142. A sampling which is used when participants are grouped according to a set of criteria specified in your research
- (A) Systematic
 - (B) Voluntary
 - (C) Availability
 - (D) Purposive
143. It is difficult and expensive to use a truly random sample and so many students get other students to fill in questionnaires for their university projects. What kind of sample is this?
- (A) Quota sample
 - (B) Convenience sample
 - (C) Systematic random sample
 - (D) Simple random sample
144. A type of sampling that rely on the subjective judgment of the researcher
- (A) Population
 - (B) Probability sampling
 - (C) Sample
 - (D) Non probability sampling
145. Non-probability sampling is used when the universe is known ____
- (A) True
 - (B) False
146. Identify the sampling design:Joana asks her roommate what her favorite TV show is
- (A) Cluster
 - (B) Unbiased
 - (C) Stratified
 - (D) Convenience
147. A non-probability sampling technique in which the sample members are chosen only on the basis of the researcher's knowledge and judgment is called:
- (A) Accidental Sampling
 - (B) Quota Sampling
 - (C) Judgemental Sampling
 - (D) Random Sampling

148. A non-probability sampling method where units are selected for inclusion in the sample because they are the easiest for the researcher to access —
- (A) Convenient Sampling
 - (B) Snowball Sampling
 - (C) Accidental Sampling
 - (D) Quota Sampling
149. Judgmental sampling relies on:
- (A) Statistical formulas
 - (B) Chance
 - (C) Researcher's knowledge and gauge
 - (D) Random number tables
150. What kind of sample technique is the following: Question everyone who sits in your row.
- (A) Convenience Sampling
 - (B) Simple Random Sampling
 - (C) Systematic Sampling
 - (D) Sample
151. Which risk most threatens convenience samples?
- (A) Measurement error from complex instruments
 - (B) Sampling frame error from exhaustive lists
 - (C) Overcoverage from nationwide random dialing
 - (D) High selection bias from easy-to-reach participants
152. This is the kind of sampling technique where your respondent recommends another respondent for you study.
- (A) Snowball sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified random sampling
153. People who are available, volunteer, or can be easily recruited are used in the sampling method called —
- (A) Simple random sampling
 - (B) Cluster sampling
 - (C) Systematic sampling
 - (D) Convenience sampling
154. Explain the process of quota sampling.
- (A) Quota sampling involves selecting a sample that reflects the characteristics of the whole population.
 - (B) Quota sampling is a method where samples are selected based on random selection.
 - (C) Quota sampling is a process of selecting samples based on convenience.
 - (D) Quota sampling is a method of selecting samples based on voluntary participation.
155. Quota Sampling
- (A) Probability
 - (B) Non-Probability
156. What is a major risk when using snowball (referral) sampling?
- (A) Administrative costs always exceed panel studies
 - (B) Random error overwhelms systematic precision
 - (C) Sample cannot reach desired numerical quota
 - (D) Network homophily can bias sample composition
157. When do you use non-probability sampling in your study?
- (A) When time is limited to conduct research or there is budget constraint.
 - (B) When the intention is not to generate results that will generalize the entire population.
 - (C) When there is a need to observe whether a particular issue needs in-depth analysis.
 - (D) All of these.
158. Which method involves selecting participants who are easiest to reach?
- (A) Stratified sampling
 - (B) Convenience sampling
 - (C) Cluster sampling
 - (D) Systematic sampling

- 159.** It is a sampling method in which not all members of the population have an equal chance of participating in the study. It has the risk of bias.
(A) Probability Sampling
(B) Non-Probability Sampling
- 160.** Which of the following is not categorized as a probability sampling method?
(A) Simple Random Sampling.
(B) Quota Sampling.
(C) Stratified Sampling.
(D) Systematic Sampling.
- 161.** In this method, the researcher sets guidelines on how to select participants from the population and the selection process is more deliberate and not random.
(A) Probabilistic sampling
(B) Non probabilistic sampling
- 162.** A researcher divides his population into certain groups and fixes the size of the sample from each group. It is called
(A) Stratified sample.
(B) Quota sample.
(C) Cluster sample.
(D) All of the above.
- 163.** You must interview cybersecurity whistleblowers, a hard-to-reach group without a public list. Which approach is most defensible and why?
(A) Simple random sampling, because it removes all selection bias
(B) Quota sampling, because quotas guarantee full representativeness
(C) Snowball sampling, because peers can confidentially refer others
(D) Systematic sampling, because intervals reduce nonresponse
- 164.** In the purposive method of sampling design, items are selected according to ____
(A) Personal judgement
(B) Law of probability
(C) Law of certainty
(D) None of the above
- 165.** In Jacob's study, he asks the first 10 people he meets to be participants. What sampling method is this an example of?
(A) Random sampling
(B) Convenience sampling
(C) Stratified sampling
(D) Systematic sampling
- 166.** You are studying a rare user group. What sampling method is most effective?
(A) Systematic sampling
(B) Stratified sampling
(C) Cluster sampling
(D) Snowball sampling
- 167.** Convenience sampling is a type of probability sampling.
(A) True
(B) False
- 168.** Members of the population do not have the equal chance of being selected.
(A) Probability Sampling
(B) Non-Probability Sampling
(C) Purposive sampling
(D) Judgmental Sampling
- 169.** Purposive sampling is used when:
(A) Every unit has equal chance
(B) Units are selected deliberately
(C) Data is numerical
(D) Study is experimental
- 170.** True or False: Snowball sampling is a type of nonprobability sampling.
(A) True
(B) False
- 171.** Ms JH chose seven student nurses from two diploma in nursing programs who had completed at least one semester of clinical experience. This sample is classified as ____

- (A) Stratified sampling
 - (B) Purposive sampling
 - (C) Convenience sampling
 - (D) Simple random sampling
172. The sample being drawn from that part of the population that is close to hand.
- (A) Systematic
 - (B) Simple random
 - (C) Multi-Stage
 - (D) Area
 - (E) Accidental
173. Which of the following is not a form of non-random sampling?
- (A) Snowball sampling
 - (B) Quota sampling inter
 - (C) Purposive sampling
 - (D) They are all forms of nonrandom sampling
174. Which of the following refers to a nonprobability sample in which the researcher uses his or her evaluation techniques to select population members who are good prospects for accurate information?
- (A) Quota sample
 - (B) Judgment sample
 - (C) Convenience sample
 - (D) Stratified random sample
 - (E) Simple random sample
175. Judgmental sampling is a technique used to select a sample with the non-existence of a sampling frame.
- (A) True
 - (B) False
176. What is an advantage of Opportunity Sampling?
- (A) Quick
 - (B) Difficult
 - (C) Expensive
 - (D) Time-consuming
177. The population is split into groups based on factors relevant to the research, then convenience sampling from each group is used.
- (A) Convenience
 - (B) Simple Random
 - (C) Systematic
 - (D) Stratified
 - (E) Quota
178. Which type of sampling method involves selecting participants who are easily accessible?
- (A) Random sampling
 - (B) Convenience sampling
 - (C) Stratified sampling
 - (D) Purposive sampling
179. How is quota sampling different from stratified random sampling?
- (A) It is not done randomly in regards to the subgroups
 - (B) It is done randomly in regards to the subgroups
180. The method that selects respondents based on their availability or accessibility to the researcher is an example of:
- (A) Probability sampling
 - (B) Cluster sampling
 - (C) Non-probability sampling
 - (D) Snowball sampling
181. Why is it important for a researcher to select a purposive sample in qualitative research?
- (A) To ensure random representation of a population.
 - (B) To focus on specific participants relevant to the study.
 - (C) To minimize the time needed for data collection.
 - (D) To ensure statistical accuracy.
182. JU chose seven student nurses from two baccalaureate nursing programs who had completed at least one semester of clinical experience. This sample is classified as ____
- (A) Stratified sampling

- (B) Purposive sampling
 - (C) Convenience sampling
 - (D) Simple random sampling
- 183.** The primary sampling method employed in qualitative research, entailing that individuals are purposefully chosen to participate in a research study for specific reasons that stem from the primary construct and context of the research questions.
- (A) Purposeful sampling
 - (B) Data set
 - (C) Design complexity
 - (D) Unit of analysis
- 184.** Group members identify additional members to be included in the sample.
- (A) Snowball sampling
 - (B) Quota sampling
 - (C) Purposive sampling
 - (D) None of above
- 185.** The manager of Happy Hamburgers wants to test out three proposed varieties of pizza fries. He asks his employees to set up a stand at the local farmer's market and give a free sample to anyone who agrees to rate the three varieties of fries.
- (A) Cluster
 - (B) Volunteer
 - (C) Convenience
 - (D) Simple random
- 186.** Which sampling method is most appropriate for studying rare populations?
- (A) Convenience sampling
 - (B) Snowball sampling
 - (C) Cluster sampling
 - (D) Stratified sampling
- 187.** Which of the following is not a type of purposive sampling?
- (A) Deviant case sampling
 - (B) Theoretical sampling
 - (C) Snowball sampling
 - (D) Probability sampling
- 188.** Which of the following sampling methods is not based on probability?
- (A) Quota Sampling
 - (B) Cluster Sampling
 - (C) Stratified Sampling
 - (D) Simple Random Sampling
- 189.** Source of bias that occurs when you ask people who are EASY to ask
- (A) Response Bias
 - (B) Convenience Sampling
 - (C) Nonresponse
 - (D) Voluntary Response
- 190.** Which of the following is not a random sampling technique?
- (A) Purposive sampling
 - (B) Stratified Sampling
 - (C) Cluster sampling
 - (D) Systematic sampling
- 191.** Using a respondent to find another respondent in a survey is named as
- (A) Purposive Sampling
 - (B) Snowball Sampling
 - (C) Quota Sampling
 - (D) Convenient Sampling
- 192.** Non-probability sampling includes:
- (A) Stratified sampling
 - (B) Convenience sampling
 - (C) Multistage sampling
 - (D) None of these
- 193.** Dr. Mirshah sends out a tweet asking students to vote for their favorite type of Thanksgiving pie. This sampling method is called
- (A) Convenience sampling
 - (B) A good idea
 - (C) Random sampling
 - (D) Voluntary response

194. A sampling that involves sampling by convenience, but within specified subgroups of the population, to enhance representativeness, is:
- (A) Quota sampling
 - (B) Consecutive sampling
 - (C) Random sampling
 - (D) None of above
195. Which situation illustrates selection bias in nonprobability sampling?
- (A) A double-blind experiment reduces interviewer effects
 - (B) A random phone dialer reaches rural households evenly
 - (C) Only frequent gym users respond to a locker-room survey
 - (D) A stratified design balances age and income groups
196. People are more likely to participate if they have already volunteered so the drop-out rate should be lower, making generalizations potentially stronger.
- (A) Strength of Opportunity Sampling Technique
 - (B) Strength of Random Sampling Technique
 - (C) Strength of Volunteer Sampling Technique
 - (D) None of above
197. What is the best sampling method for a study on the unique experiences of female CEOs?
- (A) Purposive Sampling
 - (B) Random Sampling
 - (C) Snowball Sampling
 - (D) Quota Sampling
198. A domestic violence study includes every eligible case reported to a counselling centre during a specific period. What sampling approach is used?
- (A) Consecutive sampling across the reporting window
 - (B) Quota sampling based on case severity
 - (C) Convenience sampling among accessible clients
 - (D) Simple random sampling of reported cases
199. A quantitative sampling technique where participants are selected based on naturally occurring groups or participants who are easily available.
- (A) Stratified Random Sampling
 - (B) Self-selected sampling
 - (C) Random sampling
 - (D) Opportunity (convenience) sampling
200. What sampling technique involves participants referring the researcher to others?
- (A) Random Sampling
 - (B) Convenience Sampling
 - (C) Snowball Sampling
 - (D) None of above
201. The researchers have evaluated that their target participants are difficult to reach. What sampling method would they use?
- (A) Quota sampling
 - (B) Systematic sampling
 - (C) Snowball sampling
 - (D) Convenience sampling
202. A type of non-probability sampling where the researcher is selecting a sample based on the availability of the member and/or proximity to the researcher
- (A) Convenience sampling
 - (B) Purposive sampling
 - (C) Quota sampling
 - (D) Snowball sampling
203. It is called “chain-referral” sampling technique.
- (A) Volunteer
 - (B) Quota
 - (C) Multistage
 - (D) Snowball

- 204.** Why might surveying patients in a government hospital OPD be considered convenience sampling?
(A) Patients are randomly assigned to interviewers
(B) Participants are readily accessible at one location
(C) Cases are selected using probability proportional to size
(D) Sampling frames are constructed from national registries
- 205.** Which one of the following are methods of non-probability sampling? 1. Purposive sampling 2. Snowball sampling 3. Stratified sampling 4. Systematic random sampling
(A) 1 and 2
(B) 2 and 3
(C) 1, 2 and 3
(D) 1, 3 and 4
- 206.** It is appropriate to be used in research when the members of the population are difficult to locate, such as homeless individuals, migrant workers, undocumented immigrants
(A) Convenience sampling
(B) Judgemental sampling
(C) Quota sampling
(D) Snowball sampling
(E) Purposive sampling
- 207.** All of the sampling methods below are proper sampling methods involving randomness, except
(A) Systematic sampling
(B) Convenience sampling
(C) Cluster sampling
(D) Stratified sampling
- 208.** This sampling technique targets a particular group of people who would make good study participants because of their characteristics.
(A) Purposive sampling
(B) Theoretical sampling
(C) Snowball sampling
(D) Convenience sampling
- 209.** You want to know the effects of the COVID-19 to the Filipino people and you will ask the medical frontliners. Which type of sampling will you use?
(A) Convenience
(B) Purposive
(C) Stratified
(D) Systematic
- 210.** What is Snowball Sampling?
(A) Every member of the population has an equal chance of being chosen
(B) When you pick every nth person
(C) When one participant introduces the researcher to other members in the population
(D) When the researcher has an exact 'quota' of people from different categories in proportion to their numbers in the wider population
- 211.** Which of the following best describes quota sampling?
(A) Ensures each subgroup is randomly represented
(B) Participants are selected to meet a predefined proportion
(C) Every individual has an equal chance of selection
(D) None of the above
- 212.** Which Sampling technique gathers data in a process that does not give all the individuals in the population equal chances of being selected?
(A) Random Sampling
(B) Probability Sampling
(C) Non Probability Sampling
(D) Sampling
- 213.** This is a type of Non Probability Sampling wherein the researcher selects subject based on the ease of accessibility?
(A) Judgemental Sampling
(B) Convenience Sampling
(C) Quota Sampling
(D) Snowball Sampling

214. A researcher wants to run a true experiment but insists she will not use a random sample. You could safely say that
- (A) She absolutely, positively cannot run a true experiment
 - (B) She could accomplish this using systematic sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
 - (E) Cluster sampling
215. Quota sampling is part of ____?
- (A) Probability
 - (B) Nonprobability
216. In this type of qualitative sampling, it is decided prior to the start of research how many people to include in the sample and which characteristics they should have.
- (A) Quota
 - (B) Purposive
 - (C) Snowball
 - (D) None of above
217. In a survey of hospital out-patients' views about the quality of service they receive from a hospital, researchers wanted to canvas an equal amount of women and men. During one particular week 200 women and 200 men were asked to fill in a questionnaire. What method of sampling is this?
- (A) Cluster sampling
 - (B) Quota sampling
 - (C) Expert sampling
 - (D) Systematic sampling
218. As a researcher, you want to know the plans of graduating senior highschool students. You ask all by-passers to participate in your research. Which type of sampling are you using?
- (A) Convenience
 - (B) Purposive
 - (C) Stratified
 - (D) Systematic
219. A statistics professor surveys all of her students to obtain sample data consisting of the number of credit cards each student possesses.
220. A group of researchers, decided to select their respondents because they are the most accessible. What type of non-probability sampling did they exercise?
- (A) Judgemental Sampling
 - (B) Convenience Sampling
 - (C) Quota Sampling
 - (D) Snowball Sampling
221. Accidental Sampling, Quota Sampling and Purposive Sampling are types of
- (A) Stratified Random
 - (B) Simple Random
 - (C) Non probability
 - (D) Probability
222. A magazine conducts a survey and asks its readers to cut the questionnaire from the magazine, fill it and send it via mail. It is a type of
- (A) Purposive sampling.
 - (B) Snowball sampling.
 - (C) Sequential sampling.
 - (D) Convenience sampling.
223. A technique of Building up a list or a sample of a special population by using an initial set of members as informants is called
- (A) Quota sampling.
 - (B) Convenience Sampling.
 - (C) Snow ball Sampling.
 - (D) Purposive sampling.
224. It is a type of non-probability sampling done in a way that whoever you saw first or came to volunteer first is considered as a respondent.
- (A) Simple random sampling
 - (B) Stratified random sampling
 - (C) Convenience sampling
 - (D) None of above

225. A statistics student obtains height/weight data by interviewing family members.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sampling
 - (D) Stratified sampling
 - (E) Systematic sampling
226. Interview the first 30 students who enter the school in the morning.
- (A) Simple random
 - (B) Population
 - (C) Systematic
 - (D) Convenience
227. In snowball sampling, the sample is collected by:
- (A) Randomly selecting from the entire population
 - (B) Using a pre-determined interval
 - (C) Participants recruiting other participants
 - (D) None of the above
228. This is a non probability sample selected from members of the population that are easy to access for research. Example family, friends
- (A) Convenience sample
 - (B) Random sample
 - (C) Probability sample
 - (D) Data Sample
229. Participants are sampled according to what is conveniently available.
- (A) Accidental Sampling
 - (B) Modal instance sampling
 - (C) Cluster Sampling
 - (D) None of above
230. In qualitative research, what technique is used to select participants who are knowledgeable about the research topic?
- (A) Purposive sampling
 - (B) Simple random sampling
 - (C) Cluster sampling
 - (D) Convenience sampling
231. Read the statements below and fill in the blank with a word that best describe the given statements ____ Sampling technique in which the researcher selects samples based on the subjective judgment of the researcher rather than random selection.
- (A) Nonprobability Sampling Technique
 - (B) Probability sampling
232. ____ uses respondents that are easy to reach in a study, e.g. students using classmates for a survey
- (A) Focus groups
 - (B) Random sampling
 - (C) Snowballing
 - (D) Convenience sampling Edit
233. Snowball sampling is most appropriate when the target population is
- (A) Simple to stratify by clear attributes
 - (B) Uniform and geographically dispersed
 - (C) Large and easily listed from records
 - (D) Hidden and interconnected through social ties
234. What sampling technique will be used if a researcher wants to know the experience of the board exam takers in the time of pandemic?
- (A) Convenience Sampling
 - (B) Quota Sampling
 - (C) Purposive Sampling
 - (D) Snowball Sampling
235. Judgemental and Convenience Sampling are examples of:
- (A) Probability Sampling
 - (B) Non-probability Sampling
236. Source of bias in which people CHOOSE to respond and usually only people with very strong opinions respond
- (A) Response Bias
 - (B) Undercoverage
 - (C) Convenience Sampling
 - (D) Voluntary Response

237. Which statement best defines non-probability sampling?
- (A) Selection using stratified proportional allocation
 - (B) Selection based on researcher's subjective judgment
 - (C) Selection where every unit has equal known chance
 - (D) Selection using random chance mechanisms only
238. What is the main reason for using snowball sampling in qualitative research?
- (A) To end the study quickly
 - (B) To recruit participants from a small network of acquaintances
 - (C) To select participants randomly
 - (D) To ensure a large sample size
239. A sample selected based on ease of access is called:
- (A) Simple random sampling
 - (B) Purposive sampling
 - (C) Convenience sampling
 - (D) Stratified sampling
240. A type of purposive sampling that involves deliberate attempts to draw from diverse groups is
- (A) Maximum variation sampling
 - (B) Strata sampling
 - (C) Quota sampling
 - (D) None of above
241. A method for constructing a sample from a specific population by initially using a few known members to identify others is known as
- (A) Quota sampling
 - (B) Convenience Sampling
 - (C) Snowball Sampling
 - (D) Purposive sampling
242. You want to know who the best teacher at Lamar High School is. You decide to survey the first 10 people you see passing in the hallway.
- (A) Random
 - (B) Stratified
 - (C) Cluster
 - (D) Systematic
 - (E) Convenience
243. In ___ you recruit participants that are more easily available.
- (A) Self-selected sampling
 - (B) Opportunity sampling
 - (C) Random sampling
 - (D) Stratified sampling
244. Involves handpicking of subjects. Also called judgmental sampling.
- (A) Convenience sampling
 - (B) Purposive sampling
 - (C) Quota sampling
 - (D) Voluntary sampling
 - (E) Snowball sampling
245. In which of the following nonrandom sampling techniques does the researcher ask the research participants to identify other potential research participants?
- (A) Snowball
 - (B) Convenience
 - (C) Purposive
 - (D) Quota
246. This sampling technique is prone to bias for the respondents are chosen purposely.
- (A) Probability Sampling
 - (B) Non-probability Sampling
 - (C) Sampling Technique
 - (D) Stratified Sampling
247. What is a sampling procedure that is choosing one respondent and the said respondent will recommend another respondent?
- (A) Convenience
 - (B) Judgmental
 - (C) Snowball
 - (D) Systematic

248. — relies on the personal judgment of the researcher, rather than chance, in selecting sampling elements.
- (A) Nonprobability sampling
 - (B) Probability sampling
 - (C) Simple random sampling
 - (D) Systematic sampling
 - (E) Umpire sampling
249. Which sampling method relies on participants referring other participants with similar traits to the researcher?
- (A) Random sampling using equal selection chance
 - (B) Systematic sampling with fixed intervals
 - (C) Snowball sampling chain-referral approach
 - (D) Purposive sampling targeting key informants
250. This is a special type of qualitative sampling that stops at the point of data saturation —
- (A) Quota
 - (B) Theoretical
 - (C) Snowball
 - (D) None of above
251. Snowball sampling is commonly used in:
- (A) Experimental studies
 - (B) Research on hard-to-reach populations
 - (C) Studies involving large populations
 - (D) Laboratory research
252. — is NOT the kind of probabilistic sampling
- (A) Simple Random Sampling
 - (B) Systematic Sampling
 - (C) Stratified Sampling
 - (D) Convenience Sampling
 - (E) Multistage Cluster Sampling
253. Which of the following refers to a nonprobability sample in which the researcher finds and interviews a prescribed number of people in each of several categories?
- (A) Quota sample
 - (B) Judgment sample
 - (C) Convenience sample
 - (D) Stratified random sample
 - (E) Simple random sample
254. Choose the correct answer about Opportunity Sampling?
- (A) Deliberate effort is made as a sample representative of target population.
 - (B) Having equal chance of being selected
 - (C) Quick, convenient and economical. A most common sampling practice.
 - (D) Time consuming
255. This sampling system works like a networking business referral program.
- (A) Snowball Sampling
 - (B) Stratified Sampling
 - (C) Purposive Sampling
 - (D) Quota Sampling
256. An NBC television news reporter gets a reaction to a breaking news story by polling people as they pass in front of his studio.
- (A) Cluster sampling
 - (B) Convenience sampling
 - (C) Simple random sample
 - (D) Stratified sampling
 - (E) Systematic sampling
257. Which one is called non-probability sampling? [2008-JUNE]
- (A) Cluster sampling
 - (B) Quota sampling
 - (C) Systematic sampling
 - (D) Stratified random sampling
258. It involves the selection of elements based on assumptions regarding the population of interest, which forms the criteria for selection.
- (A) Probability
 - (B) Non probability
 - (C) Stratified Random
 - (D) Simple Random

259. In this qualitative sampling method participants are defined in advance, but proportions and sample size are not defined.
- (A) Quota
 - (B) Purposive
 - (C) Snowball
 - (D) None of above
260. Sampling techniques that do not use chance selection procedures and rely on the personal judgment of the researcher are called ____
- (A) Probability sampling techniques
 - (B) Non-probability sampling techniques
 - (C) Stratified sampling
 - (D) Cluster sampling

1.4.7 Observation Method

1. Observations conducted using standardized tools are crucial because they:
 - (A) Focus on qualitative themes
 - (B) Allow for flexible interpretation of data
 - (C) Ensure consistency across all data points
 - (D) Provide theoretical insights into the research topic
2. A key disadvantage of observation methods is most likely what?
 - (A) High cost of digital libraries
 - (B) Limited theoretical background
 - (C) Respondent literacy requirements
 - (D) Observer bias and recording difficulty
3. The liquid in the graduated cylinder is blue.
 - (A) Quantitative observation
 - (B) Qualitative observation
 - (C) Inference
 - (D) Prediction
4. If people know they are being observed, they may change their behavior to appear in a more favorable and acceptable manner. This creates an artificial observation of behavior. This is referred to as the ____
 - (A) Dartmouth effect
 - (B) Hawthorne effect
 - (C) Hollywood effect
 - (D) Durkheim effect
5. A study uses mystery shoppers to collect its data. Which of the following refers to the type of study?
 - (A) Survey
 - (B) Case Study
 - (C) Observational
 - (D) Experimental
6. What type of technique examines and records behavior in spontaneous situations without trying to manipulate or control the situation?
 - (A) Case Study
 - (B) Longitudinal Study
 - (C) Correlational Study
 - (D) Naturalistic Observation
7. A study that involves no researcher intervention is called
 - (A) An experimental study
 - (B) A noninvolvement study.
 - (C) An observational study.
 - (D) A quasi-experimental study
8. Which type of observation involves the researcher being directly involved?
 - (A) Detached observations
 - (B) Naturalistic observations
 - (C) Participant observations
 - (D) Controlled observations
9. Which research method involves the researcher immersing themselves in a group to understand their behavior in context?
 - (A) Survey
 - (B) Experiment
 - (C) Participant observation
 - (D) Content analysis

10. Which one is a strength of observations
- (A) Enables a researcher to look afresh at everyday behaviour that otherwise might be taken for granted, expected or go unnoticed
 - (B) Can provide a bias outcomes due to confirmation bias of the person/s observing and their AR hypothesis
 - (C) Has difficulties with maintaining high levels of anonymity
 - (D) Can manipulate the situation or subjects
11. Tara, a marketing researcher, watches customers as they shop for products and writes down her impressions of the customers' behaviors. Tara is gathering data by
- (A) Secondary, relating
 - (B) Primary, interviewing
 - (C) Primary, observing
 - (D) Secondary, surveying
12. Which of the following refers to an observation which is conducted without the awareness of the participant
- (A) Overt observation
 - (B) Participant observation
 - (C) Non-participant observation
 - (D) Covert observation
13. A detailed observational schedule will improve
- (A) Inter-rater reliability
 - (B) Ethics
 - (C) Demand characteristics
 - (D) Subjectivity
14. Which of the following skills is commonly developed through field trips?
- (A) Memorizing textbook facts only
 - (B) Observational skills (collecting data from real environments)
 - (C) Reducing social interaction
 - (D) Avoiding critical thinking
15. Which of the following is the main advantage of naturalistic observation?
- (A) High internal validity
 - (B) High external validity
 - (C) Save money
 - (D) Save time
16. Observation where person is aware of being observed.
- (A) Overt
 - (B) Covert
 - (C) Participant
 - (D) Non-Participant
17. ____ involve using your five senses to gather data and information about the world around you.
- (A) Predictions
 - (B) Inferences
 - (C) Observations
 - (D) None of above
18. The method of monitoring and recording consumer behavior in natural or controlled settings is known as:
- (A) Experimentation
 - (B) Surveying
 - (C) Observation
 - (D) Interviewing
19. What data collection method involves observing people's behavior in their natural or controlled environments?
- (A) Focus group
 - (B) Document analysis
 - (C) Observation
 - (D) Interview
20. Which of the following is NOT a pro of observational measures?
- (A) Directly observe behaviors
 - (B) Don't rely on recall
 - (C) Relatively objective
 - (D) Easy to collect
21. I saw a black dog running in the park.
- (A) Quantitative Observation
 - (B) Qualitative Observation

22. In Observation Method, there is a tendency to read one's own thought and feeling into other's mind. This may be otherwise called
(A) Projection.
(B) Sublimation.
(C) Rationalization.
(D) Identification.
23. The observation of human or animal behavior in its natural setting.(Research Methods and Statistics Part I)
(A) Informed Consent
(B) Internal Validity
(C) Case Study
(D) Naturalistic Observation
24. A psychologist studies the play behavior of young children during recess by watching groups of children. What type of research is being conducted?
(A) Correlation
(B) Case study
(C) Naturalistic observation
(D) Experimentation
25. Participant-as-observer: advantage is the researcher can request permission to collect and record data as needed (ethical), can obtain feedback about his/her observations and tentative conclusions
(A) True
(B) False
26. When observing a person signing, which area should you primarily focus on?
(A) Chest area
(B) Hands only
(C) Face and hands
(D) Feet
27. Structured observations
(A) Every participant has the exact same experience
(B) Are completely natural
(C) Are unreliable
(D) Lack standardisation
28. True/False:Reflexivity is not important in the observation method.
(A) True
(B) False
29. It involves watching a participant and recording relevant behavior for later analysis. This method has the advantage of providing direct evidence of the phenomenon that is being studied.
(A) OBSERVATION
(B) MEASUREMENT
(C) EXPERIMENTATION
(D) RESEARCH
30. Identify the data collection method used.A teacher wishes to know how long each student takes a test. She write the beginning time for the test and records the time when a student finishes it.
(A) Experiment
(B) Simulation
(C) Survey
(D) Observation
31. Answer:systematic process of recording the behavioral patterns of people, objects, and occurrences without questioning them.”
(A) Observational research
(B) Close ended question
(C) Open ended question
(D) None of above
32. What is one key characteristic of participant observation?
(A) The researcher remains anonymous
(B) The researcher actively takes part in all activities
(C) The researcher only observes without interaction
(D) The researcher uses only quantitative data
33. OBSERVATION RESEARCH can be
(A) Natural
(B) Disguised

- (C) Structured
 - (D) All of the above
34. The main purpose of participant observation is to:
- (A) Experience culture from the insider's perspective and immersion
 - (B) Replace interviews and surveys with field-work
 - (C) Construct authentic local narratives based on lived experiences
 - (D) Promote tourism in selected local communities
35. Less ethical as participants do not know they are being observed and cannot withdraw.
- (A) General Weakness of Observations
 - (B) Weakness of Overt Observations
 - (C) Weakness of Covert Observations
 - (D) Weakness of Participant Observations
 - (E) Weakness of Non-Participant Observations
36. It is a technique of gathering data whereby you personally watch, interact, or communicate with the subjects of your research.
- (A) Survey
 - (B) Observation
 - (C) Interview
 - (D) Research
37. Which of the following is a disadvantage of observational methods in psychological assessment?
- (A) The observer has little control over the situation.
 - (B) It cannot be used to study mother-child interactions.
 - (C) It requires a lot of technical equipment.
 - (D) It is not a systematic procedure.
38. Research methods: Name a key benefit of OBSERVATION
- (A) People never mind being observed
 - (B) You can use the scientific method to improve your interpretations
 - (C) You get to see real-life behavior unfold in an authentic way
 - (D) You get the chance to clarify things
39. As part of a university project, Kamil stood outside a cinema and counted the people going in. He recorded men, women and children separately and noted how many were in each group. Which research technique was he using?
- (A) Survey
 - (B) Focus group
 - (C) Observation
 - (D) None of above
40. Which of the following represents naturalistic observation?
- (A) Researchers watch and record how elementary school children interact on the playground.
 - (B) Researchers bring participants into a laboratory to see how they respond to a puzzle with no solution.
 - (C) A principal looks at the relationships between the number of students absence and their grades.
 - (D) Two grandparents sit in the front row to watch their grandson's first piano recital.
41. Unmarried cab drivers talk more with their customers than do married cab drivers
- (A) Naturalistic observation
 - (B) Case study
 - (C) Survey
 - (D) Experimental Method
42. I hear a rush of wind, loud yells, and metal banging together.
- (A) Qualitative Observation
 - (B) Quantitative Observation
43. Which primary data collection method involves collecting data by observing individuals in a laboratory or controlled setting, where extraneous variables can be eliminated or controlled?

- (A) Naturalistic observations
 - (B) Participant observations
 - (C) Systematic observation
 - (D) Controlled observations
44. A noted psychologist and environmentalist, Dr. Golby, has received a grant to study older person's bird-feeding behavior in public parks. Dr. Golby has research assistants sit in public parks to collect the data. She has chosen a — research method.
- (A) Case study
 - (B) Experiment
 - (C) Naturalistic observation
 - (D) Survey
45. The type of primary research where you collect information without interacting with the participant.
- (A) Focus Group
 - (B) Experiment
 - (C) Observation
 - (D) Survey
46. An observational study where the observer does not interact with or make themselves known to research subjects.
- (A) Direct observation
 - (B) Unobtrusive observation
 - (C) Visible observation
 - (D) Contrived observation
47. Research method where the researcher observes the subject in a natural setting without interfering
- (A) Naturalistic Observation
 - (B) Case Study
 - (C) Longitudinal study
 - (D) Cross-sectional study
48. Prior to beginning a behavioral observation, which of the following must be determined?
- (A) Target behavior
 - (B) Antecedents
 - (C) Positive rewards for appropriate behavior
 - (D) Replacement behaviors
49. Can be part of a pilot study, giving an overview of the range of behaviors.
- (A) Strength of Structured Observations
 - (B) Strength of Unstructured Observations
 - (C) Strength of Naturalistic Observations
 - (D) Strength of Controlled Observations
50. If a student notices that frogs are all gathering at one end of the pond the student has done what?
- (A) Observed
 - (B) Experimented
 - (C) Hypothesized
 - (D) Collected data
51. Dr. Belzer documented the behaviors of parents with their children at a local restaurant. She looked for specific examples of permissive, authoritarian, and authoritative parenting styles. Which of the following best describes the method of research used by Dr. Belzer?
- (A) Experiment
 - (B) Case Study
 - (C) Meta-analysis
 - (D) Naturalistic Observation
52. This is a data collection method where the five (5) senses are used.
- (A) Empirical observation method
 - (B) Interview method
 - (C) Questionnaire method
 - (D) Test method
53. In what method of data collection wherein the identity of the researcher is known to the group being studied.
- (A) Focus group discussion
 - (B) Overt participant observation
 - (C) Non-participant observation
 - (D) Covert participant observation

54. Which of the given study is observational.
(A) Subjects were randomly assigned to two groups, and one group was given an herb and the other group a placebo. After 6 months, the numbers of respiratory tract infections each group had were compared.
(B) A researcher stood at a busy intersection to see if the color of the automobile that a person drives is related to running red lights.
(C) Don't rely on recall
(D) Relatively objective
55. What is observation in the context of scientific research?
(A) The process of using one or more of your senses to gather information.
(B) The process of forming a hypothesis based on data.
(C) The process of conducting an experiment.
(D) The process of analyzing data collected during an experiment.
56. Type of Observation when observer observes from a distance.
(A) Covert
(B) Controlled
(C) Participant
(D) Non-Participant
57. The Naturalistic-Observation Method takes place ____
(A) With a mouse
(B) In a house
(C) In the field
(D) In a lab
58. This research method involves watching without interfering with the subjects.
(A) Experiment
(B) Naturalistic Observation
(C) Survey
(D) Case Study
59. Which of the following is a con of observational measures?
(A) Directly observe behaviors
(B) Difficult to collect
(C) Don't rely on recall
(D) Relatively objective
60. Research based on observation of people in any given environment (place) is known as:
(A) Experimentation
(B) Participant Research
(C) Natural Observation
(D) In-Depth Surveying Edit
61. Observational research method in which data is gathered for the same subjects repeatedly over a period of time.
(A) Cross-sectional method
(B) Longitudinal method
(C) Case study method
(D) Naturalistic observation method
62. As part of a group project, Emir stood outside a cinema and counted the people going in. He recorded men, women and children separately and noted how many were in each group. Which research technique was he using?
(A) Survey
(B) Focus group
(C) Observation
(D) Experimentation
63. A participant observer participates in the activities
(A) Yes
(B) No
64. Which primary data collection method involves collecting data by watching and recording the behavior of individuals or groups?
(A) Interviews
(B) Observations
(C) Surveys
(D) Experiments
65. An observational research strategy in which mechanical devices, rather than human observers, record the phenomenon being observed is called ____
(A) Personal observation

- (B) Virtual observation
 - (C) Perceptual observation
 - (D) Mechanical observation
 - (E) Device recording
66. A supermarket chain in the 1960s tracks shelf stock weekly to estimate brand share. Which method are they most likely using?
- (A) Retail audits and observations
 - (B) Influencer sentiment scraping
 - (C) Ethnographic immersion studies
 - (D) Augmented reality simulations
67. In which observational research method do researchers compare differences and similarities among people in different age groups at one given time?
- (A) Longitudinal study
 - (B) Laboratory study
 - (C) Naturalistic observation
 - (D) Cross-sectional study
68. Imagine you are designing a study to understand how people behave in a park without interfering with their activities. Which research method would be most appropriate, and why?
- (A) Naturalistic Observation, because it allows observation without manipulation
 - (B) Survey, because it gathers data from a large sample
 - (C) Experimental Method, because it provides control over variables
 - (D) Case Study, because it focuses on individual cases
69. Researchers by observation can
- (A) Analyze the data.
 - (B) Conduct research.
 - (C) Prepare the research report.
 - (D) Collect data.
70. A "field study"
- (A) Experimental study
 - (B) Cross-sectional study
 - (C) Naturalistic observation
 - (D) Testing method
71. Collecting data with your senses is
- (A) Hypothesis
 - (B) Observation
 - (C) Analyze data
 - (D) Conclusion
72. May become too involved with those they are observing and become less objective.
- (A) General Weakness of Observations
 - (B) Weakness of Overt Observations
 - (C) Weakness of Covert Observations
 - (D) Weakness of Participant Observations
 - (E) Weakness of Non-Participant Observations
73. The Naturalistic-Observation Method enables researchers to witness behavior in settings that are not ____
- (A) Natural
 - (B) Artificial
 - (C) Controlled
 - (D) Predictable
74. Record behavior that is likely to be normal, increasing ecological validity.
- (A) Strength of Structured Observations
 - (B) Strength of Unstructured Observations
 - (C) Strength of Naturalistic Observations
 - (D) Strength of Controlled Observations
75. Participants are aware they are being observed.
- (A) Overt observation
 - (B) Covert observation
 - (C) Naturalistic observation
 - (D) Laboratory observation
76. An influencing issue related to observation studies is
- (A) Observer behaviour
 - (B) Observer effect
 - (C) Observer boredom
 - (D) Observer interest

77. This initial part of the record describes the people, places events, conversation and other things involved in the activity or object focused on by the research.
- (A) Descriptive Observation
 - (B) Narrative Account
 - (C) Continuous Monitoring
 - (D) Spot Sampling
78. The most appropriate technique used in data collection for a research of "Hand washing technique among staff nurses" is ____
- (A) Interview
 - (B) Case study
 - (C) Observation
 - (D) Questionnaire
79. What kind of observation is being made in the following statement: The clouds are grey and ground is wet.
- (A) Qualitative
 - (B) Quantitative
80. Which of the following methods of collecting observational data of student behavior is most indicated for a behavior which seems to occur constantly?
- (A) Event recording
 - (B) Duration recording
 - (C) Latency recording
 - (D) Interval recording
81. Which of the following is an advantage of non-participant observation?
- (A) Lack of objectivity
 - (B) Participants are less willing to respond
 - (C) Freedom from groupism
 - (D) Inadequate findings
82. Studying interactions and behaviours is what type of research method?
- (A) Interview
 - (B) Observation
 - (C) Survey/Questionnaire
 - (D) Sociogram
83. John wants to know how important are the rituals for dead persons among Ifugaos especially. In this instance, John has to employ this data gathering technique:
- (A) Interview
 - (B) Life Story
 - (C) Observation
 - (D) Participant Observation
84. What is the difference between overt and covert observation?
- (A) If the researcher has to go under-cover
 - (B) Whether or not participants are fully clothed
 - (C) If the participants are aware they are being observed or not
 - (D) There is no difference except in the spelling ____
85. When participants change their behaviour because they know that they are being observed, this is called
- (A) Event sampling
 - (B) Expectancy effect
 - (C) Interviewer effects
 - (D) Reactivity
86. The study of behavior in naturally occurring situations without manipulation or control on the part of the observer
- (A) Volunteer bias
 - (B) Negative correlation
 - (C) Independent variable
 - (D) Naturalistic observation
87. Which advantage is commonly associated with observation methods?
- (A) Guarantees ethical neutrality
 - (B) Captures all details perfectly
 - (C) Always eliminates observer bias
 - (D) Good for behaviors not self-reported
88. To improve observations, pairs of researchers must establish:
- (A) Inter-researcher validity

- (B) Extra-sensory perception
(C) Inter-observer reliability
(D) Observer bias Edit
89. How many key components of observation are there in qualitative research?
(A) Three
(B) Six
(C) Five
(D) Four
90. It is a type of approach wherein the researcher does not live as a member of the subjects of the study.
(A) Time Sampling
(B) Sampling
(C) Participant Observer
(D) Non-participant Observer
91. Research method in which the psychologist observes the subject in a natural setting without interfering.
(A) Naturalistic observation
(B) Case study
(C) Survey
(D) Experiment
(E) Longitudinal study
92. Steven observed students entering a classroom for class and recorded whether the first half of the students who arrived for class chose to sit in the front half of the room. What data collection method was used?
(A) Observational Study
(B) Experiment
(C) Survey
(D) Simulation
93. May be low in validity as interpretation of behavior observed can be subjective.
(A) General Weakness of Observations
(B) Weakness of Overt Observations
(C) Weakness of Covert Observations
(D) Weakness of Participant Observations
(E) Weakness of Non-Participant Observations
94. The process of watching and documenting consumer behavior in either a natural or controlled environment is called:
(A) Experimentation
(B) Observation
(C) Surveying
(D) Interviewing
95. Which of the following is a type of observation method in psychology?
(A) Structured Interview
(B) Naturalistic Observation
(C) Case Study
(D) Experimental Method
96. A scientist watching animals in their normal environment is
(A) A naturalistic observation
(B) A case study
(C) A longitudinal study
(D) A correlation Edit
97. What type of study involves watching participants to see how they behave?
(A) Case study
(B) Experiment
(C) Interview
(D) Naturalistic observation
(E) Questionnaire
98. The benefit of naturalistic observation studies is ____
(A) They rely on self-reported data.
(B) They provide insights into real-world behaviors.
(C) They are less time-consuming than experiments.
(D) They focus on controlled environments.
99. In a field study, what can vary depending on the level of participant observation?
(A) The level of detail in data collected
(B) The number of participants
(C) The location of the study
(D) The time of day the study is conducted

- 100.** Tricia a psychologist students wanted to gather data for her study about the behavior of kindergarten students and she prepared to do this in most elementary school on their municipality as it always have kindergarten schools there. What she have done can be naturalistic or even done in laboratories. What type of data gathering did Tricia do?
- (A) Observation
 - (B) Standardized
 - (C) Psychological Measures
 - (D) Life-History Records
- 101.** A researcher is already part of a development team and wants to study their workflow. What observation type is this?
- (A) External
 - (B) Passive
 - (C) Balanced
 - (D) Total participation
- 102.** Non-participant observation involves observing from a distance
- (A) True
 - (B) False
- 103.** The clover had four leaves.
- (A) Qualitative observation
 - (B) Quantitative observation
 - (C) Inference
 - (D) None of above
- 104.** ____ observation involves observing people in their normal lives, such as at home or at school.
- (A) Laboratory
 - (B) Testing
 - (C) Longitudinal
 - (D) Naturalistic
- 105.** What is a limitation of participant observation?
- (A) Only quantitate data (e.g. counting) can be obtained
 - (B) It is purely descriptive
 - (C) Recording of data is difficult
 - (D) No flexibility to clarify meaning
- 106.** Mary watches several different species of birds to discover how they feed their young in their habitat, without being intrusive. This would be an example of what type of study?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Survey
 - (D) Experiment
- 107.** Which does not include the meaning of observation which in English is called “to observe”:
- (A) Observe
 - (B) Look
 - (C) Lurking
 - (D) Look closely
- 108.** What characterizes observation methods in psychology?
- (A) Strict manipulation of variables
 - (B) Computer simulations
 - (C) Systematic watching and recording of behavior
 - (D) Self-report only
- 109.** Cardinal rule of naturalistic observation:
- (A) Setting up dependent and independent variables
 - (B) Research and find enough participants
 - (C) Not disturbing participants in the study
 - (D) Getting enough different age groups for study
- 110.** What do we call careful observations of humans or animals in real life situations?
- (A) Case study
 - (B) Survey
 - (C) Naturalistic observation
 - (D) None of above
- 111.** The following are types of Observation with Intervention EXCEPT ONE.
- (A) Field Experiment

- (B) Participant Observation
 - (C) Physical Traces
 - (D) Structured Observation
- 112.** Avoid demand characteristics as participants do not know they are being observed.
- (A) General Strength of Observations
 - (B) Strength of Overt Observations
 - (C) Strength of Covert Observations
 - (D) Strength of Participant Observations
 - (E) Strength of Non-Participant Observations
- 113.** Monitoring the actions of people by visual or electronic means while recording quantitative and/or qualitative information regarding those actions.
- (A) Behavioral Observation
 - (B) Role-play Tests
 - (C) Computers as Tools
 - (D) Computer Assisted Psychological Assessment (CAPA)
- 114.** Observation relies on:
- (A) What respondents say
 - (B) What the researcher witnesses
 - (C) Hypothetical questions
 - (D) None of these
- 115.** Which research method involves observing and recording behavior in its natural setting without interference?
- (A) Experimental research
 - (B) Survey research
 - (C) Case study research
 - (D) Observational research
- 116.** What type of observation is this? There are approximately 90 colonies of bacteria on the Petri dish.
- (A) Qualitative
 - (B) Quantitative
- 117.** Which is not a way of sampling behaviour in an observation?
- (A) Continuous recording
 - (B) Time sampling
 - (C) Event sampling
 - (D) Stratified sampling
- 118.** In this situation, the researcher is involved in the activity with the people being studied:
- (A) Focus group
 - (B) Participant observation
 - (C) Sampling
 - (D) Non-participant observation
- 119.** Professor Schrute carefully monitors and records that behaviors of children on school playgrounds to track the development of their physical skills. Professor Schrute is engaged in:
- (A) Experimentation
 - (B) Survey research
 - (C) Replication
 - (D) Naturalistic observation
- 120.** Which aspect of participant observation data focuses on the results or changes that occur as a result of the observed activities?
- (A) The physical setting
 - (B) The process
 - (C) The activities
 - (D) Outcomes
- 121.** This is a method of research where the researcher carefully and systematically observes and records behavior without interfering
- (A) Observational
 - (B) Correlational
 - (C) Experiments
 - (D) Case Study
 - (E) Survey
- 122.** What data collection tool can be used to provide consistency over time between observers?
- (A) Checklist
 - (B) Projective technique

123. Primary data can be collected in several ways. Which of the following primary data collection methods would be exemplified by constructing see-through mirrors in a retail store whereby consumers' actions could be recorded?
- (A) Focus groups
 - (B) Surveys
 - (C) Observation
 - (D) Behavioral data
 - (E) Experiments
124. Psychologists use ____ to obtain information about how people/animals behave naturally, when they are not conscious of being observed.
- (A) Naturalistic observation
 - (B) Random sample
 - (C) Survey
 - (D) Interview
125. This type of observation occurs in the real world where the environment is unstructured.
- (A) Participant
 - (B) Structured
 - (C) Controlled
 - (D) Naturalistic
126. Data collection methods typical of qualitative studies include:
- (A) Surveys
 - (B) Observations
 - (C) Lab tests (example complete blood count)
 - (D) None of above
127. Researching a natural setting means all of the following EXCEPT
- (A) Seeing participants behave
 - (B) Observing participants interacting
 - (C) Talking to participants
 - (D) Using structured questionnaires with participants
 - (E) Having face-to-face interaction with participants
128. Overt observer: the role of the observer is ____ to the participants.
- (A) Obvious
 - (B) Hidden
 - (C) Ambiguous
 - (D) Unknown
129. What are the three rules of participant observation?
- (A) Get In, Come Out, Stay Away
 - (B) Get In, Stay in, Get Out
 - (C) Get in, Go Out, Come back in
 - (D) Left Foot In, Left Foot Out, InOutInOut-ShakeItAllAbout
130. This research instrument allows the description of behavior in a naturalistic or laboratory setting. This is used when questions are unable to be answered with surveys.
- (A) Interview
 - (B) Observation
 - (C) Survey
 - (D) Focus group
131. What is the most important function of the scientific observation method?
- (A) Collecting practical information
 - (B) Verifying existing hypotheses
 - (C) Verifying existing theories
 - (D) Comparing theoretical research results with practice
132. Do not include planning before the observation and the observer records behavior that is relevant to the aim of the research as it occurs.
- (A) Structured Observations
 - (B) Unstructured Observations
 - (C) Naturalistic Observations
 - (D) Controlled Observations
133. Which is NOT a type of observation?
- (A) Controlled observation
 - (B) Naturalistic observation
 - (C) Correlational observation
 - (D) Participant observation

- 134.** Participant observation involves:
- (A) Filling out surveys through digital forms
 - (B) Immersing in a culture and daily routines
 - (C) Reading archived written materials and authentic records
 - (D) Interviewing selected cultural leaders and tourists
- 135.** Primary data can be collected in several ways. Installing CCTV cameras in a retail store whereby consumers' actions can be recorded is an example of ____ research.
- (A) Focus group
 - (B) Survey
 - (C) Observational
 - (D) Behavioral
 - (E) Experimental
- 136.** The primary advantage of naturalistic observation is that this method
- (A) Allows for better control in the experiment.
 - (B) Allows data collection to be completed more efficiently and economically than other methods.
 - (C) Allows behavior that is more natural, varied, and spontaneous than one would find in a laboratory.
 - (D) Virtually eliminates the problem of observer bias.
- 137.** All scientific studies begins with it, it is done using our senses.
- (A) Inferring
 - (B) Observing
 - (C) Drawing conclusion
 - (D) Formulating hypothesis
- 138.** Researchers often utilize naturalistic observation when doing ethological investigations or studying children's behavior. In this approach
- (A) The researcher manipulates the IV
 - (B) The researcher does not manipulate or control variables
- 139.** What does making observations mean?
- (A) Something that does not change
 - (B) A scientific test that you perform in a series of actions to carefully observe how something works or doesn't work to learn about
 - (C) Facts about something that can be used for planning and reasoning
 - (D) Gathering information on a topic using our five senses. Examples: see, hear, taste, touch, and smell
- 140.** Detached observation reveals descriptions of behaviours by stepping outside of the group.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
- 141.** What is the purpose of standardization of observational procedures?
- (A) Interesting data collection
 - (B) Reliable data collection
 - (C) Unreliable data collection
 - (D) None of above
- 142.** In a research paper, a chemist describes the texture of a new compound as 'gritty'. What type of observation is this?
- (A) Qualitative
 - (B) Quantitative
 - (C) Experimental
 - (D) Theoretical
- 143.** If you would want to explore the behavior, learning patterns, reasoning mechanisms, and creativity demonstrated by your students, which method is most appropriate to use?
- (A) Naturalistic observation
 - (B) Focused group discussion
- 144.** A advantage to COVERT observations is that the researcher gets access to groups that might not normally agree to participate in research.
- (A) True
 - (B) False

145. What is the primary source of ethnographic data?
- (A) Participant observation
 - (B) Structured interview
 - (C) Cultural practice
 - (D) Document study
146. This observation method makes you see or listen to everything that happens in the area of observation.
- (A) Participant Observation
 - (B) Observation
 - (C) Indirect Observation
 - (D) Direct Observation
147. What is the best data collection method to determine if not using car seat belts increases deaths in car accidents
- (A) Census
 - (B) Sample Survey
 - (C) Experiment
 - (D) Observational Study
148. Privileged observer does what?
- (A) Participate in the activities
 - (B) Does not participate in the activities
 - (C) Has the privilege of being an observer
 - (D) None of above
149. How are observations made?
- (A) Only with your eyes.
 - (B) By trying to explain what you see.
 - (C) Using your 5 senses
 - (D) Just making a good guess.
150. Visual cues that add detail or human interest
- (A) Rapport
 - (B) Interview
 - (C) Follow up questions
 - (D) Observing details
151. You want to explore user behavior in a natural setting without interfering. What method should you use?
- (A) Focus group
 - (B) Survey
 - (C) Interview
 - (D) Passive observation
152. Participant-as-observer: weakness is that participants might not behave naturally because they are aware that they are being studied (disappears when they begin to trust the researcher or adjust to his/her presence)
- (A) True
 - (B) False
153. Compared to the others, which example BEST illustrates the observational method?
- (A) Chris puts a glass to the wall so that he can hear the neighbors argue.
 - (B) Elaine positions herself near a traffic light and records how many drivers run through red lights.
 - (C) Gustavo stops people on the street to ask them how they voted in the last election.
 - (D) Twyla videotapes her sister's wedding, focusing on sentimental and silly moments.
154. Choose the correct option that mentioned correct observational tools.
- (A) Observation sheets, Surveys, Records, Visuals
 - (B) Observation sheets, Observation notes, Recording&Transcription, Visuals
 - (C) Observation notes, Interviews, Transcription, Classroom Documents
 - (D) Interviews, Questionnaires, Journals&Logs, Classroom Documents
155. Watching the behaviors of your customers to gain valuable marketing information is an example of what type of data collection method?
- (A) Experimental method
 - (B) Interview
 - (C) Observation method
 - (D) Survey method
156. In a structured observation, the tool used to tally for target behaviours is known as

- (A) Interview schedule
 - (B) Questionnaire
 - (C) Behavioural checklist
 - (D) Feedback sheet
157. If researchers were watching high school students in class this would be considered what type of research?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Laboratory observation
 - (D) Longitudinal
158. What is it called when the group is aware they are being observed?
- (A) Covert
 - (B) Non-participant
 - (C) Overt
 - (D) Participant
159. Subjects that are seen or recorded in their typical/natural environment without trying to manipulate and control the situation
- (A) Case Study
 - (B) Survey of Nature
 - (C) Nature Observation
 - (D) Naturalistic Observation
160. What is the difference between participant observation and non-participant observation?
- (A) Participant observation needs many interviews
 - (B) Non-participant observation means a researcher takes part
 - (C) Participant observation requires a researcher to take part
 - (D) Non-participant observation means a researcher films events
161. What is the term for the following definition? A behavioral recording technique where the activity of the individual or group is recorded only at preselected time intervals.
- (A) Scan sampling
 - (B) Continuous recording
 - (C) Event sampling
 - (D) Focal sampling
162. Observations by a collaborator during the conduct of classroom action research are mainly focused on ____
- (A) Both the teacher's teaching and more importantly students' learning behavior.
 - (B) Detailed descriptions of class progress from minute to minute.
 - (C) Class atmosphere during the implementation of the strategy.
 - (D) Student-student and teacher-student class interactions.
163. During a school event, Tisha observes her classmates interacting without speaking, using various gestures and activities to communicate. The data collection method she uses to study these nonverbal behaviours is called ____
- (A) Observation
 - (B) Survey
 - (C) Interview
 - (D) None of above
164. Class list log, in writing down observations,, it should be objective rather than subjective.
- (A) True
 - (B) False
165. Jane Goodall observing apes in their natural habitat is an example of conducting a ____
- (A) Case study
 - (B) Naturalistic observation
 - (C) Cross-sectional method
 - (D) Longitudinal method
166. Keep an eye on someone to get a piece of real information about him, called?
- (A) Observation for research.
 - (B) Assessment.
 - (C) Survey
 - (D) Planning

167. How do you ensure inter-observer/inter-rater reliability?
- (A) Observers are trained to code behaviours in different ways
 - (B) Observers are trained to code behaviours in the same way
168. What is the term for a systematic, organized, and objective procedure to record behavioral phenomena occurring naturally in real time?
- (A) Interview
 - (B) Case Study
 - (C) Observation
 - (D) Self-Report
169. Every five minutes during math class, the teacher notes when Helen is on or off task. Helen's behavior is being observed and recorded using which of the following methods?
- (A) Interval recording
 - (B) Anecdotal
 - (C) Latency
 - (D) None of the choices listed here
170. A noted psychologist and environmentalist, Dr. Fouz, has received a grant to study older persons' bird-feeding behavior in public parks. Dr. Fouz has research assistants sit in public parks to collect the data. Dr. Fouz has chosen a ___ research method.
- (A) Case Study
 - (B) Controlled Experiment
 - (C) Natural Observation
 - (D) Survey
171. Which is the most appropriate data collection method to use when a business wants to determine how its employees interact with customers?
- (A) Experiment
 - (B) Observation
 - (C) Employee survey
 - (D) Telephone interview
172. What research method would be best for examining student teacher interactions?
- (A) Longitudinal Study
 - (B) Case Study
 - (C) Survey
 - (D) Naturalistic Observation
173. Professor MacDougall is interested in the reaction of students to a new university policy requiring attendance at all class meetings. Professor MacDougall inconspicuously listens to student conversations when the topic comes up and records the students' opinions. This technique represents
- (A) Observational
 - (B) Experimental
 - (C) Archival
 - (D) Correlational
174. Which type of research design in psychology aims to observe and record behavior without manipulating variables?
- (A) Experimental
 - (B) Correlational
 - (C) Naturalistic observation
 - (D) Longitudinal study
- Tags: DOK Level 2: Skill/Concept
175. Which is an undisclosed participant observation?
- (A) Rosenhan's pseudopatient study
 - (B) Milgram's obedience study
 - (C) Asch's conformity study
 - (D) Bandura's Bobo doll study
176. Type of observation where the person does not know they are being observed.
- (A) Natural
 - (B) Controlled
 - (C) Overt
 - (D) Covert
177. A method of collecting data where it enables job analysts to observe employees in their daily routines
- (A) Questionnaire Method
 - (B) Interview Method
 - (C) Observation Method
 - (D) Structured Interview Method

- 178.** The following options show classifications of the Observation technique. One alternative is incorrectly stated. Indicate which one:
- (A) Human observation and robotic observation
 - (B) Direct observation and indirect observation
 - (C) Participant observation and non-participant observation
 - (D) Structured observation and unstructured observation
- 179.** What is gathering information (data) directly about natural phenomena?
- (A) Inference
 - (B) Observation
 - (C) Hypothesis
 - (D) Theory
- 180.** Developmental psychologist Arthur Chang watches children in a daycare center through a one-way mirror. Chang is utilizing which form of research?
- (A) Case study
 - (B) Correlational
 - (C) Naturalistic observation
 - (D) Esurvey
- 181.** In non-participant observation, the researcher primarily does what?
- (A) Conducts phone interviews
 - (B) Manipulates the environment
 - (C) Becomes part of the group
 - (D) Observes without interacting
- 182.** What is a key benefit of contextual inquiries in online research?
- (A) It eliminates the need for surveys
 - (B) Participants can control the researcher's computer
 - (C) Researchers can observe real-time user behavior
 - (D) No need for participant consent
- 183.** Which of the following is an example of an unobtrusive method for collecting data on video game play?
- (A) Collecting data from game consoles to track actual minutes played without participants' awareness
 - (B) Distributing questionnaires asking students to estimate their weekly play time
 - (C) Conducting focus group discussions about gaming habits
 - (D) Interviewing students about their favorite video games and play frequency
- 184.** When gathering qualitative data through observations, the presence of the researcher has no effect on the behavior of the subjects being observed.
- (A) TRUE
 - (B) FALSE
 - (C) It depends on the situation and the context of the participant and the observer.
 - (D) None of above
- 185.** Watching behavior in real-world settings without trying to manipulate the situation
- (A) Sleep therapy
 - (B) Bird watching
 - (C) Naturalistic observation
 - (D) Home study
- 186.** In terms of data collection, a structured observation is one in which:
- (A) The observer records everything seen
 - (B) The observer uses a checklist or predetermined categories
 - (C) The observer interacts with participants
 - (D) The observer analyzes survey results
- 187.** The process of collecting data by recording facts or events
- (A) Modeling
 - (B) Simulation
 - (C) Observation
 - (D) Scientific method

- 188.** Which type of observation involves the researcher actively joining the group?
- (A) Participant observation.
 - (B) Non-participant observation.
 - (C) Controlled observation.
 - (D) Experimental observation.
 - (E) Secondary observation.
- 189.** What skill does a scientist show when she listens to the sounds that whales make?
- (A) Making a hypothesis
 - (B) Making observations
 - (C) Interpreting Data
 - (D) Drawing Conclusions
- 190.** Comprises the thoughts of a researcher whenever he notices anything, talks to someone, participates in an activity or observes something that helps him understand or add to whatever he are trying to find out about.
- (A) Interview
 - (B) Participant observation
 - (C) Social survey
 - (D) Reflective journal log
- 191.** Why might naturalistic observation have high ecological validity but also face challenges?
- (A) It is conducted in controlled settings, making it less authentic.
 - (B) It occurs in real-world environments but may be difficult to control external factors.
 - (C) It allows researchers to manipulate variables in the field.
 - (D) It has low external validity because of the natural setting. Edit
- 192.** If the researcher becomes involved in the behaviour being observed, this is known as:
- (A) Focus group
 - (B) Observation
 - (C) Personal reflection
 - (D) Participant Observation
- 193.** The apple is shiny, red, and round. What type of observations are these?
- (A) Quantitative
 - (B) Qualitative
- 194.** What is a potential disadvantage of non-participant observation?
- (A) Objectivity and neutrality
 - (B) Limited representativeness
 - (C) Careful analysis is possible
 - (D) Participants are more willing to respond
- 195.** Qualitative researchers may record observational data in the form of
- (A) Field notes
 - (B) Tally charts
 - (C) Behavioural categories
 - (D) Frequency tables
- 196.** Which method of data collection allows researchers to gather information about customers in a natural setting?
- (A) Focus group
 - (B) Experiment
 - (C) Observation
 - (D) Personal interview
- 197.** Tyler walks into a Starbucks, and keeps track of how many caramel cinnamon lattes are being sold to gather data. What method is he using?
- (A) Survey
 - (B) Observation
 - (C) Product Mix
 - (D) Product line
- 198.** An example of using observations in research is:
- (A) Conducting surveys
 - (B) Performing experiments
 - (C) Recording behaviors
 - (D) Analyzing data
- 199.** Scientists track a flock of birds for three years to learn their migratory patterns.

- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
- 200.** What kind of observation is being made in the following statement: The liquid is a pink color.
- (A) Qualitative
 - (B) Quantitative
- 201.** What characterizes active observation?
- (A) Working side-by-side with the customer to gain understanding from their perspective
 - (B) Silently watching customers without interaction
 - (C) Collecting survey responses through an online form
 - (D) Interviewing a single participant at a time
- 202.** The dog has a black nose.
- (A) Qualitative Observation
 - (B) Quantitative Observation
 - (C) Inference
 - (D) None of the above
- 203.** What is “reactivity” in observational research?
- (A) Participants changing behavior because they know they are being observed
 - (B) The researcher’s bias
 - (C) The effect size
 - (D) The correlation coefficient
- 204.** What is the problem with behavioral observations?
- (A) Difficult to obtain permission
 - (B) Instruments for recording behavior are not well developed
 - (C) Difficult to score and time-consuming
 - (D) Selection is not random in samples
- 205.** What is the purpose of using Observations as a data collection method?
- (A) To gather numerical data
 - (B) To watch behaviors in natural settings
 - (C) To conduct experiments
 - (D) To analyze statistical data
- 206.** ____, a form of observational research, involves sending observers to watch and interact with consumers in their natural environments.
- (A) Group interviewing
 - (B) Ethnographic research
 - (C) Survey research
 - (D) Experimental research
 - (E) Causal research
- 207.** When devising an observation schedule it is important that the observer
- (A) Has a clear focus about who and what he is observing.
 - (B) Uses mathematical models.
 - (C) Uses observing environment.
 - (D) Takes into account the research area.
- 208.** Which method involves the researcher living within a community to understand their daily practices and social interactions?
- (A) Interview
 - (B) Observation
 - (C) Focus group
 - (D) Experiment
- 209.** It refers to a data collection technique wherein the researcher is on the actual situation and records pertinent data.
- (A) Experiment
 - (B) Interview
 - (C) Observation
 - (D) None of above
- 210.** What is observing and recording behavior in naturally occurring situations without trying to manipulate and control the situation?
- (A) Operational Definition
 - (B) Naturalistic Observation
 - (C) Illusory Correlation
 - (D) Experimental Group

211. Qualitative research employs an inductive methodology. The procedure is always initiated by
- (A) Reading literature
 - (B) Analyse pattern
 - (C) Observation
 - (D) Testing hypothesis
212. Jane Goodall lived among wild chimpanzees intermittently for decades, studying their social and family systems while keeping her interaction with the chimpanzees to a minimum. Her research method can most accurately be described as a ____
- (A) Survey
 - (B) Case study
 - (C) Experiment
 - (D) Observation
213. The data collection method used to study nonverbal behaviours such as gestures and activities is called ____
- (A) Observation
 - (B) Survey
 - (C) Interview
 - (D) None of above
214. Non-participant observer: a researcher who does not become involved in the situation being studied, e.g. by ____ through one way glass or by keeping ____ from the social group of the participants.
- (A) Observing, apart
 - (B) Interacting, close
 - (C) Participating, involved
 - (D) Engaging, near
215. Which of the following is a primary research method for gathering data?
- (A) Accessing published ratings/circulation figures
 - (B) Using internet searches
 - (C) Observations
 - (D) Analyzing market trends
216. Provide an example of a structured observation technique used in quantitative research.
- (A) Case study
 - (B) Behavioral coding
 - (C) Interview
 - (D) Survey
- Explanation:** Behavioral coding is a structured observation technique commonly used in quantitative research. It involves systematically recording and categorizing observable behaviors. This technique allows for objective data collection and analysis, making it a reliable method for studying behavior.
217. When you use your senses to gather information, you're making an ____
- (A) Observation
 - (B) Inference
218. Using one or more of your senses to gather information
- (A) Classifying
 - (B) Observing
 - (C) Inferring
 - (D) Predicting
219. What does it mean to 'go native' in research?
- (A) When an observer joins the group and never returns to their former lives
 - (B) When a researcher decides to become a Native American
 - (C) When a researcher tells the police about illegal activities during their observation.
 - (D) None of above
220. Naturalistic observation: study conducted by watching the participants' behavior in their ____ environment without interference from the researchers in either the social or physical environment.
- (A) Normal
 - (B) Observing
 - (C) Interfering
 - (D) Watching

221. Non-Participant Observation is a form of Quantitative Research
(A) True
(B) False
222. Another term for self-observation in which one's own mental and emotional processes are described is ____
(A) Experiment
(B) Introspection
(C) Survey
(D) None of above
223. One of the following is the limitation of observation method
(A) Study of the behaviour of students directly
(B) Recording of previously decided behavioural aspects
(C) Assessing the behaviour, based on external behaviour only
(D) Study of the behaviour of animals and mental patients
224. In the documentary "Salam, Neighbor", the film-makers go to Jordan and live in a Syrian refugee camp, developing close relationships with the displaced people living there. What kind of research is this?
(A) Case study
(B) Participant Observation
(C) Program Evaluation
(D) Demographic Information Edit
225. What is one of the sources of evidence that academic disciplines could use?
(A) Logic
(B) Observation
(C) Disjunction
(D) Analogies
226. A type of observation that takes part in the activities of the individual or group being observed.
(A) Participant Observation
(B) Non-participation
(C) Direct Observation
(D) Indirect Observation
227. The speed of the car is 55 mph.
(A) Qualitative Observation
(B) Quantitative Observation
228. The flowers are green and blue.
(A) Qualitative Observation
(B) Quantitative Observation
(C) Inference
(D) Hypothesis
229. A researcher has recorded that, during a typical day in a primary school classroom, green-eyed children are more likely than blue-eyed children to ask questions. This researcher most likely employed a(n) ____ research method to gather data. A researcher most likely employed a(n) research method to gather data.
(A) Observational
(B) Archival
(C) Experimental
(D) Interview
230. When the observer becomes part of the community (or group of people) they wish to observe (can be overt or covert).
(A) Observations
(B) Overt Observations
(C) Covert Observations
(D) Participant Observations
(E) Non-Participant Observations
231. The hallway is warmer than the science room. What type of observation is this?
(A) Qualitative
(B) Quantitative
(C) All the above
(D) None of the above
232. List the strengths of Naturalistic Observation.
(A) Strengths of naturalistic observation include high ecological validity and the ability to observe natural behaviors.

- (B) It allows for manipulation of variables in a controlled environment.
- (C) It guarantees that observer bias will not occur.
- (D) It ensures that all participants are aware they are being studied at all times.
- 233.** The researcher immerses himself/ herself in the setting where his respondents are and keeps a keen eye on the participants and takes down notes.
- (A) Process of Observation
- (B) Focus Groups
- (C) Case Studies
- (D) Longitudinal Studies
- 234.** What is a potential challenge of using observation for market research?
- (A) Ensuring the data is accurate and unbiased.
- (B) Reducing marketing costs.
- (C) Avoiding customer feedback.
- (D) Focusing only on competitors.
- 235.** When you use your 5 senses to gather information, you are making a/an
- (A) Observation
- (B) Inference
- (C) Scientific Wondering
- (D) None of above
- 236.** Students in a science class record the behavior of their class pet by looking at the pet's behavior. What type of data collection method is this?
- (A) Experiment
- (B) Observational Study
- (C) Survey
- (D) Simulation
- 237.** Naturalistic observation
- (A) A research method involving controlled experiments in a lab setting.
- (B) A technique where subjects are observed in their natural environment.
- (C) A method that relies on self-reported data from participants.
- (D) A strategy that uses surveys to gather information from a large group.
- 238.** The sky is usually blue during the day. What type of observation is this?
- (A) Quantitative
- (B) This is not an observation it is an opinion.
- (C) Qualitative
- (D) None of these
- 239.** This is NOT a form of observation research.
- (A) -A traffic counting machine monitors traffic flow at a store entrance
- (B) -A survey is handed to customers upon exiting a retail store
- (C) -A video camera records what people do while shopping
- (D) None of above
- 240.** What is the term for when observations may be skewed to align with observer expectations?
- (A) Observer bias
- (B) Confirmation bias
- (C) Sampling error
- (D) Placebo effect
- 241.** It refers to the process of systematic noting and recording of events.
- (A) Observation
- (B) Experimentation
- (C) Measurement
- (D) Data gathering
- 242.** A noted psychologist and environmentalist, Dr. Limon, has received a grant to study older persons' bird-feeding behavior in public parks. Dr. Limon has research assistants sit in public parks to collect data. Dr. Limon has chosen a ___ method.
- (A) Naturalistic observation
- (B) Case study
- (C) Controlled experiment
- (D) Survey

243. The action or process of observing something or someone
(A) Research Analysis.
(B) Research and Development (R&D) in Education.
(C) Experimental Research.
(D) Observation.
244. The flower was red.
(A) Qualitative observation
(B) Quantitative observation
245. The kitten has 2 ears.
(A) Qualitative Observation
(B) Quantitative Observation
(C) Inference
(D) None of above
246. What does participant observation involve?
(A) Observing participants from a distance without interaction.
(B) The researcher becoming a member in a social setting and observing.
(C) Participants observing the researcher in a controlled environment.
(D) The researcher conducting surveys among participants.
247. Which data collection approach is most appropriate when one wants to record the behavior of people and their interaction with each other?
(A) In-depth interviews
(B) Focus group discussion
(C) Observation
(D) Document reviews
248. What observation is used when the researcher/observer becomes a part of the observed group?
(A) Participant observation
(B) Overt observation
(C) Naturalistic observation
(D) Laboratory observation
249. You observe that it's extremely hot today. What is a potential weakness of using this observation in support of an argument?
(A) The observation is inaccurate.
(B) The observations does not take temperature into account.
(C) The observation could only be true for certain times of day.
(D) The observation may not be true for another observer.
250. Observing the behaviors, customs and ways of living of the group by way of becoming a regular member of the group, is known as
(A) Participant observation.
(B) Direct observation.
(C) Non-participant observation.
(D) Natural observation.
251. Detailed factual of what the recorder sees and hears. Best its written immediately after the incident.
(A) Anecdotal Recording
(B) Class List Log
(C) Checklist
(D) Running Record
252. Involve the perception of data using your senses or scientific instruments
(A) Inference
(B) Volume
(C) Hypothesis
(D) Observation
253. What is an observation?
(A) A group of people assembled to participate in a discussion about a product before it is launched.
(B) A set of printed or written questions with a choice of answers.
(C) A structured conversation where one person asks questions, and the other provides answers.
(D) The action or process of closely observing or monitoring something or someone.

254. A primary research technique in which the actions are watched and recorded by either cameras or observers.
- (A) Experimental method
 - (B) Survey method
 - (C) Observation method
 - (D) Focus group method
255. Which scientific method is being described below: observing and recording in a natural setting
- (A) Naturalistic observation
 - (B) Case study
 - (C) Survey
 - (D) Replication
256. This term refers to an ethnographic research strategy defined as an extended observation of a group in which the researcher is immersed in the day-to-day lives of the people.
- (A) Immersion
 - (B) Field Study
 - (C) Participant Observation
 - (D) Surveying
257. Which of these answers is not one of the three ways that scientists use to observe and study behavior?
- (A) Case Study
 - (B) Correctional Method
 - (C) Naturalistic Observation
 - (D) Survey
258. Observation where observer joins the group being observed.
- (A) Non-Participant
 - (B) Participant
 - (C) Covert
 - (D) Overt
259. Which data collection method would you use to collect data for this study? A study of how fourth grade students solve a puzzle.
- (A) Observational Study
 - (B) Experiment
 - (C) Survey
 - (D) Simulation
260. Participant observation is most often applied in:
- (A) The field of anthropology and social studies
 - (B) The field of chemistry and laboratory sciences
 - (C) The field of mathematics and computation
 - (D) The field of education and political sciences
261. In this study technique you observe the behavior and how customers interact with products in their daily life
- (A) Ethnography
 - (B) Customer journey map
 - (C) Surveys
 - (D) Social experiments
262. ____ involves observing behavior in individuals in their natural environments.
- (A) Archival research
 - (B) Case study
 - (C) Naturalistic observation
 - (D) Survey
263. A case study on workplace culture finds that employees behave differently when the researcher is present. What is this effect called?
- (A) Observer effect
 - (B) Data saturation
 - (C) Theoretical sampling
 - (D) Sampling bias
264. A remark, statement or comment based on something one has seen, heard or noticed.
- (A) Hearsay
 - (B) Gossip
 - (C) Observation
 - (D) Noticed Actions

265. May miss behaviors as they are observing from a distance.
- (A) General Weakness of Observations
 - (B) Weakness of Overt Observations
 - (C) Weakness of Covert Observations
 - (D) Weakness of Participant Observations
 - (E) Weakness of Non-Participant Observations
266. According to Calhoun (2002), participant observation requires:
- (A) Building experiments on locally sourced natural resources
 - (B) Reading and summarizing written local narratives
 - (C) Immersion and participation in daily practices
 - (D) Education and awareness through cultural festivals and heritage tourism
267. The data recorded during an observation is called ____
- (A) Sampling
 - (B) Response
 - (C) Field note
 - (D) Conducting
268. An independent department store wants to collect information regarding the most common route customers take when walking through its store. Which of the following is the most suitable way for the business to gather this information?
- (A) Internet research
 - (B) Focus group
 - (C) Observation
 - (D) Questionnaire
269. A researcher wants to explore how users interact with a new interface in real time. What method is best?
- (A) Observation
 - (B) Case study
 - (C) Survey
 - (D) Interview
270. If a research works at a cafeteria, and observes the waiters, this is an example of?
- (A) Observation
 - (B) Focus group
 - (C) Interview
 - (D) Document review
271. Information gained using the 5 senses
- (A) Observation
 - (B) Inference
 - (C) Qualitative
 - (D) Quantitative
272. What is referred to as accompanying observations about the participant and the context of the interview/observation?
- (A) Transcript
 - (B) Notes
 - (C) Screenshot
 - (D) Checklist
273. Process of gathering information about events or processes in an orderly way
- (A) Observations
 - (B) Data
 - (C) Inference
 - (D) None of the above
274. ____ is a method of collecting data or information in which you watch research participants for a specific amount of time and record whether or no particular behavior or activity took place.
- (A) Time Sampling
 - (B) Frequency Count
 - (C) Observation
 - (D) Running Record
275. What are observational measures in the context of relationship research?
- (A) Observational measures involve watching couples' actual behaviors in relationships.
 - (B) Observational measures are surveys about couples' feelings.

- (C) Observational measures are interviews with relationship experts.
(D) Observational measures are written reports by couples about their experiences.
- 276.** Which is considered a disadvantage of naturalistic observation?
(A) It provides an overabundance of information
(B) It deals with behavior not tampered with by outside influences
(C) It limits biased observations through careful record keeping
(D) It doesn't identify the cause of observed behavior
- 277.** The main advantage of participant observation is that it:
(A) Maximizes the contact between researcher and locals
(B) Produces extensive numerical and statistical data
(C) Saves costs by reducing time spent in the field
(D) Provides deeper insight into cultural practices
- 278.** Observation of subject's behavior in their natural habitats is called ____
(A) A case study
(B) A cross-sectional study
(C) A longitudinal study
(D) Naturalistic observation
- 279.** I think Allie is happy because I heard her laughing.
(A) Qualitative observation
(B) Inference
(C) Quantitative observation
(D) None of above
- 280.** What is the main characteristic of naturalistic observation?
(A) Psychologists manipulate the environment
(B) Psychologists observe the subject in a natural setting without interfering
(C) Psychologists conduct experiments in a lab
(D) Psychologists interview the subjects
- 281.** When is observation used to collect data?
(A) When experiments are easy to perform
(B) When practical or ethical reasons prevent experiments
(C) When data is not needed
(D) When a hypothesis is not required
- 282.** What is a potential issue with first-person observations?
(A) They are always accurate and unbiased
(B) They may be colored by danger, emotions, or stress
(C) They include all necessary details
(D) They are the most reliable form of evidence
- 283.** On observation experiences during Field study, what is the significance of the intended aim in observing environment, learners and teachers?
(A) Purpose
(B) Focus
(C) Intentionally
(D) Process
- 284.** A researcher counts how many times people smile during a conversation. What type of design is this?
(A) Experimental
(B) Correlational
(C) Observational
(D) Survey
- 285.** What is structured observation?
(A) The analysis of tall buildings.
(B) A technique in which the researcher observes behavior from one position in the workplace.
(C) A technique in which the researcher uses specific rules for behavior observation.

- (D) A technique in which the researcher observes behavior from a covert location.
- 286.** In addition to active listening, what action helps in understanding a speaking customer?
- (A) Typing
 - (B) Speaking fluently
 - (C) Observation
 - (D) Tidying the store
- 287.** What is non-participant observation?
- (A) Researchers pay participants.
 - (B) Participants observe researchers.
 - (C) Research that has no participants.
 - (D) Where the researcher observes participants.
- 288.** Ollie, a nursery school student, hypothesizes that boys have fights with the finger paints more than girls do. She tests her hypothesis by casually watching the finger painting table for 3 days of nursery school. What method is she using?
- (A) Informal survey
 - (B) Case study
 - (C) Naturalistic observation
 - (D) Ethnography
- 289.** Which step in the observation process involves deciding who will be doing the observation and providing necessary training?
- (A) Planning
 - (B) Self-Evaluation
 - (C) Recording
 - (D) Interpretation
 - (E) Execution
- 290.** Types of Observation
- (A) Controlled and uncontrolled
 - (B) Surveys and interviews
 - (C) Open and close
 - (D) Written and oral
 - (E) No correct answer
- 291.** More likely to be objective as they are not personally involved in the situation.
- (A) General Strength of Observations
 - (B) Strength of Overt Observations
 - (C) Strength of Covert Observations
 - (D) Strength of Participant Observations
 - (E) Strength of Non-Participant Observations
- 292.** Along with experiments, scientists can also collect data through ____
- (A) Debates
 - (B) Explanations
 - (C) Observations
 - (D) Theories
- 293.** What kind of observation is in the picture?
- (A) Quantitative
 - (B) Qualitative
 - (C) Neither quantitative nor qualitative
 - (D) None of above
- 294.** It is a collection data technique which includes watching how a customer acts in a retail area, how he/she dresses up, and what the customer says when he/she sees the product.
- (A) Survey
 - (B) Questionnaire
 - (C) Experimentation
 - (D) Observation
- 295.** Imagine Luna and Sophia are on a detective mission in their science project. What does "Observation" involve in their research?
- (A) The clues that help prove their hypothesis
 - (B) The final answer after gathering all the evidence
 - (C) Using their senses to gather information
 - (D) The most important message in a text
- 296.** Mystery shopping uses what type of method for collecting primary data.
- (A) Focus group
 - (B) Observation
 - (C) Experiment
 - (D) Survey

- 297.** It means that the observers are not visible in the setting.
(A) Observation
(B) Unobstrusive
(C) Invisible
(D) None of above
- 298.** It is qualitative study technique that helps you understand the behavior of customers
(A) Survey
(B) Interview
(C) Observation
(D) Customer journey maps
- 299.** What is a benefit of detached observations in research?
(A) Researchers can directly interact with participants.
(B) Behavior is not affected since people don't know they're being watched.
(C) It allows researchers to control the environment.
(D) It ensures all important details are captured.
- 300.** How do focus groups allow researchers to examine interactions?
(A) By preventing any disagreements among participants
(B) By observing how the group interacts and reacts to each other's comments
(C) By allowing only one person to speak at a time
(D) By reinforcing the researcher's own opinions
- 301.** When conducting an observation people might act differently because they know they are being watched. This is called ____
(A) Valid Research
(B) The Hawthorne Effect
(C) The Doppler Effect
(D) The Butterfly Effect
- 302.** The leaves on the plant are turning brown.
(A) Qualitative observation
(B) Quantitative observation
(C) Both qualitative and quantitative observation.
(D) This is not a qualitative or quantitative observation.
- 303.** What does this mean by "unobtrusive"?
(A) The researcher does not try to control or handle the phenomenon
(B) The researcher tries to control or handle the phenomenon
- 304.** Which observational research method enables researchers to witness behavior in settings that are not artificial or manipulated?
(A) Testing
(B) Laboratory study
(C) Naturalistic observation
(D) Case study
- 305.** When the accuracy of the observer's observations is influenced by their personal experiences and motives
(A) Prejudice
(B) Observer effect
(C) Observer bias
(D) None of above
- 306.** Which type of research method involves collecting data without the participants' knowledge to reduce bias, often using hidden observation or deception?
(A) Unobtrusive
(B) Obtrusive
(C) Likert-type
(D) Semantic differential
- 307.** Observation or Inference: The goat pushed the boy into the pond.
(A) Observation
(B) Inference

- 308.** The observation method of collecting marketing-research data involves:
- (A) Watching what customers do
 - (B) Test marketing new products
 - (C) Conducting online surveys
 - (D) Calling customers on the telephone
- 309.** This observation is done when everyone knows they are being observed.
- (A) Overt.
 - (B) Covert.
 - (C) Either (A) or (B).
 - (D) Neither (A) nor (B).
- 310.** Observation or Inference? Sound traveled faster through the desk than through the air.
- (A) Observation
 - (B) Inference
- 311.** Fully takes on the role of outside observer; does not inform the group being studied that they are being observed and they usually will not know that they are being observed
- (A) Complete Observer
 - (B) Observer-as-participant
- 312.** In some research situations, observation can be:
- (A) Quantitative about the nature
 - (B) A primary source
 - (C) A primary qualitative source
 - (D) A primary source of either quantitative or qualitative information about phenomena
 - (E) A primary source of qualitative information about the nature
- 313.** The process of observing and collecting data about people, cultures, and natural environments in their natural settings is known as:
- (A) Laboratory research
 - (B) Peer evaluation
 - (C) Fieldwork
 - (D) Statistical analysis
- 314.** Covert observer: the role of the observer is not obvious because they are ____
- (A) Hidden/disguised
 - (B) Visible
 - (C) Obvious
 - (D) Transparent
- 315.** Structured observation: a study in which the observer records only a ____ range of behaviors.
- (A) Limited
 - (B) Extensive
 - (C) Random
 - (D) Uncontrolled
- 316.** A researcher is conducting a study where he is secretly observing participants to see how they behave at their place of work. This type of study is called
- (A) Naturalistic Observation
 - (B) Case Study
 - (C) Experiment
 - (D) Survey
 - (E) Interview
- 317.** There are TWO windows in the classroom. What type of observation is this?
- (A) Qualitative
 - (B) Quantitative
 - (C) All the above
 - (D) None of the above
- 318.** A particular type of participant observation in which the identity of the researcher, the nature of the research project, and the fact that participants are being observed are concealed from those who are being studied
- (A) Field experiment
 - (B) Covert observation
 - (C) Participatory observation
 - (D) Structured interviews
- 319.** More ethical as participants know they are being observed.
- (A) General Strength of Observations

- (B) Strength of Overt Observations
 - (C) Strength of Covert Observations
 - (D) Strength of Participant Observations
 - (E) Strength of Non-Participant Observations
- 320.** Careful observations of humans or animals in real life situations
- (A) Case study
 - (B) Survey
 - (C) Naturalistic observation
 - (D) None of above
- 321.** What does observation research focus on?
- (A) Survey responses
 - (B) Historical records
 - (C) Directly watching human behavior
 - (D) Lab-controlled settings
- 322.** Can be replicated by others when using the same behavior schedule.
- (A) Strength of Structured Observations
 - (B) Strength of Unstructured Observations
 - (C) Strength of Naturalistic Observations
 - (D) Strength of Controlled Observations
- 323.** What is the overall perk of using observations?
- (A) The ability to have first-hand experiences
 - (B) The ability to control data
 - (C) The ability to generate diverse data about the behavior of participants in a naturally occurring setting.
 - (D) None of above
- 324.** Which method is typically used in ethnographic reports to gain a deep understanding of a community's cultural practices?
- (A) Statistical analysis
 - (B) Participant observation
 - (C) Experimental design
 - (D) Secondary data analysis
- 325.** Observation technique is most useful when studying:
- (A) Attitudes.
 - (B) Opinions.
 - (C) Motivations.
 - (D) Behaviours.
- 326.** The statement 'The water is cold' is an example of which type of observation?
- (A) Qualitative
 - (B) Quantitative
 - (C) Numerical
 - (D) Experimental
- 327.** A researcher secretly becomes an active member of a group in order to observe their behaviour. This researcher is acting as:
- (A) An overt participant observer
 - (B) A covert non-participant observer
 - (C) A covert participant observer
 - (D) None of the above
- 328.** Explain the observation method used in psychological research.
- (A) It involves conducting surveys to gather data.
 - (B) It requires the researcher to observe subjects in their natural environment.
 - (C) It focuses on analyzing historical documents.
 - (D) It is primarily used for experimental manipulation.
- 329.** What is the role of observation in descriptive research?
- (A) To manipulate variables
 - (B) To assign participants
 - (C) To gather data without interference
 - (D) To test hypotheses
- 330.** If Sharon spent a week living as a Tattoo Artist, this would be an example of ____
- (A) Non-participant observation
 - (B) Bad judgement
 - (C) Quantitative Research
 - (D) Participant observation

331. In the Naturalistic-Observation Method, researchers have no control over what?
- (A) The setting
 - (B) The events
 - (C) The participants
 - (D) Both A and B.
332. Observation method is related to..
- (A) Real life situation
 - (B) Laboratory situations
 - (C) Experimental situations
 - (D) None of these
333. Naturalistic observation involves studying subjects in their natural environment without — or control of variables.
- (A) Manipulation
 - (B) Observation
 - (C) Measurement
 - (D) Classification
334. May gain a greater understanding of the participants' behavior as they are involved in the situation.
- (A) General Strength of Observations
 - (B) Strength of Overt Observations
 - (C) Strength of Covert Observations
 - (D) Strength of Participant Observations
 - (E) Strength of Non-Participant Observations
335. Which method is being used? An owner of a shop want to know what her customers think about the new line of products she has gotten in. She looks at the days sales and records what percentage of sales were from the new product line.
- (A) Observation
 - (B) Convenience
 - (C) Voluntary response
 - (D) Systematic
336. A museum wants to know what the most popular exhibit is so it looks for the most worn out area in front of the exhibits. This is —
- (A) Observation
 - (B) Experiment
 - (C) Survey
 - (D) Focus Groups
337. Conducted in a real-life setting.
- (A) Structured Observations
 - (B) Unstructured Observations
 - (C) Naturalistic Observations
 - (D) Controlled Observations
338. True/False: An observer could lose objectivity using the method of participant observation.
- (A) True
 - (B) False
339. Which primary data collection method involves collecting data by observing individuals in their natural environment without their knowledge or consent?
- (A) Covert observations
 - (B) Overt observations
 - (C) Participatory observations
 - (D) Structured observations
340. In a naturalistic observation, a researcher
- (A) Asks people directly or indirectly what they think, feel, or have done.
 - (B) Observes one person, often over a long period of time.
 - (C) Observes and records behavior in the real world.
 - (D) Asks questions that can have completely open-ended answers.
341. Brief notes teachers take as they observe children.
- (A) Running Notes
 - (B) Anecdotal Notes
 - (C) Lesson plan notes
 - (D) Automaticity
342. A researcher wishing to use the field-study method would most likely be found where?

- (A) Interviewing the child's parents
 - (B) Teaching a class of children
 - (C) Observing a school playground
 - (D) Interviewing children individually
- 343.** Which of the following research methods involves observing people in their natural environment without interference?
- (A) Case study
 - (B) Naturalistic observation
 - (C) Field experiment
 - (D) Survey
- 344.** In data collection, what method involves observing behaviors in a natural setting?
- (A) Survey
 - (B) Interview
 - (C) Observation
 - (D) Content Analysis
- 345.** What is the main advantage of observation?
- (A) The ability to generate limited data about the behavior of participants in unnatural settings
 - (B) The ability to generate diverse data about the behavior of participants in naturally occurring settings
 - (C) The inability to generate diverse data about the behavior of participants
 - (D) It's not as boring as doing lab experiments
- 346.** Dr. Nash wants to conduct research on partner abuse. Why would Dr. Nash be unwise to use observational methods for this topic?
- (A) Participants will lie about being abused.
 - (B) Abuse is usually something that occurs privately.
 - (C) There actually are no drawbacks to using observational methods.
 - (D) Dr. Nash will be unable to remain neutral.
- 347.** How can businesses ensure the accuracy of data collected through observation?
- (A) By avoiding customer feedback.
 - (B) By focusing only on competitors.
 - (C) By using standardized observation techniques.
 - (D) By reducing marketing costs.
- 348.** The method of data collection where the researcher observes phenomena without intervening is called:
- (A) Survey
 - (B) Interview
 - (C) Observation
 - (D) Experiment
- 349.** What are field notes used for in observation methods?
- (A) To conduct interviews
 - (B) To record observed behavior
 - (C) To perform experiments
 - (D) To manipulate participants
- 350.** Professor Ober carefully monitors and records the behaviors of children on school playgrounds to track the development of their physical skills. Professor Ober is engaged in:
- (A) Experimentation.
 - (B) Replication.
 - (C) Survey research.
 - (D) Naturalistic observation.
- 351.** While looking for ideas on how to craft a user-friendly dishwasher, the designers of a dishwasher-manufacturing company spent 10 days observing people as they used their dishwashers in their homes. In this instance, the designers were conducting ____
- (A) Survey research
 - (B) Experimental research
 - (C) Quantitative marketing research
 - (D) Ethnographic research
 - (E) Causal research
- 352.** Which from the main methods for collecting qualitative data may take place in natural setting and involve the researcher taking lengthy and descriptive notes of what is happening?
- (A) Interview

- (B) Focus group
 - (C) Observation
 - (D) Research
353. In order for observations to be valid as research evidence, what must be done?
- (A) Isolate specific behaviors of participants
 - (B) Use multiple observations
354. It can be difficult to record all behaviors.
- (A) Weakness of Structured Observations
 - (B) Weakness of Unstructured Observations
 - (C) Weakness of Naturalistic Observations
 - (D) Weakness of Controlled Observations
355. May be less natural if participants are aware of the controlled setting.
- (A) Weakness of Structured Observations
 - (B) Weakness of Unstructured Observations
 - (C) Weakness of Naturalistic Observations
 - (D) Weakness of Controlled Observations
356. Form, used by the researcher before data collection for taking notes during an observation
- (A) Observational protocol
 - (B) Data recording protocol
 - (C) Collecting Documents
 - (D) Conducting Interviews
357. Which primary data collection method involves recording customer actions without direct interaction?
- (A) Focus Group
 - (B) Survey
 - (C) Observation
 - (D) Test Market
358. Which activity best reflects participant observation?
- (A) Reading detailed history books from local libraries
 - (B) Distributing online cultural questionnaires to locals
 - (C) Watching films about cultural traditions of the community
 - (D) Living with a community and joining routines
359. An act of using one or more of your senses to gather information and take note of what occurs is
- (A) Qualitative data
 - (B) Quantitative data
 - (C) An Inference
 - (D) An Observation
360. In participant observation the researcher is part of the group being observed.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
361. You just watch and listen to your target of observation, without you participating in any of their activities.
- (A) Participant Observation
 - (B) Direct Observation
 - (C) Continuous Monitoring
 - (D) Non-participation Observation
362. What is the observation of behavior in its natural setting called?
- (A) Naturalistic observation
 - (B) Controlled observation
 - (C) Participant observation
 - (D) Structured observation
363. Teacher B wrote of Ana: "When Ana came to class this morning, she seemed to be very tired and slouched."
- (A) Incident report
 - (B) Anecdotal report
 - (C) Personality report
 - (D) Observation report
364. In passive observation, what does the researcher primarily do?
- (A) Merely watches a customer in their natural surroundings
 - (B) Works side-by-side with the customer to understand issues

- (C) Directs customers through scripted tasks in a lab
(D) Conducts a group discussion with eight to twelve customers
- 365.** Collecting info by recording actions without interacting or communicating with the participant.
(A) Focus group
(B) Simulation
(C) Survey
(D) Observation
- 366.** Which is the best definition of observation as a research method?
(A) Watching or reading a large sample of printed or broadcast material.
(B) Watching your favourite programs on Netflix
(C) A method to record behaviours in our research.
(D) A way of analysing why people do things.
- 367.** Which of the following technique in which the behavior of research subjects is watched without any direct contact?
(A) Interview
(B) Questionnaire
(C) Observation
(D) Opinionnaire
- 368.** Observation is a technique that involves systematic selection, monitoring, and recording, in a systematic way, of:
(A) People interviewed, either individuals or groups
(B) The behavior and characteristics of organisms, subjects, or phenomena
(C) Local primary health-care activities
(D) Community health outcomes
(E) Community participation
- 369.** Participants are observed in a controlled setting.
(A) Naturalistic Observation Method
(B) Laboratory-Observation Method
(C) Survey Method
(D) Experimental Method
- 370.** A doctor goes back through her records for the past year to see whether more of her patients were males or females.
(A) Observational
(B) Experimental
(C) Survey
(D) None of above
- 371.** It must be summer.
(A) Qualitative Observation
(B) Quantitative Observation
(C) Opinion
(D) Inference
- 372.** You are doing a project for science class to determine the various species of fish in a nearby lake.
(A) Questionnaire/Survey
(B) Interview
(C) Observation
(D) None of the above
- 373.** Which data collection method uses the researcher's sense organs to gather information?
(A) Interview
(B) Observation
(C) Experiment
(D) Survey
- 374.** What is the goal of naturalistic observation in research?
(A) To alter the behavior of subjects in a controlled environment
(B) To observe and study behavior as it normally occurs without altering the situation
(C) To analyze and interpret recorded material
(D) To focus on numeric analysis of data
- 375.** A disadvantage of ____ is the behaviors could be only one-time occurrences.
(A) Observations

- (B) Correlations
 - (C) Experiments
 - (D) Case Studies
 - (E) Surveys
- 376.** The objective of meeting a group, observing them, and writing a report is to:
- (A) Understand group dynamics and document findings
 - (B) Create a social event
 - (C) Entertain the group
 - (D) Ignore the group's activities
- 377.** A researcher stood at a school parking lot entrance to see if the color of a car is related to the driver not wearing a seatbelt.
- (A) Observational Study
 - (B) Experiment
- 378.** Structured. Involves the standardization of all observational procedures to obtain reliable research data
- (A) Quantitative Observation
 - (B) Qualitative Observation
- 379.** You want to know how users feel about a feature immediately after using it. What method avoids recall bias?
- (A) Interview after one month
 - (B) Survey after one week
 - (C) Focus group
 - (D) Observation during use
- 380.** Mr. Evans has brown hair. What type of observation is this?
- (A) Quantitative
 - (B) Qualitative
- 381.** Study of behavior in a natural situation without manipulation in contrast to a lab.
- (A) Case study
 - (B) Cross-sectional method
 - (C) Longitudinal method
 - (D) Naturalistic observation
- 382.** The kitten's eyes are closed
- (A) Qualitative Observation
 - (B) Quantitative Observation
 - (C) Inference
 - (D) None of above
- 383.** The following are the types of Observation, EXCEPT:
- (A) Participant/Non-participant
 - (B) Covert/Overt
 - (C) Structured/Unstructured
 - (D) Naturalistic/Laboratory Setting
- 384.** There are 28 computers in the classroom is an example of what type of observation?
- (A) Qualitative
 - (B) Quantitative
- 385.** It is warm outside.
- (A) QUALITATIVE OBSERVATION
 - (B) QUANTITATIVE OBSERVATION
- 386.** When the participants do not know they are being observed.
- (A) Observations
 - (B) Overt Observations
 - (C) Covert Observations
 - (D) Participant Observations
 - (E) Non-Participant Observations
- 387.** If I wanted to see how often students are on their phones during class when they should not be, but did not want to do anything to impact their behavior, I would use which data collection method?
- (A) Observational study
 - (B) Survey
 - (C) Experiment
 - (D) Simulation
- 388.** A(n) ____ observation is carried out using a checklist or questionnaire as the event is happening.
- (A) Structured
 - (B) Unstructured

- (C) Participant
(D) Non-participant
- 389.** When researchers observe subjects in their natural environment without interference, they are conducting:
(A) Field experiments
(B) Participant observation
(C) Naturalistic observation
(D) Laboratory research
- 390.** One of the cars is black and the other is blue.
(A) Qualitative observation
(B) Quantitative observation
(C) Inference
(D) Prediction
- 391.** Case study in which the researcher becomes a member of the group being studied
(A) Interview
(B) Secondary Analysis
(C) Participant Observation
(D) Case Study
- 392.** Quantitative or Qualitative Observation? I smell the delicious scent of pumpkin pie in the air.
(A) Quantitative
(B) Qualitative
- 393.** Harder to control for extraneous variables that may affect participants' behavior, lowering the validity.
(A) Weakness of Structured Observations
(B) Weakness of Unstructured Observations
(C) Weakness of Naturalistic Observations
(D) Weakness of Controlled Observations
- 394.** What is the systematic recording of behaviors or events called?
(A) Observations
(B) Secondary Data Analysis
(C) Random Sampling
(D) Descriptive Statistics
- 395.** What is a key characteristic of non-participant observation?
(A) The observer actively engages in group activities.
(B) The observer influences the group activities.
(C) The observer remains passive and does not participate.
(D) The observer leads the group activities.
- 396.** Read the statement and decide if it's an observation or inference: The car seems to be a VW Buggy
(A) Observation
(B) Inference
- 397.** Being a record of the actual behaviour of the child, it has more uses and merits of the Observations are ____
(A) Valuable and Reliable
(B) Reliable and Objective
(C) Reliable and Subjective
(D) Objective and Subjective
- 398.** What is the major limitation of observation?
(A) We can't generalize the findings
(B) We can't trust the findings
(C) It is very susceptible to bias
(D) It's too time consuming
- 399.** Observational study needs research intervention
(A) Yes
(B) No
(C) All the above
(D) None of the above
- 400.** Recording behavior in natural environment
(A) Survey
(B) Wording effect
(C) Naturalistic observation
(D) Case study

- 401. OBSERVATION:** The watching of behavioral patterns of people in certain situations to obtain information about the phenomenon of interest. A maxim in the social and behavioral sciences that attitudes and behavior are not always congruent
- (A) True
 - (B) False
- 402.** Making ____ requires using our 5 senses!
- (A) Inferences
 - (B) Observations
 - (C) Hypotheses
 - (D) None of above
- 403.** Participant observations
- (A) Validity is a strength
 - (B) Reliability is a strength
 - (C) Ethics is a strength
 - (D) Objectivity is a strength
- 404.** Briggs is interested in whether there is a difference in the way males and females carry objects such as backpacks and computer cases, so she sets up a hidden camera on the main mall of the college and videotapes students at various times throughout the day. Which type of study is this?
- (A) Case study
 - (B) Survey
 - (C) Experiment
 - (D) Naturalistic observation
- 405.** This primary data collection method collects information by recording the actions of customers without interacting with or communicating with them
- (A) Focus Group
 - (B) Observation
 - (C) Survey
 - (D) Test Market
- 406.** A type of research conducted in the participants' normal environment without interference from the researchers.
- (A) Controlled
 - (B) Naturalistic/observational
- 407.** When the observer is not a part of the group and they observe from a distance (can also be overt or covert).
- (A) Observations
 - (B) Overt Observations
 - (C) Covert Observations
 - (D) Participant Observations
 - (E) Non-Participant Observations
- 408.** Through the use of ____, healthcare workers are alert to situations in which a patient's verbal and nonverbal messages don't match.
- (A) Observation
 - (B) Communication
 - (C) Protocols
 - (D) Listening
- 409.** The research method in which the researcher does not at all interfere with or try to control any part of the research.
- (A) Experiment
 - (B) Case study
 - (C) Longitudinal study
 - (D) Observational study
- 410.** When a participant's behaviour is influenced by their knowledge of an observer's presence
- (A) Observer bias
 - (B) Observer effect
 - (C) Natural observation
 - (D) Logic
- 411.** "A ball falling from the sky" is an example of a observation
- (A) Quantitative
 - (B) Qualitative
 - (C) Neither quantitative nor qualitative
 - (D) None of above
- 412.** The candle burns with a red flame.
- (A) Qualitative observation
 - (B) Quantitative observation
 - (C) An observation
 - (D) None of the answers

- 413.** What is an observational study?
- (A) A study where a characteristic is observed and data is collected without influencing the population.
 - (B) A study where researchers manipulate variables to see the effect.
 - (C) A study that only uses historical data.
 - (D) A study that involves laboratory experiments.
- 414.** What is a limitation of covert (hidden) observation?
- (A) Social desirability may affect participant responses
 - (B) Informed consent can not be obtained
 - (C) Presence of researcher may influence participant behaviour
 - (D) Difficult to develop rapport with participants
- 415.** Why might first-person observations not include the big picture?
- (A) They focus on broad overviews
 - (B) They are limited to the observer's perspective
 - (C) They are always comprehensive
 - (D) They are based on second-hand information
- 416.** Observation of an event personally by the observer is ____
- (A) Uncontrolled observation.
 - (B) Direct observation.
 - (C) Indirect observation.
 - (D) Controlled observation.
- 417.** Ethnographic observations may document ____
- (A) Field notes and audio recordings
 - (B) Radio programs and follow-up conversations
 - (C) Informal conversations and TV. Shows
 - (D) None of above
- 418.** This technique involves observing involves studying the spontaneous behavior of participants in natural surroundings. The researcher simply records what they see in whatever way they can.
- (A) Naturalistic observation
 - (B) Qualitative
 - (C) Case Study
 - (D) Lab Experiment
- 419.** A librarian wants to know what genres of books are most popular. He looks up the top 100 checked out books in the library's computer system.
- (A) Survey
 - (B) Observational Study
 - (C) Experiment
 - (D) None of above
- 420.** To study the development of relationships Dr Rajiv carefully observed and recorded patterns of verbal and nonverbal behaviors among boys and girls in the schoolyard which research method did Dr Rajiv employ
- (A) Naturalistic observation
 - (B) Replication
 - (C) The survey
 - (D) The case study
 - (E) Experimentation
- 421.** A person with sleep problems is video recorded overnight in a sleep lab to help diagnose a condition.
- (A) Census
 - (B) Sample
 - (C) Observation
 - (D) None of above
- 422.** During ____ observation, the individual does not get conscious of someone observing his behaviour.
- (A) Participant
 - (B) Natural
 - (C) General
 - (D) Selective

423. Method of Ethnography where the researcher joins a group of people being studied, either by living with them or by observing them for an extended period of time during the day.
- (A) Observational Study
 - (B) Paired Observation
 - (C) Participant Observation
 - (D) Field Notes
424. Structured observation is defined by which attribute?
- (A) Researcher joins the participant group
 - (B) Open, flexible, exploratory style
 - (C) Planned with variables and a checklist
 - (D) Observer remains non-interactive
425. Observing the way people eat in restaurants is an example of
- (A) The longitudinal method
 - (B) Survey
 - (C) Laboratory observation
 - (D) Naturalistic observation
426. Takes on the role of an insider, essentially becoming a member of the group being studied and spending a great deal of time with the group; does not tell members that they are being studied
- (A) Complete participant
 - (B) Observer
427. In structured observation, what is the primary advantage compared to open-ended field notes?
- (A) Greater flexibility of interpretations
 - (B) Higher standardization of coded behaviors
 - (C) Improved random assignment to groups
 - (D) Deeper exploration of personal motives
428. When gathering participant observation data, which of the following is NOT one of the aspects to consider?
- (A) The physical setting
 - (B) The participants
 - (C) The weather conditions
 - (D) The activities
429. An observation without prior bias; based solely on facts or what is taking place.
- (A) Objective observation.
 - (B) Subjective observation
 - (C) Bias observation
 - (D) Peer review
430. Have behavioral checklists in place before beginning the observation. A tally is kept of behaviors. Researchers plan what will be observed.
- (A) Structured Observations
 - (B) Unstructured Observations
 - (C) Naturalistic Observations
 - (D) Controlled Observations
431. Participant observation is the process of immersing yourself in the study of ____
- (A) People
 - (B) Options
 - (C) Methods
 - (D) Outcomes
432. When the researcher is part of the group that s/he is studying.
- (A) Participant Observation
 - (B) Non Participant Observation
 - (C) Covert Observation
 - (D) Overt Observation
433. Types of observation in psychology
- (A) Controlled, naturalistic, participant
 - (B) Open, closed, middle
 - (C) Semi-Open, closed, open
 - (D) Visual, potential
434. What type of observation is this? There are 20 fish, 2 frogs, and 1 turtle in the pond.
- (A) Quantitative
 - (B) Qualitative

435. A research method in Sociology where the researcher becomes part of the group being studies is called
- (A) Non-participant observation
 - (B) Observer observation
 - (C) Participant observation
 - (D) Experimenter observation
436. When making an observation, you must use —
- (A) Only Sight
 - (B) Smell & Touch
 - (C) ALL 5 Senses
 - (D) Only Taste
437. The advantage of this method of research is that the behavior observed in the subject(s) natural environment to be more natural, spontaneous, and varied than that observed in a laboratory.
- (A) Observational
 - (B) Correlational
 - (C) Experiments
 - (D) Case Study
 - (E) Survey
438. Participant observation is best described as a method of:
- (A) Study of local business conducted in heritage sites
 - (B) Entertainment through cultural programs
 - (C) Research involving direct participation
 - (D) Storytelling about significant cultural traditions
439. Naturalistic observations are conducted in order to:
- (A) Describe behavior.
 - (B) Explain behavior.
 - (C) Predict behavior.
 - (D) Control behavior.
440. Observing behavior as it happens in real settings without imposing laboratory controls is known as which research method?
- (A) Naturalistic observation
 - (B) Case study
 - (C) Survey method
 - (D) Experimental method
441. One of the oldest observation methods used in early childhood education.
- (A) Checklist
 - (B) Anecdotal Record
 - (C) Running Record
 - (D) Class List Log
442. When the participants know they are being observed.
- (A) Observations
 - (B) Overt Observations
 - (C) Covert Observations
 - (D) Participant Observations
 - (E) Non-Participant Observations
443. Those whose job is to see, pay attention and observe closely directly regarding the teacher's appearance in the classroom is the task of —
- (A) Teacher
 - (B) Student
 - (C) Supervisor
 - (D) Observer
444. Which method of primary research involves watching how people behave in and respond to different situations?
- (A) Focus groups
 - (B) Observations
 - (C) Surveys
 - (D) Consumer panels
445. How can observation be used in primary market research?
- (A) By watching and analyzing customer behavior in real-world settings.
 - (B) By conducting interviews with experts.
 - (C) By providing customers with product samples.
 - (D) By creating online surveys.

446. Ethnographers typically undertake — observation as a data collection strategy during their fieldwork:
(A) Historical
(B) Participant
(C) Systematic observation
(D) Statistical observation
447. What is the main characteristic of observation as a data collection method?
(A) Evaluates results after giving a treatment
(B) Obtains statistical information
(C) Obtains facts about the subject
(D) Uses sense organs to gather information
448. An observational type of method, in which a set of audience is observed at a given point in time.
(A) Longitudinal study
(B) Cross sectional study
(C) Survey method
(D) Case study
449. List the weaknesses of Naturalistic Observation.
(A) Weaknesses of naturalistic observation include lack of control over variables and potential observer bias.
(B) Naturalistic observation always provides quantitative data only.
(C) Naturalistic observation guarantees no observer influence on subjects.
(D) Naturalistic observation is the fastest method for collecting experimental data.
450. This is a descriptive technique of observing and recording behavior in a naturally occurring situation without manipulating the situation.
(A) Survey
(B) Case study
(C) Naturalistic observation
(D) None of above
451. A type of observation in which behavior in a setting is carefully observed and recorded without any other kind of manipulation; often used to describe complex cultural activities.
(A) Naturalistic observation
(B) Participant observation
(C) Systematic observation
(D) Statistical observation
452. A researcher wants to study the behavior of the ethnic group in Ifugao with their normal environment. A researcher will utilize the method of
(A) Case study
(B) Experimental research
(C) Naturalistic observation
(D) Correlational research
453. Using your 5 senses to collect data (can be qualitative or quantitative)
(A) Quantitative
(B) Qualitative
(C) Observation
(D) Inference
454. A type of observation conducted in the participants' normal environment without interference from the researchers.
(A) Controlled observation
(B) Naturalistic observation
455. A — observation is carried out where the researcher is not part of the event or phenomena happening.
(A) Non-participant
(B) Participant
(C) Structured
(D) Unstructured
456. Molly is a researcher studying customer behavior at a local butcher shop. She stands near the meat counter for two hours, timing how long each customer spends at the counter. What research method is Molly using?
(A) Interview
(B) Observation
(C) Experiment
(D) Survey

457. Advantage over self-reports: researcher's ability to record actual behavior than obtain reports of preferences or intended behavior. Costs more money than self-report approaches
- (A) True
 - (B) False
458. Observation of subject behavior in a controlled setting is called ____
- (A) Laboratory observation
 - (B) Naturalistic observation
 - (C) General observation
 - (D) A case study
459. A toy company puts new toys in a large play area and invites kids in to play to see how they interact with the toys. This research is ____
- (A) Observation
 - (B) Survey
 - (C) Experiment
 - (D) Focus Group
460. In a ____ observation researcher is a part of observation
- (A) Non participant
 - (B) Participant
 - (C) Structural
 - (D) Unstructured
461. What are the two kinds of observations?
- (A) Quantitative and qualitative
 - (B) Quantitative and observations
 - (C) Inferences and predictions
 - (D) Qualitative observations
462. What method allows you to watch and record the way people behave in a particular situation?
- (A) Observation
 - (B) Participant Observation
 - (C) Statistical Analysis
 - (D) Content Analysis
463. Seeking additional information through passive perception, such as observing and listening, either to confirm or refute your interpretation is
- (A) Fundamental attribution error
 - (B) Mindfulness
 - (C) Indirect perception checking
 - (D) Direct perception checking
464. If you wanted to know about what life is like on the West Coast and you moved in with a family there for a year, which data collection method are you using?
- (A) Experiment
 - (B) Survey
 - (C) Participant Observation
 - (D) Existing Resources

1.4.8 Interview Method

1. In creating this type of question the interviewer or the researcher has two options, open-ended with no classification where the interviewer tries to record the response verbatim, and Open-ended, where the interviewer uses predecided classifications to record the response.

 - (A) Closed or structured questions
 - (B) Open or unstructured
 - (C) Dichotomous
 - (D) None of above

2. Which is NOT a benefit of a Personal Interview?

 - (A) Establishes rapport
 - (B) Yields more in-depth information
 - (C) Short duration to complete
 - (D) Respondents can be carefully selected

3. Which of the following is not a disadvantage of telephone interviewing?

 - (A) Researchers do not have to spend so much time and money on travelling

- (B) Some people in the target population may not own a telephone
- (C) It can be difficult to build rapport over the telephone
- (D) Interviewers cannot use visual cues such as show cards
4. The technique a reporter uses to begin an interview with easy questions to get the interviewee comfortable because it establishes a conversational tone that creates a positive reporter-source relationship.
- (A) Humorous questions.
- (B) Quick questions.
- (C) Easy questions.
- (D) Softball questions.
5. What type of questions help gather more information and show genuine interest?
- (A) Multiple-choice questions
- (B) Probing questions
- (C) Closed questions
- (D) Rhetorical questions
6. An interview technique that tries to draw deeper and more elaborate explanations from the discussion is called?
- (A) Focus group discussion
- (B) Observation
- (C) Probing
- (D) None of the above
7. A 'Structured Interview' in research methods and design is:
- (A) An interview with a set of predetermined questions asked in the same order to all participants.
- (B) An informal conversation with no set questions or order.
- (C) An interview where questions are adapted based on participant responses.
- (D) A group discussion led by a moderator.
8. Conducted over the telephone with the researcher reading out questions and the participant speaking their answers.
- (A) Structured Interview
- (B) Unstructured Interview
- (C) Semi-Structured Interview
- (D) Telephone Interview
- (E) Face-to-Face Interview
9. Explain the interview method used in psychological research.
- (A) It involves observing subjects without interaction.
- (B) It is a method where researchers conduct face-to-face or telephonic conversations to gather data.
- (C) It focuses on the use of questionnaires.
- (D) It is primarily used for statistical analysis.
10. Open ended questions which are used to clarify.
- (A) Encourage the sharing of information
- (B) Have one or two word answers
- (C) An example is "what time is it"
- (D) Usually stop communication
11. While interviewing a participant, they were asked to skip a question. What should you do?
- (A) Respect their choice and move on
- (B) Insist they answer
- (C) End the study immediately
- (D) Ignore the concern
12. A survey method in which a trained researcher asks questions and records the answers
- (A) Interview
- (B) Sampling
- (C) Questionnaire
- (D) Secondary analysis
13. This type of interview makes it easier for respondents to clarify any of their answers or ask for clarification of any questions being asked. This should improve validity.
- (A) Strength of Structured Interview
- (B) Strength of Unstructured Interview

- (C) Strength of Semi-Structured Interview
 - (D) Strength of Telephone Interview
 - (E) Strength of Face-to-Face Interview
14. Which type of interview allows for a more free-flowing conversation?
- (A) Structured interview
 - (B) Semi-structured interview
 - (C) Unstructured interview
 - (D) Group interview
15. TYPES OF QUALITATIVE INTERVIEWS: Informal Conversational Interview, Interview Guide Approach, Standardized Open-ended Interview.
- (A) True
 - (B) False
16. A two way systematic conversation between an investigator and respondent is called
- (A) Observation
 - (B) Schedule
 - (C) Interview
 - (D) Simulation
17. A researcher wants to understand why users abandon a checkout process. Which method is most appropriate?
- (A) Questionnaire
 - (B) Observation
 - (C) Interview
 - (D) Sampling
18. What is the key difference between an unstructured and a structured interview?
- (A) Unstructured interviews are easier to analyse.
 - (B) Structured interviews are more natural than unstructured interviews.
 - (C) Unstructured interviews are based on themes and does not have a strict list of questions that must be followed in a specific order.
 - (D) None of above
19. If a researcher asks a participant, 'Can you describe a time when you faced a challenge at work?', what type of interview question is this?
- (A) Open-ended
 - (B) Close-ended
 - (C) Leading
 - (D) Hypothetical
20. Interview is a technique to collect information by:
- (A) Recording secondary data
 - (B) Recording data from medical records
 - (C) Recording available data
 - (D) Expanding detailed observation of subjects
 - (E) Asking people who are interviewed, either individuals or a group
21. What is the problem that structured and unstructured interviews face because of artificiality?
- (A) It is sometimes doubtful whether interviewees answers are truthful and valid.
 - (B) It makes interviewees feel under pressure during their interview
 - (C) It often results in low response rates as interviewees do not like the setting that the interview will take place in.
 - (D) None of above
22. Which METHOD of research is being described here? It is conducted face-to-face with customers and a series of questions are asked
- (A) Personal interview
 - (B) Telephone survey
 - (C) On-line survey
 - (D) Focus group Edit
23. Structured interviews in language research involve predetermined questions with multiple-choice options.
- (A) True
 - (B) False

24. Validity in interviews is strengthened by the following EXCEPT:
- (A) Building rapport with interviewees
 - (B) Multiple questions cover the same theme
 - (C) Constructing interview schedules that contain themes drawn from the literature
 - (D) Prompting respondents to expand on initial responses
25. There is no pre-preparation. Questions are asked depending on the direction in which the discussion goes.
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-Structured Interview
 - (D) Telephone Interview
 - (E) Face-to-Face Interview
26. Standardized as all participants receive the same questions, increasing reliability.
- (A) Strength of Structured Interview
 - (B) Strength of Unstructured Interview
 - (C) Strength of Semi-Structured Interview
 - (D) Strength of Telephone Interview
 - (E) Strength of Face-to-Face Interview
27. What is the first step in conducting an interview?
- (A) Asking a thought-provoking question
 - (B) Thanking the interviewee for the opportunity
 - (C) Asking a very basic question
 - (D) Introducing yourself and your role
28. What is the recommended number of participants for in-depth interviews in phenomenological research?
- (A) 1-10 participants
 - (B) 5-25 participants
 - (C) 30-50 participants
 - (D) 50-100 participants
29. A highly-scheduled interview consists of a standardized list of questions. In most extreme form, it even specifies their precise wording and the order in which are asked. Which of the following is not true about the preparation for a highly-scheduled interview?
- (A) Usually takes less time
 - (B) Easier for interviewing to control
 - (C) Requires less skill by interviewer
 - (D) High flexibility in exploring responses
30. An interview that is guided by an established list of topics or broad questions is:
- (A) Semi structured
 - (B) Directed
 - (C) Unstructured
 - (D) None of above
31. What is the primary characteristic of an Interview as an assessment method?
- (A) It is a standardized measure.
 - (B) It involves seeking information on a one-to-one basis.
 - (C) It requires the subject to manipulate objects.
 - (D) It is a written test.
32. Mrs. Santos will conduct an interview among the participants in her study. She wants to make sure that all the questions are the same for all participants. What kind of interview should she conduct?
- (A) Informal
 - (B) Structured
 - (C) Semi-structured
 - (D) Retrospective
33. Which of the following is NOT the strength of the unstructured interview?
- (A) Its flexibility.
 - (B) Its usefulness in probing into attitudes and motives of which even the respondent may not be aware.
 - (C) Its getting below the level of clichés in the instance.
 - (D) Its simplicity.

34. Which one is a Do's in interview etiquette?
- (A) Dress too casually
 - (B) Lie about abilities to get job
 - (C) Be confident
 - (D) Too excessive in gesture
35. There are a number of different types of interviews in sociology, and one is a ____, where the researcher talks to many people at the same time, rather than discussing with individuals. ____ The researcher can then facilitate them to focus on a particular issue or subject.
- (A) Structured interview
 - (B) Group interview
 - (C) Personal interview
 - (D) Random interview
36. An interview is:
- (A) A presentation, an analysis of information
 - (B) An event brought to the attention of the public
 - (C) Comment signed by the editor
 - (D) An interview reported in the form of questions and answers
37. This limits the answer of the respondents based on what they think and feel about the topic.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
38. They are gathered together wherein they take turns in answering questions asked by the researcher.
- (A) Individual interview
 - (B) Group interview
 - (C) Mediated interview
 - (D) None of above
39. The Friendly relationship between Interviewer and respondent is called
- (A) Management.
 - (B) Conclusion.
 - (C) Morale.
 - (D) Rapport.
40. Personal interviews conducted in shopping malls are known as ____
- (A) Mall interviews.
 - (B) Mall intercept interviews.
 - (C) Brief interviews.
 - (D) None of the given options.
41. Stopping people at shopping malls or on a busy street corner is a data collection technique known as ____
- (A) Primary interview
 - (B) Stopper interview
 - (C) Blocked interview
 - (D) Intercept interview
 - (E) Environmental interview
42. Which of these interviews is taken for a candidate far away?
- (A) Lunch interview
 - (B) Telephone
 - (C) Stress interview
 - (D) Group interview
43. The participant chooses to agree with the moderator or researcher. Some participants may agree just to complete the interview.
- (A) Acquiescence bias
 - (B) Social acceptability bias
 - (C) Habituation bias
 - (D) Sponsor bias
44. Student RF interviewed a respondent by asking, "Ms. A, could you describe your experience being posted at the intensive care unit (ICU)?" This question is used in the following interview.
- (A) Closed
 - (B) Structured
 - (C) Unstructured
 - (D) Semi-structured

45. Which survey research method is most effective in getting in-depth information from respondents.
- (A) Questionnaires
 - (B) Telephone survey
 - (C) Interview
 - (D) None of the above
46. A semi-structured interview
- (A) May use a checklist and follow-up questions
 - (B) Has a script of the exact questions
 - (C) Is the most flexible of the interview approaches
 - (D) None of above
47. Which question below is the most important when starting an interview?
- (A) How old are you?
 - (B) What grade are you in?
 - (C) What is your name and how do you spell it.
 - (D) Is there anything else you would like to add?
48. Telephone interviews are more cost-effective than ___ while retaining flexibility.
- (A) Face-to-face interviews
 - (B) Online surveys
 - (C) Email questionnaires
 - (D) Postal surveys
49. Do not allow participants to elaborate on interesting questions.
- (A) Weakness of Structured Interview
 - (B) Weakness of Unstructured Interview
 - (C) Weakness of Semi-Structured Interview
 - (D) Weakness of Telephone Interview
 - (E) Weakness of Face-to-Face Interview
50. True or False: Interviews are one of the most important ways that information is gathered.
- (A) True
 - (B) False
51. Which research tool is best for gathering in-depth information?
- (A) Survey
 - (B) Interview
 - (C) Experiment
 - (D) Observation
52. Which data collection method asks participants direct questions to understand their perspectives?
- (A) Survey
 - (B) Observation
 - (C) Focus group
 - (D) Interview
53. What is a data gathering procedure wherein the participants are prodded to talk about their experiences, feelings, beliefs, outlook, etc.
- (A) Interview
 - (B) Observation
 - (C) Questionnaire
 - (D) Immersion
54. Which of these are strong Interviewing Skills (check all that apply):
- (A) Punctuality
 - (B) Casual Language
 - (C) Enthusiasm
 - (D) Preparedness
55. Interview conducted over the telephone
- (A) Phoner
 - (B) Read-back
 - (C) Interviewing
 - (D) Feature
56. When research questions are about the thought processes that lead people to have certain opinions, what research method is usually best?
- (A) A survey
 - (B) In-depth interviews
 - (C) Ethnographic observation
 - (D) A social experiment

57. What is the primary purpose of using interviews in research?
- (A) To entertain the respondents
 - (B) To collect data or investigate issues in depth
 - (C) To advertise products
 - (D) To conduct surveys
58. Which one of these is a weakness of Interviews?
- (A) Low response rate
 - (B) Interviewer effect.
 - (C) Cheap and easy way to collect data
 - (D) Demand Characteristics
59. Group interviews and focus groups are used to produce qualitative data. A group normally consists of how many participants?
- (A) Between 9-10
 - (B) Between 5-6
 - (C) Between 3-4
 - (D) Between 11-12
 - (E) Between 6-8
60. When should researchers ask potentially sensitive questions during an interview?
- (A) Throughout the interview
 - (B) At the beginning of the inventory to get them out of the way
 - (C) Toward the end of the interview
 - (D) At the midpoint of the interview to allow time for the researcher to build rapport
61. A one on one interview between the respondent and the researcher
- (A) Individual interview
 - (B) Group interview
 - (C) Mediated interview
 - (D) None of above
62. ____ is a strategy used to interview a professional to ask for advice and direction, rather than a job opportunity.
- (A) Networking
 - (B) Interviewing
 - (C) Informational interviewing
 - (D) Goal setting
63. The person conducting an interview is called the interviewee.
- (A) True
 - (B) False
64. Interviewing involves person-to-person open-ended information gathered.
- (A) True
 - (B) False
65. What do you call the data collection approach wherein the researcher takes a deep dive into the experience, thoughts, and opinions of a participant.
- (A) In-depth interviews
 - (B) Focus group discussion
 - (C) Ethnography
 - (D) Observation
66. What method of data collection that interviewing several respondents at the same time, guided by a moderator?
- (A) Projective techniques
 - (B) Focus groups
 - (C) In-depth interviews
 - (D) Test markets
67. An interview with a fixed list of open and closed questions
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-structured Interview
 - (D) None of above
68. Which is not a research method used in Sociology
- (A) Multi-structured interviews
 - (B) Unstructured interviews
 - (C) Semi-structured interviews
 - (D) Structured interviews

69. In an interview, which is NOT recommended?
- (A) Dress appropriately
 - (B) Maintain confident body language
 - (C) Use aggressive tone
 - (D) Prepare necessary documents
70. What is essential when conducting structured interviews?
- (A) Ignoring responses
 - (B) Avoiding rapport with interviewees
 - (C) Preparing standardized questions
 - (D) Asking random questions
71. Can be referred to as 'depth' or 'in depth' interview. What is this?
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Instructured interview
 - (D) None of the mentioned
72. During a market research, a company decides to interview a group of potential customers to get their feedback on a new product. This method of collecting data is known as ____
- (A) Survey
 - (B) Interview
 - (C) Focus Group
 - (D) Poll
73. Which of the following are described as loosely structured conversations with individuals drawn from the target audience?
- (A) Experiments
 - (B) Quantitative surveys
 - (C) Panels
 - (D) Conversation interviews
 - (E) Depth interviews
74. Which type of research instrument is best suited for gathering detailed, qualitative data?
- (A) Survey
 - (B) Questionnaire
 - (C) Interview
 - (D) Experiment
75. There are no predetermined questions nor suggested answers. The data is solely dependent on the answers given by the respondents.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
76. When asking questions of a patient, it is more effective to:
- (A) Ask yes or no questions.
 - (B) Ask questions that only require a limited response.
 - (C) Ask questions that encourage specific details related to information needed.
 - (D) Ask questions that require critical thinking.
77. A meeting with someone who works in an area of interest who can provide you with information about the career:
- (A) Mentor
 - (B) Interview
 - (C) Informational interview
 - (D) None of these
78. One of the claimed advantages of using interviews in primary market research is that: 1) the consumer answering the questions writes all of the answers 2) there is no chance of interviewer bias 3) any questions that are unclear can be explained by the interviewer 4) the sample chosen will always be representative of the whole population
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
79. What research tool is best for studying lived experiences?
- (A) Interview
 - (B) Questionnaire
 - (C) Experiment
 - (D) Case Study

80. This occurs when respondents in an interview are inclined to answer in a certain way because the wording of the question encourages them to do so.
- (A) Confirmation bias
 - (B) Leading question bias
 - (C) Question order bias
 - (D) Biased reporting
81. What type of questions can be included in a structured interview?
- (A) Only open-ended questions
 - (B) Only close-ended questions
 - (C) Both open-ended and close-ended questions
 - (D) Only multiple-choice questions
82. This type of interview enables the interviewees to freely express and arrange their experiences and feelings.
- (A) Structured interview
 - (B) Semi-structured interview
 - (C) Unstructured interview
 - (D) None of above
83. Unstructured interviews are easy to analyze
- (A) True
 - (B) False
84. An interview is a mode of collecting a survey
- (A) True
 - (B) False
85. A structured conversation to collect information directly from a source is called:
- (A) Survey
 - (B) Interview
 - (C) Discussion
 - (D) Debate
86. Which is not an example of research methods used in psychology
- (A) Structured Interviews
 - (B) Multi-structured interviews
 - (C) Semi-structured interviews
 - (D) Unstructured interviews
87. What is the recommended approach for gathering stories in narrative research?
- (A) Conducting interviews with a large group of people
 - (B) Spending considerable time with one or more individuals
 - (C) Using only written documents for analysis
 - (D) Observing individuals without interaction
88. A qualitative approach involves ____ interviews.
- (A) Open-ended
 - (B) Closed-ended
 - (C) Structured
 - (D) Multiple-choice
89. Ms AK is doing a research project titled "Student nurses' experience of learning in the clinical environment". The MOST appropriate method of data collection is through ____
- (A) Interview
 - (B) Observation
 - (C) Survey
 - (D) Document analysis
90. Tell whether the statement is true or false The personal or telephone interviewer's ability to record the verbatim answers quickly or to summarize accurately and to probe effectively is a closed response question disadvantage
- (A) True
 - (B) False
91. Which is the best format to use if content and material gathered for certain number of students by different interviews have to be compared in a piece of research?
- (A) Unstructured.
 - (B) Projective.
 - (C) Analytical.
 - (D) Structured.

92. Data gathered by a researcher talking to individuals/participants
(A) Focus group
(B) Questionnaire
(C) Test
(D) Interview
93. Interviews are formal meetings where a person is asked to communicate ____, experiences, and interests.
(A) Skills
(B) Colors
(C) Locations
(D) Numbers
94. A question that is structured to allow the interview subject latitude in answering. This type of question does not allow for a simple one-word answer
(A) Primary Source
(B) Open-ended question
(C) -is question
(D) Stock question
95. According to your textbook, when writing interview questions, in general, your questions should be neutral and open-ended.
(A) True
(B) False
96. What is the primary advantage of using in-depth interviews in qualitative research?
(A) They provide detailed insights into participants' thoughts and feelings.
(B) They allow for large sample sizes.
(C) They ensure statistical validity of the findings.
(D) They are less time-consuming than surveys.
97. Which of the following research methods is appropriate when a business wants to obtain in-depth, qualitative information from a few customers:
(A) Structured observation
(B) Personal interview
98. Interview Guide Approach. Interviewer does not have to follow these topics and questions during the interview in any particular order; can change the wording of any questions. Relatively unstructured interaction between the interviewer and the interviewee
(A) True
(B) False
99. A data that allows you to communicate verbally with the participants, to ask questions about your research study.
(A) Sampling
(B) Observation
(C) Interview
(D) Data Analysis
100. Which are the first steps of interviewing?
(A) Understanding the purpose, researching, and writing questions
(B) Setting up the interview, thinking of ice-breakers, writing questions
(C) Researching, writing questions, and thinking of ice breakers
(D) None of above
101. Members of the research team telephone potential respondents, ask questions of respondents from a computer screen and key the answers directly into a computer.
(A) Computer-assisted personal interviewing
(B) Computer-assisted self-interviewing
(C) Fully automated self-interviewing
(D) Computer-assisted telephone interviewing
(E) Fully automated telephone interviewing
102. QUALITATIVE INTERVIEWS. The interviewer must establish trust and rapport, making it easy for the interviewee to provide information about his or her inner world
(A) True
(B) False

- 103.** Asking questions of knowledgeable people for a story
(A) Q-and-A
(B) Phoner
(C) Anecdote
(D) Interviewing
- 104.** Differentiate between structured and semi-structured interview.
(A) Structured interviews have no set questions.
(B) Semi-structured interviews follow a strict script.
(C) Structured interviews use a fixed set of questions.
(D) Semi-structured interviews do not allow for any flexibility.
- 105.** Tell whether the statement is True or False- Field briefings can be improved by preparing video tape briefing, to show to interviewers to ensure a consistent message to all interviewers prior to data collection
(A) True
(B) False
- 106.** For what duration are telephone interviews described as most efficient?
(A) Nearly twenty to thirty minutes
(B) Roughly five to seven minutes
(C) Approximately thirty to forty minutes
(D) About ten to fifteen minutes
- 107.** This type of survey uses open-ended questions:
(A) Experiment
(B) Questionnaire
(C) Interview
(D) Case Study Edit
- 108.** What type of approach is used in an unstructured interview?
(A) Formal and rigid
(B) Informal and friendly
(C) Structured and systematic
(D) Analytical and detailed
- 109.** By using — as the research method, the researcher could gain quick understanding about issues, problems and questions based on verbal report.
(A) Survey
(B) Interview
(C) Observation
(D) None of above
- 110.** What type of interview has open-ended questions in it and interviewers can further their questions by going more into depth with the interviewee?
(A) Semi-structured interviews
(B) Un-structured interviews
(C) Structured interviews
(D) Half-structured interviews
- 111.** A researcher uses a list of pre-written questions and asks them in the same order to all participants. What type of interview is this?
(A) Informal
(B) Semi-structured
(C) Unstructured
(D) Structured
- 112.** An unguided interview of psycho-analytical nature permitting the subject to talk freely with a view to obtain insight into hidden motives is called
(A) A focused interview.
(B) A structured interview.
(C) A directive interview.
(D) A non-directive depth interview.
- 113.** Semi-structured interviews
(A) Start with a question and then a conversation follows
(B) Are guided by set questions that you adhere to without making any changes based upon the participants responses
(C) Are group based interview where the group interaction is an essential aspect of data collection
(D) Are when an interviewer follow a guidance of questions but allows scope for probing further.

114. Interviewer encourage the respondent to talk about the given topic with a base minimum of direct questioning for the purpose eliciting the respondents feeling and beliefs on the given topic is
- (A) Direct interviews
 - (B) Interview Schedule
 - (C) Personal Interviewing
 - (D) Non direct Interview
115. When should you not use an open question in an interview?
- (A) To relax the interviewee
 - (B) To discover the interviewee's opinion
 - (C) To maintain the control over conversation
 - (D) To discover the interviewee's feelings or values
116. In qualitative research, interviews are usually:
- (A) Structured
 - (B) Objective
 - (C) Unstructured
 - (D) Based on experiments
117. How is data typically recorded during an interview?
- (A) Without permission
 - (B) With permission and transcribed
 - (C) Only in written notes
 - (D) Through video only
118. In the context of an interview ____ greetings is to be used.
- (A) Formal
 - (B) Informal
 - (C) Friendly
 - (D) Cordial
119. Which of the following is a disadvantage of unstructured interview?
- (A) Spontaneous
 - (B) Flexibility
 - (C) Faster execution
 - (D) Time consuming
120. What is step one of interviewing?
- (A) Compile a list of questions
 - (B) Do your background research
 - (C) Figuring out what you want to find out
 - (D) Picking out your outfit
121. Semi-structured interview: an interview with a fixed list of ____ questions. The interviewer can add more questions if necessary.
- (A) Open
 - (B) Closed
 - (C) Random
 - (D) Open and closed
122. Which of the following is not a characteristic of a good question to ask during an interview?
- (A) The question is likely to elicit and anecdote
 - (B) The question encourages the source to provide details
 - (C) The question starts a subject talking about his or her experiences
 - (D) The question encourages the subject to respond with a "yes" or "no".
123. This type verbally administers a list of predetermined open-ended questions, wherein the respondents must choose among the given set of answers prepared by the researcher.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
124. Interviews are helpful when
- (A) You want to get insight into attitudes of participants
 - (B) You want a better understanding of participants' points of view
 - (C) The subject matter is too sensitive for people to discuss in a group setting
 - (D) All of the choice s

125. What type of primary research that involves open questions between the interviewer & respondent
- (A) Surveys
 - (B) Observations
 - (C) Interviews
 - (D) Quotas Edit
126. Which of these is not a type of Interview?
- (A) Quantified Interview
 - (B) Structured Interview
 - (C) Semi-Structured Interview
 - (D) Unstructured Interview
127. This type of question in an interview seek the respondent's answer to "what-if" question. They can be a useful way of indirectly getting a respondent to describe beliefs or attitudes.
- (A) Factual question
 - (B) Hypothetical question
 - (C) Leading question
 - (D) Secondary question
128. Which type of interview is most reliable?
- (A) Structured
 - (B) Un-structured
 - (C) Both as reliable as each other
 - (D) None of above
129. If a student wants to research the biggest challenges producers face when adopting new technology, what is one activity they could do?
- (A) Interview area agriculture producers about changes in technology over the past 50 years
 - (B) Plant a vegetable garden
 - (C) Write a report on weather patterns
 - (D) Study animal nutrition Edit
130. During the interview, you should always use jargon.
- (A) True
 - (B) False
131. A face-to-face conversation in which you are asking probing questions to get opinions or feedback is an example of what type of data collection method?
- (A) Observation method
 - (B) Interview
 - (C) Experimental method
 - (D) Consumer panel
132. ___ interviews offer more flexibility and new ways of gathering insights. The close and personal interaction permits the interviewer to be more sensitive and open to nonverbal feedback and body language.
- (A) Group
 - (B) Personal
 - (C) Quick
 - (D) Structured
133. When an interviewer prepares a list of questions in advance and asks those question to the candidate to obtain the information from him; it is called?
- (A) A structured interview
 - (B) A well-organized interview
 - (C) A systematic type interview
 - (D) None of the above
134. Standardization has been achieved when what is said to all interviewees is the same or as similar as possible.
- (A) True
 - (B) False
135. A good interviewer should:
- (A) Listen actively and follow up with relevant questions
 - (B) Talk most of the time
 - (C) Avoid eye contact
 - (D) Ask only yes/no questions
136. When conducting an interview, asking "Anything else?, What do you mean?, Why do you feel that way?, " etc, are all forms of:
- (A) Contingency questions.
 - (B) Response categories.

- (C) Protocols.
(D) Probes.
- 137.** Which type of interview is characterized by a fixed set of questions?
(A) Structured interview
(B) Semi-structured interview
(C) Unstructured interview
(D) Open-ended interview
- 138.** Which method has the highest risk of interviewer bias influencing responses?
(A) Online questionnaires
(B) Face-to-face interviews
(C) Postal self-administered
(D) Automated IVR calls
- 139.** A meeting in which someone asks you questions to see if you are suitable for a job or course
(A) CV
(B) Operate
(C) Job-hunters
(D) Interview
- 140.** Who asks questions during an interview
(A) Interviewer
(B) Interstate
(C) Interval
(D) Interlock
- 141.** It is the one that takes place when you interview the studied population (individually or in groups) so that it freely expresses any idea, feelings and motivations about the topic being studied.
(A) Interview Method
(B) Face to face interview
(C) In-depth Interview
(D) Semi-Structured Interview
- 142.** Which statement best describes the Vox Pops Method of research?
(A) Primary research / an interview schedule is often used
(B) Secondary research / provides projections into the future
(C) Primary research / questionnaires are necessary
(D) Interviewing the public on the street (qualitative and quantitative)
- 143.** The ____ interview occurs when leaving a job.
(A) Informational
(B) Employment
(C) Exit
(D) Coaching
- 144.** In an interview, the person who provides information is called the:
(A) Analyst interpreting data gathered from the community
(B) Author producing published work
(C) Interviewee or community respondent
(D) Observer recording field events in the community
- 145.** Which of the following is a FALSE statement regarding in-depth interviews?
(A) It is necessary to ask for permission and obtain consent when using recording devices during the interview.
(B) One should not guide the respondent's answers.
(C) The order of the prepared questions should not be changed.
(D) Questions should be open-ended.
- 146.** Tell whether the statement is True or False—implying asking someone a question implies that the interviewer expects the respondents to have an answer. This may induce respondents to answer the question despite of complete lack of knowledge
(A) True
(B) False
- 147.** What is a disadvantage of using an interview questionnaire?
(A) Data is highly generalized

- (B) It provides limited insights
 - (C) Data depends on the quality of the questions
 - (D) It lacks flexibility in response collection
- 148.** Which Interviewing Method is used to answer Behavior Based Interview Questions?
- (A) STEM Method
 - (B) STEP Method
 - (C) STAR Method
 - (D) STORM Method
- 149.** Interviews and open-source journalism rely on ____ as sources of information.
- (A) Documents
 - (B) People
 - (C) Computers
 - (D) Data
- 150.** Which scenario best fits using telephone interviews today?
- (A) Narrow, time-critical follow-ups, small samples
 - (B) Rich ethnographic observation, long sessions
 - (C) Mass market measurement, large land-line panels
 - (D) Highly visual tasks, product interaction testing
- 151.** In ____ interviews, researchers stop people at a shopping mall or busy street corner and request an interview on the spot.
- (A) Intercept
 - (B) Arranged
 - (C) Group
 - (D) Structured
 - (E) Behavioral
- 152.** What is one disadvantage of using interviews for data collection?
- (A) They are quick and inexpensive.
 - (B) They provide quantitative data.
 - (C) They are time-consuming and costly.
 - (D) They are easy to analyze.
- 153.** “unstructured, direct, personal meeting in which a single participant is probed by an experienced interviewer for the purpose of gaining relevant information about the market research problem” The statement above refers to ____
- (A) Focus group
 - (B) In-depth Interview
 - (C) Observation
 - (D) Survey
- 154.** A researcher collects data through structured interviews but realizes that participants’ answers lack depth. What should the researcher do?
- (A) Switch to open-ended, unstructured interviews
 - (B) Reduce the number of participants
 - (C) Remove repetitive responses
 - (D) Stop the research and analyze existing data
- 155.** Personal interviews can be used to collect large amounts of information at a low cost per respondent.
- (A) TRUE
 - (B) FALSE
- 156.** Examine interview method as a data collection method.
- (A) Interviews are used to collect numerical data.
 - (B) Interviews involve asking questions to gather information.
 - (C) Interviews are only used in laboratory settings.
 - (D) Interviews do not require any preparation.
- 157.** Which primary data collection method involves collecting data from a small group of individuals who are interviewed in-depth about their opinions and experiences?
- (A) Focus groups
 - (B) Case studies
 - (C) Longitudinal studies
 - (D) Cross-sectional studies

158. A well-planned, sit-down session between a reporter and interviewee is a
- (A) Formal interview
 - (B) Casual interview.
 - (C) Not necessary with today's technology.
 - (D) Practice that is no longer used in modern newspapers.
159. When a reporter asks an interviewee two questions to help elicit a response, the reporter is using an interview technique called a *1 point2-part question.multiple inquiry.double-dip.none of these
- (A) 2-part question.
 - (B) Multiple inquiry.
 - (C) Double-dip.
 - (D) None of these
160. The tool used to collect data in an interview method is
- (A) An observation schedule.
 - (B) A questionnaire.
 - (C) An interview schedule.
 - (D) A warranty card.
161. Some structured questions and some unstructured questions.
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-Structured Interview
 - (D) Telephone Interview
 - (E) Face-to-Face Interview
162. Which of the following could lead to bias in an interview?
- (A) The interviewee might give brief responses.
 - (B) The interviewee might have little knowledge on the topic.
 - (C) The interviewer might has understanding of the topic.
 - (D) The interviewer has a pre-existing opinion on the topic.
163. How does a structured interview reduce interviewer error?
- (A) By being not flexible.
 - (B) By having a pre-planned structure.
 - (C) By lacking important details.
 - (D) By limiting depth understanding.
164. Interview can be carried out with one person or in a focus group.
- (A) True
 - (B) False
165. During a group interview, one interviewee will get interviewed by many interviewers at the same time.
- (A) TRUE
 - (B) FALSE
166. When using exploratory interviews to identify occupational interests, you should try to interview someone who
- (A) Has an executive position in the company.
 - (B) Used to have the kind of job you want.
 - (C) Holds the kind of job you want.
 - (D) Hires people for the kind of job you want.
167. A disadvantage of using interviews would be
- (A) Limitations on number of participants
 - (B) Limitations on the number of questions
 - (C) Limitations on time
 - (D) Limitations on quality of responses
168. How can interviewees be encouraged to provide more thoughtful responses during an interview?
- (A) Use silent probes
 - (B) Provide overt encouragement
 - (C) Ask for clarification
 - (D) All of the above
169. When conducting an interview with questions that can not be answered with 'yes' or 'no', a reporter uses
- (A) Open-ended questions.

- (B) Close-ended questions.
(C) Ridiculously long questions.
(D) Confusing questions.
- 170.** Complete the sentence: Focus groups ____
(A) That start with a question and then a conversation follows
(B) Are guided by set questions that you adhere to without making any changes based upon the participants responses
(C) Are group based interviews where the group interaction is an essential aspect of data collection
(D) Are when an interviewer follow a guidance of questions but allows scope for probing further.
- 171.** The questioning phase of the interview is the responsibility of
(A) The interviewer
(B) The interviewee
(C) The interviewee primarily, but the interviewer partially
(D) The interviewer primarily, but the interviewee partially
- 172.** This type of interview is done to recall and reconstruct something that happened in the past.
(A) Informal Interview
(B) Structured interview
(C) Semi-structured Interview
(D) Retrospective Interview
- 173.** Which of the following is NOT a characteristic of a good interview?
(A) Act naturally
(B) Vary who controls the communication
(C) Practice active listening
(D) Interrupt the interviewee when they are speaking
- 174.** Open-ended questions and answers between a reporter and his/her source
(A) Hard news
(B) Broadcast
(C) Interview
(D) Podcast
- 175.** A special type of purposive communication which can be classified into different types according to purpose in order to obtain information from an organization or individual
(A) Letter of Inquiry
(B) Email
(C) Interview
(D) Essay
- 176.** What kind of study would best help a company find out why customers are dissatisfied with their service?
(A) Quantitative Survey
(B) Experimental Design
(C) Focus Group Discussion
(D) Stratified Sampling
- 177.** In this type of interview you come up with some questions to ask, but you don't necessarily ask them in any order ____
(A) Structured
(B) Semi-structured
(C) Unstructured
(D) None of above
- 178.** Interviews are best used when:
(A) The researcher conducts them over the phone
(B) The researcher has an informal conversation with subjects
(C) There is a set of predetermined questions developed
(D) There is two or more people involved
- 179.** In qualitative interviews,
(A) The researcher takes field notes on the behaviour and activities of individuals at the research site.
(B) The researcher conduct face-to-face interview with participants, interview participants by telephone, or engages in focus group interviews, with six to eight interviewee in each group.

- (C) The researcher often engage in multiple observations.
(D) None of above
- 180.** One of the claimed advantages of using interviews in primary market research is that:
(A) The consumer answering the questions writes all the answers
(B) There is no chance of interviewer bias
(C) Any questions that are unclear can be explained
(D) None of above
- 181.** What is one-to-one interview about?
(A) Verbal quarrel
(B) A game of two people
(C) The researcher asks only the most important questions of the participant
(D) An individualistic type of conversation
- 182.** Which characteristic best differentiates face-to-face interviews in quantitative research?
(A) Automated routing, anonymous participation
(B) High nonverbal cue collection, longer scheduling
(C) Low setup costs, minimal rapport building
(D) Rapid dialing, widespread landline coverage
- 183.** The guide a researcher uses to structure an interview is call a(n) ____
(A) Questionnaire
(B) Protocol
(C) Instrument
(D) Survey
- 184.** Which feature most distinguishes a focused interview?
(A) Concentrates on specific topics
(B) Relies on large random samples
(C) Ensures complete numerical data
(D) Uses mechanical recording devices
- 185.** When interviewing someone, you should always ____ if the source doesn't give the answer right away.
(A) Ask it again, because maybe they didn't hear you.
(B) Ask them if they don't feel comfortable answering the question
(C) Ask it again in a different way
(D) Remove the question entirely
- 186.** Which technique is explicitly a group interview exploring perceptions?
(A) Telephone interview
(B) Focus group discussions
(C) Controlled observation
(D) Mechanical device tracking
- 187.** Indirect questions are of great use for investigating:
(A) Demographics
(B) Business issues
(C) Sensitive topics
(D) Food purchases
- 188.** Select the BEST source for an interview on how Oklahoma wind turbine electrical power is produced.
(A) A landowner
(B) A wind energy expert
(C) A weatherman
(D) A wireless internet expert
- 189.** There is a set of fixed, predetermined questions which are presented to every participant in the same order and in the same way.
(A) Structured interview
(B) Semi-structured interview
(C) Unstructured interview
(D) None of above
- 190.** What is an open-ended question?
(A) An older question
(B) A yes or no question
(C) A question requiring the interviewee to give longer explanations and lead to follow-up questions.
(D) A new question

191. To conduct survey of illiterate respondent, the best method for collection of data will be:
- (A) Questionnaire method
 - (B) Indirect interviews
 - (C) Personal interviews
 - (D) Observation method
192. What is a characteristic of structured interviews?
- (A) They are informal and flexible.
 - (B) They follow a set sequence of questions.
 - (C) They do not involve any questions.
 - (D) They are conducted in natural settings.
193. Interviews collect mainly
- (A) Qualitative data
 - (B) Quantitative data
194. It is an oral questionnaire?
- (A) Score card
 - (B) Interviewer
 - (C) Unobtrusive
 - (D) Interview
195. Which of these is a quality of unstructured interviews
- (A) Standardised
 - (B) Offensive
 - (C) Uncomfortable to answer
 - (D) Flexibility in questions and answers
196. What is an open ended question? A question requiring the interviewee to give longer explanations and lead to follow-up questions.
- (A) An older question
 - (B) A yes or no question
 - (C) A question requiring the interviewee to give longer explanations and lead to follow-up questions.
 - (D) A new question
197. A method of gathering primary or secondary information by asking questions.
- (A) Document
 - (B) Interview
 - (C) Transcript
 - (D) Observing
198. The biggest disadvantage of face-to-face interviews is that they are costlier than either mail or telephone surveys.
- (A) True
 - (B) False
199. How is information from the interview captured?
- (A) A researcher can choose the method that is most suitable and efficient.
 - (B) Only by taking written notes.
 - (C) Conducted in a laboratory or natural settings
 - (D) None of above
200. What is a disadvantage of face-to-face interviews?
- (A) Highest response rates
 - (B) Allows for the longest questionnaires
 - (C) High cost
 - (D) Interviewers can observe body language
201. When conducting an interview, asking questions such as: "What else?" or "Could you expand on that?" are all forms of:
- (A) Structured responses
 - (B) Category questions
 - (C) Protocols
 - (D) Probes
202. What is a disadvantage of semi-structured interviews?
- (A) They are quick to conduct.
 - (B) They have fixed guidelines.
 - (C) They are time-consuming.
 - (D) They provide limited information.
203. Which of the following is NOT a benefit of using interviews in qualitative research?
- (A) Provides rich, detailed data
 - (B) Eliminates researcher bias completely
 - (C) Allows for follow-up questions
 - (D) Can explore participants' emotions and thoughts

- 204.** The type of interview in which the specific topics are decided in advance but the sequence and wording can be modified during the interview is called
- (A) The interview guide approach.
 - (B) The informal conversational interview.
 - (C) A closed quantitative interview.
 - (D) The standardized open-ended interview.
- 205.** What method was used to gather data in the study about night shift nurses?
- (A) Quantitative Survey Method
 - (B) Biographical Narrative Interview Method
 - (C) Experimental Method
 - (D) Case Study Method
- 206.** A method in which the researcher conducts in-person interviews reads questions to the respondent on a computer screen and keys the respondent's answers directly into the computer.
- (A) Computer-assisted personal interviewing
 - (B) Computer-assisted self-interviewing
 - (C) Fully automated self-interviewing
 - (D) Computer-assisted telephone interviewing
 - (E) Fully automated telephone interviewing
- 207.** A meeting or conversation in which a writer or reporter asks questions of one or more persons from whom material is sought for a newspaper, story, or television broadcast
- (A) Talent
 - (B) Reporter
 - (C) Open-ended Questions
 - (D) Interview
- 208.** Which of the following is an open question?
- (A) "How long have you had this job?"
 - (B) "How did you feel when you lost your wallet?"
 - (C) "Would you say that you were upset when the Cowboys won?"
 - (D) "Things are crazy right now, wouldn't you agree?"
- 209.** True or false? Structured interviews produce valid data whereas unstructured interviews produce reliable data.
- (A) True
 - (B) False
- 210.** Computer Assisted Personal Interview (CAPI)
- (A) In situ survey
 - (B) Continuous Survey
 - (C) Non-Continuous Survey
 - (D) Personal Survey
- 211.** Interviewer enters the interview session with a plan to explore specific topics and to ask specific open-ended questions
- (A) Interview Guide Approach
 - (B) Informal Conversational Interview
- 212.** Why do structured interviews suffer from inflexibility?
- (A) Because the interviewer can ask as many questions as they like so may get lost and go off subject.
 - (B) Because researchers have to draw up the questions in advance and therefore have already decided what is important and this might not coincide with what the interviewee thinks.
 - (C) The interviewer may be biased to a certain topic.
 - (D) None of above
- 213.** The interview method in cultural mapping is:
- (A) A survey that requires yes or no answers
 - (B) A review of documents like historical texts and archives
 - (C) An ethical observation without active questioning and obstruction of daily lives
 - (D) A dialogue where the researcher asks questions

- 214.** Reporting of socially undesirable behaviors can also be less for a face-to-face interview due to potential embarrassment or fear of being judged by the interviewer.
- (A) Weakness of Structured Interview
 - (B) Weakness of Unstructured Interview
 - (C) Weakness of Semi-Structured Interview
 - (D) Weakness of Telephone Interview
 - (E) Weakness of Face-to-Face Interview
- 215.** Which type of interview involves predefined questions with no deviation?
- (A) Structured
 - (B) Semi-Structured
 - (C) Unstructured
 - (D) Focus Group
- 216.** Term: InterviewerChoose the matching definition:
- (A) A broad term that refers to the management of money, investments, and other financial instruments.
 - (B) A person who asks questions to gather information, typically during a formal meeting or conversation.
 - (C) Material that provides official information or evidence or that serves as a record.
 - (D) People who depend on someone else for their support.
- 217.** Which primary data collection method involves in-depth, one-on-one conversations with respondents?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Experiments
- 218.** An informal interview can still be considered an interview even if the researcher has no control over the conversation.
- (A) TRUE
 - (B) FALSE
- 219.** If the interviewee mentions something interesting, you should ask extra questions on the spot, even if those questions aren't on your script. TRUE or FALSE?
- (A) True
 - (B) False
- 220.** A small number of consumers expressing opinions about a new product or service in a group discussion is a
- (A) Target market
 - (B) Focus group
 - (C) Survey group
 - (D) Experimental group
- 221.** If you have three participants for the interview, you can ask each person the same set of questions.
- (A) True
 - (B) False
- 222.** What data collection method involves direct verbal responses?
- (A) Interview
 - (B) Observation
 - (C) Survey
 - (D) Focus Group
- 223.** Cues that help reporters organize questions for an interview
- (A) Rapport
 - (B) 5 W's and H
 - (C) Interview
 - (D) Primary source
- 224.** What needs to be avoided during an interview is ____
- (A) Be honest and direct
 - (B) Speak clearly and firmly
 - (C) Provides irrelevant information
 - (D) Show interest and sincerity
- 225.** A technique for gathering in-depth information from 5 to 10 informants simultaneously is called:
- (A) Focus group interview
 - (B) Semi structured interview
 - (C) Group interview
 - (D) None of above

226. Michael met with an Import Cars representative to have a structured conversation to assess whether he should be hired for their company. This is considered what?
- (A) Walkthrough
 - (B) Interview
 - (C) Job shadow
 - (D) Resume
227. While terminating the interview, the field-worker should not do one of the following
- (A) He should record all the responses made by the interviewee before leaving.
 - (B) He should thank the interviewee.
 - (C) He should close the interview hastily.
 - (D) He should answer all the questions the respondent asks concerning the nature and purpose of the study.
228. Structured interview: an interview with ____ questions asked to each participant.
- (A) Fixed
 - (B) Each
 - (C) Random
 - (D) Some
229. When conducting an interview to gather research for your speech your first step is to select the interviewees.
- (A) True
 - (B) False
230. An interview set up and planned in advance
- (A) Primary Source
 - (B) Off the record
 - (C) Q and A
 - (D) Formal interview
231. Interview
- (A) The profession of gathering and reporting news for the public.
 - (B) The introduction section of a story.
 - (C) Questioning a person or persons to obtain details on a topic.
 - (D) Usually in feature writing. A paragraph that explains news-worthiness of the material.
232. This type of question in an interview tempts the respondents to answer in one way. They frequently suggest answer the interviewer expects.
- (A) Direct questions
 - (B) Leading questions
 - (C) Primary questions
 - (D) Opinion questions
233. A structured interview has a set of predetermined questions.
- (A) TRUE
 - (B) FALSE
234. What is the most useful technique to gather good information for both news stories and feature stories?
- (A) Outlining
 - (B) Pre-writing
 - (C) Researching the Internet
 - (D) Interviewing
235. Interviewers are always impartial when conducting interviews
- (A) False
 - (B) True
236. Which of the following is inappropriate during an interview?
- (A) Using a tape recorder
 - (B) Closely observing the subject's reactions
 - (C) Arguing with the subject
 - (D) Eye contact
237. What is one advantage of using a structured interview format?
- (A) It is not flexible.
 - (B) It allows for large samples to be interviewed.
 - (C) It lacks important details.
 - (D) It leads to restrictive answers.

- 238.** Which of the following represents excellent advice for conducting an interview?
- (A) Listen more and talk less.
 - (B) Don't interrupt.
 - (C) Don't be judgmental about the interviewee's beliefs or views.
 - (D) All of the given options.
- 239.** There is more risk of researcher bias.
- (A) Weakness of Structured Interview
 - (B) Weakness of Unstructured Interview
 - (C) Weakness of Semi-Structured Interview
 - (D) Weakness of Telephone Interview
 - (E) Weakness of Face-to-Face Interview
- 240.** Which is the technique of investigation involving face to face conversation?
- (A) Observation.
 - (B) Sociometry.
 - (C) Interview.
 - (D) Questionnaire.
- 241.** Interview which require "Probing" is called
- (A) Clinical Interview
 - (B) Depth Interview
 - (C) Group Interview
 - (D) Telephone Interview
- 242.** The written set of guidelines that describes an outline of topics to be covered by a focus group moderator is called a
- (A) Discussion guide.
 - (B) Concept test.
 - (C) Case study.
 - (D) All of the given options.
- 243.** Interviewing is the favoured approach EXCEPT when:
- (A) There is a need for highly personalized data
 - (B) It is important to ask supplementary questions
 - (C) High numbers of respondents are needed
 - (D) Respondents have difficulty with written language
- 244.** Which is NOT considered a good behavior of an interviewer?
- (A) Arrange interviews and be prepared with questions
 - (B) Asking the person being interviewed to repeat something said even if they were still speaking
 - (C) As the question again at the end of an interview if you get a no comment response
 - (D) Shake hands at the end of an interview
- 245.** ____ is a face-to-face conversation between two individuals with the sole purpose of collecting relevant information to satisfy a research purpose.
- (A) Video
 - (B) Observation
 - (C) Interview
 - (D) None of above
- 246.** If a researcher records and transcribes interviews before analyzing them, which data collection method is being used?
- (A) Observation
 - (B) Survey
 - (C) Interview
 - (D) Case Study
- 247.** In a ____, the interviewer schedule may state exactly what questions should be asked, as well as the order of the questions.
- (A) Structured survey
 - (B) Unstructured interview
 - (C) Structured interview
 - (D) Semi-structured interview
- 248.** It is a method that has a physical contact with the respondents.
- (A) Direct Method
 - (B) Indirect Method
 - (C) Observation Method
 - (D) Experimental Method

- 249.** This refers to a two-party conversation in which at least one person has a specific serious purpose. This is mostly structured and has several distinct phases and always involves some sort of question-and-answer format.
- (A) Report
 - (B) Interview
 - (C) Meeting
 - (D) Proposal
- 250.** Provides a lot of information from a small number of people and are useful when you want to get an expert or knowledgeable opinion on a subject. This statement provides which type of primary research?
- (A) Survey
 - (B) Interview
 - (C) Observation
 - (D) Analysis
- 251.** ____ occurs between two people where one person asks the question and another person answers the question.
- (A) Brief encounter context.
 - (B) Interview context.
 - (C) Small group context.
 - (D) Private context.
- 252.** Questions raised throughout an interview can be recorded by:
- (A) Recording after the interview is completed
 - (B) Recalling the interview after one day
 - (C) Writing directly on paper or recording during the interview
 - (D) Recalling important results at any time
 - (E) Recording after returning from fieldwork
- 253.** Example of qualitative instrument
- (A) Interview guide / focus group discussion
 - (B) Survey questionnaire
 - (C) Statistical software
 - (D) Random sampling table
- 254.** What type of data collection technique is used to gather unstructured data?
- (A) Survey
 - (B) Test
 - (C) Interview
 - (D) Questionnaire
- 255.** A conversation between two people in which questions are asked
- (A) Consumer panel
 - (B) Focus group
 - (C) Interview
 - (D) Questionnaire
- 256.** The aim of focused interview is
- (A) To take the response from the candidate from different of subjects.
 - (B) To take the response from the candidates from a specific subject.
 - (C) Both A and B.
 - (D) None of the above.
- 257.** "I asked questions verbally to all the employees of the accounts department at Greensteds School, to find out how their systems work." What research method is described above?
- (A) Questionnaires
 - (B) Interviews
 - (C) Collecting Documents
 - (D) Observation
- 258.** When you would like to explore a phenomenon indepth, you employ
- (A) Semi-structured interview
 - (B) Structured interview
- 259.** What type of interview question is this, "What do you think is the purpose of research?"
- (A) Feeling question
 - (B) Background question
 - (C) Opinion question
 - (D) Knowledge question

260. You should always do what at the end of an interview?
- (A) Leave
 - (B) Shake their hands
 - (C) Use the restroom
 - (D) Thank them for their time.
261. Interviews differ from focus groups in that for interviews the number of participants are ___ and the topic is usually ___
- (A) Larger; less complex
 - (B) Larger; based on employee preferences
 - (C) Smaller; more complex
 - (D) Smaller; based on consumer preferences
262. How can businesses use focus groups to gather customer insights?
- (A) By observing customer behavior in stores.
 - (B) By engaging a small group of people in a discussion about the product.
 - (C) By providing product samples.
 - (D) By creating online surveys.
263. In-person interviews can be time consuming.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above
264. Fixed questions are pre-prepared and every participant receives the same questions in the same order.
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-Structured Interview
 - (D) Telephone Interview
 - (E) Face-to-Face Interview
265. Which of the following is a common tool for qualitative data collection in educational research?
- (A) Interviews
 - (B) Multiple-choice tests
 - (C) Graphs and charts
 - (D) Standardized tests
266. A formal meeting during which a journalist asks a famous person different questions about specific subjects for publication
- (A) Journalist
 - (B) Listener
 - (C) Live
 - (D) Interview
267. This consists of predetermined questions and at the same time this allows the respondent to freely answer the questions based on how they think and feel about the research topic.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
268. What is the best method for qualitative gathering of information?
- (A) Survey
 - (B) Interview
 - (C) Content analysis
 - (D) None of above
269. What procedure will be used to record data?
- (A) Collecting Documents
 - (B) An Interview Protocol
 - (C) Collecting Audiovisual Mater
 - (D) Conducting Interviews
270. How is data typically collected in phenomenological research?
- (A) Through surveys
 - (B) Through in-depth interviews
 - (C) Through experiments
 - (D) Through statistical analysis
271. RJ interviewed a respondent by asking, "Ms. A, could you describe your experience being posted at the intensive care unit (ICU)?" This question is used in the following interview.

- (A) Closed
 - (B) Structured
 - (C) Unstructured
 - (D) Semi-structured
272. Which ONE is not applicable as an interview method?
- (A) Focus group discussion.
 - (B) Reviewing an interview article in an academic journal.
 - (C) Email conversation.
 - (D) Face-to-face conversation.
273. If a researcher interviews participants to gather personal experiences, the instrument used is:
- (A) Checklist
 - (B) Observation guide
 - (C) Interview schedule
 - (D) Rating scale
274. Describe the process of conducting interviews as a research method.
- (A) Prepare questions, conduct surveys, record responses
 - (B) Select participants, prepare questions, conduct interviews, record responses, analyze data, draw conclusions.
 - (C) Recruit participants, analyze findings, present results
 - (D) Select participants, analyze data, draw conclusions
275. Most spontaneous and loosely structured. Does not use an interview protocol. Good to tape-record
- (A) Informal Conversational Interview
 - (B) Interview Guide Approach
276. Compare and contrast between unstructured interview method and structured interview method with its advantages and disadvantages.
- (A) Unstructured interviews are more rigid than structured interviews.
 - (B) Structured interviews allow for more flexibility than unstructured interviews.
 - (C) Unstructured interviews are more flexible and can adapt to the interviewee's responses.
 - (D) Structured interviews are always more effective than unstructured interviews.
277. Which sociologists used an un-structured interview to investigate the sensitive topic of domestic violence.
- (A) Young & Willmott
 - (B) Opie & Parson
 - (C) Dobash & Dobash
 - (D) Mark & smith
278. The person who asks questions in an interview.
- (A) Audience
 - (B) Leader
 - (C) Subject
 - (D) Interviewer
279. What is a question and answer session between a reporter and source to get information for a story?
- (A) Lead
 - (B) Hammer
 - (C) Interview
 - (D) Editorial
280. A qualitative method of research often used to obtain the respondents' perceptions and attitudes to the issues.
- (A) Workshop
 - (B) Ethnography
 - (C) Interview
 - (D) Reflective journal log
281. Enable the reporter to be flexible to move in a different direction if the interview shifts away from the planned topic
- (A) Primary source
 - (B) Observing details
 - (C) 5W's and H
 - (D) Follow up question

- 282.** Define the term: Interviews.
- (A) Interviews are a qualitative data collection method involving direct questioning of participants.
 - (B) Interviews are a quantitative data analysis technique using statistical software.
 - (C) Interviews are a method of distributing surveys online to a large audience.
 - (D) Interviews are a process of collecting data through observation only.
- 283.** Pepito is a researcher. One of his subjects is on his vacation, but to meet the deadline, he is planning to gather the information he needs through phone. This is a type of what?
- (A) One on one interview
 - (B) Telephone interview
 - (C) Electronic email interview
 - (D) Focus group discussion
- 284.** It is conducted in a one on one consultation to gain understanding of the problem under study.
- (A) Method
 - (B) Survey
 - (C) Interview
 - (D) Hybrid Method
- 285.** If you are asked an inappropriate question during an interview, it is best to refuse to answer it.
- (A) True
 - (B) False
- 286.** In a semi-structured interview, which of the following statements is true?
- (A) The interviewer asks predetermined questions in a fixed order.
 - (B) The interviewee has no opportunity to elaborate on their responses.
 - (C) Both the interviewer and interviewee have complete flexibility in the discussion.
 - (D) The interview is highly structured with no room for deviation.
- 287.** Why is it helpful to prepare an interview guide before conducting semi-structured interviews?
- (A) So that the data from different interviews will be comparable and relevant to your research question
 - (B) So that you can calculate the statistical significance of the results
 - (C) In order to allow participants complete control over the topics they discuss
 - (D) To make the sample more representative
- 288.** Which interview type has pre-set questions which allow for elaboration and probing
- (A) Structured
 - (B) Unstructured
 - (C) Semi-structured
 - (D) None of above
- 289.** A company has decided to interview several candidates for the same position at the same time to judge their leadership skills. This is an example of a group interview
- (A) True
 - (B) False
- 290.** Which of the following is a disadvantage of interviews?
- (A) You can read the interviewee's body language
 - (B) Opportunity to clarify questions
 - (C) Obtain quantitative and qualitative data
 - (D) Anonymity of interviewee is lost and may impact on responses
- 291.** A practice interview conducted with another person is a(n) ____
- (A) Short-term
 - (B) Career
 - (C) Scholarship
 - (D) Mock interview
- 292.** A conversation between a reporter and a source
- (A) Chat
 - (B) Source

- (C) Direct quotation
(D) Interview
- 293.** When you conduct an interview, prepare closed-ended questions to ensure a variety of responses
(A) True
(B) False
- 294.** True or False: As the interviewer, you should do the majority of talking in an interview.
(A) True
(B) False
- 295.** Which of the following is a formal meeting where a person is asked to communicate their skills and interests?
(A) Interview
(B) Presentation
(C) Visual Reports
(D) Evaluative Report
- 296.** In this type of interview, questions are pre-determined, the order of questioning is fixed and wording is usually specific.
(A) Structured interview
(B) Semi-structured interview
(C) Unstructured interview
(D) None of above
- 297.** Focus groups are the same as semi-structured individual interviews.
(A) True
(B) False
- 298.** Diego is a psychology student who conducts a research on students' thoughts about the struggles they face during the pandemic. He wants answers to be spontaneous so he decided not to prepare a standard question. He just asked students to share then he listened and took important notes. What kind of interview was done by Diego?
(A) Structured Interview
(B) Unstructured Interview
(C) Semi-structured Interview
(D) None of above
- 299.** There tends to be a better response rate when a telephone interview is used compared to a face-to-face interview when the focus is on socially sensitive or personal thoughts and behaviors.
(A) Strength of Structured Interview
(B) Strength of Unstructured Interview
(C) Strength of Semi-Structured Interview
(D) Strength of Telephone Interview
(E) Strength of Face-to-Face Interview
- 300.** What is the interviewer effect?
(A) The effect of the interviewer's characteristics on the responses.
(B) The effect of the interviewee's characteristics on the questions.
(C) The effect of the researcher's values on the data collection.
(D) The effect of the research environment on the data.
- 301.** What is a key characteristic of email interviews?
(A) They are conducted in real-time
(B) They allow for face-to-face interaction
(C) They are asynchronous
(D) They provide non-verbal cues
- 302.** The major advantage of interviews is
(A) The response rate is high
(B) The interviewer can guess the age of the respondent
(C) That people are more likely to be honest
(D) That the researcher can ask more detailed questions
- 303.** A meeting between an employer and a job applicant.
(A) Board Meeting
(B) Interview
(C) On the Job Training
(D) Business Luncheon

- 304.** One of the most typical interviews wherein the interviewer will simply arrange the interview through video
- (A) TV interview
 - (B) Live interview
 - (C) Webcam interview
 - (D) None of above
- 305.** In this type of interview, the respondents are asked to answer the questions based how they feel and think about a certain topic.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
- 306.** To reduce interviewer bias, interview schedules should be:
- (A) Individualised
 - (B) Itemised
 - (C) Standardised
 - (D) Operationalised Edit
- 307.** ____ involve asking individuals a series of questions, often face-to-face or over the phone.
- (A) Focus group
 - (B) Interviews
 - (C) Questionnaire
 - (D) Online surveys
- 308.** An on-site member of the research team intercepts and directs willing respondents to nearby computers.
- (A) Computer-assisted personal interviewing
 - (B) Computer-assisted self-interviewing
 - (C) Fully automated self-interviewing
 - (D) Computer-assisted telephone interviewing
 - (E) Fully automated telephone interviewing
- 309.** In this type of interview, the respondents answer the questions based on what they personally think and feel about it.
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-structured Interview
 - (D) Interview
- 310.** It is acceptable to ask leading questions during an interview to guide participants toward specific responses.
- (A) True
 - (B) False
- 311.** What is the primary goal of an interview in interpersonal communication?
- (A) To have a casual conversation
 - (B) To solve a problem with a group
 - (C) To obtain specific information or assess qualifications
 - (D) To entertain an audience
- 312.** Ethnography: ____ is informal, face-to-face interviews that are designed to cover specific topics without the rigid structure of a questionnaire, but more structured than open interviews
- (A) Semi-structured interviews
 - (B) Participant observation
 - (C) Informants
 - (D) None of above
- 313.** The primary advantages of the interview are:
- (A) High response rate and opportunity for clarification of questions
 - (B) Cost and training required
 - (C) Anonymity and cost
 - (D) Time required and response rate
- 314.** Which of these questioning techniques do you use to get elaborate, descriptive answers?
- (A) Closed questions
 - (B) Yes and No questions
 - (C) Open ended questions
 - (D) None of above

315. For what method are questions pre set, but the interviewer can ask them in any order, add follow up questions and leave out questions?
- (A) Structured
 - (B) Semi-structured
 - (C) Unstructured
 - (D) None of above
316. You should you NOT do during an interview?
- (A) Look interested in what the person is saying
 - (B) Take notes
 - (C) Ask prepared questions to guide the conversation
 - (D) Ask only yes or no questions
317. Which of the following is a type of interview in which the interviewer ask a particular set of predetermined questions?
- (A) Unstructured Interview
 - (B) Structured Interview
 - (C) Semi-structured Interview
 - (D) Focused Interview
318. Unstructured interviews provide participants with a limited range of responses.
- (A) True
 - (B) False
319. What is the primary focus of oral history in narrative research?
- (A) Writing and recording one's own life experiences.
 - (B) Gathering personal reflections on events and their causes from one or several individuals.
 - (C) Portraying an individual's entire life.
 - (D) Writing and recording the experiences of another person's life.
320. Reading parts of the story to the source to check for accuracy
- (A) On-background
 - (B) Phoner
 - (C) Call-back
 - (D) Read-back
321. Which of the following is a benefit of email interviews?
- (A) Immediate response
 - (B) Inexpensive and convenient
 - (C) Access to non-verbal communication
 - (D) More dynamic interaction
322. What are the main types of interviews?
- (A) Objective and subjective
 - (B) Fun and boring
 - (C) Fully structured, semi-structured, unstructured
 - (D) Scientific, journalistic, and YouTube interviews
323. What do we call an interview which is like a conversation in style?
- (A) Unstructured
 - (B) Semi-structured
 - (C) Structured
 - (D) Interactionist
324. Which of the following is not a type of qualitative interview?
- (A) Unstructured interview
 - (B) Oral history interview
 - (C) Structured interview
 - (D) Focus group interview
325. What is an interview?
- (A) A book I wrote with pictures and information
 - (B) An animoto I made with facts
 - (C) A video I created where I asked questions to get information
 - (D) None of the above
326. Which among the following should be considered when conducting an interview?
- (A) Do not ask dichotomous questions.
 - (B) Respect the culture of the group being studied
 - (C) Develop rapport with the participants.
 - (D) All of the above.

327. Interviewers should be trained to do all of the following except:
- (A) Establish a friendly relationship with the respondent
 - (B) Show their own views regarding the study
 - (C) Follow-up on ambiguous answers
 - (D) Ask questions in a standard manner
328. Questions and Answer meeting between a reporter and source to get information
- (A) News
 - (B) Interview
 - (C) Inverted Pyramid
 - (D) Reporter
329. In what circumstances should you record an interview or take detailed notes?
- (A) If it is appropriate and if it helps ensure accuracy.
 - (B) Only if the interviewee insists on it.
 - (C) Always, to have a complete record of the interview.
 - (D) If the interviewee is a potential job candidate.
330. Lavelle is a reporter in Anchorage, Alaska. He is working to gather information on the current fishing crisis due to the low fish count found in their local waters. What would Lavelle gain from doing interviews with local fisherman in the area?
- (A) A one-sided view of the story
 - (B) Less information and credibility
 - (C) An estimation of the local weather patterns
 - (D) More information and credibility
331. What should you do if the interviewee refuses to answer a question?
- (A) End the interview immediately
 - (B) Respect their decision and move on to the next question.
 - (C) Ask the same question again
 - (D) Insist on getting an answer
332. In which of the following Free Description Tasks technique, questions and answers are in the form of a spoken interaction between the experimenter and the participant?
- (A) Interview
 - (B) Questionnaire
 - (C) Long answer
 - (D) Partial report
333. Reluctance to respond is least in
- (A) Telephone surveys
 - (B) Questionnaire surveys
 - (C) Personal interviews
 - (D) All of these
334. Interviews never directly capture information about the participant such as age, gender, employment status
- (A) True
 - (B) False
335. Interviewer bias is ___ in personal interviews as opposed to telephone interviews.
- (A) More likely
 - (B) Less likely
 - (C) About the same
 - (D) There is no basis for comparison
336. In-depth one-on-one data collection is best achieved by:
- (A) Structured survey
 - (B) Focus group
 - (C) Individual interview
 - (D) Observational checklist
337. Which is a practical issue of structure interviews?
- (A) Not representative
 - (B) Very little freedom to explain questions or clarify misunderstandings
 - (C) Cannot match the potentially huge sample numbers reached by questionnaires
 - (D) None of above

338. Which of the following is NOT a way interviews can be conducted?
- (A) Phone
 - (B) Internet
 - (C) Face to face
 - (D) Written letter
339. Which type of interview allows the questions to emerge from the immediate context or course of things?
- (A) Interview guide approach.
 - (B) Informal conversational interview.
 - (C) Closed quantitative interview.
 - (D) Standardized open-ended interview.
340. It has series of broad questions to ask and may have some prompts to help the interviewee.
- (A) Structured
 - (B) Unstructured
 - (C) Semi-structured
 - (D) None of the Above
341. 'Unstructured' interviews can be referred as —
- (A) Focused Interviews
 - (B) Depth or In-depth Interviews
 - (C) Structured Interview
 - (D) None of the above
342. Research methods: Name a key benefit of INTERVIEWS
- (A) It is easy to avoid researcher bias from affecting the results
 - (B) They are cheap and easy to get lots of participants
 - (C) You use the scientific method to get better results
 - (D) It is more detailed and you have more chances to clarify things
343. The interview schedule only specifies the topic and the available time.
- (A) Structured interview
 - (B) Semi-structured interview
 - (C) Unstructured interview
 - (D) None of above
344. Which primary data collection method involves collecting data through phone or video calls with respondents?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Experiments
345. An interview protocol is essential to:
- (A) Ensure consistency across different interviews
 - (B) Increase the sample size
 - (C) Improve the survey design
 - (D) Standardize participant responses
346. A face-to-face meeting between the employer and the applicant
- (A) Lunch date
 - (B) Interview
 - (C) Resume
 - (D) Employment
347. What is the name given to the plan for carrying out an interview?
- (A) An interview schedule.
 - (B) A transcript.
 - (C) An interview agenda.
 - (D) A memo.
348. Probing questions could be ___ / ___ questions
- (A) Open/closed
 - (B) Open only
 - (C) Closed only
 - (D) None of the above
349. A type of research instrument commonly used in qualitative research where we can have a purposive conversation between a researcher and interviewee
- (A) Focus group discussion
 - (B) Interview

- (C) Questionnaire
 - (D) Observation
- 350.** Listen carefully, repository of detailed information. Should be armed with probes or prompts to use when greater clarity or depth is needed from the person being interviewed
- (A) INTERVIEWER
 - (B) INTERVIEWEE
- 351.** Interview schedule is used for
- (A) Unstructured interviews
 - (B) Standardised interviews
 - (C) Both of these
 - (D) None of these
- 352.** What is the importance of setting a positive and respectful atmosphere at the beginning of an interview?
- (A) It helps you get through the interview quickly.
 - (B) It creates a welcoming and comfortable environment for the interviewee.
 - (C) It ensures that the interview stays on a strict schedule.
 - (D) It allows you to immediately dive into the most critical questions.
- 353.** Researchers question participants face-to-face or over the telephone and can ask both open and closed questions. May be structured, semi-structured or unstructured.
- (A) Self-report
 - (B) Questionnaire
 - (C) Interview
 - (D) None of above
- 354.** An agreement reached, before an interview view begins, that the interviewer will not print the information the the interviewee provides
- (A) Q and A
 - (B) Off the record
 - (C) Formal interview
 - (D) Stock question
- 355.** Expert information is obtained by unstructured personal interviews without administering a formal questionnaire
- (A) True
 - (B) False
- 356.** If an interview is conducted with a respondent who does not meet the qualifications for a study, what kind of bias has occurred?
- (A) Non-response bias.
 - (B) Instrument bias.
 - (C) Position bias.
 - (D) Respondent bias.
- 357.** A question that helps an interviewer pursue topics that come up unexpectedly during an interview.
- (A) Leading question
 - (B) Open-ended question
 - (C) Yes/no question
 - (D) Follow-up question
- 358.** Which of the following is not a disadvantage of using interview as a data collection tool?
- (A) Researcher can ask additional questions
 - (B) Respondents do not have anonymity
- 359.** If a researcher interviews a principal about the characteristics of the district superintendent, the principal is a(n)
- (A) Unobtrusive observer.
 - (B) Informant.
 - (C) Research assistant.
 - (D) Objective rater.
- 360.** People are actually less likely to report unhealthy behaviors in a telephone interview compared to a face-to-face interview.
- (A) Weakness of Structured Interview
 - (B) Weakness of Unstructured Interview
 - (C) Weakness of Semi-Structured Interview
 - (D) Weakness of Telephone Interview
 - (E) Weakness of Face-to-Face Interview

361. The interviewer and the participant are present in the same room, with the interviewer reading out questions and the participant responding verbally.
- (A) Structured Interview
 - (B) Unstructured Interview
 - (C) Semi-Structured Interview
 - (D) Telephone Interview
 - (E) Face-to-Face Interview
362. Using a structured interviewing technique would likely achieve all of the following except?
- (A) Increased consistency across candidates
 - (B) Reduced subjectivity on the part of the interviewer
 - (C) Enhanced job relatedness
 - (D) More opportunity to explore areas as they arise during the interview
363. What do you call the data collection approach that requires the researcher to interview a group consisting of 6 to 8 participants?
- (A) In-depth interviews
 - (B) Focus group discussion
 - (C) Observation
 - (D) Ethnography
364. Respondents independently approach a centrally located computer station or kiosk, read questions off a screen and key their answers directly into the station's computer
- (A) Computer-assisted personal interviewing
 - (B) Computer-assisted self-interviewing
 - (C) Fully automated self-interviewing
 - (D) Computer-assisted telephone interviewing
 - (E) Fully automated telephone interviewing
365. Before starting an interview, the researcher should establish:
- (A) A positive rapport with the interviewee
 - (B) A formal written request to municipal and barangay heads
 - (C) A draft of the final comprehensive report
 - (D) A group consensus with other interviewers
366. According to Kvale (1996), the main task of interviewing is to:
- (A) Gather information with authentic and measurable numerical results
 - (B) Examine the memory of participants on their local community
 - (C) Confirm the accuracy of written references
 - (D) Understand the meaning behind responses
367. Which of the following is a formal meeting where a person is asked to communicate their skills and interests? (hint: they are often used to fill a job or get acceptance into a club/school)
- (A) Interview
 - (B) Presentation
 - (C) Visual Report
 - (D) None of above
368. What should you avoid when asking questions to gather patient information?
- (A) Using "why" questions that may sound judgmental
 - (B) Using open-ended questions
 - (C) Asking for clarification
 - (D) Using the phrase "Tell me more about ____"
369. Which of the following is NOT a benefit of recording an interview?
- (A) You can check back for information you forgot.
 - (B) You can get accurate quotes.
 - (C) You have a back-up in case you lose your notes.
 - (D) You can sell the recording of the interview.

370. Interviewing is a form of questioning characterized by the fact that it employs verbal questioning as its principal technique of data collection.
- (A) True
 - (B) False
371. A Focus Group is ____
- (A) A meeting for Ford owners
 - (B) A group interview on one topic
 - (C) A type of mindfulness exercise
 - (D) A group to regain lost focus
372. The style of presentation which you do ask your guest questions
- (A) Solo presentation
 - (B) Co-hosting presentation
 - (C) Interview presentation
 - (D) None of above
373. True or False: To get more information out of an interviewee, one must ask close-ended questions.
- (A) True
 - (B) False
374. Imagine Chance, Emory, and Joel are conducting interviews for a school project. Which of the following scenarios would be an example of a less effective interview?
- (A) Chance's interview, where he informs the audience about the subject
 - (B) Emory's interview, where he asks follow-up questions
 - (C) Joel's interview, where the interviewee gives only yes/no answers
 - (D) None of above
375. What do you call the type of structured interview that is considered as very convenient and affordable because researchers can connect to the respondents who has a telephone?
- (A) Computer Assisted Personal Interview
 - (B) Face-to-face interviews
 - (C) Observation
 - (D) Telephone Interview
376. If the interviewer is skillful enough and is able to establish rapport, he is likely to draw some confidential matters.
- (A) True
 - (B) False
377. Which data collection method is considered one of the best for gathering narrative data in qualitative analysis?
- (A) Experiments
 - (B) Surveys
 - (C) Interviews
 - (D) None of above
378. 'Structured' and 'Unstructured' are two types of
- (A) Observation.
 - (B) Introspection,.
 - (C) Interview.
 - (D) None of these.
379. Why is interviewing often used in cultural mapping?
- (A) It requires minimal preparation time
 - (B) It produces only statistical information
 - (C) It emphasizes direct interaction with locals
 - (D) It gathers firsthand perspectives from participants
380. Research instruments, such as interview questions, can be made flexible based on information that has recently surfaced.
- (A) Strength
 - (B) Weakness
381. It is impossible to conduct focus groups without a face-to-face setting
- (A) True
 - (B) False
382. Interviews are conversations with ____
- (A) Fun
 - (B) Purpose
 - (C) Friendliness
 - (D) Informality

383. Questions used to further develop a response to an initial question or questions asked after an interview.
- (A) Follow-up
 - (B) Open-ended
 - (C) Closed-ended
 - (D) Read back
384. What type of interview has a pre-determined questions that must be answered by the respondents?
- (A) Open-ended.
 - (B) Structured.
 - (C) Unstructured.
 - (D) Observation.
385. "It is a personal interview that is carried out with one respondent at a time". This statement referring to?
- (A) Case study
 - (B) One-on-one interview
 - (C) Focus groups
 - (D) Record keeping
386. Which of the following is a common data collection method in qualitative research?
- (A) Rating scales
 - (B) Questionnaires
 - (C) Interviews
 - (D) Surveys
387. True or False: Probes are used to influence responses in an interview.
- (A) True
 - (B) False
388. A tool in psychology which involves a face to face interaction/conversation with a client to ask for pertinent information
- (A) An interview
 - (B) A test
 - (C) An assessment
 - (D) Chismisan session
389. Face-to-face conversation to explore issues; conducted without using a structured questionnaire
- (A) Observation
 - (B) In-depth interview
 - (C) Research question
 - (D) None of the above
390. A guided conversation between the researcher and respondent is known as:
- (A) Fieldwork
 - (B) Interview
 - (C) Survey
 - (D) None of above
391. A brand manager needs to measure awareness and values attached to brands. What method should be prioritized?
- (A) Focus groups and face-to-face interviewing
 - (B) Hall tests evaluating product samples
 - (C) Market tests with experimental pricing
 - (D) Cluster analysis for demographic segments
392. An interview schedule is a list of people to be interviewed in qualitative research.
- (A) True
 - (B) False
393. A ____ is one where the interviewer does have a list of questions they intend to ask, but they are happy to ask supplementary questions if required or to leave out questions if deemed necessary.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) Value-free interview
394. What is a key benefit of using the interview method in research?
- (A) It is the fastest method
 - (B) It provides in-depth information about perspectives, experiences, and feelings
 - (C) It is the cheapest method
 - (D) It requires no preparation

- 395.** This method allows for prompting and probing of open-ended responses.
- (A) Snail mail survey
 - (B) Online survey
 - (C) Telephone interview
 - (D) None of these
- 396.** Which of the following is a leading question?
- (A) “What do you think about the level of effort being put forward in school?”
 - (B) “People should work harder in school, don’t you think?”
 - (C) “Should people work harder in school?”
 - (D) None of the above
- 397.** The downside is that researcher is not able to get a grasp of the nonverbal factors that sometimes give the most meaningful answers to a research inquiry.
- (A) Individual interview
 - (B) Group interview
 - (C) Mediated interview
 - (D) None of above
- 398.** Which of the following is an excellent way to enhance the validity of interview data collection?
- (A) Spend an extended period of time in the field.
 - (B) Obtain participant trust.
 - (C) Recognize your own biases.
 - (D) Spend time in field, obtain participant trust, and recognize biases.
- 399.** Which of the following statements is applicable to the unstructured interview?
- (A) It is most appropriate for getting insight into a particular situation in the early stages of investigation.
 - (B) It is less flexible than the structured interview.
 - (C) It is one that operates on the basis of an interview schedule.
 - (D) It is not suited to getting varied responses.
- 400.** A ____ is one where the interviewer sticks rigidly to a pre-written set of questions. It is effectively an individually-administered questionnaire and could have open or closed questions or a mixture of both.
- (A) Pilot study
 - (B) Structured interview
 - (C) Unstructured interview
 - (D) Questionnaire
- 401.** The two main participants in this interaction are the interviewer and the interviewee. This type of interaction is known as:
- (A) Debate
 - (B) Conversation
 - (C) Interview
 - (D) Oratory
- 402.** The only person asking questions in an interview is the interviewer.
- (A) True
 - (B) False
- 403.** What is a key activity when interviewing area agriculture producers about changes in technology over the past 50 years?
- (A) Research the adoption of technology by agriculture producers in your area.
 - (B) Restore a tractor and sell it.
 - (C) Plan plant-related activities and laboratories.
 - (D) Design custom computer programs for producers. Edit
- 404.** Which of the following would represent the emic perspective in an integration study of an inner-city middle school?
- (A) Newspaper article on proposed budget cuts in that county
 - (B) Research study of a similar school from another state
 - (C) Quote from school board member at a public meeting
 - (D) Interview with eighth-grade student at risk of dropping out

405. A formal, personal meeting, esp. one arranged for formal discussion or to evaluate an applicant.
- (A) Interview
 - (B) Job application
 - (C) Resume
 - (D) None of above
406. A researcher is investigating the effects of social media on student self-esteem. What data collection method would provide the most in-depth insights?
- (A) Interviews and focus groups
 - (B) Online surveys with multiple-choice questions
 - (C) Observing students in classrooms
 - (D) Reviewing students' social media posts
407. A question during an interview such as "Why do you feel that way?" is known as a:
- (A) Probe
 - (B) Filter question
 - (C) Response
 - (D) Pilot
408. What is the role of a trained facilitator/moderator in a focus group?
- (A) To take notes during the discussion
 - (B) To provide the participants with the correct answers
 - (C) To moderate the discussion using a topic guide and keep people on track
 - (D) To participate in the discussion as a group member
409. What is the term for open-ended questions that nudge or encourage respondents to reveal more information about a situation?
- (A) Open-Ended Questions
 - (B) Close-Ended Questions
 - (C) Probing Questions
 - (D) Paraphrasing
410. Allow researchers to gain insight into the area.
- (A) Strength of Structured Interview
 - (B) Strength of Unstructured Interview
 - (C) Strength of Semi-Structured Interview
 - (D) Strength of Telephone Interview
 - (E) Strength of Face-to-Face Interview
411. Which type of interview allows for open-ended exploration?
- (A) Structured
 - (B) Semi-structured
 - (C) Unstructured
 - (D) Participant
412. What is the primary method of data collection in phenomenology research?
- (A) Interviews
 - (B) Experiments
 - (C) Questionnaires
 - (D) Case studies
413. This occurs in a group interview setting when one of the participants influences the behavior and responses of the others.
- (A) Social desirability bias
 - (B) Acquiescence bias
 - (C) Sensitivity bias
 - (D) Dominant respondent bias
414. What is one characteristic of the data collected from an interview questionnaire?
- (A) It is always quantifiable.
 - (B) It is limited to predefined options.
 - (C) It is usually in-depth and qualitative.
 - (D) It uses a standard numerical rating system.
415. At a basic level, ___ involves gathering information from a single person. But it can mean a great deal more.
- (A) Insight
 - (B) Resource
 - (C) Websites
 - (D) Interviewing
 - (E) Works cited

- 416.** When we know little about the topic or area and training is about something complicated, the best of survey method to use:
- (A) Observation
 - (B) Focus Group Discussion
 - (C) Interview
 - (D) Questionnaire
- 417.** What is the key characteristic of an interview?
- (A) It involves only one party
 - (B) It involves two parties
 - (C) It does not involve asking questions
 - (D) It is always informal
- 418.** In a structured interview, how are questions presented to participants?
- (A) In a random order
 - (B) In a different order for each participant
 - (C) In the same order for all participants
 - (D) Only if participants request them
- 419.** Which of the following is an advantage of semi-structured interviews?
- (A) Limited flexibility
 - (B) Time efficiency
 - (C) Rich in-depth data
 - (D) Strict guidelines
- 420.** The data collection method used to learn information from a single individual or small number of individual is called ____
- (A) Observation
 - (B) Survey
 - (C) Interview
 - (D) None of above
- 421.** Interviews in cultural mapping can be conducted:
- (A) Through formal written examinations
 - (B) Remotely through online exchanges
 - (C) In one-on-one or group discussions
 - (D) By observation with permission from the locals
- 422.** Teachers in the UK, Spain, and Finland were interviewed to gather opinions on good teaching methods.
- (A) True
 - (B) False
- 423.** When analyzing interview transcripts, a researcher finds a participant's response contradicts earlier statements. What is the best way to handle this?
- (A) Ask the participant for clarification
 - (B) Exclude the participant's data
 - (C) Assume the participant was lying
 - (D) Disregard the inconsistency
- 424.** A ____ is essentially a structured conversation where one participant asks questions, and the other provides answers.
- (A) Discussion
 - (B) Informational Discussion
 - (C) Professional Developmental Observation
 - (D) Interview
- 425.** Why is it important to consider time zone differences in internet-based interviews?
- (A) To avoid the interview altogether if time zones differ.
 - (B) To ensure that the interviewee always chooses a convenient time.
 - (C) To confirm that the interviewee is located in the same time zone as the company.
 - (D) To coordinate and agree on a mutually suitable interview time.
- 426.** The quickest method to collect primary data is:
- (A) Direct Personal Investigation
 - (B) Indirect Oral Investigation
 - (C) Telephone Interview
 - (D) Mailed Questionnaire Method
- 427.** Standardized Open-ended Interview. IP in the quantitative interview includes primarily close-ended items, but the IP in the standardized open-ended interview includes primarily open-ended items. Interviewer does not vary

- from the IP, is more structured than the interview guide approach. Questions are all written out, interviewer reads the questions exactly as written and same order
- (A) True
(B) False
- 428.** ____ is an interview conducted by a trained moderator among a small group of respondents in an unstructured and natural manner
- (A) An experiment
(B) A focus group
(C) A quantitative survey
(D) A depth interview
- 429.** A formal meeting where a person is asked to communicate skills, experiences, and interests
- (A) Group Discussion
(B) Presentations
(C) Criticism
(D) Interview
- 430.** Answer: This method of data collection involves interviewing businesspeople at their offices regarding industrial products or services.
- (A) Executive interview
(B) Mail survey
(C) Research paper
(D) None of above
- 431.** You want to know how users feel about your app's usability. Which method gives the deepest insight?
- (A) Interview
(B) Survey
(C) Likert scale
(D) Questionnaire
- 432.** What is usually necessary to facilitate a focus group?
- (A) A trained facilitator
(B) A group of researchers
(C) Multiple focus groups
(D) A principle researcher
- 433.** Which of the following method is used when an investigator collects the required information with the informant
- (A) Direct personal interview
(B) Indirect oral interview
(C) Mailing method
(D) Questionnaire through correspondents
- 434.** Why interview is particularly used?
- (A) To only get facts
(B) To gauge basic information on topic.
(C) To get detailed story behind one's experiences.
(D) None of above
- 435.** It is essential to establish rapport and create a comfortable environment for participants before starting the interview.
- (A) True
(B) False
- 436.** Interviews will provide a limited information from a small number of people.
- (A) True
(B) False
(C) All the above
(D) None of the above
- 437.** A questionnaire which is conducted face-to-face with a respondent is an example of
- (A) An unstructured interview
(B) A semi-structured interview
(C) A structured interview
(D) A focus interview
- 438.** Structured interviews are most suitable for capturing in-depth narratives and personal experiences
- (A) True
(B) False
- 439.** In-depth interviews are ideal for researching which of the following?
- (A) Topics concerning market characteristics

- (B) Sensitive, personal and confidential topics
(C) Reactions to a new advertising campaign
(D) Straightforward, quantifiable and easy-to-explain topics
- 440.** Which activity implies one-way communication?
(A) Interview
(B) Assembly
(C) TV Show
(D) Focus Group Discussion
- 441.** Why is it important for structured interviews to follow a standardized procedure?
(A) To increase validity, as the interview can be adapted for each respondent
(B) To increase reliability, because all respondents receive the same interview stimulus
(C) To allow for an in-depth exploration of the topic
(D) To make it easier for untrained interviewers to carry out complex surveys
- 442.** In ____ the interviewer interviews the respondents in person. There is direct contact between the interviewer and the respondents. In terms of environment, the mood of the respondents and interviewer can really affect the data collection process, as well as time and place.
(A) Personal Interview
(B) Telephone Interview
(C) Mail Survey
(D) Fax Survey
- 443.** What method of data collection maximizes the engagement with the respondent?
(A) Personal interviews
(B) Telephone interviews
(C) Web surveys
(D) Mail surveys
- 444.** Which source provides qualitative information?
(A) Online surveys
(B) Interviews
(C) Questionnaires
(D) Books and journals
- 445.** Among the following interview methods, which one provides the highest reliability and the most information?
(A) Telephone interview
(B) Mail interview.
(C) Face-to-face interview
(D) Group interview.
(E) None of the above methods ensure both requirements.
- 446.** Which of the following utterances is an example of an open question in an interview?
(A) "How long have you worked here?"
(B) "Start at the beginning and tell me about the problem."
(C) "Which of the three shifts would you prefer to work on?"
(D) "Would you rather stay in this department or have a transfer?"
- 447.** The interviewer may just go with the aim of discussing a limited number of topics, sometimes as few as just one or two.
(A) Research
(B) Unstructured
(C) Structured
(D) Semi-structured
- 448.** Data collection method that involves two or more people through questions and answers
(A) Null Hypothesis (H0)
(B) Interview
(C) Quantitative Data
(D) Experimental Research
- 449.** During the Interview-Ask ____
(A) Questions
(B) For snacks
(C) Friends to join
(D) For unrelated stories

450. There are Four basic principles of engaging in ethnographic interviews, except:
- (A) Context
 - (B) Interpretation
 - (C) Partnership
 - (D) Presentation
451. When conducting an interview, the person asking the questions should ask only Yes or No type questions.
- (A) True
 - (B) False
452. Unstructured interviews allow:
- (A) Only yes/no responses
 - (B) Flexible, free-flowing answers
 - (C) No follow-up questions
 - (D) None of these
453. The success of an in-depth interview depends on the ___ of the interviewer.
- (A) Skills
 - (B) Accent
 - (C) Questions
 - (D) Charisma
454. An automated voice asks questions over the telephone, and respondents use keys on their touch-tone-telephones to enter their replies.
- (A) Computer-assisted personal interviewing
 - (B) Computer-assisted self-interviewing
 - (C) Fully automated self-interviewing
 - (D) Computer-assisted telephone interviewing
 - (E) Fully automated telephone interviewing
455. Semi-structured interviews allow for flexibility in exploring participants' perspectives and experiences.
- (A) True
 - (B) False
456. One-on-one discussions to gain deep insights into customer preferences.
- (A) Interviews
 - (B) Focus Groups
457. What is the purpose of asking thoughtful questions during an interview?
- (A) To avoid answering questions
 - (B) To show disinterest
 - (C) To demonstrate curiosity
 - (D) To confuse the interviewer
458. Words a source says or writes during an interview
- (A) Anecdote
 - (B) Open-ended question
 - (C) Read-back
 - (D) Quotation
459. Two primary tasks in the opening portion of an interview are ___
- (A) To establish rapport and provide orientation
 - (B) To establish your need for information and confirm the interviewee's credentials
 - (C) To set up recording equipment and provide the interviewee with a list of questions you will ask
 - (D) To obtain the correct spelling of the interviewee's first and last names
460. ___ is talking to someone and asking them questions to learn about their story or experience.
- (A) Interview
 - (B) Drawing
 - (C) Cooking
 - (D) Dancing
461. Which is not an advantage of an interview
- (A) Allows two-way communication
 - (B) The researcher can encourage the respondent to answer
 - (C) Mistakes and misunderstandings can be dealt with immediately
 - (D) Can be expensive as researchers have to be selected and trained

462. Match each description with the method of data collection it describes. Data gathered by researcher talking to individual participants.
- (A) Questionnaire
 - (B) Focus group
 - (C) Interview
 - (D) Test
463. A completely unstructured interview typically begins with a question to begin an undirected conversation. This question is called:
- (A) Structured question
 - (B) Direction
 - (C) Grand tour
 - (D) None of above
464. This type of interview combines the characteristics of the Structured and Unstructured Interview.
- (A) Structured interview
 - (B) Unstructured interview
 - (C) Semi-structured interview
 - (D) None of above
465. A(n) ____ is an interview in which there is no specific set of predetermined questions, although the interviewers usually have certain topics in mind that they wish to cover during the interview. These flow like an everyday conversations and tend to be more informal and open-ended.
- (A) Structured interviews
 - (B) Semi-structured interviews
 - (C) Unstructured interviews
 - (D) Personal interviews

1.4.9 Questionnaire

1. The number of questionnaires returned or completed divided by the total number of eligible people who were contacted or asked to participate in the survey is called the ____.

 - (A) Response rate.
 - (B) Participation rate.
 - (C) Inflation rate.
 - (D) None of the given options.

2. What is the main purpose of using open-ended questions in a survey?

 - (A) To obtain statistical information
 - (B) To evaluate results after giving a treatment
 - (C) To obtain facts about the subject
 - (D) To allow respondents to express their thoughts

3. While creating research questionnaires, researchers must particularly AVOID the use of ____.

 - (A) Biased phrasing
 - (B) Simple language
 - (C) Closed-end questions
 - (D) Logical question arrangement
 - (E) Open-ended questions

4. To reduce interviewer bias while keeping costs low, a firm should choose:

 - (A) On-site interviews with product demonstrations
 - (B) Live telephone calls with persuasive scripts
 - (C) Extended face-to-face sessions with flexible probing
 - (D) Anonymous online surveys with standardized wording

5. What is a biased question in a survey?

 - (A) A question worded so that the subject would tend to answer in a certain way.
 - (B) A question that is always answered truthfully.
 - (C) A question that is left unanswered by most subjects.
 - (D) A question that is only asked to experts.

6. Which of the following data collection method is less time consuming

 - (A) Interview
 - (B) Questionnaire

7. How can questionnaires be tailored to specific business needs?
- (A) By using standardized questions.
 - (B) By creating custom questions relevant to the business.
 - (C) By avoiding open-ended questions.
 - (D) By focusing only on numerical data.
8. The type of instrument used in research that lists questions about a topic with spaces for responses.
- (A) Interview
 - (B) Inventory
 - (C) Flowchart
 - (D) Survey Questionnaire
9. Which tool is used for data collection?
- (A) Microscope
 - (B) Thermometer
 - (C) Questionnaire
 - (D) Autoclave
10. The tool that you will use in gathering data from your respondents.
- (A) Descriptive
 - (B) Population
 - (C) Questionnaire
 - (D) Multiple choice
 - (E) Percentage
11. Which one is the instrument for survey?
- (A) Field note
 - (B) Interview question
 - (C) Questionnaire
 - (D) None of above
12. What is one key difference between a survey questionnaire and an interview questionnaire?
- (A) Survey questionnaires collect only qualitative data.
 - (B) Interview questionnaires predetermine indicators before the study.
 - (C) Survey questionnaires use a 4-point or 5-point Likert Scale.
 - (D) Interview questionnaires focus on measuring responses with Likert Scales.
13. A contingency question is one that:
- (A) Is contingent upon the use of specialized vocabulary
 - (B) Depends on the answer to a prior question
 - (C) Provides at least three response questions
 - (D) Is only given to predetermined respondents
14. Which of the following an open-ended question in a questionnaire?
- (A) Have you ever tried basketball?
 - (B) Would you like to try basketball?
 - (C) What would encourage and motivate you to try basketball?
 - (D) Would you consider basketball if there were free lessons?
15. Questionnaires often make use of ___ and rating scales
- (A) Checklist
 - (B) Numbers
 - (C) Listing
 - (D) None of above
16. Which of the following is NOT an advantage of questionnaires?
- (A) Reaching a large sample
 - (B) Requiring literacy demands
 - (C) Providing anonymity
 - (D) Gathering a large amount of data
17. How do you know if your questionnaire has good face validity?
- (A) When items on a questionnaire are randomly arranged
 - (B) When items on a questionnaire seem to relate to the concept being measured
 - (C) When items on a questionnaire are easy to be answered
 - (D) When items on a questionnaire are printed correctly without spelling errors

18. Paul randomly surveyed people in the mall and asked them what genre of movie they prefer. The results are shown in the survey below. By what percent did action movies exceed drama movies as the genre of choice?
- (A) 1.5%
 - (B) 3%
 - (C) 21%
 - (D) 19.5%
19. The main instrument for collecting data in survey research.
- (A) Research Instrument
 - (B) Data
 - (C) Questionnaire
 - (D) Result (Findings)
20. Question that consists of two or more questions joined together is called a
- (A) Confusing question.
 - (B) Double barreled question.
 - (C) Accurate question.
 - (D) General question.
21. Which of the following should come first in the questionnaire?
- (A) Study's key variables
 - (B) Screening questions
 - (C) General questions
 - (D) Demographics
22. An approach where a phone call is made to ask permission to mail or fax a questionnaire.
- (A) Telephone Prenotification Approach
 - (B) Lockbox Approach
 - (C) Drop-off Approach
 - (D) None of above
23. Tell whether the statement is true or falseThe articulateness of the respondent in an interview situation or the willingness to compose a written answer to a mail survey is a closed response question disadvantage
- (A) True
 - (B) False
24. A ____ is a set of questions to be answered as a means of collecting data for market research.
- (A) Focus group
 - (B) Interviews
 - (C) Questionnaire
 - (D) Online surveys
25. Participants can give different opinions, allowing researchers to understand the complexity of an issue.
- (A) Strength of Paper and Pencil Questionnaire
 - (B) Strength of Online Questionnaire
 - (C) Strength of Open Questions Questionnaire
 - (D) Strength of Closed Questions Questionnaire
26. What data collection tool involves a set of standardized questions that explore a specific topic and collect information about demographics, attitudes, etc.?
- (A) Survey questionnaire
 - (B) Content analysis
27. Questionnaire is Made
- (A) For Convenience of Study
 - (B) For Study of objective
 - (C) Both A&B
 - (D) None of the above
28. What kind of questions should a questionnaire include:
- (A) Close-ended questions
 - (B) Open-ended questions
 - (C) Ambiguous questions
 - (D) Both A and B
29. Which of the following is an example of a survey data-gathering technique?
- (A) Observation
 - (B) Questionnaire
 - (C) Experiment
 - (D) Interview

30. Which of these methods does not allow for flexibility?
- (A) Questionnaires
 - (B) Interviews
 - (C) Observations
 - (D) None of above
31. By writing a questionnaire you should avoid the following things:
- (A) Restrict the length of your questionnaire
 - (B) Explain the purpose of the questionnaire
 - (C) Ask more than one question at a time
 - (D) Beware of asking for private or 'sensitive' information
32. What is the primary characteristic of a structured questionnaire in quantitative research?
- (A) Adaptive questions changing for each participant
 - (B) Unscripted prompts based on interviewer judgment
 - (C) Consistent wording and fixed response options
 - (D) Open-ended narratives without scales
33. A form containing a set of questions addressed to a statistically significant number of subjects
- (A) Bias
 - (B) Sample
 - (C) Questionnaire
 - (D) Target population
34. ____ is the first section of a questionnaire where the researcher intends to collect data pertaining to the respondent's name, address, and phone number.
- (A) Request for cooperation
 - (B) Identification data and occupation
 - (C) Instruction
 - (D) Information sought
 - (E) Classification data
35. Access to a large group and easily completed/returned.
- (A) Strength of Paper and Pencil Questionnaire
 - (B) Strength of Online Questionnaire
 - (C) Strength of Open Questions Questionnaire
 - (D) Strength of Closed Questions Questionnaire
36. What is mailed to respondents who are expected to read, understand and answer the questions?
- (A) Schedule.
 - (B) Observation schedule.
 - (C) Research format.
 - (D) Questionnaire.
37. This research instrument contains planned questions that are used to measure attitudes, perceptions, and opinions.
- (A) Observation
 - (B) Surveys
 - (C) Questionnaire
 - (D) Experiments
38. What is the last step when you make a questionnaire?
- (A) Determine survey objectives
 - (B) Create questions
 - (C) Decide layout
 - (D) Evaluate a questionnaire
39. A researcher performs a study that has excellent external or so-called population validity, meaning that the results have generalizability. To collect his data the researcher gave clients a rating scale in which they were to respond with strongly agree, somewhat agree, neutral, somewhat disagree, or strongly disagree. This is
- (A) A speed test
 - (B) A Likert Scale
40. If a marketing researcher wishes to reach those people who would not give personal interviews or whose responses might be biased

- or distorted by interviewers, he or she should use ____
- (A) Mail questionnaires
 - (B) Telephonic interviews
 - (C) Online interviews
 - (D) Focus groups
 - (E) Observational research
41. A ____ should not be used in the field survey without adequate pretesting
- (A) Research
 - (B) Sample design
 - (C) Questionnaire
 - (D) Pilot report
42. Advantage of Questionnaire is
- (A) Economical. Nationwide or International coverage.
 - (B) Easy to plan, construct and administer.
 - (C) Confidential, less strain, focusing all the significant ideas.
 - (D) All of the above.
43. ____ provide a relatively cheap, quick and efficient way of obtaining large amounts of information from a large sample of people.
- (A) Observations
 - (B) Questionnaires
 - (C) Report cards
 - (D) None of the above
44. What is a mistake that researchers who write questionnaires should avoid?
- (A) Writing questions respondents are willing to answer.
 - (B) Writing questions respondents are able to answer.
 - (C) Writing questions with filters and routes.
 - (D) Writing questions respondents do not understand.
45. Open-ended, Closed-response, forced-choice response and Likert response are the structure of ____
- (A) Questions
 - (B) Observation
 - (C) Interviews
 - (D) Questionnaire
46. Response rates for mail questionnaires are usually low.
- (A) True
 - (B) False
47. A common issue on questionnaire responses is misunderstanding the question
- (A) True
 - (B) False
48. When developing a survey, which of the following is crucial to avoid?
- (A) Clear and concise questions
 - (B) Leading questions
 - (C) Logical flow of questions
 - (D) Simple language
49. Questionnaire and survey mean the same thing.
- (A) True
 - (B) False
50. A questionnaire typically uses:
- (A) Primarily open-ended questions
 - (B) Closed questions to gather quantitative data
 - (C) Only qualitative data
 - (D) None of above
51. Which research instrument would be most appropriate for measuring attitudes toward a social issue?
- (A) Observation checklist
 - (B) Interview
 - (C) Likert scale survey
 - (D) Open-ended questionnaire
52. It is the main instrument in collecting data in survey research. Basically, it is a set of questions, often called items, which follow a

- fixed scheme in order to collect individual data about one or more specific topics.
- (A) Population
 - (B) Sample
 - (C) Questionnaire
 - (D) Variable
53. Which one of the following is a research tool? [2011-DECEMBER]
- (A) Graph
 - (B) Illustration
 - (C) Questionnaire
 - (D) Diagram
54. When constructing a questionnaire, there are 15 principles to which you should adhere. Which of the following is not one of those principles?
- (A) Avoid using multiple items to measure a single construct.
 - (B) Avoid double negatives.
 - (C) Avoid double-barreled questions.
 - (D) Do not use "leading" or "loaded" questions.
55. A researcher wants to study the future of the sports in India. For the study which tool is most appropriate for him?
- (A) Questionnaire
 - (B) Schedule
 - (C) Interview
 - (D) Rating scale
56. Harold, Joaquin, Louise, Adrian and Peter created set of questions to gather the information they need.
- (A) Interview
 - (B) Survey
 - (C) Questionnaire
 - (D) Statement of the Problem
57. A questionnaire is a list of well-planned questions written on paper which can either be personally administered or mailed by the researcher to the respondents using any of the following forms EXCEPT
- (A) Guided-response type
 - (B) Recall type
 - (C) Free response type
 - (D) Interview type
58. An open-ended question is one in which
- (A) Respondents answer a set of given answers
 - (B) Respondents are given a time-frame to complete a question
 - (C) Respondents provide their own answers
 - (D) Respondents make their own question
59. The most common instrument used to collect primary data is the ____
- (A) Human eye (through observation)
 - (B) Internet
 - (C) Bar-code reader (behavioral data research)
 - (D) Video camera (e.g., focus-group research)
 - (E) Questionnaire
60. Sanya has developed a paper and pencil method for collecting data where participants respond to a series of questions.
- (A) Interview method
 - (B) Methodology
 - (C) Questionnaire
 - (D) Survey
61. It is a statistical instrument consisting of a series of questions for the purpose of gathering information from respondents
- (A) Statistical Instruments
 - (B) Questionnaire
 - (C) Closed-Ended Questions
 - (D) Open-Ended Questions
62. Introduced questionnaires and surveys into psychological research.
- (A) Antiquity to the Nineteenth Century
 - (B) 1822-1911: Francis Galton
 - (C) 1832-1920: Wilhelm Wundt
 - (D) 1860-1944: James McKeen Cattell
 - (E) Alfred Binet

63. These are often used to gather information about individuals' attitudes, beliefs, and behaviors. It is important to clarify that these are a design choice rather than a specific method.
- (A) Survey approach
 - (B) Census
 - (C) Questionnaire
 - (D) Statistics
64. Which is NOT correct for closed questions?
- (A) They require a longer response
 - (B) They are quick to answer
 - (C) They give you facts
 - (D) They are easy to answer
65. An item that directs participants to different follow-up questions depending on their response is called a ____
- (A) Semantic differential.
 - (B) Response set.
 - (C) Probe.
 - (D) Contingency question.
66. This method involves collecting data through a series of questions that respondents answer in writing.
- (A) Interview method
 - (B) Methodology
 - (C) Questionnaire
 - (D) Observational method
67. What is a limitation of using questionnaires in quantitative research studies?
- (A) It leads to unlimited outcomes.
 - (B) It leads to limited outcomes.
 - (C) It requires a small sample size.
 - (D) It requires varying opinions.
68. One advantage of using a questionnaire over an Interview is:
- (A) Probe questions can be asked
 - (B) Respondents can be put at ease between questions
 - (C) Interview bias can be avoided
 - (D) Response rates are always high
69. What is the purpose of a demographic questionnaire in a research instrument?
- (A) Assessing the instrument's reliability
 - (B) Collecting information about participants' characteristics
 - (C) Establishing face validity
 - (D) Ensuring content validity
70. Which of the following is an example of a closed-ended question?
- (A) How long have you shopped in the local bakery?
 - (B) How often do you shop in the local store?
 - (C) Why do you shop at the sandwich shop?
 - (D) Is Jose's Tacos your favorite place to eat?
 - (E) Could you describe your favorite sandwich?
71. What is an online survey form?
- (A) It is a survey form tool.
 - (B) It is a questionnaire that you can use to gather data over the internet.
 - (C) It is a survey form tool you can use in your profile.
 - (D) It is a document you can use for research purposes.
72. "While at the supermarket, one of the workers gave me a handout containing questions that I had to answer and return." Which research method is described above
- (A) Handouts
 - (B) Questionnaire
 - (C) Receipt
 - (D) Evaluation
73. The objective type of questions can be evaluated through
- (A) Optical Bar Code Reader.
 - (B) Optical Mark Reader.
 - (C) Magnetic Character Reader.
 - (D) All of the above.
74. Questionnaire is filled by ____
- (A) Respondent

- (B) Everybody
(C) Enumerator
(D) None of the above
75. How could a local council efficiently obtain quantitative primary data that identifies the most significant social needs for a local community?
(A) Interview
(B) Case study
(C) Questionnaire
(D) Literature review
76. In conducting primary data research, what is the next step after designing the questionnaire?
(A) Set the survey goal
(B) Execution
(C) Set the scale
(D) Pretest the questionnaire
77. It is a list of questions or statements administered personally by an interviewer face-to-face, telephone or online
(A) Discussion guide
(B) Data analysis
(C) Survey questionnaire
(D) None of above
78. Which of the following is an example of a closed question?
(A) "What is the reason for your visit today?"

(B) "Are you an only child?"
(C) "Can you describe your pain for me?"
(D) "What are your plans for the future?"
79. In constructing questionnaires, beware of double negative.
(A) True
(B) False
80. A researcher-made instrument is created by the researcher for a specific study, while an adopted instrument is taken from existing tools. Which of the following is an example of a researcher-made instrument?
(A) A questionnaire developed by the researcher for a new study
(B) The Beck Depression Inventory
(C) The Stanford-Binet Intelligence Scale
(D) The Big Five Personality Test
81. The questionnaire Survey form is Filled by
(A) Researcher
(B) Respondent
(C) Examiner
(D) All of the above
82. In order to collect primary data from the field, the researcher require a ____
(A) Book
(B) Hypothesis
(C) Questionnaire
(D) Research Report
83. A questionnaire is better when it is as short as possible yet complete.
(A) True
(B) False
84. What is a written document containing prompts or questions used to gather an individual's perceptions or beliefs?
(A) Scale
(B) Table of specifications
(C) Questionnaire
(D) Inventory
85. A survey that asks the respondent to indicate their age and includes response categories of age 20-30, age 30-40, age 40-50 and age 50+, violates which important rule for constructing closed-ended items for questionnaires?
(A) Exhaustive
(B) Comprehensive
(C) Relevant
(D) Tangible

86. A researcher wishes to validate a questionnaire in Science. He requests experts in Science to judge if the items measure the knowledge, skills, and values supposed to be measured. What type of validity is applied in the given situation?
- (A) Content validity
 - (B) Construct validity
 - (C) Concurrent validity
 - (D) Predictive validity
87. One advantage of using a questionnaire is that:
- (A) Probe questions can be asked
 - (B) Respondents can be put at ease
 - (C) Interview bias can be avoided
 - (D) Response rates are always high
88. What can be described as a questionnaire?
- (A) A set of survey questions given to researchers
 - (B) A set of essays given to researchers
 - (C) A set of survey questions given to respondents
 - (D) A set of essays given to respondents
89. In research, an example of a closed-ended question is:
- (A) "How do you feel about your current job?"
 - (B) "What challenges do you face in your job?"
 - (C) "Do you enjoy your job? Yes or No"
 - (D) "Describe your ideal work environment"
90. A research instrument consisting of a series of questions to get information from respondents
- (A) Questionnaire
 - (B) Correlational Research
 - (C) Research Objectives
 - (D) Field Note
91. Questionnaire: a research method that uses ____ questions to identify different traits about a participant using a written format where they would not be face to face with the researcher.
- (A) Open/closed
 - (B) Multiple-choice
 - (C) Essay
 - (D) Interview
92. Determine if the following statement is correct for research writing."A questionnaire was used"
- (A) Right
 - (B) Wrong
 - (C) All the above
 - (D) None of the above
93. A list of questions which is handed over to the respondent, who reads the questions and records the answers himself is known as the
- (A) Interview schedule.
 - (B) Questionnaire.
 - (C) Interview guide.
 - (D) All of the given options.
94. What is the term for questions that require the respondent to elaborate and not simply answer 'yes' or 'no'?
- (A) Open-Ended Questions
 - (B) Close-Ended Questions
 - (C) Probing Questions
 - (D) Paraphrasing
95. Questionnaires can be an effective means of measuring the ____, attitudes, preferences, opinions and, intentions of relatively large numbers of subjects more cheaply and quickly than other methods.
- (A) Behaviour
 - (B) Population
 - (C) Situation
 - (D) None of above
96. A list of questions is called a ____
- (A) Questionnaire
 - (B) Survey
 - (C) Sample
 - (D) Population

97. The use of questionnaires generates quantitative data.
(A) TRUE
(B) FALSE
98. What data collection tool consists of a set of written questions?
(A) Interview
(B) Observation
(C) Questionnaire
(D) Case Study
99. What does the data from an interview questionnaire depend on?
(A) The number of respondents
(B) The quality of the questions
(C) The predefined indicators
(D) The use of Likert scales
100. Data may be open to interpretation.
(A) Weakness of Paper and Pencil Questionnaire
(B) Weakness of Online Questionnaire
(C) Weakness of Open Questions Questionnaire
(D) Weakness of Closed Questions Questionnaire
101. What type of questionnaire contains both closed and open-ended questions?
(A) Structured
(B) Unstructured
(C) Semi-structured
(D) Standardized
102. Each question in a questionnaire is designed:
(A) For one research objective
(B) For multiple research objectives
(C) For many related variables
(D) For one variable
(E) For one objective and its related variables
103. Questionnaires can be classified as both, quantitative and qualitative method depending on the nature of ____
(A) Questions
(B) Research
(C) Instrument
(D) None of above
104. In data collection, which method allows for a large sample size but may lack depth?
(A) Interviews
(B) Observations
(C) Questionnaires
(D) Focus groups
105. In which of the following Free Description Tasks technique, the participant is asked a series of specific questions in written form?
(A) Short answer
(B) Questionnaire
(C) Long answer
(D) Interview
106. What is it called when a questionnaire has two options 'male and female' or 'Yes or No' to a question
(A) Dichotomous
(B) Multiple choice
(C) Standard scale
(D) None of above
107. What are the examples of instruments?
(A) Questionnaire
(B) References
(C) Tables and graphs
(D) Quotations
108. A set of written questions designed to gather information
(A) Quantitative data
(B) Questionnaire
(C) Sample
(D) Secondary data

- 109.** The most popularly used device for collecting data is
(A) A questionnaire.
(B) A schedule.
(C) A diary.
(D) An observation.
- 110.** According to the text, questionnaires can address events and characteristics taking place when?
(A) In the past (retrospective questions).
(B) In the present (current time questions).
(C) In the future (prospective questions).
(D) All of the above.
- 111.** The questionnaire is
(A) A Statement
(B) Quantitative
(C) Tools for quantitative research
(D) Qualitative research tools
- 112.** Which of the following is a closed-ended question?
(A) "What do you think about our store?"
(B) "How often do you visit our store? (Daily, Weekly, Monthly)?"
(C) "What new products should we sell?"
(D) "How do you feel about shopping here?"
- 113.** 'Yes or No' type of questions are popularly known as;
(A) Free questions
(B) Dichotomous questions
(C) Looping questions
(D) None of the above
- 114.** Each statement is assigned a numerical classification that goes from -2 to +2 or from 1 to 5
(A) Likert
(B) Per item classification
(C) Continuous classification
(D) Staple
- 115.** A good questionnaire should be ____
(A) Have embarrassing questions
(B) Biased
(C) Short simple and concrete
(D) None of above
- 116.** The researcher ____ questionnaire to know the students' responses toward the use of On-line learning
(A) Reveal
(B) Distribute
(C) Read
(D) Comprehend
- 117.** A written set of questions that survey participants answer by themselves.
(A) Variable response
(B) Questionnaire
(C) Response coding
(D) Population sample
- 118.** Which of the following is a potential bias in questionnaire design?
(A) Clear instructions
(B) Leading questions
(C) Closed-ended questions
(D) Structured format
- 119.** All of the following should be considered when creating a questionnaire to collect data EXCEPT:
(A) Making sure the language is appropriate
(B) Making sure that the questions are clear and understandable
(C) The researcher's opinion should be evident/obvious in the questions
(D) Making sure that the questions explore your research objective
- 120.** High response rates to a questionnaire increases the likelihood of biased results.
(A) True
(B) False

- 121.** What can a questionnaire in descriptive research include?
- (A) A set of standard questions to ask participants
 - (B) Observations of a sports team
 - (C) Analysis of a historical event
 - (D) Predictions about future trends
- 122.** Which one is a non-projective technique?
- (A) Questionnaire
 - (B) Word Association Test
 - (C) Rorschach Inkblot Test
 - (D) Thematic Apperception Test
- 123.** What is a disadvantage of using a questionnaire to collect data for a research?
- (A) Too few responses may be returned
 - (B) Closed questions are difficult to tally
 - (C) The answers from respondents cannot be compared
 - (D) Quantitative data is difficult to interpret
- 124.** Tools refer to the questionnaire or data gathering instrument to be constructed, validated, and administered.
- (A) TRUE
 - (B) FALSE
- 125.** Which scale is commonly used in a survey questionnaire?
- (A) 2-point scale
 - (B) 3-point scale
 - (C) 4-point or 5-point Likert Scale
 - (D) 6-point scale
- 126.** In constructing questionnaires, provide for the systematic quantification of responses.
- (A) True
 - (B) False
- 127.** Which is an example of a Likert scale question?
- (A) What is your favorite brand?
 - (B) Strongly Agree → Strongly Disagree
 - (C) How often do you visit?
 - (D) What improvements should we make?
- 128.** A self-administered questionnaire is a tool in which the questions are written:
- (A) To be mailed to respondents
 - (B) So respondents will answer by recording on forms
 - (C) So respondents will answer by recording on a machine
 - (D) So respondents will answer and the interviewer enters results into forms
 - (E) Like checklists used to observe respondent behavior
- 129.** The following response scale-Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree-corresponds to which type of questions?
- (A) Likert scale
 - (B) Semantic differential
 - (C) Ranking scale
 - (D) Guttman scale
- 130.** Data obtained by having participants fill out self-report instrument
- (A) Focus group
 - (B) Questionnaire
 - (C) Test
 - (D) Interview
- 131.** If you used a ____ Likert-style scale but find a response of 6 you've probably identified a data entry error.
- (A) 3
 - (B) 4
 - (C) 5
 - (D) 6
- 132.** Budi would like to know how most of his friends applied listening strategies that are taught by his English teacher. What can we suggest to Budi?
- (A) Distribute a questionnaire
 - (B) Ask all friends to write a diary
 - (C) Ask his friends to take photos
 - (D) None of above

133. Sanya is conducting a research study and has created a paper and pencil data gathering method wherein the subject or respondent completely answers a series of questions.
- (A) Interview method
 - (B) Question and answer method
 - (C) Methodology
 - (D) Questionnaire
134. Selected the advantage of a questionnaire
- (A) Lack of personalization
 - (B) Not possible to provide guidelines
 - (C) Not possible to collect in depth data
 - (D) Inexpensive way of collect data
135. A researcher is designing the survey instrument to measure teacher profiles. To gather data for question 1.c ("years of teaching experience"), which type of question format would be most appropriate?
- (A) An open-ended essay question.
 - (B) A multiple-choice question with ranges like "0-5 years," "6-10 years," etc.
 - (C) A "yes/no" question.
 - (D) A question about their favorite teaching year.
136. A set of written questions distributed among learners for research is called:
- (A) Interview
 - (B) Questionnaire
 - (C) Checklist
 - (D) Case study
137. A closed ended question designed to measure the intensity of a respondents answer.
- (A) Closed ended question
 - (B) Scaled response question
 - (C) Open ended question
 - (D) Focus group
138. Sending Questionnaire to a respondent with a request to complete and return by post is called
- (A) Mail Survey.
 - (B) Observation.
 - (C) Panel.
 - (D) Interview.
139. ____ require a respondent to indicate a degree of agreement or disagreement with a variety of statements related to the attitude or object. They are also called summated scales
- (A) Constant-Sum Scales
 - (B) Semantic Differential Scales
 - (C) Likert Scale
 - (D) Purchase Intent scale
140. Critique this statement: "As long as my questionnaire is long, it is already valid."
- (A) A long questionnaire is not necessarily valid; validity depends on how well it measures what it is intended to measure.
 - (B) A long questionnaire is always valid regardless of its content.
 - (C) The length of a questionnaire guarantees its reliability and validity.
 - (D) Validity is only determined by the number of questions in a questionnaire.
141. An approach where the questionnaire can be hand-delivered to sampling points
- (A) Telephone Prenotification Approach
 - (B) Lockbox Approach
 - (C) Drop-off Approach
 - (D) None of above
142. What is a disadvantage of a survey questionnaire?
- (A) It offers in-depth qualitative insights.
 - (B) Data may be limited or generalized based on predefined options.
 - (C) It only works with individual responses.
 - (D) It is difficult to design.
143. Which disadvantage is linked to questionnaires?
- (A) Guaranteed accurate deep insights
 - (B) Mandatory interviewer presence
 - (C) Possible misinterpretation, low response
 - (D) Prohibitive cost and time

- 144.** What is the term for a set of questions designed to gather specific information?
- (A) Survey
 - (B) Form
 - (C) Questionnaire
 - (D) Poll
- 145.** Which method of collection of data covers the widest area?
- (A) Telephone interview method
 - (B) Mailed questionnaire method
 - (C) Direct interview method
 - (D) All of these
- 146.** What should be the number of questions in a questionnaire?
- (A) 5.
 - (B) 15.
 - (C) 20.
 - (D) As small as possible keeping in view the purpose of the survey.
- 147.** Which of the following is not a potential limitation of using online surveys in research?
- (A) Limited sample size
 - (B) Low response rate
 - (C) Inability to collect qualitative data
 - (D) None of the above
- 148.** A ___ has only two response alternatives: yes or no, agree or disagree, and so on.
- (A) Dichotomous question
 - (B) Multichotomous question
 - (C) Polytomous question
 - (D) Trichotomous question
- 149.** The best way to reach people who would not give personal interviews or whose responses might be biased or distorted by the interviewer is by using a(n) ___
- (A) Personal interview
 - (B) Mail questionnaire
 - (C) Telephone interview
 - (D) Mall-intercept
 - (E) Online interview
- 150.** What are Likert Scales?
- (A) Scales that measure how likeable you are.
 - (B) Likert scales are used to describe the data and show a summary of the results.
 - (C) Likert scales are a type of psychometric scale frequently used in psychology questionnaires, where respondents are asked to rate the level to which they agree with a statement.
 - (D) Likert scales are the correct rules of conduct necessary when carrying out research.
- 151.** In a questionnaire close ended question are those where:
- (A) The question and answer are close to each other
 - (B) The answer are given as option
 - (C) Short answer are required
 - (D) The question are clear and distinct
- 152.** A researcher sends you a form to fill out concerning your favorite movies. This is an example of ___
- (A) A questionnaire.
 - (B) A sample.
 - (C) Secondary analysis.
 - (D) Multiple causation.
- 153.** Questionnaires can capture a wider sample of participant data with greater ease than using interviews
- (A) True
 - (B) False
- 154.** Which research method is the most suitable for gaining information about the study habits of 50 high school students in Australia?
- (A) Observation
 - (B) Questionnaire
 - (C) Structured interview
 - (D) Case study

155. An open-ended question accomplishes which of the following?
- (A) Prompts the source to give a short, usually one-word response.
 - (B) Prompts the source to give an open response with irrelevant information.
 - (C) Prompts the source to give long and rambling answers.
 - (D) Prompts the source to respond openly and comfortably with a conversational response and useful information.
156. What is a questionnaire?
- (A) A group of people assembled to participate in a discussion about a product before it is launched.
 - (B) A set of printed or written questions with a choice of answers.
 - (C) A structured conversation where one person asks questions, and the other provides answers.
 - (D) The action or process of closely observing or monitoring something or someone.
157. A ___ is one that clues the respondent to what answer is desired or leads the respondent to answer in a certain way.
- (A) Open-ended question
 - (B) Leading question
 - (C) Misleading question
 - (D) Neutral question
158. Going from general to specific is called the ___ approach in the questionnaire.
- (A) Bottom-up
 - (B) Sideways
 - (C) Diagonal
 - (D) Funnel
159. Which of the following is a closed question?
- (A) "How do you feel about the election?"
 - (B) "Why did you vote the way that you did?"
 - (C) "Did you vote for Trump or Biden?"
 - (D) "How have your views changed over the past four years?"
160. Participants may be less willing to elaborate on their answers when writing.
- (A) General Strength of Questionnaires
 - (B) General Strength of Interviews
 - (C) General Weakness of Questionnaires
 - (D) General Weakness of Interviews
161. A Likert scale is a psychometric scale commonly used in questionnaires to measure what?
- (A) Factual knowledge
 - (B) Demographic data
 - (C) Attitudes, opinions, or perceptions
 - (D) Response times
162. What is the purpose of field testing in the context of survey instruments?
- (A) Assessing customer satisfaction
 - (B) Validating the effectiveness of advertising concepts
 - (C) Ensuring the survey instrument is understood equally by all respondents
 - (D) Comparing data points along the trend line
163. In research instrument development, what is the purpose of reverse-coding items in a questionnaire?
- (A) Reducing response bias
 - (B) Enhancing content validity
 - (C) Checking for participant understanding
 - (D) Controlling for acquiescence bias
164. Which one of the following is useful in assessing and clarifying concepts and definitions at the beginning stages of questionnaire?
- (A) Document design analysis.
 - (B) Response analysis survey.
 - (C) Focus group.
 - (D) Operation test.
165. Which of the following is a merit of a good questionnaire?
- (A) Has questions of calculation

- (B) Has limited number of questions
 - (C) Has personal questions
 - (D) Has only open ended questions
- 166.** You can create and analyze surveys right in your mobile or web browser-no special software required.
- (A) Google drive
 - (B) Google
 - (C) Google Forms
 - (D) Interview
- 167.** A limited choice of categories can reduce validity.
- (A) Weakness of Paper and Pencil Questionnaire
 - (B) Weakness of Online Questionnaire
 - (C) Weakness of Open Questions Questionnaire
 - (D) Weakness of Closed Questions Questionnaire
- 168.** A good questionnaire should have biased questions which would discourage respondents from giving an actual response.
- (A) True
 - (B) False
- 169.** Under this method a list of questions is prepared and is sent to all the informants by post
- (A) Telephonic questionnaire method
 - (B) Mailed questionnaire method
 - (C) Face to Face questionnaire method
 - (D) In field questionnaire method
- 170.** A questionnaire is an objective data gathering tool. A self-made questionnaire has several parts which include the following EXCEPT ONE.
- (A) Thank you note
 - (B) Introductory paragraph
 - (C) Statement of the problem
 - (D) Personal details of subject
- 171.** Which is an advantage of using close-ended questions?
- (A) Explores emotions deeply
 - (B) Easy to quantify and analyze
 - (C) Generates long responses
 - (D) Requires fewer respondents
- 172.** Instrument used to measure opinions
- (A) Questionnaire or survey
 - (B) Thermometer
 - (C) Barometer
 - (D) Microscope
- 173.** You want to gather data from 10,000 users quickly and cheaply. What should you use?
- (A) Web-based questionnaire
 - (B) Passive observation
 - (C) Case study
 - (D) Focus group
- 174.** A filter question in a questionnaire;
- (A) Help separate the respondents
 - (B) Provokes the respondents
 - (C) Compels the respondent to respond
 - (D) Has no effect
- 175.** The following data collection technique belongs to quantitative research methods:
- (A) Face-to-face interview using a questionnaire
 - (B) Focus group discussion (FGD)
 - (C) Using existing information
 - (D) In-depth interview with key informants
 - (E) Group interview
- 176.** Survey data are often collected via which of the following?
- (A) Standardized tests.
 - (B) Ability measures.
 - (C) Questionnaires.
 - (D) Observations.
- 177.** It is a list of items used to gather data from respondents about their attitudes, experiences, or opinions.

- (A) Questions
 - (B) Questionnaire
 - (C) Interview sheets
 - (D) All of the above
- 178.** In collecting primary data, marketing researchers have a choice of two main research instruments, ____
- (A) Reference books and journals
 - (B) Questionnaires and mechanical devices
 - (C) Social networks and internal databases
 - (D) Commercial online databases and search engines
 - (E) Open-source directories and blogs
- 179.** The most common research instrument used is the ____
- (A) Questionnaire
 - (B) Moderator
 - (C) Telephone interviewer
 - (D) Live interviewer
- 180.** When evaluating the wording of a survey, the editor should make sure that each question contains
- (A) Advanced, highly technical vocabulary
 - (B) Impressive but vague language
 - (C) Simple words without jargon
 - (D) Vocabulary with dual meanings
- 181.** What is the other term for questionnaire in research?
- (A) Instrument
 - (B) Mechanical Device
 - (C) Rating Scale
 - (D) Survey
- 182.** What are the disadvantages of closed-ended questions?
- (A) They limit the depth of responses
 - (B) They encourage detailed explanations
 - (C) They allow for open discussion
 - (D) They provide multiple perspectives
- 183.** Which tool uses a set of written questions to gather specific information?
- (A) Checklist
 - (B) Observation
 - (C) Questionnaire
 - (D) Survey
- 184.** Suppose you are designing a survey on job satisfaction. Based on Weng (2004), which scale format would likely maximize reliability? (Weng (2004))
- (A) 7-point fully labeled Likert scale
 - (B) 9-point scale with no labels
 - (C) 5-point scale with full labels
 - (D) 9-point scale with endpoint labeling
- 185.** We commonly verify the accuracy of responses by:
- (A) Returning to ask the respondent the same question
 - (B) Re-asking the respondent the same question immediately after the answer
 - (C) Re-asking the respondent the same question right after finishing the interview
 - (D) Placing questions with the same content at different positions in the questionnaire
 - (E) Repeating many items in the questionnaire
- 186.** What is a disadvantage of using a questionnaire to collect data for an Independent Research Project?
- (A) Too few responses may be returned
 - (B) Closed questions are difficult to tally
 - (C) Quantitative data is difficult to interpret
 - (D) The answers from respondents cannot be compared
- 187.** What are closed-ended questions?
- (A) These questions do not allow respondents to elaborate on their responses.
 - (B) These questions allow respondents to answer in any way they choose.

188. A ____ is a research instrument consisting of a series of questions for the purpose of gathering information from respondents.
- (A) Questionnaire
 - (B) Article
 - (C) Discussion
 - (D) Cumulative record
189. You want to know how many users prefer iOS over Android. What type of question should you ask?
- (A) Ordered closed-ended
 - (B) Likert scale
 - (C) Open-ended
 - (D) Unordered closed-ended
190. Critical decision area in questionnaire construction is ____
- (A) Question content.
 - (B) Question wording.
 - (C) Response strategy.
 - (D) All of the given options.
191. Written set of questions to be answered by a research participant
- (A) Questionnaire
 - (B) Interview
 - (C) Closed-Ended
 - (D) Open-Ended
192. SSS Questionnaire is
- (A) Student Satisfaction Survey
 - (B) Student Study Survey
193. Questionnaires can be described as:
- (A) A set of formally prepared questions that seek information
 - (B) Surveys that are conducted in person or over the phone
 - (C) A series of questions asked by a researcher
 - (D) Questions that can be answered by anyone
194. Which is true of a questionnaire?
- (A) It's ideal for a small group
 - (B) It's ideal for sensitive topics
 - (C) It's flexible
 - (D) It's impersonal
195. Offer predetermined answers for the participants to choose from (e.g. Do you doodle while carrying out tasks? Yes/No).
- (A) Paper and Pencil Questionnaire
 - (B) Online Questionnaire
 - (C) Open Questions Questionnaire
 - (D) Closed Questions Questionnaire
196. If a response to a survey question asks the respondent to say whether he or she is "under 35 or over 35", this is an example of a(n):
- (A) Structured question.
 - (B) Disguised question.
 - (C) Cross-sectional question..
 - (D) Longitudinal question.
197. What type of response bias is the following? One's response to questions depend on the group that one is using for reference
- (A) Social desirability responding
 - (B) Moderacy bias
 - (C) Extremity bias
 - (D) Acquiescence bias
 - (E) Reference group effect
198. A question like "Are your parents living?" where the response is simply yes or no, is an example of a(n):
- (A) Open-ended question
 - (B) Empathic question
 - (C) Closed-ended or directive question
 - (D) Transition statement
199. Which of the following is the first step in the questionnaire design process?
- (A) Specify the information needed
 - (B) Specify the type of interviewing method
 - (C) Determine the content of individual questions
 - (D) Decide on the question structure

- 200.** Match each description with the method of data collection it describes. Data obtained by having research participants fill out self-report instruments
- (A) Questionnaire
 - (B) Focus group
 - (C) Interview
 - (D) Test
- 201.** Open-ended questions that respondents answer in their own words are called ____
- (A) Structured questions
 - (B) Unstructured questions
 - (C) Double-barreled questions
 - (D) Filtered questions
- 202.** This is when the researcher gives the respondents the ability to respond in their own words. What type of degree of structure of questions in a questionnaire is this?
- (A) Open-Ended Questions
 - (B) Close-Ended Questions
 - (C) Dichotomous Questions
 - (D) None of the mentioned
- 203.** Which of the following steps are required to design a questionnaire
- (A) Revision of the draft
 - (B) Prepare a draft of questionnaire
 - (C) Writing primary and secondary aims of the study
 - (D) All of the above
- 204.** Questionnaires can address events and characteristics taking place when?
- (A) In the past (retrospective questions)
 - (B) In the present (current time questions)
 - (C) In the future (prospective questions)
 - (D) All of the above
- 205.** An item in a questionnaire states that "most politicians cannot be trusted." Respondents are required to provide their answers by choosing any one of the following options: 1) Strongly disagree, 2) Disagree, 3) Neither agree nor disagree, 4) Agree, 5) Strongly agree. This is an example of a ____
- (A) Semantic differential
 - (B) Word association question
 - (C) Thematic Appreciation Test (TAT)
 - (D) Likert scale
 - (E) Dichotomous question
- 206.** Questionnaires must be valid and reliable.
- (A) True
 - (B) False
- 207.** ____ is a form containing questions. It may be a printed form or one designed to be filled in online.
- (A) Survey
 - (B) Interview
 - (C) Questionnaires
 - (D) None of above
- 208.** Offering two or more choices from which respondents can select answers.
- (A) Open-ended question
 - (B) Close-ended question
 - (C) Essay question
 - (D) None of the above
- 209.** Another name for a Likert Scale is a(n)
- (A) Event sampling.
 - (B) Interview protocol.
 - (C) Summated rating scale.
 - (D) Ranking.
- 210.** When a survey question is designed in such a way that it influences the respondent to answer in a particular way, it is said to have ____
- (A) Validity
 - (B) Reliability
 - (C) Bias
 - (D) Unclear
- 211.** If a researcher discovers that participants have different interpretations of a survey question, what should the researcher consider doing?

- (A) Revise the survey question for clarity
 - (B) Assume all interpretations are valid
 - (C) Ignore the differing interpretations
 - (D) Conduct a new survey with a different population
- 212.** The bad question which lead the participants to agree or respond in a certain way is ____
- (A) Biased question
 - (B) Double-barreled question
 - (C) Leading question
 - (D) Absolute question
- 213.** A questionnaire is typically used to:
- (A) Manipulate variables
 - (B) Gather standardized responses from participants
 - (C) Perform qualitative analysis
 - (D) Conduct observational studies
- 214.** Initial questions in questionnaires that screen potential respondents to ensure they meet the requirements of the sample are called ____
- (A) Double-barreled questions
 - (B) Filter questions
 - (C) Random questions
 - (D) Coefficient questions
 - (E) Requirement questions
- 215.** It gathers information about students' backgrounds, attitudes, experiences, school demographics, learning environment, and teacher qualifications and practices.
- (A) Performance tasks
 - (B) Questionnaires
 - (C) Assessment
 - (D) Periodicity
- 216.** Which method involves collecting data through written questions?
- (A) Focus groups
 - (B) Interviews
 - (C) Questionnaires
 - (D) Television
- 217.** In qualitative data collection, which term refers to participants self-reporting instruments?
- (A) Questionnaires.
 - (B) Observations.
 - (C) Secondary data.
 - (D) Focus groups.
- 218.** Participants answer written questions on paper or online, which can include both open and closed questions.
- (A) Self-report
 - (B) Questionnaire
 - (C) Interview
 - (D) None of above
- 219.** A marketing team is conducting a survey to understand the popularity of their new product. They ask customers to rank the product on a scale of 1 to 10. What type of question is this?
- (A) Yes/No
 - (B) Multiple choice
 - (C) Rating scale questions
 - (D) None of above
- 220.** Questionnaires with open-ended items allow respondents to do what?
- (A) Receive interviewer guidance
 - (B) Express ideas freely
 - (C) Avoid giving any answers
 - (D) Select fixed options
- 221.** Which of the following instruments typically requires a structured format?
- (A) Interviews
 - (B) Observations
 - (C) Surveys
 - (D) Ethnographic notes
- 222.** Questionnaires can be used to collect qualitative and quantitative data
- (A) True
 - (B) False

223. Forced choice questions prevent participants from avoiding questions.
(A) Strength of Paper and Pencil Questionnaire
(B) Strength of Online Questionnaire
(C) Strength of Open Questions Questionnaire
(D) Strength of Closed Questions Questionnaire
224. The most important requirement when designing a questionnaire is that its content must:
(A) Cover the research objectives
(B) Cover the variables
(C) Cover the objectives and variables
(D) Be arranged in a logical order
(E) Be easy for the research community to understand
225. Which step is included in developing a questionnaire?
(A) Predicting sales
(B) Pre-testing the questionnaire
(C) Designing company logos
(D) None of these
226. It is a survey document with questions that is used to gather information from individuals to be used in the research.
(A) Questionnaire
(B) Methodology
(C) Respondents
(D) Findings
227. Is it primary (direct from source) or secondary (indirectly)? "Questionnaire"
(A) Primary
(B) Secondary
228. Which of the following is an example of an open question in a survey?
(A) "How do you feel about ____"
(B) "Do you like ice cream? Yes or No"
(C) "Choose your favorite color: Red, Blue, Green"
(D) "Rate your satisfaction from 1 to 5"
229. In a study that may include several questionnaires, the title indicates:
(A) Who conducts interviews in the study
(B) Which subjects will be interviewed
(C) The objective of the interview
(D) Who are collaborators in the interview process
(E) Which content the questionnaire serves
230. What is the main purpose of a questionnaire in data collection?
(A) To obtain statistical information
(B) To ask questions orally
(C) To obtain facts about the subject
(D) To evaluate results after giving a treatment
231. Low response rate is a common pitfall of questionnaires.
(A) True
(B) False
232. A ____, whether it is called a schedule, interview form, or measuring instrument, is a formalized set of questions for obtaining information from respondents.
(A) Interview
(B) Survey
(C) Questionnaire
(D) Sheet
233. Which one of these is a strength of Questionnaires?
(A) Interviewer effect
(B) Low response rate
(C) Cheap and easy way to collect data
(D) Unethical
234. Participants may not be able to freely express their opinions.
(A) Weakness of Paper and Pencil Questionnaire
(B) Weakness of Online Questionnaire

- (C) Weakness of Open Questions Questionnaire
(D) Weakness of Closed Questions Questionnaire
235. — is sent by post to respondent, to answer as specified in the covering letter.
(A) Research
(B) Questionnaire
(C) Pilot study
(D) Schedule
236. Which tool is most appropriate for collecting quantitative data?
(A) Survey questionnaire
(B) Personal Narratives
(C) Open-ended interview only
(D) Art sketches
237. What should you do after writing questions for a survey?
(A) Decide who and what you need data about.
(B) Decide what personal information you need from respondents.
(C) Decide what the purpose is of the data collection.
(D) Test the questionnaire.
238. You are on a geography field trip and have been given the task of finding out how much time individual shoppers have spent inside of the mall. Which of the following data collection techniques do you feel would be most appropriate to find out his information?
(A) Photographing people shopping
(B) Sketching the mall layout
(C) A questionnaire survey of customers leaving the mall
(D) Interviews with store managers
(E) Sending a letter to the mall's owners
239. Which of the following is an example of an open-ended survey question?
(A) What should the bookstore do about plastic bags?
(B) How many times have you visited the bookstore this semester?
(C) Would you be willing to change to another method of ordering books?
(D) All of these are open-ended questions.
240. A researcher's questionnaire has leading questions that push favorable answers. Which error best describes this issue?
(A) Measurement bias within non-sampling error
(B) Coverage bias within sampling error
(C) Pure sampling error from chance
(D) Frame error within sampling error
241. Which of the following is true with regard to mail questionnaires?
(A) The response rate of mail questionnaires is often very low.
(B) Mail questionnaires are highly flexible.
(C) The researcher has maximum control over the mail questionnaire sample.
(D) Mail questionnaires are unsuitable for collecting large amounts of information about respondents.
(E) Respondents always provide honest answers to personal questions on mail questionnaires.
242. Grades 7 through college, 100 items tapping poor study skills and attitudes that could affect academic performance
(A) Survey of Study Habits and Attitudes (SSHA)
(B) Attitude Inventories
243. Open-ended surveys allow the respondents much more freedom and flexibility when providing their answers.
(A) True
(B) False
244. Which of these is NOT a step for planning a questionnaire?
(A) Clear on its purposes
(B) Develops concrete research questions

- (C) Anonymity is present in this way of collecting data
- (D) Exhaustive in its coverage and inclusion of items
- 245.** A question that asks respondents to choose an answer from possibilities given
- (A) Forced-Choice Question
- (B) Observation Method
- (C) Primary Data
- (D) Open-Ended Question
- 246.** A disadvantage of using questionnaires in research is that they
- (A) Provide data which is difficult to quantify
- (B) Are not cost effective
- (C) Can make it difficult to access respondents
- (D) Place limitations on Responses
- 247.** This type of question should be avoided in surveys because of the technical nature of the language used
- (A) Double-barrelled questions
- (B) Open-ended
- (C) Questions with jargon
- (D) Leading questions
- 248.** Requires the person completing the questionnaire to rate items on a list individually, for example from 1 to 10 where 1 is very important and 10 is least important.
- (A) Rank order
- (B) Rating
- (C) Real time
- (D) Real-time backup
- (E) Real-time data (RTD)
- 249.** What are the advantages of questionnaires?
- (A) Detailed qualitative information can be gathered about the product or service.
- (B) Collating and analysing the results is not time consuming.
- (C) Carrying out questionnaires will not take a lot of time and money.
- (D) They can be carried out online
- 250.** ____ form the major portion of the questionnaire. This refers to the items relating to the actual area of the study.
- (A) Request for cooperation
- (B) Identification data and occupation
- (C) Instruction
- (D) Information sought
- (E) Classification data
- 251.** What is a form containing a set of questions related with the field of enquiry called
- (A) Questionnaire
- (B) Interview
- 252.** In a questionnaire, the questions are standardized. All respondents are asked exactly the same questions in the same order. This means a questionnaire can be replicated easily to check for ____
- (A) Validity
- (B) Objectivity
- (C) Reliability
- (D) None of above
- 253.** Your school is trying to determine which elective courses students would like to see offered next year.
- (A) Questionnaire/Survey
- (B) Interview
- (C) Observation
- (D) None of the above
- 254.** Which instrument is commonly used in both qualitative and quantitative research?
- (A) Thermometer
- (B) Microscope
- (C) Questionnaire
- (D) Billboard
- 255.** A Likert-type question measuring student motivation in research could be: "I am motivated to participate in research activities." Which of the following is a Likert-type response option for this statement?
- (A) Strongly agree

- (B) What is your favorite research topic?
(C) How often do you participate in research?
(D) Describe your motivation for research.
256. Questionnaire is
(A) A list of answers
(B) A list of questions
(C) A discussion with group of customers
(D) None of above
257. What type of questionnaire is used to elicit qualitative data?
(A) Closed-ended questions
(B) Open-ended questions
(C) Multiple-choice questions
(D) Rating scale questions
258. Self-report: a research method, such as a ____ or interview, which obtains data by asking participants to provide information about themselves.
(A) Method
(B) Questionnaire
(C) Interpretation
(D) None of above
259. The type of question that encourages an answer phrased in the respondent's own words.
(A) Open ended question
(B) Close ended question
(C) Executive interview
(D) Focus group
260. Using double-barrelled questions is acceptable in questionnaire design.
(A) True
(B) False

1.4.10 Schedule Method

1. When the questions are presented to the respondents in a face-to-face situation, and the interviewer rather than the subjects, fills out the query, it is called
(A) A Schedule.
(B) A Questionnaire.,
(C) An Inventory.
(D) A Test.
2. A schedule is generally filled up by
(A) Researcher
(B) Informants
(C) Government
(D) Educational institutions
3. A ____ is filled by the enumerators.
(A) Schedule
(B) Questionnaire
(C) Both (a) and (b)
(D) None of these

1.5 Data Analysis and Interpretation

1.5.1 Data Analysis

1. It is used to analyze and interpret verbal data or behavioural data. What is this?
(A) Narrative Analysis
(B) Discourse Analysis
(C) Grounded Theory
(D) Content Analysis
2. Hey there! Anika, Ria, and Nikita are planning a fun study session. They want to know what statistical test can be used for observing the changes between base line and endline study?
(A) Chi-Square Test
(B) Independent Sample t-Test
(C) Correlation
(D) Paired Sample t-Test

3. What does “Axial Coding” refer to in qualitative research?
(A) Data collection technique
(B) Data reassembly and pattern identification
(C) Statistical analysis method
(D) None of above
4. If Jake wants to represent the percentage of expenses used by gas and labor, what kind of chart should he use?
(A) Column
(B) Pie
(C) Stacked bar
(D) XY scatter
5. I have an x-axis and a y-axis. I help to compare categories. There are spaces between my bars. What am I?
(A) Bar Graph
(B) Histogram
(C) Line Graph
(D) Dot Plot
6. What is the purpose of creating a data table?
(A) To make the data harder to access
(B) To waste time and resources
(C) To organize and present data in a structured format for easy analysis and comparison.
(D) To confuse people with unnecessary information
7. What type of data representation is this?
(A) Pictograph
(B) Data table
(C) Line graph
(D) Pie chart
8. Which analysis procedure focuses on decreasing the number of dimensions in the quantitative and or qualitative data?
(A) Data consolidation
(B) Data reduction
(C) Data integration
(D) None of above
9. Which type of data is this?Teacher salaries
(A) Quantitative
(B) Categorical
10. A display of the relationship between two quantitative variables, graphing each explanatory value on the x axis and the accompanying response on the y axis
(A) Scatter plot
(B) R
(C) Quartiles
(D) Range
11. IT specialists often analyze ____ to make decisions.
(A) Skill
(B) Data
(C) Maintenance
(D) None of above
12. The goal is to abstract core analytic themes from the data. Although still a reduction of data, data remains in qualitative form. This is a ____
(A) Content Analysis
(B) Thematic Analysis
(C) Repertory grid analysis
(D) None of above
13. It is characterized because the differences between two data values is significant.
(A) Reason Scale
(B) Ordinal Scale
(C) Nominal Scale
(D) Interval Scale
14. Which chart best shows distribution shape?
(A) Line chart
(B) Histogram
(C) Pie chart
(D) Bar chart

15. This part of the thesis is usually found as contents of Chapter IV and should also be started with an introduction that discusses the range of the chapter in brief form.
- (A) Presentation, Analysis, and Interpretation of data
 - (B) Presentation, data of analysis
 - (C) Data
 - (D) Interpretation
16. T7-Jacob wants to record his results for the temperature of each day in the past week. What graph or table should he use?
- (A) Data table
 - (B) Bar graph
 - (C) Histogram
 - (D) Line graph
17. Which of the following charts will NOT be suitable if you want to compare values of multiple categories directly?
- (A) Column Chart
 - (B) Bar Chart
 - (C) Line Chart
 - (D) Pie Chart
18. It is a graph that uses symbols to present and compare data. These graphs are often used where there are people who need to understand things, even if they do not read or speak the language.
- (A) Bar Graph
 - (B) Line Graph
 - (C) Pie Graph
 - (D) Pictograph
19. A group of trades-people were surveyed about their method of travel to work. What data type does this example represent?
- (A) Categorical: Nominal
 - (B) Categorical: Ordinal
 - (C) Numerical: Discrete
 - (D) Numerical: Continuous
20. Visual display of data in a spreadsheet
- (A) Plot area
 - (B) Data
 - (C) Legend
 - (D) Chart
21. What is the type of reliability when measured by administering two tests identical in all aspects except the actual wording of items?
- (A) Internal Consistency Reliability
 - (B) Test-retest reliability
 - (C) Equivalent Forms Reliability
 - (D) Inter-rater Reliability
22. What do researchers do Using a “specific method”?
- (A) Selecting individuals to study
 - (B) Reviewing the literature
 - (C) Reporting and evaluating research
 - (D) Analyze and interpret the data to see if it supports the prediction and resolves the question that initiated the research
23. Graphs help us represent data
- (A) True
 - (B) False
24. When a number of researchers use the same operational definition to measure a variable and achieve the same results, the measure is said to be
- (A) Instrumental
 - (B) Reliable
 - (C) Valid
 - (D) None of above
25. Which of the following is NOT a step in the process of conducting a literature review?
- (A) Searching and selecting relevant literature
 - (B) Summarizing and synthesizing the findings
 - (C) Conducting statistical analysis on primary data
 - (D) Critically analyzing the literature

26. The two important functions of classification are:
- (A) Scrutiny and editing of data
 - (B) Presentation and interpretation of data
 - (C) Reducing bulk data and facilitating comparison
 - (D) Forming trend and tendencies
27. You can make a ____ as a way of organizing numbers that can help you see patterns.
- (A) Claim
 - (B) Graph
 - (C) Pattern
 - (D) Measurement
28. Suitable analysis for interview transcripts
- (A) Thematic analysis
 - (B) Regression analysis
 - (C) Meta-analysis
 - (D) Descriptive statistics
29. A mutual relationship or connection between two or more things is known as:
- (A) Mutualicity
 - (B) A cremation
 - (C) A causation
 - (D) A correlation
30. Determine whether the given data is Discrete or Continuous. Data: Person's weight
- (A) Discrete Data
 - (B) Continuous Data
31. Which of the following is the process of systematically applying statistical and/or logical techniques to describe and illustrate, condense and recap, and evaluate data?
- (A) Data Analysis
 - (B) Data Interpretation
 - (C) Data Coding
 - (D) Data Presentation
32. Refers to methods used in order to make generalizations and conclusions about a target population, based on results from a sample.
- (A) Inferential statistics
 - (B) Descriptive statistics
 - (C) Demography
 - (D) Epidemiology
33. What is the main focus of the body of the research report?
- (A) Listing the research team members.
 - (B) Summarizing the introduction and background.
 - (C) Discussing future research directions.
 - (D) Presenting research findings and analysis.
34. Height of a tomato plant is an example of ____
- (A) Qualitative data
 - (B) Quantitative data
35. Bars on a graph should be:
- (A) Equal width
 - (B) Varying heights
 - (C) Different colours
 - (D) Both equal width and varying heights.
36. Checking the accuracy of data by having participants read transcripts of the studies in which they were involved is called ____
- (A) Iterative questioning
 - (B) Credibility checks
 - (C) Reflexivity
 - (D) None of above
37. Which one of the following methods serve to measure correlation between two variables? [2010-DECEMBER]
- (A) Scatter Diagram
 - (B) Frequency Distribution
 - (C) Two-way table
 - (D) Coefficient of Rank Correlation
38. It is the formula that used for reliability test.
- (A) Pearson's R
 - (B) Cronbach Alpha
 - (C) Chi-Square test
 - (D) None of above

39. What graph/chart do you use for percentages?
(A) Bar graph
(B) Line Graph
(C) Pie chart
(D) Data table
40. Head size-Is this numerical data classified as Discrete or Continuous?
(A) Discrete
(B) Continuous
41. Which scale is used when responses are in the order of strongly disagree, disagree, agree, strongly agree?
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
42. Identify what chapter of a research study the given element belongs to. ANALYSIS OF DATA
(A) Chapter 1
(B) Chapter 2
(C) Chapter 3
(D) Chapter 4
(E) Chapter 5
43. Is the information collected during the survey numerical or categorical data?
(A) Numerical data. I know this because the y-axis is labeled with numbers.
(B) Numerical data. I know this because the surveyor counted how many people that they surveyed.
(C) Categorical data. I know this because the responses to the survey are names.
(D) Categorical data. I know this because each column is a different color.
44. Determine the level of measurement of the data set. The allergies on a physician's intake form.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
45. Which of the following is the primary purpose of classifying data in scientific research?
(A) To organize information for easier analysis
(B) To increase the amount of data collected
(C) To ensure data is always accurate
(D) To make data collection faster
46. Visible or audible results of data processing
(A) Input.
(B) Output.
(C) Processing.
(D) Storage.
47. This chart shows the colour of cars counted in a survey. What is the difference between the number of red cars and the number of silver cars counted?
(A) 15
(B) 9
(C) 6
(D) 5
48. Information overload happens when the amount of data that can be processed is exceeded.
(A) TRUE
(B) FALSE
49. Product statistics, sales projections, future growth and trends are examples of what type of data?
(A) Transactional Data
(B) System Data
(C) Organizational Data
(D) Analytical Data
50. You're analyzing data with three variables: age, device type, and satisfaction score. What analysis applies?
(A) Descriptive
(B) Bivariate
(C) Multivariate
(D) Univariate

51. Tammy recorded the amount of time she spent on six activities over a twenty four hour period and drew a bar graph, as follows: Approximately what percentage of the day did she spend on playing sport?
- (A) About 8%
 - (B) About 11%
 - (C) About 15%
 - (D) About 27%
52. Which of the following is not the software of quantitative data analysis?
- (A) SPSS
 - (B) MS Excel
 - (C) ATLAS.tiCompare
 - (D) None of above
53. Client's level of anxiety when organized as a data is classified as which of the following:
- (A) Nominal
 - (B) Ordinal
 - (C) Ratio
 - (D) Interval
54. How can the effectiveness of a tsunami warning system be evaluated and improved?
- (A) Conduct regular public awareness campaigns.
 - (B) Analyze response times and accuracy of alerts during past events to identify areas for improvement.
 - (C) Increase the number of warning signs along the coast.
 - (D) Focus on post-tsunami recovery efforts.
55. The disadvantage of a small sample size in psychology experiments that expect to measure a small to medium effect is that
- (A) The study is underpowered, leading to an increased Type I error.
 - (B) The study is underpowered, leading to an increased Type II error.
 - (C) The study is overpowered, leading to an increased Type I error.
 - (D) The study is overpowered, leading to an increased Type II error.
56. What is the term used for the process of verifying data by cross-checking with multiple sources?
- (A) Hypothesis
 - (B) Triangulation
 - (C) Quantitative analysis
 - (D) Qualitative analysis
57. According to your textbook, when evaluating your research materials you need to check the validity of the information.
- (A) True
 - (B) False
58. Base your response on the following data: 3, 5, 2, 5, 4, 7, 1, 0, 6, 4, 8, 5, 3, 2, 4, 5, 9. What would the first class's limits be in a frequency table of 5 classes?
- (A) 0-1
 - (B) 0-2
 - (C) 2-3
 - (D) 3-4
59. I need to compare the percentage of votes received by different political parties. Which type of graph should I choose?
- (A) Line Graph
 - (B) Picture Graph
 - (C) Pie Chart
 - (D) None of above
60. Marvin investigates shoe size among men. What type of variation is shown on the graph?
- (A) Continuous
 - (B) Discontinuous
 - (C) Long-drift
 - (D) Short-drift
61. A graph that illustrates trends and changes in data over time.
- (A) Pie
 - (B) Line
 - (C) Bar
 - (D) Table

62. What type of data would be used to represent a person's religion?
(A) Numerical data
(B) Categorical data
(C) Ratio data
(D) Interval data
63. Which of the following is a picture that shows data in a way that's easy to understand, like graphs, tables, or diagrams?
(A) Data
(B) Chart
(C) Histogram
(D) Dot Plot
64. What method would be best to use to test whether people in different regions of the country are equally likely to vote Democratic or Republican in the next election?
(A) You would generate a correlation coefficient.
(B) You would look at a frequency distribution.
(C) You would use a crosstab to generate a chi-square test of independence.
(D) None of the above
65. The type of animals in Melbourne Zoo is an example of
(A) Continuous data
(B) Ordinal data
(C) Discrete data
(D) Nominal data
66. When should a line graph be used?
(A) When comparing parts of a whole
(B) When showing change over time
(C) When comparing data between different groups of categories
(D) Whenever you want
67. Which type of graph best displays percentages (parts) of a whole?
(A) Line graph
(B) Bar graph
(C) Climatogram
(D) Pie graph
68. Charts and graphs are ___ representations of data.
(A) Graphical
(B) Simple
(C) Inaccurate
(D) None of above
69. How can you analyse and interpret the results?
(A) By assuming that something does not exist
(B) Making decisions about the specific methods
(C) Identify the results without commenting on them
(D) Use statistical methods to examine and evaluate the data
70. Rearranging data in a new sequence is known as ___?
(A) Uploading.
(B) Updating.
(C) Sorting.
(D) Summarizing.
71. Which of the following is a good way to analyze data
(A) Organize it into charts and graphs and do calculations if necessary
(B) Check it over and then copy it
(C) Put it away for a few months to see if it makes more sense later
(D) None of above
72. Which statistical tool is most appropriate for examining the relationship between two continuous variables?
(A) T-test
(B) ANOVA
(C) Pearson correlation
(D) Chi-square test

73. Which of the following is a manual data exploration tool provided by Microsoft?
- (A) Microsoft Excel
 - (B) Tableau public
 - (C) Data wrapper
 - (D) Google data studio
74. Arranging data in a specific order is called
- (A) Merging.
 - (B) Sorting.
 - (C) Classification.
 - (D) Verification.
75. Which of the following is a characteristic of quantitative data?
- (A) Subjective
 - (B) Objective
 - (C) Descriptive
 - (D) Exploratory
76. Which type of graph displays data in consecutive and equivalent intervals?
- (A) Line plot
 - (B) Venn diagram
 - (C) Histogram
 - (D) Stem and leaf
77. In a line plot displaying the ages of cars in a parking lot, if there are 10 X's at 5 years, what conclusion can we draw?
- (A) There are 5 cars that are 10 years old.
 - (B) There are 10 cars that are 5 years old.
 - (C) All cars are 5 years old.
 - (D) 5 cars are newer than 10 years.
78. While informational interviews provide original source material, expert opinion should be ____ (1) ____ with a range of ____ (2) ____
- (A) Purpose; 2) sponsor
 - (B) Balanced; 2) views
 - (C) Varied; 2) technical
 - (D) Discount; 2) rely
 - (E) Purpose; 2) target population
79. ____ is a ranking scale that indicates the ordered relationship among the objects or events
- (A) Nominal scale
 - (B) Ordinal Scale
 - (C) Interval Scale
 - (D) Ratio Scale
80. Is this Discrete or Continuous? The time taken to complete a marathon race.
- (A) Discrete
 - (B) Continuous
81. Data-Analysis Phase. In this particular phase, the researcher analyzes the milestone from the previous step based on his data-analysis plan.
- (A) TRUE
 - (B) FALSE
82. Which of the following best explains why data triangulation increases the credibility of research findings?
- (A) It uses multiple sources to validate results
 - (B) It speeds up data collection
 - (C) It eliminates researcher bias completely
 - (D) It guarantees 100% accuracy in findings
83. What type of statistical data are used in educational research?
- (A) Descriptive statistical analysis.
 - (B) Inferential statistical analysis.
 - (C) Both of them.
 - (D) None of the above.
84. Processed data is called ____
- (A) Fact
 - (B) Assumption
 - (C) Information
 - (D) Total
85. Show whether employment in a particular area has risen or declined in the stated years.
- (A) Economic Trends
 - (B) Employment Trends

86. During which step would you graph your data?
(A) Conclusion
(B) Problem
(C) Hypothesis
(D) Analyze Data
87. What is the term for 'Diverse data'?
(A) Velocity
(B) Variety
(C) Veracity
(D) Data Stream
88. What kind of data was recorded on the data table?
(A) Examination Data
(B) Laboratory Data
(C) Qualitative Data
(D) Quantitative Data
89. Which type of data would student height be categorized as?
(A) Categorical
(B) Continuous
(C) Discontinuous
(D) Normal
90. This section presents how data were analyzed, either quantitative or qualitatively.
(A) METHODOLOGY
(B) INSTRUMENT
(C) DATA GATHERING
(D) DATA ANALYSIS
91. Charlotte is investigating the influence of multiple factors such as age, gender and income on how much money an individual spends on grocery shopping every month. Which of the following statistical tests best suits her study design?
(A) Linear regression
(B) Chi-square test
(C) Pearson correlation
(D) Spearman rank order correlation
92. In a given data set, the maximum value is 76 and the minimum value is 13, what would be class width when using 6 classes?
(A) 10
(B) 10.5
(C) 11
(D) 15
93. The procedure to estimate internal consistency reliability of splint-half test
(A) Average proportion distance (ADP)
(B) Spearman-brown correction formula
(C) Kudar-richardson 20 or KR-20
(D) Cronbach's coefficient alpha
94. What is qualitative data?
(A) Data that can be observed but not measured
(B) Data that can be measured and quantified
(C) Data that is always numerical
(D) Data that is always accurate
95. What is the data classification for the following situation? How long we wait to get our food at Chick-Fil-A
(A) Trick question
(B) Huh?
(C) Qualitative
(D) Quantitative
96. Edward would like to create a chart that shows the trend in iPod sales over the past 2 years. Which chart type should he create?
(A) Bar
(B) Column
(C) Line
(D) Pie
97. Which type of graph is best for showing the relationship between two variables?
(A) Bar graph
(B) Pie chart
(C) Line graph
(D) Histogram

98. Used to measure the degree of relationship between two sets of data
(A) (Two)-Way ANOVA
(B) Paired t-test
(C) Pearson Product-Moment Correlation Test
(D) Pearson's χ^2
99. Which of the following is an example of continuous data?
(A) The number of classes you have in a day
(B) The amount of time you spend studying
(C) The number of games you have installed in your phone/computer
(D) The size of your shoes
100. Number of students in a classroom taking the SAT
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
101. How should data be treated according to the principle of objectivity?
(A) It should be adjusted to fit hypotheses
(B) It should speak for itself
(C) It should be ignored if contradictory
(D) It should be altered for clarity
102. A histogram is very similar to a bar graph, but uses intervals on the x-axis.
(A) True
(B) False
103. Statistics are ____
(A) Asking people how they feel about a new computer game
(B) Using numbers and data to measure success or provide information to those who need it to develop the media product.
(C) Survey questions
(D) The most important result of research
104. Data analysis begins officially after the data are collected, screened, and entered a computer program for analysis.
(A) True
(B) False
105. A way of showing data using bars of different heights/lengths is called ____
(A) Bar graph
(B) Frequency table
(C) Pictograph
(D) Tally chart
106. Data analysis can be in
(A) Statistical form.
(B) Descriptive form.
(C) Explanatory form.
(D) Descriptive, explanatory and graphical form.
107. It is the science of collecting, organizing, interpreting, and analyzing data. It is very important because it has many applications in the society.
(A) Biology
(B) Statistics
(C) Mathematics
(D) None of above
108. Hey there! Can you help Akhil figure out which statistical test to use for comparing base line and endline study?
(A) Chi-Square Test
(B) Independent Sample t-Test
(C) Correlation
(D) Paired Sample t-Test
109. Which data quality dimension refers to data accurately representing the real world?
(A) Validity
(B) Completeness
(C) Timeliness
(D) Accuracy

110. — is the most commonly used technique for controlling for extraneous variables in nonexperimental research.
- (A) Matching.
 - (B) Holding extraneous variables constant.
 - (C) Static control.
 - (D) Statistical control.
111. The appropriate analytical technique is determined by
- (A) The research design.
 - (B) Nature of the data collected.
 - (C) Nature of the hypothesis.
 - (D) Both A & B.
112. In which section of a report would you most likely find a chart?
- (A) Introduction
 - (B) Conclusion
 - (C) Data analysis
 - (D) Acknowledgments
113. A coach measures the running time of his athletic team. What data type does this example represent?
- (A) Categorical: Nominal
 - (B) Categorical: Ordinal
 - (C) Numerical: Discrete
 - (D) Numerical: Continuous
114. What type of analysis focuses on one variable only?
- (A) Bivariate analysis
 - (B) Multivariate analysis
 - (C) Univariate analysis
 - (D) Qualitative analysis
115. What are the different methods of data analysis in quantitative research?
- (A) Qualitative, comparative, and predictive data analysis
 - (B) Qualitative, exploratory, and predictive data analysis
 - (C) Correlational, causal, and predictive data analysis
 - (D) Descriptive, inferential, and exploratory data analysis
116. What is the comprehensive process in qualitative research that includes transcribing data, identifying patterns, and analyzing themes?
- (A) Data analysis
 - (B) Sampling
 - (C) Data gathering procedure
 - (D) Literature review
117. Type of graphs that could be used to show abundance of different species
- (A) Pie chart
 - (B) Line graph
 - (C) Bar graph
 - (D) X-y scatter graph
118. This refers to the method of organizing, sorting, and scrutinizing data in order to make meaningful inferences.
- (A) Critical thinking
 - (B) Findings
 - (C) Analysis
 - (D) None of above
119. It is the process of organizing data into logical sequential and meaningful categories and classifications to make them amenable to study and interpretation.
- (A) Analysis
 - (B) Statement Problem
 - (C) Conclusion
 - (D) Hypothesis
120. Arranging the numerical figures in ascending or descending order is called —
- (A) Data
 - (B) Pictograph
 - (C) Table
 - (D) Array
121. Evaluating sources can help you
- (A) Assess if the information is accurate or not

- (B) Decide if the author is bias
(C) Decide if you should use the information as evidence
(D) All of the above
- 122.** Group of similar objects that differ significantly from other objects is named as ____
(A) Classification
(B) Cluster
(C) Community
(D) None of these
- 123.** The statement “Define the variables or the criteria for ordering the data obtained in field-work” corresponds to a step for which part of the research process?
(A) Data processing
(B) Problem formulation
(C) Sampling design
(D) Reporting of results
- 124.** Which axis is usually used for categories in a bar chart?
(A) Vertical (y-axis)
(B) Horizontal (x-axis)
(C) Diagonal axis
(D) Both axes
- 125.** This step in the marketing research process occurs after the collection of data has been completed, but before the preparation of presentation of the research report.
(A) Analyze the data
(B) Follow up
(C) Specify the sampling procedures
(D) Collect the data
- 126.** It is a process of collecting validity evidence to evaluate the appropriateness of the interpretations, uses, and decisions based on assessment results.
(A) Reliability
(B) Validation
(C) Assessment
(D) Evaluation
- 127.** Classify the data: time of day: dawn, morning, noon, afternoon, evening, night
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 128.** It summarizes collected data. It involves the explanation of data gathered through the use of analytical and logical reasoning to determine patterns, relationships or trends.
(A) Collection of Data
(B) Organization of Data
(C) Presentation of Data
(D) Analysis of Data
(E) Interpretation of Data
- 129.** Jenny records the heights of her family members. The heights, in inches, are 50, 53, 45, 52, 68, 56 47, 69, and 60. The stem-and-leaf plot shows some of the data. What are the leaves for stem 5?
(A) 2, 3, 7
(B) 0, 2, 3, 5
(C) 0, 2, 3, 6
(D) 2, 3, 5
- 130.** What do graphs do?
(A) Help answer a question
(B) Looks pretty
(C) Makes reports look important
(D) Tells us a story
- 131.** The respondent provides information which can be easily converted into quantitative data (e.g., count the number of ‘yes’ or ‘no’ answers), allowing ____ analysis of the responses.
(A) Measurable
(B) Statistical
(C) Quantitative
(D) None of above

132. — involves studying a set of cultural artifacts (items produced for mass cultural consumption) or events and interpreting the themes they reflect.
- (A) Content analysis
 - (B) Case study
 - (C) Narrative
 - (D) None of above
133. The role of statistics is to — (Research Methods and Statistics Part III)
- (A) To make Psychology more like a science
 - (B) Come up with definite conclusions to Psychological Phenomena
 - (C) Summarize, Analyze, and Interpret Data
 - (D) To make Psychology more believable
134. Ages of students in a statistics class
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
135. Which software should Dr. Balagtas to manipulate numerical data in the computer?
- (A) Spreadsheet
 - (B) Word processing
 - (C) Desktop publishing
 - (D) Multimedia
- Explanation:** Spreadsheet is a file that exists of cells in rows and columns and can help arrange, calculate and sort data. Data in a spreadsheet can be numeric values, as well as text, formulas, references and functions.
136. Discuss the significance of data visualization in quantitative research.
- (A) Data visualization helps in presenting complex data in a visual format, making it easier to understand and interpret.
 - (B) Data visualization only adds complexity to quantitative research
 - (C) Data visualization has no impact on quantitative research
 - (D) Data visualization is only useful for qualitative research
137. The main purpose of the Results section is to:
- (A) Interpret and explain the meaning of findings
 - (B) Present data clearly without interpretation
 - (C) Repeat the methodology in detail
 - (D) Provide background information from literature
138. I have an x-axis and a y-axis. I help to track changes over time. What am I?
- (A) Circle Graph
 - (B) Histogram
 - (C) Line Graph
 - (D) Dot Plot
139. In TNHS, 200 students are randomly selected to determine if they like coffee, tea or both. 140 like tea, 120 like coffee and 80 like both tea and coffee. How many students like at least one of the beverages?
- (A) 40
 - (B) 60
 - (C) 80
 - (D) 180
140. The collected data should be in the form of
- (A) Given map
 - (B) Given pie chart
 - (C) Given line graph or table
 - (D) All of the above
141. A statistical technique that would allow a researcher to cluster such traits as being talkative, social, and adventurous with extroversion is called —
- (A) A case study
 - (B) Meta-analysis
 - (C) Statistical significance
 - (D) Factor analysis
 - (E) Z score Edit

142. The height and weight of the students in Year 7 are measured and recorded. The data shows a ____
- (A) Continuous variation
 - (B) Discontinuous variation
 - (C) No variation
 - (D) None of above
143. What kind of question is this: You ask people in an airport, "How many states have you visited?"
- (A) Statistical Question
 - (B) Non-Statistical question
144. To examine the parts of something in detail
- (A) Analyze
 - (B) Cite
 - (C) Interpret
 - (D) Infer
145. Weight-Is this numerical data classified as Discrete or Continuous?
- (A) Discrete
 - (B) Continuous
146. If the data does not resemble a mirror image, the distribution is said to be skewed.
- (A) True
 - (B) False
147. Freshman majors at a New Jersey state university
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
148. What graph is used to see parts of a whole as a percentage?
- (A) Line Chart
 - (B) Bar Graph
 - (C) Pie Chart
 - (D) Column Chart
149. A farmer wants to show the relationship between the ages of his apple trees and the number of apples they produce. He collects the data to make a scatterplot. He puts tree ages in years on one axis. Which data should he put on the other axis?
- (A) The price of the apples.
 - (B) The heights of the trees.
 - (C) The number of apples they produce.
 - (D) The color of apples the trees produce.
150. What is the cyclical process of collecting and analyzing data during a single research study called?
- (A) Inter analysis.
 - (B) Interim analysis.
 - (C) Constant analysis.
 - (D) Inter-item analysis.
151. The following are the MAJOR PHASES in qualitative data analysis described by Huberman (1994), EXCEPT
- (A) Data display
 - (B) Data reduction
 - (C) Drawing and verifying conclusions
 - (D) Data coding
152. A ____ shows data using bars.
- (A) Pictograph
 - (B) Line graph
 - (C) Bar Graph
 - (D) Tally Chart
153. After gathering data, what should be your next step?
- (A) Gather more data
 - (B) Make a frequency table
 - (C) Complete a line plot
 - (D) Throw the feathers away
154. What is the following describing? Create themes or categories that are consistent with particular cultural messages
- (A) Coding
 - (B) Tightness-looseness
 - (C) Cultural priming
 - (D) Situation sampling

155. Which chart should be used to compare data that changes over time?
- (A) Bar Graph
 - (B) Circle Graph
 - (C) Line Graph
 - (D) None of above
156. The average number of pencils in a student's book bag.
- (A) Qualitative data
 - (B) Quantitative data
157. Discrete data can be
- (A) Averages, ranges, or continuous values
 - (B) Graphs, trends, or predictions
 - (C) Measurements, scales, or intervals
 - (D) Counts, categories, or distinct values
158. This chart has the shape of a circle, with each portion having a different size depending on the data.
- (A) Pie chart
 - (B) Bar chart
 - (C) Pictogram
 - (D) Bubble chart
159. Choose the correct data type for: The following TV shows: 'The Walking Dead, Game of Thrones, Dexter'.
- (A) Quantitative
 - (B) Categorical
 - (C) Discrete
 - (D) Continuous
160. I can use a bar graph when I want to represent values (vertical axis) for different categories (horizontal axis).
- (A) True
 - (B) False
161. What is the primary role of data analysis software like SPSS in quantitative research?
- (A) To automate the research design
 - (B) To conduct qualitative interviews
 - (C) To process and analyze large datasets for statistical significance
 - (D) To collect observational data
162. The measure of closeness of the estimates to the actual value
- (A) Precision
 - (B) Interval estimate
 - (C) Accuracy
 - (D) Point Estimate
163. Which type of graph is most suitable for displaying the relationship between two continuous variables in a scientific experiment?
- (A) Bar graph
 - (B) Line graph
 - (C) Pie chart
 - (D) Histogram
164. What should you do before interpreting your results in data analysis?
- (A) Use the right method to deal with missing data
 - (B) Ensure that the assumptions of the statistical tests are met
 - (C) Check for assumption violations and consider alternative methods if necessary
 - (D) Select appropriate tests based on the study design
165. How do you decide the scale for the y-axis in a bar chart?
- (A) Ignore the data and choose any arbitrary scale.
 - (B) Select random intervals for the y-axis.
 - (C) Choose a scale based on the data range, ensuring clear visualization and appropriate intervals.
 - (D) Use a fixed scale regardless of data range.
166. Statistical calculations and preparation of tables and graphs can be done using
- (A) Adobe Photoshop.
 - (B) Excel.
 - (C) Notepad.
 - (D) Power Point.

- 167.** Which of the following is NOT a step in analyzing the literature for a review?
- (A) Identifying key findings and conclusions
 - (B) Evaluating the quality of the research
 - (C) Summarizing the entire content of each paper
 - (D) Identifying gaps or inconsistencies in the literature
- 168.** Which method measures the relationship between variables?
- (A) Correlation analysis
 - (B) Regression analysis
 - (C) Descriptive statistics
 - (D) Hypothesis testing
- 169.** Which chart will Best represent a comparison of the average family income in three states?
- (A) Column
 - (B) Line
 - (C) Pie
 - (D) XY scatter
- 170.** Data duplication wastes the space, but also promotes a more serious problem called ____
- (A) Data inconsistency.
 - (B) Other than those given as options.
 - (C) Program dependency.
 - (D) Separated data.
- 171.** In this step of the scientific method I can use graphs, charts, or descriptions to show my observations.
- (A) Analyze results (data)
 - (B) Form a hypothesis
 - (C) Ask a question
 - (D) Draw a conclusion
- 172.** Raw data is made comprehensible by:
- (A) Collection of data
 - (B) Classification of data
 - (C) Organisation of data
 - (D) Presentation of data
- 173.** The last stage of action research includes:
- (A) Draw inferences, analyze the assumption, and evaluate the project.
 - (B) Analyze the data, draw inferences, and evaluate the project.
 - (C) Evaluate the problem, implement the data, and draw inferences.
 - (D) Formulate the problem, analyze the assumption, and draw inferences.
- 174.** What is the term for the following definition? A conclusion, based on facts, that a person perceives to be true.
- (A) Inference
 - (B) Assumption
 - (C) Prediction
 - (D) Observation
- 175.** The amount of chlorine in a pool has been measured. What data type does this example represent?
- (A) Categorical: Nominal
 - (B) Categorical: Ordinal
 - (C) Numerical: Discrete
 - (D) Numerical: Continuous
- 176.** Students record how long they can keep their eyes open without blinking in seconds.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
- 177.** What information is most likely to be provided on a graph?
- (A) Qualitative data
 - (B) Data in table format
 - (C) A numerical representation of data
 - (D) Data obtained from primary research
- 178.** Ethan, Rohan, and Aria are working on a project where they have a large dataset. They are particularly interested in exploring the relationship between two columns in the dataset. What would be the best visualization technique for them to use?

- (A) Scatter plot
(B) Histogram
(C) Bar chart
(D) Cross tab
- 179.** A car salesman records information about the cars he is selling. The age of each car is ____ data
(A) Qualitative
(B) Continuous
(C) Discrete
(D) None of above
- 180.** The representation of data in the form of whole and its parts is called as ____
(A) Pie chart
(B) Bar graph
(C) Double bar graph
(D) Histogram
- 181.** The arranging of data in a logical sequence is called ____
(A) Classifying.
(B) Sorting.
(C) Summarizing.
(D) Reproducing.
- 182.** A graph that illustrates comparisons of amounts and quantities.
(A) Pie
(B) Line
(C) Bar
(D) Table
- 183.** A plot of the temperature and precipitation in a particular region.
(A) Biome
(B) Freshwater
(C) Taiga
(D) Climograph
- 184.** The number of participants in this Zoom call is an example of:
(A) Observational Data
(B) Qualitative Data
(C) Discrete Data
(D) Continuous Data
- 185.** William is analyzing survey results about customer satisfaction. What type of chart should he use to handle both negative and positive feedback effectively?
(A) Showing positive values only
(B) Handling both negative and positive magnitude values
(C) Displaying only neutral values.
(D) None of above
- 186.** What is the vertical axis of a bar chart typically labeled as?
(A) Labels
(B) Data points
(C) Frequency
(D) Categories
- 187.** Andy is comparing how long two tablets can be used after being fully charged. Use the measures of variability to make an inference about the data.
(A) The IQR for tablet A is higher so tablet A's battery life is more consistent.
(B) The MAD is lower in tablet B's battery life so Tablet B is more consistent.
(C) On average Tablet A's battery will last longer.
(D) On average Tablet B's battery will last longer.
- 188.** Scientists can organize their observations using ____
(A) Charts
(B) Graphs
(C) Tables
(D) All of the above
- 189.** The most common graphical presentation of quantitative data is a
(A) Histogram.
(B) Bar chart.
(C) Stem and leaf display.
(D) Pie chart.

- 190.** What is data coding?
- (A) Ensure data collection was done without bias
 - (B) Grouping and assigning values to responses from the survey
 - (C) To make sure that there are minimal errors
 - (D) Writing a report
- 191.** What tool can researcher use to help in estimating and processing missing values in data sets?
- (A) Quirkos
 - (B) Ms. excel
 - (C) SPSS
 - (D) Nvivo
- 192.** What kind of chart should you use to show the pieces (percentages) of a whole
- (A) Bar Chart
 - (B) Column Chart
 - (C) Pie Chart
 - (D) None of above
- 193.** When data are ranked or ordered, it is:
- (A) Nominal scale
 - (B) Ordinal scale
 - (C) Interval scale
 - (D) Ratio scale
- 194.** Type of Data arrangement
- (A) Symmetrical
 - (B) Hairline
 - (C) Skewed Right
 - (D) Skewed Left
- 195.** After collecting data, the next step in the scientific method is:
- (A) Forming a hypothesis
 - (B) Drawing a conclusion
 - (C) Analyzing results
 - (D) Starting a new experiment
- 196.** Strange Servant is reviewing the data on how many customers pay via cash, EFTPOS and Paywave. Is this data an example of
- (A) Continuous
 - (B) Discrete
 - (C) Nominal
 - (D) Ordinal
- 197.** The followings are data analysis approaches except
- (A) Thematic analysis
 - (B) Constant comparative method
 - (C) Audit trail
 - (D) Interpretative phenomenological analysis
- 198.** This section is where the data obtained from the research is presented.
- (A) Theoretical framework
 - (B) Methodology
 - (C) Introduction
 - (D) Results
- 199.** The analysis of data gathered during a particular experiment is necessary in order to
- (A) A-formulate a hypothesis for that experiment
 - (B) B-develop a research plan for that experiment
 - (C) C-design a control for that experiment
 - (D) D-draw a valid conclusion for that experiment
- 200.** Which graph uses a line to connect points, showing how data changes over time?
- (A) Line Graph
 - (B) Pie Chart
 - (C) Bar Chart
 - (D) Dot Plot
- 201.** Data reliability refers to the extent to which a measurement instrument consistently yields the same results
- (A) TRUE
 - (B) FALSE

202. What type of data is used when recording the time it takes to perform a memory task?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) None of above
203. Which chart is used to make comparisons and generalizations about groups of data?
- (A) Column
 - (B) Line
 - (C) Pie
 - (D) Exploded pie
204. The height of Mr. Kei.
- (A) Discrete data
 - (B) Continuous data
205. A hospital analyzes its patient admission records from the last five years to identify seasonal peaks in emergency room visits. This is:
- (A) Predictive Analytics
 - (B) Descriptive Analytics
 - (C) Diagnostic Analytics
 - (D) Prescriptive Analytics
206. Students respond to a survey where they identify whether they prefer to write with pencils, pens, markers, or type.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
207. Pie Graph is a special chart that shows the relative sizes of data.
- (A) True
 - (B) False
 - (C) This is True only for certain data sets
 - (D) This is True for most data sets
208. It shows the relationship between two variables in tabular form.
- (A) Contingency Table
 - (B) Percentages
 - (C) Frequency Table
 - (D) None of above
209. A person who reviews and examines data or information for a specific area is called an ____
- (A) Network
 - (B) Programming
 - (C) Analyst
 - (D) Database
210. Distinguish between quantitative data and qualitative data.
- (A) Quantitative data is numerical and can be measured, while qualitative data is descriptive and involves characteristics that cannot be counted.
 - (B) Quantitative data is always descriptive, while qualitative data is always numerical.
 - (C) Quantitative data cannot be measured, while qualitative data can be counted.
 - (D) Quantitative data and qualitative data are both always numerical.
211. What type of graph shows points to see if there is a relationship between two sets of data?
- (A) Scatter Plot
 - (B) Histogram
 - (C) Column Chart
 - (D) Box and Whisker Plot
212. An Excel chart is
- (A) Group of data points
 - (B) Cells that contain values to be graphed
 - (C) Visual representation of numeric data
 - (D) Small circle shape to show comparisons of values
213. What is used to represent the sum of more than one value and compare the contribution of individuals to the whole?
- (A) Stacked bar
 - (B) Line
 - (C) Column
 - (D) Pie

- 214.** In the data analysis process, qualitative researchers construct ____ by looking out for ____ & ____
(A) Results, Data, Causality
(B) Conclusions, Coding, Answers
(C) Meaning, Patterns, Themes
(D) None of above
- 215.** Viewing a PivotTable report only for a subset that meets a selection criterion is known as ____
(A) Organizing
(B) Implementing
(C) Sorting
(D) Filtering
- 216.** Temperature when organized as a data is classified as which of the following:
(A) Nominal
(B) Ordinal
(C) Ratio
(D) Interval
- 217.** What type of graph would you make to show how many of your classmates were born in each month of the year?
(A) Line
(B) Bar
(C) Circle
(D) Scatter plot
- 218.** Why do scientists use graphs?
(A) They are pretty.
(B) It makes an extra step.
(C) They show trends.
(D) They like to use them.
- 219.** THE PROCESS OF PRESENTING DATA IN THE FORM OF A TABLE IS CALLED?
(A) ORGANISATION
(B) CLASSIFICATION
(C) PRESENTATION
(D) TABULATION
- 220.** First aid training can be conducted at a basic, intermediate and advanced level. What data type does this example represent?
(A) Categorical: Nominal
(B) Categorical: Ordinal
(C) Numerical: Discrete
(D) Numerical: Continuous
- 221.** Reliability is a process of tools accuracy. The Cronbach alpha must at least
(A) 0.5
(B) 0.6
(C) 0.7
(D) 0.1
- 222.** Classify as categorical, discrete or continuous. The number of televisions in each house.
(A) Categorical
(B) Discrete
(C) Continuous
(D) None of above
- 223.** Contains lines that show data trends over a period of time
(A) Line Chart
(B) Bar Chart
(C) Column Chart
(D) Pie Chart
- 224.** Aria, Charlotte, and Benjamin are working on a research project for their statistics class. What is the best way for them to analyze the data they've collected?
(A) Asking their friends and family for their opinions
(B) Using statistical methods and software tools
(C) Using a Magic 8-Ball
(D) Relying on guesswork and intuition
- 225.** A counselor is told by his supervisor to measure the internal consistency reliability (i.e. homogeneity) of a test but not to divide the test in halves. The counselor would need to utilize
(A) The split-half method

- (B) The test-retest method
(C) The Kuder-Richardson coefficient of equivalence
(D) None of above
226. Which of the following is considered a 'hard skill' in the field of science?
(A) Critical thinking
(B) Data analysis
(C) Teamwork
(D) Communication
227. Students at Cooper Elementary school took a survey about what kinds of pets they had at home. Then, students plotted that information on a frequency table. How many kids have dogs and cats for pets?
(A) 19
(B) 12
(C) 7
(D) 20
228. Amanda has created multiple charts for each product sold. How will her manager know the name of each chart?
(A) X axis
(B) Y axis
(C) Legend
(D) Chart Title
229. A study was done to determine the correlation between the frequency of doing workouts and scores in a memory test. Assuming a normal distribution, which statistical tool is BEST used for analyzing if there is a strong association between the two variables?
(A) Pearson's r
(B) Spearman's ρ
(C) Paired samples t-test
(D) Independent t-test
(E) Chi-square test of independence
230. It is a method for studying and/or retrieving meaningful information from documents.
(A) Content Analysis
(B) Historical Analysis
(C) Discourse Analysis
(D) None of above
231. To arrange things in a systematic order, to make something part of a system or classification, to categorize.
(A) Code Research Data
(B) Marketing Information System
(C) Customer Driven Information
(D) Quantitative Research
232. The following data set shows the minutes spent on internet by 50 internet users. Use the class width from the previous question to find the lower class limits if the first lower class limit is the minimum value of the data set.
(A) 7, 7, 11, 17, 19, 20, ____
(B) 6.5, 18.5, 30.5, 42.5, 54.5, 66.5, 78.5
(C) 12.5, 24.5, 36.5, 48.5, 60.5, 72.5
(D) 7, 19, 31, 43, 55, 67, 79
233. What step in The Scientific Method involves tables and graphs where we create something to display our data?
(A) Experiment
(B) Research
(C) Analyze Data
(D) Hypothesis
234. Data are taken and analyzed from a sample as a representative of the population, making it more credible and reliable for policymaking and decision making. This characteristic of research pertains to ____
(A) Replication
(B) Reliable Data
(C) Visual representation
(D) Objective
Explanation: Data taken from a sample represent the population, making it credible and reliable. This pertains to the characteristic of having reliable data.
235. The parts of a pie chart are referred to as a
(A) Pie
(B) Slice

- (C) Segment
(D) Sector
- 236.** Classification of data is the process of:
(A) Arranging data in rows and columns
(B) Representing data using diagrams
(C) Grouping data into classes or categories
(D) Editing the collected data
- 237.** If Jake wants to find out if the size of a fruit has any effect on the total sales for the week of that particular fruit, what chart should he use
(A) Column
(B) Pie
(C) Stacked bar
(D) XY scatter
- 238.** What type of chart is best suited for visualizing trends and patterns over time?
(A) Column Chart
(B) Pie Chart
(C) Bar Chart
(D) Line Chart
- 239.** Line graphs can be used to
(A) Show categories
(B) Show frequency
(C) Predict
(D) None of above
- 240.** According to Shrout and Fleiss (1979), which statistical method is commonly used to assess interrater reliability? (Shrout & Fleiss (1979))
(A) Pearson correlation
(B) Intraclass correlation coefficients (ICCs)
(C) T tests
(D) Structural equation modeling
- 241.** The gender of students in a research study (e.g., male, female) is classified as:
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 242.** What role does data play in smart cities?
(A) Data has no role in smart cities.
(B) Data is only used to monitor crime in smart cities.
(C) Data is only used for advertising purposes in smart cities.
(D) Data is collected, analyzed, and used to improve various aspects of urban life.
- 243.** The colors of the cars in the school parking lot.
(A) Qualitative data
(B) Quantitative data
- 244.** Chart that shows only one data series and is used to compare sizes of each part to the whole
(A) Line chart
(B) Column chart
(C) Pie chart
(D) Stacker bar chart
- 245.** Vikram wants to compare the sales data of different products over several months. Which chart type would be the most effective for this purpose?
(A) Area Chart
(B) Line Chart
(C) Column Chart
(D) Pie Chart
- 246.** We went into a movie theater to watch a movie. When we came out the roads were wet. We think that it rained. This is an example of —
(A) A qualitative observation
(B) An inference
(C) A quantitative observation
(D) A prediction
- 247.** This process involves a nurse researcher who needs to analyze the data using Statistical Package for the Social Sciences (SPSS) for windows.
(A) Findings
(B) Data analysis

- (C) Data collection
(D) Research method
248. A graph that uses vertical or horizontal bars to show comparisons among two or more items.
(A) Numerical Data
(B) Box Plot
(C) Bar Graph
(D) Categorical graph
249. Activities of Data exploration
(A) Visualizing, manipulating, and querying data
(B) Displaying Data
(C) Storing and Managing Data
(D) Use of GIS programs
250. Construct validity asks: Does what you are measuring actually measure what is being said to be measured?
(A) True
(B) False
251. Information resulting from the systematic analysis of data or statistics is the definition of
(A) Utility
(B) Indexing
(C) Analytics
(D) Extraction
(E) Cache
252. In order to draw conclusions from scientific research, you must first ____
(A) Redo the experiment
(B) Read the materials
(C) Analyze the data
(D) None of above
253. Representation of Data using rectangles of uniform width and equal spacing between them is called ____
(A) Tabular form
(B) Bar graph
(C) Pictograph
(D) None of above
254. Which answer below best describes a Nominal Scale?(Research Methods and Statistics Part III)
(A) Labels or names categories of data
(B) Uses subcategories of Continuous Data
(C) Produces Data that can be rank ordered, such as from highest to lowest
(D) Represents data that have equal values between measurements
255. What is one reason why research requires training?
(A) To ensure creativity
(B) To perform statistical analysis
(C) To increase funding
(D) To reduce time
256. Class label is unknown: Group data to form new classes, e.g., cluster houses to find distribution patterns
(A) Predictive Analysis
(B) Anomaly Detection
(C) Association Mining
(D) Cluster analysis
257. The Results section of a research report should include:
(A) Interpretation and discussion only
(B) Study findings and supporting data
(C) Marketing recommendations only
(D) None of these
258. Which method focuses on identifying, analyzing, and reporting patterns in qualitative data?
(A) Content Analysis
(B) Thematic Analysis
(C) Descriptive Analysis
(D) None of above

259. Which type of chart is best suited for showing the distribution of a single numerical variable?
- (A) Histogram
 - (B) Scatter Plot
 - (C) Bar chart
 - (D) Pie Chart
260. Qualitative observations that fall into separate and distinct categories.
- (A) Numerical Data
 - (B) Data
 - (C) Categorical Data
 - (D) Measure of Center
261. What is a table?
- (A) Organizes data into rows and columns
 - (B) Shows when events happened
262. Which step of the research process involves tabulation?
- (A) Follow-up
 - (B) Collect the data
 - (C) Analyze the Data
 - (D) Determine the research design
263. Which visual is best to show data trends over time?
- (A) Pie chart
 - (B) Bar chart
 - (C) Line chart
 - (D) Tree map
264. Which of the following is the product of data processing?
- (A) Information.
 - (B) Data.
 - (C) Software Program.
 - (D) System.
265. A scientist wanted to see if the amount of garbage that Americans threw away changed over time. He collected information and then showed his results in the graph below. Based on this graph, what could the scientist say about the amount of garbage that each person threw away?
- (A) It increased over time
 - (B) It decreased over time
 - (C) It increased the most in 1980
 - (D) It decreased the most in 1990
266. Trinity asked a random sample of 50 students at her school if they brought lunch from home today. If 30 answered “yes,” about what percent of students at Trinity’s school brought lunch from home today?
- (A) 15%
 - (B) 30%
 - (C) 50%
 - (D) 60%
267. Data analysis involves:
- (A) Collecting data
 - (B) Organizing and interpreting data
 - (C) Report writing
 - (D) None
268. Virginia’s listing as the number one men’s NCAA basketball team in a poll of sportswriters, with Michigan State listed number two.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
269. Number of books read over the summer
- (A) Categorical
 - (B) Numerical
 - (C) Data that changes over time
 - (D) None of above
270. Which scenario best illustrates the concept of data saturation?
- (A) A researcher stops collecting data because no new themes emerge
 - (B) A researcher increases sample size to improve accuracy
 - (C) A researcher repeats interviews multiple times
 - (D) A researcher changes research methods mid-study

271. To compare three or more groups use:
- (A) T-test
 - (B) ANOVA
 - (C) Chi-square
 - (D) Regression
272. Which of the following is a real-world application of data crunching in environmental science?
- (A) Predicting weather patterns
 - (B) Classifying plant species
 - (C) Measuring soil pH
 - (D) Observing animal behavior
273. The classification of data from a ruler that ranges from 0cm to 12cm is:
- (A) Continuous
 - (B) Discrete
 - (C) Ordinal
 - (D) Qualitative
274. Which of the following is NOT typically considered categorical data?
- (A) Gender
 - (B) Ethnicity
 - (C) Religious affiliation
 - (D) Weight
275. Using statistics from government reports like the census is a form of sociological research known as:
- (A) Secondary analysis
 - (B) Case study
 - (C) Field research
 - (D) Participant observation
276. Classification and tabulation are important because they:
- (A) Increase data complexity
 - (B) Make data analysis easier
 - (C) Confuse the user
 - (D) Are not required in statistics
277. What is the purpose of using tables in market research?
- (A) To make data harder to understand.
 - (B) To help visualize data and identify patterns.
 - (C) To reduce the need for data collection.
 - (D) To eliminate the need for surveys.
278. A table that lists items and shows the frequency or number of times they occur is called ____
- (A) Bar graph
 - (B) Frequency table
 - (C) Pictograph
 - (D) Tally chart
279. What term describes the internal consistency of surveys or tests assessed by splitting items into halves and correlating the two sets of scores?
- (A) Test-retest reliability
 - (B) Inter-rater reliability
 - (C) Split-half reliability
 - (D) Alternate-forms validity
 - (E) Content validity
280. What type of graph is best used to compare data?
- (A) Line
 - (B) Circle
 - (C) Bar
 - (D) Pictograph
281. When using content analysis in qualitative research, what is the primary focus of analysis?
- (A) Statistical trends
 - (B) Identifying patterns in written or visual content
 - (C) Participant demographics
 - (D) Structured interviews
282. Choose the term to match this definition: a detailed examination of the elements or structure of something.

- (A) Analysis
 - (B) Summary
 - (C) Hypothesis
 - (D) Conclusion
- 283.** What is the process of assigning numerals or symbols to answer so that all questions can be put into limited number of categories or classes
- (A) Coding
 - (B) Editing
 - (C) Data cleaning
 - (D) Tabulation
- 284.** The height of a person in centimeters is an example of ____
- (A) Nominal data
 - (B) Continuous data
 - (C) Discrete data
 - (D) Ordinal data
- 285.** If someone draws a conclusion based on a small sample size, they are making a
- (A) Slippery slope fallacy.
 - (B) Hasty generalization.
 - (C) Red herring fallacy.
 - (D) Appeal to ignorance.
- 286.** Which type of graph represents the proportion of categorical or discrete data as slices of a whole, often called a pie chart?
- (A) Boxplot
 - (B) Circle Graph
 - (C) Histogram
 - (D) Line Graph
- 287.** Which type of graph/chart is used to observe the relationship between two data variables?
- (A) Bar graph
 - (B) Histogram
 - (C) Pie chart
 - (D) Scatter plot
- 288.** What is "customer satisfaction ratings-e.g. 1 star ____ 5 stars" an example of?
- (A) Nominal
 - (B) Ordinal
 - (C) Discrete
 - (D) Continuous
- 289.** What type of chart would you use to compare multiple categories of data?
- (A) Surface Chart
 - (B) Bar Chart
 - (C) Area Chart
 - (D) Pie Chart
- 290.** Quantitative data can be analyzed using the followings, EXCEPT:
- (A) Descriptive statistics
 - (B) Coding
 - (C) Linear regression
 - (D) Multivariate analysis
 - (E) All correct
- 291.** Data types that pose specific challenges to a data scientist
- (A) Structured data
 - (B) Audio, video and Image data
 - (C) Integer
 - (D) None
- 292.** What does a Scatter Diagram with points close to the trendline indicate?
- (A) Strong correlation
 - (B) No correlation
 - (C) Random variation
 - (D) Outliers
- 293.** What type of data? letter grade on exam
- (A) Ordinal
 - (B) Nominal
- 294.** It offers the ability to easily compile descriptive statistics, parametric and non-parametric analyses, as well as graphical depictions of results through the graphical user interface (GUI).

- (A) MINITAB
(B) SPSS
(C) R
(D) GRAPHPAD PRISM
- 295.** Data are in the form of statistics
(A) Objective
(B) Numerical
(C) Replication
(D) Large Sample Sizes
- 296.** When conducting a review of literature on a particular subject, the researcher should
(A) Read all available material on the subject

(B) Read the whole journal article and then decide whether or not it is useful
(C) Read strategically and critically
(D) Read fully only those texts that appear to agree with his/her point of view
- 297.** What graph is used to see the percentage in the groups? (aka the percentage of the whole)
(A) Line Chart
(B) Bar Graph
(C) Pie Chart
(D) Column Chart
- 298.** The process of editing data involves:
(A) Deleting all inconsistencies
(B) Ensuring data is accurate and complete
(C) Altering results to match the hypothesis
(D) Ignoring outliers
- 299.** This part of an argument sometimes includes numbers and statistics.
(A) Claim
(B) Reason
(C) Evidence
(D) Reasoning
(E) Counterargument
- 300.** From the frequency table, how many students chose either Bananas or Oranges as their favorite fruit?

(A) Total students who chose Bananas or Oranges.
(B) Total students who chose Apples or Grapes.
(C) Total students who chose only Bananas.
(D) Total students who chose Oranges and Pears.
- 301.** Is the number of students in a class an example of quantitative or qualitative data?
(A) Discrete
(B) Qualitative
(C) Quantitative
(D) Categorical
- 302.** Identify the Level of Measurement described below: Ranks data, and precise differences between units of measure do exist; however, there is no true starting point (meaningful zero). Data can be ordered. Differences between data values can be compared.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 303.** A graph is useful in analyzing experimental data because it:
(A) Changes the results
(B) Provides a visual representation of patterns
(C) Replaces the need for conducting an experiment
(D) Proves the hypothesis is correct
- 304.** The process of arranging, organizing, and interpreting data is called:
(A) Data presentation
(B) Data collection
(C) Data analysis
(D) Data coding
- 305.** It is a process of understanding data or known facts or assumptions serving as the basis of any claims or conclusions you have about something.

- (A) Data Matrix
 - (B) Data Analysis
 - (C) Research Design
 - (D) Dig Deeper
- 306.** Which term is defined as converting data into information?
- (A) Data.
 - (B) Input.
 - (C) Output.
 - (D) Processing.
- 307.** Which statistical measure is commonly used to determine the internal consistency of a scale or survey?
- (A) Pearson correlation coefficient
 - (B) Standard deviation
 - (C) Cronbach's alpha
 - (D) Factor loading
- 308.** This is a statistical tool that will be used in analyzing the research data.
- (A) Data Collection Procedure.
 - (B) Parameter and Statistic.
 - (C) Research Design.
 - (D) Statistical Treatment.
- 309.** Interviews, Focus Groups, Observations, and Oral Histories belongs to this type of analysis.
- (A) External Sources
 - (B) Internal Sources
 - (C) Quantitative Data Analysis
 - (D) Qualitative Data Analysis
- 310.** Longitudinal research often involves which of the following types of analysis?
- (A) Statistical analysis
 - (B) Content analysis
 - (C) Discourse analysis
 - (D) Ethnographic analysis
- 311.** We can see if there is a possible relationship between two categorical variables using a stacked bar chart.
- (A) TRUE
 - (B) FALSE
- 312.** Data has been collected on visitors' viewing habits at a bank's website. Which technique is used to identify pages commonly viewed during the same visit to the website?
- (A) Clustering
 - (B) Association Rules
 - (C) Classification
 - (D) Regression
- 313.** Time of day: dawn, morning, noon, afternoon, evening, night
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 314.** What is the purpose of using thematic analysis and triangulation protocol in the research?
- (A) To simplify the data
 - (B) To ignore the data
 - (C) To manipulate the data
 - (D) To ensure the validity of research findings
- 315.** If the data of participants is ordered by their responses, which scale of measurement is being used?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 316.** All variables in the study can contribute to the overall prediction in an equation that adds together the predictive power of each identified variable.
- (A) Bivariate Correlational Studies
 - (B) Longitudinal
 - (C) Prediction Studies
 - (D) Multiple Regression Prediction

317. Which of these is a weakness of qualitative data?
- (A) Hard to analyse
 - (B) Low response rate
 - (C) Lacks validity
 - (D) Unethical
318. Which of these comes in data preparation?
- (A) Removing collinearity
 - (B) Rescale data
 - (C) Remove noise
 - (D) Evaluation metrics
319. Which type of question can be complicated in the data summary and analysis?
- (A) Open-ended
 - (B) Closed-ended
 - (C) Scaled
 - (D) None of above
320. If you want to compare the number of students in different year groups at a school, which graph would be most appropriate?
- (A) Line graph
 - (B) Bar chart
 - (C) Pie chart
 - (D) Histogram
321. Pie chart is also known as
- (A) Pizza graph
 - (B) Circle graph
 - (C) Ball graph
 - (D) Slice graph
322. Edward would like to create a chart that uses vertical rectangles to compare iPod and iPad sales. Which chart type would he create?
- (A) Bar
 - (B) Column
 - (C) Line
 - (D) Pie
323. In quantitative research, the primary purpose of data analysis is to:
- (A) Present background information
 - (B) Derive meaning and patterns from numerical data
 - (C) Test the reliability of the research instrument
 - (D) Develop a hypothesis
324. SPSS can be used to perform forecasts and "what-if" analyses to help the researcher in isolating the underlying causes, identifying the relevant variables that should be investigated, and formulating appropriate research questions and hypotheses.
- (A) TRUE
 - (B) FALSE
325. In a pie chart, what does each slice represent?
- (A) Each slice represents a different texture
 - (B) Each slice represents a different color
 - (C) Each slice represents a different shape
 - (D) Each slice represents a category or value being compared.
326. How can you avoid the pitfall of improper data entry in research analysis?
- (A) Thoroughly check data for accuracy before analysis
 - (B) Use the right method to deal with missing data
 - (C) Select appropriate tests based on the study design
 - (D) Check the normality and homogeneity of your data
327. Increasing the sample size of an opinion poll will reduce the
- (A) Bias of the estimates made from the data collected in the poll.
 - (B) Variability of the estimates made from the data collected in the poll.
 - (C) Variability of opinions in the sample.
 - (D) Variability of opinions in the population.
328. Height in centimeters is:
- (A) Interval
 - (B) Ratio
 - (C) Nominal
 - (D) Ordinal

- 329.** What is the main challenge associated with unstructured data?
- (A) Difficulty in processing
 - (B) Limited availability
 - (C) Lack of storage options
 - (D) Fixed format
- 330.** Carrie is comparing the growth of plants under natural and artificial light sources. Part B Use the box plots to make an inference using the variability of the data.
- (A) On average group Q has a greater growth of plants under natural and artificial light sources.
 - (B) The sets have the same variability related to the growth of plants under natural and artificial light sources.
- 331.** Students identify the number of pets that live at their house.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
- 332.** A graph that is used to observe changes over a period of Time
- (A) Time Graph
 - (B) Line Graph
 - (C) Bar Graph
 - (D) Picto Graph
- 333.** Which type of review uses statistical methods to combine results of several studies?
- (A) Meta-analysis
 - (B) Systematic review
 - (C) Narrative review
 - (D) Scoping review
 - (E) Critical review
- 334.** A set of data that are words or non measurable numbers is called ____
- (A) Numerical data
 - (B) Categorical data
- 335.** Which statistical test in PSPP is used to check reliability?
- (A) T-test
 - (B) ANOVA
 - (C) Cronbach's Alpha
 - (D) Chi-square
- 336.** Lucas told his mom he wanted to know how tall the members of his family are. Each family member takes turns measuring each other. His mom is 5 feet 2 inches, his dad is 6 feet, his sister is 3 feet 3 inches tall and he is 4 feet 7 inches tall. What could Lucas do with this data to make it easier to read and analyze?
- (A) Ask a question
 - (B) Make a prediction
 - (C) Draw a conclusion
 - (D) Create a data table
- 337.** Single value or piece of data from the data series.
- (A) Plot area
 - (B) Tick mark
 - (C) Data marker
 - (D) Data point
- 338.** It is a detailed description of the setting or individuals followed by analysis of the data for themes or issues.
- (A) Grounded theory
 - (B) Thematic analysis
 - (C) Phenomenological analysis
 - (D) Case study
- 339.** Which level of data classification would describe the number of hours students study for the SATs?
- (A) Nominal level
 - (B) Ordinal level
 - (C) Interval level
 - (D) Ratio level
- 340.** In the methods section of the report, the researcher needs to:
- (A) A discuss the results of the research.
 - (B) Discuss the theoretical background for the research.

- (C) Recount in detail the daily research activities conducted during the research process.
- (D) Set out in detail how data was gathered and analysed.
- 341.** Data analysis in research process is intended to:
- (A) Manipulate responses
- (B) Present only positive results
- (C) Interpret the meaning of data collected
- (D) Increase word count in the report
- 342.** Shannon provides statistical data to support her claims in a class debate. What should you do to evaluate the accuracy of this data?
- (A) Trust the data because it is presented in a professional format.
- (B) Verify the data by checking the original study or dataset.
- (C) Ignore the data because statistics can be misleading.
- (D) Use the data because it supports your argument.
- 343.** When phenomena are grouped into categories with uniform ranges, researcher would adopt
- (A) Ordinal scale.
- (B) Interval scale.
- (C) Ratio scale.
- (D) Nominal scale.
- 344.** Why is it important to ensure the accuracy of data during data collection?
- (A) To save time when analyzing data
- (B) To ensure the validity of results
- (C) To avoid repeating the same methods
- (D) Because inaccurate data does not affect the study
- 345.** What is the main purpose of using a histogram in data analysis?
- (A) To calculate the mean of the data
- (B) To visualize the distribution of data
- (C) To find the median of the data
- (D) To determine the mode of the data
- 346.** A graph with points plotted to show a possible relationship between two set of data
- (A) Continuous Graph
- (B) Sequence
- (C) Scatter plot
- (D) Arithmetic Graph
- 347.** Using the scientific method, we typically analyze and evaluate data in order to ____
- (A) Avoid the need to conduct a study
- (B) Avoid using statistical techniques
- (C) Determine whether or not to measure data
- (D) Determine whether the pattern of data shows support for a research hypothesis
- 348.** In a data display, this is a break, space, or opening between values where no value occurs.
- (A) Gap
- (B) Hole
- (C) Symmetric
- (D) Peak
- 349.** A graph to compare teacher's favorite colors
- (A) Pie Chart
- (B) Bar Graph
- (C) Line Graph
- (D) None of above
- 350.** Encoding three variables in scatterplot is done using:
- (A) Color and size
- (B) Only position
- (C) Only shape
- (D) Only hue
- 351.** Which one is not a primary scale of measurement?
- (A) Nominal
- (B) Ordinal
- (C) Interval
- (D) Ratio
- (E) Likert

352. Coders in research are:
- (A) Participants in a study
 - (B) Researchers who analyze qualitative data
 - (C) People who fund research
 - (D) Editors of research papers
353. Which of the following is a critical skill for interpreting data from scientific experiments?
- (A) Data collection
 - (B) Data analysis
 - (C) Data prediction
 - (D) Data classification
354. If you categorize data as poor, average, good, excellent, which scale are you using?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
355. Which of the levels of listening involves trying to determine if information is valid and trustworthy?
- (A) Appreciative
 - (B) Critical
 - (C) Emphatic
 - (D) Informative
356. Classify as categorical, discrete or continuous. The amount of water a person drinks each day.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
357. Validity refers to the consistency of a measurement.
- (A) True
 - (B) False
358. The following are the three main forms of presentation of data EXCEPT
- (A) Textual presentation
 - (B) Data tables
 - (C) Diagrammatic presentation
 - (D) Organizational Charts
359. Which of the following best describes the 'findings' section of a report?
- (A) It provides background information
 - (B) It summarizes the literature review
 - (C) It presents the results of the research
 - (D) It outlines the research question
360. Expansion of SPSS
- (A) Statistical Package for Social Science
 - (B) Self Package Social Study
 - (C) Show Poll Social Science
 - (D) Setup package social science
361. To examine or to look at something carefully and break it down into parts
- (A) Cite
 - (B) Inference
 - (C) Analyze
 - (D) Evaluate
362. Which of the following is the process of sorting through large data sets to identify patterns and establish relationships to solve problems through data analysis?
- (A) Data Mining.
 - (B) Data Warehousing.
 - (C) All of these.
 - (D) None of these.
363. Biodiversity is measured by
- (A) Random quadrat sampling
 - (B) Height of vegetation
 - (C) Richness and evenness
 - (D) Health of keystone species
364. It reflects the strength and/or direction of the relationship between two (or more) variables.
- (A) Linear Regression
 - (B) Correlation
 - (C) Regression
 - (D) ANOVA

- 365.** Which of the following is not the feature of symbols assigned to categories on a nominal scale?
- (A) No quantitative meaning.
 - (B) Nothing more than labels or names.
 - (C) May be ordered according to magnitude.
 - (D) Cannot be subjected to arithmetic operations.
- 366.** Classify as categorical, discrete or continuous. The colours of lollies in a packet.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
- 367.** Soon after the collection and storing of the data, the research team proceeds with the analysis of such data in relation to different perspectives such as A. ___ themes, B. ___ dimensions, codes or categories.
- (A) Hypotheses. Propositions
 - (B) Themes. Dimensions
 - (C) Groups. Segments
 - (D) Markets. Units
- 368.** A ___ is used to show a common attribute or trend among your data points.
- (A) Data table
 - (B) Trendline
 - (C) Legend
 - (D) Scatter diagram
- 369.** You have researched the effects of hypnosis vs. autogenics as treatment for posttraumatic stress on male and female Gulf War soldiers. Which technique will you use to properly analyze your data from this study?
- (A) Within-subjects design
 - (B) ANOVA
 - (C) Two-way analysis of variance
 - (D) Factor analysis
- 370.** What is the primary purpose of correlation studies?
- (A) To predict the outcome of one variable based on another
 - (B) To determine the relationship between two or more variables
 - (C) To establish a cause-and-effect relationship between variables
 - (D) To compare different groups of individuals
- 371.** If there are no gaps between consecutive classes, the limits are called:
- (A) Class Intervals
 - (B) Class marks
 - (C) Class boundaries
 - (D) Class limits
- 372.** Mr Flood records that 48% of his class do their homework on time. What decimal represents the percent of students who hand it in late.
- (A) 0.62
 - (B) 0.48
 - (C) 0.052
 - (D) 0.52
- 373.** Content validity is how well an item is being measured, considering domain specification.
- (A) True
 - (B) False
- 374.** Which of the following is NOT a method of processing / analysing data?
- (A) Using charts/graphs
 - (B) Web pages
 - (C) Database tables
 - (D) Reports
- 375.** What is data analysis for?
- (A) To make data more confusing
 - (B) To entertain people
 - (C) To change the data into another form
 - (D) To find patterns and insights
- 376.** Existing data sets can be used multiple times and explored from different angles
- (A) True
 - (B) False

- 377.** How can you interpret a bar chart to compare the data of different categories?
- (A) By counting the number of colors used in the chart
 - (B) By comparing the font size of the category labels
 - (C) By looking at the background color of the chart
 - (D) By comparing the length of the bars for each category and looking at the scale of the chart.
- 378.** What is the primary purpose of a pie chart in writing?
- (A) To entertain the reader with a story.
 - (B) To provide a detailed description of a character.
 - (C) To visually represent data proportions.
 - (D) To summarize the plot of a novel.
- 379.** Summarize and analyze data with both crosstabulation and charting.
- (A) Bar Chart
 - (B) Pivot Chart
 - (C) Heat Map
 - (D) Pie Chart
- 380.** How do you calculate the total number of data points from a histogram?
- (A) By counting the number of bars in the histogram.
 - (B) By summing the heights (frequencies) of all the bars in the histogram.
 - (C) By averaging the heights of the bars in the histogram.
 - (D) By multiplying the width of the bars by the number of bars.
- 381.** Using a few facts to make a general statement
- (A) Validity
 - (B) Premise
 - (C) Generalization
 - (D) Deductive Reasoning
- 382.** The representation of information using a chart, diagram, image, etc. is the definition of
- (A) Indexing
 - (B) Analytics
 - (C) Extraction
 - (D) Concatenation
 - (E) Visualization(s)
- 383.** Ted records the heights of the sunflowers in his family's garden. In inches, the heights are 24, 11, 21, 18, 15, 25, 30, 13, 23, and 36. The stem-and-leaf plot shows some of the data. What leaves should Ted write for stem 1?
- (A) 1, 3, 5, 8
 - (B) 1, 3, 8
 - (C) 1, 2, 3, 5, 8
 - (D) 2, 3, 5, 8
- 384.** What type of data is best represented using a bar chart?
- (A) Categorical data
 - (B) Time series data
 - (C) Numerical data
 - (D) Text data
- 385.** Explain how each statistical test is used in the treatment of data.
- (A) Methodology
 - (B) Population Sampling or Respondents of the Study
 - (C) Research Instrument
 - (D) Statistical Treatment of Data
- 386.** Which chart will BEST represent the decline of sales for a music company over the past five years?
- (A) Column
 - (B) Line
 - (C) Pie
 - (D) XY scatter
- 387.** A good way to organize and record your results and observations is ____
- (A) Away from all people.

- (B) In a data tables, charts and graphs
(C) Ask other people for their opinion
(D) Controlled variables or constants
- 388.** Which verb is an example of a steady / stable trend?
(A) Go up
(B) Decline
(C) Remain unchanged
(D) Fluctuate
- 389.** What statistical method would be most appropriate for analyzing categorical data in a large-scale survey?
(A) T-test
(B) ANOVA
(C) Chi-square test
(D) Regression analysis
- 390.** A counselor believes that clients who receive assertiveness training will ask more questions in counseling classes. An experimental group receives assertiveness training while a control group does not. In order to test for significant differences between the groups the counselor should utilize
(A) The student's t test
(B) A correlation coefficient
(C) A survey
(D) An analysis of variance (ANOVA)
- 391.** Identify if the data point listed below is an example of qualitative data or quantitative data: 1' x 1' x 1' box
(A) Qualitative data
(B) Quantitative data
- 392.** A statistical technique used to reduce data to a smaller set of summary variables and explore the phenomena' underlying theoretical structure. It is used to identify the structure of the relationship between the variable and the respondent.
(A) Alpha
(B) Hypothesis Testing
(C) Exploratory Factor Analysis
(D) P value
- 393.** Common term for the representation of multidimensional data
(A) Data set
(B) Raw data
(C) Data
(D) Data cube
- 394.** What does the findings section highlight?
(A) The success of the study.
(B) Psychological interpretation of the statistical findings.
(C) Outcome of data analysis.
(D) All of these.
- 395.** This includes your sampling method and formulas to come up with findings out of the data gathered.
(A) Abstract
(B) Data Gathering Procedure
(C) Statistical Treatment Applied
(D) Appendix
- 396.** Chapter 4 of Research
(A) The Problem and its Background
(B) Methods of Research
(C) Presentation, Analysis and interpretation of Data
(D) Review of Related Literature and Studies
- 397.** A student wants to summarize how often each device was preferred. What should they create?
(A) Box plot
(B) Frequency distribution
(C) Scatter plot
(D) Histogram
- 398.** Which type of data includes numbers such as age, height, or marks?
(A) Categorical data
(B) Numerical data
(C) Qualitative data
(D) Text data

- 399.** Which type of data is more informational yet harder to analyze
(A) Numerical data
(B) Non-numerical data
- 400.** What kind of data is measured with numbers such as mean, mode, median and ranges?
(A) Quantitative data
(B) Qualitative data
- 401.** MS Excel is useful for:
(A) Hypothesis formulation
(B) Data analysis and visualization
(C) Report binding
(D) Literature review
- 402.** Coding in qualitative research refers to the process of organizing and categorizing data to facilitate analysis and interpretation.
(A) True
(B) False
- 403.** This type of data presentation helps summarize and categorize data using columns and rows. It contains headings that indicate the most important information about your study.
(A) Tabular
(B) Graphical
(C) Textual
(D) Editing
- 404.** A pie chart tells us what portion (percentage) of the data falls into each category.
(A) True
(B) False
- 405.** The cumulative total in a Pareto Chart is represented by a:
(A) Line Graph
(B) Bar Graph
(C) Scatter Plot
(D) Pie Chart
- 406.** What are the six steps in analyzing and interpreting Qualitative data?
(A) 1,2,3,4,5,6
(B) 1,2,3,4,5,8
(C) 1,3,4,5,8,7
(D) None of above
- 407.** A class of 30 students voted on their favorite fruit. The results were: 10 chose apples, 8 chose bananas, 6 chose oranges, and 6 chose grapes. What type of graph would best represent this data?
(A) Histogram
(B) Pie chart
(C) Bar graph
(D) Line graph
- 408.** During the ____ stage, the analyst will look for patterns of responses to the survey questions.
(A) Data Editing
(B) Data collection
(C) Data Analysis
(D) Sample
- 409.** The vertical axis of a histogram is labeled as
(A) Class
(B) Frequency
(C) Midpoint
(D) Cumulative Frequency
- 410.** Example: Comparing student's favorite type of candy
(A) Bar graph
(B) Line graph
(C) Pie chart
(D) None of above
- 411.** Data in tables of a research report show that 20 out of 60 students in the first year of B.A. class of a college are girls. On a particular day of visit it is observed that 12 students are absent of whom 08 are girls. Attendance behaviour is poorer among girls than others. This observation is a case of
(A) Deductive logic

- (B) Transductive logic
(C) Inductive logic
(D) Inferential logic
- 412.** Which of the following is a skill/concept you might apply when researching the impact of various insects on woodland management?
(A) Analyzing how insects affect tree health
(B) Memorizing the names of insects
(C) Listing types of trees in a forest
(D) Drawing a picture of a forest
- 413.** If a research requires evaluation of facts and information relative to the research being conducted to find the most relevant information, it is ____
(A) Analytical
(B) Empirical
(C) Logical
(D) Methodical
- 414.** Which type of graph is best suited for comparing different categories or groups?
(A) Line graph
(B) Pie chart
(C) Scatter plot
(D) Bar graph
- 415.** Which data display best displays the following: Age ranges of people who shop at a certain store.
(A) Box-and-Whisker Plot
(B) Line Graph
(C) Histogram
(D) Stem-and-Leaf Plot
- 416.** Which chart uses dots to show how often numbers or categories appear?
(A) Dot Plot
(B) Pie Chart
(C) Line Graph
(D) Bar Chart
- 417.** What is involved in the step of analyzing the data in psychological research?
(A) Formulating hypotheses
(B) Organizing data and running statistical analysis
(C) Conducting experiments
(D) Reviewing previous studies
- 418.** What does the results section highlight?
(A) The success of the study.
(B) Outcome of data analysis.
(C) Psychological interpretation of the statistical findings.
(D) All of these.
- 419.** A commonly used statistical package is:
(A) SPSS
(B) Paint
(C) Tally
(D) Notepad
- 420.** In a scientific experiment, why is it important to classify data into different categories?
(A) To make the data more complex
(B) To simplify data analysis and interpretation
(C) To increase the number of variables
(D) To ensure data is biased
- 421.** Respondent validation is the process by which:
(A) The validity of an interview schedule can be measured
(B) Researchers ask their participants to comment on an account of the findings
(C) The problem of low response rates to a survey can be overcome
(D) Participants collaborate with the researcher to design the research
- 422.** Determine whether the data related to the topic below is discrete or continuous: The number of books in the library
(A) Discrete
(B) Continuous

423. What is the purpose of using bar charts in data investigations?
- (A) To confuse the reader
 - (B) To represent data clearly
 - (C) To hide information
 - (D) To make data look complicated
424. Raw data should be processed only one time
- (A) True
 - (B) False
425. Which part of the research report examines and interprets the data collected to draw conclusions?
- (A) Analysis
 - (B) Bibliography
 - (C) Methodology
 - (D) Citation
426. I want to show how the height of plants changed over two months. What type of graph will I use?
- (A) Bar graph
 - (B) Line graph
 - (C) Circle/pie graph
 - (D) None of above
427. What symbol replaces any number of any symbols?
- (A) ?
 - (B) *
 - (C) choice?,
428. What type of data? Length
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
429. Determine the level of measurement of the data set. The temperatures on a physician's intake form.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
430. What is the significance of the area of the bars in a histogram?
- (A) The area of the bars represents the total frequency of the data points within the specified ranges.
 - (B) The area of the bars indicates the mean of the data set.
 - (C) The area of the bars shows the median value of the data points.
 - (D) The area of the bars reflects the mode of the data set.
431. Complete the sentence: all graphs should have ____
- (A) ____ data only.
 - (B) ____ a title only.
 - (C) ____ a title and labels on both axis, plus data.
 - (D) ____ labels on both axis only.
432. Which test would you use to see if the distribution of music that Californians listen to is the same as that of Nevadans? 900 Californians and 600 Nevadans were surveyed.
- (A) Chi-square Goodness of Fit Test
 - (B) Chi-Square Test for Homogeneity
 - (C) Chi-Square Test for Independence/Association
 - (D) Not a Chi-square test
433. There were 3 accidents requiring first aid during the event. What type of data is this?
- (A) Qualitative
 - (B) Quantitative
434. You would like to compare the number of votes that 6 candidates received in the latest student election.
- (A) Bar Graph
 - (B) Line Graph
 - (C) Pie Chart
 - (D) Histogram

435. Why is Excel commonly used?
- (A) For creating ER diagrams and database designs
 - (B) For managing file systems and storing data
 - (C) For physical design and logical design in databases
 - (D) For data analysis, data entry, and data management
436. Which type of data is this? Number of shoes owned.
- (A) Quantitative
 - (B) Categorical
437. The scaling that permits most sophisticated statistical analysis is ____
- (A) Nominal scaling
 - (B) Ordinal scaling
 - (C) Interval scaling
 - (D) Ratio scaling
- Explanation:** From the lowest to highest level are: nominal, ordinal, interval and ratio
438. A 'number crunching' computer is one that can handle
- (A) Large spreadsheets.
 - (B) Large alphanumeric data.
 - (C) Large volume of numbers.
 - (D) Only numbers.
439. Histograms are a special type of
- (A) Box Plot
 - (B) Line Graph
 - (C) Bar Graph
 - (D) None of above
440. Data used to build a data mining model
- (A) Training Data
 - (B) Validation Data
 - (C) Test Data
 - (D) Hidden Data
441. Determine the level of measurement of the data set. The weight on a physician's intake form.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
442. Which of the following statistical measures is appropriate to analyse the data obtained when carrying out inter-rater reliability?
- (A) Coefficient alpha
 - (B) Intraclass coefficient
 - (C) Spearman-Brown formula
 - (D) Pearson's correlation
443. The ability to repeat research and obtain the same results. Data is gathered through quantitative methods.
- (A) Representativeness
 - (B) Reliability
 - (C) Generalisability
 - (D) Objectivity
444. What type of Data are we collecting when asking: "How many pets do you have?"
- (A) Categorical Data
 - (B) Quantitative Data
445. ____ coding is the initial organization of raw data to try to make sense of it.
- (A) Axial
 - (B) Open
 - (C) Pre-Selective
 - (D) None of above
446. Which of the following is typically the first practical step in the Data Analysis process?
- (A) Report Generation
 - (B) Model Building
 - (C) Data Visualization
 - (D) Data Collection/Acquisition
447. Which level of measurement provides the least sensitive analysis?
- (A) Nominal data
 - (B) Ordinal data
 - (C) Interval data
 - (D) None of above

448. In the context of research skills, what does the term 'synthesize' mean?
- (A) To separate information into parts
 - (B) To combine information from different sources
 - (C) To ignore irrelevant data
 - (D) To summarize a single source
449. Casey is evaluating humor in individuals by how many jokes they say. He scores each person and adds up the total. Casey's advisor tells him that he needs to have another person also score the same individuals, and that he should then compare the scores given. This is checking for:
- (A) Test-retest reliability
 - (B) Convergent validity
 - (C) Inter-rater reliability
 - (D) Predictive/concurrent validity
450. A table with rows representing age groups and columns representing survey responses is an example of:
- (A) A data matrix
 - (B) A hypothesis summary
 - (C) Statistical testing
 - (D) A visual narrative
451. The number of seats in a car is ____ data
- (A) Discrete
 - (B) Continuous
 - (C) Qualitative
 - (D) None of above
452. The number of goals scored at a football match
- (A) Qualitative
 - (B) Quantitative
 - (C) Continuous
 - (D) Discrete
453. How are results typically presented in quantitative research?
- (A) As personal reflections
 - (B) Through numeric data, charts, and statistical summaries
 - (C) In the form of themes and narratives
 - (D) With detailed interview quotes
454. John and Lilly need to visualize the flow and proportions of a city's waste management pathways from collection to final disposal. What type of diagram should they use?
- (A) Radial chart
 - (B) Sankey diagram
 - (C) Area chart
 - (D) Box and whiskers plot
455. What type of data would it be if you asked everyone in the class to rate how much they like psychology on a scale of 1 to 10?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) None of above
456. Select the best conclusion for this graph.
- (A) Carbon dioxide levels decreased between 1960 and 2020.
 - (B) Carbon dioxide levels did not change between 1960 and 2020.
 - (C) Carbon dioxide levels increased gently between 1960 and 2020.
 - (D) Carbon dioxide levels increased rapidly between 1960 and 2020.
457. Temperature measured in Celsius is an example of:
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
458. A graph that compares data by using bars of different lengths or heights to show values is a(n) ____
- (A) Pictograph
 - (B) Bar graph
 - (C) Line plot
 - (D) Scale

459. Presents the outcome of the experimentation using tables and charts
(A) Result
(B) Method
(C) Abstract
(D) Introduction
460. Which will BEST represent each spouse's contribution to the total household budget over a period of six months?
(A) Exploded pie
(B) Pie
(C) Stacked bar
(D) XY scatter
461. Statistics is used by researchers to
(A) Analyze the empirical data collected in a study.
(B) Make their findings sound better.
(C) Operationally define their variables.
(D) Ensure the study comes out the way it was intended.
462. Which is the best chart for displaying scientific data?
(A) Scatter Plot
(B) Pie Chart
(C) Area Chart
(D) Doughnut Chart
463. What should be included in the results section?
(A) Conclusion
(B) Findings, data analysis, tables, figures, statistical results.
(C) Introduction
(D) Literature review
464. Which app feature is typically used for graphing and analyzing data in smartphone-based physics experiments?
(A) Camera
(B) Graphing tools
(C) GPS
(D) Calendar
465. Is this Discrete or Continuous? The Speed of IHS students driving around the Valley.
(A) Discrete
(B) Continuous
466. What recent shift has computing power enabled in marketing research?
(A) Emphasis on squeezing data for deeper insights
(B) Greater reliance on intuition over analytics
(C) Limiting analysis to small convenience samples
(D) Elimination of segmentation and pricing models
467. When is it appropriate to use a pie chart for data analysis?
(A) When the data involves precise numerical values
(B) When comparing parts of a whole
(C) When comparing unrelated categories
(D) When analyzing trends over time
468. What type of data is best visualized using a histogram?
(A) Categorical data
(B) Nominal data
(C) Ordinal data
(D) Continuous data
469. Which type of graph best displays change over continuous variables such as temperature, time, and pH?
(A) Line graph
(B) Bar graph
(C) Climatogram
(D) Pie graph
470. Data analytics helps you analyze the data you have.
(A) False
(B) True

471. What is the process of assigning data to a class by applying labels called?
- (A) Regression
 - (B) Clustering
 - (C) Classification
 - (D) Association
472. Which Test is Appropriate? Is Gender a factor in a person's favorite fruit? 400 men and 500 women were asked what their favorite fruit is to see if the distribution of favorite fruit is the same for men and women.
- (A) Chi-square Goodness of Fit Test
 - (B) Chi-Square Test for Homogeneity
 - (C) Chi-Square Test for Independence/Association
 - (D) Not a Chi-square test
473. If in a frequency table, either the lower limit of first class or the upper limit of last class is not a fixed number, then classes are called:
- (A) One-way classes
 - (B) Two-way classes
 - (C) Discrete classes
 - (D) Open-end classes
474. A PIE Chart is created using
- (A) Cherries
 - (B) Apples
 - (C) Data
 - (D) Cars
475. What major element under chapter 4 is known as the process of breaking of the whole study into its respective categories according to the specific problem?
- (A) Presentation
 - (B) Interpretation
 - (C) Conclusions
 - (D) Analysis
476. Which statistical elements are appropriate to specify in the Data Management and Statistical Analysis section?
- (A) Timeline milestones for report writing
 - (B) Only names of investigators and site
 - (C) Sample size estimation and planned tests
 - (D) Random anecdotes and opinions
477. What does reliability ensure?
- (A) Results are consistent and repeatable.
 - (B) Results are always true.
 - (C) Data is collected once.
 - (D) Findings are descriptive.
 - (E) Hypotheses are never tested.
478. It deals with the collection and interpretation of data to describe its characteristics.
- (A) Descriptive Statistics
 - (B) Inferential Statistics
479. The study of a population based on age, race, gender, and education.
- (A) Market Research
 - (B) Demographics
 - (C) Behavioral Segmentation
 - (D) Target Market
480. What is a potential disadvantage of using qualitative data?
- (A) It is easy to measure
 - (B) It provides numerical data
 - (C) It can be difficult to analyze and present
 - (D) It is always accurate
481. Classify as categorical, discrete or continuous. The brand of car a person drives.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
482. A mental health counselor had data on three personality tests for over 300 former clients. The tests measured over 30 variables and the counselor was interested to see if these tests might be measuring some common factors. To do this, she conducted a
- (A) Factor analysis.

- (B) Content analysis.
(C) T-test
(D) Item analysis.
- 483.** Observations and information that support a conclusion ____
(A) Classifying
(B) Evidence
(C) Opinions
(D) Predictions
- 484.** Which technique organizes studies into a table with themes, methods, and findings?
(A) Matrix method
(B) Concept map
(C) Annotated bibliography
(D) Meta-analysis
(E) Narrative review
- 485.** Sarah is a qualitative researcher studying how children and parents interact in Head Start Centers. As she examines her data (videotapes and transcripts), she jots down notes concerning the interactions, generating hypotheses, suggesting relationships among categories of information she is examining and so on. This process of jotting notes as she examines the data is called
(A) Drawing diagrams.
(B) Transcription.
(C) Memoing.
(D) Face sheet coding.
- 486.** Classify the data: The number of people wearing jeans in each classroom at OCHS
(A) Discrete quantitative
(B) Continuous quantitative
(C) Qualitative
(D) None of above
- 487.** During a recent data analysis workshop, Kavya presented her findings on the importance of statistics in various fields. She highlighted key features that are essential for understanding and interpreting data effectively.
(A) Statistical modeling
(B) Data mining
(C) Data analysis and visualization
(D) Predictive analytics
- 488.** What phase involves examining the codes and collated data to identify significant broader patterns of meaning?
(A) Searching for themes
(B) Reviewing themes
(C) Defining and naming themes
(D) Coding
- 489.** Organize the Data means
(A) Confirm research results with more than one secondary source in pie graphs
(B) Putting responses in chart or data tables can help to identify trends
(C) Pay attention to patterns and trends
(D) None of above
- 490.** The term that defines data about the data is called ____
(A) Megadata.
(B) Superdata.
(C) Metadata.
(D) Predata.
- 491.** Which graph is most suitable for comparing parts of a whole?
(A) Line graph
(B) Bar graph
(C) Pie chart
(D) Histogram
- 492.** Which Interval contains the most data values?
(A) 120-129
(B) 130-139
(C) 140-149
(D) 150-159
(E) 160-169
- 493.** The numbers show the relative position of the objects, but not the magnitude of the differences between them

- (A) Ordinal
 - (B) Nominal
 - (C) Interval
 - (D) Ratio
494. Which word best completes the sentence:
'The chart ____ the increase in temperature over the years.'
- (A) Sings
 - (B) Dances
 - (C) Illustrates
 - (D) Hides
495. Graph B is called what?
- (A) Histogram
 - (B) Line graph
 - (C) Line plot
 - (D) Bar graph
496. This graph compares parts to the whole.
- (A) Line graph
 - (B) Pictograph
 - (C) Bar graph
 - (D) Pie chart
497. In content analysis its constituents are arranged in
- (A) Haphazardly manner
 - (B) Logical manner
 - (C) Down word manner
 - (D) Upward manner
498. The scores students receive on an IQ test are classified as:
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
499. What does "Horizontalization" refer to in the context of analyzing data in phenomenological research?
- (A) Grouping statements into meaningful themes
 - (B) Listing significant statements from the data
 - (C) Identifying statistical trends in the data
 - (D) Comparing data across different studies
500. You may want to consult sources with ____ and demographics.
- (A) Topography
 - (B) Biography
 - (C) Statistics
 - (D) Autobiography
501. Identify the Level of Measurement described below: Possesses all the characteristics of interval measurement, and there exists a true zero. In addition, true ratios exist when the same variable is measured on two different members of the population
- (A) Nominal
 - (B) Ratio
 - (C) Ordinal
 - (D) Interval
502. Analysing research results includes:
- (A) Looking over the secondary data for issues in research.
 - (B) Examining the graphs and statistics that were used.
 - (C) Comparing key findings from primary and secondary data.
 - (D) Having a discussion with the respondents about the topic.
503. Which type of data represents categories with a natural order or ranking?
- (A) Nominal Data
 - (B) Ordinal Data
 - (C) Interval Data
 - (D) Ratio Data
504. A histogram displays the number of hours students spend on homework each week. If the 0-1 hour range has the smallest bar, what does this suggest?
- (A) No students spend 0-1 hour on homework.

- (B) Few students spend only 0-1 hour on homework each week.
(C) Most students spend 0-1 hour on homework.
(D) The data is incorrect.
- 505.** The section that organizes and interprets data is:
(A) Data Collection
(B) Data Analysis
- 506.** Which of the following is true of content analysis?
(A) Produces only quantitative data
(B) Involves counting, categorising & interpreting words/images
(C) May only be applied to reliable sources
(D) All of the other options
- 507.** Arranging and organizing the data collected and making the necessary calculations. A correct translations/ interpretation of the data is primordial for everyone to understand not only the researcher.
(A) Collecting the data
(B) Analyzing and interpreting the data
(C) Writing a report
(D) None of above
- 508.** Classification of data on geographical basis is also called
(A) Reflected classification
(B) Populated classification
(C) Sampling classification
(D) Spatial classification
- 509.** The number of students in a class is an example of ____
(A) Nominal data
(B) Continuous data
(C) Discrete data
(D) Ordinal data
- 510.** Process of extracting relevant information from a set of data.
(A) Analysis of Data
(B) Collection of Data
(C) Interpretation of Data
(D) Non Parametric
- 511.** Box plots show:
(A) Frequencies
(B) Quartiles and outliers
(C) Proportions
(D) Totals
- 512.** The raw data can be grouped according to time. Such a classification is known as a
(A) Chronological classification
(B) Spatial classification
(C) Qualitative classification
(D) Quantitative classification
- 513.** Classification based on time is ____
(A) Qualitative classification
(B) Quantitative classification
(C) Chronological classification
(D) Geographical classification
- 514.** What is the level of measurement used in a research on how humidity in the air changes over the year in a city?
(A) Interval
(B) Ratio
(C) Ordinal
(D) Nominal
- 515.** What strategic measures can be implemented to assess the impact of a hurricane on coastal communities?
(A) Monitor weather forecasts daily.
(B) Develop a risk assessment model using historical data and current meteorological information.
(C) Evacuate all residents immediately.
(D) Increase insurance premiums for coastal properties.
- 516.** The number of pets per family in a city.
(A) Discrete data
(B) Continuous data

517. The output of data characterization can be presented in various forms
(A) Pie charts
(B) Bar charts
(C) Curves and multidimensional tables
(D) Multidimensional data cubes
(E) All of the above
518. What is the difference between a pie chart and a bar graph?
(A) Pie charts show trends over time, while bar graphs show geographical data.
(B) Pie charts are used for qualitative data, while bar graphs are used for quantitative data.
(C) Pie charts are more visually appealing than bar graphs.
(D) Pie charts show proportions of a whole, while bar graphs compare different categories by their values.
519. What is the level of measurement used in a research on the relationship between the amount of time students spend on preparing for the exam and the marks they get in it?
(A) Ratio
(B) Interval
(C) Ordinal
(D) Nominal
520. Data analysis can be
(A) Statistical form.
(B) Descriptive form.
(C) Explanatory form.
(D) Descriptive, explanatory and graphical form.
521. Evidence that is directly concerned with what is being discussed is ____
(A) Relevant
(B) Sound
(C) Irrelevant
(D) Sufficient
522. The processing of gathered information should be based on identified objectives.
(A) Gather the data
(B) Analyze the data
(C) Recommend Solutions
(D) Apply the Results
523. When classifying data, which of the following is considered a qualitative characteristic?
(A) Temperature in degrees Celsius
(B) Mass in kilograms
(C) Color of a mineral
(D) Volume in liters
524. Classification on basis of time order is called as
(A) Disclosed classification
(B) Chronological classification
(C) External classification
(D) Internal classification
525. If a measurement process systematically overstates or understates the true value, what type of error is this?
(A) Bias
(B) Random error
(C) Instrumental error
(D) Zero error
526. In a study of plant species, a Venn Diagram is used to show the distribution of species in two different habitats. What does the non-overlapping part of a circle represent?
(A) Species found in both habitats.
(B) Species found in neither habitat.
(C) Species unique to one habitat.
(D) Species that are extinct.
527. What is the purpose of the "Description" step in analyzing data during ethnographic fieldwork?
(A) To compile a detailed, holistic description of the group.
(B) To create a performance-based output like a play or poem.

- (C) To identify patterns or themes that signify how the cultural group works.
(D) To interpret the views of the researcher only.
528. Kiara is working on a project that involves analyzing a large dataset. To analyze the data it is required:
(A) To visualize all data
(B) To print all data
(C) To add all data
(D) None of above
529. Which classification of data scale has equal distances between its values?
(A) Ordinal
(B) Continuous
(C) Interval
(D) Discrete Edit
530. A survey showed 7/15 of a class liked soccer and 2/5 liked baseball. Which sport was liked less?
(A) Baseball
(B) Soccer
(C) Neither
(D) Both because they're equal.
531. In Classification, the derived model may be represented in the form of
(A) Flow Chart
(B) DFD
(C) Decision Tree
(D) ER Model
532. Data from a 5-point Likert scale is:
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
533. In a survey of 100 people about their favorite colors, 40 chose blue, 30 chose red, and 30 chose green. What type of graph would best illustrate this data?
(A) Pie chart
(B) Line graph
(C) Bar graph
(D) Histogram
534. An indication of a data display that shows where the data is at its highest point is a ____?
(A) Cluster
(B) Gap
(C) Peak
(D) Outlier
535. Is the question below an example of a statistical question? "How tall do oak trees usually grow?"
(A) YES
(B) NO
536. Which of the following is most suitable for displaying the temperature in London over a week?
(A) Bar chart
(B) Line graph
(C) Pie chart
(D) Scatter plot
537. What type of response bias is the following? Tendency to express agreement in an extreme fashion, choosing one of the endpoints
(A) Social desirability responding
(B) Moderacy bias
(C) Extremity bias
(D) Acquiescence bias
(E) Reference group effect
538. Which of the following option is used to graphically summarize data and to explore complicated data?
(A) Pivot Chart
(B) Pivot Table
(C) Charts
(D) Maps
(E) Graphs

- 539.** A statistical method by which the collected data is so organized the further analysis and interpretation of data become easy.
- (A) Processing
 - (B) Editing
 - (C) Coding
 - (D) None of above
- 540.** In the results section of a research report, which of the following is most important to include?
- (A) Personal opinions about the data
 - (B) A detailed explanation of the methodology used
 - (C) Statistical analysis of the data
 - (D) Future research suggestions
- 541.** Macey has a spreadsheet containing data about the total number of students participating in different sports in her school. She wants to graphically show the relative popularity of each sport. Which type of chart should she choose?
- (A) Column chart
 - (B) Scatter chart
 - (C) Pie chart
 - (D) Line chart
- 542.** Determine data analysis and findings questions:
- (A) Is the study written appropriately for intended audience(s)?
 - (B) Were the findings represented in narrative discussions or in visuals?
 - (C) Was the overall account consistent with one of the many forms for presenting qualitative research?
 - (D) Has the author chosen a specific purposeful sampling strategy for individuals or sites?
- 543.** Shows data using small dots within areas.
- (A) Cartogram
 - (B) Choropleth map
 - (C) Topographic map
 - (D) Dot density map
- 544.** A poll was conducted in which 1000 adults were asked if they prefer bottled water or tap water, and 57% of them said they prefer bottled water. In this scenario, the 57% is a ____
- (A) Population
 - (B) Sample
 - (C) Parameter
 - (D) Statistic
- 545.** Analyzing the results of your experiment can be:
- (A) Obtaining data from your experiment
 - (B) Organizing data into graphs and tables
 - (C) Doing calculations to learn more about your results
 - (D) Both (b) and (c)
- 546.** Reducing data to a manageable size, developing summaries, and applying statistical techniques are all aspects of ____
- (A) Sampling
 - (B) Data collection
 - (C) Data Analysis
 - (D) Pilot Testing
- 547.** Which level of measurement would involve participants being assigned labels to put them into categories?
- (A) Nominal data
 - (B) Ordinal data
 - (C) Interval data
 - (D) None of above
- 548.** Which type of graph is used to show trends over time?
- (A) Scatter plot
 - (B) Pie chart
 - (C) Line graph
 - (D) Bar graph
- 549.** What does the 'Results' section of a research article focus on?
- (A) Interpreting and analysing the data
 - (B) Presenting and summarising the data without interpretation
 - (C) Discussing the limitations of the study
 - (D) Reviewing the literature again

550. Number of teeth lost
- (A) Categorical
 - (B) Numerical
 - (C) Data that changes over time
 - (D) None of above
551. Statistical analysis improves research by:
- (A) Increasing accuracy of results
 - (B) Reducing time
 - (C) Avoiding sampling
 - (D) Skipping conclusions
552. What choice would you not identify by using a line graph?
- (A) Trends
 - (B) Conclusions
 - (C) Make predictions
 - (D) Recognize anomalous data
553. Small, medium and large measures to give the size of an object are ____
- (A) Nominal Scale
 - (B) Reason Scale
 - (C) Interval Scale
 - (D) Ordinal Scale
554. The measure of closeness of the estimates to each other
- (A) Accuracy
 - (B) Point Estimate
 - (C) Precision
 - (D) Interval Estimate
555. This chart represents the sum of more than one value and compares the contribution of individuals to the whole.
- (A) Pie
 - (B) Line
 - (C) Stacked Bar
 - (D) Column
556. A graph shows the number of books read by students over 4 weeks. If the points (1, 5), (2, 10), and (3, 15) represent the number of books read, what is the pattern in the data?
- (A) The pattern is quadratic, with an increase of 10 books each week.
 - (B) The pattern is linear, with an increase of 5 books each week.
 - (C) The pattern is exponential, with a doubling of books read each week.
 - (D) The pattern is constant, with no change in the number of books read each week.
557. The process of reducing large mass of data in to homogenous groups for meaningful analysis.
- (A) Classification
 - (B) Processing
 - (C) Editing
 - (D) None of above
558. Which of the following is NOT typically found in the results section?
- (A) A discussion of the study's implications
 - (B) Tables and graphs to present the data
 - (C) Statistical analysis of the data
 - (D) Summary of findings
559. What is usually used in applied research as a data analysis?
- (A) Data analysis in applied research is more varied, usually including a mix of qualitative and quantitative methods
 - (B) Data analysis in applied research is not varied, usually including fixed qualitative and quantitative methods
 - (C) Data analysis in applied research is sometimes varied, it doesn't include a mix of qualitative and quantitative methods
 - (D) None of above
560. Before you show your results on a chart, you should ____
- (A) Analyze them
 - (B) Remove them
 - (C) Share them online
 - (D) None of above

- 561.** Data with a relatively low standard deviation can best be described as having more ____
(A) Validity
(B) Consistency
(C) Generalizability
(D) Errors
- 562.** Which tool is used to analyse large unstructured data sets, such as e-mail, memos, and survey responses to discover patterns and relationships?
(A) OLAP
(B) In-memory computing
(C) Clustering
(D) Text mining
- 563.** Which part of a research plan presents how data gathered from the whole research are to be analyzed?
(A) Data Analysis
(B) Rationale
(C) Bibliography
(D) Methodology
- 564.** What is the main purpose of a line graph?
(A) To compare quantities between different categories
(B) To show trends or changes over time
(C) To display proportions of a whole
(D) To show the distribution of data
- 565.** Classification of data based on geographical differences is called
(A) Qualitative classification
(B) Quantification classification
(C) Chronological classification
(D) Spatial classification
- 566.** Which source would most likely provide bias-free information on Germany's role in World War II?
(A) A World War II veteran
(B) A student Web site on the war
(C) A German propaganda film
(D) A statistical report on the war
- 567.** Choose the correct statement:
(A) The results of qualitative data analysis are presented in the form of mathematical models
(B) Data collected from surveys through questionnaires is qualitative data
(C) Secondary data can be raw data collected by the researcher from the first source.
(D) Checking raw data (the responses in all survey forms) is an important step before entering data to perform subsequent analysis steps.
- 568.** It is used to reveal the data through tables containing number of rows and columns depending on the categories of the data to be presented
(A) Tabular presentation
(B) Graphic presentation
(C) Textual presentation
(D) All of the above
- 569.** In statistical data, what is the primary function of the system in relation to data?
(A) Generating large datasets
(B) Analyzing data to extract insights
(C) Converting data into images
(D) Distributing data across networks
- 570.** Which of the following is direct application of frequent itemset mining?
(A) Social Network Analysis
(B) Market Basket Analysis
(C) Outlier Detection
(D) Intrusion Detection
- 571.** A type of graph with the use of image or pictures.
(A) Picture Graph
(B) Bar Graph
(C) Line Bar
(D) Pie Graph

572. What kind of data analysis do we use in photovoice?
(A) Phenomenal Molecule
(B) Interpretive Phenomenological Approach
(C) Grounded theory
(D) Thematic analysis
573. Graph A is called what?
(A) Histogram
(B) Line graph
(C) Line plot
(D) Bar graph
574. While single Likert Scale responses should be treated as ____, multiple Likert Scale responses combined could be treated as ____
(A) Ordinal Scales; Interval Scales
(B) Interval Scales; Ordinal Scales
(C) Nominal Scales; Ratio Scales
(D) Ratio Scales; Nominal Scales
575. What is essential for drawing valid conclusions from experimental data?
(A) Random assignment
(B) Measurement and data analysis
(C) Controlled conditions
(D) Manipulation of variables
576. Chart that shows a trend in data over a period of time
(A) Line chart
(B) Column chart
(C) XY Scatter chart
(D) Bar chart
577. A car salesman records information about the cars he is selling. The colour of each car is ____ data
(A) Qualitative
(B) Continuous
(C) Discrete
(D) None of above
578. Which will be the most appropriate method of statistical analysis if a researcher wants to know how much contribution a JRF-test makes to the over-all success of the candidates?
(A) F-test.
(B) Product-movement correlation.
(C) Linear regression method.
(D) T-test.
579. In TNHS, 200 students are randomly selected to determine if they like coffee, tea or both. 140 like tea, 120 like coffee and 80 like both tea and coffee. How many students like tea only?
(A) 20
(B) 40
(C) 60
(D) 80
580. Whether tabulation makes the data simple or complex?
(A) Simple
(B) Complex
581. Arranging data into a table is called
(A) Interpretation.
(B) Tabulation.
(C) Analysis.
(D) Frequency.
582. SPSS is a:
(A) Report writing tool
(B) Statistical software package
(C) Sampling method
(D) Measurement scale
583. Which chart uses bars to compare amounts in different categories?
(A) Bar Chart
(B) Line Graph
(C) Box and Whisker Plot
(D) Pie Chart

584. What test we can use to find the difference between two groups of scores from an independent-measures design?
- (A) Friedman
 - (B) Kruskal-Wallis
 - (C) Mann-Whitney
 - (D) Wilcoxon
585. Extension Q: A survey of 50 students in the high school revealed that 15 are interested in joining the soccer team. If the high school has 300 students total, use the survey results to predict how many would be interested in joining the soccer team.
- (A) 90
 - (B) 21
 - (C) 150
 - (D) 255
586. In a scientific experiment, which of the following is a crucial step in classifying data?
- (A) Ignoring outliers
 - (B) Grouping data based on similarities
 - (C) Randomly selecting data points
 - (D) Focusing only on numerical data
587. When creating a bar graph, why is it important to label the vertical axis with an appropriate scale?
- (A) It makes the graph look more colorful
 - (B) It helps in accurately representing the data values
 - (C) It is required by graphing software
 - (D) It ensures the bars are all the same height
588. What do researchers use to quickly determine what raw data mean?
- (A) Research Report
 - (B) Data Analysis Software
 - (C) Internal Data Source
 - (D) External Data Source
589. The class mostly has brown eyes. Select which type of data is being collected.
- (A) Numeric
 - (B) Continuous
 - (C) Discrete
 - (D) Categorical
590. Which type of graph has a box between lower and upper quartiles?
- (A) Histogram
 - (B) Scatter plot
 - (C) Box and whiskers plot
 - (D) None of above
591. You want to make a graph for an experiment you did about plant growth over a two week period of time. What type of graph would you use?
- (A) Bar graph
 - (B) Line graph
 - (C) Pictograph
 - (D) Pie chart
592. Which of the following is an example of categorical data?
- (A) Weight
 - (B) Color
 - (C) Height
 - (D) Temperature
593. It involves describing the data using statistical methods and procedures.
- (A) Analysis
 - (B) Interpretation
 - (C) Collection
 - (D) Organization
594. The vertical axis of a frequency polygon comes from this column:
- (A) Class width
 - (B) Frequency
 - (C) Class midpoint
 - (D) Class boundaries
595. A histogram shows the scores on a math test. If the 70-79 range has the tallest bar, what does this indicate?
- (A) Most students scored between 70 and 79.

- (B) The test was out of 70-79 points.
(C) One student scored between 70 and 79.
(D) The average score was between 70 and 79.
- 596.** Exploratory factor analysis (EFA) aids in:
(A) Testing hypotheses
(B) Establishing construct validity and item reduction
(C) Sampling
(D) Defining hypotheses
- 597.** It is the science of collection, organization, analysis, interpretation, and presentation of data
(A) Data
(B) Statistics
(C) Qualitative
(D) Quantitative
- 598.** Recording, editing, coding are the part of —
(A) Data Collection
(B) Sampling
(C) Data Analysis
(D) None of the above
- 599.** A graph to show how tall you grew each year
(A) Pie Chart
(B) Bar Graph
(C) Line Graph
(D) None of above
- 600.** Which stages of data analysis identifies what information is needed?
(A) Identify the need
(B) Define scope
(C) Identify potential sources
(D) Source and select information
- 601.** Statistics on data are calculated in which step?
(A) Data acquisition
(B) Data exploration
(C) Both of these
(D) None of these
- 602.** We can measure the cause and effect relationship by
(A) Time series analysis
(B) Correlation analysis
(C) Regression analysis
(D) Cross-sectional analysis
- 603.** My cat is twelve years old.
(A) Qualitative data
(B) Quantitative data
- 604.** Determine whether the data is qualitative or quantitative: Student ID numbers
(A) Qualitative
(B) Quantitative
- 605.** Which of the following charts is used to compare a single category of values as parts of a whole?
(A) Pie
(B) Scatter
(C) Column
(D) Bar
- 606.** Processing and displaying data does not depend on
(A) Ethical consideration
(B) The way you want to communicate the findings
(C) The type of information
(D) Computer skills
- 607.** How can you analyze a bar chart to identify trends or patterns?
(A) By counting the number of bars
(B) By analyzing the color of the bars
(C) By examining the height or length of the bars, looking for outliers, observing the overall direction, identifying patterns, and comparing bars across categories or time periods.
(D) By measuring the width of the bars

- 608.** What proportion of students in the sample are Seniors?
(A) 28/125
(B) 12/50
(C) 16/75
(D) 12/28
(E) 12/125
- 609.** In a histogram, what does a gap between bars suggest?
(A) There are no data points in that range
(B) The data is continuous
(C) The data is normally distributed
(D) The data is skewed
- 610.** Which statistical technique provides insights into the degree of association between variables?
(A) Descriptive Statistics
(B) Correlation analysis
(C) Frequency distribution
(D) Case study
- 611.** What type of graph is best used to represent parts of a whole?
(A) Line
(B) Circle
(C) Bar
(D) Pictograph
- 612.** Dana counts the number of flowers that grow around the pond in her backyard every spring. She compares those numbers to the amount of rain that has fallen. She makes the following table:
(A) 2016 had the most pansies and the least rainfall.
(B) 2017 had the most crocuses and the most rainfall.
(C) 2018 had the least daisies and the least rainfall.
(D) 2016 had the most daisies and the most rainfall.
- 613.** To examine an idea or object by breaking it into smaller parts.
(A) Antonym
(B) Analyze
(C) Media literacy
(D) Microscope
- 614.** The ability to make a measurement that is as close to the actual measurement as possible:
(A) Accuracy
(B) Precision
(C) Analysis
(D) Prediction
- 615.** Data analysis is done:
(A) Before hypothesis formulation
(B) After data collection
(C) Before problem identification
(D) After report writing
- 616.** It deals with the question of how many subjects are to be observed and how the observations are to be analyzed
(A) The sampling design:
(B) The observational design:
(C) The statistical design:
(D) The operational design:
- 617.** If you are conducting a Quantitative Research, what will most likely appear in your discussion are ___ containing data in the form of numbers and statistics.
(A) Chairs
(B) Tables
(C) Surveys
(D) Graphs
- 618.** Good interviewers seek to engage interviewees in intensive conversations. They probe for knowledge and ideas, but they also allow interviewees to explore and develop ideas. A good interview, like a good essay, goes beyond basic knowledge; it provides ___
(A) Insight
(B) Resource

- (C) Websites
(D) Interviewing
(E) Works cited
- 619.** What term describes the consistency and stability of a measurement or test?
(A) Achievement
(B) Relevance
(C) Effort
(D) Reliability
- 620.** Which type of graph best compares groups of discrete data?
(A) Line graph
(B) Bar graph
(C) Climatogram
(D) Pie graph
- 621.** Which chart would you use if you had two categories and you wanted to show distribution (how they add up to 100%) of those two categories? Example: % of people who bought whole milk and % of people who bought skim milk in December.
(A) Bar
(B) Line
(C) Column
(D) Pie
- 622.** Which step of the scientific method provides graphs and charts to process the information (numbers, etc.) we've gathered?
(A) Experiment
(B) Analysis
(C) Conclusion
(D) None of these
- 623.** Searching for similarities and differences by making systematic comparisons across units of data
(A) Similarities & differences
(B) Linguistic connectors
(C) Missing data
(D) Theory related material
- 624.** How do you label the axes on a bar graph?
(A) Use colors to represent values
(B) Label both axes with categories
(C) Label the x-axis with categories and the y-axis with values.
(D) Leave the axes unlabeled
- 625.** A periodic review and assessment of the accuracy, completeness, and reliability of data
(A) Data Integrity Audit
(B) Redundant
(C) Compatible
(D) Mismanagement
(E) Discrepancy
- 626.** When presenting data from a survey which show change over time, the best method to present would be a ____
(A) Table.
(B) Line graph.
(C) Bar chart,
(D) Pie chart.
- 627.** What data analysis should be used by the researcher if it is not clear what to expect from the data?
(A) Exploratory Data Analysis
(B) Interval Analysis
(C) Descriptive Data Analysis
(D) Inferential Data Analysis
- 628.** To display data showing your heights over the first ten years of your life, use a ____
(A) Circle Graph
(B) Bar Graph
(C) Line Graph
(D) None of above
- 629.** Analyzing a table of delivery times can help identify:
(A) Font styles
(B) Patterns in performance or delays
(C) Employee names
(D) GPS coordinates

- 630.** Identify Me! This section presents the reader with the researcher's data and results of statistical analysis described in the method section. Thus, this section must align closely with the methods section and the research problems or objectives of the study.
- (A) Review of Related Literature
 - (B) Abstract
 - (C) Methodology
 - (D) Results and Discussion
- 631.** What is the primary purpose of data classification in statistics?
- (A) To create visual representations of data
 - (B) To sort data into categories based on shared characteristics
 - (C) To collect data from multiple sources
 - (D) To eliminate irrelevant data from the dataset
- 632.** Which is best to show intensity of rainfall?
- (A) Qualitative scale
 - (B) Sequential scale
 - (C) Diverging scale
 - (D) Binary scale
- 633.** Which is the analysis that would involve comparing the data obtained through the Likert scale on two stores in terms of the average respondent ratings for each item, such as quality of merchandise, in-store service, and brand mix?
- (A) Contrastive analysis
 - (B) Profile analysis
 - (C) Parallel analysis
 - (D) Analogous analysis
- 634.** I need to track the change in the temperature of Mumbai over the past 50 years. Which type of graph should I choose?
- (A) Picture Graph
 - (B) Pie Chart
 - (C) Line Chart
 - (D) None of above
- 635.** Determine the type of data: the number of red cars in the parking lot
- (A) Qualitative Data
 - (B) Discrete Data
 - (C) Continuous Data
 - (D) None of above
- 636.** What is the purpose of data presentation in quantitative research?
- (A) To make the data more complicated and difficult to interpret
 - (B) To visually represent the findings and make it easier for others to understand and interpret the data.
 - (C) To hide the actual findings from others
 - (D) To confuse the audience with unnecessary visuals
- 637.** What is the importance of data analysis in scientific research?
- (A) To interpret the results of an experiment
 - (B) To design the experiment
 - (C) To formulate a hypothesis
 - (D) To conduct the experiment
- 638.** A pictorial representation of data in the form of a circular chart is ____
- (A) Pictograph
 - (B) Sector chart
 - (C) Histogram
 - (D) Pie chart
- 639.** The 'Reliability Analysis' feature in PSPP helps to measure:
- (A) Consistency of a scale
 - (B) Data normality
 - (C) Causal relationships
 - (D) Correlation
- 640.** In critically analyzing literature related to a social issue, what should a student primarily focus on?
- (A) The popularity of the authors
 - (B) The relevance and credibility of the sources
 - (C) The length of the articles reviewed
 - (D) The visual presentation of the research

- 641.** Numerical Data has two main categories, what are they?
(A) Discrete and Continuous
(B) Categorical and Continuous
(C) Discrete and Categorical
(D) None of above
- 642.** Claim, evidence, or reasoning? Last week, there were 2 leaves on our plant, and 6 leaves today.
(A) Claim
(B) Evidence
(C) Reasoning
(D) None of the above
- 643.** The mass of data collected needs to be systematized and organized through
(A) Editing.
(B) Classifying.
(C) Tabulating.
(D) All of the above.
- 644.** Which technique analyzes correlations among many variables to identify closely related clusters?
(A) Standard deviation
(B) Central tendency
(C) Factor analysis
(D) Thematic apperception
- 645.** Qualitative or quantitative data that can be arranged in order or rank
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 646.** How does outlier detection contribute to the accuracy of quantitative data analysis?
(A) It increases the sample size
(B) It ensures that extreme values do not distort the results
(C) It minimizes the need for further data collection
(D) It eliminates the need for statistical tests
- 647.** Which type of scaling indicates ordering
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 648.** A bar style data display showing frequency of data values in intervals of the same size
(A) Box plot
(B) Slope-intercept form
(C) Pie chart
(D) Histogram
- 649.** Which statistical procedure should be used in order to answer this research problem: "Is there a significant difference in the achievement test performance across the six Colleges?"
(A) Frequency and Percentage
(B) ANOVA
(C) Paired Samples T-test
(D) Independent Samples T-test
- 650.** What kind of data is required for constructing a histogram?
(A) Continuous data
(B) Categorical data
(C) Ordinal data
(D) Boolean data
- 651.** SUM, AVERAGE, MAX and VLOOKUP are examples of what?
(A) Functions
(B) Tables
(C) Formulae
(D) Statistical tools
- 652.** The amount of rain, in cm, that falls in a storm.
(A) Discrete data
(B) Continuous data
- 653.** The number of computers in a library.
(A) Discrete data
(B) Continuous data

654. What type of data? Temperature preference-High, medium, or low?
(A) Ordinal
(B) Nominal
(B) Data Analytics
(C) Data analysis
(D) Datasets
655. What graph is needed to show the amount of rainfall over a 12 month period?
(A) Bar graph
(B) Line graph
(C) Scatterplot
(D) Pie chart
656. A scatter plot shows the relationship between age and height of children. If older children are generally higher on the y-axis, what does this imply?
(A) Older children are usually shorter.
(B) Height decreases with age.
(C) Older children are usually taller.
(D) Age and height are not related.
657. A researcher does a study of students' phenomenological feelings about problem solving. One of her categories of codes involves positive affect. Two subcategories of that category of positive affect are smiles when solves the problem, and shouts hooray when finished. The relation between these subcategories and the overall category of positive affect is
(A) Sequence.
(B) Spatial.
(C) Strict inclusion.
(D) Function.
658. The Split-Half Method is a technique used to estimate which general type of reliability?
(A) Parallel Forms
(B) Test-retest
(C) Inter-rater
(D) Internal Consistency
659. ____ is the process of examining data to find facts, relationships, patterns, insights and/or trends.
(A) Data Intelligence
660. Gwyneth has completed data acquisition and notices that the data collected from one API is inconsistent with the data from another source. What should she do next?
(A) Ignore the inconsistencies and proceed
(B) Conduct a thorough investigation and resolve inconsistencies in the data
(C) Select the data that looks more accurate
(D) Remove the data from both sources
661. Women are 3 times as likely as men to have rheumatoid arthritis. A survey conducted in acity of 4, 000, 000 people revealed about 40, 000 cases of rheumatoid arthritis.Approximately how many of these 40, 000 could be expected to be WOMEN?
(A) 39000
(B) 30000
(C) 20000
(D) 10000
(E) 3000
662. What is the level of measurement used in a research on the causes of deaths in a country?
(A) Nominal
(B) Ratio
(C) Ordinal
(D) Interval
663. Characteristic of interest in a sample
(A) Parameter
(B) Category
(C) Statistic
(D) Nominee
664. The ratings of a movie ranging from "poor" to "good" to "excellent"
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio

665. When is it better to use tables instead of graphs?
- (A) When you want to show patterns in data
 - (B) When you want to highlight changes over time
 - (C) When you want to compare quantitative data
 - (D) All answers are correct
666. Using the frequency table you created, what is the most popular fruit among the students?
- (A) Apples
 - (B) Oranges
 - (C) Grapes
 - (D) Bananas
667. Which measurement scale would be best to use for a rank ordering? (Price, L. R. (2017) Chapter 2 & Appendix)
- (A) Ordinal
 - (B) Nominal
 - (C) Ratio
 - (D) Interval
668. What is the purpose of Microsoft Excel?
- (A) Word processing
 - (B) Data analysis and visualization
 - (C) Presentation design
 - (D) Email management
669. Gender of a respondent is male, female is an example of ____ scale
- (A) Ratio
 - (B) Nominal
 - (C) Ordinal
 - (D) Interval
670. In a data display, a grouping of data that is close together is a ____?
- (A) Cluster
 - (B) Median
 - (C) Peak
 - (D) Gap
671. Refers to the use of multiple forms of data to capture a single phenomenon. These data provide the opportunity for cross-checking or researcher interpretations.
- (A) Data triangulation
 - (B) Investigator triangulation
 - (C) Methods triangulation
 - (D) Theory triangulation
672. What's the main benefit of using scales instead of only open-ended questions?
- (A) They are easier to analyze
 - (B) They confuse respondents
 - (C) They reduce accuracy
 - (D) They replace objectives
673. SPSS is software used for:
- (A) Data collection
 - (B) Statistical analysis
 - (C) Report writing
 - (D) Planning
674. Which of the following refers to the final stage of data analysis?
- (A) Design flexibility.
 - (B) Bracketing.
 - (C) Ethnography.
 - (D) Selective Coding.
675. Which chart should be used for showing how the parts of something relate to the whole.
- (A) Bar Graph
 - (B) Circle Graph
 - (C) Line Graph
 - (D) None of above
676. A bar graph compares information ____
- (A) From Mars and the moon.
 - (B) Information in the zoo.
 - (C) Information about different groups.
 - (D) In different colors.
677. When creating a chart to compare the test scores of students on the midterm and the end

- of term exams., which data will appear on the y-axis?
- (A) Midterm
 - (B) Students
 - (C) Terms
 - (D) Test Scores
- 678.** Chart for displaying multiple variables.
- (A) Crosstabulation
 - (B) Line Chart
 - (C) Scatter Chart Matrix
 - (D) Column Chart
- 679.** An estimate of reliability obtained by correlating pairs of scores from the same people on two different administration of the same test.
- (A) Test-retest reliability estimate
 - (B) Parallel form/alternative from reliability estimate
 - (C) Split-Half reliability estimate
 - (D) Internal consistency
- 680.** It indicates that the elements are different, but the difference is not according to order or magnitude.
- (A) Nominal Scale
 - (B) Ordinal Scale
 - (C) Interval Scale
 - (D) Ratio Scale
- 681.** Which test would you use to see if shoe brand preferences changed between last year and this year? 1000 people were observed this year and last year to see what brand of shoe they were wearing.
- (A) Chi-square Goodness of Fit Test
 - (B) Chi-Square Test for Homogeneity
 - (C) Chi-Square Test for Independence/Association
 - (D) Not a Chi-square test
- 682.** Which of the following is NOT a step in data analysis?
- (A) Data collection
 - (B) Data cleaning
 - (C) Data interpretation
 - (D) Data imagination
- 683.** What follows after data collection in the scientific method?
- (A) Making a new guess
 - (B) Ignoring results
 - (C) Analyzing the data
 - (D) Drawing pictures
- 684.** What communication approach emphasizes data, facts, and detailed analysis?
- (A) Driver
 - (B) Passive
 - (C) Diplomatic
 - (D) Analytical
- 685.** What is the purpose of member checking in the process of analyzing qualitative data?
- (A) Ensuring statistical significance
 - (B) Validating findings with participants
 - (C) Conducting additional interviews
 - (D) Randomizing the data
- 686.** Used to show a relationship between co-variables.
- (A) Bar Chart
 - (B) Histogram
 - (C) Scatter Graph
 - (D) None of above
- 687.** What type of data does a histogram display?
- (A) Quantitative
 - (B) Categorical
- 688.** What is the purpose of conducting a power analysis in statistical research?
- (A) To determine the sample size needed to detect a certain effect size with a given level of confidence
 - (B) To calculate the mean and standard deviation of a dataset
 - (C) To identify outliers in the data
 - (D) To assess the normality of the data distribution

689. Students tell how many years they have attended school.
- (A) Change over time
 - (B) Numerical
 - (C) Categorical
 - (D) None of above
690. If an experimenter adds 100 random people to their study group every day for a week, what is MOST likely to happen to the sample group?
- (A) The mean age will trend higher
 - (B) The age range will decrease
 - (C) The mean age will trend lower
 - (D) The standard deviation will increase
691. What is the process of analyzing and interpreting numerical data-even in large amounts called?
- (A) Statistics
 - (B) Demographic Information
 - (C) Central Tendencies
 - (D) Mathematics
692. How can you use a histogram to compare two datasets?
- (A) You can overlay two histograms on the same graph or place them side by side to visually compare the distributions, shapes, and frequencies of the two datasets.
 - (B) You can only use one histogram to represent both datasets separately.
 - (C) You can use a pie chart instead of a histogram for better comparison.
 - (D) You can only compare the means of the two datasets using a histogram.
693. A car salesman records information about the cars he is selling. The mass of each car is ___ data
- (A) Qualitative
 - (B) Continuous
 - (C) Discrete
 - (D) None of above
694. Data collected from experiments can be represented using tables, graphs, or charts.
- (A) TRUE
 - (B) FALSE
695. What type of information could be shown on the x-axis
- (A) Name of the chart
 - (B) Statistics
 - (C) Category
 - (D) Trend
696. Is there any relationship between pregnant women smoking and the birth weight of a newborn.
- | | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
|-------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|----|
| no of smoki | 12 | 15 | 33 | 27 | 20 | 17 | 19 | 46 | 30 | 25 | 39 | 25 | 30 | 21 | 29 |
| weight | 3.7 | 4.1 | 2.9 | 3.9 | 4.3 | 5.4 | 3.8 | 4.3 | 2.1 | 2.4 | 3.9 | 4.0 | 2.1 | 4.8 | |
- if we want to find y = the relationship between number of smoking and newborn body weight, which statistics would be used?
- (A) Pair t-test
 - (B) Independent t-test
 - (C) Pearson correlation
 - (D) Non of correct answers
697. The most common scales used in research are
- (A) Ratio
 - (B) Ordinal
 - (C) Nominal
 - (D) All of the above
698. It involves the interpretation of data gathered through the use of analytical and logical reasoning to determine patterns, relationships, or trends.
- (A) Data abstract
 - (B) Data analysis
 - (C) Data collection
 - (D) Data gathering
699. What is emphasized in Step 3 regarding data?
- (A) Collection of raw data
 - (B) Integration of data

- (C) Cleaning and refining data
 - (D) Visualizing data in Excel
- 700.** Data collection is usually followed by:
- (A) Report writing
 - (B) Data analysis and interpretation
 - (C) Framing a hypothesis
 - (D) Sampling design
- 701.** In the context of qualitative data analysis, what does the term “coding” refer to?
- (A) Assigning numerical values to data
 - (B) Sorting and labeling data into categories
 - (C) Conducting statistical tests on the data
 - (D) Selecting participants for the study
- 702.** A series of horizontal and vertical bars that are each divided into two or more parts. Each bar represents the contributions of one data group to the whole.
- (A) Column chart
 - (B) Stacked bar chart
 - (C) Line chart
 - (D) None of above
- 703.** Research Step #3: Analyzing means ____
- (A) Collecting information
 - (B) Showing how information connects
 - (C) Creating a format to show research
 - (D) Putting information in order (like an outline)
- 704.** What is cumulative frequency in relation to histograms?
- (A) Cumulative frequency is the total number of data points in a dataset.
 - (B) Cumulative frequency is the running total of frequencies up to each bin, showing how many data points fall below a certain value.
 - (C) Cumulative frequency is the average of all frequencies in a histogram.
 - (D) Cumulative frequency is the difference between the highest and lowest frequencies in a histogram.
- 705.** The graph shows the results of a survey in which students were asked to name their favorite season. How many students were surveyed in all?
- (A) 26
 - (B) 27
 - (C) 16
 - (D) 18
- 706.** Grace, Zoe, and Henry are working on a project where they need to compare the sales data of different products over the same time period. Which type of line chart would be best for this purpose?
- (A) Simple line chart
 - (B) Multi-line chart
 - (C) Stacked line chart
 - (D) Area line chart
- 707.** After completing an experiment, what is the next logical step?
- (A) Change the hypothesis to fit the results
 - (B) Analyze and interpret the collected data
 - (C) Repeat the experiment without looking at results
 - (D) Stop researching
- 708.** You conducted a short survey on campus about students’ career goals. What should your group do next before including the results in your discussion?
- (A) Use all responses without filtering
 - (B) Count only your friends’ answers
 - (C) Summarize the data and highlight key patterns or trends
 - (D) Ignore the data if it’s not interesting
- 709.** How can you evaluate the supporting evidence in a writer’s argument?
- (A) Evaluate the supporting evidence by asking the writer’s opinion
 - (B) Evaluate the supporting evidence by only focusing on emotional appeals
 - (C) Evaluate the supporting evidence by looking for relevant facts, statistics, expert opinions, and logical reasoning.

- (D) Evaluate the supporting evidence by ignoring any statistics or facts presented
710. A chart is created comparing employee absences for the Shoe Department over a period of six months. Which data will appear on the x-axis?
- (A) Absences
(B) Employee name
(C) Months
(D) Salaries
711. What information do you need to create a bar chart from ungrouped data?
- (A) Categories and their corresponding values.
(B) The average value of the data set.
(C) Only the total number of data points.
(D) A pie chart representation.
712. Data ____ occurs when the same attribute in related data files has different values?
- (A) Duplication
(B) Redundancy
(C) Inconsistency
(D) Discrepancy
713. What is the “Constant Comparative Method” used for in qualitative research?
- (A) Descriptive statistics
(B) Continuous data comparison and analysis
(C) Sampling technique
(D) None of above
714. Data → ____ → Information
- (A) Processing
(B) Developing
(C) Testing
(D) Implementing
715. In a series, the number of times an item occurs is known as:
- (A) Number
(B) Frequency
(C) Class Frequency
(D) Cumulative frequency
716. Which chart should be used to compare trends like comparing sales of 3 different departments over a period of time?
- (A) Column Chart
(B) Stacked Bar Chart
(C) Line Chart
(D) None of above
717. Is this Discrete or Continuous? The time it takes to have a medical physical exam.
- (A) Discrete
(B) Continuous
718. What kind of picture shows data-like what kind of pets kids have, or what kind of ice cream kids like?
- (A) Chart or graph
(B) Map
(C) Timeline
(D) None of above
719. Which of the following is NOT a common data visualization technique?
- (A) Scatter plot
(B) Histogram
(C) Pie chart
(D) Loop diagram
720. When Dr. Fauci engages in ____ of COVID-19, he is reviewing the results of many research studies at once.
- (A) Informed consent.
(B) Random sampling.
(C) Sampling bias.
(D) Meta-analysis.
721. What is the role of software in quantitative data analysis?
- (A) To collect data
(B) To simplify data reporting
(C) To perform complex calculations and analyses
(D) To develop research instruments

722. Students are asked to name their favorite type of juice to drink.
(A) Categorical Data
(B) Numerical Data
(C) Change Over Time
(D) None of above
723. The number of cars parked at Mentone station is an example of ____
(A) Nominal data
(B) Continuous data
(C) Discrete data
(D) Ordinal data
724. What helps organize data?
(A) Table
(B) Graph
(C) Bar
(D) Line
725. For which of the following would you use a histogram to represent the data.
(A) Weight ranges of competitors in a boxing tournament
(B) Fruits sold by different vendors
(C) Favourite colours of students in a class
(D) Sports preferred by different students of a class
726. An important issue in index construction is to ____ items.
(A) Weight.
(B) Measure.
(C) Codify.
(D) Reconstruct.
727. The data based on different states of India is an example of ____ classification
(A) Geographical classification
(B) Chronological classification
(C) Quantitative classification
(D) Qualitative classification
728. This is the proportion or probability that candidates, or students, will answer a test item correctly. Generally, more difficult items have a lower percentage.
(A) Item Analysis
(B) Discrimination Index
(C) Difficulty Index
(D) Effectiveness of Distractors
729. Qualitative data categorized using names, labels or qualities
(A) Nominal
(B) Ordinal
(C) Ratio
(D) Interval
730. The number of cars in the parking lot.
(A) Discrete data
(B) Continuous data
731. Of the following, what type of statistical approach is useful for establishing construct validity? (Price, L. R. (2017) Chapter 4)
(A) Logistic regression
(B) ANOVA
(C) Multitrait-multimethod
(D) Cross Validation
732. Which of the following sections would likely contain the decision to reject or fail to reject the null hypothesis?
(A) Chapter 1:Introduction
(B) Chapter 2:Review of Related Literature
(C) Chapter 3:Design of the Study
(D) Chapter 4:Data Analysis and Interpretation
(E) Chapter 5:Summary and Conclusion
733. Joe is losing an average of .5 pounds a week. Is this continuous or discrete data?
(A) Discrete
(B) Continuous
734. Inter-rater reliability: The extent to which two researchers interpreting qualitative responses in a questionnaire (or interview) will

- produce the ____ records from the same raw data.
- (A) Different
 - (B) Qualitative
 - (C) Multiple
 - (D) Same
735. Which revision would most improve the scientific quality of a paper?
- (A) Adding decorations
 - (B) Clarifying procedures and data analysis
 - (C) Removing graphs
 - (D) Shortening the discussion
736. In survey research, a confidence level of 95% means:
- (A) Results fall within the margin 95% of times
 - (B) The sample equals 95% of the population
 - (C) Errors will be eliminated in 95% of cases
 - (D) Ninety-five participants must be surveyed
737. Identify if the data point listed below is an example of qualitative data or quantitative data: 97% test score
- (A) Qualitative data
 - (B) Quantitative data
738. Which type of validity is determined by comparing a measure with another process or method that is already established as valid?
- (A) Criterion-Related Validity
 - (B) Content Validity
 - (C) Construct Validity
 - (D) Face Validity
 - (E) No correct answer
739. Experimental process for results
- (A) What did I find out?
 - (B) How did I solve the problem?
 - (C) Who helped me out?
 - (D) Whose work did I refer to?
 - (E) What does it mean?
740. Write T if the statement is true, and F if it is false. Data analysis is the process of gathering information.
- (A) True
 - (B) False
741. I want to compare the average heights of different plants (corn, beans, tomatoes, watermelon, asparagus) in July. What type of graph will I use to show this information?
- (A) Bar graph
 - (B) Line graph
 - (C) Circle/pie graph
 - (D) None of above
742. A student took a survey to find out how many members of the class were born in each month. The table below shows the results. Which is the BEST way to display the data?
- (A) Line graph
 - (B) Bar graph
 - (C) Histogram
 - (D) Pie graph
743. Which of the following is not an approach of analysis of qualitative data?
- (A) Criterion Analysis.
 - (B) Logical Analysis.
 - (C) Content Analysis.
 - (D) Inductive Analysis.
744. In data analysis of the grounded theory approach, the step which focuses on the main idea, developing the story line, and finalizing the theory is called ____
- (A) Theoretical saturation.
 - (B) Axial coding.
 - (C) Selective coding.
 - (D) Open coding.
745. What is the recording of reflective notes about what you are learning from your data during data analysis called?
- (A) Coding
 - (B) Segmenting

- (C) Memoing
(D) Reflecting
746. Which shows parts of a whole?
(A) Pie Chart
(B) Bar Graph
(C) Line Graph
(D) None of above
747. When analyzing data from an experiment, which graph is best for identifying trends over time?
(A) Pie chart
(B) Line graph
(C) Bar graph
(D) Scatter plot
748. The process of compiling, analyzing, and interpreting the results of primary and secondary data collections
(A) Defining the problem
(B) Obtaining data
(C) Data analysis
(D) Recommending solutions
749. A graphed cluster of dots that represent the value of 2 variables is called what?
(A) Correlation
(B) Random shaping
(C) Sampling bias
(D) Scatter plot
750. The pattern of variation in data is called the
(A) Distribution
(B) Arithmetic mean
(C) Standard deviation
(D) Correlation
751. What type of data is the number of animals in a zoo?
(A) Continuous Data
(B) Nominal Data
(C) Discrete Data
(D) Ordinal Data
752. Data crunchers often use which type of graph to display the distribution of a dataset?
(A) Bar graph
(B) Pie chart
(C) Histogram
(D) Line graph
753. Data from your Financial & Inventory system is considered structured data.
(A) True
(B) False
754. After data collection, what is the immediate next step in a standard analysis workflow?
(A) Reporting results
(B) Data interpretation
(C) Sampling design
(D) Problem identification
(E) Data cleaning
755. Which stage of data analysis processes sales data to produce charts that indicate sales?
(A) Select the most appropriate tools
(B) Share the result
(C) Record and store information
(D) Process and analyse data
756. What is the role of the y-axis in a chart?
(A) To provide a narrative
(B) To display data values
(C) To introduce characters
(D) To summarize the text
757. Which type of data can be used by a business to support managerial analysis tasks and organization decision making?
(A) Transactional data.
(B) Saved data.
(C) Analyzed data.
(D) Raw data.
758. In the drinks sold example, what does the frequency column represent?
(A) Types of drinks
(B) Price of each drink

- (C) Duration of drink sales
(D) Number of each drink sold
- 759.** A car salesman records information about the cars he is selling. The number of doors is ____ data
(A) Qualitative
(B) Continuous
(C) Discrete
(D) None of above
- 760.** Why is data analysis concerned with data reduction?
(A) Because far too much data is collected than is required
(B) Because we need to make sense of the data
(C) Because of the repetitions in answers to questionnaires
(D) Because the sample size has been exceeded
- 761.** Which analysis procedure focuses on taking quantitative and qualitative data findings and building a coherent whole?
(A) Data cleansing
(B) Data reduction
(C) Data consolidation
(D) Data integration
- 762.** Involves the orderly and systematic representation of numerical data in a form designed to elucidate the problem under consideration
(A) Classification.
(B) Coding.
(C) Tabulation.
(D) Editing.
- 763.** Continuous data includes fractions and decimals
(A) True
(B) False
- 764.** Occurs when a company examines its data to determine if it can meet business expectations, while identifying possible data gaps or where data might be missing.
- (A) Data gap analysis
(B) Data inconsistency review
(C) Data integrity analysis
(D) Data management review
- 765.** "This new shampoo I use is really good! My hair has been so much healthier since I started using it!" is an example of ____
(A) Common cause fallacy
(B) Confusing cause and effect
(C) Post hoc fallacy
(D) Appeal to anecdotal evidence
- 766.** The process of coding the necessary data specifically to the open-ended question.
(A) Data Coding
(B) Classification
(C) Data Analysis
(D) Data Interpretation
(E) Describe Data
- 767.** In a qualitative study, what is the purpose of using a coding system during data analysis?
(A) To ensure data accuracy
(B) To eliminate researcher bias
(C) To categorize and interpret data themes
(D) To quantify responses
- 768.** What type of data? zip code
(A) Ordinal
(B) Nominal
- 769.** Data analysis is first step in which phase to find relationships between collected data.
(A) Data Exploration phase
(B) Data Acquisition phase
(C) Modelling phase
(D) Problem scoping phase
- 770.** Another word used to describe qualitative data is ____
(A) Categorical
(B) Numerical

771. Content Analysis and Statistical Treatments are classified under which phase of the research process?
- (A) Instrumentation
 - (B) Research Problem
 - (C) Data Analysis
 - (D) Literature Review
772. This type of data involves equal intervals between scales
- (A) Intervals
 - (B) Ratio
 - (C) Continuous
 - (D) Discrete
773. The difference between the upper limit and the lower limit of a class is known as:
- (A) Range
 - (B) Magnitude of a class interval
 - (C) Frequency
 - (D) Class Limits
774. Gender, religious affiliation, and eye color are variables which are classified as:
- (A) Nominal-level data
 - (B) Ordinal-level data
 - (C) Interval-level data
 - (D) Ratio-level data
775. Consists of classification, tabulation & coding.
- (A) Collecting of data
 - (B) Preparation of report
 - (C) Interpretation of data
 - (D) Processing of data
776. What is a way to organize data from an experiment?
- (A) Variable
 - (B) Chart or Graph
777. When you want to compare categories you use ____
- (A) Bar graph
 - (B) Line graph
 - (C) Pie chart
 - (D) None of above
778. Which type of data visualization should you use to represent frequencies for a continuous variable?
- (A) Bar graph
 - (B) Histogram
 - (C) Scatterplot
 - (D) Pie chart
779. Which one of the below will give you percentage data in SPSS?
- (A) Descriptives
 - (B) Frequencies
 - (C) Crosstabs
 - (D) Q-Q Plots
780. When creating a chart to analyse the effect of oil prices on the cost of stocks, which data will appear on the y-axis?
- (A) Months
 - (B) Oil prices
 - (C) Stock names
 - (D) Stock prices
781. What type of data can be separated into groups?
- (A) Numerical Data
 - (B) Categorical Data
 - (C) Features
 - (D) Labels
782. Which of the following charts is used to identify the type of relationship (if any) between categories and/or variables?
- (A) Pie
 - (B) Scatter
 - (C) Area
 - (D) Column
783. Given the data set: [3, 3, 4, 4, 4, 5, 5, 5, 5, 6, 6, 6, 6], create a frequency table.
- (A) | Value | Frequency || ____ | ____ || 3 | 2 || 4 | 3 || 5 | 4 || 6 | 5 |
 - (B) | Value | Frequency || ____ | ____ || 3 | 2 || 4 | 4 || 5 | 4 || 6 | 4 |

- (C) | Value | Frequency || — | — || 3 | 3 || 4
| 3 || 5 | 4 || 6 | 4 |
- (D) | Value | Frequency || — | — || 3 | 2 || 4
| 3 || 5 | 5 || 6 | 4 |
- 784.** Breaking down data to find patterns or answers to the testable question.
- (A) Graphs
 - (B) Hypothesis
 - (C) Analyze data
 - (D) Testable question
- 785.** Used to show continuous data. Bars touch.
- (A) Bar Chart
 - (B) Histogram
 - (C) Scatter Graph
 - (D) None of above
- 786.** In the context of data, what does 'validity' refer to?
- (A) Trustworthiness of evidence
 - (B) Consistency across time
 - (C) Representativeness of business metrics
 - (D) Currency of data
- 787.** What is a common tool used to analyze quantitative data?
- (A) Statistical software
 - (B) Focus groups
 - (C) Case studies
 - (D) Ethnographic research
- 788.** What is a simple way of showing part-to-whole relationships but can be difficult to read with more than a few components?
- (A) Bar Chart
 - (B) Pie Chart
 - (C) Line Graph
 - (D) Scatter Plot
- 789.** If 8 cats, 12 dogs and 3 rabbits are in a store of pet animals, then the ratio 8: 23 is for —
- (A) Dogs to cats
 - (B) Cats to dogs
 - (C) Rabbits to cats
 - (D) Cats to all animals
- 790.** Jerry recorded the outdoor temperature at noon on the first day of each month for one year. He made the box-and-whisker plot below to display his data. What is the range of temperatures?
- (A) 40
 - (B) 55
 - (C) 70
 - (D) 95
- 791.** The process by which response categories are summarized by numerals or other symbols to carry out subsequent operations of data analysis.
- (A) Coding
 - (B) Editing
 - (C) Processing
 - (D) None of above
- 792.** How many classes a frequency distribution should have
- (A) Larger number
 - (B) Smaller number
 - (C) Neither very large nor very small number
 - (D) None of the above
- 793.** — is the process of comparing data with a set of rules or values to find out if the data is correct.
- (A) Concatenation.
 - (B) Validation.
 - (C) Digit checking.
 - (D) Integration.
- 794.** Coding in data preparation means:
- (A) Assigning symbols/numbers
 - (B) Removing errors
 - (C) Writing reports
 - (D) Sampling
- 795.** Which method is commonly used to analyze online data sources?
- (A) Web scraping
 - (B) Ignoring digital trends
 - (C) Conducting manual interviews only
 - (D) Avoiding online surveys

- 796.** What is the purpose of data triangulation in research?
- (A) To increase the reliability and validity of research findings
 - (B) To compare different research methodologies
 - (C) To identify potential confounding variables
 - (D) To establish causal relationships between variables
- 797.** How can a researcher ensure that conclusions are reliable?
- (A) Base them solely on initial assumptions.
 - (B) Derive them from well-analyzed data.
 - (C) Use opinions from participants.
 - (D) Avoid statistical verification.
- 798.** Condensing output data to exhibit specific information is
- (A) Calculating.
 - (B) Recording.
 - (C) Merging.
 - (D) Summarising.
- 799.** Which three (3) terms are most associated with quantitative data analysis?
- (A) Range, frequencies, skewness
 - (B) Diffusion, sonorous, miscible
 - (C) Refraction, translation, destroy
 - (D) Tectonics, fundamental, transcribe
- 800.** In qualitative research, what is the term for the process of identifying, analyzing, and interpreting recurring patterns or themes in the data?
- (A) Statistical analysis
 - (B) Thematic coding
 - (C) Hypothesis testing
 - (D) Quantification process
- 801.** What is the purpose of calculating arithmetic mean in different types of series?
- (A) To create a sense of mystery around the data
 - (B) To facilitate comparison between two or more groups
 - (C) To make the data look more interesting
 - (D) To confuse the audience with complex calculations
- 802.** Determine the level of measurement of the data set. The years that a television show on ABC won the Emmy for best comedy series are listed: 1955, 1979, 1980, 1981, 1982, 1988, 2010, 2011, 2013, 2014
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 803.** Look at the histogram. Which data set is represented by the histogram?
- (A) {78, 84, 82, 82, 81, 95, 98, 89, 81, 68, 79, 88}
 - (B) {78, 84, 82, 64, 81, 95, 98, 89, 81, 68, 79, 96}
 - (C) {78, 84, 82, 79, 81, 95, 98, 89, 81, 68, 79, 96}
 - (D) {78, 84, 82, 79, 81, 95, 76, 89, 81, 72, 79, 96}
- 804.** The sample contained 3 different types of bacteria.
- (A) Qualitative data
 - (B) Quantitative data
- 805.** If you are looking for interval frequency, which data plot would you choose to construct?
- (A) Dot Plots
 - (B) Histograms
 - (C) Box & Whisker Plots
 - (D) Movie Plot
- 806.** Which software is commonly used for statistical analysis?
- (A) MS Paint
 - (B) SPSS
 - (C) VLC
 - (D) Adobe Reader

807. Classify the data: percent of students taking the SAT
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
808. To analyze the relationship between variables, what should the researcher use?
- (A) Statistical methods
 - (B) Interview methods
 - (C) Observation methods
 - (D) Case study methods
809. In the step of categorizing, extracted data are converted into manageable units and extracted significant statements which are similar are put together
- (A) Formation of themes
 - (B) Data analysis
 - (C) Clustering and categorizing
 - (D) Coding
810. What is not a usual question to ask when conducting statistical analysis?
- (A) If the data does not give me the results I want do I still trust the results?
 - (B) Where did the data come from, what is its source?
 - (C) What kind of surveys were conducted, if any?
 - (D) Are the results of the data reliable?
811. Which chart is used to record frequency or count of data?
- (A) Pie chart
 - (B) Scatter plot
 - (C) Bar chart
 - (D) Line chart
812. Classify as categorical, discrete or continuous. The average temperatures of various cities.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
813. A satisfactory statistical quantitative method should not possess one of the following qualities [2005-DECEMBER]
- (A) Appropriateness
 - (B) Measurability
 - (C) Comparability
 - (D) Flexibility
814. A retail store wants to check if **customer preferences** for product categories (Electronics, Apparel, and Home Decor) differ based on **gender**. Which test is appropriate?
- (A) ANOVA
 - (B) Regression
 - (C) Chi-square test
 - (D) T-test
815. Choose which data mining task is the most suitable for the following scenario: determining the thumbs up/thumbs down of a social media post
- (A) Prediction
 - (B) Association rules
 - (C) Classification
 - (D) Clustering
816. The weight of baseball players on the Phillies this year
- (A) Discrete quantitative
 - (B) Continuous quantitative
 - (C) Qualitative
 - (D) None of above
817. How can you avoid the pitfall of ignoring data quality in research analysis?
- (A) Implement quality control measures throughout your research process
 - (B) Balance the complexity and simplicity of your model
 - (C) Choose the right type of visualization for your data
 - (D) Use the right method to deal with missing data

- 818.** Why have different scientists interpreted air temperature data differently?
- (A) The data are not very high quality.
 - (B) Different scientists analyze the data differently.
 - (C) Many of the interpretations are wrong.
 - (D) None of the scientists understands the data.
- 819.** What do the researchers use to analyze the data?
- (A) Probability methods.
 - (B) Mathematical methods.
 - (C) Statistical tools.
 - (D) Index numbers.
- 820.** Which type of validity is established when a newly developed depression inventory is found to strongly correlate with scores from an already established and well-regarded depression inventory when both are administered at the same time?
- (A) Predictive validity
 - (B) Test-retest validity
 - (C) Face validity
 - (D) Concurrent validity
- 821.** There are 40 sheep on a farm. The colour of the sheep is ___ data
- (A) Qualitative
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
- 822.** In which step of the scientific method do we want to use graphs
- (A) Away from all people.
 - (B) Analyze data
 - (C) An open flame.
 - (D) Plenty of water.
- 823.** Statistics help us to ___
- (A) Obtain data and then organize and analyse
 - (B) Obtain data and then organize, summarize, present, analyze, interpret and reach conclusions
 - (C) Obtain data and then organize, summarize, present and analyze
 - (D) It is a set of methods to plan studies and experiments
- 824.** This section describes the statistical techniques or the inferential interpretations that were applied to the data and the result of these analyses.
- (A) Results And Discussion
 - (B) Analysis of Data
 - (C) Design of the Study
 - (D) The Review of Related Literature
- 825.** What type of statistics can be produced for qualitative data?
- (A) Descriptive statistics, inferential statistics, relative frequencies
 - (B) Mode, variance, standard deviation
 - (C) Mean, median, mode
 - (D) Frequency counts, descriptive statistics, inferential statistics
- 826.** In a histogram, what does the width of a bar indicate?
- (A) The frequency of data
 - (B) The range of data values
 - (C) The interval or bin size
 - (D) The total number of data points
- 827.** What is the purpose of a frequency table?
- (A) To calculate the mean of a dataset.
 - (B) To identify outliers in a dataset.
 - (C) To determine the range of a dataset.
 - (D) To organize and summarize data by displaying the frequency or count of each distinct value or category.
- 828.** Meta-analyses use statistics to integrate findings across quantitative studies
- (A) True
 - (B) False

829. The statistical tools used to answer the research questions of the study are described and the formula is presented and explained in —
- (A) Data Gathering Procedure
 - (B) Data Processing Method
 - (C) Sampling Design and Technique
 - (D) Statistical Treatment
830. Observation or Inference: Based on the rotten smell, I think a fish died.
- (A) Observation
 - (B) Inference
831. A logical explanation of an observation that is drawn from prior knowledge or experience is
- (A) Qualitative data
 - (B) Quantitative data
 - (C) An Inference
 - (D) An Observation
832. Using tools like statistical software, data visualization, and predictive analytics to interpret market research findings.
- (A) Data Analysis:
 - (B) Ethical Considerations:
833. Data that is just on the boundary and close to the limits of the range of data being tested.
- (A) Extreme data.
 - (B) Nested formula/function.
 - (C) Columns.
 - (D) Tabs.
834. Weighted averages are considered when
- (A) The data are not classified
 - (B) The data are put in the form of frequency table
 - (C) All the observations are not of equal importance
 - (D) Both a and b
835. Construct validity is concerned with:
- (A) The appearance of the instrument to participants
 - (B) The consistency of responses over time
 - (C) How well the instrument measures the theoretical concept
 - (D) How effectively the instrument aligns with existing data
836. What kind of data is shown in this example? The girl is 72 inches tall.
- (A) Qualitative Data
 - (B) Quantitative Data
837. A frequency distribution table showing value of sales in different column and advertisement expenditure in different rows is termed as:
- (A) Bilateral frequency distribution
 - (B) Univariate frequency distribution
 - (C) Multivariate frequency distribution
 - (D) None of these
838. Best chart for showing parts of a whole:
- (A) Histogram
 - (B) Pie chart
 - (C) Scatter plot
 - (D) Box plot
839. The number of children in your house is an example of
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Neither
 - (D) None of above
840. Which of the following could be subjected to a textual content analysis?
- (A) Interview transcripts
 - (B) Newspaper articles
 - (C) Song lyrics
 - (D) All of the above
841. Unit of analysis in content analysis is defined as:
- (A) The smallest element analyzed in the content
 - (B) The method of collecting data
 - (C) The process of coding data
 - (D) The interpretation of results

- 842.** What graphically represents trends in plotted data and predicts future values?
- (A) Sparkline
 - (B) Trendline
 - (C) Chartline
 - (D) Error bar
- 843.** A section that describes the data that was collected and the results of any statistical tests that were performed
- (A) RESULTS
 - (B) APPENDICES
 - (C) METHODS
 - (D) TITLE
- 844.** Which is NOT a level of data classification
- (A) Nomial level
 - (B) Ordinal level
 - (C) Qualitative level
 - (D) Interval level
- 845.** If you measure the height of each plant in a garden in centimeters, is that qualitative or quantitative data?
- (A) Quantitative
 - (B) Qualitative
 - (C) Primary
 - (D) Historical
- 846.** Which type of graph shows change over time?
- (A) Bar graph
 - (B) Line graph
 - (C) Circle graph
 - (D) None of above
- 847.** Which one of them finds hidden structures in data
- (A) Linear regression
 - (B) Supervised learning
 - (C) UnSupervised learning
 - (D) None of above
- 848.** A woman is looking at a small, medium and large dress size. What data type does this example represent?
- (A) Categorical: Nominal
 - (B) Categorical: Ordinal
 - (C) Numerical: Discrete
 - (D) Numerical: Continuous
- 849.** If you show a relationship where this is none, you have created a(n)
- (A) Experiment.
 - (B) Negative correlation.
 - (C) Illusory correlation.
 - (D) Positive correlation.
- 850.** Using this will help you see patterns in data and help ensure you do not overlook any data points.(Research Methods and Statistics Part III)
- (A) An IRB
 - (B) Calculating the Mean
 - (C) Analyzing a Pie Chart
 - (D) Frequency Distribution Table
- 851.** Has vertical bars that represent numerical value
- (A) Line Chart
 - (B) Bar Chart
 - (C) Column Chart
 - (D) Pie Chart
- 852.** Ounces of a latte is
- (A) Qualitative data
 - (B) Quantitative data
- 853.** Which reliability coefficient is most commonly used to estimate the internal consistency of a multiple-choice test with dichotomous scoring?
- (A) Cronbach's Alpha
 - (B) Pearson R Correlation
 - (C) Kuder-Richardson Formula
 - (D) Kendall-Tau

854. Which chart will BEST represent the percentage of expenses for travel, food, and entertainment, with emphasis on the entertainment expense?
- (A) Stacked Bar
 - (B) Pie
 - (C) XY Scatter
 - (D) Exploded Pie
855. You collected data on age, gender, and device preference. What type of data analysis is appropriate?
- (A) Qualitative
 - (B) Bivariate
 - (C) Multivariate
 - (D) Univariate
856. Which shows change over time?
- (A) Pie chart
 - (B) Bar Graph
 - (C) Line Graph
 - (D) None of above
857. Directly concerned with what is being discussed; related to or on topic
- (A) Relevant
 - (B) Irrelevant
 - (C) Ramble
 - (D) Worry
858. In order to make the research reliable, it requires that
- (A) There is no deliberate attempt to either to conceal or highlight something.
 - (B) Quantitative and qualitative methods are to be used.
 - (C) Repeatability and accuracy are provided for the quality of measurement procedures used.
 - (D) The solution to the research problem is known in advance.
859. Choose which data mining task is the most suitable for the following scenario: determining the stock value of a certain company
- (A) Prediction
 - (B) Classification
 - (C) Clustering
 - (D) Association rules
860. Describing the shape of a data set that has the same values across the entire display.
- (A) Symmetric
 - (B) Unimodal
 - (C) Skewed
 - (D) Uniform
861. As part of a survey, 400 students were asked to name their favorite lunch from the cafeteria. The results showed that 24 of the students prefer lasagna. What percentage of the students prefer lasagna?
- (A) 1,666%
 - (B) 16%
 - (C) 6%
 - (D) 1/6%
862. I need to represent the percentage of different expenses of Indians. Which graph should I use?
- (A) Pie Chart
 - (B) Line Graph
 - (C) Picture Graph
 - (D) None of above
863. A graph that shows how data changes over time
- (A) Tally chart
 - (B) Intersection
 - (C) Line graph
 - (D) Data
864. A statistical procedure that identifies clusters of test items that seem to tap a common ability is called
- (A) Correlational measurement
 - (B) Standardization
 - (C) Factor analysis
 - (D) Reliability assessment

- 865.** Line graphs can show
(A) Medians
(B) Means
(C) Trends
(D) None of above
- 866.** The process of compiling, analyzing, and interpreting the results of data collection
(A) Research Subject
(B) Research Setting
(C) Case Study
(D) Data Analysis
- 867.** A scientist is looking at data she collected on two different mice. Does the growth of either mouse follow a linear pattern?
(A) Mouse A only
(B) Mouse B only
(C) Both A and B
(D) Neither is linear
- 868.** The greatest value in a set of data is called the —
(A) Upper quartile
(B) Lower quartile
(C) Minimum
(D) Maximum
- 869.** Which of the following is a characteristic of BOTH statistical analysis and closed-ended questionnaires?
(A) Direct quotations from primary data are emphasised
(B) Comparisons may be made from structured data collection
(C) Quantitative information is used to explore subjective experiences
(D) A randomly selected sample is used as a part of an interactive process
- 870.** People ANALYZE data in bar graphs to draw conclusions and make comparisons. What does ANALYZE mean?
(A) To write paragraphs
(B) To study closely
(C) To add and subtract
(D) To make tally marks
- 871.** How is qualitative data often represented?
(A) Using numerical data types such as integers and decimals
(B) Using categorical data types such as strings and characters
(C) Using mathematical formulas
(D) Only through graphs and charts
- 872.** Which is the graph most often used in science as it compares only two variables?
(A) Line graph
(B) Bar graph
(C) Circle graph
(D) None of above
- 873.** What type of data includes numerical values where ratios are meaningful, and it possesses a true zero point?
(A) Nominal Data
(B) Ordinal Data
(C) Interval Data
(D) Ratio Data
- 874.** What is the term for data that has been organized into a structured format for analysis?
(A) Raw data
(B) Unstructured data
(C) Semi-structured data
(D) Processed data
- 875.** What type of chart is best suited for showing the distribution of data and highlighting relative sizes of different categories?
(A) Column Chart
(B) Bar Chart
(C) Pie Chart
(D) Area Chart
- 876.** What is the level of measurement used in a survey about ranking the importance of safety, price, speed, and comfort when buying cars?
(A) Nominal

- (B) Ordinal
(C) Interval
(D) Ratio
- 877.** It is better to use line plots when the data is related to time, like growth over years.
(A) True
(B) False
- 878.** A way of showing data using symbols or pictures is called ____
(A) Bar graph
(B) Frequency table
(C) Pictograph
(D) Tally chart
- 879.** In Quantitative research, what is the purpose of the Results section?
(A) Is to summarize the data that were collected and their statistical treatment
(B) Is to interpret and evaluate the study results
(C) Giving primary emphasis to relationships between the results and the hypotheses of the study
(D) None of above
- 880.** Which of the following softwares is commonly used in quantitative data analysis?
(A) NVivo
(B) XSight
(C) Coding analysis toolkit (CAT)
(D) SPSS
(E) Not aware of
- 881.** Classify the data: How hot are peppers: hot, very hot, flamethrower
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 882.** Which of the following measurement methods compares a baseline performance with performance at the end of an intervention period?
(A) Absolute change
(B) Reliable change index
(C) Percent of nonoverlapping data points
(D) Percent change
- 883.** Which chart will BEST represent an increase in the sales for the shoe department over time and compare it to a decrease in sales of the cosmetics department over the same period of time?
(A) Line
(B) Pie
(C) Stacked bar
(D) XY scatter
- 884.** Quantitative data analysis deals with something that can be counted.
(A) True
(B) False
- 885.** You need to take a survey at school to see which type of lunch food is most preferred by 7th grade students. Which type of graph would be best to display the data?
(A) Line Graph
(B) Bar Graph or Pie Chart
(C) Scatter Plot
(D) Funnel Chart
- 886.** Which type of graph is usually just a comparison of numbers?
(A) Line graph
(B) Bar graph
(C) Circle graph
(D) None of above
- 887.** What should be included in the results section of a quantitative research study?
(A) Interpretation of results
(B) Graphs and charts
(C) Methods of data collection
(D) Limitations of the study

888. Data that possesses equal intervals between consecutive values but lacks a true zero point falls under which category?
- (A) Nominal Data
 - (B) Ordinal Data
 - (C) Interval Data
 - (D) Ratio Data
889. It is a way to misuse of Statistics and Data assuming that two sets of data seem to be related and concluding that one variable is causing the other to change.
- (A) Faulty Polling
 - (B) Flawed correlations
 - (C) Data Fishing
 - (D) Confirmation Bias
 - (E) Misleading Data Visualization
890. Which scale of measurement classifies data into categories with no order?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
891. When a study is said to be "Valid" ____
- (A) It is thought to measure what it was supposed to measure
 - (B) It is thought that the same or similar results should be achievable if repeated
 - (C) The DV is supposed to have the desired impact on the IV
 - (D) It is thought to be ineffective
892. If Jake wants to study the relationship between the daily temperature and the amount of fruit sold during a week, what kind of chart should he use?
- (A) Column
 - (B) Line
 - (C) Pie
 - (D) Scatter
893. In chronological classification, data is classified based on:
- (A) Size
 - (B) Time
 - (C) Quality
 - (D) Location
894. A ____ chart shows the contribution of each component of one series of data to the whole.
- (A) Pie
 - (B) Exploded pie
 - (C) Stacked bar
 - (D) Line chart
895. The graphs are used to perform ____
- (A) Conclusions
 - (B) Research
 - (C) Analysis
 - (D) None of above
896. Reliability is most simply known as which of the following?
- (A) A rank order of participants on some characteristic.
 - (B) Ways in which people are the same.
 - (C) Appropriateness of interpretations on the basis of test scores.
 - (D) Consistency or stability.
897. Statistical analysis in research helps in:
- (A) Making sense of collected data through mathematical methods
 - (B) Eliminating all outliers without justification
 - (C) Manipulating results to fit expectations
 - (D) Avoiding hypothesis testing
898. A useful way to display quantitative data would be
- (A) Case study write-up
 - (B) Written report
 - (C) Essay
 - (D) Bar chart
899. Are used to determine if results are statistically significant and can be generalized to a larger population.

- (A) Inferential statistics
 - (B) Descriptive statistics
 - (C) Nominal statistics
 - (D) Correlation statistics
- 900.** Properly arranged data is called
- (A) Field.
 - (B) Words.
 - (C) Information.
 - (D) File.
- 901.** The best graph to use if I want to compare the price of 6 different cars would be:
- (A) Line graph
 - (B) Bar graph
 - (C) Circle graph
 - (D) None of above
- 902.** Your age is an example of?
- (A) Quantitative/ numeric data
 - (B) Qualitative/categorical data
 - (C) Quantitative and discrete
 - (D) Quantitative and continuous
- 903.** A marketing research team analyzes online product reviews to understand customer sentiment. What type of analysis is this?
- (A) Content Analysis
 - (B) Descriptive Analysis
 - (C) Regression Analysis
 - (D) Survey Analysis
- 904.** Nominal and ordinal data are types of:
- (A) Qualitative data
 - (B) Ratio data
 - (C) Interval data
 - (D) None of these
- 905.** A company's Human Resources department distributes a survey which asks employees to rate their current benefits as "excellent," "good," "fair," or "poor." This is an example of a(n):
- (A) Nominal scale
 - (B) Interval scale.
 - (C) Ratio scale.
 - (D) Ordinal scale.
- 906.** The purpose of data coding is to:
- (A) Simplify and classify raw data
 - (B) Change meanings
- 907.** If a bar graph shows 10 apples and 5 oranges, which fruit is more popular?
- (A) Apples
 - (B) Bananas
 - (C) Grapes
 - (D) Oranges
- 908.** Which of the following statistical techniques identifies patterns underlying combinations of the original variables capable of summarizing the original set?
- (A) Factor analysis
 - (B) Multivariate analysis of variance
 - (C) Cluster analysis
 - (D) Multidimensional scaling
- 909.** Is a histogram the same as a bar graph?
- (A) Yes, because they both use intervals.
 - (B) No, because a histogram displays numerical data while a bar graph displays categorical data.
 - (C) Yes, because they both use bars to display data.
 - (D) No, because a histogram displays categorical data while a bar graph displays numerical data.
- 910.** A psychologist uses statistics to show a cluster of intelligence topics such as (spatial ability & verbal intel) that are related to one another. This psychologist is probably using
- (A) The WAIS
 - (B) The IQ formula
 - (C) Factor analysis
 - (D) The standardization formula
- 911.** This data analysis tool is used to spot connections and patterns between data
- (A) Data cleaning

- (B) Data tables
 - (C) Visualisations
 - (D) Trend and pattern identification
- 912.** The plant is tall and green, it must be healthy.
- (A) Qualitative observation
 - (B) Inference
 - (C) Quantitative observation
 - (D) None of above
- 913.** What are the main functions of analysis of data?
- (A) Making the data meaningful.
 - (B) Testing null hypothesis.
 - (C) Acquiring meaningful results.
 - (D) All of the above.
- 914.** Identify if the data point listed below is an example of qualitative data or quantitative data:thirty-two calories
- (A) Qualitative data
 - (B) Quantitative data
- 915.** The name of students in the class
- (A) Qualitative
 - (B) Quantitative
 - (C) Continuous
 - (D) Discrete
- 916.** Mathematical/Statistical process that allows researchers to identify CLUSTERS of traits that seem to go together:
- (A) FOIL
 - (B) Factor Analysis
- 917.** Zipf's Law explains which distributional pattern in information science?
- (A) Authors' productivity declines with inverse squares
 - (B) Core periodicals form three equal productivity zones
 - (C) Word occurrence follows a rank-frequency power law
 - (D) Citation networks grow exponentially
- 918.** Describes how the data were analyzed using appropriate statistical method
- (A) Data analysis
 - (B) Research ethics
 - (C) Data collection
 - (D) Research instruments
- 919.** Why is it important to classify data before conducting a statistical analysis?
- (A) To ensure the data is organized and meaningful
 - (B) To make the data more complex
 - (C) To reduce the amount of data
 - (D) To guarantee the results are correct
- 920.** Example of non-numerical data is
- (A) Employee address.
 - (B) Examination score.
 - (C) Bank balance.
 - (D) None of the above.
- 921.** The best advice for knowing when you have collected enough sources for your literature review is to:
- (A) Look for repetitive patterns in the materials you are finding and reading.
 - (B) Search until you have exhausted your own institution's direct resources.
 - (C) Search until you have obtained at least 10 sources.
 - (D) Look for at least one source that supports each of your hypotheses.
- 922.** When wanting to highlight changes over time of multiple variables, which data visualization is most appropriate?
- (A) Table
 - (B) Chart
 - (C) Graph
 - (D) All answers are correct
- 923.** What type of data is best represented by a line graph?
- (A) Categorical data
 - (B) Data with fixed values

- (C) Random data points
(D) Continuous data or data showing trends over time.
- 924.** Which type of chart shows data points connected by lines?
(A) Line chart
(B) Pie chart
(C) Bar chart
(D) None of above
- 925.** Which analysis procedure is most suitable for qualitative data?
(A) Frequency count
(B) Thematic analysis
(C) Percentages
(D) Mean and median
- 926.** Why is data triangulation important in qualitative research?
(A) It ensures different methods and sources confirm findings
(B) It speeds up the research process
(C) It eliminates the need for participant validation
(D) It makes data collection easier
- 927.** A statistical technique that describes two or more variables simultaneously and results in tables that reflect the joint distribution of two or more variables that have a limited number of categories or distinct values is a(n) ____
(A) T test
(B) ANOVA
(C) Factor analysis
(D) Cross-tabulation
- 928.** How can synthesizing information from multiple sources benefit your research?
(A) It can help confirm the accuracy of the information.
(B) It ensures that your research will be shorter and more concise.
(C) It means you only need to cite one source.
(D) It allows you to use only primary sources.
- 929.** Which evidence best supports the author's claim that voting in local elections shapes community policies more?
(A) High turnout led to better-funded libraries and parks.
(B) National issues get more media coverage.
(C) Special interests ignore voter numbers.
(D) Teens cannot register to vote yet.
- 930.** In qualitative research, what term refers to the process of systematically and logically making sense of patterns and themes identified in the data?
(A) Statistical analysis
(B) Thematic coding
(C) Inferential testing
(D) Theoretical framework
- 931.** In PSPP, which function is used to test relationships between two categorical variables?
(A) Chi-square test
(B) T-test
(C) ANOVA
(D) Regression
- 932.** In an experiment, a student measures the growth of a plant over time and records the data in a table. Which type of chart would be most appropriate to visualize the plant's growth over time?
(A) Pie chart
(B) Bar chart
(C) Line graph
(D) Scatter plot
- 933.** What type of graph shows how data is grouped into ranges using bars?
(A) Histogram
(B) Column Chart
(C) Scatter Plot
(D) Box and Whisker Plot

- 934.** In the Analysis activity, what type of data will students analyze?
- (A) Data from their own surveys about natural hazards.
 - (B) Real-world data sets related to natural hazards.
 - (C) Fictional data created by the teacher.
 - (D) Historical data of natural disasters unrelated to hazards.
- 935.** The score of some students on an online math test are shown below. 7, 8, 9, 6, 7, 4, 5, 6, 8, 4, 5, 8. Jasper wants to display the given data on the dot plot. How many dots should he place on 8?
- (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 936.** What is a bar chart used for?
- (A) To calculate square root
 - (B) To write a novel
 - (C) To compare different categories of data
 - (D) To measure temperature
- 937.** Editing of data refers to:
- (A) Removing errors
 - (B) Classifying data
 - (C) Presenting data
 - (D) Analyzing data
- 938.** Written methodology section usually includes three major parts: (1) Data Collection, (2) Data Gathering Instruments, and (3)
- (A) Data Analysis Procedures
 - (B) Data Visualization Tools
 - (C) Sampling Techniques
 - (D) Research Hypotheses
- 939.** The process of marking segments of data with symbols, descriptive words, or category names is known as ____
- (A) Coding.
 - (B) Coloring.
 - (C) Concurring.
 - (D) Segmenting.
- 940.** The claim must be supported by ____
- (A) Thesis
 - (B) Claim
 - (C) Debate
 - (D) Evidence
- 941.** Which level of measurement allows you to say that one data point is greater than or less than another, but not by how much?
- (A) Ordinal
 - (B) Nominal
 - (C) Interval
 - (D) Ratio
- 942.** A quality control in assessment through examination of evidence according to the content, criterion, and construct of the test is referred to as:
- (A) Item analysis
 - (B) Mean, Median, Mode
 - (C) Reliability
 - (D) Validity
- 943.** By looking for research bias and errors you can do which of the following
- (A) Analyze scientific claims
 - (B) Ask scientific questions
 - (C) Design an experiment
 - (D) Conduct an experiment
- 944.** Frequency distribution is not useful in determining the degree of consensus among data points.
- (A) True
 - (B) False
- 945.** Statistics in Research permits the most exact kind of description.
- (A) TRUE
 - (B) FALSE
 - (C) All the above
 - (D) None of the above

- 946.** When numbers are just assigned to phenomena without discrimination, it is a
(A) Nominal scale.
(B) Ordinal scale.
(C) Ratio scale.
(D) Interval scale.
- 947.** Research lies in the making of conclusions or generalizations basing on the collected data.
(A) Inductive
(B) Deductive
(C) Independent
(D) Dependent
- 948.** What is the primary function of data in research?
(A) To provide evidence for analysis
(B) To entertain the audience
(C) To confuse the reader
(D) To summarize a story
- 949.** Which Scale has an absolute zero at the point of origin?
(A) Ratio Scale.
(B) Interval Scale.
(C) Ordinal Scale.
(D) Nominal Scale.
- 950.** Classification of population of India in terms of years is an example of:
(A) Geographical classification
(B) Chronological classification
(C) Quantitative classification
(D) Qualitative classification
- 951.** The data gathered in a Quantitative Study will be analyzed through:
(A) Math/statistical analysis
(B) Summarizing, categorizing, and interpreting
- 952.** Discrete data is best visualised using a
(A) Histogram
(B) Bar Chart
(C) Line Graph
(D) Scatter Plot
- 953.** Mass of a cake.
(A) Qualitative
(B) Quantitative discrete
(C) Quantitative continuous
(D) None of above
- 954.** Use the data from the table. Which number of concert tickets is an outlier?
(A) 58
(B) 61
(C) 71
(D) 128
- 955.** Which pair of steps occurs at the end of a quantitative project?
(A) Collect data; analyze data
(B) Formulate hypotheses; define purpose
(C) Review literature; select sample
(D) Analyze data; communicate findings
- 956.** ___ data is continuous, ordered, has standardized differences between values, and a natural zero
(A) Ratio
(B) Nominal
(C) C Ordinal
(D) None of above
- 957.** Which chart type will best represent the percentage of expenses for office supplies, salaries, and travel for a company's total budget?
(A) Pie
(B) Stacked Bar
(C) Column
(D) Line
- 958.** If the vertical axis of a line graph is labelled in ounces, what type of data might be shown?
(A) Distance travelled
(B) Weight of liquid consumed
(C) Number of people
(D) Temperature

- 959.** Managers gather, analyze, and interpret all relevant data concerning a planning issue by performing a(n) ____
- (A) Situational analysis
 - (B) Inspection
 - (C) Standard routine
 - (D) SWOT
- 960.** A single data element in a spreadsheet
- (A) Column
 - (B) Row
 - (C) Cell
 - (D) Table
- 961.** When the measure of constructs that theoretically should be related, are actually observed to be related to one another, then this type of validity is known as?
- (A) Face validity
 - (B) Convergent validity
 - (C) Construct validity
 - (D) Discriminant validity
- 962.** Ordinal data is a type of
- (A) Categorical data
 - (B) Numerical data
- 963.** What type of graph is best used to represent trends in data?
- (A) Line
 - (B) Circle
 - (C) Bar
 - (D) Pictograph
- 964.** Which term refers to the extent of detail provided in information? For instance, some information may provide summary information while others may provide a great amount of detail ____
- (A) Aggregate Data.
 - (B) Information Granularity.
 - (C) Data Detail.
 - (D) None of these.
- 965.** What are bar graphs used for?
- (A) To show where things are located on a map.
 - (B) To compare data between different groups, or to track changes over time.
 - (C) To show geographical data only.
 - (D) To create pretty pictures in our geography booklets!
- 966.** A histogram groups numbers into what?
- (A) Groups
 - (B) Ranges
 - (C) Category
 - (D) Sectors
- 967.** T-test requires data to be:
- (A) Quantitative
 - (B) Qualitative
 - (C) Nominal
 - (D) Binary
- 968.** What type of data is measured using a scale where the difference between values is meaningful but has no true zero?
- (A) Ordinal data
 - (B) Interval data
 - (C) Nominal data
 - (D) Descriptive data
- 969.** A survey was taken at Montross Middle School. The students were asked what their favorite sport was and the results are shown in the bar graph. What circle graph represents the same data set?
- (A)
 - (B)
 - (C)
 - (D)
- 970.** Using different hues for male and female is:
- (A) Color to highlight
 - (B) Color to distinguish
 - (C) Color to encode magnitude
 - (D) Color gradient

971. Chronological tabulation is based on
(A) Time
(B) Location
(C) Both
(D) None of above
972. Display where bars touch and intervals are used as scale
(A) Bar Graph
(B) Histogram
(C) Box Plot
(D) None of above
973. It is a branch of Applied mathematics specializing in procedures for collecting, organizing, presenting, analyzing and interpreting from observations.
(A) Geometry
(B) Trigonometry
(C) Algebra
(D) Statistics
974. The visual representation of data to compare quantities of various categories is called
(A) Picto Graph
(B) Line Graph
(C) Bar Graph
(D) Pie Chart
975. If Jake wants to represent the total sales of each fruit for a week, what kind of chart should he use?
(A) Column
(B) Pie
(C) Stacked Bar
(D) XY scatter
976. Science that consists of collecting, organizing, analyzing and interpreting data
(A) Data
(B) Statistics
(C) Population
(D) Sample
977. Which set of data could the frequency table represent?
(A) 1, 2, 2, 3, 6, 7, 7, 9, 12, 12, 14, 17, 18, 20
(B) 0, 2, 4, 5, 6, 6, 7, 8, 9, 11, 11, 13, 14, 15, 20, 20, 20
(C) 1, 5, 6, 10, 11, 15, 16, 20, 4, 5, 5, 3
(D) 2, 2, 4, 5, 6, 6, 7, 8, 9, 11, 11, 13, 14, 15, 20, 20, 20
978. What is the method of qualitative analysis that involves categorizing data into themes?
(A) Content analysis
(B) Thematic analysis
(C) Observation analysis
(D) Statistical analysis
979. What can be consider as a bad inference?
(A) Having an acceptable reason for the conclusion
(B) Having a reason that doesn't justify the conclusion
(C) Having logical evidence to support the conclusion
(D) None of above
980. Compares values across categories
(A) Radar
(B) Combo
(C) Bar chart
(D) Area
981. She observed that a dolphins colour ranges from gray to white.
(A) This is qualitative data
(B) This is quantitative data
982. What is the process of examining the relationship between two or more variables called?
(A) Data modeling
(B) Data correlation
(C) Data manipulation
(D) Data inference

- 983.** Which of the following statements best describes content analysis?
(A) It systematically examines text to identify patterns and themes
(B) It measures numerical values in qualitative research
(C) It focuses on participant behavior rather than spoken language
(D) It ensures all interview responses are statistically valid
- 984.** Data cleaning involves:
(A) Removing inconsistencies and errors
(B) Collecting more data
(C) Hypothesis writing
(D) Literature review
- 985.** Which is not a tool for Graphical Data Analysis?
(A) Bar Chart
(B) Box Plot
(C) Linear Regression
(D) Scatter Plot
- 986.** Is the time taken to run a race discrete or continuous data?
(A) Discrete Data
(B) Continuous Data
(C) Categorical Data
(D) Nominal Data
- 987.** To show how variables are closely related with one another, you must use
(A) Data matrix
(B) Profile matrix
(C) Proximity matrix
(D) Table matrix
- 988.** Classify the data: The number of touchdowns the Eagles score each year
(A) Discrete
(B) Continuous
- 989.** To find the angle of each slice in a pie chart, you multiply ____ by 360.
(A) Relative frequency
(B) Frequency
(C) Sample size
(D) Population size
- 990.** Determine the type of data: number of cattle in a farm
(A) Qualitative Data
(B) Discrete Data
(C) Continuous Data
(D) None of above
- 991.** When analyzing a reliable source, what type of evidence will help you write your argument?
(A) Facts and opinions
(B) Primary and secondary sources
(C) Data, statistics, anecdotes, and examples
(D) Information that only smart people would find
- 992.** Display shows number of items in specific categories [like colors, foods, grades ____]
(A) Bar Graph
(B) Box Plot
(C) Line Graph
(D) None of above
- 993.** If Cronbach's Alpha is 0.90, the scale is considered:
(A) Unreliable
(B) Highly reliable
(C) Poorly designed
(D) Invalid
- 994.** Searching through large amounts of digital data to find useful patterns or trends.
(A) Raw data
(B) Follow-up
(C) Data analysis
(D) Data mining
- 995.** Which tool is best for analyzing the relationship between two variables?
(A) Histogram

- (B) Scatter Diagram
(C) Control Chart
(D) Flow Chart
- 996.** What reasoning process would you use to evaluate the success of earthquake preparedness programs in a city?
(A) Count the number of emergency kits distributed.
(B) Analyze the outcomes of simulated earthquake scenarios and adjust plans based on identified gaps.
(C) Increase the number of emergency drills.
(D) Focus on public awareness campaigns.
- 997.** What is the first step when creating a box and whisker plot?
(A) Find the median
(B) Find the lowest and highest values
(C) Order the data set
(D) Find the median of the top and bottom halves
- 998.** What statistical methods can be used to analyze data?
(A) Descriptive statistics, inferential statistics, regression analysis, hypothesis testing, ANOVA, chi-square tests, time series analysis.
(B) Data visualization techniques
(C) Machine learning algorithms
(D) Qualitative analysis
- 999.** Which of the following is NOT a data analysis approaches?
(A) Thematic analysis
(B) Constant comparative
(C) Audit trail
(D) Analytic induction
- 1000.** It presents data using bars of different heights.
(A) Bar graph
(B) Pie graph
(C) Information mapping
(D) Table
- 1001.** Consider this stem-and-leaf plot. What is the sample size of the data set represented by this plot?
(A) 14
(B) 20
(C) 41
(D) 95
- 1002.** The horizontal axis of a histogram comes from this column:
(A) Intervals
(B) Frequency
(C) Midpoint
(D) Cumulative Frequency
- 1003.** After collecting data, the next step in the Marketing research process will be:
(A) Report the results obtained.
(B) Analyze information
(C) Find a solution to the problem that needs research.
(D) Pass data to Marketing managers for their review.
- 1004.** Which of the graphs is analyzed by using comparison?
(A) Line graph
(B) Pie chart
(C) Bar graph
(D) Pictogram
- 1005.** The sonar frequency most often used by dolphins is 100kHz.
(A) This is qualitative data
(B) This is quantitative data
- 1006.** A survey asks, "How satisfied are you with your school?" The answers are: "Very satisfied," "Satisfied," "Neutral," "Dissatisfied," and "Very dissatisfied." This is an example of:
(A) Quantitative data
(B) Qualitative data
(C) Numerical data
(D) None of the above

- 1007.** You are researching the effectiveness of speed cameras in your city and need to answer this research question: Do speed cameras reduce car accidents? Which fact below answers your research question?
- (A) The police department reported serious collisions fell by 27% with cameras in place.
 - (B) The police department has requested funding to obtain additional cameras.
 - (C) The police department receives many complaints that cameras are a money-making scheme. Edit
 - (D) None of above
- 1008.** Identify the best average to use for the following data — FAVOURITE SCHOOL SUBJECT: French, PE, DT, ICT, Maths, Science, Science, EP, Life Choices, Maths, Maths
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) None of above
- 1009.** Significance of hypothesis is tested on ____ level in Social Sciences.
- (A) 0.05
 - (B) 0.01
- 1010.** True or False-You can show the data you collect during your experiment in several different ways.
- (A) True
 - (B) False
- 1011.** How can the integrity of research data be maintained?
- (A) Use primary data
 - (B) Check data for validity
 - (C) Use secondary data to determine results
 - (D) Collect data that is personal and detailed
- 1012.** Example: Daily temperatures over a 7 day period.
- (A) Bar graph
 - (B) Line graph
 - (C) Pie chart
 - (D) None of above
- 1013.** Which of the following is a common feature of a chart?
- (A) Narrative structure
 - (B) Data points
 - (C) Character development
 - (D) Plot twist
- 1014.** Which of the following is NOT an example of qualitative data?
- (A) Employee job satisfaction
 - (B) Marital status
 - (C) Sales in dollars
 - (D) Open-ended questions
- 1015.** Statistical methods are mathematical formulas, models, and techniques that are used in statistical analysis of raw research data.
- (A) True
 - (B) False
 - (C) All the above
 - (D) None of the above
- 1016.** When phenomena are rated or scored in the order of importance, the type of scale Used is
- (A) Ordinal scale.
 - (B) Nominal scale.
 - (C) Ratio scale.
 - (D) Interval scale.
- 1017.** What type of graph would be best to show the relationship between the number of endangered species over time.
- (A) Bar graph
 - (B) Line graph
 - (C) Circle graph
 - (D) Data table
- 1018.** It factually describes the data gathered and the tables and graphs that summarize the collected data.
- (A) RESULTS
 - (B) DISCUSSION
 - (C) CONCLUSION
 - (D) REFERENCES
 - (E) RESEARCH REPORT

- 1019.** What is the purpose of a scatter diagram in psychological research?
- (A) To show the frequency of different categories
 - (B) To identify a correlation between two variables
 - (C) To display data in a circular graph
 - (D) To summarize data using bars
- 1020.** Doug records the daily high temperatures each day for a week. He wants to record his findings in a graph. What type of graph should he create?
- (A) Pie chart
 - (B) Bar graph
 - (C) Line graph
 - (D) Histogram
- 1021.** AnalyzeChoose matching definition
- (A) To have a portion of salary reduced because of some infraction, such as tardiness to work.
 - (B) Examine methodically and in detail the constitution or structure of something, especially information, typically for purposes of explanation and interpretation.
 - (C) Relating to education, educational studies, an educational institution, or the educational system.
 - (D) Things you can do well; natural or acquired skills or talents.
- 1022.** Which organization method groups studies by shared concepts or models to explain a topic?
- (A) Geographic organization by study location
 - (B) Methodological organization by data types
 - (C) Thematic organization around core ideas
 - (D) Chronological organization across publication years
- 1023.** To read or study the data on a graph is to ____ the data.
- (A) Data
 - (B) Analyze
 - (C) Scale
 - (D) Line plot
- 1024.** What type of data is often collected in bar charts?
- (A) Text data
 - (B) Image data
 - (C) Audio data
 - (D) Numerical data
- 1025.** What are graphs used for?
- (A) To show data
 - (B) To keep track of things so you don't forget
 - (C) To catch the eye and look colorful
 - (D) To draw pictures on
- 1026.** A restaurant chain wanted to find out how the customer experience was in a store. Which choice best represents a statistic?
- (A) The percentage of all customers that reported a positive experience.
 - (B) The percentage of customers surveyed that reported a positive experience.
 - (C) All customers.
 - (D) A random selection of customers that were surveyed.
- 1027.** What type of graph best shows change of dependent variable over time?
- (A) Circle chart
 - (B) Line graph
 - (C) Bar graph
 - (D) Data table
- 1028.** What is typically represented on one axis of a bar chart?
- (A) Sources of energy
 - (B) Units of time
 - (C) Numerical values such as costs, income, or birth rates
 - (D) Types of people

- 1029.** Which process involves organizing and summarizing data for analysis?
(A) Data collection
(B) Data processing
(C) Data storage
(D) Data retrieval
- 1030.** The source reliability, accuracy and value of information may vary based on the time it was produced or acquired.
(A) Verified
(B) Reliability
(C) Accuracy
(D) Timeliness
- 1031.** In which criterion in evaluating sources does this statement “Is the language or tone biased or free of emotion?” belong?
(A) Authority
(B) Relevance
(C) Currency
(D) Accuracy
- 1032.** This chart is used to indicate the correlation of two or more sets of data.
(A) XY Scatter
(B) Line
(C) Pie
(D) Stacked bar
- 1033.** Statistics in Research enables us to analyze some of the casual factors of complex and otherwise bewildering events.
(A) TRUE
(B) FALSE
(C) All the above
(D) None of the above
- 1034.** Categories have rank ordering and the distance between them is constant and meaningful: temperature in F or C, date of birth
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 1035.** Carrying out — helps establish patterns and relationships among the data being analyzed.
(A) Data Intelligence
(B) Data Analytics
(C) Data analysis
(D) Datasets
- 1036.** What type of data would eye colour be?
(A) Nominal
(B) Ordinal
(C) Interval
(D) None of above
- 1037.** Coding
(A) Requires the researcher to assign a code to extracted significant statements from the field text
(B) It is hard to code electronic data.
(C) There is no fixed rule as to how to code your data
(D) The researcher may devise his own coding scheme.
- 1038.** An advertising agency mailed 100 questionnaires to the viewers to know the impact of the advertisement. It received only one questionnaire back. It is not possible to apply statistics because:
(A) It does not deal with quantitative data
(B) It does not deal with single result
(C) The answer replied is not clear
(D) It is not confidential
- 1039.** Which of the following step is performed by data scientist after acquiring the data?
(A) Data Integration
(B) Data Replication
(C) Data Cleansing
(D) All of the Mentioned
- 1040.** In the dissertation’s finding section, there should no deductions, nor inference, nor interpretation should be made.
(A) TRUE
(B) FALSE

- 1041.** What type of data will questions answerable by YES or NO generate?
- (A) Categorical data
 - (B) Numerical data set
 - (C) Statistics
 - (D) Statistical question
- 1042.** A survey of 1,000 people was done for music preferences. 80% of the people liked rock music. How many of the 1,000 people liked rock music?
- (A) 920
 - (B) 200
 - (C) 80
 - (D) 800
- 1043.** What is the branch of statistics that involves organizing, displaying and describing data?
- (A) Descriptive statistics
 - (B) Inferential statistics
 - (C) Sports statistics
 - (D) Health statistics
- 1044.** A characteristic of a small part of data, taken from a larger group of data is called a —
- (A) Population
 - (B) Parameter
 - (C) Sample
 - (D) Statistic
- 1045.** The research activity preceding collating is
- (A) Coding
 - (B) Summarizing
 - (C) Synthesizing
 - (D) Categorizing
- 1046.** Display that shows change over time
- (A) Line Graph
 - (B) Line Plot
 - (C) Box Plot
 - (D) Histogram
- 1047.** In statistics, which of these measures variability in data?
- (A) Median
 - (B) Correlation
 - (C) Standard Deviation
 - (D) Causation
- 1048.** All good graphs have —
- (A) Labels and a title
 - (B) Two axes
 - (C) Qualitative data
 - (D) Color
- 1049.** Which graph would be the best to represent categorical data?
- (A) Pie Chart
 - (B) Dot Plot
 - (C) Stem Plot
 - (D) Box Plot
- 1050.** It is the process of examining data against the preconceived hypotheses.
- (A) Data gathering
 - (B) Data analysis
 - (C) Hypothesizing
 - (D) Research Design
- 1051.** What role do statistical tools play in quantitative research?
- (A) They make data collection complex
 - (B) They provide subjective insights
 - (C) They focus on qualitative data
 - (D) They facilitate quick data analysis
- Explanation:** Statistical tools aid in quick data analysis in quantitative research.
- 1052.** Type of graph that shows parts of a whole; the proportional relationship of one set of values.
- (A) Line graph
 - (B) Bar and column graph
 - (C) Table
 - (D) Pie graph

- 1053.** What is the purpose of data analysis in research?
- (A) To make the report lengthy
 - (B) To interpret raw data and extract meaningful insights
 - (C) To ignore discrepancies
 - (D) To finalize the hypothesis
- 1054.** A self-report inventory intended to measure students' confidence that they are "college ready" will be given to 500 high school students in January and then to the same students in February. What type of reliability should be considered?
- (A) Internal-consistency.
 - (B) Alternate forms.
 - (C) Inter-rater.
 - (D) Test-retest.
- 1055.** You are trying to prove that your family spends way too much money on entertainment. Your family monthly spending looks like this: \$450 food \$800 entertainment \$1,250 home mortgage \$200 maintenance \$150 meals outside home
- (A) Line Graph
 - (B) Histogram
 - (C) Pie Chart
 - (D) Bar Graph
- 1056.** A survey asks students what their favorite type of ice cream is.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
- 1057.** Which plot shows median, quartiles, and outliers?
- (A) Histogram
 - (B) Box plot
 - (C) Bar chart
 - (D) Scatter plot
- 1058.** How much people like dogs-Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
- 1059.** A table that uses numbers to record data
- (A) Frequency table
 - (B) Key
 - (C) Scale
 - (D) Line plot
- 1060.** Use the legend of the map to decide on the classification method used:
- (A) Natural breaks
 - (B) Quantile
 - (C) Equal interval
 - (D) Standard deviation
- 1061.** Nationality-Is this Categorical data classified as Ordinal or Nominal?
- (A) Ordinal
 - (B) Nominal
- 1062.** This is the process of transforming qualitative research data from written interviews or field notes into typed text
- (A) Segmenting
 - (B) Coding
 - (C) Transcription
 - (D) Memoing
- 1063.** The time during a week that children ages 12 to 15 reported they watched television
- (A) Discrete quantitative
 - (B) Continuous quantitative
 - (C) Qualitative
 - (D) None of above
- 1064.** Adequate analysis of the data is the least difficult phase of research for the novice.
- (A) True
 - (B) False
- 1065.** Which of the following is not a type of analysis used in longitudinal research?
- (A) Cross-sectional analysis
 - (B) Time-series analysis

- (C) Longitudinal data analysis
(D) Growth curve analysis
- 1066.** If you are looking for quartile data, which data plot would you choose to construct?
(A) Dot Plots
(B) Histograms
(C) Box & Whisker Plots
(D) Movie Plot
- 1067.** The number of students in each year level is counted. What type of data is number of students?
(A) Numerical
(B) Categorical
- 1068.** A group of researchers are studying the annual profits of the companies A, B, and C for a four year period (2017-2020). They obtained the information from the respective financial statements of the companies. Shown below is a graph presenting the data collected from their research. By how much larger was company A's annual profit than company B's annual profit in the year 2018?
(A) Php 1 000 000
(B) Php 500 000
(C) Php 5 000 000
(D) Php 100 000
- 1069.** A Graphic representation of data. The bar can be VERTICAL or Horizontal, but a vertical graph is also known as a column chart.
(A) Bar Chart
(B) Pie Chart
(C) Graphs
(D) Line Chart
- 1070.** In the data table, would light transmittance be qualitative or quantitative?
(A) Qualitative
(B) Quantitative
(C) Both qualitative and quantitative
(D) None of above
- 1071.** SPSS is used for:
(A) Drawing
(B) Music editing
(C) Data analysis
(D) Translation
- 1072.** Students measure their height in centimeters.
(A) Categorical Data
(B) Numerical Data
(C) Change Over Time
(D) None of above
- 1073.** A ___ is used to compare differences between groups.
(A) Bar chart
(B) Histogram
(C) Scattergram
(D) None of above
- 1074.** Which analysis is the simultaneous analysis of two variables?
(A) Univariate Analysis.
(B) Bivariate Analysis.
(C) Multivariate Analysis.
(D) None of these.
- 1075.** Confirmation of the reliability of the results, the establishment of correlation and functional dependence refer to:
(A) Mathematical processing of research results
(B) The choice of the goal, direction and topic of research work
(C) Analysis and registration of the results of research work
(D) Calculation of the effectiveness of research results, scientific and technical products
(E) Preparation for the experiment and its implementation
- 1076.** What do you do if you have an anomalous result?
(A) Include the result in when taking an average

- (B) Exclude the result when taking an average
- (C) Edit and change the result without anyone knowing
- (D) None of above
- 1077.** A survey that indicates the average time a client has to wait in a drugstore can make use of statistical treatment.
- (A) TRUE
- (B) FALSE
- 1078.** In qualitative data analysis, what method involves breaking down the data into smaller, meaningful units for easier interpretation?
- (A) Grounded theory
- (B) Content analysis
- (C) Narrative analysis
- (D) Data reduction
- 1079.** If you want to display how sales changed every month in a year, which chart is MOST suitable?
- (A) Pie Chart
- (B) Line Chart
- (C) Column Chart
- (D) Doughnut Chart
- 1080.** Types of classification of Data are:
- (A) Qualitative classification
- (B) Chronological classification
- (C) Interpersonal classification
- (D) Geographical classification
- (E) Personal classification
- 1081.** It is where observations are written and interpreted.
- (A) Introduction section
- (B) Method section
- (C) Analysis section
- (D) Recommendation section
- 1082.** Which form of data analysis examines large amounts of data through coding?
- (A) Discourse analysis
- (B) Content analysis
- (C) Both
- (D) None of the above
- 1083.** How do we convert a frequency table into a cumulative frequency table?
- (A) By finding the midpoint of each interval and multiplying by frequency.
- (B) By filling in the gaps on a two way table so both sets of data have the same total.
- (C) By finding the running total of the frequency at every interval.
- (D) None of above
- 1084.** Which one is NOT appropriate to use to study the association between variables?
- (A) Scatterplot.
- (B) Pie chart.
- (C) Correlation.
- (D) Regression.
- 1085.** Which type of chart would be appropriate if you want to show how some particular data changes over time to illustrate a trend?
- (A) Area chart
- (B) Line chart
- (C) Pie chart
- (D) Scatter chart
- 1086.** What is the term for a detailed examination of the elements or structure of something?
- (A) Analysis
- (B) Synthesis
- (C) Evaluation
- (D) Interpretation
- 1087.** The researchers wanted to know if they measured their variable of interest twice, they would expect similar outcomes. What reliability would they use?
- (A) Test-retest reliability
- (B) Inter-rater reliability
- (C) Split-half reliability
- (D) Parallel-forms reliability

- 1088.** The researchers will ____ the data using statistics.
(A) Advertise
(B) Analyze
(C) Attach
(D) Attack
- 1089.** Joe is losing an average of 0.3 kg a week. Is this continuous or discrete data?
(A) Discrete
(B) Continuous
- 1090.** Data in columns and rows that are next to each other and easy for highlighting together to make charts with.
(A) Contiguous data.
(B) Double Data Entry.
(C) Visual Verification.
(D) Verification.
- 1091.** Determine the level of measurement of the data set. The flight numbers of 6 departing flights from Chicago O'Hare International Airport on an afternoon in October of 2016 are listed: 17855159450934583342110
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 1092.** Natural language is a special type of
(A) Unstructured data
(B) Structured data
(C) Streaming data
(D) None
- 1093.** "The house is painted blue." What type of data is this?
(A) Quantitative
(B) Qualitative
(C) Inconclusive
(D) None of the above
- 1094.** Identify the best average to use for the following data ____ AGE OF THE STARTING 11 IN A FOOTBALL TEAM: 18, 23, 21, 20, 19, 17, 18, 19, 21, 22, 38
(A) Mean
(B) Median
(C) Mode
(D) None of above
- 1095.** What is a common method for analyzing data in scientific research?
(A) Guesswork
(B) Statistical analysis
(C) Anecdotal evidence
(D) Speculation
- 1096.** Which graph would be most appropriate to show the change in temperature over a week?
(A) Line graph
(B) Bar graph
(C) Pie chart
(D) Scatter plot
- 1097.** What chart would be best to compare the total sales of three salesmen?
(A) Column Chart
(B) Pie Chart
(C) Line Chart
(D) None of above
- 1098.** This is the technique utilized for analyzing the data gathered
(A) Quantitative Analysis.
(B) Data Gathering.
(C) Presentation of Data.
(D) Instrumentation.
- 1099.** The ____ scale of measurement is a rank-order scale.
(A) Nominal scale
(B) Ordinal scale
(C) Interval scale
(D) Ratio scale

- 1100.** A pre post study gave the following results: Pre-study-4, 4, 5, 4.6. Its corresponding Post study values are-3.5, 4.5, 4, 3.9. Which non parametric test is suitable here?
- (A) Mann Whitney
 - (B) Kruskal Wallis
 - (C) Wilcoxon
 - (D) Paired T Test
- 1101.** Which answer shows categorical data?
- (A) Age
 - (B) Height
 - (C) Number of cousins
 - (D) Favorite singer
- 1102.** What is the main purpose of statistics in research?
- (A) To make the research look scientific
 - (B) To manipulate data for desired results
 - (C) To summarize, analyze, and draw conclusions from data
 - (D) To avoid using numbers
- 1103.** This chart has disks that can be bigger or smaller, and also change their location.
- (A) Pie chart
 - (B) Bar chart
 - (C) Pictogram
 - (D) Bubble chart
- 1104.** Which of the following is a disadvantage of grouping data?
- (A) Loses accuracy of data as you no longer know exact data values
 - (B) Makes the data easy to read and understand
 - (C) Easy to spot patterns and compare data
 - (D) Helps to quickly see how data is distributed
- 1105.** In a survey, the ratio of the number of credit cards held to the number of people was 5.8 to 1. If 1421 credit cards were held, how many people were in the survey?
- (A) 58
 - (B) 580
 - (C) 245
 - (D) Not enough information is given
- 1106.** It is a word or short phrase to represent subjective data.
- (A) Theme
 - (B) Code
 - (C) Pattern
 - (D) Data
- 1107.** The Likert scale is an example of which type of scale?
- (A) Nominal
 - (B) Interval
 - (C) Ordinal
 - (D) None of the above
- 1108.** Which of the following is NOT a statistical method?
- (A) Mean
 - (B) Regression Analysis
 - (C) Grounded Theory Coding
 - (D) Standard Deviation
- 1109.** Chart used to show the relationship of two values
- (A) Line Chart
 - (B) Column Chart
 - (C) XY Scatter Chart
 - (D) Stacked Bar Chart
- 1110.** Which menu would you select to run statistical procedures?
- (A) Analyze menu
 - (B) Graph menu
 - (C) Data menu
 - (D) Transform menu
- 1111.** In content analysis, what is coding?
- (A) The process of selecting a sample
 - (B) The process of assigning categories or labels to units of analysis
 - (C) The manipulation of independent variables
 - (D) The analysis of survey responses

- 1112.** Determine the level of measurement of the data set. The gender on an employment application.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1113.** Head size-Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
- 1114.** Which type of data is this? Time it takes to get to school.
- (A) Quantitative
 - (B) Categorical
- 1115.** Ranking satisfaction level as "high," "medium," or "low" exemplifies which scale?
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1116.** Data analysis involves collecting open-ended data, based on asking general questions and developing an analysis from the information supplied by participants.
- (A) True
 - (B) False
- 1117.** Which scale has a meaningful zero point?
- (A) Ordinal scale
 - (B) Interval scale
 - (C) Ratio scale
 - (D) Nominal scale
- 1118.** After you collect your data and describe the process of data collection, you will?
- (A) Explain the details of the data analysis process
 - (B) Immediately move to the conclusion
 - (C) Write the reference
 - (D) None of above
- 1119.** Earring length-Is this numerical data classified as Discrete or Continuous?
- (A) Discrete
 - (B) Continuous
- 1120.** Which one is not the scale of measurement commonly used in research?
- (A) Road
 - (B) Ratio
 - (C) Interval
 - (D) Ordinal
- 1121.** It refers to the quality of being exact.
- (A) Accuracy
 - (B) Clarity
 - (C) Depth
 - (D) Precision
- 1122.** A value that lies outside most of the other values in a set of data. This could mean it is much smaller or much larger than the other values.
- (A) Variance
 - (B) Frequency
 - (C) Outlier
 - (D) Central Tendency
 - (E) Range
- 1123.** Represent the smallest and largest data values that can belong to each class.
- (A) Class Intervals
 - (B) Class Limits
 - (C) Range
 - (D) Limits
- 1124.** Which type of numerical data uses only whole numbers?
- (A) Categorical data
 - (B) Continuous data
 - (C) Discrete data
 - (D) None of the above

- 1125.** What is the purpose of a histogram?
- (A) To show a possible relationship between two sets of data
 - (B) To show the spread of all of the data on a number line
 - (C) To show the frequency of the data
 - (D) None of above
- 1126.** The process of grouping data is
- (A) Editing
 - (B) Classifying
 - (C) Tabulating
 - (D) Coding
- 1127.** Why is editing of data important?
- (A) To reduce sample size
 - (B) To prepare for conducting interviews
 - (C) To ensure quality and consistency
 - (D) To add bias
- 1128.** Developed correlation and regression.
- (A) Antiquity to the Nineteenth Century
 - (B) 1822-1911: Francis Galton
 - (C) 1832-1920: Wilhelm Wundt
 - (D) 1860-1944: James Mckeen Cattell
 - (E) Alfred Binet
- 1129.** Which chart type is best suited for showing the relationship between two variables?
- (A) Pie chart
 - (B) Bar chart
 - (C) Line chart
 - (D) Scatter plot
- 1130.** The temperature in Springfield on this date in the last ten years were: 68, 68, 69, 70, 72, 70, 68, 75, 55, 67. What is the average temperature on this date over the last ten years? (Round to nearest whole number)
- (A) 60
 - (B) 61
 - (C) 68
 - (D) 69
- 1131.** Creating a model which can predict the user's future intention can be considered as an example of?
- (A) Descriptive Analytics
 - (B) Predictive Analytics
 - (C) Prescriptive Analytics
 - (D) Diagnostic Analytics
- 1132.** What is a synonym for 'chart' in the context of data representation?
- (A) Map
 - (B) Graph
 - (C) Story
 - (D) Poem
- 1133.** When creating a chart comparing employee absences over a period of six months, which data will appear on the Y-axis?
- (A) Absences
 - (B) Employee name
 - (C) Months
 - (D) Salaries
- 1134.** Entering data twice is an example of Verification.
- (A) True
 - (B) False
- 1135.** An instruction to carry out operations on the numerical data
- (A) Spreadsheet
 - (B) Row
 - (C) Column
 - (D) Formula
- 1136.** Data analysis strategies are chosen based on:
- (A) Research objectives
 - (B) Report length
 - (C) Researcher's opinion
 - (D) Software availability
- 1137.** Time on the Internet per week-Is this numerical data classified as Discrete or Continuous?
- (A) Discrete
 - (B) Continuous

- 1138.** What do you call this process of analyzing the data and searching for essential information that answers the research questions?
- (A) Sampling
 - (B) Data analysis
 - (C) Coding
 - (D) Categorizing
- 1139.** Which of the following describes the characteristics of research where data are in a form of statistics?
- (A) Objectives
 - (B) Replication
 - (C) Numerical Data
 - (D) Large Sample Size
- 1140.** What are some common data analysis techniques used in research?
- (A) Descriptive statistics (e.g., mean, median, mode)
 - (B) Inferential statistics (e.g., t-tests, ANOVA)
 - (C) Regression analysis
 - (D) Machine learning
 - (E) All of the above
- 1141.** Age of Oscar Winners
- (A) Categorical
 - (B) Quantitative
- 1142.** Refers to the extent of detail within the data (fine and detailed or coarse and abstract).
- (A) Data Granularity
 - (B) Data Level
 - (C) Data Format
 - (D) Data Description
- 1143.** What does the use of evidence-based practice mandate regarding research?
- (A) Replication without critical appraisal
 - (B) Discarding studies with negative results
 - (C) Analysis and systematic review of findings
 - (D) Selective reading of headlines only
- 1144.** The purpose of a coding manual is to
- (A) Provide researchers with instructions about how to code the data
 - (B) List all the categories that have been omitted from the schedule
 - (C) Test researcher's knowledge of statistics
 - (D) Provide a form onto which the data can be entered
- 1145.** Reasons of analysis and visualising data are
- (A) Quickly get a sense of the trends, relationships and patterns contained within the data.
 - (B) Define strategy for which model to use at a later stage.
 - (C) Communicate the same to others effectively
 - (D) All of these
- 1146.** What does "Theme Analysis" involve in the process of analyzing data in ethnography?
- (A) Identifying patterns or themes that signify how the cultural group works.
 - (B) Compiling a detailed description of the group.
 - (C) Writing a traditional report based on the researcher's views.
 - (D) Creating a performance-based output like a play or poem.
- 1147.** In tabulation, the title of the table is usually placed:
- (A) At the bottom
 - (B) In the middle
 - (C) At the top
 - (D) Beside the table
- 1148.** Which of the following best describes the concept of validity in research?
- (A) The complexity of the research design
 - (B) The entertainment value of the research
 - (C) The ability to replicate results
 - (D) The accuracy of the measurements and findings

- 1149.** Avni is conducting a survey to measure customer satisfaction at her cafe. She uses a specific questionnaire to gather feedback from her customers. If Avni uses the same questionnaire multiple times and consistently receives the same results regarding customer satisfaction, this indicates that the questionnaire —
- (A) Validity
 - (B) Reliability
 - (C) Probability
 - (D) None of above
- 1150.** To which step of research process cycle does representing data refer?
- (A) Collecting the data
 - (B) Analyzing and interpreting the data
 - (C) Breaking down the data
 - (D) Reviewing the problem
- 1151.** Which type of qualitative data analysis places a high priority on being true to, respecting, and capturing the details of individual situations?
- (A) Unique case orientation.
 - (B) Inductive analysis.
 - (C) Holistic perspective.
 - (D) Context sensitivity.
- 1152.** What does 'df' stand for?
- (A) Data Fragmentation
 - (B) Deep Freezer
 - (C) Discount Factor
 - (D) Data Frame
- 1153.** A table which presents data for two characteristics is called:
- (A) Simple table
 - (B) One-way table
 - (C) Two-way table
 - (D) Complex table
- 1154.** This organizer is used to present data usually in rows and in columns for reference.
- (A) Venn Diagram
 - (B) Concept Maps
 - (C) Table
 - (D) Graph
- 1155.** The primary reason to conduct exploratory data analysis in PSPP is to:
- (A) Avoid research questions
 - (B) Skip data cleaning
 - (C) Understand patterns, trends, and distributions in the dataset
 - (D) Modify the research problem
- 1156.** A data ___ is a technique for establishing a match, or balance between the source data and the target data warehouse.
- (A) Set
 - (B) File
 - (C) Map
 - (D) Raw
- 1157.** What type of data can a histogram be used to represent?
- (A) Discrete
 - (B) Continuous
 - (C) None of the above
 - (D) Both of the above
- 1158.** The purpose of using a scatter diagram in research is to:
- (A) Find the average
 - (B) Show frequency
 - (C) Display variable correlation
 - (D) Show percentages
- 1159.** Jason asked people how much money they saved in the last week. The data is shown in the table below. Which table shows all data in a histogram correctly?
- (A) Histogram A
 - (B) Histogram B
 - (C) Histogram C
 - (D) Histogram D
- 1160.** Gwen has a great idea for documenting the growth of the bean sprout she planted in her science class. She wants to create a chart that tracks vertical plant growth on a weekly measurement schedule. Which type of chart

- would be best for Gwen to use to track the plant growth?
- (A) Line chart
 - (B) Area chart
 - (C) Scatter chart
 - (D) Pie chart
- 1161.** The number of people wearing jeans in each classroom at OCHS
- (A) Discrete quantitative
 - (B) Continuous quantitative
 - (C) Qualitative
 - (D) None of above
- 1162.** The cell phone listed as third best on an on-line electronics review website.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1163.** Which of the following would be used for trend and pattern identification?
- (A) Table
 - (B) Report
 - (C) Database
 - (D) Line graph
- 1164.** Which of the following best describes the role of classification in data analysis?
- (A) It helps in identifying trends and patterns
 - (B) It increases the complexity of data
 - (C) It ensures data is always accurate
 - (D) It speeds up data collection
- 1165.** Part of statistical table which is placed above the table.
- (A) Title of the Table
 - (B) Title of the Column
 - (C) Stub
 - (D) None of above
- 1166.** You are researching for a school project. Which step would best help you apply the CRAAP test at a strategic level?
- (A) Only check the publication date of your sources
 - (B) Use multiple sources and compare their accuracy, authority, and relevance to your topic
 - (C) Accept information from any website
 - (D) Ignore the intended audience of the source
- 1167.** Deals with organizing and summarizing observations so that they are easier to comprehend
- (A) Statistics
 - (B) Descriptive Statistics
 - (C) Inferential Statistics
 - (D) Statistician
- 1168.** Careful use of statistical methods does not include —
- (A) Carefully defining the situation
 - (B) Gathering data
 - (C) Summarizing the data accurately
 - (D) Deriving and communicating meaningful conclusions
 - (E) Throwing out data that does not fit the graph
- 1169.** The collection and classification of data that are in the form of numbers.
- (A) Statistics
 - (B) Data
 - (C) Range
 - (D) Population
- 1170.** Which of the following is not a part of a statistical table?
- (A) Title
 - (B) Caption
 - (C) Stub
 - (D) Index
- 1171.** If the quantitative variable can take only an at most countable number of values, then such data is called —
- (A) Continuous Data
 - (B) Discrete Data

- 1172.** What does a Histogram chart display?
- (A) Positive and negative changes in income
 - (B) Decreases in a value over each stage of a multi-step process
 - (C) Statistical distribution of values
 - (D) Frequency of values falling within a range
- 1173.** Emma, Liam, and Ava are working on a project. They have collected some data on the heights of their classmates. Which type of chart should they use to represent this data?
- (A) Bar chart, as it compares the frequency of categories
 - (B) Line chart, as it shows changes over time
 - (C) Histogram, as it shows the distribution of a dataset
 - (D) Pie chart, as it shows how a part relates to the whole
- 1174.** Integrate findings across quantitative studies statistically; analysis unit is the study, not individual subject
- (A) Meta-analyses
 - (B) Meta-syntheses
- 1175.** Students answer a survey question that asks how many years they have been at their school.
- (A) Categorical Data
 - (B) Numerical Data
 - (C) Change Over Time
 - (D) None of above
- 1176.** Data which can be measured on a fixed scale and does have an absolute zero
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 1177.** Which one of the following shows continuous variation?
- (A) Blood group
 - (B) Height
 - (C) Male or female
 - (D) Tongue rolling
- 1178.** In a survey of 100 students of a school, it was found that 49 liked watching football, 53 liked watching hockey and 62 liked watching basketball. Also, 27 liked watching football and hockey both, 29 liked watching basketball and hockey both and 28 liked watching football and basket ball both. 5 liked watching none of these games. How many students like watching all the three games?
- (A) 5
 - (B) 13
 - (C) 14
 - (D) 15
- 1179.** When the information is recorded in the form of ranks given to the subjects are said to be in
- (A) Ordinal scale
 - (B) Ratio scale
 - (C) Interval scale
 - (D) Categorical scale
- 1180.** How can you identify themes, debates, and gaps in the literature?
- (A) By making up your own themes and debates
 - (B) By consulting fortune tellers
 - (C) By looking at patterns, recurring questions, and missing elements in the literature
 - (D) By focusing only on one source
- 1181.** Checking the data collected for omissions, legibility and consistency in classification is an example of:
- (A) Coding.
 - (B) Editing.
 - (C) Analysis.
 - (D) Fieldwork.
- 1182.** Determine whether the data related to the topic below is discrete or continuous: The number of voters favoring a candidate
- (A) Discrete
 - (B) Continuous

- 1183.** Data exploration can be done using ____
- (A) Decision making
 - (B) Problem scoping
 - (C) Evaluation
 - (D) Data Visualization
- 1184.** A way to describe the shape of a data display that indicates most of the data is on one side of the display.
- (A) Symmetric
 - (B) Unimodal
 - (C) Skewed
 - (D) Uniform
- 1185.** A student wanted to compare how many CDs he owns to how many his classmates own. What type of data is he collecting?
- (A) Continuous
 - (B) Discrete
- 1186.** The following statements are correct EXCEPT:
- (A) Organize and prepare the data for analysis
 - (B) Read through all data
 - (C) Read the parts which are interesting
 - (D) Represent the data within a report
- 1187.** When should a bar graph be used?
- (A) When comparing parts of a whole
 - (B) When showing change over time
 - (C) When comparing data between different groups of categories
 - (D) Whenever you want
- 1188.** When data spans from 1 to 1,000,000 the best axis is:
- (A) Linear
 - (B) Nominal
 - (C) Logarithmic
 - (D) None of above
- 1189.** Which type of graph displays the frequency of numerical data in consecutive, equal intervals with adjacent bars?
- (A) Boxplot
 - (B) Circle Graph
 - (C) Histogram
 - (D) Line Graph
- 1190.** This part of the research answers the question how will the researchers analyze their research data.
- (A) Data Analysis
 - (B) Data Gathering
 - (C) Data Interpretation
 - (D) Data Presentation
- 1191.** A series of vertical columns each representative of a data series.
- (A) Stacked bar
 - (B) Column chart
 - (C) XY scatter chart
 - (D) Pie chart
- 1192.** Which of the following data analysis methods is best suited for identifying patterns and themes in qualitative research data?
- (A) Regression analysis
 - (B) Thematic coding
 - (C) T-tests
 - (D) Randomized controlled trials
- 1193.** A statistical technique that allows users to investigate patterns of effect within a system of variables. It is one of several types of the general linear model that examine the impact of a set of predictor variables on multiple dependent variables
- (A) Path Analysis
 - (B) Structural Equation Model
 - (C) Quantitative Research
 - (D) Mixed Methods
- 1194.** Which of the following is a key component of data preparation?
- (A) Data Visualization
 - (B) Data Cleaning
 - (C) Model Deployment
 - (D) Problem Statement

1195. Best plot to show correlation between two variables:

- (A) Histogram
- (B) Bar chart
- (C) Scatter plot
- (D) Pie chart

1196. Which type of graph shows how numerical data changes over time, using connected points to display trends?

- (A) Boxplot
- (B) Circle Graph
- (C) Histogram
- (D) Line Graph

1.5.2 Descriptive Statistics

1. The difference between the greatest and least number in a set of data:

- (A) Mean
- (B) Median
- (C) Mode
- (D) Range

2. Which descriptive measure quantifies the typical spread of values around the mean?

- (A) Variance expresses average squared deviation
- (B) Standard deviation expresses typical dispersion
- (C) Median expresses central ordered position
- (D) Skewness expresses distribution asymmetry

3. In quantitative data, which of the following is described as the distance in the scoring units of the variable from the highest to lowest?

- (A) Range
- (B) Standard deviation
- (C) Mean
- (D) Variance

4. Allows an examination of the relationship between variables; is there a relationship between these variables? Are they positively or negatively related?

- (A) T-TEST
- (B) ANALYSIS OF VARIANCE (ANOVA)
- (C) PEARSON'S CORRELATION (PEARSON'S R)
- (D) None of above

5. Which measure of central tendency best represents this set of data: 3, 18, 2, 0, 1, 0, 2, 1

- (A) Mean
- (B) Median
- (C) Mode
- (D) Range

6. How do you find the mean of a set of numbers?

- (A) Add all of the numbers up and then divide by the amount of numbers you have
- (B) Do the largest number minus the smallest number
- (C) Find the middle number
- (D) Find the number that occurs most often

7. Description of a relationship between two sets of data

- (A) Independent
- (B) Sequence
- (C) Equation
- (D) Correlation

8. Data that can take only certain fixed values (like number of students) is known as:

- (A) Continuous data
- (B) Discrete data
- (C) Structured data
- (D) Unstructured data

9. Which measure would shopkeepers use to find the best selling sizes of their stock?

- (A) Mode
- (B) Median
- (C) Mean
- (D) Range

10. Find the mean of 1, 2, 3, 4, 5
(A) 2
(B) 3
(C) 4
(D) 4.5
11. Which is a synonym for "average?"
(A) Median
(B) Mode
(C) Range
(D) Mean
12. The vertical axis of an ogive comes from this column:
(A) Cumulative Frequency
(B) Frequency
(C) Midpoint
(D) Upper Class Limits
13. I have bars, but don't call me a bar graph. I'm a ____
(A) Histogram
(B) Pareto Chart
(C) Stem-and-Leaf Plot
(D) Ogive
14. What is the median of this data set? 100, 400, 500, 200, 300, 200, 200
(A) 100
(B) 200
(C) 400
(D) 300
15. The purpose of descriptive statistics in PSPP is to:
(A) Summarize data
(B) Perform inferential analysis
(C) Predict future values
(D) Test hypotheses
16. In quantitative research, which statistical method provides a summary of ordered data?
(A) Inferential Statistics
(B) Descriptive Statistics
(C) Predictive Statistics
(D) Qualitative Statistics
17. How do we calculate the range of data?
(A) Subtract the smallest number away from the largest number.
(B) Subtract the largest number away from the largest number.
(C) Subtract the largest number away from the smallest number.
(D) Subtract the smallest number away from the smallest number.
18. A histogram is a form of bar graph in which the categories are ____ and equal intervals.
(A) Circle
(B) Consecutive
(C) Large
(D) Small
19. Calculate the mean: 99, 87, 84, 91, 97, 86, 83, 90, 93
(A) 101.2
(B) 90
(C) 81
(D) 73.6
20. What can you infer from a pie chart where one category is significantly larger than the others?
(A) The pie chart is inaccurate
(B) The dominant category is the least relevant
(C) The category that is significantly larger is the dominant or most prevalent category.
(D) The other categories are equally important
21. Put data set in order from least to greatest and find the middle number.
(A) Finding the Median
(B) Finding the Mode
(C) Finding the Mean
(D) Range

22. MID POINT IS EQUAL TO:
(A) $(\text{UPPER CLASS LIMIT} + \text{LOWER CLASS LIMIT}) / 2$
(B) $(\text{UPPER CLASS LIMIT} - \text{LOWER CLASS LIMIT}) / 2$
23. The bar chart shows the ages of children in a youth club. What is the range of ages?
(A) 4
(B) 5
(C) 7
(D) 6
24. The strength and direction of the relationship between two variables are expressed by the ____
(A) Illusory correlation
(B) Positive correlation
(C) Negative correlation
(D) Correlation coefficient
25. The mean of 25 observations is 36. The mean of first 13 observations is 32 and that of last 13 observations is 39. What is the value of 13th observation?
(A) 20
(B) 23
(C) 32
(D) 40
26. A measure of the degree of relatedness between two variables is
(A) Variability
(B) Correlation
(C) Standard deviation
(D) Prediction
27. A collection of observation produced by sorting them into classes and showing their frequency of occurrence in each class.
(A) Statistics table
(B) Frequency distribution table
(C) Distribution column
(D) Frequency Graph
28. Find the mean of 11, 5, 2
(A) 4
(B) 5
(C) 6
(D) 7
29. This classification is used for normally distributed data to easily see which features are below or above the mean.
(A) Quantile
(B) Jenks
(C) Equal interval
(D) Standard deviation
30. The lower and upper class limits are 20 and 30. The mid value of the class is ____
(A) 10
(B) 25
(C) 30
(D) 50
31. Deals with describing the characteristics of individual objects or groups of individuals under study.
(A) Inferential Statistics
(B) Descriptive Statistics
(C) Statistics
(D) Statistic
32. Which of the following best describes how to summarize data using descriptive statistics, including mean, median, mode, and measures of spread?
(A) By using graphical representations only
(B) By calculating mean, median, mode, and measures of spread
(C) By collecting more data
(D) By ignoring outliers
33. Which average could give more than one possible answer?
(A) Mean
(B) Median
(C) Mode
(D) None of above

34. The goal of ____ is to focus on summarizing and explaining a specific set of data
- (A) Inferential statistics.
 - (B) Descriptive statistics.
 - (C) None of the above.
 - (D) All of the above.
35. Which of the following statements corresponds to a frequency distribution?
- (A) A table that shows the number of times a data entry appears in a data set.
 - (B) A data set that shows the number of data entries that appear in a time.
 - (C) A conclusion drawn from a sample.
 - (D) The boundaries between two consecutive bars.
36. What do you call a number that describes a population statistics?
- (A) Sample statistic
 - (B) Parameter
 - (C) Variable
 - (D) Distribution
37. Compare the averages of Set A = {2, 4, 6, 8} and Set B = {1, 3, 5, 7, 9}. Which set has a higher average?
- (A) Set A
 - (B) Set B
 - (C) Both have the same average
 - (D) Cannot be determined
38. The relationship between variables
- (A) Correlation
 - (B) Case study
 - (C) Volunteer bias
 - (D) Replicated
39. The statistic indicated by the symbol “r” is called the
- (A) Relational ratio.
 - (B) Mean.
 - (C) Correlation coefficient.
 - (D) R-test.
40. Any statistic indicating the central tendency or most typical score of a set of scores-such as the arithmetic mean, median, and mode. The term average, without qualifications as to type, typically, refers to the arithmetic mean.
- (A) Assessment
 - (B) Average
 - (C) Battery
 - (D) Bias
41. Given the frequency table below, what is the total number of observations?
- | Value | Frequency |
|-------|-----------|
| 1 | 4 |
| 2 | 5 |
| 3 | 6 |
| 4 | 3 |
- (A) 15
 - (B) 16
 - (C) 17
 - (D) 18
42. A survey company was trying to see if people in a state thought the pollution was too high. Which choice best represents a parameter?
- (A) All people in the state.
 - (B) Percentage of all people in the state who thought the pollution was too high.
 - (C) 500 randomly selected residents of the state.
 - (D) 71% of the residents surveyed thought the pollution was too high.
43. A histogram is like a bar graph, except that ____ (check all that apply.)
- (A) The bars touch
 - (B) It is for quantitative data
 - (C) The bars are arranged in ascending order
 - (D) It is for qualitative data
44. What type of information is usually seen on the y-axis
- (A) Category
 - (B) Statistics
 - (C) Name of the chart
 - (D) Pattern

45. It ranks individuals in terms of the degree to which they possess a characteristic.
- (A) Nominal Scale
 - (B) Ordinal Scale
 - (C) Interval Scale
 - (D) Ratio Scale
46. How do you calculate the mean of a set of data?
- (A) Sort the data into numerical order. Find the middle piece of data.
 - (B) Subtract the smallest data point from the largest data point.
 - (C) Add all of the data and divide by the number of data points.
 - (D) Find the most common data point.
47. Which is the most useful visualization for visualizing data that can express the frequency of events in your data, often grouping data into ranges?
- (A) Bar Chart
 - (B) Pie Chart
 - (C) Histogram
 - (D) Line Chart
48. Adam's 6 test scores have an arithmetic mean of 75%. Which formula would help you find the total amount of scores? Clue: A mean is an average. To find the average of a number you must add all the scores and divide it by the total number of scores. In this problem, we are not given the total amount of scores.
- (A) $75/100-6 = x$
 - (B) $X/6 = 75$
 - (C) $75-6 = x$
 - (D) $75/6 = x$
49. The mean of 9 observations is 16. One more observation is included and the new mean becomes 17. The 10th observation is
- (A) 18
 - (B) 26
 - (C) 30
 - (D) 7
50. To find the ____ you add up all the numbers and then divide by how many numbers you have.
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Range
51. If there is an even number of data in the data set how do you find the median?
- (A) Order the data and find the middle value
 - (B) Order the data add the 2 middle values and divide by 2
52. How can you calculate the relative frequency from a frequency table?
- (A) Multiply each frequency by the total number of observations and divide by 100.
 - (B) Add each frequency to the total number of observations and divide by 100.
 - (C) Subtract each frequency from the total number of observations and divide by 100.
 - (D) Divide each frequency by the total number of observations and multiply by 100.
53. What is the purpose of using arithmetic mean?
- (A) To obtain a single value which is representative of all the items
 - (B) To complicate the data analysis
 - (C) To create a sense of uncertainty around the data
 - (D) To make the data look more confusing
54. What term describes the statistical likelihood of a specific hazard occurring within a specific time period?
- (A) Resilience
 - (B) Vulnerability
 - (C) Risk
 - (D) Mitigation
55. What information can you gather from a bar chart?
- (A) A bar chart provides information about the frequency or distribution of categorical data.

- (B) A bar chart provides information about the change in data over time.
- (C) A bar chart provides information about the average value of a dataset.
- (D) A bar chart provides information about the relationship between two variables.
56. The level of measurement where all mathematical calculations are possible is:
- (A) Nominal
- (B) Ordinal
- (C) Interval
- (D) Ratio
57. Levels of Measurement include
- (A) Nominal, Ordinal, Interval, Ratio
- (B) Interval, Ratio, Nominal, Ordinal
- (C) Nominal, Interval, Ratio, Ordinal
- (D) Ratio, Interval, Ordinal, Nominal
58. Measuring the Central Tendencies (mean, mode, median) of how much food a herd of cows eat in a day would be a/an ____
- (A) Descriptive Statistic
- (B) Inferential Statistic
59. A frequency distribution is
- (A) A tabular summary of a set of data showing the relative frequency.
- (B) A graphical form of representing data.
- (C) A tabular summary of a set of data showing the frequency of items in each of several nonoverlapping classes.
- (D) A graphical device for presenting categorical data.
60. A student kept track of how many strikeouts his favorite professional baseball player earned every season and used the data to create a histogram for a statistics course. The histogram he created is displayed above. What is the most common range of strikeouts (mode) for this baseball player?
- (A) 26-50
- (B) 76-100
- (C) 101-125
- (D) 126-150
61. Deals with the collection & presentation of data
- (A) Inferential Statistics
- (B) Descriptive Statistics
- (C) Statistics
- (D) Statistic
62. Statistical data are often relevant when discussing psychological disorders. For example, a researcher might want to know how many new cases of depression are diagnosed each year, a figure called the ____ of the disorder.
- (A) Prevalence
- (B) Incidence
- (C) Recurrence
- (D) Ratio
63. Observe the frequency distribution: Estimate the class boundaries.
- (A) 20, 31, 42, 53, 64, 75, 86, 96
- (B) 20, 31, 42, 53, 64, 75, 86
- (C) 19.5, 30.5, 41.5, 52.5, 63.5, 74.5, 85.5, 96.5
- (D) 30, 41, 52, 63, 74, 85, 96
64. The mean of first five prime numbers is
- (A) 5
- (B) 6
- (C) 5.6
- (D) 5.8
65. Measurements, numbers and percentages
- (A) Testimonial Evidence
- (B) Statistics
- (C) Personal or Anecdotal Evidence
- (D) None of above
66. Can the mean, median and mode of data coincide?
- (A) Yes
- (B) No
67. A PIE CHART is done in ____
- (A) Frequencies
- (B) Cumulative frequencies
- (C) Percentages
- (D) Decimals

68. A fact or a piece of data from a study is a what?
(A) Statistic
(B) Thesis
(C) Hook
(D) None of the above
69. For set of data 1, 1, 1, 2, 2, 3, 4, 5, 5, and 25 the mean is 4.9, the median is 2.5, and the mode is 1. Which is the best measure of center to best describes the data set?
(A) Mean
(B) Median
(C) Mode
(D) Range
70. Which level of measurement can have absolute zero value?
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
71. A quantity calculated to indicate the extent of deviation for a group as a whole.
(A) Standard deviation
(B) Mean
72. To find the ____ you put all numbers in order from least to greatest and find the number that is in the middle.
(A) Mean
(B) Median
(C) Mode
(D) Range
73. The middle number in an ordered set of data is called the ____
(A) Mean
(B) Median
(C) Mode
(D) Range
74. A business analyst wants a macro-level view to spot data errors before modeling. Which descriptive measure is least helpful for error detection?
(A) Mean across groups
(B) Standard deviation levels
(C) Minimum and maximum checks
(D) Skewness of distributions
75. What is the term for a numerical value that summarizes a characteristic of a sample?
(A) Statistic
(B) Parameter
(C) Median
(D) Mean
76. How can you identify the mode of a dataset using a histogram?
(A) The mode can be identified as the bin with the highest bar (frequency) in the histogram, indicating the most common value range in the dataset.
(B) The mode is the average of all the values in the dataset.
(C) The mode is the median value of the dataset.
(D) The mode can be found by identifying the lowest bar in the histogram.
77. "How pleased are you with your job: Not pleased, somewhat pleased or very pleased?" The answer to this question will be placed in which scale?
(A) Nominal Scale
(B) Interval Scale
(C) Ratio Scale
(D) Ordinal Scale
Explanation: Ordinal Scale: data measurement that involves ordered categorical response. Can be ordered from highest to lowest but are not always equally spaced. E.g. How do bears make you feel? 1. Shitty, 2. Meh, 3. Nice, 4. Orgasmic
78. Which type of psychological study uses measures of central tendency and measures of variability?
(A) Inferential statistics

- (B) Correlational research
(C) Experiments
(D) Descriptive statistics
79. A histogram displays the ages of students in a class. If the most common age is 12 and there are 10 students aged 12, what percentage of the class does this represent if there are 40 students in total?
(A) 25%
(B) 20%
(C) 30%
(D) 15%
80. What statistical tool is used to measure the given specific question? "How may the high school Science teachers of District 1 be described in terms of gender?"
(A) Weighted mean
(B) Chi-square test
(C) Frequency distribution
(D) Median
81. As one variable increases, the other decreases
(A) Positive correlation
(B) Null hypothesis
(C) Negative correlation
(D) No correlation
82. What is the range of the following set of data numbers: 4,1,5,6,9,2?
(A) 1
(B) 5
(C) 8
(D) 9
83. Find the mean: 9, 9, 3, 2, 8, 7, 4
(A) 49
(B) 6
(C) 9
(D) 7
84. Which scale of measurement involves ranking?
(A) Nominal
- (B) Ordinal
(C) Interval
(D) Ratio
85. What is the approximate mean of the data? 45, 55, 60, 48, 57, 52, 49
(A) 50
(B) 55
(C) 52.3
(D) 53
86. A company wants to know the average number of hours their employees work per week. They randomly select 30 employees and record their weekly hours. What is the population parameter they are trying to estimate?
(A) The total number of employees
(B) The average number of hours worked by all employees
(C) The number of employees working more than 40 hours
(D) The number of employees working less than 40 hours
87. The average of a set of numbers:
(A) Mean
(B) Median
(C) Mode
(D) Range
88. In a statistical display, each data value should be represented by the same amount of area.
(A) Simpson's Paradox
(B) Independence
(C) Area Principle
(D) Segmented Bar Chart
89. If the symbol of ratio is colon then, what is the symbol of proportion?
(A) :
(B) ::
90. It consists of the collection, organization, summation, and presentation of data.
(A) Statistics

- (B) Probability
(C) Descriptive Statistics
(D) Inferential Statistics
91. The difference between the smallest and largest value in a data set is called the ____
(A) Median
(B) Mode
(C) Range
(D) Mean
92. Which of these sentences describes the data in the most detail?
(A) The pie charts illustrate what percentage of people graduated from university
(B) The pie charts illustrate what percentage of men and women that graduated from an American university in 2020 found a job in a related industry
93. Given the data set: 1, 2, 3, 6, 9, 11, 45, 102, calculate the percentile for the data value 11 in this set.
(A) 70th percentile
(B) 62.5th percentile
(C) 72.5th percentile
(D) 75th percentile
94. Branch of stats that organizes, summarizes and displays data
(A) Descriptive
(B) Inferential
95. Jamal said that 41 was the number in a data set that was listed the most. Which term would define Jamal's number?
(A) Mean
(B) Median
(C) Mode
(D) Range
96. Quantitative data is often presented in the form of ____
(A) Statistics
(B) Demographic Information
- (C) Text
(D) Mathematics
97. A scientist measures the height of five different plant species: 10 cm, 12 cm, 8 cm, 15 cm, and 11 cm. What is the average height of these plants?
(A) 11.2 cm
(B) 10 cm
(C) 12 cm
(D) 13 cm
98. A statistician is counting the amount of goals scored by a hockey team. What data type does this example represent?
(A) Categorical: Nominal
(B) Categorical: Ordinal
(C) Numerical: Discrete
(D) Numerical: Continuous
99. What type of data? class level (Sr. Jr. Soph, Fresh)
(A) Ordinal
(B) Nominal
100. In this measurement, the numerical values just "name" the attribute uniquely.
(A) Nominal Measurement
(B) Ordinal Measurement
(C) Interval Measurement
(D) None of above
101. The middle number in a sorted list of numbers.
(A) Mean
(B) Median
(C) Ordered pair
(D) Quotient
102. A data set can have more than one mode
(A) True
(B) False

- 103.** Mr Holland gives his class a test. The results are: 34%, 44%, 75%, 21%, 98%, 86%, 71%, 76%, 63%, 55%. How many students scored above the mean percentage?
- (A) 4
(B) 5
(C) 6
(D) 7
- 104.** Which of the following descriptive statistics is most appropriate for describing ratio data?
- (A) Mean
(B) Median
(C) Mode
(D) Range
- 105.** The mean of the data set can be found by ____
- (A) Finding the sum of the numbers and then dividing by the total amount of numbers in the data set
(B) Subtracting the minimum from the maximum
(C) Choosing the middle number
(D) Choosing the number that occurs most
- 106.** Choose the statistical question:
- (A) How many sixth graders ate breakfast on Monday?
(B) How many sixth graders eat breakfast each school day?
- 107.** Which descriptive statistic is used to measure data dispersion?
- (A) Mean
(B) Standard deviation
(C) Mode
(D) Median
- 108.** Which of the following is an example of nominal data?
- (A) Test scores (out of 100)
(B) Favorite color
(C) Height in centimeters
(D) Income in dollars
- 109.** For bars of the same width in a histogram, the higher the frequency, the taller the bar. This means that the height of the bar is ____ the frequency that it represents.
- (A) Directly proportional to
(B) Inversely proportional to
- 110.** Which measure of central tendency would be most appropriate for analyzing skewed data?
- (A) Mean
(B) Median
(C) Mode
(D) Standard deviation
- 111.** What is Descriptive Statistics
- (A) The branch of statistics that involves the organization, summarization, and display of data.
(B) A branch of Math which deals with information
(C) A branch of Statistics which deals with Population
(D) None of above
- 112.** Find the full form-MAD
- (A) None of these
(B) Mean as dirt
(C) Mean absolute deviation
(D) None of above
- 113.** There are 40 sheep on a farm. The weight of the sheep is ____ data
- (A) Qualitative
(B) Discrete
(C) Continuous
(D) None of above
- 114.** The average budget allocation for the top five schools in Malaysia was RM367.6 million.
- (A) Descriptive Statistics
(B) Inferential Statistics
(C) I tak tau lah
(D) None of above

115. What do you do if there are two numbers in "the middle" when you are finding the median?
- (A) Pick your favorite number
 - (B) Add the two numbers in the middle & then divide by two.
 - (C) They are both the median
 - (D) None of the above
116. The following data set shows the minutes spent on internet by 50 internet users. Find the range.
- (A) 86
 - (B) 7
 - (C) -79
 - (D) 79
117. Out of 5 brands of chocolates in a shop, a boy has to purchase the brand which is most liked by children. What measure of central tendency would be most appropriate if the data is provided to him?
- (A) Mean
 - (B) Mode
 - (C) Median
 - (D) Any of the three
118. Find the mean of the following numbers 40, 38, 46, 38, 51 and 57.
- (A) 45
 - (B) 40
 - (C) 38
 - (D) 35
119. The average is called the ____
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Range
120. What does it mean for a graph of data to be SYMMETRICAL?
- (A) Most of the data is grouped to the left side
 - (B) Most of the data is grouped to the right side
 - (C) Most of the data is in the middle (draw a line down the middle and both sides look the same)
 - (D) None of above
121. A Correlation of "0"
- (A) Positive Correlation
 - (B) No Correlation
122. What is the main goal of descriptive statistics?
- (A) To summarize data
 - (B) To interpret theories
 - (C) To test hypotheses
 - (D) To structure the sampling population
123. A data set can have more than one median?
- (A) True
 - (B) False
124. Based on the graph provided, what is the median of the data?
- (A) 14
 - (B) 14.5
 - (C) 15
 - (D) None of above
125. Correlations tell us
- (A) How things work
 - (B) How many things are being measured
 - (C) How things are linked
 - (D) How participants feel
126. If one bar is taller than another in a bar chart, what does that indicate about the data?
- (A) The taller bar represents a larger value
 - (B) Bar colors determine the values
 - (C) The taller bar represents a smaller value
 - (D) Bars show categories without values
127. Julius is analyzing survey responses from 100 users. He wants to find the most frequently selected interface design. What statistical measure should he use?
- (A) Mode

- (B) Median
(C) Range
(D) Mean
- 128.** Observe the frequency distribution: Estimate the relative frequency of the fourth class.
(A) 69
(B) 5.3
(C) 0.189 or 18.9%
(D) 0.54 or 54%
- 129.** James collects the following data on the number of dolphins seen from a cruise ship over the last 5 days. 12, 15, 13, 22, 18 What is the mean absolute deviation of the data?
(A) 16
(B) 5
(C) 3.2
(D) 1
- 130.** The maximum length in feet of several whales is listed below. 46, 53, 33, 53, 79 If the maximum length of the Blue Whale, 98 feet, is added to this list, which of the following statements would be true?
(A) The mode would decrease.
(B) The mean would increase.
(C) The median would decrease.
(D) The mean would decrease.
- 131.** What is the 'range' in the context of data analysis?
(A) The difference between the highest and lowest value in a data set
(B) The most frequently occurring value in a data set
(C) The middle value in a sorted data set
(D) The average value of a data set
- 132.** The heights of some students are given. 158cm 172cm 164cm 164cm 167cm 159cm What is the range of the heights?
(A) 13cm
(B) 14cm
(C) 164cm
(D) 330cm
- 133.** Identify the best average to use for the following data — FAVOURITE FOOTBALL TEAM: Arsenal, Chelsea, Chelsea, Arsenal, Southampton, Arsenal, Man Utd
(A) Mean
(B) Median
(C) Mode
(D) None of above
- 134.** Spread is the ____, or difference, between least and greatest values.
(A) Mean
(B) Median
(C) Mode
(D) Range
- 135.** Descriptive statistics help in:
(A) Summarizing and organizing data
(B) Testing hypotheses
(C) Determining causal relationships
(D) All of the above
- 136.** Which measure would you use to find the spread of temperature over a certain night?
(A) Mode
(B) Median
(C) Mean
(D) Range
- 137.** A bank creates a dashboard that visualizes the monthly distribution of loan types (mortgage, personal, auto) across different age groups. This is primarily:
(A) Predictive Analytics
(B) Descriptive Analytics
(C) Prescriptive Analytics
(D) Diagnostic Analytics
- 138.** Is the question below an example of a statistical question? "How many pets do students at Democracy Prep have?"
(A) YES
(B) NO

139. Which is the closest to what most people would call the "average?"
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Range
140. Which branch summarizes and presents characteristics of a data set without generalizing beyond it?
- (A) Predictive analytics forecasts future sales trends
 - (B) Qualitative methods interpret interview narratives
 - (C) Inferential statistics test population hypotheses
 - (D) Descriptive statistics summarize sample characteristics
141. A statistical relationship between two variables.
- (A) Generalizability
 - (B) Blinding
 - (C) Regression
 - (D) Correlation
142. Which of the following is an example of a statistical question?
- (A) How old is your math teacher?
 - (B) How old is your shoulder partner?
 - (C) How old are teachers at Democracy Prep?
 - (D) How old is Democracy Prep?
143. Those methods involving the collection, presentation, and characterization of a set of data in order to properly describe the various features of that set of data are called:
- (A) Statistical inference
 - (B) The scientific method
 - (C) Sampling
 - (D) Descriptive statistics
144. The highest number minus the lowest number in a set of data is called the ____
- (A) Mean
 - (B) Range
 - (C) Median
 - (D) Maximum
145. A numerical value used to indicate how widely individuals in a group vary is known as ____
- (A) Mode
 - (B) Mean
 - (C) Standard deviation
 - (D) Median
146. A retail chain reviews its sales reports from the previous holiday season to determine which regions had the highest revenue. Which type of analytics is being used?
- (A) Prescriptive Analytics
 - (B) Descriptive Analytics
 - (C) Predictive Analytics
 - (D) Diagnostic Analytics
147. Why might skewness be reported alongside mean and variance in a descriptive summary?
- (A) It proves causal effects between variables
 - (B) It guarantees normality of the distribution
 - (C) It indicates asymmetry that can bias averages
 - (D) It replaces standard deviation in all cases
148. In a survey, 40 people were asked if they liked or disliked Jam. Of the group surveyed, 5% said they disliked Jam. How many people disliked Jam?
- (A) 2
 - (B) 10
 - (C) 20
 - (D) 5
149. Seth said that 17 was the number that showed the difference between the lowest and highest numbers in a data set. Which term would define Seth's number?
- (A) Mean

- (B) Median
(C) Mode
(D) Range
150. Which measure of central tendency is affected by outliers?
(A) Mean
(B) Median
(C) Mode
(D) Range
151. During a field study, a group of students records the number of insects found in 6 different locations: 8, 10, 12, 14, 16, and 18. What is the average number of insects per location?
(A) 12
(B) 13
(C) 14
(D) 15
152. The arithmetic mean of a set of 10 numbers is 20. If each number is first multiplied by 2 and then increased by 5, then what is the mean of new numbers?
(A) 20
(B) 25
(C) 40
(D) 45
153. A value that describes how data is centered.
(A) Data
(B) Measure of Center
(C) Median
(D) Statistics
154. Determine the level of measurement of the data set. The Year of College Graduation on an employment application.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
155. Useful for organizing and summarizing data and provide a "picture" of the data.
(A) Descriptive Statistics
(B) Data Analysis
(C) Inferential Statistics
(D) Measurement Instruments
156. Which statistical measure is commonly used to determine the internal consistency reliability of a single test administration?
(A) T-Test
(B) Kendall-Tau
(C) Cronbach alpha
(D) Pearson r correlation
157. Which measure would you use to find the spread of marks in an exam
(A) Mode
(B) Median
(C) Mean
(D) Range
158. The 30 students in a class did a survey of their favorite movie series and recorded. What was the relative frequency for High School Musical?
(A) 0.30
(B) 0.09
(C) 0.2
(D) 0.33
159. Which measure would you use to find the most popular snack in your class?
(A) Mode
(B) Median
(C) Mean
(D) Range
160. What term describes the average of a set of data numbers?
(A) Mean
(B) Mode
(C) Median
(D) Range

- 161.** Determine the level of measurement of the data set. The Number of Years at Last Job on an employment application.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 162.** How is the size of each wedge in a pie chart determined?
- (A) By the frequency of data within each category
 - (B) By the mean of the dataset
 - (C) By the standard deviation of the dataset
 - (D) By the range of the dataset
- 163.** A pie graph allows you to easily see
- (A) Information about the proportion or percentage of something in relation to the whole.
 - (B) The total number of each category.
 - (C) How much data occurs within a range of numbers.
 - (D) The spread of the data.
- 164.** What is the purpose of using averages?
- (A) To convert the collected information and raw data in brief
 - (B) To confuse the audience with complex calculations
 - (C) To make the data look more interesting
 - (D) To create a sense of mystery around the data
- 165.** Which two are examples of descriptive statistics?
- (A) Median and correlation.
 - (B) Mean and standard deviation.
 - (C) Hypothesis testing and histograms.
 - (D) Variance and regression analysis.
- 166.** How can we describe a relationship between variables where one variable increase, the other variable also increases?
- (A) Positive correlation
 - (B) Negative correlation
 - (C) Causation correlation
 - (D) Perfect correlation
- 167.** The amount of time (in minutes) it takes students to complete an online course module is classified as:
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 168.** The ____ number is often the median.
- (A) Lowest
 - (B) Highest
 - (C) Middle
 - (D) Last
- 169.** Which analytics technique focuses on summarizing and describing historical data?
- (A) Prescriptive Analytics
 - (B) Descriptive Analytics
 - (C) Machine Learning
 - (D) Predictive Analytics
- 170.** In what scenarios is the harmonic mean more appropriate than the arithmetic mean?
- (A) When calculating the average of a set of numbers without ratios.
 - (B) When averaging rates or ratios, especially in scenarios involving speed or efficiency.
 - (C) In scenarios where data is normally distributed.
 - (D) When dealing with absolute values rather than rates.
- 171.** If a bar chart has the following values: 4, 8, 6, 10, what is the mean value?
- (A) 6
 - (B) 7
 - (C) 8
 - (D) 10
- 172.** Display that shows frequency of data divided into equal intervals
- (A) Box Plot

- (B) Histogram
(C) Line Graph
(D) None of above
173. Which age group represents the mode (the most frequent)?
(A) 40-49
(B) 50-59
(C) 60-69
(D) 70-79
(E) 80-89
174. The ____ describes how similar or varied the set of observed values are for a particular data item.
(A) Central tendency
(B) Range
(C) Spread
(D) Quartile
175. Which phrase is appropriate for describing the lowest value?
(A) Maximum value
(B) Median value
(C) Minimum value
(D) Average value
176. 'A histogram can have more than one mode.'
(A) True
(B) False
177. To find the ____ you put all numbers in order from least to greatest and then take the largest number minus the smallest number.
(A) Mean
(B) Median
(C) Mode
(D) Range
178. Calculate the mean. 23, 18, 9, 10, 5
(A) 55
(B) 13
(C) 14
(D) 17
179. What are the key components of a frequency table?
(A) Standard deviation, variance, range
(B) Mean, median, mode
(C) Data, variables, observations
(D) Categories, frequency, relative frequency
180. The heights of nine basketball players at Northside High School were recorded. 62 in. 65 in. 69 in. 68 in. 70 in. 71 in. 66 in. 65 in. 65 in. What is the median height of these nine players?
(A) 65
(B) 66
(C) 68
(D) 71
181. Which statistical procedure should be used in order to answer this research problem: "How may the level of reading comprehension of the selected students be described?"
(A) T-test
(B) Mean and Standard Deviation
(C) Frequency and Percentage
(D) Correlation
182. Data in pie charts can be reported in all of these EXCEPT
(A) Percentages
(B) Numerical
(C) Fractions
(D) Degrees
183. Determine the mean for the set of data. 153, 176, 249, 150, 620, 242
(A) 209
(B) 265
(C) 318
(D) 470
184. Data analysis is to be done and the nurse researcher wants to include measures of variability. These include the following except:
(A) Range

- (B) Variance
(C) Mean
(D) Standard deviation
- 185.** Which statistical tool is used to measure the central tendency of a dataset in quantitative research?
(A) Regression Analysis
(B) Correlation Analysis
(C) ANOVA (Analysis of Variance)
(D) Descriptive Statistics
- 186.** At Donald's Donuts the number of donut holes in a bag can vary. Help Donald find the mode. 12, 10, 10, 10, 13, 12, 11, 13, 10
(A) 13
(B) 12
(C) 11
(D) 10
- 187.** First quartile is also known as
(A) Lower quartile
(B) Upper quartile
(C) Median
(D) Geometric Mean
- 188.** How to show the proportions of different categories of data in a graph?
(A) Bar graph
(B) Circle graph
(C) Line graph
(D) Area graph
- 189.** What is a frequency distribution?
(A) A method to calculate the mean of a data set.
(B) A summary of how often each value occurs in a data set, often represented in a histogram.
(C) A graphical representation of data using pie charts.
(D) A technique to find the median of a data set.
- 190.** A pie chart allows you to easily see
(A) Information about the proportion of parts relative to the whole.
(B) The total number of each category.
(C) How much data occurs within a range of numbers.
(D) The spread of the data.
- 191.** Is the following question statistical or non statistical? On average, how many water bottles does every class go through daily?
(A) Statistical
(B) Non Statistical
- 192.** Which among the following divides the data in two different category
(A) Ordinal Scale
(B) Nominal Scale
(C) Interval Scale
(D) Ratio Scale
- 193.** In order to find the median, the data must be sorted from least to greatest first.
(A) True
(B) False
- 194.** Find the mean from the following data — 2, 11, 7, 6, 9, 1
(A) 8
(B) 5
(C) 6
(D) 7
- 195.** What is the mean of the following set of data? 2, 6, 10, 31, 14, 8
(A) 11.8
(B) 71
(C) 12
(D) 14.2
- 196.** What is the term for the median of the lower half of the data?
(A) Lower Quartile
(B) Upper Quartile
(C) Median
(D) Maximum

197. Identify the best average to use for the following data ____ FAVOURITE SHOP: Next, Next, H&M, H&M, Topman, Topman, Debenhams, River Island, Next
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) None of above
198. The number of hours you spent studying each day during the past week
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
199. Find the mean of 3,4,5,6,7
- (A) 4
 - (B) 5
 - (C) 6
 - (D) 7
200. On a scatter plot both sets of data values increase
- (A) Positive Correlation
 - (B) Negative Correlation
 - (C) No Correlation
 - (D) Correspondence
201. The mean is less than the median
- (A) Skewed left
 - (B) Skewed right
 - (C) Symmetrical
 - (D) None of above
202. At Donovan's Donuts, the number of donut holes in a box can vary. Help Donovan find the mode. 12, 10, 10, 10, 13, 12, 11, 13, 10
- (A) 13
 - (B) 12
 - (C) 11
 - (D) 10
203. Analyze the data distribution: [10, 12, 12, 14, 14, 16, 16, 18]. What is the mode of the data set?
- (A) 10
 - (B) 12
 - (C) 14
 - (D) 16
204. Which is an example of a numerical data?
- (A) Strongly agree
 - (B) Male/Female
 - (C) 85% test score
 - (D) Teacher comments
205. The number of times a particular observation occurs is called its ____
- (A) Frequency
 - (B) Data
 - (C) Array
 - (D) Range
206. Which of the following data sets has no mode?
- (A) {2,3,4,4,5}
 - (B) {3,4,5,6,7}
 - (C) {7,7,8,9,9}
 - (D) {1,1,4,5,7}
207. This measures how strong or weak the relationship between 2 quantitative variables are.
- (A) Scatter Plot
 - (B) Causation
 - (C) Correlation
 - (D) Line of best fit
208. Which of the data sets below has a mean of 12?
- (A) 23, 8, 12, 11, 6
 - (B) 19, 3, 20, 6, 2
209. In statistics, what does a pie chart represent?
- (A) Representation of trends over time
 - (B) Comparison of two variables
 - (C) Display of geographical data
 - (D) Distribution of a whole into parts

- 210.** Measure of central tendency most affected by extreme scores
(A) Median
(B) Mode
(C) Mean
(D) Range
- 211.** A botanist is studying the average number of petals on a flower species. She counts the petals on 5 flowers and records: 5, 7, 6, 8, and 9. What is the average number of petals per flower?
(A) 9
(B) 8
(C) 7
(D) 6
- 212.** Calculation and interpretation of ____ measures help understand research findings in AP Psychology.
(A) Statistical
(B) Historical
(C) Anecdotal
(D) Philosophical
- 213.** The weight of a person in kilograms is an example of ____
(A) Nominal data
(B) Continuous data
(C) Discrete data
(D) Ordinal data
- 214.** The most commonly reported measure of central tendency is ____ (Research Methods and Statistics Part III)
(A) The Mode
(B) The Median
(C) The Standard Deviation
(D) The Mean
- 215.** What is the mean of the data set? 85, 97, 84, 88, 95, 100, 88
(A) 19
(B) 83
(C) 88
(D) 91
- 216.** Which of the following best represents ordinal data?
(A) Test scores on a math exam
(B) High school class ranking
(C) Zip codes of students
(D) Number of siblings
- 217.** The distance between the greatest number and the least number in a set of data.
(A) Mean
(B) Median
(C) Range
(D) Mode
- 218.** The mean is also known as
(A) Weighted average
(B) Summation of values
(C) Arithmetic average
(D) Spread
- 219.** Which type of data is most suitable for analysis using descriptive statistics?
(A) Qualitative data
(B) Categorical data
(C) Quantitative data
(D) Unstructured data
- 220.** Parameters describes
(A) Mean value of sample
(B) Variation in the sample
(C) Central value of population
(D) None of the above
- 221.** What are bins in a histogram?
(A) Bins are the intervals or ranges into which data is grouped in a histogram.
(B) Bins are the individual data points collected in a histogram.
(C) Bins are the colors used to represent different data sets in a histogram.
(D) Bins are the labels assigned to each bar in a histogram.

222. What is the branch of mathematics dealing with the collection, organization, analysis, interpretation and presentation of data?
- (A) Algebra
 - (B) Geometry
 - (C) Probability
 - (D) Statistics
223. An increase in one measurement corresponding to an increase in another measurement would be an example of a:
- (A) Correlative cause
 - (B) Primary cause
 - (C) Positive correlation
 - (D) Positive cause
224. The number of students in different classes of a school are 33, 38, 48, 33, 34, 34, 33 and 24. The mode of this data is
- (A) 24
 - (B) 34
 - (C) 33
 - (D) 48
225. The data shows the test scores of four different classes. Algebra: {87, 91, 64, 88, 74} Geometry: {98, 86, 84, 91, 79} Statistics: {87, 72, 84, 88, 91} Pre-Algebra: {63, 82, 78, 71, 74} Which class had the smallest interquartile range?
- (A) Algebra
 - (B) Geometry
 - (C) Statistics
 - (D) Pre-Algebra
226. A sample of 10 measurements has a mean of 15.7 and a sample of 20 measurements has a mean of 14.3. Find the mean of all 30 measurements.
- (A) 16.3
 - (B) 14.8
 - (C) 17.1
 - (D) 21.4
227. Given two data sets: [2, 3, 3, 4, 4, 4, 5, 5, 5, 5] and [1, 2, 2, 3, 3, 3, 4, 4, 4, 4], which data set has a higher mode?
- (A) Data set 1
 - (B) Data set 2
 - (C) Both have the same mode
 - (D) Cannot be determined
228. Which measure is dividing the data into two equal parts?
- (A) Median
 - (B) Mean
 - (C) Mode
 - (D) Variance
229. Which of the following is closest to the mean? 5, 9, 11, 12, 13, 13, 18, 20
- (A) 11
 - (B) 12
 - (C) 13
 - (D) 14
230. Levels of measurement can be classified as:
- (A) Nominal, ordinal, interval, ratio
 - (B) Binomial, multinomial, normal
 - (C) T-test, z-test, chi-squares, f-test
 - (D) None of the above
231. When are ratios useful?
- (A) When you want to compare a part of something to a whole.
 - (B) When you want to divide 2 numbers.
 - (C) When you are doing chores.
 - (D) None of above
232. Correlation measures
- (A) Causation
 - (B) Strength and direction of relationship
 - (C) Probability
 - (D) Variance
233. Compare the data sets: [1, 2, 2, 3, 3, 3, 4, 4, 4, 4] and [2, 3, 3, 4, 4, 4, 5, 5, 5, 5]. Which data set has a higher median?
- (A) Data set 1
 - (B) Data set 2
 - (C) Both have the same median
 - (D) Cannot be determined

234. The principal used facts in the form of numbers to report daily suspensions.
- (A) Average
 - (B) Statistics
 - (C) Mode
 - (D) Median
235. A way to describe the concentration and the spread of data in a set is a ____
- (A) Histogram
 - (B) Stem-and-leaf plot
 - (C) Box-and-whisker plot
 - (D) Line graph
236. Descriptive statistics is
- (A) Statistical methods used to find something about population
 - (B) Statistical methods used to describe data that have been collected
 - (C) Statistical methods used to forecast something under study
 - (D) Statistical methods used to estimate something under study
237. Median formula for set of even number distribution is
- (A) Median = $((n/2)^{th} \text{observation} + (n/2 + 1)^{th} \text{observation}) / 2$
 - (B) Median = $(n+1)/2$
 - (C) Median = $n/2$
 - (D) Middle value of the class interval
238. Last year the average price of gas each month was: \$2.45, \$2.99, \$2.87, \$2.72, \$2.33, \$2.56, \$2.36, \$2.45, \$2.32, \$2.49, \$2.54, and \$3.04. What is the range of the average gas prices?
- (A) \$0.99
 - (B) \$0.72
 - (C) \$0.59
 - (D) \$0.50
 - (E) \$0.44
239. For a discrete variable, the classification of its data is known as a ____
- (A) Frequency Array
 - (B) Univariate
 - (C) Bivariate
 - (D) None of these
240. The bar chart shows the ages of children in a youth club. What is the modal age?
- (A) 10
 - (B) 11
 - (C) 13
 - (D) 12
241. Which of the following is not a level of measurement?
- (A) Nominal
 - (B) Ordinal
 - (C) Ratio
 - (D) Proportion
242. Number of people watching different TV shows
- (A) Bar chart
 - (B) Line graph
243. Time on the Internet per week - Is it classified as numerical or categorical?
- (A) Numerical
 - (B) Categorical
244. Find the mean of the numbers below: 1.4, 2.8, 2.4, 2.5, 2.8, 3.1, 1.1
- (A) 2.3
 - (B) 2.2
 - (C) 2.4
 - (D) 2.1
245. What type of data is this? The diameter of a pizza.
- (A) Categorical
 - (B) Quantitative
246. Find the mean from the following data: 5, 3, 6, 5, 3, 9, 4
- (A) 8
 - (B) 5

- (C) 6
(D) 7
- 247.** Determine the level of measurement: what color is your car
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 248.** During a wildlife survey, a team records the number of mammals spotted in 3 different regions: 12, 15, and 18. What is the average number of mammals observed per region?
(A) 18
(B) 15
(C) 16.5
(D) 13
- 249.** Avani is conducting a study to understand how the amount of time students spend studying affects their exam scores. She wants to find out if there is a relationship between these two quantitative variables. ____ is used to test relationships between quantitative variables. In other words, it's a measure of how things are related
(A) Regression
(B) Correlation
(C) Variance
(D) None of above
- 250.** Which average requires you to put the values in order and find the middle value?
(A) Mean
(B) Median
(C) Mode
(D) Range
- 251.** This is a graphed cluster of dots, each of which represents the value of 2 variables. would be used in a correlational study.
(A) Plot box
(B) Scatterplot
(C) Variables
(D) Samples
- 252.** If people were asked how many children they had, they might answer 0, 1, 2, 3, or more. This implies
(A) Continuous quantity
(B) Discrete quantity
(C) Categorical quantity
(D) Heterogenous
- 253.** Mean, Median and Mode can be same for some data.
(A) True
(B) False
- 254.** Which of the following uses the absolute value in its calculation?
(A) Range
(B) Mode
(C) Mean Deviation
(D) Standard Deviation
- 255.** The total of all the observations divided by the number of observations is called
(A) Geometric mean
(B) Standard deviation
(C) Arithmetic mean
(D) Median
- 256.** The table below shows the lengths of fences a company installed during a week. Which statement is true?
(A) The 275-foot fence caused the mean to be significantly lower than the median.
(B) The 275-foot fence caused the median to be significantly lower than the mean.
(C) The 2,250-foot fence caused the mean to be significantly greater than the median.
(D) The 2,250-foot fence caused the median to be significantly greater than the mean.
- 257.** Find the mean of the following shoe sizes: 7, 8.5, 9, 8.5, 7, 8.5, 10, 12, 8, 7.5 DON'T ROUND YOUR ANSWER:)
(A) 8.6
(B) 9.5
(C) 7.8
(D) 7.5

258. Classify as categorical, discrete or continuous. The heights of the trees in a garden.
- (A) Categorical
 - (B) Discrete
 - (C) Continuous
 - (D) None of above
259. Ordinal type of data are ordered in nature
- (A) True
 - (B) False
260. Which type of graph illustrates the distribution of numerical data through quartiles, showing minimum, first quartile, median, third quartile, and maximum?
- (A) Boxplot
 - (B) Circle Graph
 - (C) Histogram
 - (D) Line Graph
261. The level of measurement that classifies data into categories with no order or ranking is called:
- (A) Interval
 - (B) Ratio
 - (C) Nominal
 - (D) Ordinal
262. Which of the following is defined as numerical categories with a true zero point
- (A) Numerical
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
263. Referring to the middle term or mean of the middle two terms of a series of values arranged in order of magnitude.
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Range
264. Which of the following is calculated using all the available data?
- (A) Arithmetic Mean
 - (B) Range
 - (C) Median
 - (D) Mode
265. Collection, presentation, and description of sample data.
- (A) Descriptive Statistics
 - (B) Inferential Statistics
 - (C) Qualitative Variable
 - (D) Quantitative Variable
266. Which of the following is the arithmetic average of a set of data points?
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Midpoint of the magnitudes
267. Which of the following statistical coefficients is used to measure the consistency of student performance across all individual items within a single test administration?
- (A) Pearson r correlation
 - (B) Kendall-Tau
 - (C) Cronbach Alpha
 - (D) Linear Regression
268. What is the range of the data set below? 25, 24, 24, 24, 33
- (A) 54
 - (B) 9
 - (C) 7
 - (D) 24
269. The least value in a data set is called the ____
- (A) Minimum
 - (B) Maximum
 - (C) Lower quartile
 - (D) Upper quartile
270. Statistics in singular sense includes
- (A) Collection of data
 - (B) Organisation of data
 - (C) Analysis of data
 - (D) All of these

271. ____ is the difference between the greatest and least values in a set of data.
- (A) Range
 - (B) Domain
 - (C) Function
 - (D) Relation
272. How would you describe the mean?
- (A) Difference
 - (B) Average
 - (C) Middle
 - (D) Most repeated number
273. What's the best average to use when there is an extreme value (outlier)?
- (A) Mode
 - (B) Median
 - (C) Mean
 - (D) Range
274. A researcher is analyzing the average weight of a sample of mice. The weights in grams are: 20, 22, 24, 26, and 28. What is the average weight of the mice?
- (A) 22 g
 - (B) 24 g
 - (C) 25 g
 - (D) 26 g
275. Calculating by adding all of the scores together and dividing by the number of scores.
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) Range
 - (E) Standard Deviation
276. The mean of 10 test scores was calculated as 70, but it turns out that one of the scores was misread as 45 instead of 55. What is the correct average of the test scores?
- (A) 65
 - (B) 80
 - (C) 71
 - (D) 75
277. On a scatterplot there is no relationship between the data sets
- (A) Positive Correlation
 - (B) Negative Correlation
 - (C) No Correlation
 - (D) Increasing Relation
278. The relative frequency of a class is computed by
- (A) Dividing the midpoint of the class by the sample size.
 - (B) Dividing the frequency of the class by the midpoint.
 - (C) Dividing the sample size by the frequency of the class.
 - (D) Dividing the frequency of the class by the sample size.
279. What is the mean of the set of data? 4, 8, 3, 10, 4, 6, 0
- (A) 4
 - (B) 5
 - (C) 6
 - (D) 7
280. The mean marks obtained by a class of 40 students is 65. The mean marks of half of the students is found to be 45. The mean marks of the remaining students is ____
- (A) 85
 - (B) 60
 - (C) 70
 - (D) 65
281. An item with choice of answer 'Excellent', 'Good', 'Average', 'As Expected', 'Below Average', is an example of ____ level of measurement.
- (A) Ordinal
 - (B) Nominal
 - (C) Ranking
 - (D) Qualitative

- 282.** A frequency distribution is a tabular summary of data showing the
- (A) Fraction of items in several classes.
 - (B) Percentage of items in several classes.
 - (C) Relative percentage of items in several classes.
 - (D) Number of items in several classes.
- 283.** A measure of the extent to which two factors vary together, and thus of how well either factor predicts the other is called a
- (A) Measure of central tendency
 - (B) Coefficient
 - (C) Inferential statistic
 - (D) Correlation
- 284.** Which of the following continuous quantitative variables is interval?
- (A) No. of students
 - (B) Temperature
 - (C) Gender
 - (D) Weight
- 285.** If 60 values were used for the data, about how many data values are greater than the 1st quartile?
- (A) 15
 - (B) 30
 - (C) 45
 - (D) 60
- 286.** In a follow-up study, a researcher reported that the correlation is .85. In the initial study, the correlation was .78. This means there is a(an):
- (A) Error and the researcher should repeat the study
 - (B) Stronger correlation between the variables in the follow-up study
 - (C) Unknown difference between the two studies
 - (D) Weaker correlation between the variables in the follow-up study
- 287.** Numerical data used to measure and describe characteristics of groups; uses measures of central tendency
- (A) Standard deviation
 - (B) Descriptive statistics
 - (C) Inferential statistics
 - (D) Percentile rank
- 288.** Find the mean from the following data — 1, 8, 3, 2, 8, 8
- (A) 8
 - (B) 5
 - (C) 6
 - (D) 7
- 289.** Which of the following is descriptive statistics?
- (A) T-test
 - (B) Z-test
 - (C) Standard deviation
 - (D) Chi-square test
- 290.** A bar graph in which the bars go across from left to right
- (A) Tally table
 - (B) Frequency table
 - (C) Vertical bar graph
 - (D) Horizontal bar graph
- 291.** What statistic is used to measure the relationship between two variables?
- (A) Median
 - (B) Standard deviation
 - (C) Mean
 - (D) Correlation coefficient
- 292.** All 30 students in the class were surveyed about what their favorite food is. 12 students chose hot dogs. What percentage of the class chose hot dogs?
- (A) 13%
 - (B) 26%
 - (C) 40%
 - (D) 60%

293. Which symbol represents the mean of a sample?
- (A) μ
 - (B) $\bar{x}$
 - (C) σ
 - (D) s
294. If the data are labels or categories that are used to define an attribute of an element, the scale we use is ____
- (A) Ordinal
 - (B) Nominal
 - (C) Interval
 - (D) Reason
295. When do we typically use pie charts?
- (A) To show how much water is in a river during a storm event.
 - (B) To only show favourite fruits.
 - (C) To show random numbers.
 - (D) To show percentages.
296. To find the average of a set of numbers, add all the numbers in the data set and divide by ____
- (A) 2
 - (B) Largest number
 - (C) Smallest number
 - (D) The number of items in the set
297. Descriptive statistics is mainly concerned with:
- (A) Testing hypotheses about populations
 - (B) Drawing conclusions beyond the data collected
 - (C) Summarizing and organizing data in a meaningful way
 - (D) Predicting future events
298. The mean salary of all female workers is \$35,000. The mean salary of all male workers is \$41,000. What must be true about the mean salary of all workers?
- (A) It must be \$38,000.
 - (B) It must be larger than the median salary.
 - (C) It could be any number between \$35,000 and \$41,000.
 - (D) It must be larger than \$38,000.
299. Paul asked 200 people what their favorite fruit was. 80 said it was bananas, 95 said it was apples, and the rest said it was some other fruit. What percent likes bananas the best?
- (A) 4%
 - (B) 40%
 - (C) 80%
 - (D) 200%
300. Find the mean of the numbers below: 12, 8, 14, 5, 1, 3, 0, 8, 10, 11
- (A) 7.2
 - (B) 8
 - (C) 9
 - (D) 7.4
301. A realtor wants to give a customer an idea of housing prices in a neighborhood. All the houses are priced within \$20,000 of one another, except one house that is much larger and more expensive than the rest. Which measure(s) of central tendency will be most affected by the one expensive house?
- (A) Mode only
 - (B) Mean only
 - (C) Both mode and mean
 - (D) Both mean and median
302. A parameter is ____
- (A) A planned activity whose results yield a set of data
 - (B) A numerical value that summarizes all of the data of an entire population
 - (C) The set of values collected from the variable from each of the elements that belong to the sample
 - (D) A numerical value summarizing the sample data
303. The sum of the percent frequencies for all classes will always equal
- (A) One

- (B) Number of classes
(C) Number of items in the study
(D) 100
- 304.** Find the mean number of phones. You may want to copy out the table with an extra column.
(A) 2.56
(B) 2.3
(C) 1.5
(D) 2.2
- 305.** If a bar chart shows a normal distribution, what shape does it have?
(A) Bell-shaped
(B) Uniform
(C) Skewed to the left
(D) Skewed to the right
- 306.** The mean of five numbers is 30. If one number is excluded, their mean becomes 28. The excluded number is:
(A) 28
(B) 30
(C) 35
(D) 38
- 307.** A research lab measures the growth of a bacterial culture over four weeks, recording increases of 20,000, 25,000, 18,000, and 22,000 cells. What is the average weekly growth?
(A) 21,250 cells
(B) 20,000 cells
(C) 23,000 cells
(D) 19,500 cells
- 308.** The ranking of students based on their final exam results in a class (e.g., 1st, 2nd, 3rd) is classified as:
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 309.** In a study of amphibian populations, a researcher records the number of frogs in 4 different ponds: 25, 30, 35, and 40. What is the average number of frogs per pond?
(A) 30
(B) 32.5
(C) 37.5
(D) 35
- 310.** The sum of all numbers divided by the amount of numbers.
(A) Maximum
(B) Minimum
(C) Median
(D) Average
- 311.** The mean temperature in Glens Falls for the month of February is 23 degrees with a standard deviation of 4.2 degrees. Approximately what percent of days in February will have days below 23 degrees?
(A) 5%
(B) 34%
(C) 50%
(D) 68%
- 312.** If a question is statistical what does it have
(A) Data
(B) Data without variability
(C) Data with variability
(D) None of above
- 313.** Classify as categorical, discrete or continuous. The number of brothers a person has.
(A) Categorical
(B) Discrete
(C) Continuous
(D) None of above
- 314.** A table that shows classes or intervals of data entries with a count of the number of entries in each class.
(A) Frequency distribution
(B) Frequency polygon
(C) Histogram
(D) Ogive

- 315.** How do you find the median?
- (A) Order least to greatest, then slash from each side until you reach the middle
 - (B) Add the numbers in your data set, then divide by the amount you added
 - (C) Look for the number that repeats the most
 - (D) Highest number minus the lowest number
- 316.** What is the mean of this data set? 2, 3, 7, 4, 9
- (A) 4
 - (B) 5
 - (C) 6
 - (D) 7
- 317.** In an ____ the number used to rank the objects also represents equal increments of the attribute being measured.
- (A) Nominal scale
 - (B) Ratio scale
 - (C) Ordinal scale
 - (D) Interval scale
- 318.** Name that scale of measurement: Placing people into small, medium, and tall height groups
- (A) Ordinal
 - (B) Nominal
 - (C) Ratio
 - (D) Ordinary
- 319.** Of the mean, median, and mode, the median will always be the most affected by outliers.
- (A) True
 - (B) False
- 320.** The number of times a data value occurs is called the ____
- (A) Attribute
 - (B) Data
 - (C) Statistical question
 - (D) Frequency
- 321.** It is a brief descriptive coefficients that summarize a given data set, which can be either a representation of the entire or a sample of a population. It is called?
- (A) Analysis
 - (B) Descriptive statistics
 - (C) Totality
 - (D) Description Theory
- 322.** What proportion of the population's data do we expect to lie within 2 standard deviations of the mean?
- (A) 99.7%
 - (B) 90%
 - (C) 68%
 - (D) 95%
- 323.** For one week, Jeremy counted the number of sea shells he found each day on the beach. His numerical data set was: 20, 37, 4, 2, 35, 33, 2 What is the range for Jeremy's data set?
- (A) 20
 - (B) 33
 - (C) 35
 - (D) 2
- 324.** How often something occurs.
- (A) Frequency
 - (B) Population
 - (C) Range
 - (D) Mean
- 325.** If the grading of work life balance is classified as mild, moderate and severe the scale of measurement used is ____
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
- 326.** The largest and the smallest values of any given class of a frequency distribution are called:
- (A) Class Intervals
 - (B) Class marks
 - (C) Class boundaries
 - (D) Class limits

327. The temperatures in cities throughout the country that are listed in most newspapers.
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
328. Weight of trucks on the Garden State Parkway
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
329. A scientist records the growth of a plant over six weeks with measurements of 80 cm, 75 cm, 90 cm, 85 cm, 70 cm, and 95 cm. What is the average growth per week?
- (A) 82.5 cm
 - (B) 80 cm
 - (C) 85 cm
 - (D) 78.5 cm
330. Descriptive statistics can be represented by ____
- (A) ____ summaries or histograms.
 - (B) ____ essays or graphs.
 - (C) ____ essays or summaries.
 - (D) ____ histograms or graphs.
331. The most frequently occurring score(s) in a distribution.
- (A) Range
 - (B) Mean
 - (C) Median
 - (D) Mode
332. In a survey, customers are asked to rate their satisfaction with a product using the Likert scale. What scale of measurement is used in the survey?
- (A) Ordinal
 - (B) Ratio
 - (C) Interval
 - (D) Nominal
333. A ratio or fraction of the sample or population that has a specific characteristic of interest
- (A) Proportion
 - (B) Z values
 - (C) Alpha
 - (D) Critical Values
334. Middle score in an ordered list
- (A) Mean
 - (B) Mode
 - (C) Median
 - (D) Range
335. When the mean and the median are the same or almost the same value, the distribution is said to be symmetric.
- (A) True
 - (B) False
336. Mean represents the central value of a specific set of numbers in quantitative analysis.
- (A) True
 - (B) False
337. What is the range of the follow set of data: 60, 85, 29, 32, 45, 17, 55
- (A) 67
 - (B) 43
 - (C) 68
 - (D) 56
338. When a distribution is divided into ten equal parts, each score point describes the distribution as ____
- (A) Percentile
 - (B) Quantiles
 - (C) Quartile
 - (D) Decile
339. It is a number that describes a population.
- (A) Stratified
 - (B) Parameter
 - (C) Statistic
 - (D) Sampling

- 340.** What is the median?
- (A) The number in the middle when the numbers are in order from least to greatest.
 - (B) The difference between the largest and smallest number.
 - (C) The average
 - (D) The number that appears most often.
- 341.** Boris the baker bakes a lot of bread. The number of loaves he gets from a batch varies though. Here's how many loaves he's gotten from the last couple batches: 10 loaves, 9 loaves, 10 loaves, 9 loaves, 11 loaves, 8 loaves, 10 loaves. What is the mode?
- (A) 9.6 loaves
 - (B) 10 loaves
 - (C) 3 loaves
 - (D) None of above
- 342.** When you are trying to find the MEDIAN of a set of data and 2 numbers are left in the middle after putting them in order from least to greatest, what do you do?
- (A) List both numbers as the median
 - (B) Add the 2 numbers and divide by 2
 - (C) Pick the one you want
 - (D) Subtract the 2 numbers
- 343.** How many times a value occurs in a data set is called the ____
- (A) Variability
 - (B) Quartile
 - (C) Frequency
 - (D) Mode
- 344.** If the data set is: 5, 7, 9, 11, what is the median?
- (A) 11
 - (B) 8
 - (C) 7
 - (D) 9
- 345.** The frequency distribution of two variables is known as
- (A) Bivariate distribution
 - (B) Multivariate distribution
 - (C) Univariate distribution
 - (D) Sub-multivariate distribution
- 346.** The number of times a certain response appears in a data set is known as its ____
- (A) Frequency
 - (B) Relative Frequency
 - (C) Sigma
 - (D) Theta
- 347.** Find the average for this data: 12, 8, 4, 4
- (A) 24
 - (B) 16
 - (C) 9
 - (D) 7
- 348.** Statistics which is concerned with summarizing values to describe group characteristics of the data.
- (A) Descriptive
 - (B) Inferential
 - (C) Parametric
 - (D) Non Parametric
- 349.** Gender, age-class, religion, type of disease, and blood group are measured on:
- (A) Nominal scale of measurement
 - (B) Ordinal scale of measurement
 - (C) Interval scale of measurement
 - (D) Ratio scale of measurement
- 350.** A statistical measure based upon the entire population is called parameter while measure based upon a sample is known as: [2008-JUNE]
- (A) Sample parameter
 - (B) Inference
 - (C) Statistics
 - (D) None of these
- 351.** Temperature can be classified into this level of measurement.
- (A) Interval
 - (B) Ratio

- (C) Nominal
(D) Ordinal
- 352.** A GOOD AVERAGE SHOULD BE CAPABLE OF FURTHER ALGEBRAIC TREATMENT.
(A) TRUE
(B) FALSE
- 353.** The word Average and Mean are the same
(A) True
(B) False
- 354.** What type of graph would be most appropriate for displaying the distribution of a single variable?
(A) Line graph
(B) Bar graph
(C) Histogram
(D) Scatter plot
- 355.** Blood pressure when organized as a data is classified as which of the following:
(A) Nominal
(B) Ordinal
(C) Ratio
(D) Interval
- 356.** Numerical data represents
(A) Groups
(B) Letters
(C) Numbers
(D) Answers
- 357.** Which of the following information is not provided by a correlation coefficient?
(A) Amount of variables
(B) Strength of relationship between variables
(C) How variables are associated
(D) None of above
- 358.** What is the purpose of computing an average value for a set of data?
(A) To make the data look more interesting
(B) To obtain a single value which is representative of all the items
(C) To create a sense of mystery around the data
(D) To confuse the audience with complex calculations
- 359.** Find the range of the data. 16, 28, 6, 19, 21, 15, 22, 33, 17
(A) 18
(B) 27
(C) 30
(D) 12
- 360.** It is proportional to the underlying property, and when there is an absence of that property the number is zero.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 361.** What is the range of this data set?
(A) 12
(B) 51
(C) 5
(D) 39
- 362.** How do you find the mean?
(A) Order least to greatest, then slash from each side until you reach the middle
(B) Add the numbers in your data set, then divide by the amount you added
(C) Look for the number that repeats the most
(D) Highest number minus the lowest number
- 363.** Sum of data points divided by the number of data points.
(A) Finding the Median
(B) Finding the Mode
(C) Finding the Mean
(D) None of above

364. Locate the number that shows up the most.
- (A) Finding the mode
 - (B) Finding the mean
 - (C) Finding the median
 - (D) Finding the range
365. Descriptive or inferential? The national average annual medicine expenditure per person is \$1052 (Source: The Greensburg Tribune Review).
- (A) Descriptive
 - (B) Inferential
366. The mode is the value which has the highest ____?
- (A) Arithmetic Mean
 - (B) Standard Deviation
 - (C) Class
 - (D) Frequency
367. Rain water was collected at 30 sites and the pH level was measured. The mean and standard deviation of values of 4.60 and 1.10, respectively. When the pH meter was recalibrated back at the laboratory, it was found to be an error. The error can be corrected by adding 0.1 pH units to all the values and then multiplying the result by 1.2. The mean and standard deviation of the corrected pH measurements are
- (A) 5.64, 1.44
 - (B) 5.40, 1.44
 - (C) 5.64, 1.20
 - (D) 5.64, 1.32
368. It is a measurement gauging the rate of a response appearance within a data set.
- (A) Frequency counts
 - (B) Mean
 - (C) Mode
 - (D) Standard Deviation
369. Which average do you use when you have non-numeric data?
- (A) Mode
 - (B) Median
 - (C) Mean
 - (D) Range
370. The heights of the starting 5 players on a basketball team are 60 inches, 67 inches, 64 inches, and 65 inches. If the mean or balance point of the players is 65, what is the height of the 5th player?
- (A) 70
 - (B) 69
 - (C) 61
 - (D) 68
371. A particular observation which occurs maximum number of times in a given data is called its
- (A) Frequency
 - (B) Range
 - (C) Mode
 - (D) Median
372. How can you describe the highest value in the data?
- (A) The highest value is the sum of all entries.
 - (B) The highest value is the average of the dataset.
 - (C) The highest value is the median of the dataset.
 - (D) The highest value is the maximum entry in the dataset.
373. Descriptive summary of a data set through a single value that reflects the center of the data distribution
- (A) Central tendency
 - (B) Neuron
 - (C) Stimulant
 - (D) Synesthesia
374. Study the data set shown. 15, 14, 19, 16, 22, 20, 17, 20, 29, 21, 18 Which statement is true about this set of data?
- (A) The range is 3
 - (B) The range is 20
 - (C) The median is 18.5
 - (D) The median is 19

375. Find the mean age. You may want to write out the table with an extra column.
- (A) 2.6
 - (B) 6.5
 - (C) 5.7
 - (D) 5.5
376. Used to describe the data collected and summarize the data and its properties using the measures of central tendencies and the measures of dispersion.
- (A) Descriptive Statistics
 - (B) Inferential Statistics
 - (C) Mixed Methods
 - (D) Quantitative
377. Find the mean, median, and mode: 3, 1, 7, 9, 11, 8, 3
- (A) Mean: 6.57 median: 7 mode: 3
 - (B) Mean: 9 median: 6 mode: 3
 - (C) Mean: 6 median: 7 mode: 3
 - (D) Mean: 6 median: 9 mode: 3
378. What is Continuous Data?
- (A) Data that can only take on specific values
 - (B) Data that can take on any value within a given range
 - (C) Data that is categorical in nature
 - (D) Data that is always whole numbers
379. Standard deviation measures the distribution of responses around the mean in quantitative analysis.
- (A) True
 - (B) False
380. The mean should be used as the measure of center if the data is skewed.
- (A) True
 - (B) False
381. Statistical data about population characteristics —
- (A) Demographics
 - (B) Fixed Cost
 - (C) Pricing Strategy
 - (D) Graph
382. Describe a situation where a pie chart would be more effective than a bar graph.
- (A) When representing the distribution of different categories within a whole, such as market share percentages of different companies.
 - (B) When representing the frequency of different events.
 - (C) When showing the correlation between two variables.
 - (D) When comparing the growth of different companies over time.
383. Identify the best average to use for the following data — TEST SCORES IN A SPELLING TEST: 9, 9, 3, 6, 5, 7, 7, 9, 5, 4
- (A) Mean
 - (B) Median
 - (C) Mode
 - (D) None of above
384. How do you determine the frequency of a data set in a histogram?
- (A) By calculating the mean of the data points.
 - (B) By counting the number of data points that fall within each interval.
 - (C) By finding the median of the data points.
 - (D) By plotting the data points on a line graph.
385. Your psychology teacher wants you to organize and summarize the scores on the first psychology test; which type of statistics is your professor most likely to use?
- (A) Descriptive statistics
 - (B) Inferential statistics
 - (C) Correlational statistics
 - (D) Significant statistics
386. What is the median of this data set? 3, 17, 17, 11, 8, 13, 5, 18
- (A) 11

- (B) 12
(C) 13
(D) 17
- 387.** What is ordinal (rank) data?
(A) Quantitative data that can be given an order or ranked
(B) Data that is always qualitative
(C) Data that cannot be measured
(D) Data that is always continuous
- 388.** Using the measures of central tendency is an example of ____ statistics.
(A) Instinctual
(B) Experimental
(C) Inferential
(D) Descriptive
- 389.** What type of evidence is this: About 37% of 12th graders reported vaping in 2018, compared with 28% in 2017.
(A) Statistics
(B) Data
(C) Fact
(D) Research Study
- 390.** A data set can have more than one ____
(A) Median
(B) Mode
(C) Mean
(D) Midrange
- 391.** Calculate the mean: 81, 69, 72, 80, 67, 62, 78, 74, 71, 86
(A) 82.2
(B) 92
(C) 67.2
(D) 74
- 392.** Which one of the following methods serve to measure correlation between two variables?
(A) Two-way table
(B) Scatter Diagram
(C) Frequency Distribution
(D) Coefficient of Rank Correlation
- 393.** The statistic is a number describing the:
(A) Population
(B) Sample
(C) Survey
(D) Percent
- 394.** Which of the following is an example of a statistic?
(A) $(10 \times 10)15 = 115$
(B) The average test score was 76
(C) Tomorrow night there will be a full moon
(D) It looks like there's a good chance of rain tonight
- 395.** What is ordinal data?
(A) Ranked data.
(B) Well behaved data.
(C) Numbers.
(D) Ordinary data.
- 396.** What is a 'Percent/Percentage'?
(A) An offer to buy an item and get another at a discount
(B) The process of calculating prices
(C) An amount that is a part of a whole based off of 100
(D) A type of discount
- 397.** What are statistical methods used to describe and summarize data, such as mean, median, and mode?
(A) Descriptive Statistics
(B) Inferential Statistics
(C) Correlation
(D) Observation
- 398.** If the grading of diabetes is classified as mild, moderate and severe the scale of measurement used is
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio

- 399.** A display of categorical data that uses bars positioned over category values; each bar's height reflects the count or percentage of data values in that category
- (A) Bar chart
 - (B) Boolean
 - (C) Box plot
 - (D) Categorical data
- 400.** When a researcher uses correlation, then there is no direct manipulation of the IV. A researcher might ask, for example, how IQ correlates with the incidence of panic disorder. Again, nothing is manipulated; just measured. In cases such as this a correlation coefficient will reveal
- (A) The relationship between IQ and panic disorder
 - (B) The probability that a significant difference exists
 - (C) An F test
 - (D) Percentile rank
- 401.** Another name for Mean is ____
- (A) Median
 - (B) Average
 - (C) Mode
 - (D) None of above
- 402.** What is an example of ratio data?
- (A) Gender classification
 - (B) Temperature in Celsius
 - (C) Income in dollars
 - (D) Customer preferences
- 403.** A histogram is a graph that represents the cumulative frequencies for the classes in a frequency distribution.
- (A) True
 - (B) False
- 404.** What term refers to the measure of relationship between two variables?
- (A) Hypothesis
 - (B) Independent Variable
 - (C) Correlation
 - (D) Variable
- 405.** Is the question below an example of a statistical question?"What is the most popular type of music of students in SUNY-B?"
- (A) YES
 - (B) NO
- 406.** In the construction of a frequency distribution, it is generally preferable to have classes of:
- (A) Equal class width
 - (B) Unequal class width
 - (C) Maximum class width
 - (D) None of these
- 407.** A numerical characteristic of the POPULATION
- (A) Statistic
 - (B) Parameter
 - (C) Observation
 - (D) Study
- 408.** Which of the following can not be found using a pie chart?
- (A) Range
 - (B) Mode
 - (C) Proportions
 - (D) Mean
- 409.** The 75th percentile is referred to as the
- (A) First quartile
 - (B) Second quartile
 - (C) Third quartile
 - (D) Fourth quartile
- 410.** Which language is used to describe percentage?
- (A) Proportion of + Noun
 - (B) Allocation of + Noun
 - (C) Fraction of + Noun
 - (D) Percentage of + Noun
- 411.** Hair colour-Is this Categorical data classified as Ordinal or Nominal?
- (A) Ordinal
 - (B) Nominal

- 412.** What is a correlation?
(A) A group of people who represent a larger population.
(B) Research that involves the pursuit of knowledge in a systematic way
(C) The stealing of someone else's work
(D) The people a researcher wants to study
(E) A measure of how things are related to one another
- 413.** Mean
(A) Subtract the highest number from the lowest
(B) Add up all the numbers and divide by the number of numbers
(C) Ms.Syroid
(D) The cafeteria lady
- 414.** Of the parents surveyed, 25% prefer year-round school. What fraction represents the number of parents who do NOT prefer year-round school?
(A) $1/25$
(B) $1/4$
(C) $3/4$
(D) $24/25$
- 415.** Determine the level of measurement: what town you were born in
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 416.** Ethnic group categories of people in a neighborhood.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 417.** It is a numerical description of a population characteristic.
(A) Parameter
(B) People
(C) Statistics
(D) Data
- 418.** Which statistical measure is used to describe the spread or dispersion of a dataset?
(A) Mean
(B) Median
(C) Standard deviation
(D) Mode
- 419.** All 25 students in our class were surveyed about what their favorite food is. 11 students chose pizza. What percentage of the class chose pizza?
(A) 20%
(B) 44%
(C) 15%
(D) 60%
- 420.** Determine the level of measurement: percent of students in clubs at OCHS.
(A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
- 421.** Name that scale of measurement:Where do you live:city, suburban, town, or rural
(A) Ratio
(B) Rational
(C) Nominal
(D) Interval
- 422.** If you want to find out which color MOST students favor, you should use which measure of center?
(A) Mode
(B) Median
(C) Mean
(D) Range
- 423.** Descriptive statistics ____ while inferential statistics ____
(A) Summarize data; make assumptions about the population

- (B) Make assumptions about the population; summarize data
- (C) Make assumptions about the population; make inferences about the population
- (D) Describe data; summarize data
- 424.** Which is used in univariate analysis. It is utilized when describing a phenomena or a variable.
- (A) DESCRIPTIVE TOOL
- (B) INFERENCE TOOL
- 425.** The table shown is comparing a person's foot length to their height in cm. Calculate the correlation (r) and what it means.
- (A) R = 5.5; strong positive
- (B) R = 0.986; Weak Positive
- (C) R = 0.986; Strong Positive
- (D) R = 25.05; Weak Negative
- 426.** A scientist records the growth of a plant over five days as 5 cm, 7 cm, 6 cm, 8 cm, and 4 cm. What is the average daily growth?
- (A) 6 cm
- (B) 5 cm
- (C) 7 cm
- (D) 6.5 cm
- 427.** The temperature in Michigan City on this date in the last ten years were: 68, 68, 69, 70, 72, 70, 68, 75, 55, 67. What is the mean temperature on this date over the last ten years? (Round to nearest whole number.)
- (A) 60
- (B) 61
- (C) 68
- (D) 69
- 428.** Consists of the collection, organization, summarization, and presentation of data
- (A) Inferential
- (B) Descriptive
- (C) Data
- (D) Variable
- 429.** Write down your answer to this question, you will need it for the following problem! The mean of a set of numbers is 123. The sum of the numbers is 2,214. Which of the equations below could help you determine how many numbers are in the set?
- (A) $\frac{x}{123} = 2,214$
- (B) $\frac{2,214}{x} = 123$
- (C) $\frac{123}{x} = 2,214$
- (D) $\frac{x}{2,214} = 123$
- 430.** In a frequency distribution, the class may be:
- (A) Singular or plural
- (B) Subjective or objective
- (C) Individual or discrete
- (D) Inclusive or exclusive
- 431.** Descriptive statistics is used to
- (A) Describe the Characteristics of sample
- (B) Predict the association between the variables
- (C) Generalized the results
- (D) Compare the groups
- 432.** If the average of 8 numbers is 14, how much would the average of 5 more numbers need to be to raise the overall average to 19?
- (A) 13
- (B) 19
- (C) 24
- (D) 27
- 433.** Find the median from the following data —
5, 3, 6, 5, 3, 9, 4
- (A) 8
- (B) 5
- (C) 6
- (D) 7
- 434.** Also referred as statistical averages tell us the point about which items have a tendency to cluster. The 3 most common statistical averages are (arithmetic) mean, median and mode.
- (A) Measures of dispersion

- (B) Measures of asymmetry (skewness)
(C) Measures of central tendency
(D) Measures of relationship
435. The degree to which the test scores in a class spread.
(A) Discrimination
(B) Dispersion
(C) Interval
(D) None of these
436. The number I see the most is called the ____
(A) Mode
(B) Median
(C) Mean Absolute Deviation
(D) Modular
437. The median of the data: 3, 4, 5, 6, 7, 3, 4 is
(A) 5
(B) 3
(C) 4
(D) 6
438. Which measure of central tendency best represents this set of data: 13, 13, 11, 13, 13, 12, 13
(A) Mean
(B) Median
(C) Mode
(D) Range
439. Which among the statements is NOT an example of statistical question?
(A) Who is my favorite Korean Drama star?
(B) What is the favorite Korean Drama of the grade 7 students?
(C) What is the typical age of the grade 7 Mathematics teachers?
(D) How many brothers and sisters do my classmates have?
440. What does a Box & Whisker chart represent?
(A) Positive and negative changes in income
(B) Decreases in a value over each stage of a multi-step process
(C) Frequency of values falling within a range
(D) Statistical distribution of values
441. The ____ is the difference between the upper quartile and the lower quartile.
(A) Range
(B) Interquartile range
(C) Outlier
(D) Median
442. It is a numerical measure that describes a characteristic of a population.
(A) Statistic
(B) Parameter
(C) Sample
(D) Population
443. The medals (gold, silver, bronze) received by Olympic athletes is an example of:
(A) Nominal data
(B) Discrete data
(C) Ordinal data
(D) Continuous data
444. A statistical test conducted to find the relationship between two variables measured as quantitative variables
(A) Pearson Correlation
(B) Chi-square test
(C) Independent Sample t-test
(D) One Way ANOVA
445. Which one means "the most common response to the question?"
(A) Mean
(B) Median
(C) Mode
(D) Meatball
446. Find the median of 4, 9, 8, 3, 7, 10
(A) 7
(B) 7.5
(C) 8
(D) 8.5

447. What is the term in statistics for the entire collection or group of individuals being studied?
- (A) Population
 - (B) Sample
 - (C) Parameter
 - (D) Statistic
448. Find the average of the following data — 5, 3, 6, 5, 3, 9, 4
- (A) 8
 - (B) 5
 - (C) 6
 - (D) 7
449. When should a line graph be used instead of a bar chart?
- (A) When displaying discrete data points
 - (B) When showing trends over time or continuous data.
 - (C) When presenting qualitative data
 - (D) When showing the comparison of different categories
450. Find the relative frequencies
- (A) 37%, 76%, 92%, 95%, 98%, 100%
 - (B) 28%, 30%, 12%, 2%, 2%, 2%
 - (C) 33%, 37%, 20%, 7%, 7%, 7%
 - (D) 37%, 39%, 16%, 3%, 3%, 3%
451. A statistic is —
- (A) A planned activity whose results yield a set of data
 - (B) A numerical value that summarizes all of the data of an entire population
 - (C) The set of values collected from the variable from each of the elements that belong to the sample
 - (D) A numerical value summarizing the sample data
452. It is used to describe the basic features of the data in a study. It provides simple summaries about the sample and the measures.
- (A) Descriptive Analysis
 - (B) Inferential Analysis
 - (C) Univariate Analysis
 - (D) None of above
453. It is a numerical description of a sample characteristic
- (A) Statistic
 - (B) Statistics
 - (C) Parameter
 - (D) Data
454. What will be considered if the researcher focuses on numerical characteristics of the population?
- (A) Parameter
 - (B) Population
 - (C) Sampling
 - (D) Statistic
455. Which task best fits the micro-level use of descriptive statistics in quality control?
- (A) Modeling long-run trends with multivariate regression
 - (B) Selecting the best inferential test for causal claims
 - (C) Estimating population parameters from sampled data
 - (D) Drilling into records to spot duplicate or impossible values
456. Facts given in number form
- (A) Anecdotes
 - (B) Numbers and stats
 - (C) Examples
 - (D) Facts
457. Which of the following measures are used for descriptive analysis of data?
- (A) Mean, Chi-square test and t-test
 - (B) Mean, median and mode
 - (C) Median, ANOVA and chi-square test
 - (D) ANOVA, Chi-square test and t-test
 - (E) Not aware of

458. What can be inferred if a histogram has a very high peak?
- (A) The data is widely spread
 - (B) There is a high frequency of data in that interval
 - (C) The data is normally distributed
 - (D) The data is skewed
459. What term is used to describe the number which appears most often in a set of data numbers?
- (A) Mean
 - (B) Mode
 - (C) Median
 - (D) Range
460. The value appearing at the center of a sorted version of a list, or the mean of the two central values.
- (A) Median
 - (B) Mean
 - (C) Range
 - (D) Modus
461. What inference is probably true based on the mean and median of the scores below? Blue Team Averages per quarter: 91%, 88%, 87%, 90% Green Team Averages per quarter: 88%, 85%, 82%, 89%
- (A) The Blue team had slightly higher grades, on average.
 - (B) The Green team had slightly higher grades, on average.
 - (C) The Blue and Green teams had the exact same scores, on average.
 - (D) The Blue team's scores were twice as great as the Green team's scores.
462. To find the average of a set of numbers, add up all the items and divide by ____
- (A) 2
 - (B) The minimum
 - (C) The maximum
 - (D) The number of items
463. What percentage of scores falls within 3 standard deviations of the mean?
- (A) 68%
 - (B) 34%
 - (C) 99.7%
 - (D) 95%
464. Values that belong to a population
- (A) Statistic
 - (B) Parameter
 - (C) Error
 - (D) Sample
465. In a scientific experiment, a student measures the growth of a plant over 5 days. The heights recorded in centimeters are: 10, 12, 14, 13, and 11. What is the average height of the plant over these 5 days?
- (A) 12 cm
 - (B) 13 cm
 - (C) 11 cm
 - (D) 14 cm
466. Andy is comparing how long two tablets can be used after being fully charged. Use the measures of center to make an inference about the data.
- (A) The IQR for tablet A is higher so tablet A's battery life is more consistent.
 - (B) The MAD is lower in tablet B's battery life so Tablet B is more consistent.
 - (C) On average Tablet A's battery will last longer.
 - (D) On average Tablet B's battery will last longer.
467. Temperatures of 22 selected refrigerators
- (A) Nominal
 - (B) Ordinal
 - (C) Interval
 - (D) Ratio
468. The more hours a student studies the higher their grades will be is an example of ____
- (A) Negative correlation
 - (B) Positive correlation

469. The table below shows the number of hours students spend watching TV per week:
- | Hours | Frequency |
|-------|-----------|
| 3 | 2 |
| 5 | 5 |
| 7 | 3 |
- What is the arithmetic mean number of hours spent watching TV?
- (A) 5
(B) 5.2
(C) 5.3
(D) 5.5
470. Frequency distribution is a measurement gauging the rate of a response appearance within a data set.
- (A) True
(B) False
(C) All the above
(D) None of the above
471. In a marine biology study, a scientist measures the length of 4 different fish in centimeters: 30, 35, 40, and 45. What is the average length of the fish?
- (A) 35 cm
(B) 37.5 cm
(C) 40 cm
(D) 42.5 cm
472. Which of the following best describes the process of finding the range for a set of data?
- (A) ADD the biggest and smallest numbers
(B) Place the number in order from least to greatest then find the middle.
(C) Find the difference between the Maximum and the Minimum.
(D) Find the average.
473. A correlation looks at the relationship between:
- (A) An IV and a DV
(B) Two co-variables
(C) Three co-variables
(D) Extraneous variables
474. Find out the median score from the following frequency distribution table:
- | Score | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 |
|--------------------|------|-------|-------|-------|-------|
| Number of students | 4 | 3 | 5 | 6 | 7 |
- (A) 40
(B) 31
(C) 52
(D) 26
475. Kelly has five math test scores: 88, 90, 56, 85, and 86. Which measure of center would best represent this data?
- (A) Mean
(B) Median
(C) Mode
(D) Range
476. At Dominique's Donuts the number of donut holes in a bag can vary. Help Dominique find the mode. 12, 10, 10, 10, 13, 12, 11, 13, 10
- (A) 13
(B) 12
(C) 11
(D) 10
477. Interviewers ask research subjects to describe in some detail relationships with important people in their lives. Using established criteria, raters review these personal descriptions and assign a dominant attachment category (Secure-1, Preoccupied-2, Fearful-3, Dismissing-4).
- (A) Nominal
(B) Ordinal
(C) Interval
(D) Ratio
478. Mean, Median, and Mode are different ways to talk about the ____ of a data set.
- (A) Center
(B) Summary
(C) Individual Values
(D) Average
479. When reporting your statistics, you should
- (A) Report as many decimals as the statistics program produces.
(B) Report as many decimal places based on the accuracy of your measurement instrument.

- (C) Provide the bare minimum amount of detail, which is usually just the p-value.
(D) Find ways to make it as complicated as possible because that makes it look more impressive and valid.
- 480.** In order to find the median, the very first thing you must do is to..
(A) Find the difference between biggest and the smallest number.
(B) Find the middle number
(C) List the numbers in order
(D) Find the most repeated number
- 481.** A mayor wanted to see if the people in his town thought he was doing a good job. Which choice best represents a statistic?
(A) The percentage of all townspeople who believe the mayor is doing a good job.
(B) The percentage of townspeople surveyed who believe the mayor is doing a good job.
(C) All townspeople.
(D) A random selection of 100 townspeople.
- 482.** Which type of results does frequency shows?
(A) Numbers
(B) Tallies
(C) Symbols
(D) None of above
- 483.** Except for rounding errors, relative frequencies should add up to what sum?
(A) 0
(B) 1
(C) 50
(D) 100
- 484.** Find the mean: 3.8, 4.2, 4.0, 4.2, 4.2
(A) 4.08
(B) 20.4
(C) 5.1
(D) 4.2
- 485.** It is the sum of the data divided by the number of data values.
(A) Mean
(B) Median
(C) Mode
(D) None of the choices
- 486.** Roger has the following data: 12, 10, 3, 5, 6. Susan has the following data: 5, 9, 4, 5, 6. Who has the data with the highest median and what is it?
(A) Roger-6
(B) Susan-7
(C) Roger-8
(D) Susan-5.5
- 487.** The relative frequencies (expressed as percentage) of the eight classes as given below: 12.6, 18.2, 17.5, 20.3, 2.8, 4.2, 9.8, 14.7. Find the central angle for IV class.
(A) 58°
(B) 73°
(C) 62°
(D) 105°
- 488.** Given the following data: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10
(A) The average of the data is 5
(B) The average of the data is 6
(C) The average of the data is 5.5
(D) The average of the data is 55
- 489.** A numerical value used as a summary measure for a sample, such as sample mean, is known as a
(A) Population parameter
(B) Sample parameter
(C) Sample statistic
(D) Population mean
- 490.** What term describes the middle of a sorted list of numbers?
(A) Mean
